Shropshire Local Plan Review

Summary of Responses to the Consultation on the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan

Published: December 2020

Shropshire Local Plan Review

Regulation 18: Pre-Submission Draft of the Shropshire Local Plan

Introduction

Following approval by Shropshire Council's Cabinet, the fifth stage of 'Regulation 18' consultation to inform the Local Plan Review was undertaken from the 3rd August 2020 to the 30th September 2020.

This stage of consultation sought views from all interested parties on the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan.

The Regulation 18: Pre-Submission Draft of the Shropshire Local Plan identified a draft vision and draft framework for the future development of Shropshire to 2038. This addressed such issues as the needs and opportunities in relation to housing, the local economy, community facilities and infrastructure; and seeks to safeguard the environment, enable adaptation to climate change and helps to secure high-quality and accessible design. It contained:

- Draft strategic policies which set the priorities and framework for the Local Plan
- Draft 'strategic' implementation policies and more 'detailed' draft policies for managing development
- Draft settlement policies which provide draft strategies and draft guidelines for the settlements of Shropshire, including where appropriate identifying draft proposed site allocations
- Draft strategic settlement and draft strategic site policies which identify these draft proposed sites and provide draft strategies and draft guidelines for their development.

To assist in responding to this consultation, a two-part Consultation Form was made available for all interested parties to complete and submit. Part A Consultation Form was for personal details and needed to only be completed once. Part B Consultation Form was for interested parties to provide their response(s). A separate Part B Consultation Form was requested for each comment about a relevant paragraph, policy (including its explanation) or site an interested party wished to make.

Consultation responses could address any of the Supporting Documents and/or Evidence prepared to support the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan, by relating them to the resulting paragraph, policy (including its explanation) or site in the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan.

During the consultation on the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan around 2,500 unique respondents commented. Respondents included individuals; businesses; landowners; Town and Parish Councils; representatives of the development industry; organisations; neighbouring Authorities; and statutory consultees. All responses to this consultation and the issues they raise have been considered and have and will continue to inform ongoing the Local Plan Review.

This document provides a summary of the responses received to the consultation on the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan. This summary is presented in five columns, these are:

Column 1: The unique reference for the respondent (A reference) and their consultation response(s) (B reference). Please note each individual respondent is registered one (A Reference). However, each respondent may have multiple consultation responses (B references), which are numbered B1, B2, B3 etc.

Column 2: Summarises the response to **Question 1: To which document does this response relate?** of the Part B Consultation Form. The summary indicates a document to which the consultation response relates. It is acknowledged that many responses relate to a number of documents.

Column 3: Summarises the response to **Question 2: To which part of the document does this response relate?** of the Part B Consultation Form. The summary indicates a part of the document to which the consultation response relates, grouped by issue, such as a draft Policy or Place Plan Area. It is acknowledged that many responses relate to numerous draft policies and/or Place Plan Areas.

Column 4: Summarises the response to **Question 3: Do you agree or disagree with the paragraph, policy, site or policies map you have identified in Q2?** of the Part B Consultation Form.

Column 5: Summarises the response to **Please use this space to make any comments on the paragraph, policy, site or policies map you have identified in Q2** of the Part B Consultation Form. The summary identifies key issues raised by respondents. It should be noted that these responses represent the views of the relevant party and are not necessarily shared by Shropshire Council.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0167B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Support the principles laid out within draft policy SP1. It is imperative that these tests are robustly applied in the decision making process, including in relation to applications at SUE West and that the existing businesses and the wider local environment are protected. Development near Oxon Hall Caravan Park must not result in detrimental levels of air, light and noise pollution.
A0268B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		This draft policy essentially characterises what is considered to constitute sustainable development in Shropshire. Please also see comments on proposed allocation SHR197VAR.
A0269B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	The Shropshire Test Support Policy SP1 (2) insofar as Community Led Plans are consistent with the strategic housing allocations and the stated Development Guidelines – see generally SP2 (7)
A0306B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Proposals should also cross reference the forthcoming Nature Recovery Strategy, and the Climate Strategy.
A0311B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose
A0323B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose (respondent ref; Form 2)
A0356B02	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose (respondent ref; Form 2)
A0398B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Climate change. I note the details in SP3 p20, p6 2.2 how county moves towards zero carbon economy, and DP12 p88 on minimising carbon emissions DP12 4.119 should show Shropshire Council to be proactive e.g. 'We will encourage/require incorporating renewables into new builds, and discourage gas boilers and log burners.' I disagree with the statement 'Opportunities to adapt and mitigate climate change are likely to remain similar to the present'. Shropshire Council can make a difference as above. £5k now buys a 3kW producing 10 photovoltaic panel retrofit with a car charger. Much cheaper for new build and lower output
A0413B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Part e) should read 'raising standards to a high level of energy efficiency and delivery'.
A0430B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Support the overarching vision of the County set out in this policy. It recognises that development will need to contribute to meeting local needs and make settlements more sustainable with the right mix of housing, employment, and other types of development. It also recognises that proposals should also seek to reflect relevant considerations in community-led plans, local economic growth strategies (including the Shrewsbury Big Town Plan), the Local Transport Plan, and the Public Health Strategy.
A0436B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0437B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0438B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0439B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0440B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0441B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0442B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0443B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Support introduction of draft Policy SP1, as it acknowledges and respects the unique and diverse nature of Shropshire. This policy should reiterate the principle of Rural Rebalance, one of the key objectives of Shropshire Council's Core Strategy. It is evident that a range of sustainable facilities are often accommodated across several settlements in rural areas (cluster settlements), therefore flexible development policies to support a range of housing and economic development in rural areas is vital.
A0446B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. However, latest evidence only provides a snapshot of current housing needs. Further, the accuracy of the 'Right Home Right Place' Local Housing Need Surveys is questioned as it is understood it is challenging to get local communities to engage. Hence the proposal that 50% of open market dwellings reflect the resulting profile seems overbearing and will hamper developers ability to respond to market forces. Need to retain the ability for developers to respond to the market and build properties to cater for market demand. The alternative proposal that at least 25% of open market dwellings have 2 bedrooms or less and at least a further 25% of open market dwellings have 3 bedrooms both limits housebuilders ability to respond to local demand and fails to recognise that the profile of first time buyers has changed with entrants to the housing market often being in their 30's when they typically have a family. It is considered more reflective of modern demographic trends to have a split of 35% 3 beds and 15% 2 beds (3 bed houses are preferred by families and 2 beds by individuals). The policy needs to provide flexibility so the plan is able to respond to changes in circumstances, meet need and make best use of land. Support the general approach of the policy, particularly section 2 which allows flexibility within the mix and variety of dwellings sizes for market dwellings, however urge further flexibility be demonstrated and robust evidence presented on the type of housing demanded.
A0501B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0573B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Supports Policy SP1 that identifies material considerations to support growth and its delivery in a sustainable manner:- based on sound principles of making efficient use of land and balancing design, community and natural environment- development Ruckley Estates/Harrow Estates in Shifnal supports this principle, meeting local needs in the right place with the right mix of housing allocation of SHF018b and SHF018d supports this principle by implementing Policy SP1(b) to:- focus employment development in a highly sustainable location- provide greater self-containment for the town, reducing the need to travel- create a cohesive community with its proximity to Shifnal Industrial Estate and the proposed residential allocation of SHF018b & SHF018d also supports the:- design approach in Policy SP1(e) to raise design standards- approach in SP1(f) to make efficient use of land allocation of SHF018c & SHF032 for housing development adhere to objectives and requirements of Shropshire Test by being:- sustainably located within walking distance of the town centre and local services- located on the east side of town in proximity to most of these services and to the new local employment allocation- local movement of residents contributing to the containment of the settlement- providing additional community facilities and green spaces to support cohesive communities in accordance with SP1(b) & (g)
A0642B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The council does not have a Climate Change strategy and there is no indication of by how much the plan mitigates the impacts or how it is addressed.
A0642B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Para 3.1 What is a gateway policy? There needs to be a formal requirement on developers to show that they have passed the test before submitting an application. If there are to be exclusions then there need to be clear and justified reasons for these.
A0642B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Para 3.2 What is the point of putting forward aspirations if they are unenforceable?
A0647B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose.
A0648B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose.
A0670B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose.
A0685B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	This policy is supported in its entirety especially the support for sites that have sufficient proven infrastructure.
A0696B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Don't know / no opinion	Part C of the draft policy is far weaker than the proposed 'Vision'. It should read: "Will place the delivery of a zero-carbon economy at the heart of all development".
A0698B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestry, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose.
A0862B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Draft Policy SP1 (The Shropshire Test) requires development which, "makes efficient use of land" and draft Policy SP5 (High-Quality Design) includes a requirement to make, "efficient and effective use of land and topography". Support these sections of Policies SP1 and SP5. SHR054a is 3.86 hectares in size, the proposed guideline figure of only 60 dwellings is equivalent to a density of only 15.5 dwellings per hectare. This is inconsistent with draft Policies SP1 and SP5 as the site is capable of accommodating 116 dwellings at a density of 30 dwellings per hectare. Acknowledge that some of the site will be needed for compensatory car parking for the Shrewsbury Club, however this does not justify a reduction from 116 dwellings to only 60 dwellings. 85 dwellings (net density of 22 dwelling/ha) would be more appropriate.
A0888B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	With regard to draft Policies DP25 (Green Belt and Safeguarded Land) and S21 (Strategic Site RAF Cosford) or S1 (Albrighton Place Plan Area), proposed an amendment to the policies to allow the allocation (or safeguarding) of land at Newport Lane, Cosford which should be removed from the Greenbelt and allocated for housing development to support the strategic growth objectives of RAF Cosford. see wider response.
A0957B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		The new notion of a Shropshire Test is actually an idea that proposes a number of very desirable high level principles to which all developments should aspire. However, the wording only asks developer applicants to show that they have "considered" the principles. Furthermore, the principles are general and can be interpreted in different ways to suit different contexts and therefore need careful appraisal to ascertain their impact in any particular circumstance. Such lack of clarity will be difficult to evaluate by planners and is likely to be unenforceable leading to Appeals that are upheld. The principles are very relevant and desirable but lack any exemplification or benchmarks that could render them useful in practice. Evidence for this comes from: the unused Shropshire Accreditation Scheme; the minimal impact of the WMCA Design Charter stated in the application for a mixed development near Battlefield Roundabout; the vastly optimistic self-evaluation of the application for an estate at Bicton, off the Welshpool Road, using the BfL12 criteria; the Government's own critique of the planning system in "Planning for the Future"; the outcomes of Weir Hill and other mediocre estates even when there are already policies in the previous Local Plan that could be used to ensure high quality design (in all its meanings). This desirable policy has no better chance of making an impact than the other ones concerning the quality of design
A0970B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Disagree with the draft Policy as it needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. Para 2.1 of the draft Local Plan includes "The pursuit of sustainable development is at the heart of the planning process" and quotes the NPPF which itself quotes the UN General Assembly in defining sustainable development at the strategic level as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Taken together with para 3.28 of the draft Local Plan: "The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. The widespread and potentially devastating impacts of climate change place a responsibility on us all to minimise our carbon emissions, and this must be seen as an essential component of all development. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'". This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components: 1. Detail in the four key areas necessary for a zero carbon future - Policies to reduce energy demands; Commitment to develop and support far more renewable energy in the county; Guidance to actively promote a low carbon / more plant based diet; and Support and strategies for changes in land use policies. Strategies to support the county's development in these 4 key areas must be the cornerstones to a plan fit to fulfil government legislation to achieve net zero carbon by 2050 (as published on 27th June 2019) not the 80% mentioned in SP3. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose. 2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents.
A0981B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Policy SP1 – The Shropshire Test. Sport England supports part 1a) of the policy that development will support the health, well-being and safety of communities. This is consistent with the guidance in Chapter 8 of the NPPF, which relates to promoting healthy and safe communities. Sport England also supports the reference in part 1g) of the policy to providing sufficient infrastructure. It is recommended to add the words 'to meet identified needs' so that this ties in with the Council's evidence base. The reference to infrastructure should also cross-refer meeting the requirements of policy DP27 as this cross-relates.
A0984B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Support the overarching vision for the County. Recognises that development must contribute to meeting local needs and making settlements more sustainable, with the right mix of housing, employment, and other types of development. Recognises that where appropriate proposals should seek to reflect consideration other Shropshire Council strategic, such as Community Led Plans, Local Economic Growth Strategies, Local Transport Plan and Public Health Strategy.

A0997B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Historic England welcomes the inclusion of the historic environment in this strategic policy
A1143B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components:1. Detail in the four key areas necessary for a zero carbon future (see below).2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestation, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose
A1143B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	In section (d) this policy paragraph states: "Conserves and enhances the high-quality natural environment and provides opportunities for green and blue networks"; This statement starts off well but becomes ambiguous with the unfinished statement "...provides opportunities provides opportunities for green and blue networks". What opportunities? Net gain, better functioning networks, reversal of fragmentation.
A1152B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Agreement is as far as it goes. Fully endorse the thrust of draft policy SP5, in recognition of the importance of design for creating better places and better buildings within them. Design is notoriously difficult to pin down and there have been the Building for Life standards (mentioned in para 129 of the NPPF), the Shrewsbury Test, and the guidelines developed by Shropshire Council Development Management. Concern is simply that the guidelines in both the West Midlands Design Charter and in the Shropshire Test are perhaps a bit general and possibly bland. Developers might therefore be able to say that they have met those tests whilst still presenting a development that is little better than those that are presently criticised.
A1180B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. A2180B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	We would have expected something more akin to the aspirations of the Shrewsbury Test, but this doesn't appear to be the case.
A2308B38	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Appreciate the key focus of the draft Local Plan is meeting local needs, however it should also recognise that need for development may arise to help deliver national requirements. Would like to see explicit support for defence related development within the plan which would be in line with Para 95 of the NPPF. Note specific support is provided within Policy S21 with respect to RAF Cosford, however there are a number of other key defence sites within the County. This draft policy highlights the need for development to support the health, well-being and safety of communities and clearly development undertaken in relation to national defence purposes has a link to this objective.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2321B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	<p>Policy SP1: The Shropshire Test</p> <p>3.1 'The Shropshire Test' provides a series of guiding principles which should assist the Council in being able to identify the most sustainable locations for meeting the identified housing and employment need throughout the plan area.</p> <p>3.2 In the context of this test (and as demonstrated in the table below), Albrighton is a sustainable location for further housing growth given its excellent social, community and transport infrastructure, and the approach advanced in the draft plan to support the growth of RAF Cosford as a strategic employment site with the proposed allocation of some 220.1 ha of land. It is on the edge of the Black Country and wider Greater Birmingham conurbation, with a regular rail service to Wolverhampton, Birmingham City Centre, Telford and Shrewsbury, and is in close proximity to the M54 growth corridor (comprising the employment sites at i54, ROF Featherstone, and the estates on Wobaston Road).</p> <p>3.3 These factors will act to further elevate the demand for nearby housing, and as set out within our response to Policy SP2, the amount of housing growth directed to Albrighton should be increased to reflect the sustainable future growth of the village and ensure it aligns with the draft plan's wider ranging goals of reducing the impact of climate change, and creating truly sustainable development.</p> <p>3.4 As part of recognising the role which Albrighton can play in the delivery of truly sustainable development, Vistry consider that more growth should be directed to the village and land to the east of Newport Road is well placed to facilitate additional growth within the village whilst also aligning with the guiding principles as set out within 'The Shropshire Test'.</p> <p>SP1. The Shropshire Test Our Response 1. Development will contribute to meeting local needs and making its settlements more sustainable, providing the right mix of new housing, employment and other types of development which: a. Supports the health, well-being and safety of communities; As identified within the 'Technical review of the need for new homes in Albrighton' report enclosed at Appendix 2, Albrighton is within walking distance of the wide range of local services and facilities provided within the village centre. It is also within walking distance of Albrighton Train Station which provides access to Shrewsbury, Telford, Cosford, Wolverhampton and Birmingham. b. Supports cohesive communities; The site is capable of delivering a mix of open market and affordable housing reflective of current and future demographic and market trends and the needs of different groups in the community, including policy compliant levels of affordable homes and a range of dwelling sizes. This is particularly important given that the Albrighton Neighbourhood Plan Light (ANPL) identified that 'the community of Albrighton has expressed considerable concern over the ability of young first-time buyers to access the housing market'. Up to date data shows that since the ANPL was published, the prices of entry level and median house prices in Albrighton have rapidly increased faster than the average for Shropshire, further exacerbating the challenges facing young first time buyers and making it even more difficult to stay in or move into Albrighton. The new development would provide policy compliant levels affordable homes and a range of dwelling sizes. c. Addresses and mitigates the impacts of climate change; The Vision Framework (Appendix 1) identifies that there are limited environmental constraints to the delivery of residential development on the site. Moreover, the site is well located, in close proximity to existing services and facilities to allow for the creation of a truly sustainable community within close proximity to existing services and facilities and a significant job growth location at RAF Cosford. d. Conserves and enhances the high-quality natural environment and provides opportunities for green and blue networks; New residential development will provide a strong landscape framework comprising new open space provision for formal and informal play and recreation providing opportunities embedded within green infrastructure. Development of the site would include permeable and legible pedestrian and cycle routes, linking through to the adjacent residential areas of Albrighton. e. Raises design standards and enhances the area's The proposed development would be built in accordance with the Future Homes Standard meeting national housing standards as well as seeking to shape the character and historic environment; development so that it reflects the character and style of architecture and responding to designated heritage assets within proximity to the site. f. Makes efficient use of land; and The site is capable of delivering circa 218 homes at a density of up to 35 dwellings per hectare (dph), assisting in the delivery of new market and affordable housing that is capable of addressing local need in terms of type and tenure. The land can be brought forward for development in the short – medium term to make an important contribution towards the housing needs of the village and wider county. g. Provides sufficient infrastructure, services, facilities, and where necessary provides opportunities for their enhancement. As set out in section 1 of these representations, and detailed throughout the Vision Framework (Appendix 1), the site could deliver sufficient infrastructure, services, facilities and where necessary provides opportunities for their enhancement – specifically ecological and biodiversity enhancements.</p>
A2323B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		No specific comments.
A2358B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	<p>In response to:</p> <p>1. Development will contribute to meeting local needs and making its settlements more sustainable, providing the right mix of new housing, employment and other types of development which:</p> <p>a. Supports the health, well-being and safety of communities;</p> <p>30 houses within the first stage, with unknown additional properties following will increase carbon emissions through build and habitation. The village which has no lighting and almost no pavements already encounters high volume of vehicles and therefore hub status levels of development would decrease the safety of residents.</p> <p>b. Supports cohesive communities;</p> <p>Any cohesion and unified spirit that may have once existed in Clive has already started to pack it's bag to leave due to development squabbles and personal agendas.</p> <p>c. Addresses and mitigates the impacts of climate change;</p> <p>d. Conserves and enhances the high-quality natural environment and provides opportunities for green and blue networks;</p> <p>e. Raises design standards and enhances the area's character and historic environment;</p> <p>f. Makes efficient use of land; and</p> <p>g. Provides sufficient infrastructure, services, facilities, and where necessary provides opportunities for their enhancement.</p> <p>Many other Shropshire villages that have encountered similar development to that being proposed for Clive have not had their previously high-quality natural environment, design standards, area's character or historic environment enhanced by the development. Far from it.</p> <p>My worry is that the developers will not always deliver what they promise and with no known final figure for houses that could be built in Clive by 2038 then it is hard to imagine that almost all of the points mentioned in SP1. The Shropshire Test, can be confidently adhered to in order to safeguard the character and community of the village of the environment.</p> <p>If Clive was offered (and subsequently delivered) development that was ground breaking in environmental protection and enhancement through great design and quality build with the support, ongoing assessment and vigilance of Shropshire council, the parish council and the community, then many more 'boxes' are ticked from the council wider objectives list and the positives linked with the above points a-g will be realised.</p> <p>The frequency with which Shropshire council mention 'sustainability', 'zero carbon' and also being '...especially concerned to ensure that new development maintains and enhances the character, appearance and historic interests of the County's settlements and countryside, including its distinctive landscape...' within the plan is extremely reassuring...until you assess recent and ongoing local village developments. Clive will surely suffer the same fate if hub status is approved. The need for fast development and healthy profits for the house builders clashes with the aforementioned positive objectives.</p> <p>I believe increased sustainable self build allocation within all of Shropshire council's proposed development areas will greatly assist with the introduction of long term residents to the communities where they build their homes (more often than not with great passion and love, ohh...and a little bit of blood, sweat and tears). Communities and the environment benefit – long term.</p>
A2365B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	<p>The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components: 1. Detail in the four key areas necessary for a zero carbon future (see below). 2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include; policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestation, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose (respondent ref; Form 2)</p>
A2372B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	<p>The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. This is why I disagree with this policy. Paragraph 2.1 states: "The pursuit of sustainable development is at the heart of the planning process." The National Planning Policy Framework (NPPF) quotes the United Nations General Assembly in defining what this means at a strategic level: "meeting the needs of the present without compromising the ability of future generations to meet their own needs" Taken together with paragraph 3.28 : "The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. The widespread and potentially devastating impacts of climate change place a responsibility on us all to minimise our carbon emissions, and this must be seen as an essential component of all development. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components: 1. Detail in the four key areas necessary for a zero carbon future (see below). 2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four Key areas for a zero carbon future. 1. Policies to reduce energy demands. Specifically in a) new buildings and in retrofitting existing building and b) in a comprehensive sustainable transport system that gives residents alternatives to private cars. 2. Commitment to develop and support far more renewable energy in the county. Shropshire needs to make full use of its natural resources of hills and wind to produce more electricity. On shore wind projects and more solar energy farms. 3. Council guidance to actively promote a low carbon / more plant based diet. This should be one of the principle aims within Health & Wellbeing strategy. 4. Support and strategies for changes in land use policies. A county framework to increase re-forestation, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Strategies to support the county's development in these 4 key areas must be the cornerstones to a plan fit to fulfil government legislation to achieve net zero carbon by 2050 (as published on 27th June 2019) not the 80% mentioned in SP3. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose. https://www.cat.org.uk/info-resources/zero-carbon-britain/</p>
A2398B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1		Part 1 of the draft policy emphasises that development will contribute to meeting local needs, making settlements more sustainable and providing the right mix of housing. Whilst this is generally supported, reference to meeting 'local' needs may result in the economic aspirations of the Plan not being met. If Shropshire is to grow, then development should look to meet 'identified' needs and the policy should be amended as such. This would be in line with the part two of the Policy which references the need for development to reflect the Local Economic Growth Strategies.
A2412B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	We support the aspirations of the plan and that it seeks to deliver sustainable development in the appropriate locations providing the right mix of new housing, employment etc.
A2427B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	<p>The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components: 1. Detail in the four key areas necessary for a zero carbon future (see below). 2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. A2441B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	Shrewsbury is an historic town and more effort should be paid to maintaining and enhancing the historic feel of the town instead of creating modern concrete structures that wouldn't look out of place in Milton Keynes. In particular I really worry for the aesthetic look of Smithfield Road. agree with the policy but have difficulty seeing how it will be delivered affectively given the reverse appears to be the actual implementation: For example: Bicton / Bicton Heath area: a) decreases health, well-being and safety of community - proposed 60 mph NWRP to run through the communities b) destroys cohesive communities - building 200% more houses than current dwellings in Bicton's will destroy the culture and cohesiveness of the communities c) does not address and mitigate the impact of climate change - proposed 60 mph NWRP will increase CO2 emissions, the building materials will also have an impact d) does not enhance the high-quality natural environment - 3 naturalised pools dating back to the glacial period and teaming with wildlife are to be eradicated and houses built on their site. g) removes infrastructure and services - planned removal of Oxon Park and Ride (removal of service) There needs to be tougher strategies and policies in place so that existing communities are not devastated or decimated as the ones above will be
A2469B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. A2476B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	3.2 This draft policy enshrines the core planning principles that are set out within the Vision for Shropshire for 2038 and is broadly supported. It is considered that the effectiveness of this policy could be improved by cross-referencing, where relevant, other specific policies within the Local Plan. Suggested modification example: a. Supports the health, well-being and safety of communities (See Policy DP30) b. Supports cohesive communities (See Policy DP1) c. Addresses and mitigates the impacts of climate change (See Policies SP3, DP12) 3.3 Doing this would assist those using and implementing the local plan by directing them to individual, specific policies that provide further detail and/or criteria as to how each of the core aims can be met.
A2477B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Agree	Supported
A2489B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP1	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. A0038B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Further comments following the publication of the Draft housing strategy. There is clearly a conflict between the draft plan and the draft housing strategy. Population growth forecast at 17500 till 2041, though a need of 25400 to 2038 but proposes a build of 30800 dwellings? The policy is based on one dwelling per job and assuming a dwelling occupancy of 2.5 would require Shropshire to build just 7000 dwellings. As far as I can see there is no attempt to rationalise this variance so therefore the reasoning behind the LPR is called into question.
A0100B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Approach which seeks that new development is focused towards primary urban areas, specifically Shrewsbury, which will develop and grow in respect of its role as a strategic centre, is supported but will require the ongoing review of land to ensure a continuous supply of suitable sites is available. Accessible and sustainable land such as client's site ((SHR185) north of Dobbie's) should therefore continue to be considered by the Council. The proposed growth options provide the most significant opportunities to deliver a wide range of good quality affordable and family housing. Combined, with the urban focus of development the proposed level of development will promote access to services and support delivery of new infrastructure
A0138B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		Welcome recognition of the need to provide older persons housing Statistics on the level of growth in older people within the Plan do not consider the 2018-based SNHP. The SHMA and associated policies should be updated to consider the 2018-based SNHP. Whilst the Plan indicates it will monitor the number of older person specific dwellings permitted in Shropshire, it is only possible to measure the effectiveness of a policy if there is also a target figure. We strongly encourage the Council to identify and monitor how many older person housing units are needed in each of the four types of housing that it identifies in paragraph 4.36, namely, "a. Age-restricted general market housing; b. Retirement living or sheltered housing; c. Extra care housing or housing-with-care; and d. Residential care homes and nursing homes". As a minimum, the need for each of the above types of housing should be quantified
A0158B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The draft Local Plan is over-estimating the number of new homes needed compared with government figures of 1,270 per annum and 25,400 in total up to 2038. There must be a balance between investment in new housing and investment in supporting infrastructure. This balance has not been achieved in the past and we are not confident it will be achieved in the future.
A0167B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		Policy SP2 makes it clear Shrewsbury is the Key Centre and focus for new development. Do not object to this principle. However, development on the edge of the settlement must not result in severance between the town centre and wider local area. E.g. Safe and suitable pedestrian access must be maintained from Oxon Hall Caravan Park over the NWRP and through SUE West to ensure that visitors to the site can continue to access and support the local economy. Bus routes must also be retained to allow visitors to the Caravan Park access into the town to support the local economy whilst minimising impact on climate change and carbon generation. The policy should also reference acceptability of tourist related development outside development boundaries.
A0205B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Many upper floors in town centres are vacant, but have independent access from the shops below. Measures should be put in place, including grants, to encourage the conversion of such unused or under utilised spaces to provide residential accommodation. Bringing upper floors back into use would help regenerate town centres and provide increased security after business hours. Converting these spaces into residential would reduce the need to build on agricultural land on the outskirts of Bridgnorth.

A0238B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Document Reference BTC14;BTC15;BTC16:Para 2 -Insufficient evidence for 30,800 dwellings, around 26,000 more appropriate reflecting Local Housing Need 2020 requirement for 25,894 homes. The optional increase to 30,800 homes, reflecting economic growth aspiration too optimistic. View is evidenced by a review of the ONS 2014 based household and population projections. These indicate projected household growth from 2016 to 2038 for Shropshire of 19,136 and population growth of 25,695 (8.2%) but with ageing population i.e. 'working age' population aged 16-64 years going down by 12,563 and the population aged 65+ going up 39,059. Number of single person households is projected to rise by 8,435, making up 44% of the projected growth in number of households. Whilst a "balanced growth" policy provides sufficient employment land to enable 1 job to be created for each additional home built, the plan does not identify what impact an additional 11,664 homes (above the ONS projected households) would have on Shropshire's population or labour force. Therefore not possible to determine, on the basis of Plan information, whether the "balanced growth" objective realistic. Whilst balanced growth objective is to enable creation of 30,800 jobs this is in context of projected decline of most typically economically active age group (16-64). It is not clear whether Shropshire's population (augmented from the ONS projections by building 11,664 further homes) would have the capacity to provide the 43,363 workers needed. (paragraphs 3.18 and 3.19 refer) Despite concerns regarding achievement of balanced growth, support an ambitious target for the provision of employment land provided that: a. achieved new jobs is monitored and reviewed every 5 years, along with the Local Plan. b. Targets for dwelling provision (across Shropshire and in local areas) are modified in the light of the number of new jobs created, to reflect balanced growth strategy & prevent the development of commuter towns. c. Safeguards are established to ensure that sites approved as employment land cannot be readily granted permission for housing development. Para 3.22- The draft Plan no longer contains an explicit commitment to a balanced growth policy (1 new job for each new dwelling). This should be included if the policy is still being followed. Generally supports this policy and that approval of new housing should be dependent on the achievement of an adequate provision of new jobs. (SP10 refers) Proposals in the Shropshire Economic Growth Strategy and in the Bridgnorth Local Economic Growth Strategy are not sufficiently robust to justify the growth in employment land and population proposed in the draft Local Plan. An approach is required to limit housing growth in areas where anticipated level of job creation is not achieved.
A0240B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Policy SP2: Strategic Approach2.1 Principally, L&Q Estates supports the Council's choice to pursue a higher growth option to deliver around 30,800 new dwellings over the plan period; however, it considers that an increased housing requirement is necessary for a number of reasons.2.2 The DSLP1 confirms the Council has undertaken an assessment of its local housing need ('LHN')using the Standard Methodology, indicating a housing need of 25,894 dwellings over the plan period from 2016 to 2038, as at April 2020. L&Q Estates considers this approach is correct and in line with the requirement of NPPF paragraph 60.2.3 The NPPF and Planning Practice Guidance ('PPG') are clear that the LHN figure generated by standard method is a minimum starting point (i.e. actual housing need may be higher than this figure). It goes on to state that it would be appropriate for a higher figure to be adopted on the basis of employment, infrastructure, unmet housing needs2, or affordable housing.2.4 In this regard, the Council purports that the proposed housing requirement not only meets its local housing need, but incorporates a contribution to the unmet housing shortfall of the neighbouring Black Country4, as well as providing flexibility and an opportunity to: a Respond positively to specific sustainable development opportunities; b Increase the delivery of family and affordable housing to meet the needs of local communities and support new families coming into Shropshire; c Support the delivery of specialist housing for older people, people with disabilities and the needs of other groups within the community; d Support the diversification our labour force; and e Support wider aspirations, including increased economic growth and productivity.2.5 It is understood the additional requirement of 4,906 dwellings therefore comprises 1,500dwellings to meet the unmet housing needs of the Black Country, and 3,406 dwellings to provide flexibility in response to the above opportunities (i.e. increased affordable housing, increased specialist housing, and increased economic growth). The table below demonstrates our understanding of the Council's proposed housing need and requirement for the plan period2016-2038. (Table 2.1 Housing need and proposed housing requirement 2016-2038 not included in this summary).2.6 With the proposal to plan for an additional 4,906 dwellings, L&Q Estates welcomes the Council's implicit recognition that its local housing need figure is a minimum starting point.2.7 It is unclear as to how a figure of 3,406 dwellings to provide flexibility has been derived and specifically to what needs it accommodates.2.8 Although paragraph 3.6 of the DSLP confirms the needs to which this provision responds (that being to support the provision of affordable housing and specialist housing, and to support economic growth), no explicit evidence has been provided which robustly demonstrates whether this quantum of uplift is sufficient in addressing said recognised needs.2.9 Moreover, the Council has failed to demonstrate how a contribution of 1,500 dwellings to meet the Black Country shortfall is appropriate or justified, particularly in the absence of any detailed analysis into the functional economic relationship between Shropshire and the Black Country.2.10 Consequently, L&Q Estates considers that further evidence is required to robustly demonstrate whether an uplift of 4,906 dwellings is sufficient to address the following factors:• Unmet housing need (Duty to Cooperate);• Affordable housing; and• Infrastructure.2.11 In addition to the above factors, the Council will also be aware of the Government's recent consultation on 'Changes to the current planning system'6 which proposes a revised standard method to align with its aspirations for the housing market.2.12 For the reasons set out below, L&Q Estates considers a further uplift to the Council's proposed housing requirement is necessary in order to align with the revised standard method which issue to form part of an updated PPG following the outcome of the consultation.2.13 Before these considerations, however, it is worth noting the shortcomings in the SustainabilityAppraisal7 ('SA') underpinning the Council's preferred option for a higher housing growth scenario. Chapter Five confirms that three Housing Requirement Options were assessed against the respective Sustainability Objectives8. The Housing Requirement Options are replicated below. (Table 2.2 Housing Requirement Options assessed through the SA not included in this summary).2.14 Although L&Q Estates supports the sufficient distinction between the reasonable alternatives, as advised by the PPG10, the approach is considered flawed on two grounds.2.15 Firstly, the total number of dwellings tested in the 'Option 3: High Growth' scenario (28,750dwellings) does not reflect the 30,800 dwellings identified in the DSLP, thus resulting in the sustainability implications of the proposed housing requirement not being accuratelyconsidered.2.16 Secondly, the annualised housing requirement for each of the three options suggests a 20-yearplan period has been utilised, as opposed to a 22-year plan period (2016-2038) as proposed in the DSLP. Again, this suggests the sustainability implications of the proposed housing requirement has not being accurately considered.2.17 L&Q Estates therefore recommends that the Council re-run the appraisal of housing growth options through the SA in order to reasonably conclude on a preferred option which has been robustly tested.
A0240B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The PPG is clear that 'an increase in the total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes.' The DSLP proposes to plan for an additional 3,406 dwellings beyond its LHN figure, but it is unclear as to how this additional provision has been derived and to what precise needs it accommodates (i.e. whether this uplift is included to directly meet unmet affordable housing need). In identifying affordable housing need, the DSLP15 defers to the Strategic Housing Market Assessment (September 2020) ('SHMA'), which concludes that 17,574 households will require affordable housing over the plan period 2016-2038, resulting in an estimated need for 799 affordable dwelling per annum16. Such need is significantly greater when compared against recent affordable housing completions: (Table 2.3 Open Market and Affordable Housing Completions in Shropshire not included in this summary). Firstly, it should be noted that the DSLP17 erroneously indicates an estimated need of '799 households per year' as opposed to affordable dwellings per year. It is therefore requested that this is amended accordingly to reflect the need for dwellings and not households. Secondly, wholly disagree with the observations and assertions of the SHMA and subsequently its conclusion to not recommend an uplift to the housing requirement based on acute affordable housing need: <ul style="list-style-type: none"> • 'To deliver the aspirations for affordable housing as identified through the assessment of affordable housing need... total housing development would have to be approximately 83,686 dwellings over the Local Plan period from 2016 to 2038 or 3,804 dwellings per annum, more than 3 times the calculated LHN... This significantly exceeds expected demand and crucially is considered undeliverable and inappropriate within the Shropshire housing market.' (paragraph 4.152) • '...the extent to which the housing requirement would need to exceed the LHN in order to meet aspirations for affordable housing would be undeliverable and inappropriate in a Shropshire context.' (paragraph 4.154) • 'If an adjustment cannot be made that would help to deliver the required number of affordable dwellings, there is a need to consider whether any adjustment is appropriate. Ultimately any such adjustment must not result in the housing requirement becoming undeliverable and be delivered through a plan led approach. As such any decision regarding the housing requirement is a policy consideration.' (paragraph 4.155) Principally, this approach is considered wholly unjust as it prematurely disregards an uplift to the LHN before assessing whether an increased housing requirement would be deliverable in the context of the Plan's deliverability. Moreover, it is considered unreasonable to assert that an uplift to the LHN would render the housing requirement undeliverable when compared against historic annual housing completions: (Table 2.4 Total Housing Completions in Shropshire (2016/17-2018/19 not included here) Given that recent annual housing completions have been, on average (1,876 dpa), approximately 60% greater than the current LHN (1,177 dpa), L&Q Estates consider that an uplift to account for acute affordable housing need is unlikely to render the housing requirement, and thus the Plan as a whole, undeliverable. Conclusively, recommend that the Council affords further consideration to an uplift of its LHN to account for acute affordable housing need, and subsequently adjusts its housing requirement to reflect this.
A0240B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	2.39 The PPG highlights that where there are 'strategic infrastructure improvements that are likely to drive an increase in the homes needed locally'18, it may be appropriate to plan for a higher figure than the standard method indicates. 2.40 The DSLP19 makes clear that the proposed strategic approach 'responds directly to the Economic Growth Strategy for Shropshire (2017-2021) and specifically reflects the objective to prioritise investment in strategic locations and growth zones along strategic corridors utilising existing road and rail connections.' 2.41 In particular, the Economic Growth Strategy for Shropshire ('EGS') identifies a number of strategic corridors and growth zones, most notably the M54/A5 East growth corridor20. It also recognises that the 'delivery of high quality infrastructure to meet the needs of businesses and residents is essential to the implementation of this economic growth strategy for Shropshire'21. 2.42 In this respect, L&Q Estates considers the Council should consider whether an increase in the LHN figure would be required to support such strategic infrastructure improvements, as advised by the PPG. 2.43 By way of example, an increase in the housing requirement could provide the funding required to invest in services and facilities and provide the funding required to improve and support the infrastructure packages identified in the EGS. Notably, the EGS recognises that given the 'ever tightening public purse and the increasingly competitive environment to secure public investment into infrastructure', the Council must 'look at innovative ways to deliver schemes'22. 2.44 Crucially, funding and investment are likely to be seen as significant limitations for delivery of local infrastructure projects. An increase in the delivery of housing, and thus private investment associated with this, can offer the funding necessary to facilitate this. 2.45 Indeed, the Council will be aware of the Government's recent consultation on 'Changes to the current planning system'23 which proposes a revised standard method to align with its aspirations for the housing market. 2.46 In the context of Shropshire, the result of the revised standard method identifies a local housing need of 2,129 dpa, representing an approximately 80% increase on the current local housing need of 1,177 dpa. A calculation of Shropshire's revised local housing need is demonstrated below (Table 2.5 Shropshire's local housing need calculated using revised standard method not included in this summary). 2.47 The Government is aware that any change in the standard method will have an impact on plans that are currently under preparation, and has therefore proposed transitional arrangements for authorities in having regard to their revised standard method need figure. It is proposed that, from the publication date of the revised guidance: <ul style="list-style-type: none"> • Authorities which are already at the second stage of the strategic plan consultation process (Regulation 19) are given 6 months to submit their plan to the Planning Inspectorate for examination; and • Authorities close to publishing their second stage consultation (Regulation 19), should be given 3 months from the publication date of the revised guidance to publish their Regulation 19 plan and a further 6 months to submit their plan to the Planning Inspectorate. 2.48 It is understood the current consultation of the SDLP was originally to be undertaken as a Regulation 19 consultation; however, Cabinet Members instead sought to resolve on undertaking a further Regulation 18 consultation should the need to make significant changes to the Plan arise24. 2.49 Whilst Officers have confirmed that a revised Local Development Scheme would have to be prepared to reflect this25, it would prove unfeasible for the Council to undertake a Regulation 19 consultation within three months of the revised guidance publication, should the guidance be published any time prior to winter 2020/21. 2.50 Notably, the Government's consultation confirms that the PPG will be updated to incorporate the revised guidance 'following the outcome of this consultation'26, with the consultation closing on 1st October 2020. 2.51 Having regard to these transitional arrangements and the likely timing of a forthcoming Regulation 19 consultation, clearly the Council will need to have regard to the revised standard method figure. It would therefore be prudent for the Council to build in a buffer at this stage and seek to begin assessing a number of sites that could deliver sufficient capacity to meet this increased figure. 2.52 Indeed, the Council will need to assess whether such quantum of development is sustainable when tested against its Sustainability Appraisal, however such an approach would align with NPPF paragraph 11(a) which confirms that plans should seek opportunities to meet the development needs of their area and 'be sufficiently flexible to adapt to rapid change.' 2.53 In this knowledge, considers it entirely appropriate for the existing safeguarded land at Land between Revells Rough, Lamedge Lane and the eastern rail line to be allocated for housing.
A0246B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Welshampton should be considered a Community Cluster within the Local Plan. The village is well provisioned with local amenities, a significant number of dwellings which are reliant on these amenities, located on the A495 close to Ellesmere and is currently a Community Cluster. Welshampton is perfect for small, well-considered infill development.
A0266B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The target numbers for new homes are based on a growth model dating back to the Economic Growth Strategy for Shropshire 2017 – 2021. Since then we have seen a global and local pandemic, Shropshire Council has declared a climate emergency and the government has committed the country to being 'net zero carbon' by 2050. The continued commitment to a high growth strategy for suburban, semi-rural and rural homes can no longer be justified on the basis of the out-of-date growth strategy and is not compatible with the council's own ambitions for a net zero carbon county by 2030. A minor adjustment to the sustainability appraisals that now includes access to existing public transport is not a sufficient response to these developments. (Interestingly though the effect has been to downgrade the sustainability of some sites.) Yet at the same time the council's own assessment of housing need, published after the main consultation document, requires more affordable homes than planned – by almost 10,000. So both the overall target and the proportion of affordable homes target require a complete rewrite. Reference to a local climate change strategy is of little value given the lack of detail and force in the development policies, especially as associated detailed policies in the local climate change strategy are yet to emerge. With specific reference to Shrewsbury the constraints of a medieval 'monocentric' town based on a series of river loops is insufficiently considered when looking for opportunities for growth. Whilst the high level policy S16 shows willing, the aspirations that sustainable infrastructure 'will be expected to [be] explore[d]' is not a robust guarantee that growth will be compatible with the character and natural limits of the town. There is no recognition of the possibility that such a town could reach a saturation point after which the quality of life will decline.
A0268B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		Draft Policy SP2 builds on previous Local Plan Review consultations to present the draft spatial strategy for the County. Please also see comments on proposed allocation SHR197VAR.
A0269B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Strategic Approach Support the provision of 30,800 dwellings for the Plan Period having regard to cross boundary housing needs and families moving in to Shropshire

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0269B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Strategic Approach Support growth to be complimented by new development in Community Hubs, identified in Schedule SP2.2, to include Burford
A0295B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The level of housing growth proposed is too high. The housing requirement should aim to achieve the minimum requirement under the standard methodology for housing need (25,894). It is noted that the NPPF states that the standard methodology 'can' be applied over the plan period, but also allows for a higher or lower figure where there are exceptional circumstances, which will be tested at examination. The NPPF also states a specific supply of deliverable sites should be identified for a five year period a supply of specific, developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15. Therefore the draft Local Plan only needs to provide reasonable evidence that sites will become available in broad locations and does not need to make specific allocations where there are good reasons for not allocating them at present (such as infrastructure constraints restricting development and no firm plans to resolve them). Consider proposals for an additional 1,500 homes to meet the Association of Black Country Authorities' (ABCA's) projected housing shortfall is unsound. Key issues are: Shropshire is not adjacent to any of the authorities in ABCA. Progress on the ABCA plan has stalled due to Covid-19. The ABCA Urban Capacity study indicates a shortfall of just under 27,000 homes, but the worst shortage is in Sandwell borough making up over half the total, Bridgnorth wouldn't be an obvious place to make up for that shortfall Telford & Wrekin Council rejected ABCA's request in 2019 - indicating lack of evidence.
A0295B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Consider proposals for an additional 1,500 homes to meet the Association of Black Country Authorities' (ABCA's) projected housing shortfall is unsound. Key issues are: Shropshire is not adjacent to any of the authorities in ABCA. Progress on the ABCA plan has stalled due to Covid-19. The ABCA Urban Capacity study indicates a shortfall of just under 27,000 homes, but the worst shortage is in Sandwell borough making up over half the total, Bridgnorth wouldn't be an obvious place to make up for that shortfall. ABCA project a significant employment land shortfall as well, however, South Staffordshire will make a significant contribution to this and the recently approved West Midlands Interchange at Four Ashes (M6/ A5/ A454) is estimated to meet 80 - 100 Ha of the shortfall "based on the travel to work area". Telford & Wrekin Council rejected ABCA's request in 2019 - indicating lack of evidence.
A0299B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support the preferred development strategy which aims to deliver a sustainable pattern of growth and a 'step-change' in economic productivity. Support an 'urban focus' and identification of Shrewsbury as the primary focus for development (this reflects the role of Shrewsbury within the heart of the County and opportunities for growth from initiatives such as the Big Town Plan and University Centre: Shrewsbury). Further housing growth should be considered. Recognise the need to provide sufficient employment land to support housing growth, but there is a need to avoid long-term protection of employment land where there is no reasonable prospect of a site being used for that purpose.
A0306B010	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.26 (e) We question the ability for this strategic corridor to deliver true sustainable economic growth.
A0306B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	While we accept the general Strategic Approach, we question the scale of development, both housing and employment land. We have expressed concerns relating to the high level of growth in previous consultations. The insistence on pursuing a level of housing in excess of housing need is not a sustainable approach and reflects the focus on economic growth. This is contrary to section 2 of the NPPF which states that the three overarching objectives of sustainable development (economic, social and environmental) need to be "pursued in mutually supportive ways (so that opportunities can be taken to secure net gains across each of the different objectives). Not all Principal and Key Centres are equal in their ability to accommodate sustainable growth
A0306B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.17 The purpose of the local plan is surely to achieve sustainable development not to achieve the aspirations of the Economic Growth Strategy.
A0306B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.26 (b) We question the ability for this strategic corridor to deliver true sustainable economic growth.
A0306B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.26 (d) The Wildlife Trusts oppose HS2 at a national level as the environmental costs outweigh any benefits. The identification of a strategic corridor linking to HS2 that is based solely on road transport is an example of the unsustainable results of the scheme and Shropshire Wildlife Trust does not welcome its mention in the Local Plan.
A0310B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Oppose the high housing growth figure (will strain housing delivery targets - Shifnal has already experienced this problem by having unplanned permissions granted) and the addition of 1500 houses to meet Black Country needs (which will exacerbate the problem). Difficulty in ensuring infrastructure is being developed at a level and timescale to support permitted and completed development. This is contrary to several of the Strategic Objectives. There should be a pre-requisite for settlements to be able to develop their infrastructure to meet existing needs before further growth is permitted. Shropshire Council have failed to demonstrate how the increased provision of housing above need will lead to more affordable housing or how employment will be developed to meet the housing growth. Covid has made aspirations unrealistic. No evidence to justify how 1500 houses for the Black Country was arrived at, nor how it assessed whether such housing could be accommodated to meet its sustainable communities objectives. Not aware that a detailed analysis has been carried out by the Black Country to assess the availability of land within the Black Country to meet its own needs. The Green Belt Exceptional Circumstances Statement states that Shifnal will play a key role in meeting this need. This is contrary to Green Belt policy as it will require the removal of Green Belt not to meet essential Shifnal needs and when no alternative locations have been considered. The addition of unmet migrant need from the Black Country would constitute unsustainable development and an unsustainable community, so failing to meet the positively prepared soundness test. Telford would be a better location than a small settlement like Shifnal and the consequential loss of Green Belt. There is 300ha of employment is proposed, but says this is around 15ha a year, but 15ha/year over the 22 year period of the Plan equates to a total of 330ha. Totalling the individual Place Plan Area totals of employment land proposed then gives a total of 376ha, whilst Appendix 6 states that the strategic employment land supply will be 414ha. There is thus nearly a 40% difference in employment land proposed within the Plan. Indeed, para 3.20 also states that Appendix 6 "provides information on the employment completions achieved since the start of the Local Plan period and the various commitments (including allocations) available, which will contribute towards achieving the identified employment land requirement". No reasoning is given as to how if Appendix 6 contributes to the employment land requirement and totals 414ha, the employment land figure in the Plan is stated at 300ha. The employment land figures fail to take into account employment proposed in the Plan for RAF Cosford. This area means that the actual employment land figure proposed is well over 50% more than the 300ha figure quoted. The Economic Growth Strategy will be out of date before the Plan is adopted and fails to consider the long term economic situation up to 2038. There is no recognition in the Plan of the impact that Covid-19 is and will be having on the national and local economy. A much more realistic and conservative estimate of employment land requirements should be undertaken, with a view to the next Plan Review reassessing the economic situation when the full effects of Covid-19 can be assessed. Inconsistency in comments made by Shropshire Council in a meeting with the TC, on the relation between housing and employment figures and the objective of balanced growth. Shropshire Council said the 1500 houses from the Black Country unmet need were incorporated into the Shropshire housing figure, not added on as extra housing. The increase in housing in this plan to 30800 from the previously proposed 28750 was stated to be due to the increase in Plan period from 2036 to 2038. Whilst SC say the new housing figure is solely related to the extra 2 year period of the Plan, they have not similarly amended the employment figure for the extra time period and amended housing.
A0386B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Parish Council confirms that Stoke St Milborough, Hopton Cangeford and Cleedownton will no longer be community clusters as shown by the brown marker on the map on page 19. Figure SP2.1. The PC applied to become Open Countryside in January 2020. The locations were not listed as Community Clusters within the Place Plan area.
A0393B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Please see accompanying letter for full comments. Broad Support for urban focused strategy and identification of Broseley as a Key Centre.
A0406B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The Much Wenlock Neighbourhood Plan specifically rejects the building of large housing estates. By including one of 120 houses in the proposed Shropshire Local Plan the intention was obviously not to support the Neighbourhood Plan for this town.

Page 10

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0407B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		Draft Policy SP2 suggests development in rural areas is required to ensure long-term sustainability of rural communities. This approach is used in the Core Strategy (and earlier) and has turned many villages into dormitory settlements. Whilst sustainability in terms of retention of services may have been enhanced, there has been no systematic gathering of evidence to demonstrate that these policy aspirations have been achieved. Nothing underpins the necessity to carry this policy in to the future beyond political whim. There are severe adverse sustainability characteristics attaching to the policy. The proposed development pattern encourages the use of the private car and fails to minimise carbon emissions. Development in rural areas results in greater transport emissions than development located at towns. It is unsound to locate some 27% of all residential development in Community Hubs and Community Clusters, as this is inconsistent with the zero carbon spatial vision for the County and the Climate Emergency. It conflicts with draft Policy SP3 which supports a transition to a zero carbon economy and fails to meet policies requiring reductions in carbon emissions. There is no evidence that development in rural hubs and clusters, amounting to some 4000 dwellings so far in the plan period has met any significant local need. Strategies which allow for more rural development than necessary to meet local need to serve local employment do not comply with policies requiring development to be sustainable. All options considered within the preparation of the Local Plan involved significant development in rural areas. Draft policy SP3 requires development to reduce carbon emissions by minimising the need to travel and maximising the ability to make trips by sustainable modes of transport. For development to be appropriately located it must meet these two policy requirements. To minimise the need to travel, the location of development and its access to services and facilities is the main consideration. The National Travel survey shows on average a person makes 536 trips a year: 35% for shopping, 27% for commuting, 5% for business, 17% for personal business and 15% for socialising. Analysis of factors which represent nearly 70% of travel shows a household in a rural area (Hubs around Oswestry considered) is likely to produce around 9 times the amount of travel (distance) than one in Oswestry. Rural development and 'rural rebalance' increases the overall amount of distance travelled per household, conflicting with draft Policy SP3 and is unjustified/unevidenced. To maximise the use of sustainable transport need for access at any time of the day to buses, cycling and walking, and for longer distances rail. In locations outside major urban areas it is difficult for public transport to provide services to scattered workplaces. Services from community hubs in the Oswestry area show an inability to serve the employment centres in Oswestry, Shrewsbury and Wrexham. Similarly such locations have little chance of using public transport to access shopping and secondary education. Most minor hubs and clusters are served by a single route providing a single bus in the peak hour in each direction, with services stopping early in the evening. Such services suffer when compared with private vehicles as they: cannot be used for destinations away from the bus route; are slower (in most cases); more costly (even accounting for parking); and do not allow flexible working hours. Car journeys are the likely alternative to use of buses. The NPPF requires "the fullest possible use of...cycling" and draft Policy SP3 requires prioritisation of active travel including cycling. The majority of cycling trips are short distances (80% less than five miles and 40% less than two miles). Risk to cyclists on roads is high. To make fullest use of cycling, patterns of growth must enable the provision of safe facilities and short distances. Accommodating a high proportion of growth in rural areas does not achieve this, in fact it works against this due to distances, the dangerous nature of relevant roads (for instance the A5 and A483), absence of good quality cycle ways; and often gradients of roads. As such this policy again contradicts draft Policy SP3. The NPPF and draft Policy SP3 likewise require active management of growth patterns to favour walking. Development in isolated small communities does not support walking as a means of communication. Walking for leisure in rural areas is open to those that living in rural and urban areas. Whilst villages do offer social facilities which are supported by existing rural development, the towns provide a wider range, particularly for the young. Rural development will lead either to these facilities being denied to young people, with attendant social cost, or lead to parental "taxi" services, again running counter to the intentions of draft policy SP3. Car ownership in Shropshire is high, but those living in rural areas without cars can be isolated and dependent on others/other options, as such rural areas would not be the 'right location' for them. There are preferable means of meeting the needs for development land. For instance, development in the north-west should be focused along the A5 strategic corridor, in accordance with the principles outlined in Oswestry 2050. Major local employers and residential areas should be linked together. Low carbon development could occur. Attractive high frequency, economic and low carbon public transport services and cycle links should be provided. Satellite villages could be formed at Park Hall and Middleton. The A5 may need to be diverted beyond the main urban area. This would be a sustainable means of accommodating all the development proposed in villages, with little adverse effects on rural settlements. This option has not been given serious consideration by the Council.
A0413B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The reviews of the plan should consider the levels of demand for new developments and allow for changes within the time period of the plan and changes to the economy of the UK.
A0430B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to the housing requirement figure in SP2(2) which should be kept under review as the plan progresses given the ongoing work which may have implications for the housing requirement such as the statement of common ground on cross-boundary issues with the Black Country and the anticipated publication of the revised standard method for calculating local housing need. SP2(2) proposes a housing requirement of around 30,800 homes over the plan period / 1,400 per annum. It is set out in the supporting text, that this housing requirement has been informed by the current standard method for calculating local housing need at 25,894 homes over the plan period / 1,100 homes per annum, and incorporates an element of flexibility as set out in paragraph 3.6 of the plan, and includes 1,500 homes to support the unmet need of the Black Country. The supporting text in the plan, at paragraph 3.11, suggests that the expected rate of delivery of around 1,400 dwellings per annum forms the most robust trajectory of future housing delivery. However, there is no annual trajectory provided within the plan showing how the housing requirement would be achieved year-on-year over the plan period and broken down into settlements. It would be useful if the plan included an annual trajectory and Wallace retain the right to comment on this should one be provided.
A0430B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2(5) with a proposed minor amendment to achieve a sustainable and appropriate pattern of development which also maximises investment opportunities, new development will be focused in the urban areas. Wallace supports this approach as the urban areas are the most sustainable locations within the County and should be afforded the lion share of development. It goes on to set out the pattern of development for the urban areas, saying that development will be focused on the Strategic Centre of Shrewsbury (Part 5a), with significant development at both the Principal and Key Centres (Part 5b), and new sustainable communities at the Strategic Settlements (Part 5c). Wallace support the broad pattern of development set out in Part 5, particularly Part 5b which groups the Principal and Key Centres, as both these categories have settlements where significant development can be accommodated. Schedule SP2.1. Urban Locations lists the settlements under the headings of Strategic Centre, Principal Centres, Key Centres and Strategic Settlements. Wallace consider that the Principal Centres and Key Centres could be grouped together in the schedule under the heading Principal and Key Centres, to be consistent with the grouping and wording at Part 5b of the policy.
A0430B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to SP2(6) which recognises the importance of ensuring the long-term sustainability of rural communities, and that growth in urban areas will be complemented by appropriate new development within Community Hubs and Community Clusters to maintain or enhance their sustainability. However, Appendix 5 of the Regulation 18 Local Plan identifies a large proportion of the planned housing growth will be directed to the Community Hubs alone, and no figures are given for the Community Clusters. The proportion of homes to the rural areas could be considered to contradict the complementary nature of these areas and weaken the focus of development to the urban areas
A0433B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The draft policy states 7,700 affordable homes (25% of all housing) will be delivered. It is unclear how this will be achieved given that draft Policy DP3 (affordable housing provision) does not apply to all sites (less than 5) and targets 10% or 20% on-site contributions. Clarity is required. Furthermore 25% of all households per annum equates to 350 dwellings per annum, but the identified need is some 799 households per annum. This means the housing waiting list will continue to increase by around 449 households per annum reaching nearly 15,000 by the end of the plan period, this is a significant deficiency in the plan.
A0436B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0437B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0438B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support the proposal to provide 7,700 affordable dwellings (equating to around 25% of the total housing requirement) during the plan period from 2016 to 2038. Affordable housing is increasingly important as affordability of open market housing is worsened due to their attractiveness to migrants. Providing good quality affordable housing that meets local needs, there is a need to acknowledge complexities around land supply and incentivise landowners.
A0438B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0439B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0440B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0441B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered
A0442B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support SP2 and the level of housing and employment development proposed, to support economic and sustainability aspirations However the new proposed standard method of calculating housing need would increase Shropshire's local housing need (need would be some 2,129 dwelling per annum). Whilst it is not expected to affect the Local Plan Review due to transitional arrangements, timescales in which amendments to the standard method may arise are unclear. The Council should be mindful of these changes and their potential impact on the preparation of the Shropshire Council Local Plan. The PPG states that the standard method of calculating housing need set the minimum housing requirement. Plus, ambition support economic growth, deliver affordable housing and unmet needs from other authorities need to be considered

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0450B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Comparing paras 3.5 and 3.6 - the housing requirement of 30,800 dwellings is excessive: it exceeds the housing requirement of 25,894 dwellings by 20% and provides too much flexibility in the housing supply. In para 3.7, it is not appropriate to meet part of the Black Country housing needs in Shropshire as this will cause an unnecessary migration from the City and will increase out-commuting from Shropshire.
A0485B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Why does the Plan include 1,500 dwellings to meet Black Country needs? The Mayor of Birmingham has stated that the Black Country can meet its own needs.
A0501B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Paragraph 3.3 Paragraph 3.30 includes the objective to "Support skills investment and business growth which accelerates Shropshire's transition to a low carbon economy and investment in low carbon infrastructure..." Therefore the plan should contain SMART targets to both increase the county's renewable energy supply and plans to skill up our work force so that Shropshire will benefit economically from the increasing growth in this sector. Earlier this year the UK Government announced that onshore wind would be eligible to compete in the fourth Contracts for Difference (CFD) allocation round in 2021, a welcome outcome which will help ensure onshore developments will play a prominent role in the 'green recovery.' There is no mention of onshore wind development in the plan. Opposition to wind farms will exist – just as people must have fought against pylons which as now accepted as a necessary part of the landscape. https://www.energyvoice.com/opinion/266602/onshore-repowering-benefit-economy/We-are-facing-a-once-in-a-lifetime-opportunity-to-improve-climate-resilience . The Committee on Climate Change has said the tragedy of the Covid-19 pandemic can still become "a historic turning point in tackling the global climate crisis", and position the UK as a true leader on environmental policy. A green recovery is the only option to ensure a resilient economy can emerge amid the prospect of the "biggest economic shock for a generation" due to the coronavirus crisis, the government has been told. CCC chair Lord Deben said: "There's no [other] option. We can't return to prosperity unless we build a green economy which works for the whole of the nation." "The steps that the UK takes to rebuild from the Covid-19 pandemic can accelerate the transition to a successful and low-carbon economy and improve our climate resilience. Choices that lock in emissions or climate risks are unacceptable. https://www.independent.co.uk/environment/climate-change-economy-uk-report-2020-green-recovery-coronavirus-environment-a9583941.html These words apply as much to Shropshire as to every part of the UK. The local plans must clearly set out the means by which the county is going to achieve a transition to a low carbon economy – at present this is lacking and the objective of paragraph 2.2 is not embedded within the local plan.
A0504B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	GROWTH PROPOSALS FOR SHROPSHIRE, based upon the work carried out by the Bridgnorth Plan Group, I consider that the aspirational target for growth of the number of dwellings is too high for the whole of Shropshire and particularly the Bridgnorth Place plan area. I consider that meeting the minimum requirement under the Standard Methodology for housing needs assessment (stated in SP2, para 3.5 to be 25,894 dwellings over the plan period) would be sufficient for Shropshire Council to meet its obligations and that at target close to that should be adopted. I would support this figure being reviewed in 5 years time. I note that in reviewing this calculated value, following NPPF guidance that this figure is based upon a baseline value average which has been backdated to 2016 then extrapolated to the end of the plan period. There is no evidence that the calculation accounts for the start date being 2020 for the forward looking need. It is unclear how the overall figure of 30800 has been proposed and I find this to be unsound. The corresponding supporting document is incorrect in stating that the 2014 and 2016 ONS data gives the same baseline projection, this document is Unsound in terms of supporting evidence.
A0508B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Policy SP2 sets out the Council's strategic approach to new development across the County over the Plan Period confirming that 30,800 dwellings and 300 hectares of employment land will be delivered. MPG object to the proposed housing requirement of 30,800 and consider that it is too low and should be increased for the following reasons: 1. Uplift of housing requirement is not sufficient to respond to worsening market signals. 2. Failing to meet the needs of the Black Country with additional allocations so not meeting requirements of duty to cooperate with authorities in the Black Country Greater Birmingham HMA; 3. Standard method of calculating housing fails to take account of current government consultation which suggests national housing growth needs to rise from 241,000 annually to 300,000.
A0513B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Policy SP2 sets out the anticipated levels of growth that will be delivered over the plan period. Criterion 3 relates to the provision of affordable housing indicated that of the total housing requirement approximately 25% (7,700 dwellings) will be provided during the local plan period. It is unclear how this total has been calculated and whether it is realistic given that Policy DP3 – Provision of Affordable Housing seeks a range of 10-20% provision. As a result, the 25% figure quoted in Policy SP2 cannot be justified and should be reduced accordingly. The Site is controlled under a single ownership and as such is immediately available to contribute towards the identified housing need. The Site represents a viable and deliverable option which can be brought forward within the short term (0-5) years.
A0516B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Housing requirement of 30,800 is too high. Seems to be based on a predicted housing boom which is unlikely due to pandemic. Urges Council to reconsider and set a target more realistic for Shropshire
A0549B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Disagree that there is a need to accommodate housing numbers from the Black Country. Shropshire Council is only in it for the money.
A0573B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Support SP2(5) to deliver a sustainable pattern of development and to focus on principal and key centres. Support SP2(2) and para 3.17 to deliver an employment requirement of 300 hectares and to encourage appropriately located and high quality new employment development to achieve the aspirations of the Economic Growth Strategy. This conforms to NPPF para 80 for significant weight to be placed on the need to support economic growth and productivity taking into account local business needs and wider development opportunities. Support the Shropshire Employment Land Review evidence for Shifnal as a significant Key Centre that contributes towards the strategic growth objectives of the east of the County and employment allocations SHF018b & SHF018d reflect this significant role and housing growth must also optimise opportunities for local living, local patterns of live-work. Housing Need - should be viewed in the context of the guidance on the standard methodology in NPPG as a formula to identify the minimum number of homes expected to be planning for. SP2 and para 3.5 identifies the housing need to be 1,177dpa and the housing requirement puts the delivery of housing to 1,400dpa. The draft standard methodology would then put the need figure to 2,129dpa and would exceed the SP2 housing requirement as a minimum figure albeit policy constraints to be applied to the methodology may reduce the revised housing need figure. In the Shropshire Green Belt, there has been no revision to national Green Belt policy and so, to achieve the government objective to significantly boost housing supply, exceptional circumstances must be applied to identify the supply of land to deliver the necessary scale of development land. The Shropshire Local Plan must therefore use the exceptional circumstances to allocate or safeguard a sufficient supply of land for housing development. Black Country Unmet Need - Shropshire represents a preferred location to meet this need because it is undertaking a current local plan review and is physically close to the Black Country unlike many other West Midland authorities. Shropshire will accept 1,500 dwellings of this need as set out in the Shropshire Exceptional Circumstances evidence. Shropshire fails to state where the development will be located but states the settlements of the M54/A5 and to the east of Shropshire will play a key role in the delivery of this housing. Whilst the uncertainty regarding Duty to Co-operate may affect sub-regional planning, housing need in Shropshire will increase and strategically scaled development like Shifnal East will remain important. Shropshire must therefore meet the challenge of providing sufficient land to deliver housing growth of over 2,000dpa with a revised standard methodology. Reliance on Windfalls - The 5 Year Housing Land Supply Statement recognises that windfalls are a significant component of Shropshire's housing supply particularly brownfield sites, infilling and conversions. Changing environmental and economic circumstances will affect the supply of brownfield sites and these may not be located in areas of greatest housing need like Shifnal. The reliance on windfalls can be reduced by allocating site SHF032 and safeguarding site SHF18c which will ensure housing is delivered where it is most needed especially as rural conversions are unlikely in the Green Belt. Covid-19 Impacts - this might affect the short, medium and long term delivery of housing due to the short term impact on construction and the longer term impact on GDP. This impact on the housing pipeline will require greater flexibility and this is noted in some recent appeal decisions. This would suggest a number of risks from Covid-19 including capacity of the construction industry, supply chain issues for developers, access to investment funding likely to affect the delivery of allocations, permissions and the negotiations of S106 commitments. This may affect the ability to conform to delivery tests in the NPPF and require delivery assumptions in Monitoring Reports and 5 Year Housing Land Supply Statement to be revised. Local Plans must maximise housing development in strategic and sustainable locations and account for sufficient flexibility in assumed delivery rates. Site SHF032 in Shifnal is readily available and deliverable when released from the Green Belt and site SHF018c has the potential to be safeguarded and brought early if there is an immediate requirement for housing land.
A0600B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with the new dwellings target for the plan period. Previous consultations suggest members of the public, Town and Parish Councils and Local and National interest Groups preferred a lower target (CPRE analysis). The public preference for a lower rate should be respected and the lower rate would also be beneficial for the people of Shropshire
A0615B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Don't agree that Shropshire Housing requirement is correct, and should be lower. Accommodating 1500 dwellings from the Black Country should be removed from the plan. The numbers will also be affected by the Covid-19 pandemic will also have significant short term impact on demand and construction. By the next partial review the repercussions of the pandemic will be clearer and a new target can be reviewed then, until then a moderate growth target of 5% above identified need is appropriate
A0616B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Don't agree that Shropshire Housing requirement is correct, and should be lower. Accommodating 1500 dwellings from the Black Country should be removed from the plan. The numbers will also be affected by the Covid-19 pandemic will also have significant short term impact on demand and construction. By the next partial review the repercussions of the pandemic will be clearer and a new target can be reviewed then, until then a moderate growth target of 5% above identified need is appropriate
A0627B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Incorporating 1500 Black Country homes should be closer to that region. The economic fluctuations between now and 2038 means that the Plan will be out of date soon. Covid effects not taken into account - Housing targets should be looked at then - after the affects of the pandemic are clearer. Should be 'Moderate Growth,' not High Growth.
A0633B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This target is 19% in excess of the identified need of 25,894 for Shropshire. The incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire. Both of these factors increase the risk of an "out of date" Plan due to economic fluctuations between now and 2038. Effect of Covid-19 is unknown. An "out of date" Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of "Right Homes in Right Place" in the Draft Housing Strategy 2020-2025. In view of the changed world circumstances we would again ask that the 15% "High Growth" Target is reconsidered by the Council, and changed to a more deliverable "Moderate Growth" 5% above identified needs to avoid a potential "out of date" Plan in the coming years. This will increase pressures on settlements across the county for the supply of 'out of county' needs unless sites or location close to that region can be identified. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A0642B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	We disagree with the adoption of a higher than required level of house building: this is not what the people of Shropshire say that they want when they are consulted. How many of the 30,800 new homes will be located within 200m of a bus stop with a 7 day per week service and what is the likely trip generation by car (trips per day by car per household x 30,800)? We agree that development in town centres should be the main focus as this is the most sustainable way for people to live. However, the plan does not outline how the significant issue of under occupancy should be dealt with. This has significant potential to address the need for housing if addressed strategically. The details of the individual places plans suggest that there will still be very significant amounts of edge of town, car dependent development which, in turn, will worsen traffic congestion and climate change impacts. Point 5b: Not all Principal and Key Centres are equal in their ability to accommodate sustainable growth. Point 7: We welcome this change as our experience to date has been that Shropshire Council has obstructed all attempts to develop such plans. The local plan needs to set out how the council will support such plans - what resources will be made available?
A0642B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.17 The purpose of the local plan is surely to achieve sustainable development (as required by NPPF) not to achieve the aspirations of the Economic Growth Strategy.
A0642B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.26 (b) We question the ability for this strategic corridor to deliver true sustainable economic growth in the absence of a clear policy of promoting sustainable transport.

Page 12

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0665B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		This objection relates to parts 2 and 5 of Policy SP2. SP2 2: This says the housing requirement for Shropshire is 30,800 dwellings based on an actual need of 25,894 dwellings. In addition 1,500 homes are to be built as part of the Black Country's specific needs. I have two issues with the housing requirement. Firstly, I have read that the shortfall for the Greater Birmingham and Black Country Housing Market Area is now only 2,597 up to 2031, and from what I can gather is likely to disappear completely in the near future because of all the brownfield sites being developed in the conurbation. Although there could be some shortfall post-2031, this will only be known once the new Birmingham and Black Country plans proceed. Therefore there is no justification for Shropshire to take 1,500 dwellings from the Black Country. If there is a small number of homes that need to be taken from the Black Country then it is those councils who neighbour the Black Country that should have them. I do not think it is correct for Shropshire to take any of their houses for the time between 2031 and 2038 either because there is absolutely no way to know today whether the Black Country will have a problem in the future, and if they do, how much of one. Any thoughts of accommodating any of their homes is a job for Shropshire's next local plan. Consequently, as a starting point the local plan should reduce the housing number by 1,500 dwellings to 29,300. Secondly, there is no reason why Shropshire should go above their own need figure of 25,894. I am acutely aware of what might be coming around the corner for Shropshire if the government get their way with changes to the planning system. There will be a massive increase in houses so the council should keep to their own need figure down for the moment rather than over supply now and then end up with a massive increase over the next 20 years as well. Therefore, the housing requirement should be further reduced down from 29,300 to 25,894 dwellings. Aside from the actual housing requirement, if the council are slow with getting on with this current draft plan they might find they get the massive housing increase earlier than they thought. The government has given councils some time to get current draft plans progressed and Shropshire must use this and get it submitted as soon as possible. If not I can only imagine how local people will vote in the next council elections. SP2 5: SP2 5b says Principal Centres will accommodate significant new housing. The policy does not quantify what 'significant' actually means and therefore it is inappropriate to use the word as it is unclear what is meant by it. I note there is no reference to 'significant' in 5c even though those two sites alone are due to deliver 1,750 dwellings.
A0678B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Recognise the sustainable merits of a balanced approach to development, recognising the role of the higher order and most sustainable settlements but also the importance of rural areas and the part these settlement can continue to play in delivering housing and, in turn, providing vitality to communities. Owing to the existing service offer, support identification of St Martins as a Community Hub settlement, under Schedule SP2.2. Also support Bullet 6 of the draft policy which enables sustainable development in Community Hubs.
A0685B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Is supported especially point 6 which properly notes and accepts the fact regarding the 'rurality' of Shropshire and the 'importance of ensuring the long-term sustainability of rural communities' and that 'growth in urban areas will be complemented by appropriate new development within Community Hubs.' Point 7 is also supported as it says: 'The production of formal Neighbourhood Plans will be supported and can identify development opportunities which will complement proposals in this Local Plan. Where appropriate they can also identify additional Community Clusters.'
A0693B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Where possible, Brownfield Sites should be used in order to protect the Green Belt.
A0696B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Don't know / no opinion	Ambitions for Net Zero Carbon emissions (considering all greenhouse gases as carbon equivalent) and a low carbon economy should be clear within the draft policy Part 2 of the draft Policy should include that renewables are considered by Neighbourhood Plans and Local Plans. Those already in place should be reviewed and updated. Details of possible areas for renewables should be provided and Applications for schemes considered inline with National policies should be allowed. Marches LEP Energy Strategy has a target for 50% of electricity demand to be provided by locally produced renewable energy. Welcome the support shown for community energy projects.
A0697B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Do not object to the calculation of Local Housing Need (25,894), however do object to the resultant housing requirement (30,800) as: -The Local Housing Need Assessment is based on the 2014-based sub-national household projections (SNHP) as per national guidance. However, whilst comparison to the 2016-based SNHP is provided no such comparison is provided for the recently published 2018-based SNHP. The 2018-based SNHP protect very different household growth for Shropshire over coming years. Applying the current standard method to the 2018-based SNHP results in a housing need of 2,159 dwellings per annum (47,498 dwellings over the total plan period). This indicates a marked change in household growth in Shropshire not captured in the 2014 or 2016-based SNHP. Recognise the difference (some 21,604 dwellings) should not necessarily be accepted at face value, however increases in dwelling stock since 2014 and figures on housing completions since 2016 would cause higher in-migration/lower out-migration and also indicate a level of future growth in this region should not be considered unreasonable. The 2014-based SNHP applied in the current standard method are based on trends markedly different to those since the beginning of the draft Local Plan period (2016), these are more effectively captured in the 2018-based SNHP. Also, a revised methodology for calculating local housing need was proposed in the Changes to the Planning System consultation. If introduced and applied need in Shropshire would be 2,129 dwellings per annum. Therefore whilst acknowledging that the Council has applied national guidance in calculating housing need, greater recognition/consideration should be given to the 2018-based SNHP when determining an appropriate housing requirement, given they indicate different trends to the 2014-based SNHP and in the context of imminent changes to national guidance. The proposed housing requirement is not supported and does not represent a high growth strategy, it is actually a decline, as it is less than the trend since the start of the draft Local Plan period (1,876 dwellings) and less than need calculated using the 2018-based SNHP. - National guidance states that local housing need is a 'minimum' and is not a requirement. Factors that may justify an adjustment need consideration. - Full consideration of the contribution that the housing requirement makes to addressing affordable housing need has not been undertaken. This need (previously 1,240 dwellings per annum and updated to 799 dwellings (presumably within SHMA Part 2 which could not be located) whilst reduced is high and the Council's approach to addressing the need for affordable housing is insufficient to make any meaningful contribution towards addressing the scale of the problem facing local people in accessing suitable housing that they can afford, as this draft policy states a specific target for affordable housing delivery of some 7,700 dwellings over the plan period (equating to 25% of all housing), however it is unclear how this has been derived or will be achieved and this represents less than half of the stated need of some 799 dwellings per annum (17,578 dwellings total). Additionally, there has been persistent under-delivery of affordable housing between 2010 and 2017 (the average is some 244 dwellings per annum equating to around 30% of affordable need. In this context not enough is being done to address current and future affordable housing need in determining the proposed housing requirement. Suggest this is addressed by increasing the supply of land in locations deemed to be sustainable and on sites that are considered to be deliverable, in particular ALB014. For these reasons the draft housing requirement should be increased and additional sites identified to address local housing need - particularly for affordable housing. Albrighton should be a focus for this additional growth and site ALB014 provides a suitably sustainable location to accommodate additional development within the settlement. This provides further support and justification for release of ALB014 from the Green Belt and its specific allocation for residential development, rather than the current proposal to safeguard the site for consideration beyond 2038. Note that the proposed distribution of growth remains generally consistent with that previously proposed and maintains Albrighton as a Key Centre. However concerned with this approach and the level of development proposed for Albrighton (see comments on Policy S1.1). Particularly concerned regarding emphasis being placed on rural areas where 26% of the total amount of development is proposed to occur, compared to just 18% in Key Centres (including Albrighton) acknowledged as more sustainable locations. This distribution does not fit with an 'urban focused' strategy and is illogical in that it directs development away from settlements accepted as being more sustainable. As a result, the residential guideline proposed for Albrighton is constrained to fit with the proposed strategy distribution, rather than reflecting the opportunities that exist through the Plan to deliver additional growth in the most sustainable parts of the Borough. This is exacerbated by a lack of consistency between the housing and economic strategies underpinning the distribution of growth in Shropshire, with employment distribution addressed in draft Policies SP10 and DP9, which prioritises investment in strategic locations and growth zones along strategic corridors. Such corridors include the Eastern Belt M54/A5/A41/A464/A5 and A454/A458, Albrighton is one of only two settlements located directly within this corridor to the west of the conurbation, alongside Shifnal (which is planned to deliver significantly more growth than Albrighton). Albrighton should therefore be treated differently to the other Key Centres given its strategic location close to the conurbation. The draft strategy proposes to limit growth in Albrighton to meet local needs only, this fails to recognise the contribution Albrighton can make to addressing wider housing and economic priorities and is a missed opportunity. The total supply of housing outlined in Appendix 5 of the Draft Local Plan totals only 28,802 dwellings, meaning a shortfall of around 2,000 dwellings against the housing requirement, which has not been acknowledged or accounted for. To reduce this disparity additional allocations in locations capable of delivering sustainable growth and which fit with the distribution strategy and help deliver the wider economic agenda (such as Albrighton) should be made, rather than relying on unknown windfall. Support the approach of treating strategic sites separate for other supply. Note the Council indicate general support for meeting unmet needs arising in the conurbation. Broadly support this intention. However, whilst reference is made to accepting 1,500 dwellings it is not explained how this will be distributed across Shropshire. Those sites 'assigned' to meet this additional need should be based on a sequential approach favouring sites deemed sustainable and deliverable and in proximity/accessible to the Black Country conurbation by public transport. Sites in east Shropshire and situated along the A41/M54/A5 corridor are considered most appropriate.
A0838B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 3.5 and 3.6: Disagree with number of new dwellings required as being 30,800 as local housing need identified 25,894 requirement. Has housing need been reviewed since 2019 when climate emergency declared. Concern about CO2 production as a result of the increased transport and domestic heating along with the loss of habitats. Concerned about impact on infrastructure. Concerned about patterns of living changing in the light of pandemic and home working, the value of open spaces and wildlife near to home. Asking Shropshire Council to look again the scale of development.
A0853B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Object to the housing requirement of 30,800 dwellings (1,400dwellings/annum) in SP2(2) as this requirement appears to be too low compared to the need for housing in Shropshire under the Government's proposed changes to the standard method. The Government's consultation on proposed changes to the standard method for calculating local housing need results in a significantly higher housing need figure at 2,129dwellings/annum than is currently being taken forward at a rate of 1,400 dwellings/annum. However, given that the Council is at an advanced stage of plan preparation, to await the revised Framework / standard method before proceeding would significantly delay the adoption of the plan and risk suppressing rather than accelerating housing delivery in the County. The only logical option is to proceed to submission and adopt this plan as quickly as possible, and to allocate sites (particularly those which can deliver in the short term) to meet housing needs now. The Local Plan Review may ultimately need to be reviewed soon after adoption to take into account the new methodology and any other changes to national planning policy, as proposed through the recent White Paper. Nevertheless, the plan represents a clear opportunity to boost the supply of housing land in the short term, and any such allocations would contribute to meeting housing needs in the future should they be increased.
A0853B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to the use of the word 'around' in SP2(2) that sets a requirement to deliver 'around' 30,800 new dwellings and around 300 hectares of employment land over the plan period from 2016 to 2038. This equates to 'around' 1,400 dwellings and 15ha of employment land per annum. NPPF paragraph 59 sets a requirement to 'boost significantly' the supply of housing land and the housing requirement should be expressed as a minimum. The Draft plan states in paragraph 3.6 that a housing requirement of 30,800 dwellings is necessary to meet housing need and support the long-term sustainability of the County, and to provide flexibility to respond to rapid change as required under the Framework. Paragraph 3.7 clarifies that the requirement also incorporates 1,500 dwellings to support the housing needs of the emerging Black Country Plan. In this context, and the ongoing policy imperative to boost significantly the supply of housing land, we consider that the housing requirement must be expressed as a minimum figure.
A0853B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to the omission of a housing trajectory in the main body of the Plan as part of SP2. Paragraphs 3.10 and 3.11 of the draft plan indicate that housing delivery is likely to be around 1,400 dwellings per annum. However, the trajectories referred to within the supporting text and Appendix 7 of the plan do not appear within the plan itself. In accordance with paragraph 73 of the Framework, a trajectory should be prepared and included within the plan so that performance against the housing requirement can be monitored. Appendices 5 and 7 of the plan provide information on the distribution of housing and the proposed timescales for delivery on the site allocations, but it is not possible to establish a detailed trajectory from this information. Notwithstanding, our overall concern is that the total housing supply identified in Appendix 5 only amounts to approximately 27,750 dwellings. The proposed strategic settlements are identified to deliver a further 1,750 dwellings, however this still leaves a shortfall of approximately 1,300 dwellings (i.e. just under 1 years' worth of supply). Even if this shortfall can be accounted for through other rural windfall completions / windfalls, there does not appear to be any flexibility within the supply to deal with rapid change.
A0853B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Market Drayton is identified as a Principal Centre, alongside Bridgnorth, Ludlow, Oswestry and Whitchurch. This reflects the credentials of Market Drayton as a sustainable location for accommodating growth, and the settlement hierarchy set out at Schedule SP2.1 is clearly justified by the Hierarchy of Settlements report (August 2020). We therefore support the designation of Market Drayton as a Principal Centre. However, we consider that Market Drayton could accommodate a greater proportion of development than is currently proposed in the draft plan.
A0888B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	See wider response.
A0894B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to Policy SP2 as the proposed 30,800 dwellings requirement uses the 2014-based household projections predicting 147,635 households in Shropshire. This does not conform to the new standard methodology using the 2018-based household projections predicting 171,876 households in Shropshire requiring a higher housing requirement of at least 46,700 dwellings. If the higher requirement is not used then the Local Plan will have very short lifespan. The methodology uses a higher starting point for households at 135,452 (not 123,886 households) and higher growth (26.9%) over the period to 2038. The standard methodology calculates the housing requirement on annual household growth over a 10 year household projection (1,741 households/year in Shropshire) multiplied by an adjustment factor (1.22). For Shropshire this gives a revised annual requirement of 2.124 dwellings/year compared with the Local Plan requirement of 1,400 dwellings/year. The shortfall in the Plan will be a major concern for the Examining Inspector irrespective of transitional arrangements for the new standard methodology. This will become clear in the proposed new Housing Delivery Test introduced through proposed changes to the planning system to substantially boost the supply of housing in England.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0894B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Object to Policy SP2 on the basis of the evidence for the delivery of the housing requirement in the Local Plan. This requires more land to be allocated in the most viable parts of the County to overcome the evidence that the Local Plan draft policies and CIL obligations render most sites either unviable or marginally viable. [INFORMATION DUPLICATED IN A0894B4 FOR POLICY S7.1 CRAVEN ARMS] The conclusions of the Delivery and Viability Study show the Local Plan cannot pass the effective test of soundness unless the housing supply delivers more smaller greenfield sites that have better viability. These sites also need to be provided in the higher values areas of the Shropshire housing market. This will include Craven Arms with relatively good development values for 3 - 4 bed homes that are higher than Shrewsbury, Bridgnorth, Shifnal and Albrighton and higher than the northern market towns. This will help to focus market attention on greenfield sites in region of 30 dwellings which are more attractive to the market than greenfield sites in the region of 250 dwellings which describes the principal housing allocation in Craven Arms. Craven Arms would also benefit from the allocation of some additional smaller greenfield sites to attract market development interest into the settlement.
A0895B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Fletcher Homes supports the SP2 policy aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" however part 2 of Policy SP2 undermines this in its low aspiration for only 1,400 dwellings per annum. This amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. The figure of 1,400 dwellings per annum is significantly lower than the 2018 based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. We question whether this is sufficient to demonstrate consistency with the Framework and the Duty to Co-operate. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, deleting the current housing target of "around 30,800 dwellings" and replacing it with "at least 46,700 new dwellings" over 22 years 2016-2038. There is a danger that the Plan will fail to be consistent with the National Planning Policy Framework, specifically the requirement in paragraph 60 to determine the minimum number of homes needed using the standard method in national planning guidance. The Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this figure to 2,124 households per annum. The policy's housing requirement of 1,400 dwellings per annum is only 66% of the housing requirement using the Government's proposed new standard methodology. The Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost the delivery of housing. The Housing Delivery Test is expected to play an increasingly significant role and failure to address the latest household projections will leave Shropshire Council vulnerable to falling foul of the Housing Delivery Test. In the short term, the Plan may or may not benefit from transitional arrangements, but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Paragraph 60 of the Framework also states, "In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." We note that the Association of Black Country Authorities wrote to Shropshire Council on 9th September 2019 and re-iterated their request that Shropshire's Local Plan help provide for their identified unmet need for 26,000 homes over the period to 2038. In response paragraph 3.7 of the draft Plan attributes 1,500 dwellings of Shropshire's housing target to support the housing needs of the emerging Black Country Plan.
A0896B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Galliers Homes support the aspiration in Policy SP2 to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable". Galliers Homes object to Policy SP2(2) which only seeks a low aspiration for 1,400 dwellings per annum. This is reduction in the housing in the Core Strategy for 1,530 dwellings per annum from 2021. The figure of 1,400 dwellings per annum is also lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. The Plan may fail to be consistent with NPPF para 60 that requires Local Plans to determine the minimum number of homes needed using the standard method in NPPG. The Government's current consultation proposes changes to the standard method to apply the 2018-based household projections and apply an affordability adjustment that would increase this local housing need to 2,124 households per annum. The policy's housing requirement of 1,400 dwellings per annum is only 66% of the housing requirement using the Government's proposed new standard methodology. The Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost the delivery of housing. The Housing Delivery Test is expected to play an increasingly significant role. In the short term, the Plan may or may not benefit from transitional arrangements but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Paragraph 60 of the Framework states, "In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." We note that the Association of Black Country Authorities wrote to Shropshire Council on 9th September 2019 and re-iterated their request that Shropshire's Local Plan help provide for their identified unmet need for 26,000 homes over the period to 2038. In response paragraph 3.7 of the draft Plan attributes 1,500 dwellings of Shropshire's housing target to support the housing needs of the emerging Black Country Plan. We question whether this is sufficient to demonstrate consistency with the Framework and the Duty to Co-operate. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of 30,800 with at least 46,700 new dwellings over 22 years 2016-2038.
A0897B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Support the draft Policy's aspiration to accommodate "investment and new development that contributes to meeting needs and making its settlements more sustainable". However part 2 of the draft Policy undermines this in its low aspiration for only 1,400 dwellings per annum. This amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. 1,400 dwellings per annum is also significantly lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Draft Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. Risk that the Plan is inconsistent with para 60 of the NPPF on determining the minimum number of homes needed using the standard method in national planning guidance. Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this local housing need to 2,124 households per annum in Shropshire. The draft policy's housing requirement of 1,400 dwellings per annum is only 66% of the housing requirement using Government's proposed new standard methodology. Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost housing delivery. The Housing Delivery Test is expected to play an increasingly significant role. In the short term, the Plan may or may not benefit from transitional arrangements but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to reconsider its housing requirement in light of the Government's recent consultations on changes to the NPPF and its direction of travel to increase housing delivery across the country. Para 60 of the NPPF also requires consideration of cross-boundary needs. Note that the Association of Black Country Authorities wrote to Shropshire Council requesting help delivering their identified unmet need for 26,000 homes over the period to 2038. In response para 3.7 of the draft Local Plan attributes 1,500 dwellings of Shropshire's housing target to supporting housing needs of the emerging Black Country Plan. Question whether this is sufficient to demonstrate consistency with the NPPF and the Duty to Co-operate. Draft Policy SP2 would be more resilient if the housing requirement is increased to reflect latest household projections and affordability data, replacing the current housing target of 30,800 with at least 46,700 new dwellings over 22 years 2016-2038. Welcome inclusion of RAF Cosford as an area in which to focus growth in section 5d of the draft Policy. Para 3.26 explains the draft Local Plan responds to the Economic Growth Strategy for Shropshire by prioritising growth zones including the M54 corridor. The implications for Albrighton are considered in our comments to Policy S1.1 Albrighton Support the strategy of directing development to Principal and Key Centres in section 5b of this draft Policy, as a strategy that will deliver sustainably located development. Support designation of Albrighton as a Key Centre, given its location on the M54 corridor.
A0900B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Sansaw Estate supports the policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable". The Estate's long-term vision for Hadnall matches the Local Plan's vision in this regard, given Hadnall's strategic location on the A49 corridor with excellent connections to a wide range of employment opportunities both in the rural area (e.g. the Sansaw Business Park) and in north Shrewsbury. We consider part 2 of Policy SP2 undermines its own aims to meet the county's needs because its proposals for only 1,400 dwellings per annum amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. The figure of 1,400 dwellings per annum is significantly lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, deleting the current housing target of "around 30,800 dwellings" and replacing it with "at least 46,700 new dwellings" over 22 years 2016-2038. Sansaw Estate encourage the Council to have the vision needed to transform Shropshire's rural settlements into vibrant places that deliver a sustainable rural future for the 21st century. The Coronavirus pandemic has highlighted the potential for radical change in the economy, with many companies and individuals considering new ways of working that are well suited to sustainable rural living. To reflect the new housing requirement and embed a vision for sustainable rural futures, the Sansaw Estate suggest that SP2(6) is amended to insert the words "and visionary rural transformation" to read: "Recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in urban areas will be complemented by appropriate new development and visionary rural transformation within Community Hubs, identified in Schedule SP2.2, which are considered significant rural service centres..." These two changes to policy SP2 should be reflected in the Community Hub policies, including policy S17.2 in relation to Hadnall to accommodate a higher residential guideline figure of 250 dwellings.
A0900B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Sansaw Estate welcomes the Plan's acknowledgement of Whole Estate Plans in managing land. We support their use by the Council as a material consideration in circumstances where the Whole Estate Plan complements the Local Plan. The value of Whole Estate Plans is that they can help to articulate, explain and demonstrate 'other material circumstances' relating to proposals, adding weight in the planning balance and enabling outcomes that deliver real value across multiple strategic objectives but which might otherwise not have been achievable if judged solely against the policy context of the Local Plan. This has been pioneered and applied effectively in the South Downs National Park and we are delighted to see Shropshire Council reflect this proven approach in their emerging Plan. The Sansaw Estate are developing a Whole Estate Plan. An overview document that sets the scene for the forthcoming Whole Estate Plan accompanies this representation. Page 5 of the 'Enabling Sustainable Rural Futures' document sets out the Estate's emerging thinking for the following locations: Sansaw Dairy; Hardwicke Farm; Black Birches; Hadnall; Clive; Grinshill; Hope Farm; Yorton Farm; Yorton Villa Farm.
A0902B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	The Strategic Approach outlined in Policy SP2 is supported. In particular, the identification of Community Hubs in the rural area, as centres for growth in a sustainable fashion is supported.
A0904B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support Gobowen as a Hub. It is important that other policies in the Plan are framed in such a way to make the delivery of housing and employment proposals straightforward and easily obtainable. This is not always the case and other development management policies should be examined to ensure that unnecessary restrictions on development proposals are not placed in the way of achieving the development that the Plan actually targets.
A0905B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	The general housing strategy for promoting high growth, with nearly 30% of the dwellings in the rural area as set out in Policy SP2, is supported. Focussing rural development in certain named Community Hubs and Community Clusters is accepted as a logical way of ensuring that residential growth is achieved whilst maintaining the character of the rural area. However, many rural settlements that are classified as Community Clusters do not have a nucleated form, and yet are still in need of new development to sustain the community. Villages with a dispersed settlement pattern should not be excluded from the potential benefits from additional development
A0906B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Strategic Approach outlined in Policy SP2 is supported. In particular, the identification of Community Hubs in the rural area, as centres for growth in a sustainable fashion is supported.
A0907B2	Viability and Deliverability of Proposed Site Allocations	Draft Policy SP2	Agree	The basic strategy set out in Policy SP2 is supported in terms of the ambition for high growth in housing and employment. The overall strategy of the hierarchy set out in Policy SP2.5 and .6 is supported, with the emphasis on identifying Community Hubs in the rural area to foster sustainable rural communities.
A0908B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	SP2 is to provide for around 30,800 dwellings in the County by 2038 this is supported. The identification of certain villages as Community Hubs is therefore, supported, in particular Bucknell as identified in Schedule SP2.2. However, having identified certain villages as being suitable in their role as "significant rural service centres", it is important that other policies in the Plan are framed in such a way as to make the delivery of these housing and employment proposals, straightforward and easily obtainable. This is not always the case and other development management policies should be examined to ensure that unnecessary restrictions on development proposals are not placed in the way of achieving the development that the Plan actually targets.
A0909B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Council was aiming for an "Urban Focus" to their proposed distribution of housing development in the County. The target figure for housing growth was 28,750 dwellings at 2016 – 2036. Now extended to 2038, and the target housing figure increased to 30,800. However, the "Residential Guideline" for Shrewsbury – the main urban area in the County has remained at 8,625 houses. To maintain a 30% share of the required housing, this figure would be 9,240, and so the strategy upon which the development guideline for Shrewsbury as set out in Policy S.16 is, in consistent with the earlier stated aim of achieving an urban focus. The additional housing requirement has been to a greater degree to the rural areas of the County. SP2 is inconsistent with the strategy explained in earlier consultation exercises, and does not follow the urban focus which is said to be at the heart of the Plan. This apparent anomaly could be rectified by allocating more land, preferably on additional sites in Shrewsbury. As it stands the allocations may not meet the housing needs of the town to 2038.
A0910B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	The overall strategy of the hierarchy set out in Policy SP2.5 and .6 is supported, with the emphasis on identifying Community Hubs and Community Clusters as the focus for the development of sustainable communities in the rural area. However, whilst the overall strategy might be appropriate, the manner in which the settlements in the rural area have been categorised is not. The Council has devised a points scoring system, which, in itself, is not necessarily a bad idea and it is noted that it has been accepted at other points in the Local Plan process but, as it takes no account of the current function and level of sustainability of the villages in the County, it cannot be fully supported.

Page 14

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0911B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Representation on behalf of Hobbins Management Company covering a range of Policies relating to Bridgnorth. Broadly in support of the policies, but stress that the policy position doesn't appear to have been followed in setting the allocation of employment land at Stanmore. The basic aim of Policy SP2 is supported. However, the estimated need for 300 hectares of employment land, appears to be much more of an aspirational target rather than one that is actually based on identified need This is certainly the case in relation to the proposed allocation of two sites at Stanmore (totalling 11.4 ha) - a settlement that has no need for further employment provision. The emphasis in the Local Plan Review is very much meeting local need, and even if the proposed allocations at Stanmore are intended to cater for Bridgnorth town rather than the rural area in which it is situated, it remains clear that the Stanmore sites are unnecessary, given the amount of currently available but undeveloped or unused employment land in Bridgnorth. The aim of Policy SP2.6, then, is supported. It is clear that this Policy does not support the proposed allocation of 11.4 ha of unneeded employment land at Stanmore, and the type of employment provision being proposed by the Council is not "appropriate rural employment" or any form of "diversification" of the rural economy.
A0916B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Oswestry as a Principal Centre is also supported as this designation accords with the Local Plan's vision, given Oswestry's role as the second market town in Shropshire and its strategic location on the A5 corridor with excellent connections to the Northern Powerhouse through Cheshire and Mid/ North Wales.
A0919B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Whitchurch as a Principal Centre accords with the Local Plan's vision in this regard, given Whitchurch's size, range of services, facilities and employment opportunities and its strategic location on the A49 corridor, with excellent connections to other English regions to the north.
A0921B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Church Stretton as a Key Centre accords with the Local Plan's vision in this regard, given Church Stretton's strategic location on the A49 corridor with excellent connections to Shrewsbury and adjoining regions. However part 2 of Policy SP2 undermines these aims as it only proposes 1,400 dwellings per annum, which is below the figure set out in the Core Strategy and the 2018 household projection forecast. There is also a danger the plan will fail to be consistent with the NPPF. The Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this figure to 2,124 households per annum. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038. The above change to policy SP2 should be reflected in the Community Hub policies, including policy S5.1 in relation to Church Stretton, which can accommodate a much higher residential guideline figure.
A0922B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. Identification of Elson as a Community Cluster settlement accords with this vision, given Elson's employment opportunities and location on the B5068 (less than 1km from Ellesmere, a Key Centre). However, consider part 2 of draft Policy SP2 undermines the aim to meet the county's needs because it proposes only 1,400 dwellings per annum. This amounts to a reduction of housing numbers compared with the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. It is also significantly lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. There is a danger the Local Plan will fail to be consistent with para 60 of the NPPF regarding use of a standard methodology to calculate the minimum number of homes needed. Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase need to 2,124 households per annum. The draft housing requirement in this policy of 1,400 dwellings per annum is only 66% of the housing requirement using the Government's proposed new standard methodology. Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost the delivery of housing. The Housing Delivery Test is expected to play an increasingly significant role. In the short term, the Plan may or may not benefit from transitional arrangements but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038.
A0923B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Ludlow as a Principal Centre accords with the Local Plan's vision in this regard, given Ludlow's size, range of services, facilities and employment opportunities and its strategic location on the A49 corridor, with excellent connections to other English regions to the south.
A0924B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Edstaston as a Community Cluster settlement accords with the Local Plan's vision in this regard, given Edstaston's limited range of services and facilities and its location on the B5476 just over a mile from Wem, a key service centre for this area of the County. Nonetheless, we consider part 2 of Policy SP2 undermines its own aims to meet the county's needs because its proposals for only 1,400 dwellings per annum amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. The figure of 1,400 dwellings per annum is significantly lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. There is a danger that the Plan will fail to be consistent with the National Planning Policy Framework, specifically the requirement in paragraph 60 to determine the minimum number of homes needed using the standard method in national planning guidance. The Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this figure to 2,124 households per annum. The policy's housing requirement of 1,400 dwellings per annum is only 66% of the housing requirement using the Government's proposed new standard methodology. The Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost the delivery of housing. The Housing Delivery Test is expected to play an increasingly significant role. In the short term, the Plan may or may not benefit from transitional arrangements but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038.
A0925B1	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Church Stretton as a Key Centre accords with the Local Plan's vision in this regard, given Church Stretton's strategic location on the A49 corridor with excellent connections to Shrewsbury and adjoining regions. Nonetheless, we consider part 2 of Policy SP2 undermines its own aims to meet the county's needs because its proposals for only 1,400 dwellings per annum amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. The figure of 1,400 dwellings per annum is significantly lower than the 2018-based household projections which forecast growth of 1,741 households per annum from 2020 to 2030. Policy SP2 will therefore constrain growth rather than meet Shropshire's housing needs. There is a danger that the Plan will fail to be consistent with the National Planning Policy Framework, specifically the requirement in paragraph 60 to determine the minimum number of homes needed using the standard method in national planning guidance. The Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this figure to 2,124 households per annum. The policy's housing requirement of 1,400 dwellings per annum is only 66% of the housing requirement using the Government's proposed new standard methodology. The Government's 'Planning for the Future' Policy Paper envisages long-term changes to the planning system to substantially boost the delivery of housing. The Housing Delivery Test is expected to play an increasingly significant role. In the short-term, the Plan may or may not benefit from transitional arrangements but these will not protect Shropshire from higher housing requirements over the medium and long term. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038. The above change to policy SP2 should be reflected in the Key Centre policies, including policy S5.1 in relation to Church Stretton, which can accommodate a much higher residential guideline figure.
A0928B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Previous representations have been submitted on behalf of Taylor Wimpey and Persimmon Homes in respect of earlier consultation on the Preferred Scale and Distribution Strategy. Context here must recognise a fundamental aspects of government policy and initiatives are to seek to boost the supply of housing and support the Government's regularly stated commitment to delivering 300,000 homes a year by the mid-2020s. The Government has been clear for many years, that housebuilding is critical to boosting the country's economic growth. This extends through such statements as "Laying the Foundations; A Housing Strategy for England (November 2011)", "Housing and Growth" a Written Statement to Parliament, (September 2012), and "Fixing the Foundations: Creating a More Prosperous Nation" (July 2015). All contain policies and initiatives which strongly support the necessity for more house building. The Government's Housing White Paper "Fixing Our Broken Housing Market" was a prelude to many of the more recent and on-going planning reforms which are aimed at addressing the housing crisis. The reforms were consulted upon in May 2017. The White Paper explained and continues the now long held commitment by Government to seek to address the challenges in delivering more housing in the country in the context of the aims with the Framework to significantly boost housing supply. The former Prime Minister's Foreword to the White Paper stated "Our broken housing market is one of the greatest barriers to progress in Britain today...The starting point is to build more houses. This will slow the rise in housing costs so that more ordinary working families can afford to buy a home and it will also bring the cost of renting down. We need to build many more houses, of the type people want to live in, in the places they want to live." The Foreword from the Secretary of State confirms "This Country doesn't have enough homes. That's not a personal opinion or political calculation. It's a simple statement of fact." Further, the Secretary of State points out that "For decades the pace of house building has been sluggish at best. As a result, the number of new homes has not kept pace with our growing population. And that, in turn, has created a market that fails to work for far too many people." The Housing White Paper confirmed that further consultation on specific issues would follow its publication, and on the 14th September 2017 the Government consulted on further measures to boost housing supply in England. The consultation document set out the Government's suggested changes to national policy, to help Local Planning Authorities and communities plan for and deliver the homes the country needs. This included: <ul style="list-style-type: none"> a proposed approach for a standard method to calculate local housing need, including transitional arrangements; improving how authorities work together in planning to meet housing and other requirements across boundaries, through the preparation of a statement of common ground; setting out how the new approach to calculating housing need can help authorities plan for the needs of particular groups and to support neighbourhood planning; providing proposals for improving the use of section 106 agreements, by making the use of viability assessments simpler, quicker and more transparent; and seeking further views on how the homes required can be built more quickly. Following the Government's consideration of representations received, much of the above is now embodied within the 2019 National Planning Policy Framework (NPPF) or within new or emerging planning statute and policy. The Government's latest consultation "Planning for the Future" (White Paper) seeks views on its package of proposals to fundamentally reform the planning system in England. The Prime Minister's forward to the "Planning for the Future" White Paper is clear that a principal reason to reform the planning system in England is because 'Thanks to our planning system' there are 'nowhere near enough homes in the right places'. The Secretary of State's forward reiterates the impact that the COVID-19 pandemic is having on delivery of housing, setting out that 'Reforming the planning system isn't a task we undertake lightly, but it is both an overdue and a timely reform. Millions of jobs depend on the construction sector and in every economic recovery, it has played a crucial role.' Its 'Introduction' continues by stating that 'The planning system is central to our most important national challenges: tackling head on the shortage of beautiful, high quality homes and places where people want to live and work... It simply does not lead to enough homes being built, especially in those places where the need for new homes is the highest. Adopted Local Plans, where they are in place, provide for 187,000 homes per year across England – not just significantly below our ambition for 300,000 new homes annually, but also lower than the number of homes delivered last year (over 241,000). The result of long-term and persisting undersupply is that housing is becoming increasingly expensive, including relative to our European neighbours. In Italy, Germany and the Netherlands, you can get twice as much housing space for your money compared to the UK. We need to address the inequalities this has entrenched'. In parallel with the Planning for the Future document, which sets out the Government's plans to undertake a fundamental reform of the planning system, the Government has also issued, in August 2020, a consultation on changes to current planning policy and regulations ('Changes to the current planning system'). This seeks views on a range of proposed changes to the current planning system including the Standard Method for assessing Local Housing Need. The Government's proposed approach seeks to ensure that the Standard Method will deliver the 300,000 new homes a year target, achieve more appropriate distribution of homes, and target more homes into areas where they are least affordable. It is clear from Government and ministerial statements that the Government remains very much committed to substantially increasing the amount of housing as a key component in the wider drive towards continued economic recovery. A revision to the Standard Methodology is key to this and to address its current shortcomings. The concerns of Government, self-evidently, remain about housing delivery and the Government is as committed as ever to addressing the lack of housing supply. This message could scarcely be stronger and its commitment to deliver 300,000 new homes in England per year remains one of the Government's key objectives and a fundamental driver behind the drive to an updated standard method and ongoing reforms to the planning system. This context is a fundamentally important material consideration and backdrop to these representations. These are the principal reason behind many of the reforms that have taken place to planning and sets out a significant context to understanding housing land needs, supply and its aim. The approach is to ensure that housing delivery is used as a tool to positively support and ensure delivery of the homes that people need in line with the Government's objectives to boost supply to significantly greater levels than seen in the past. It is essential that the new Plan provides for an appropriate level of housing. Government policy is advocating a step change in the delivery of new housing. There are significant negative impacts which would result from adopting low levels of housing growth and these must be recognised, not least the significant impact on housing affordability and increased house prices by a lack of supply. Affordability of housing is a factor affecting the Housing Market Area and the need for more affordable housing is well documented through Surveys. In addition to significant impacts on affordability, a low level of housing growth would not meet housing needs, would not support the economic growth aspirations of the vision and could lead to unsustainable patterns of travel with people having to travel further distances between home and work. New housing development supports and enhances new infrastructure and is a way of providing improvements to local social and community infrastructure which would otherwise be difficult to deliver through public sector means. Government policy seeks to ensure that those communities accommodating new development see directly the benefits in improved infrastructure in their communities. Persimmon and Taylor Wimpey believe that the level of housing now being planned for in the Local Plan Review is too low and does not align with the national objective to boost the supply of housing and support the national objectives to build more homes. This is because; <ul style="list-style-type: none"> The Plan proposes to make provision for 30,800 (1400 dpa) new homes over the plan period 2016 to 2038. The level of housing proposed is not sufficient • 1500 homes within this plan requirement are to meet the unmet needs of the Black Country. The Association of Back Country Authorities wrote to the Council in September 2019 confirming they are facing a shortfall of some 26,000 homes over the period to 2038. Shropshire could accommodate a greater proportion of that need. A greater commitment will align accord with the Duty to Cooperate. • Equally it needs to be recognised, in the context that 1500 dwellings of the Local Plan Review housing requirement is to meet some of the unmet needs of the Black Country, the net housing requirement for Shropshire being provided for in the Plan Review is lower at 29,300 (1331 dpa) • The former Core Strategy stepped housing requirement for the period 2021 to 2026 is currently 1530 dpa – rather than boosting supply, the Local Plan Review is reducing annual delivery compared to the current Core Strategy in direct contradiction of the national house building imperative to create a step change in delivery – 1400 dpa is counter intuitive to this aim. • The 2018 household projections published June 2020, Table 406 forecasts growth of 1741 households per annum from 2020 to 2030, such that the Local Plan Review misaligns with this need. • Previous iterations of the Local Plan Review have relied on the Council's own calculation of Full Objective Assessed Needs (FOAN), with additional growth to suggest a "high" level of provision at 1430 dpa. The current draft plan is a reduction of the plan requirement from the previous draft plan. High levels of housing growth were seen by the Council in earlier drafts to support the sustainability of the County and support aspirations to see a positive step change in Shropshire's economy. • Notwithstanding no change to Government Policy since the last consultation on the Local Plan Review, the Council now abandon their "FOAN plus" to now suggest alignment with Local Housing Need using the Standard Methodology (SM) of the Planning Practice Guidance which producing a need of some 25,894 dwellings for the plan period – in doing so however, they fail to recognise the well documented failings of the current SM and the current consultation on a revised SM which results in a housing requirement for the Local Plan Review of 2,124 dwellings per annum or 46,700 for the plan period. Given the obvious deficiency of the current SM, the impending amendment to the SM and the positive direction of government policy, the Council should now embrace the higher figure of the emerging SM and plan for significantly higher levels of growth • Even if the consultation of the revised SM results in a moderated housing requirement than currently consulted upon, it would still be highly likely to be significantly higher than the current Local Plan Review figure. As currently proposed, the current Local Plan Review requirement of 29,300 for Shropshire (excluding the Black Country element) is nearly 40% lower than the emerging SM • In failing to recognise the impending change to the current SM, this will inevitably mean the Local Plan Review will be out of date very quickly and have a limited shelf life, significantly so within 5 years. An early review of the Plan would be inevitable. The Plan should tackle the impending increase in calculated housing need now. • Planning for a significantly greater housing requirement, more aligned with the emergent SM will reduce risk to the Local Plan Review process. The Local Plan Review recognises this risk at paragraph 3.6 stating that in adopting a requirement of 30,800 it provides some flexibility "to respond to changes in LHN". Given however that the emergent SM is some 40% higher than the Local Plan Review requirement, it doesn't plan for any where near sufficient flexibility. This is particularly the case where the Local Plan Review also does not include for any additional reserve sites/allocations, nor does it include any workable flexible policy approach to address changes to SM (see other representations to Policy SP6) • The revised SM is going to come into effect for the purposes of a 5 year land supply calculation within months (given the current Core Strategy housing requirement is over 5 year

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0935B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Despite its strategically advantageous location close to the West Midlands and the objectives of the Shropshire Economic Growth Strategy to focus growth in the M54 Strategic Growth Corridor, the east of the County has a relatively limited pipeline supply of employment land. These are the most well connected and commercially attractive parts of the County. Other parts of the County do not offer the same strategic economic potential.</p> <p>The West Midlands Combined Authority (WMCA) Strategic Economic Plan (SEP), Midlands Connect, the Marches Strategic Economic Plan SEP, the Shropshire Economic Growth Strategy and the M54 Corridor Study/Employment Land Review all recognise the key role that Strategic Transport Corridors play in meeting growth aspirations of the area.</p> <p>It is understood that the Council has commissioned an infrastructure capacity assessment for the M54 corridor, although this is not yet published. Consider this should include working collaboratively with other local authorities located within the corridor to deliver sustainable growth. It is also noted that a number of proposed infrastructure projects will benefit the M54 corridor, including the M6/M6 Toll Link, West Midlands Rail Freight Interchange, Birmingham to Shrewsbury Rail Service Capacity Improvements and HS2.</p> <p>The current spatial strategy in the draft Local Plan identifies Shifnal as the 'focus for investment, employment, housing and development on the M54/A5 Strategic Corridor' and for the settlement to play a 'key role' in satisfying unmet needs of the neighbouring Association of Black Country Authorities (ABCA). The Plan also proposes a new mixed-use urban extension to the south-west of Bridgnorth which is proposed to deliver 1,050 dwellings and 16ha of employment land. However, consider the contributions that allocations at Shifnal or Bridgnorth could make to meeting growth aspirations of Shropshire's Economic Growth Strategy and serving sub regional or regional market needs is limited, given distance/visibility/access from the strategic road network and available site sizes, these sites are more likely to meet local employment needs only.</p> <p>Consider there is a need for further employment and housing land to be identified in the Draft Local Plan to support the growth aspirations of the County and wider region. This is particularly the case in the functional economic market area around the Black Country, South Staffordshire and east Shropshire.</p> <p>Strategic site promotion (Land at Junction 3 of the M54) submitted within the consultation response. This promotion is supported by an employment needs assessment, illustrative masterplans, updated transport strategy and a site specific Green Belt Review. It was also informed by reference to correspondence from the ABCA to Shropshire Council. The extent of the site is defined by the A5 to north, A41 to east and M54 to south with the western boundary bounded by existing and proposed roads, landscaping and existing woodland of Lizard Wood.</p> <p>The site promotion includes two/four alternative options for the site: The core proposal is as previously promoted and included within the Strategic Sites consultation undertaken by Shropshire Council, with the potential to deliver 50ha of strategic employment land and up to 3,000 homes (on-site facilities including shops, community buildings, medical centre, primary schools, secondary school and over 400ha of open space could also be provided). Alternatively the Strategic Employment Area (SEA) could be either started in advance of a residential component or be completely 'freestanding' without any residential. The SEA could also increase to up to 75ha within the same site boundary, with or without the residential aspect (this increases job opportunities to some 9,100 net additional jobs for new and existing residents). The Employment Needs Assessment undertaken suggests that if a 50ha SEA were developed, it is expected that around 55% of the space could be taken up by B8 uses, 30% by industrial (B1c/B2) activities, and around 15% by primarily office/R&D (B1a/b) space. If the SEA expanded to 75ha, the suggested mix would be 61% B8, 31% industrial (B1c/B2) and 7% freestanding offices/R&D (B1a/b). There is also a strong case to extend the area of the SEA at J3 enhancing its status and its attractiveness to large scale inward investors into the County. These proposals are informed by Covid-19 review on likely long-term changes in how we work and the potential implication on settlement patterns and the need to provide new jobs for displaced industries.</p> <p>Consider that delivery of the SEA has always been a fundamental part of proposals, but is now particularly important in light of the wide-ranging impacts of COVID-19 and Brexit, as it is vital that high quality employment schemes, such as the SEA at J3, are brought forward rapidly in order to support economic recovery. Illustrative masterplans for both options provided as appendices to this representation.</p> <p>Land at Junction 3 of the M54 is on a strategic corridor, fully available, could be delivered quickly, would provide a range of types of jobs and the site promoter aims to create a high quality, sustainable, employment-led proposal. The site has the potential to deliver significant public benefits including between 6,000 to 9,100 net additional jobs for new and existing residents living in nearby towns and villages.</p> <p>Land at Junction 3 of the M54 could benefit the economics of the local area, fully meet growth aspirations of Shropshire's Economic Growth Strategy, meet wider sub-regional/regional strategic needs (supply is particularly acute in ABCA/South Staffordshire which lacks strategic high-quality employment land, as evidenced by the recent Secretary of State decision on the proposed West Midlands Rail Freight Interchange which noted significant need for additional logistics floorspace in the region. This is confirmed within the employment needs assessment undertaken for land at J3 of the M54 which notes increased demand, particularly for large units, from the manufacturing and logistics sectors) and make a meaningful contribution to the ABCA's unmet employment and housing needs (as identified through extensive work undertaken by ABCA - latest estimates are a shortfall of circa 4,500 – 6,500 homes and circa 110 – 330ha of employment land, taking into account capacity of the Black Country urban area, green belt and potential contributions from neighbouring authorities). It is also consistent with Paras 80, 81 and 82 of the NPPF regarding building a strong and competitive economy and the NPPG. It would be complementary and would not compromise any local offer or the aspirations of the Shifnal Place Plan. Object to the strategic approach of the draft Local Plan and consider that as drafted it would not satisfy the Duty to Cooperate, would not meaningfully contribute to meeting the Black Country's unmet housing and employment needs, does not include sites capable of meeting the clearly identified strategic need (east of the County and wider West Midlands) and is at odds with the aims of the Shropshire Economic Growth Strategy and the Strategic Economic Plan for the WMCA to focus growth in the M54 corridor. The need for strategic employment land is particularly important in light of the wide-ranging impacts of COVID-19 and to drive Britain's post-Brexit growth.</p> <p>Green Belt is a major constraint in the West Midlands and East Shropshire preventing the release of greenfield land for employment and inhibiting the ability of the area to meet the economic growth aspirations within the SEPs. Brownfield land is unlikely to provide a sufficient supply of developable land to meet the SEP's ambitions and targets on its own and therefore various green belt reviews across the WMCA area have been undertaken to identify land suitable for development. Consider that there is substantial justification to progress an exceptional circumstances case for the release of Land at J3 of the M54 from the Green Belt and allocate it in the draft Local Plan as a Strategic Site.</p> <p>Land at J3 of the M54 benefits from direct access to the strategic road network and is within 2km of Cosford railway station. This ensures that the site provides an attractive location for commercial operations, providing close links to the other engineering firms and their supply chains across the West Midlands including those at the I54 and T54. Development of Land at J3 of the M54 could complement planned local growth at Shifnal, Albrighton and RAF Cosford. It would also allow direct access into ABCA via the M54 and is therefore well placed to meet cross boundary needs, as noted by ABCA within their response to the Strategic Sites consultation informing Shropshire Council's Local Plan review.</p> <p>Assessment has confirmed there are no insurmountable impediments to delivery of the Site in infrastructure terms and infrastructure improvements would benefit those in the wider area. This includes an updated Transport Strategy which confirms good active travel and public transport connections to key settlements accommodating potential employees on the site. Furthermore any on-site residential would greatly assist self-containment, although with or without on-site residential a sustainable development can be achieved. Public transport links to the site could also be improved and would be of wider benefit.</p> <p>Transport and social infrastructure investment within the M54 corridor is likely to be secured from a range of sources given the degree of alignment with regional and sub-regional economic development strategies. However, land at J3 of the M54 could greatly assist in securing necessary funding for infrastructure projects on the M54.</p> <p><i>Land at J3 of the M54 embeds net zero from the outset to ensure a positive local response to the Council's Climate Change Strategy Framework</i></p>
A0950B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>The housing and employment figures set out in policy SP2 for the period of 2016-2038 are noted, and result in a requirement of around 1,400 new dwellings and 15ha of employment land per annum. In terms of this level of housing delivery, the 'Shropshire Council – Five Year Housing Land Supply Statement' (2019) sets out that over the last 5 years housing completions have reached and surpassed the 1,400 annual figure. However, this has been dependant on non-allocated sites coming forward for development due to the previous lack of a five year housing supply. A number of these sites were on safeguarded land, such as in the northern section of Shifnal (Land North of Haughton Road and Land West of Coppice Green Lane). This highlights the importance of monitoring safeguarded land and releasing it for development so it can contribute to addressing housing need in Shropshire. Such sites were removed from the Green Belt by earlier development plans. This involved consideration of the sites by an Inspector, who concluded that they were appropriate for development, though were not needed to provide the identified housing need at that specific time. The proposed allocation of the currently safeguarded site adjoining Meadow Drive, Shifnal is therefore welcomed. The site is now identified as SHFD13 (Land adjoining Meadow Drive, Shifnal) in the emerging SLP. In terms of Local Housing Need (LHN), Shropshire Council's assessment using the Government's Standard Methodology indicates that as of April 2020 there is a need for 25,894 dwellings over the plan period (2016-2038). As explained in National Planning Policy Guidance, this figure represents the minimum number of homes expected to be planned for, and is therefore a starting point for the delivery of growth in an area. The SLP includes a housing requirement for Shropshire of 30,800 dwellings over the plan period, which Shropshire Council considers to provide flexibility to respond to changes in the Local Housing Need figure over the plan period. However, the additional allowance of 4,906 dwellings over the LHN for the entire plan period of 22 years, is considered to be extremely modest if Shropshire is to meet its wider aspirations for growth. As set out in the Economic Growth Strategy for Shropshire (2017-2021) the Council has a commitment and ambition to grow the local economy of the County through investment. The 300ha of employment land required within the plan period is identified to help drive this growth. However, the provision of additional housing will also be key to promoting growth in the area and supporting the delivery of new employment. The current housing requirement in the adopted Local Plan is 1,370 dwellings per annum. The housing requirement in the emerging plan provides for only 30 dwellings per annum more. This is not considered sufficient to support the economic growth being sought within the County. Requested Change – It is considered that the overall housing requirement identified in the SLP does not represent a boost to the supply of homes in the area, as is required to support the economic growth aspirations of Shropshire Council. A higher housing requirement should be considered by the Council.</p>
A0950B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Explanatory text for policy SP2 states that following joint working with the Black Country Authorities (BCA), Shropshire's housing requirement of 30,800 dwellings incorporates 1,500 dwellings to support the housing needs of the emerging Black Country Plan. Due to the size and location of Shropshire it adjoins twelve other local authorities. However, in terms of the duty to cooperate, as set out in paragraph 2.24 of the SLP, Shropshire does not yet have a statement of common ground with any of its surrounding local planning authorities. Such a document is key to determining whether Shropshire should be accommodating housing need from any of these other local authorities. Shropshire is being asked to absorb overspill from the Black Country, the SLP refers to 'positive conversations' with BCA. The BCA 'considers it presents a unique and once in a generation opportunity to drive forward the realisation of Shropshire's economic growth ambitions and at the same time form part of the strategic solution to meeting housing and employment land needs arising in the Black Country' (BCA letter of 20th Sept 2019). Requested Change – It is crucial that Shropshire Council agrees a Statement of Common Ground with adjoining local planning authorities to provide certainty with regards to the Council's housing delivery position and how it relates to all of its surrounding local planning authorities.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0954B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>SP2 – STRATEGIC APPROACH</p> <p>22. This policy is clear and sets out the strategic approach for Shropshire to enable the delivery of development in a sustainable pattern. New development will be focussed in the urban areas at Shrewsbury (as the strategic centre), Principal and Key Centres, Strategic settlements and RAF Cosford Strategic Site. Place Area Plans, Community Hubs and Community Clusters seeks to set out levels of development for rural areas based upon their sustainability credentials.</p> <p>23. It is particularly welcomed that this policy sets out that over the plan period from 2016-2038 that around 30,800 new dwellings will be delivered; equating to 1400 dwelling per year. This is an increase from 28,750 dwellings identified in the consultations on the Preferred Scale and Distribution of Development Consultation in December 2017 and the Preferred Sites in November 2018. There is a commitment to ensure that sufficient land is available to achieve growth aspirations and that the availability of land will be kept under review to ensure a continuous supply of suitable sites. The policy also sets out that the delivery of affordable housing remains a key priority in Shropshire, with around 7,700 affordable dwellings (equating to 25% of the total housing requirement) to be delivered over the plan period. This site is capable of delivery circa 180 dwellings.</p> <p>24. It is noted that the Council has undertaken an assessment of the Local Housing Need using the Government's Standard Methodology. Paragraph 60 of the NPPF makes it clear that this is a requirement to establish the MINIMUM numbers of homes needed across a local authority area.</p> <p>25. The assessment revealed a housing need of some 25,894 dwellings over the plan period. The Council's housing requirement figure includes an additional uplift this capacity in order to respond positively to the overall "high growth" strategy.</p> <p>26. It is considered that this uplift will further support the delivery of family and affordable housing to support local needs; increase the opportunity for specialist housing and the needs of other groups. The figure of around 30,800 provided in policy SP2 therefore has been identified to provide some flexibility to respond to changes in local housing need over the plan period. This approach will also aid the ability for the Council to respond positively to sustainable development opportunities that are not specifically allocated within the Plan, which is key to enable sites like this to come forward.</p> <p>27. This approach is generally supported but it is queried whether the figure of 25,894 is based on the latest Government's Standard Methodology figures. Lichfield's Assessment of Current local plan requirements, recent housing delivery, current standard method and new standard method by region calculates that there will be a yearly requirement of 2,129 dwellings which equates to a requirement of 46,838 dwellings over the plan period. Representation includes an extract from an article entitled How many homes? The new Standard Method – Lichfield's Website. 28. The Council ought to give the proposed new standard method consideration; it is likely to result in the housing requirement increasing now in order to avoid an early review of the Local Plan once adopted.</p> <p>29. In addition to the points raised above, it is pertinent to note that paragraph 3.7 states that the 30,800 housing requirement figure also includes a provision of 1500 dwellings to support the needs of the emerging Black Country Plan, which is unable to provide for its own housing requirement. The latest evidence (Greater Birmingham and Black Country Housing Market Area Housing Need and Housing Land Supply Position Statement – July 2020) suggests that the Black Country Authorities will have to export somewhere in the region of 29,000 dwellings to surrounding authorities under the Duty to Cooperate. It is also well known that Birmingham has a very significant shortfall.</p> <p>30. Given Shropshire's geographical proximity to Birmingham and the Black Country, it is inevitable that Shropshire will need to play more of a role in accommodating a proportion of this overspill demand, particularly towards the eastern side of the County that is functionally, economically and geographically closer to Birmingham and the Black Country.</p> <p>31. In addition to the housing requirement itself, it is noted that within appendix 5 – Residential Development Guidelines and Residential Supply that the majority of dwellings which make up the housing requirement figure consist of units that have gained permission or prior approval (as of 31st March 2019) (8,005 units) or have previously been allocated within the Site Allocations and Management of Development Plan (SAMDev) and are yet to be granted planning consent (3564 units).</p> <p>32. It is also interesting to note that circa 4,700 dwellings have already been completed. It would appear that the emerging residential site allocations will only provide somewhere in the region of 7592 dwellings over the plan period, which represents only 24% of the housing requirement figure.</p> <p>33. It is risky to rely on the 8000 dwellings that have received consent if the overall figure relies on these dwellings coming forward, being implemented and delivered. Previous experience demonstrates that sites benefitting from permission may not come forward for a variety of reasons; economic, climate, land ownership and economic viability to name a few. Consideration must be given to a realistic lapse rate when figures are finalised. Based on historical lapse rates set out in the five year housing land supply paper, it is suggested that a lapse rate of 2-5% going forward should be accounted for when considering future supply and growth to be allocated.</p> <p>S16.2 COMMUNITY HUBS: SHREWSBURY PLACE PLAN AREA</p> <p>44. This policy sets out the residential guideline for each of the Community Hub Settlements. Gleeson Strategic Land Ltd's site is on the edge of Bayston Hill and "around" 200 dwellings are directed to the settlement.</p> <p>45. Within Community Hubs, new residential development will be delivered through any identified saved SAMDev residential or mixed-use allocations; any identified Local Plan residential allocations, or through a Neighbourhood Plan.</p> <p>46. Two site allocations are proposed in Bayston Hill as follows:</p> <p>47. Land off Lyth Hill Road (BAY039) - for 100 dwellings. The table set out at Appendix 5 expects the development of this site to take place in the medium-term, 2025/26- 2029/30. This site was considered to be not currently suitable, but with future potential for the same reasons as the subject site. Richborough Estates have been promoting this site and as far as we are aware, there is no recognised house builder yet attached to it.</p> <p>48. The former Oaklands School (BAY050) - for 47 dwellings is likely to come forward in the short-term (2021-2025). This site does not appear in the SLAA. It is assumed that this site is owned by the Local Authority and there is no recognised house builder yet attached to it. This site appears to be divided into three distinct areas; former School with its own playing field (now closed); Christchurch- church building and car park – in active use in March 2020 and playing fields (also in active use in March 2020). The school has been estimated to extend to 1.13 hectares so it appears high and unrealistic to assume 47 dwellings is achievable on the site, especially given the playing fields, existing trees and allowing for on-site incidental public open space.</p> <p>49. The total new numbers of dwellings directed to the settlement therefore is 147. According to the table in Appendix 5, 27 dwellings have been completed since 2016, with a further 12 having gained permission as of 31st March 2019. Assuming the most recent 12 dwellings are completed, the grand total of new development for the village is 186. 50. Whilst the Plan as currently drafted directs "around 200" to the village, the subject site could make a valuable contribution to housing numbers in this sustainable location. This site was allocated reference BAY040 in the Stage 2 Assessment but there does not appear to be any commentary on how the decision was made to discount the site. It appears to have been sifted out at this stage due to physical, heritage or environmental constraints based on the strategic assessment undertaken within the SLAA. The Sustainability Appraisal rates to the former school site (BAY050) as "good" and the Lyth Hill Road site (BAY039) as "fair", but does not reference discounted sites and so a comparison here is not possible.</p> <p>51. As drafted, an objection must be raised to this policy. The site selection process is not at all clear to follow. It is not obvious or transparent how the various sites have been selected or discounted.</p> <p>52. The village is capable of accommodating additional housing and the site off the A49 is situated immediately adjacent to the settlement boundary. It would be a logical extension to the village and provide sustainable development.</p> <p>53. The SLAA estimated a yield of over 500 dwellings on the site – in reality due to the land levels differences across the site a smaller number is envisaged.</p> <p>54. Notwithstanding the above, it's inclusion with the plan as a residential allocation could reduce the amount of pressure on land needed to be taken out of the Green Belt at Aubeley and in terms of sequential preference, non Green Belt sites must be considered first.</p>
A0955B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Paragraph 3.6 The housing need target has not been proven and is well above what the N.A. office has been predicting in recent years. The arguments for a total of 30800 houses are not backed up in any of the sustainable arguments put forward. Why does this figure for instance include a 1500 allocation for the West Midlands Black Country Authority when they have not yet put together their plan and they have plenty of sites in which to deliver their current housing needs even if that means using some of their green belt land. In terms of sustainability and Shropshire Council's desire to become carbon neutral, building more commuter housing does not make sense and cannot be justified. The argument that more people will work from home is likely to be in the main ephemeral. I urge Shropshire to remove these housing targets from the plan as there is no justification in including them at this point in time. The plan proposes more housing particularly for Shrewsbury where infrastructure is already creaking and even if the North West Relief Road goes ahead this will not solve the issues Shrewsbury currently has. Neither will the big town plan solve current infrastructure problems particularly with the proposal of an additional 8625 houses to be built in Shrewsbury between 2016 and 2038. I urge Shropshire to reconsider its housing target and reduce it to a lower figure at this point in the planning process and to consider in more detail the effects on the already dire traffic flows in and around Shrewsbury. Independent analysis with community involvement should be part of a plan policy. An example of inadequate analysis relates to the sweetlake development on Longden road where additional traffic flows are well in excess of the developers expert's analysis given as part of their planning application and where local peoples knowledge was ignored A Lower target could lower numbers proposed for Shrewsbury easing inadequate infrastructure issues. Shropshire has a valuable agricultural landscape providing important sustainable food supplies to the UK and excessive additional housing eats into more good quality agricultural land. This is not a sustainable policy for future generations. Agricultural land has high capital value and this does not seem to be adequately reflected in the plan. A more realistic housing target would not only satisfy the population of Shropshire, the majority of individuals who have spoken against such high targets and have felt they have not been listened to, but it would also safeguard very valuable food productive land assets that we have in Shropshire. I urge Shropshire council to reduce housing targets and give greater weight to the use valuable agricultural land is put. I also urge Shropshire council to reconsider earlier consultation results whereby little support for individuals comments have fed through into housing target numbers. It does seem only developers comments have been heard and this is widely viewed particularly in Shrewsbury as undemocratic. The people of Shropshire have not supported the high housing target figure. Higher levels of house building does not mean more affordable housing will be delivered to satisfy local need unless there is a policy which controls to whom such houses are allocated including a policy of no buy to let sales. Such a policy of woefully missing from the plan. I urge Shropshire to provide clarity on how local need demands will be achieved.</p>
A0956B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		<p>Support for meeting wider housing market area needs, but further information should be provided on the contribution to the Black Country housing needs</p> <p>Strategic planning matters need to be positively addressed with these DTC/cross boundary authorities to meet the legal and soundness test of the Duty to Cooperate., noting that 1500 dwellings of the housing requirement towards meeting the shortfall in housing supply within the Black Country. The positive approach of Shropshire to helping meet wider housing market area needs is supported but no further explanation within the draft SLP or supporting evidence to how this figure has been derived. Further information should be provided, and figure kept under review in light of any further evidence from the Black Country Authorities, including progress on the Black Country Local Plan.</p>
A0956B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Whilst support overall urban focused (particularly Shrewsbury) strategy for future development the Council's aims of delivering economic growth through the provision of housing above and beyond the current standard method minimum requirement, including helping to meet wider housing market area needs . Need to consider the potential for further development to be directed to the urban locations, in particular the Strategic Centre of Shrewsbury, Principal and Key Centres to ensure Plan is "justified" and "effective. This would be to provide further flexibility to the SLP housing delivery strategy and further support the economic growth strategy for Shropshire.</p> <p>Consider the need for further flexibility in the housing requirement in light of the recently published draft Local Housing Need figures (updated draft standard methodology requirements) which indicate a potentially significant uplift in housing needs going forward. An urban focused strategy is supported by the findings of the Sustainability Appraisal & would reduce reliance upon the delivery of small-scale sites which could have a higher risk of non-implementation. In light of the potential reliance upon 'Safeguarded Land' to meet development needs beyond the plan period, non-Green Belt locations need to be considered and exhausted in order to provide further flexibility and certainty of delivery. Draft Policy SP2 (Strategic Approach) identifies 30,800 new dwellings and around 300 hectares of employment land will need to be delivered. To achieve this & a sustainable and appropriate pattern of development which also maximises investment opportunities, new development will be focused in the urban areas/locations identified in Schedule SP2.1, facilitating and recognising and developing Shrewsbury's role as the only Strategic Centre.</p> <p>From the figures provided within Appendix 5 of the draft SLP, it appears that around 70% of the draft SLP housing requirement is directed to the urban areas/locations with around 30% directed to the more rural settlements (Community Hubs and Community Clusters) and wider rural area. However, from totalling the residential guideline figures within Appendix 5 and taking into account the supply from Strategic Settlements, it would appear that only around 28,000 dwellings are identified against the 30,800 dwelling requirement. Given that Appendix 5 does not detail residential guidelines for the 'Community Clusters' it should be identified if this apparent shortfall is assumed to be met within these rural settlements and the wider rural area. If so, then there is a potential degree of uncertainty and unidentified land supply against the housing requirements. Further clarity on the housing delivery figures would therefore be welcomed, including the extent to which housing supply within the 'Community Clusters' and wider rural area is secured via planning permissions and/or allocations.</p> <p>We support Draft Policy SP2 identifying Shrewsbury as the main strategic centre for the plan area to where a commensurate level of new development is to be directed. The status of other urban centres, such as the Principal Centres and Key Centres, is also supported as part of a sustainable development strategy for Shropshire overall. It is considered that the draft SLP should consider the potential for further development to be directed to the urban locations specified in Schedule SP2.1 (under the Strategic, Principal and Key Centres) with a lesser proportion being directed to the more rural settlements in Schedules SP2.2 and SP2.3. A number of smaller Community Hubs have significant development directed towards them e.g. Burford,; Gobowen, Llanymynech ; and Hadnall. Support development in the Community Hubs, and it is necessary to support their long-term sustainability, however the scale of development must be proportionate to the size and sustainability of the settlement. The approach needs to be more robustly justified. More sustainable growth would be achieved by directing more growth to the higher order settlements such as Shrewsbury.</p> <p>By directing more growth to the higher order settlements there is the opportunity for the housing strategy to be less reliant upon smaller scale schemes typically delivered within the lower order settlements. Whilst small-medium scale sites are important to housing delivery caution needed due to generally higher rate of non-implementation</p> <p>Further growth (housing and employment) focused on urban locations and centres (strategic corridors & centres)would therefore serve to boost the economic growth of the County in line with the NPPF & Economic growth strategy. The Sustainability Appraisal (SA) for the draft SLP also outlines the range of positive benefits for an urban focused strategy, particularly in comparison to other strategy options which would involve greater growth in the rural areas. The Council should therefore consider directing a higher proportion of growth to urban locations (Strategic, Principal and Key Centres) whilst providing specific policy support for smaller scale affordable housing provision within the rural areas. The scenario of a higher level of growth within the urban areas (more than 75%) does not appear to have been tested within the SA to date.</p> <p>The recently published 'Changes to the Current Planning System' consultation (CLG, August 2020 published alongside the 'Planning for the Future' White Paper) proposes an updated standard housing methodology, which results in an increase in LHN of around 81% for Shropshire (increasing from 1,177 dwellings per annum under the current standard methodology to 2,129 dwellings per annum under the draft, revised standard methodology). This is more than the current draft SLP housing requirement which equates to 1,400 dwellings per annum (representing a 52% increase). Whilst it is recognised that the proposals are draft and the SLP is likely to be submitted for examination prior to the new standard housing methodology being applied to the Plan, there is a clear need for the draft SLP to recognise the potentially significant increase in LHN and therefore a need for greater flexibility in the housing requirements to provide further headroom going forward.</p> <p>The Council should consider the need for additional residential allocations in sustainable urban locations to provide this flexibility to ensure local housing needs (and those of areas such as the Black Country with which there is a functional relationship) in the current and beyond plan period are met in full</p>
A0957B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		<p>Draft policy SP2 discusses issues such as different parts of Shropshire, proportions of 'affordable' homes and the growing number of Neighbourhood Planning towns. (NB Neighbourhood plans are agreed only after local referenda and eventually have legal force. Shrewsbury is too big for a Neighbourhood Plan but the Big Town Plan is thought to provide strategy, although there will be no referenda. Consequently, considerable additional public consultation will be needed.)</p>
A0971B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire. Response to SP 2 - Raby Estate land could be included in the plan instead of, or as an alternative to the three strategic sites identified in the plan. The reasoning behind this is threefold. Firstly, Shropshire will be required to increase their housing requirement by 1,500 dwellings due to the agreement between Shropshire Council and the Association of Black Country Authorities. Secondly, the plan currently heavily relies on windfall development to meet its housing requirement targets. Finally, the proposed changes to the standard method for calculating housing need. These factors are likely to increase the number of dwellings that Shropshire is required to provide. Based upon this, the site at Beslow could contribute significantly to ensuring that the County can provide the housing it is obliged to provide, in a sustainable manner. Therefore, the housing need and hierarchy provided in policy SP2 is not representative of the true situation with regards to housing</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0971B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Promotion of land owned by Raby Estate in Cressage at Shore Lane. The Raby Estate has inherent issues with the settlement hierarchy proposed in draft Policy SP2, but the inclusion of Cressage as a Community Hub is supported in the current form of the hierarchy, as it removes the village from open countryside classification and means that it can begin to meet the housing needs of the community and Shropshire. Across Shropshire 2551 dwellings are proposed to be delivered via windfall development, which represents 22% of the housing. This is considered a high proportion, which represents unstable grounds on which to base the County's housing requirement on. The attached representations highlight that a greater number of dwellings need to be allocated to accommodate for this.
A0972B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Given the level of housing and economic growth proposed, a rail link along with an upgraded highway network would enable Bridgnorth to take its rightful place as a Principal Centre; aspirational target for growth of the number of dwellings is too high and do not believe there are exceptional circumstances to justify an alternative approach. Needs of neighbouring areas are well met by the amount of housing planned in Telford and Ironbridge. It is essential that the inclusion of affordable housing for people with links to Bridgnorth is central to any development. proposed new housing development is inaccessible from the town centre for pedestrian access and resulting in need for far more parking. The character of the historical town centre needs to be preserved and enhanced not overrun by traffic and car parks. Sustainability of proposed housing development in Bridgnorth not evidenced. Sustainability requires local employment and land provision alone will not produce jobs. Any new developments should be leading examples of sustainability and be sensitive to the local environment and ecology. Housing should be initiated by need not excess developer profits/ council income generation. Whilst reasonable profits are necessary for project viability query whether sufficient money directed to make the development ecologically sound and best quality and sustainability, as well as provide infrastructure and amenities for residents? delivery of affordable housing is key. Deep concern regarding rational for overall figures and 9% dwelling requirement uplift which is not supported locally. This ignores role of Shropshire Council in representing the electorate. New housing for the area is welcomed, but it needs to be of a volume compatible with, and sensitive to, the town and all inhabitants.
A0972B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The case for allocating an additional 1,500 homes to meet the Black Country's projected shortfall is unsound. Shropshire is not adjacent to any of the Black Country Authorities (ABCA); it is therefore not cross boundary with Staffordshire sitting between Bridgnorth and the Black Country. This would also create a significant increase in commuter traffic contra to sustainability aims. The Black Country authorities Urban Capacity study indicates a shortfall of just under 27,000 homes, but the worst shortage is in Sandwell borough, making up over half the total, and nowhere close to Bridgnorth. The West Midlands Mayor, Andy Street, says there is enough brownfield land to cater for new homes in his region. Telford & Wrekin rejected ABCA's request in 2019 on the basis there wasn't any evidence to support them contributing to the unmet Black Country Housing Need. Given all this, the Bridgnorth area would not be an obvious place to make up for the Black Country's projected shortfall.
A0981B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Sport England considers that the wording of the policy should be expanded to set out that the Council will ensure that there is sufficient social infrastructure provision to meet the identified needs of the proposed housing growth, consistent with policy DP27. Currently, the wording of the policy is devoid of any reference to ensuring infrastructure needs are to be met. This would ensure that the proposed policy is consistent with the Council's overall approach to infrastructure provision elsewhere in the plan. This would also ensure that the policy is consistent with para 92 of the NPPF which advises to plan positively for the provision of shared spaces, community facilities and other local services to enhance the sustainability of communities and residential environments, and para 96 of the NPPF which relates to meeting identified needs for open space, sport and recreation facilities. This will ensure that the development that comes forward through the hierarchy of the strategic centre, principal centres, key centres, strategic settlements/sites, community hubs, and community clusters etc, does so in a way that meets required infrastructure needs within Shropshire for the plan period. The reasoned justification should then refer to the Council's evidence base for infrastructure needs (which includes the Playing Pitch and Outdoor Sports Strategy (PPOSS) and the Built Sports Facilities Strategy (BFS), which consider the facility investment needs to serve the housing growth that is being proposed).
A0984B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Outlines a housing requirement of 30,800 dwellings over the plan period (1,400 per annum), informed by the current standard method for calculating local housing need and the need to provide flexibility (as set out in Para 3.6 of the Draft Local Plan) and 1,500 homes to support the unmet need of the Black Country. Expect the housing requirement to be kept under review as the plan progresses, given ongoing work which may have implications, such as preparation of a statement of common ground with the Black Country and anticipated publication of a revised standard method for calculating local housing need. Support the broad pattern of development outline in Part 5 of the Policy, particularly the need for Principal (and Key) Centres to accommodate significant well-designed new housing and employment development to maintain and enhance their roles and maximise their economic potential. However, around 25% of development is proposed in rural areas, this is a significant proportion of development in locations generally considered less sustainable and somewhat contradict the proposed urban focus. Suggest more development is directed towards urban areas.
A0986B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Note that a recent Government White Paper proposes a new standard methodology for calculating housing need. This would increase need from some 1,177 dwelling to 2,129 dwellings per annum. Therefore growth needs in Shropshire appear to be considerably higher under this new methodology.
A1101B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Agree in principle with the strategic approach of the Local Plan Review to achieve an urban focus to development. Para 3.21 of the explanation provides further explanation of the strategic approach, stating 'to accommodate development in such a way that helps make more sustainable, balanced, vibrant, resilient and self-reliant places in which to live and work'. This should underpin site allocations and should recognise benefits of housing and employment in the same location/site. A new settlement can provide an inclusive community where people have the chance to live and work, which represents a sustainable pattern of growth. BRD030 is not in accordance with the proposed approach, as it is not in the right location to meet identified residential or employment needs of Bridgnorth and there are questions over whether it can be delivered. Stanmore Garden Village is the only scheme likely to deliver this successfully for Bridgnorth. Support the overall quantum of growth for Shropshire (which has been informed by Governments standard methodology for assessing housing need but will also provide flexibility and address the high need for affordable housing and support delivery of specialist housing to meet needs of the community. Furthermore, with increased economic growth and productivity, it will allow housing and jobs to remain in balance; reduce in commuting; and will make for much more sustainable economic growth), but consider the choice of site allocation is critical in delivering it. There is strong evidence that BRD030 is flawed such that it is very unlikely to deliver proposed outcomes. The Council's affordable housing objectives (25% of all housing development) whilst a high proportion of all development, represents only a fraction of the need (799 dwellings per annum as identified within the SHMA 2020). Draft policies will fall short of delivering this aspiration, which cannot be met without greater contributions from specific proposals. As such, it may be desirable for certain allocations to deliver a greater level of affordable housing or low cost housing aimed at specific needs, such as key worker housing to achieve a sustainable pattern of growth/address an existing need. Stanmore Garden Village is significantly able to assist, offering a minimum of 30% affordable housing (equating to 85 units above the 20% proposed policy requirement). Affordable housing provided would meet local needs including social/affordable rent, shared equity (75% maximum), starter homes for first time buyers (20% discount to market), and housing for sale/rent with key worker/local employment restrictions. Stanmore Garden village would deliver 45 more affordable than BRD030 (255 vs 210) despite being smaller. Agree with identification of Bridgnorth as a Principal Centre, given it is the third largest settlement in Shropshire in terms of population and dwelling after Shrewsbury and Oswestry. As the only Principal Centre in the east of the County, Bridgnorth needs to fulfil its role serving its residents and those in its hinterland that rely on it for its extensive range of services, facilities and employment opportunities. Bridgnorth's status as a Principal Centre in the hierarchy distinguishes it from the other tiers such as Key Centres and Rural Areas, so it is right that it contributes towards the strategic growth objectives in the east of the County and accommodates significant new growth. Draft policies need to be stronger to achieve sustainable development that responds to the climate change emergency. They should recognise how the location of development and mixed use sites can reduce the need to travel.
A1106B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The local plan omits a detailed housing trajectory and is therefore inconsistent with the 2019 NPPF. There is no exact policy relating to the number of electric vehicle charging points expected within developments. It would be helpful if the expectations for charging points was more clearly set out, with reference to the impacts of viability being taken into consideration.
A1107B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	I disagree with Policy SP2 as, inexplicably, it does not include the settlements of Diddlebury, Aston Munslow and Munslow as "cluster" settlements. Instead, SP2, quite wrongly, relies on local parish councils to suggest that settlements receive "cluster" status. In the case of the Corvedale villages, this has resulted in little or no housing development taking place in recent years which has meant that the housing needs of these communities has not been met, evidenced by the RHRP survey results for Diddlebury. The Council should therefore address this imbalance in housing provision in the Corvedale by having regard to paragraph 78 of the NPPF and designating Diddlebury, Aston Munslow and Munslow as a "cluster" in Policy SP2 without further delay. These three villages are dependent on each other to provide services and facilities which make the "cluster" as a whole sustainable. The Council, therefore, has no justification for ignoring paragraph 59 of the NPPF and excluding these villages from the opportunity to make their settlements even more sustainable by supporting new housing growth which is desperately needed in the area. For example, the designation of Munslow as a "cluster" village would enable Simon Brandwood to construct a self-build dwelling for his family on land opposite The Chains which can be described as an infill site on the eastern side of the village.
A1119B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Response A1119 submitted on behalf of Laird Estates Group and relates to Warren Park in Stoke Heath. Response on specific policies are: Policy SP2 (Strategic Approach) is not sound because it fails to acknowledge the legal obligations imposed on the authority by the Housing and Planning Act 2016. Clause 124 requires local housing authorities in England to consider: "...the needs of people residing in or resorting to their district with respect to the provision of (a) sites on which caravans can be station..." Essentially, this inserts a requirement into the Housing Act and requires LPAs to include an assessment of housing needs for caravans in their periodic review of housing needs. This recognises the contribution that residential caravans have in contributing to housing supply and allows LPAs to consider the need and demand for park homes in their areas. As currently drafted, the LP Review fails to do this. In addition, it is noted that Para 3.15 refers to an estimated 799 households per year will require affordable housing. This represents 57% of the Council's expected rate of housing delivery and its questionable whether this is achievable. Regardless, Laird Estates consider the LP should recognise that residential park homes are generally low cost, compared to similar sized bricks and mortar houses, so could make a valuable contribution to the authority's overall housing land supply. Furthermore, Table 25 within the SHMA (August 2020) shows the biggest increase in dwelling type between 2001-2011 was 'caravans or other mobile or temporary structure' at 47.6%. This suggests the popularity of residential park homes in Shropshire as a type of residence is increasing. This statement is reinforced by Para 3.148 (SHMA) which confirms "In percentage terms there was evidence of a very small shift from detached and semi-detached accommodation to terraced accommodation, flats and maisonettes and interestingly caravans or other mobile homes. "Significantly, Table 36 (SHMA) shows that 'caravans or other mobile or temporary structure' equate to 0.8% of the Council's housing stock. On this basis, Laird Estates suggests 246 of the Council's housing requirement (0.8% of 30,800) should be the target for residential park homes (at present, zero residential park homes are planning for). To rectify these issues, Laird Estates suggests that the requirements of the Housing and Planning Act 2016 are referred to in supporting text (Paras 3.3 to 3.27) and Policy SP2 part 2 is changed to read as follows: Over the plan period from 2016 to 2038, around 30,800 new dwellings (including 246 residential park homes) and around 300 hectares of employment land will be delivered. This equates to around 1,400 dwellings and 15ha of employment land per annum. This Local Plan ensures that sufficient land is available to achieve these growth aspirations, however the availability of land will be kept under review to ensure a continuous supply of suitable sites is available."
A1119B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Paragraphs 2.26 to 2.27 fail to recognise the weight that should be given to the Stoke Upon Tern Neighbourhood Plan (NP). Although these paragraphs refer to the three made NPs in the county Paragraph 107 of the Neighbourhood Planning section of National Planning Practice Guidance (NPPG) (Reference ID: 41-107-20200513) (a new paragraph introduced in response to the coronavirus (COVID-19) pandemic) states: "...Where the local planning authority has issued a decision statement (as set out under Regulation 18 of the Neighbourhood Planning (General) Regulations 2012) detailing its intention to send a neighbourhood plan to referendum, that plan can be given significant weight in decision-making, so far as the plan is material to the application..." (highlighted and underlined text – our emphasis) In the case of the Stoke Upon Tern NP, the examiner published his report in May 2019 and recommended that it should proceed to referendum. This demonstrates that the NP is a robust development plan document. Furthermore, Shropshire Council's Cabinet subsequently agreed it should proceed to a referendum and it was due to take place on 16 April 2020. But this did not happen because of COVID-19. The author of this representation has also been advised by the Council's Planning Policy Department that it will work with the NP Group and Parish Council to rearrange as soon as COVID-19 restrictions are lifted. The fact the NP was due to be subject to a referendum and it was only delayed due an unprecedented health pandemic is significant. The absence of any recognition of the Stoke Upon Tern NP therefore means the Local Plan (LP) is not sound because it fails two tests, namely: the test of positivity; and, consistency with national policy. To rectify this, Laird Estates suggests explanatory text is added to acknowledge the Stoke Upon Tern Neighbourhood Plan, its robustness and recognise that it should be given significant weight in planning decisions (and that this weight applies at present). For the same reasons as above, Laird Estates welcomes Policy SP2 part 7 but suggests the wording is changed in the following way so that it is both positively prepared and consistent with national policy: "7. The production of formal Neighbourhood Plans will be supported and can identify development opportunities which will complement proposals in this Local Plan. Where appropriate they can also identify additional Community Clusters. Weight will be given to Neighbourhood Plans after a decision has been issued detailing the authority's intention to send it to referendum."
A1128B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The score of 46 for Westbury in the Hierarchy of Settlements document is incorrect. Evidence submitted with the response confirms that Westbury should have a function score of 52. The hierarchy of settlement document fails to recognise that Westbury has two "outdoor sports facilities" (+1) "amenity green space" (+3) and two "significant employment opportunities" (+2) This would increase Westbury's settlement score from 46 to 52. With a settlement score of 52 Westbury should be designated a Community Hub. A suitable site allocation for Westbury has been identified (SLAA Residential Site WEY006) and is land to the North of Roman Road. The site extends to just under 1.4 hectares and could accommodate around 29 dwellings. The site is both viable and deliverable in line with the policy requirements. A topographical survey, ecology survey, tree survey and access design have been completed and confirm no issues. A planning application could be prepared quickly and the site could be delivered by Chartland Homes in the short term (2020/21-2024/25)
A1129B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The latest calculation of Local Housing Need (LHN) identifies a need of 25,894 dwellings with an additional 1,500 dwellings to help address unmet housing needs arising from the adjacent Black Country Authorities area. The total housing requirement of 30,800 dwellings set out in Policy SP2 is therefore supported as a positive and proactive response to meeting the housing needs of Shropshire overall. The total figure should however, be considered as the minimum level of housing to be delivered in the plan period. An increased level of housing provision above the LHN requirement is more likely to result in the actual delivery and completion of sufficient housing in Shropshire. This is considered to be especially important given the scale of housing required overall and the identified affordable housing needs. The spatial apportionment and distribution of housing requirements is broadly supported with a clear emphasis, rightly, on the development of future housing (and employment) in and adjacent to Shrewsbury as the largest and most sustainable settlement in Shropshire. Our client is however concerned that the Plan proposes significant expansion and development of strategic sites that are not particularly well connected to existing settlements including the development of Green Belt land. It is our client's view that it is important to make best use of and to focus future housing development needs towards Shrewsbury to capitalise on the existing and proposed infrastructure (including the emerging development proposals for the North West Relief Road). Our client concludes that Shrewsbury is capable of supporting a greater level of future housing growth than that currently proposed in the Plan, particularly in order to support new infrastructure, including the Northern West Relief Road. Additional land allocations for housing growth will need to reflect the challenges presented by heritage and ecological constraints and areas of flood risk. The Plan should be modified in Policy SP2 and in other policies to identify and allocate additional housing to Shrewsbury area. This should include making better use of available land and sites such as our client's land to the west of Ellesmere Road (both SHR163 and as part of SHR174).

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1130B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The latest calculation of Local Housing Need (LHN) identifies a need of 25,894 dwellings with an additional 1,500 dwellings to help address unmet housing needs arising from the adjacent Black Country Authorities area. The total housing requirement of 30,800 dwellings set out in Policy SP2 is therefore supported as a positive and proactive response to meeting the housing needs of Shropshire overall. The total figure should however, be considered as the minimum level of housing to be delivered in the plan period. An increased level of housing provision above the LHN requirement is more likely to result in the actual delivery and completion of sufficient housing in Shropshire. This is considered to be especially important given the scale of housing required overall and the identified affordable housing needs. The spatial apportionment and distribution of housing requirements is broadly supported with a clear emphasis, rightly, on the development of future housing (and employment) in and adjacent to Shrewsbury as the largest and most sustainable settlement in Shropshire. Our client is however concerned that the Plan proposes significant expansion and development of strategic sites that are not particularly well connected to existing settlements including the development of Green Belt land. It is our client's view that it is important to make best use of and to focus future housing development needs towards Shrewsbury to capitalise on the existing and proposed infrastructure (including the emerging development proposals for the North West Relief Road). Our client concludes that Shrewsbury is capable of supporting a greater level of future housing growth than that currently proposed in the Plan, particularly in order to support new infrastructure, including the Northern West Relief Road. Additional land allocations for housing growth will need to reflect the challenges presented by heritage and ecological constraints and areas of flood risk. The Plan should be modified in Policy SP2 and in other policies to identify and allocate additional housing to Shrewsbury area. This should include making better use of available land and sites such as our client's land to the west of Ellesmere Road (both SHR163 and as part of SHR174).
A1135B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	30,800 is not consistent with National Policy. Between now and the submission of the Local Plan it is highly likely that the new standard method for calculating the housing requirement will be in play
A1146B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Policy SP2: Strategic Approach The Strategic Approach outlined in Policy SP2 is supported. In particular, the identification of Community Hubs and Community Clusters in the rural area, as centres for growth in a sustainable fashion is supported.
A1152B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Support a beautiful and thriving countryside that enriches all our lives. Support development in the right place which is sympathetic to the landscape and to the needs of local communities and those who work within them. Support building the right types of housing in the right places, in numbers that are clearly needed, to ensure that the County's special qualities are protected and that the genuine needs of its residents are met. We also support the targeted approach of the Productivity Growth economic option as originally put forward in the Issues and Strategic Options Consultation of the LPR, which would encourage the development of newer and more innovative industries. However, we do not believe that the continued aspirational growth preferred by Shropshire Council will protect Shropshire's special qualities or serve its resident population to best effect. Consider that the draft Local Plan is suffused with a model for growth well in excess of demographic need, which is not truly sustainable, because it is at odds with both the climate emergency and the ecological emergency. It has targets for both housing and employment land that are too high, based on figures that are questionable. It won't get the right sort of houses, particularly affordable houses, built in the right places. It also has a flawed consultation process, which is undemocratic. The opening words of SP2 derive from CS1 in the existing Core Strategy. The phrase 'Shropshire will flourish' presumably stems from the motto 'Floreat Salopia' but is surely meaningless as a planning policy. The draft Policy includes an urban focus. Whilst an increased urban focus would undoubtedly be part of an appropriate response to the Climate Emergency, note that proposed guideline figures indicate that a reduced urban element is now being planned. At the Preferred Sites stage, the proposed residential guidelines for Shrewsbury, Principal and Key Centres amounted to 72.6% of total development, this is now only 69.1%. Consider that the guideline figures, both for housing and for employment land, are too high as: -The housing calculations can be broken down into separate constituent elements, highlighting their underlying potentially questionable assumptions -The employment land figures can also be shown to be based on illogical assumptions. -The aim of the Economic Growth Strategy to 'maximise our economic potential' is not only unrealistic but contrary to climate change goals. -Public opinion is against the high targets. With regard to housing requirement, analysis is provided illustrating contributing factors, 12,489 (40%) derive from population change; 8,257 (27%) derives from changes in average household size; 5,148 (17%) derives from the national methodologies inclusion of an uplift in response to the affordability ratio (considered ineffective as building more housing will not reduce cost); 1,500 (5%) to meet housing need in the Association of Black Country Authorities (ABCA); and 3,406 (11%) for Shropshire Council aspirations (including to balance housing and jobs). Consider that windfall supply is underestimated. This includes more supply from conversion of town centre regeneration particularly post Covid-19. No calculation of the greenhouse gas emissions resulting from housing proposals has been undertaken. Consider each new housing increases emissions and contributes to rather than reduces climate change. High growth is therefore contrary to draft policies SP3 and DP12. Consider the Council should seek to minimise necessary growth. It should certainly not seek guidelines that exceed the Government's minimum requirement, and it could justifiably and soundly argue that the Climate Change agenda provides the exceptional circumstance, allowed by NPPF paragraph 60, that would allow it to seek fewer houses than that, were it so minded. Consider it is premature to accept cross-boundary need from ABCA, given delays to their plan and uncertainty about would other closer Local Authorities can contribute. With regard to the employment requirement, the proposed approach is 'balance' with housing. That is a sensible aim, but we still think that the calculation of the employment land so required has been overstated. The logic was outlined in Table 7 of the Preferred Scale and Distribution of Development consultation document and is consistent for all settlements at Preferred Sites apart from Bridgnorth and Shifnal. The guidelines at this present stage of consultation have been altered for some settlements, without any apparent full justification, but the aim of balance between houses and jobs remains. Consider the logic behind the Council's 'balanced growth' calculations is flawed as: -Each new house would not necessarily equate to a requirement for one new job. Not all occupants of new houses will have jobs which require employment land; some will already have jobs; and many will be beyond working age. -The aim of improving median earnings and going for 'smarter' jobs means that higher skilled jobs should be provided. The assumption that each job requires 42.25 sq. m on average is based on a weighting which includes 25% of warehouse-type jobs. The evidence base suggests that higher productivity jobs might require average floorspace of only 31 sq. m per job. That would mean a further decrease in the calculation of the requirement for employment land. -Under that supposedly 'smarter' EGS strategy, buildings on employment sites might well represent more than 40% of an employment site. -Not all jobs require employment space on a dedicated employment site, particularly in a post-Covid19 world where many more people may be working from home. Undertaken a calculation of employment land needs using a precautionary assumption of 1 job per household; balancing household growth proposals; and applying the 'smarter' job density of 31 sq. m, the employment land requirement indicates a need for only 155ha of employment land. Nearly 50% less than that in the draft Local Plan. Further there is an anomaly as the settlement guidelines add up to 375ha rather than 300ha. This seems to us to be a major discrepancy between what is stated in SP2 and what is stated in the detailed settlement policies, and is therefore unsound. Appendix 5 and 6 are presented differently.
A1155B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Response from Association of Black Country Authorities (ABCA). Support duty to cooperate between Shropshire and ABCA particularly over issues relating to housing and employment land. Strongly support the Local Housing requirement of 30,800 homes as set out in Policy SP2 of the Regulation 18 Local Plan in terms of it incorporating 1,500 dwellings to support the housing needs of the emerging Black Country Plan. We agree that this reflects a positive approach to cross-boundary cooperation and responds to the functional relationship between the two areas. However, we are concerned that the Local Plan does not contain a mechanism which would allow the Council to trigger a partial review of the Plan in the light of the rate and location of housing delivery or in the event of a greater need for additional housing - either associated with meeting the needs of Shropshire, or adjacent housing market areas including the Black Country. We would be happy to work with you to explore these mechanisms in more detail. Concerned that the Regulation 18 Plan does not seek to make a contribution to meeting employment land needs arising in the Black Country. The evidential basis of the Local Plan employment target of 300ha as set out in Policy SP2 is not clear and so it is not possible to determine whether within this requirement, there exists any 'headroom' above locally generated needs and / or associated with the housing contribution, that could be attributed to meeting needs arising in the Black Country without the need for additional allocations. We request further engagement with the Council through the Duty to Cooperate to explore how the Local Plan can respond to these issues.
A1168B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Draft Policy SP2 sets out a development strategy based on a settlement hierarchy. The strategic approach is justified by securing sustainable development. Settlements are grouped in the following classifications: Schedules SP2.1 – Urban Locations, SP2.2 – Community Hubs and SP2.3 Community Clusters. The settlement classification is supported. Also strongly support paragraph 3.23 that allows for appropriate levels of development within rural areas, to enhance the longer-term sustainability of rural communities, including Community Clusters. The inclusion of Edstaston, Quina Brook, Northwood, Newtown, Tilley and Aston as a Community Cluster in the Place Plan Area is fully supported.
A1176B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A1178B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A1179B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A1191B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	The proposed strategic approach within draft Policy SP2, which aims to see Shropshire flourish, with new development that meets its needs and makes its settlements more sustainable, is supported. Agree with the Council's approach to deliver around 30,800 homes over the 2016 – 2038 Plan period. It is recognised that this represents a 'high growth scenario', above the 25,894 dwelling figure generated by the Government's current Standard Methodology (and delivering 1,500 dwellings to support the housing needs of the Black Country). Support the Council's position at para 3.6 of the Explanation that the higher housing requirement provides flexibility in the supply etc. Planning for a 'high growth scenario' is critical in the context of the housing need figures arising from Government's consultation on proposed alterations to the Standard Methodology. If implemented as proposed, Local Housing Need for Shropshire would increase to 2,129 dwellings per annum (46,838 dwellings over the draft Local Plan period excluding unmet needs from neighbouring authorities), is significantly higher than the proposed housing requirement. Welcome commitment to keeping the availability of land (both for housing and employment) 'under review', to ensure a continuous supply of suitable sites. This is especially critical when ensuring the delivery of new homes. Consider BUR004 can deliver new dwellings quickly and in the early years of the Plan period, will make a positive contribution to achieving a housing supply throughout the draft Local Plan period. Note commitment to focus development in 'urban areas'. However also support recognition that long-term sustainability of rural communities is essential and new development is needed to ensure the ongoing vitality and viability of local services for these communities. Complimenting growth in urban areas with growth, in particular, in Community Hubs (including Burford) which function as 'rural service centres' and contain a range of services and facilities which provide an important focus for smaller settlements nearby is fully supported. Draft Policy SP2 identifies Burford as a Community Hub. However, the Council's Hierarchy of Settlements Assessment (2020) concludes Burford is a very sustainable rural settlement (achieving a Key Centre score. However, because many of the services are located within adjoining Tenbury Wells, the Council decided to identify it as a Community Hub). Accept this rationale, but consider the proximity of services and facilities in Tenbury Wells should not be forgotten in recognising the sustainability of the settlement.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1192B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2		The proposed strategic approach within draft Policy SP2, which aims to see Shropshire flourish, with new development that meets its needs and makes its settlements more sustainable, is supported. Agree with the Council's approach to deliver around 30,800 homes over the 2016 – 2038 Plan period. It is recognised that this represents a 'high growth scenario', above the 25,894 dwelling figure generated by the Government's current Standard Methodology (and delivering 1,500 dwellings to support the housing needs of the Black Country). Support the Council's position at para 3.6 of the Explanation that the higher housing requirement provides flexibility in the supply etc. Planning for a 'high growth scenario' is critical in the context of the housing need figures arising from Government's consultation on proposed alterations to the Standard Methodology. If implemented as proposed, Local Housing Need for Shropshire would increase to 2,129 dwellings per annum (46,838 dwellings over the draft Local Plan period excluding unmet needs from neighbouring authorities), is significantly higher than the proposed housing requirement. Welcome commitment to keeping the availability of land (both for housing and employment) 'under review', to ensure a continuous supply of suitable sites. This is especially critical when ensuring the delivery of new homes. Clive Barracks and other sites which can deliver in the medium to long term is a crucial part of achieving a supply of housing throughout the Plan period and beyond. Support identification of strategic sites, including Clive Barracks, as a focus for new development. Clive Barracks will form a successful, sustainable and well-designed new community delivering both housing and employment opportunities. It will include an appropriate mix of housing, employment opportunities and local services and facilities to serve existing and future residents, as well as the necessary infrastructure to deliver a sustainable and safe development. Consider the proposed Strategic Approach need to be expanded to reflect the importance of the re-development of brownfield land. The NPPF states planning policies and decisions should give substantial weight to the value of using suitable brownfield land for homes or other identified needs.
A1393B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Paragraph 3.17-3.18 Attention is drawn to the requirement for this site regarding DP22 Flood Risk, and DP 23 Sustainable Drainage Systems, and Flood Risk Planning Policy Recommendation Page 77 Reference 8.28 to Tenbury Wells.
A1394B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 Housing Requirement - target of 30,800Explanation Para 3.5, Para 3.6 and Para 3.7This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its "highly ambitious" High Growth target. The incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. Both of these factors increase the risk of an "out of date" Plan due to economic fluctuations between now and 2038, completely outside the control of the Council. Additionally the Covid-19 pandemic has had short term effect on construction and its long term impact on the economy and growth is unknown. The impact on consumer demand for housing will be financial lead whilst in turn supply by developers is profit lead. Despite Government exhortations to "Build Build" the funding for Local Authority housing is limited and the supply is majority private sector. It is established fact that whenever there is a lack of demand housing is not built, but developers pursue consent on otherwise unattainable land. An "out of date" Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of "Right Homes in Right Place" in the Draft Housing Strategy 2020-2025. By the next Partial Review (Yearly) the repercussions of the pandemic will be clearer, and the Housing Target can be adjusted to suit the new circumstances then, rather than increasing now when a downturn in demand & supply is widely predicted. In view of the changed world circumstances we would again ask that the 15% "High Growth" Target is reconsidered by the Council, and changed to a more deliverable "Moderate Growth" 5% above identified needs to avoid a potential "out of date" Plan in the coming years. Black Country Plan housing provision We acknowledge the requirement for cross boundary co-operation with neighbouring authorities. Our concern is the incorporation of the additional 1500 homes into the overall Shropshire Housing Target. This will increase pressures on settlements across the county for the supply of 'out of county' needs unless sites or location close to that region can be identified. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A1618B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	GROWTH PROPOSALS FOR SHROPSHIRE I consider that the aspirational target for growth of the number of dwellings is too high. I consider that meeting the minimum requirement under the standard methodology for housing needs assessment (stated in SP2, para 3.5 to be 25,894 dwellings over the plan period) would be sufficient for Shropshire Council to meet its obligations and that at target close to that should be adopted. Growth and development of housing should be linked to growth in jobs. The two i.e. jobs and housing are interlinked, and should be reviewed together on a more frequent basis (3 – 5 years), rather than a "build it and they will come" policy. See Section 5, "Regulation 18 Consultation Update Report", Bridgnorth Plan Steering Group, September 2020 for more detail:
A1635B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Evidence is old. The housing targets are too low, especially with impacts of Covid – some sites will not come forward. The new Standard Methodology would result in higher targets. The current housing target is not sufficient to protect the council against the potential economic downturn over the next few years and definitely insufficient to meet the likely increased national housing targets being pursued by the Government.
A1644B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The housing number may need to increase based on the new standard methodology recently released by Government. Shrewsbury is a logical location for more allocations. A highly suitable allocation is that proposed by us on behalf of the landowner at Hencote vineyard and winery in this comment and in other related representations for high quality specialised Care Community adjacent to the vineyard. This site has capacity to deliver 265 units of specialised purpose built and managed accommodation comprehensively meeting the needs of the older sector of the population. The site has scope to deliver a care community in an attractive parkland setting on the edge of the proposed urban area, adjacent to the proposed SHR 173 housing allocation, and located within the line of the North West Relief Road
A1646B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The total housing requirement of 30,800 dwellings set out in Policy SP2 is supported as a positive and proactive response to meeting the housing needs of Shropshire. An increased level of housing provision above the requirement is more likely to result in the actual delivery and completion of sufficient housing in Shropshire, particularly with affordable. The spatial apportionment and distribution of housing requirements is broadly supported, with focus on Shrewsbury. Concern that there is expansion and development of strategic sites that are not well-connected to existing settlements including Green Belt. More housing should be in Shrewsbury linked to the NWRR. The Plan should be modified in SP2 and in others to allocate additional housing to the Shrewsbury area. This should include making better use of available land and sites such as our land to the west of Ellesmere Road (REF SHR109) together with the immediate adjoining land (including SHR174 and SHR023) to deliver a single comprehensive scheme that can make a significant contribution towards current and future housing requirements. It should be noted that the landowners of these parcels of land have now agreed to jointly promote their land in order to achieve a deliverable and comprehensive sustainable development of this area.
A1648B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	This policy is supported
A1864B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Hierarchy of Settlements 2020 - Para 5.41a) This still includes a relaxation of these key criteria for "Community Hub" status requiring "significant employment opportunities; and "peak time public transport"; as well as a combination of services & facilities. The suggestion in Para 5.41 that a "larger range" of services and facilities would compensate for the lack of these fundamental criteria is clearly wrong. It is obvious that facilities such as playgrounds, outdoor sports facilities & amenity green space, etc. cannot possibly compensate in any way for lack of employment and/or public transport. This relaxation makes the Hierarchy of Settlements assessment & Hub designation "unsound" and should be removed. b) Additionally, without either employment or peak time travel it is certain that daily car travel will be increased by additional housing in any Community Hub That is contrary to the "Spatial Vision" and SP3 Climate Change which seeks to minimise travel and maximise trips by sustainable travel. Therefore the status of Trefonen as a "Community Hub" is contrary to existing and proposed policies, and it should be designated "Other Rural" settlement, for which it meets the full criteria. Trefonen is the only proposed Hub settlement with neither of these key requirements, and so its designation as such is "unsound". Therefore Trefonen should be designated "Other Rural" settlement, for which it meets the full criteria.
A1864B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This target is 19% in excess of the identified need of 25,894 for Shropshire. Unknown impacts from Covid-19 – we would therefore ask that the “High-Growth” target is reconsidered, and changed to Moderate Growth. Any Black Country housing supply should be located closer to that area, not anywhere else in the county
A2097B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The Black Country is well served by roads, trams and railway. There is no need to shift 1500 homes into Shropshire. There are hundreds of homes in the pipeline in the Black Country. There is no need to agree to further ABCA in Shifnal, it would bring further issues relating to congestion, carbon emissions, air and light pollution and harm the countryside.
A2101B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A2102B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A2103B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Doesn't agree with Shropshire Council housing target of 30,800. Target should be reduced to Moderate Growth and reviewed over the next 5 years as the impacts of Covid-19 and economic change is assessed. Otherwise there is a danger the plan becomes "out of date" and speculative development applications will follow. Shropshire Should not be accommodating Black Country growth
A2130B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Disagree with the strategic approach of the plan as it is based on an out of date growth model that predates the declaration of the climate emergency and the Covid-19 outbreak. The continued commitment to a high growth strategy for suburban, semi-rural and rural homes can no longer be justified in on the basis of the out-of-date growth strategy and is not compatible with Shropshire Council own praise- worthy ambitions for a net zero carbon county by 2030.
A2147B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 Housing Requirement - target of 30,800Explanation Para 3.5, Para 3.6 and Para 3.7This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its “highly ambitious” High Growth target. The incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. Both of these factors increase the risk of an “out of date” Plan due to economic fluctuations between now and 2038, completely outside the control of the Council. Additionally the Covid-19 pandemic has had short term effect on construction and its long term impact on the economy and growth is unknown. The impact on consumer demand for housing will be financial lead whilst in turn supply by developers is profit lead. Despite Government exaltations to “Build Build” the funding for Local Authority housing is limited and the supply is majority private sector. It is established fact that whenever there is a lack of demand housing is not built, but developers pursue consent on otherwise unattainable land. An “out of date” Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of “Right Homes in Right Place” in the Draft Housing Strategy 2020-2025.By the next Partial Review (5yearly) the repercussions of the pandemic will be clearer, and the Housing Target can be adjusted to suit the new circumstances then, rather than increasing now when a downturn in demand & supply is widely predicted. In view of the changed world circumstances we would again ask that the 15% “High Growth” Target is reconsidered by the Council, and changed to a more deliverable “Moderate Growth” 5% above identified needs to avoid a potential “out of date” Plan in the coming years. Black Country Plan housing provision We acknowledge the requirement for cross boundary co-operation with neighbouring authorities. Our concern is the incorporation of the additional 1500 homes into the overall Shropshire Housing Target. This will increase pressures on settlements across the county for the supply of ‘out of county’ needs unless sites or location close to that region can be identified. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A2149B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 Housing Requirement - target of 30,800Explanation Para 3.5, Para 3.6 and Para 3.7This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its “highly ambitious” High Growth target. A2163B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	SHR173 will assist in contributing to this housing target over the Plan period, and reinforce the Local Plan strategy for additional growth to be located at the highest level of the settlement hierarchy, which is supported, and in accordance with the Shropshire Council Hierarchy of Settlements.
A2166B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	support the continued role of Market Drayton as a Principal/Key Centre, acting as a focus for strategic growth objectives in the north-east of the County
A2172B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Housing requirement of 30,800 is too high. Seems to be based on a predicted housing boom which is unlikely due to pandemic. Urges Council to reconsider and set a target more realistic for Shropshire
A2173B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its “highly ambitious” High Growth target. The incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. Both of these factors increase the risk of an “out of date” Plan due to economic fluctuations between now and 2038, completely outside the control of the Council. Additionally the Covid-19 pandemic has had short term effect on construction and its long term impact on the economy and growth is unknown. The impact on consumer demand for housing will be financial led whilst in turn supply by developers is profit led. Despite Government exaltations to “Build Build” the funding for Local Authority housing is limited and the supply is majority private sector. It is established fact that whenever there is a lack of demand housing is not built, but developers pursue consent on otherwise unattainable land. An “out of date” Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of “Right Homes in Right Place” in the Draft Housing Strategy 2020-2025.By the next Partial Review (5yearly) the repercussions of the pandemic will be clearer, and the Housing Target can be adjusted to suit the new circumstances then, rather than increasing now when a downturn in demand & supply is widely predicted. In view of the changed world circumstances we would again ask that the 15% “High Growth” Target is reconsidered by the Council, and changed to a more deliverable “Moderate Growth” 5% above identified needs to avoid a potential “out of date” Plan in the coming years. Black Country Plan housing provision We acknowledge the requirement for cross boundary co-operation with neighbouring authorities. Our concern is the incorporation of the additional 1500 homes into the overall Shropshire Housing Target. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county. We note the inclusion of Ironbridge Power Station strategic site into the housing supply calculator with 1000 potential homes, but that will not fulfil the full stated need. This will increase pressures on settlements across the county for the supply of ‘out of county’ needs unless sites or location close to that region can be identified without impacting the Green Belt.

A2177B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	<p>Policy proposes around 30,800 dwellings (1,400 dwellings per annum) will be delivered between 2016 to 2038</p> <p>The NPPF requires Council's to establish a housing requirement figure for their whole area (para 65). The NPPF also specifies that the determination of the minimum number of homes needed should be informed by a Local Housing Need (LHN) assessment using the Government's standard methodology unless exceptional circumstances justify an alternative approach (para 60). In Shropshire, there are no exceptional circumstances to justify an alternative approach.</p> <p>Using the standard methodology as set out in the latest NPPG, the minimum LHN for Shropshire is 25,894 dwellings (1,177 dwellings per annum) between 2016 – 2038. This calculation is mathematically correct based on 2014 Sub National Household Projections (SNHP), 2019 as the current year and 2019 affordability ratio of 7.97. As set out in the NPPG, the LHN is calculated at the start of the plan-making process but this number should be kept under review and revised when appropriate until the Local Plan is submitted for examination. The minimum LHN for the County may change as inputs are variable, which should be considered by the Council. Government has confirmed its intention to review the standard methodology and consulted on a proposed alternative methodology within 'Changes to the Current Planning System'. Under this revised methodology, the minimum LHN for Shropshire is 2,129 dwellings per annum, significantly higher than the previously calculated LHN and proposed housing requirement. It may become necessary for the Council to update its LHN assessment.</p> <p>Government's current and revised standard methodologies identify minimum annual LHN. This is the starting point and not a housing requirement. Government's objective of significantly boosting the supply of homes set out in the NPPF remains (para 59). Any ambitions to support economic growth, deliver affordable housing and meet unmet housing needs from elsewhere may necessitate a housing requirement above minimum LHN. In Shropshire, there is justification for a housing requirement above the minimum LHN.</p> <p>-NPPG indicates if previous housing delivery has exceeded minimum LHN, the Council should consider whether this level of delivery is indicative of greater housing need. The adopted Core Strategy housing requirement of 1,375 dwellings per annum is above the minimum LHN. The Housing Delivery Test (HDT) Results for 2018/19 identified housing completions of 1,843 dwellings, which exceeds the minimum LHN and the adopted and proposed housing requirements.</p> <p>-Wider aspirations of the Economic Growth Strategy for Shropshire are to increase economic growth, productivity and diversification of the labour force. These economic ambitions require an increase in housing requirement above the minimum LHN so that a lack of labour is not to become a constraint to the realisation of economic growth potential. The NPPF seeks to achieve sustainable development by pursuing economic, social and environmental objectives in mutually supportive ways (para 8). The Council is seeking to support the long-term sustainability of the County by achieving a sustainable balance between employment and housing growth. The Council should also recognise economic benefits of housing development in supporting local communities (see HBF's Building Communities – Making Place A Home (Autumn 2020) and the Housing Calculator (available on the HBF website) based on The Economic Footprint of House Building (July 2018)).</p> <p>-NPPG states total affordable housing need should be considered in the context of likely delivery as a proportion of mixed market and affordable housing developments. NPPG states an increase in the total housing figures may be considered where it could help deliver affordable housing. Affordable housing delivery is a key priority for the Council. It is proposed circa 7,700 affordable dwellings will be delivered between 2016 - 2038. NPPG also sets out that households whose needs are not met by the market, which are eligible for one or more of the types of affordable housing set out in the definition of affordable housing in Annex 2 of the NPPF are considered to be in affordable housing need. The Council should calculate its affordable housing need as defined by NPPG. This figure may be significant in comparison to the minimum LHN. A higher overall housing requirement will contribute towards delivery of a greater number of affordable homes. It is acknowledged that the Council may not be able to meet all affordable housing needs but an uplifted housing requirement above the minimum LHN will make some contribution to meeting affordable housing needs.</p> <p>-As set out in the NPPF, Local Plans should be positively prepared and provide a strategy, which as a minimum seeks to meet its own LHNs in full and is informed by agreements with other authorities so that unmet need from neighbouring areas is accommodated (para 35a). It is proposed that Shropshire's housing requirement of 30,800 dwellings incorporates 1,500 dwellings to support the unmet housing needs of the Black Country.</p> <p>The proposed housing requirement of 1,400 dwellings per annum is the same as the adopted housing requirement of 1,375 dwellings per annum, higher than the minimum LHN of 1,177 dwellings per annum but below last year's housing delivery of 1,843 dwellings and the revised LHN of 2,129 dwellings per annum. The proposed housing requirement provides limited flexibility to respond to changes in the LHN, deliver more affordable housing, support economic growth and accommodate unmet housing needs from the Black Country. It is "business as usual" rather than significantly boosting housing supply. Before pre-submission LPR consultation, the Council should consider a higher housing requirement. The housing requirement should also be expressed as a minimum figure.</p> <p>Strategic policies should ensure a sufficient supply of deliverable/developable land to deliver the housing requirement, maintain a 5 Years Housing Land Supply (YHLS) and achieve Housing Delivery Test (HDT) performance measures. The Council's overall HLS should provide some flexibility to respond to changing circumstances, to treat the housing requirement as a minimum rather than maximum and provide choice and competition in the land market. There is no numerical formula to determine the appropriate quantum for a contingency but greater numerical flexibility is necessary where HLS is dependent on a few large strategic sites or locations than in cases where HLS is more diversified. Suggest as large a contingency as possible (at least 20%). If during examination, assumptions on lapse rates, windfall allowances and delivery rates are amended or any proposed housing site allocations are removed any built in flexibility is also reduced. National policy only permits an allowance for windfall sites if there is compelling evidence that such sites have consistently become available and will continue to be a reliable source of supply.</p> <p>Housing delivery is maximised, where a wide mix of sites provide choice for consumers, allows places to grow in sustainable ways and creates opportunities to diversify the construction sector. There is a wide range of sites by both size and market locations, which should provide access to suitable land for small local, medium regional and large national housebuilding companies as well as providing opportunities for a wide range of different types of dwellings to meet the housing needs of all households. The NPPF requires Councils to identify at least 10% of its housing requirement on sites no larger than one ha (or demonstrate strong reasons for not achieving this target (para 68)).</p> <p>The Council should confirm compliance with this aspect of national policy.</p> <p>Would not wish to comment on merits of individual site allocations, but critical assumptions on lapse rates, non-implementation allowances, lead in times and delivery rates contained within its overall HLS, 5 YHLS and housing trajectory are correct and realistic. Assumptions should be supported by parties responsible for delivery and sense checked by the Council. The Council has provided limited information / supporting evidence on a site by site analysis of the deliverability of individual site allocations.</p> <p>The Council's 5 YHLS Statement dated 3rd March 2019 estimates the 5 YHLS between 2019/20 – 2023/24 against the adopted Local Plan housing requirement is 6.42 years or against the minimum LHN is 8 years (based on a stepped trajectory, Sedgefield approach to shortfalls and 5% buffer). Before the pre-submission LPR consultation, the Council should prepare and publish an updated 5 YHLS Statement for 2020/21 – 2024/25 against the proposed housing requirement and trajectory.</p> <p>Appendix 7 : Forecast of Delivery Timescales for Local Plan Allocations is not a housing trajectory. The NPPF sets out that strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period and if appropriate to set out the anticipated rate of development for specific sites (para 73). The omission of a detailed housing trajectory is inconsistent with the NPPF. Before the pre-submission LPR consultation, a housing trajectory should be incorporated into the Local Plan.</p> <p>The draft Local Plan promotes a sustainable pattern of growth by directing majority of new development towards larger settlements with the most extensive range of services / facilities and infrastructure.</p> <p>At the plan-making stage, deliverability of development is very closely linked to viability. Viability of individual developments and plan policies should be tested at plan making stage. As set out in the NPPF, viability testing should assess cumulative impact of affordable housing provision, policy compliant standards, infrastructure and other contributions so that there is sufficient incentive for a landowner to bring forward their land for development (para 34). The Council's viability evidence is set out in Local Plan Delivery & Viability Study dated July 2020 by HDH, which demonstrates viability challenges across the County.</p>
A2180B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Shropshire Council has declared a Climate Emergency as have many of the Parish & Town Councils in the county. Surely there is an expectation that the Local Plan takes a strong stance on Climate Emergency. Since declaring a Climate Emergency our Planning Committee has spoken at length of the need for development sites to take more responsibility for energy conservation and generation on development sites but there has never been a policy requirement and our experiences of discussions with developers is that they won't until a policy dictates that they should.
A2268B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Target of 30800 is 19% in excess of the Identified need of 25894 in Shropshire. The incorporation of 1500dwelling for the Black Country places an additional burden on Shropshire during the plan period for the additional supply to be provided as part of the 5 year housing supply. These factors risk an "out of date plan" due to economic fluctuations which are outside of the control of the council. As the fallout from the Pandemic is unclear, better to hold fire now and look again later when the required numbers will be clearer. The 15% high growth target makes no sense in this light.
A2268B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Hierarchy of Settlements: The suggestion in para 5.41 that a large range of services and facilities would compensate for the lack of "significant employment opportunities" and "peak time public transport is wrong. This makes the Hub designation unsound and it should be removed.
A2277B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Target of 30800 is 19% in excess of the Identified need of 25894 in Shropshire. A2311B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The strategy to deliver 30,800 new homes and 300 hectares of employment land to 2038 is wrong. It will massively change the size and character of Shrewsbury and many of Shropshire's towns. It will bring a density of homes, people, traffic, congestion and demands for services that will be damaging to the future of Shrewsbury and Shropshire. The Council's own papers recognise the importance of open countryside and that building upon it should be avoided. In particular, Shrewsbury should not be allowed to grow outwards, nor infill in existing green and unbuilt areas. The existing boundaries and the presence of these areas, contribute hugely to the balance and well-being of the town. These boundaries and areas must be preserved for the benefit and value of future generations. The proposed high growth of housing is based upon the assumption that Shropshire needs to grow to thrive, and that a high growth in housing is necessary to achieve a step change in Shropshire's economy and support higher value jobs, and higher wages, and that the influx of significantly more people is required. It is stated that the growth in housing is vital to ensure housing close to employment and to support businesses with a labour force. This argument is overstated and flawed. The Council's Economic Growth Strategy is aspirational, not based in fact or achievement, indeed the Council recognises in its publications that it does not have control over many actions and activities that will generate economic growth. Whilst it is to the Council's credit that it wants to bring economic growth to Shropshire, its accelerated strategy of assigning huge areas of land to this goal, and objective to attract many more people, is wrong. What has been previously proposed as 300 hectares of employment land (at a rate of 15 hectares a year), and 28750 number of homes (requiring some 1,150 hectares at a rate of 58 hectares year) is massive. This is an allocation of land equivalent to some 2030 times the size of the Wembley football pitch. The number of homes would increase the population of Shropshire by about a third (approx. 115000 people), the Council's proposal for Shrewsbury, 8625 homes, represents an increase upwards of 30% in the number of houses and people. This will have a hugely damaging impact upon the infrastructure and services of Shrewsbury and Shropshire. It is crucial this highly negative impact is properly recognised. It will prove impossible to later redress and undo the situation. On page 6 of the Shropshire Council Draft Housing Strategy 2020-2025 it is said the current population is 320,300 people and that this is projected to grow to 337,800 by 2041. This is an increase of just 17,500 people. The Council's proposed growth in housing is far too aggressive and is completely wrong. Such numbers of houses will require the majority provision by the major housebuilders, and is contrary to the intent of the housing secretary, Robert Jenrick, who wants government reforms to reduce their dominance in favour of local authorities and smaller builders, which should then be beneficial to the quality, affordability and relevance of the housing to local people. Shropshire has intrinsic areas of outstanding beauty and historic importance. It is crucial that these are protected and conserved. The proposed allocation of development land impacts these areas negatively. Special consideration should be given to the impact and extent of the proposed development strategy upon the architecture, history and heritage of Shrewsbury. The scale of the proposed developments is incompatible with these areas and the town. Very important farm land will be lost, which is essential for the future sustainability of food supply. Wildlife and its habitat, which contribute much to the quality and well being of people's lives will be badly affected. The Council has mentioned economic opportunities associated with HS2 and the Midlands (in the northern and eastern parts of the county). These are the most significant economic opportunities and Shrewsbury is not strategic to them. Also in contrast to many of the development areas that have previously been listed by the Council, the northern and eastern parts of the county have good existing links, transport infrastructure, and are already attractive to businesses. The Council consultation does not mention Telford and Wrekin Council with whom they should be working hard to further economic development and establish local housing and infrastructure needs. There is not a real basis for the proposed 30800 number of homes. The Office of National Statistics stated that around 18000 was needed. The Council has used a government modelling formula which includes aspiration, not reality, and even this gives a lower number of 25400. There isn't a link between the high number of 30800 and the Council's economic strategy because of the uncertainty surrounding economic development, and which because of the pandemic and Brexit will be suppressed for many years. The Council does not appropriately weight consideration of HS2 and the eastern part of the county with its proximity to the Midlands. The Council's development plans are too aggressive, extending beyond the real need, and will be in conflict with the majority of people responding to the consultation. The Council should downscale it's Housing Strategy so that it is better able to: direct it's resources to meet the needs of people during the Coronavirus pandemic and the economic downturn; work with Telford and Wrekin Council in progressing the development of a new hospital for Shropshire and Mid Wales, which is desperately needed; withdraw from the North West Relief Road which is far too costly, which will increase traffic and congestion in and around Shrewsbury, which will impact badly the environment and the climate; work to utilise and develop the Shrewsbury shopping centres that have been bought at high cost and require significant investment. The Strategy is out of tune with a future which should work to rebalance the impact of people upon the environment and their use of resources.
A2319B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	No specific comments.
A2321B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Policy SP2: Strategic Approach 3.5 Paragraph 60 of the National Planning Policy Framework (February 2019) (NPPF) states that a local housing need assessment should inform the minimum number of homes needed and should be conducted using the standard method in national planning guidance "...unless exceptional circumstances justify an alternative approach...". It adds that "...any needs that cannot be met within neighbouring areas should also be taken into account...". 3.6 Policy SP2, the 'Strategic Approach' establishes that over the plan period 30,800 new dwellings will be delivered, equating to around 1,400 dwellings per annum (dpa). In justifying this scale of provision, reference is made to the standard method of assessing the minimum need for housing, which suggests that at least 25,894 homes – or 1,177 per annum – are needed in Shropshire. The draft plan highlights its approach of providing flexibility beyond this minimum. 3.7 In addition to providing flexibility throughout the plan period, the level of housing growth also incorporates 1,500 dwellings to support the housing needs of the emerging Black Country Plan, where evidence to date indicates the capacity of the urban area for housing delivery is chronically constrained. 3.8 The NPPF and Planning Practice Guidance (PPG) strongly support the position taken by authorities such as Shropshire to identify a housing requirement which is higher than that implied as a 'minimum' level through the standard method. This particularly recognises economic ambitions relating to the M54 growth corridor with a clear commitment across a range of strategies to ensure that this investment is successful, with the outlined aspiration representing a significant potential growth in employment opportunities across the corridor. Furthermore planning for a higher level of provision is necessary to respond to the pressing need to deliver much needed affordable homes to address the consequences of historic under-provision. 3.9 Whilst the proposed housing requirement is higher than the outcome of the current standard method (1,177 dpa), up-to-date demographic projections suggest higher levels of need are likely to arise where recent growth is sustained. On 6 August the Government published the 'Changes to the Current Planning System' document for consultation which set out proposed changes to the standard method for assessing local housing need. The outcome of the revised method for Shropshire would increase the minimum requirement to 2,129 dwellings per year. Whilst it is acknowledged that the revised method is only out for consultation, it does reflect the impact of the up-to-date demographic projections on the need in the District. 3.10 Planning for higher levels of housing need is also considered prudent in the context of the significant housing need pressures identified in the Greater Birmingham / Black Country HMA, with which both Shropshire as a whole and in particular Albrighton are identified as having strong functional housing market relationships. There is little evidence to date that the full scale of need associated with either a minimum level, or indeed those associated with delivering the HMA's economic growth ambitions, will be accommodated in the current generation of Local Plans. The result will be a continued displacement of housing demand pressures, which will in turn place greater pressure on local housing markets in Shropshire, as well as other areas, where connections are strongest. The opportunity exists for the Council to take an even more positive approach in providing for these needs again with reference to the unique position it has in joining housing markets through the M54 growth corridor.
A2323B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Support the ambition for Shropshire to flourish, accommodating investment and new development that contributes to meeting needs and making the districts settlements more sustainable. Consider that SHF019 and P15b can contribute to this. With regard to the housing requirement, recognise the sustained ambitions of the Council to respond positively in providing for housing to meet local needs, with the Draft Plan continuing to provide for 1,400 homes per year (30,800 homes between 2016 and 2038) thus exceeding the current outcome of the standard method (1,177dpa). The NPPF and PPG strongly support the position taken by authorities such as Shropshire to identify a housing requirement which is higher than that implied as a 'minimum' level through the standard method. This particularly recognises economic ambitions relating to the M54 growth corridor with a clear commitment across a range of strategies to ensure that this investment is successful, with the outlined aspiration representing a significant potential growth in employment opportunities across the corridor. Furthermore planning for a higher level of provision is necessary to respond to the pressing need to deliver much needed affordable homes to address the consequences of historic under-provision. Whilst the proposed housing requirement is higher than the outcome of the current standard method, up-to-date demographic projections suggest higher levels of need. Government recently consulted on 'Changes to the Current Planning System' which set out proposed changes to the standard method for assessing local housing need. The outcome of the revised method for Shropshire would increase the minimum requirement to 2,129 homes per year. Whilst it is acknowledged that the revised method is only out for consultation, it does reflect the impact of the up-to-date demographic projections on the need in the District. Planning for higher levels of housing need is also considered prudent in the context of the significant housing need pressures identified in the Greater Birmingham/Black Country HMA (there is little evidence that this HMA can meet minimum need or indeed its growth ambitions, which will displace development outwards), with which both Shropshire as a whole and Shifnal are identified as having strong functional housing market relationships. The opportunity exists for the Council to take an even more positive approach in providing for these needs again with reference to the unique position it has in joining housing markets through the M54 Corridor. Strong evidence-based support (provided as an Appendix to this representation), for the proposed policy approach of allocating and safeguarding land for housing growth in Shifnal. However, based on analysis of this, consider the draft Local Plan should incorporate greater flexibility to support land coming forward where justified. Note reference to the fact that the "availability of land will be kept under review to ensure a continuous supply of suitable sites is available". However, there is no mechanism in place to determine how such reviews would impact upon the policies within the Local Plan or how safeguarded sites would be considered within the plan period should the need arise. Such a mechanism would make the Plan more robust and help ensure that the Council are able to meet their ambitions. Consider Shropshire can accommodate a greater level of growth. With regard to affordable housing, draft Policy SP2 identifies a target of around 7,700 affordable homes during the plan period, or 350 homes per year. As the Draft Plan acknowledges, the Council's evidence base confirms the full need is considerably higher, calculating an estimated need to provide 799 affordable homes a year over the plan period. This level of need represents some 57% of the overall proposed affordable housing requirement and would require a significant increase from recent levels of delivery. The last published Annual Monitoring Report (AMR) confirms in the last seven years the highest annual level achieved has been 441 (2016/17) with the average in the last seven years being only 244 affordable homes per annum. Evidently planning for a level housing growth above the current proposed requirement would further support the delivery of additional affordable housing and mitigate a risk that the aspired boost in provision is not achieved. With regard to the pattern of development, Shifnal is identified as a Key Centre and it is noted that it scores highly (4th highest) of the Key Centres in terms of service and facilities. This means it has significant social infrastructure. This is affirmed within the Sustainability Appraisal (SA) Report for the draft Local Plan which acknowledges that development in line with the proposed guidelines would mean "Existing businesses are likely to be maintained and supported and opportunities to create more or higher value jobs provided... The provision of, and access to, services such as schools, doctor's surgeries and shops is likely to be maintained or enhanced... this option may also; enable more walking and cycling in the town; support access to amenities such as play areas and sports facilities". It also aligns with the Shifnal Neighbourhood Plan's objectives around the provision of health and leisure facilities. It is also noted that the SA confirms public transport is likely to be maintained/increased with opportunities to co-ordinate new development with future provision. Shifnal is well-connected to its wider economic area and is a location that exhibits demand for further residential development, with this expressly recognised within the Draft Plan. The town also already accommodates significant levels of economic activity and employment alongside good social infrastructure. The proposed allocation of a large employment site in Shifnal is strongly supported as a means of sustainably accommodating inward investment and enabling local business to grow building on the advantages of the M54 corridor. This will offer the opportunity to create a more sustainable balance between housing and employment in Shifnal over the plan period.
A2327B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The county's housing and employment targets are wrong – will damage Shrewsbury and many of the towns. Shrewsbury should not grow outwards, and should not build on green infill sites. The Shropshire-wide scale of development is too high and the arguments in favour of this growth is overstated and flawed. It would damage the infrastructure. Only the larger housebuilders would be (mostly) used. Areas of Shropshire should be protected. Farm land will be lost. ONS suggests that only 18,000 houses are needed. NWRR not needed.
A2338B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Stoke St Milborough, Hopton Cangeford, Clee Stanton and Clee Downton are incorrectly labelled as Cluster settlements on the map
A2342B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The Parish of 'Stoke St Milborough and Hopton Cangeford' was removed from the Community Cluster designation at the request of the Parish Council, and should be shown as OPEN COUNTRYSIDE. However, although the text of the Plan (schedule SP2.3 of policy SP2) correctly shows our parish as OPEN COUNTRYSIDE, both of the maps (Craven Arms Place Plan area, & figure SP2.1 Shropshire) show all of the small settlements within our Parish still marked as Clusters.

A2369B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 explanation paras 3.5 3.6 3.7 SP2 Strategic approach Para 2 Housing Requirement - target of 30,800 Explanation Para 3.5, Para 3.6 and Para 3.7 This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its "highly ambitious" High Growth target. he incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. Both of these factors increase the risk of an "out of date" Plan due to economic fluctuations between now and 2038, completely outside the control of the Council. Additionally the Covid-19 pandemic has had short term effect on construction and its long term impact on the economy and growth is unknown. The impact on consumer demand for housing will be financial lead whilst in turn supply by developers is profit lead. Despite Government exaltations to "Build Build" the funding for Local Authority housing is limited and the supply is majority private sector. It is established fact that whenever there is a lack of demand housing is not built, but developers pursue consent on otherwise unattainable land An "out of date" Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of "Right Homes in Right Place" in the Draft Housing Strategy 2020-2025. By the next Partial Review (5yearly) the repercussions of the pandemic will be clearer, and the Housing Target can be adjusted to suit the new circumstances then, rather than increasing now when a downturn in demand & supply is widely predicted. In view of the changed world circumstances we would again ask that the 15% "High Growth" Target is reconsidered by the Council, and changed to a more deliverable "Moderate Growth" 5% above identified needs to avoid a potential "out of date" Plan in the coming years. Black Country Plan housing provision We acknowledge the requirement for cross boundary co-operation with neighbouring authorities. Our concern is the incorporation of the additional 1500 homes into the overall Shropshire Housing Target. This will increase pressures on settlements across the county for the supply of 'out of county' needs unless sites or location close to that region can be identified. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A2371B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 explanation paras 3.5 3.6 3.7 SP2 Strategic approach Para 2 Housing Requirement - target of 30,800 Explanation Para 3.5, Para 3.6 and Para 3.7 This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its "highly ambitious" High Growth target. he incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A2398B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Generally supportive of the extension of the draft Local Plan period - notes the NPPF requirement for a 15 year period at adoption. Request that all supporting evidence clearly demonstrates that development requirements and targets have been increased accordingly. Point 1 of the draft policy reiterates the aims which are set out in the Vision, as well as the Shropshire Test, and are supported. Point 2 of the draft policy confirms that over the plan period 2016 to 2038, around 30,800 new dwellings and 300ha of employment land will be delivered, equating to around 1,400 dwellings and 15ha of employment land per annum. The policy explanation confirms the proposed housing requirement is nearly 5,000 dwellings above the standard method figure, which represents the minimum number of homes needed. Supports the principle of adopting a housing requirement which seeks to significantly uplift the minimum figure. Paragraph 3.6 of the draft Local Plan confirms the flexibility provided by the increase in the housing figure allows for the delivery of family and affordable housing to meet local needs and support new families coming into Shropshire. Supports the delivery of quality family housing in sustainable locations and acknowledges the role this can play in attracting new families to the County. It is important that the future growth aspirations are aligned with housing policy and that enough of the right types of housing are built to ensure that the labour force and skills the economy needs will be attracted to and retained in Shropshire. Government's proposals for revising the standard method to calculating housing need mean Shropshire needs to press on with their emerging Plan quickly to progress to Reg 19 and submission. If they do not then it may need to be re-thought and cause delay. Point 3 of the draft policy acknowledges that delivery of affordable housing remains a key priority in Shropshire and confirms that the Plan aims to deliver around 7,700 affordable dwellings. Policy explanation confirms there are in excess of 5,000 households on the housing register and the SHMA has identified need for nearly 800 affordable homes per annum during the draft Local Plan period. Support focus on delivery of affordable housing and acknowledge the pressing need within Shropshire. It is important that viability and market attractiveness of settlements and sites is considered when allocating sites. There is little value in allocating land in settlements where there is no market interest, or sites which are overly constrained. Such allocations may either remain undeveloped and undelivered or fail to viably deliver affordable housing. Point 6 of the draft policy references the importance of ensuring the long-term sustainability of rural communities through allocating new development within Community Hubs. Strongly supports the acknowledgment that Community Hubs are significant service centres. It is imperative that a sufficient level of growth is directed to such settlements in order to sustain day to day facilities and secure continued vitality. Many rural settlements provide homes for several generations of the same family and new development will help younger people find homes in the communities in which they grew up. Similarly new housing will also assist in allowing older people to downsize. The draft Local Plan recognises Shropshire has a rural character and network of villages and small towns which serve a wide hinterland as well as its resident population. It is important that the contribution of these settlements is recognised and the key role they play in not only supporting their own rural communities but also the urban conurbations too. For instance, Bayston Hill is located less than 1 mile from the settlement boundary of the County Town of Shrewsbury. Development within Bayston Hill will help to sustain and grow the vitality of both settlements.
A2403B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	The Estate supports the aspirations of the plan to help support and deliver growth and investment in Shropshire. We support the focus of this development on the key settlements, with Shrewsbury retaining its primary settlement function and key location for growth. We are also however pleased to see the plan recognises the rurality of much of the county and the need for the plan to allow appropriate growth in rural areas. This will help to maintain the sustainability of rural communities, including through the provision of affordable housing, and rural economic development and diversification across the whole rural area. The Estate is an example of successful rural diversification, having successfully developed a collection of modern rural workspaces which provide employment for over 300 people'. Such provision will be an important part of providing for sustainable rural communities during and after the current health pandemic and into the future. Policy SP2 proposes the delivery of around 30,800 new dwellings and around 300 hectares of employment land over the plan period. We consider in respect of housing development, Policy SP2 is taking a too conservative approach which may adversely impact upon its wider growth aspirations, and those of the Government to see a continued increase in housing growth and delivery. Under their current consultation on proposed changes to the standard method for assessing local housing need, the use of the most up to date household projections, plus additional adjustments for affordability, would see an increase in Shropshire's housing requirement from the current proposed figure of 1,400 per annum to over 2,100 dwellings per annum. Whilst it is accepted the Government proposals are still at consultation stage, it is also noted that the proposed 1,400 per annum housing target is lower than the current adopted housing requirement of 1,530 in the Core Strategy for the forward period 2021-2026. The role of housing delivery in supporting economic growth is accepted in planning policy. It is therefore recommended that the council's housing targets are revised taking into account the emerging Government consultation to a more aspirational figure which matches their growth objectives. Policy SP2 advises that the employment requirement for Shropshire of around 300ha of employment land over the plan period from 2016 to 2038 seeks to implement the aspirations of the Economic Growth Strategy for Shropshire, key objectives of which are to support and grow new and existing businesses and attract inward investment. The need to allocate new strategic allocations to provide sufficient land to deliver against these aspirations is supported. However, the need for the plan to include sufficient flexibility to ensure necessary development comes forward to support economic growth will be important and is commented on under our representations to Policy SP9.
A2407B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	We note that the plan has a strategic policy SP2 specifically around climate change and Natural England would support this. We also consider that addressing climate change is a theme throughout the plan and that there are specific development management policies (DP12) to minimise carbon in new developments. Natural England supports this approach, especially with regard to the climate emergency and climate change running as a thread throughout the whole plan.
A2412B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	We support the strategic approach set out in the plan, which seeks to deliver 30,800 new dwellings between 2016 to 2038. We also welcome the that Market Drayton is identified as a 'Principal Centre' where development is directed.
A2426B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	In many small settlements there is a case for limited new dwellings, without the level of development that may be necessary to create a Community Cluster. At present only affordable housing can be considered on any rural land outside the Community Hubs or Clusters. This is unnecessarily restrictive, and in defined settlements it should be possible to propose individual developments on infill sites.
A2441B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	A delivery of around 30,800 new dwellings is above the governments' quota. Why is it necessary to be so much over the number of dwellings the government suggests? If it is so that more affordable dwellings can be built in rural areas where you say they are needed, why split the county in half and stipulate 10% of affordable housing in the north and 20% in the South. To reach the government's affordable housing target for the county surely it would be more environmentally better to have a blank 20% rate across the county thus reducing the need for so much building and destruction of the countryside.
A2441B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Increasing the number of houses in Shropshire by some 22% by 2038 seems excessive and well above the government's assessment.
A2455B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Para 2 Housing Requirement - target of 30,800 Explanation Para 3.5, Para 3.6 and Para 3.7 This target is 19% in excess of the identified need of 25,894 for Shropshire. The Council is still pursuing its "highly ambitious" High Growth target. The incorporation of 1500 dwellings for the emerging Black Country Plan places an additional burden on Shropshire during the Plan period for the delivery of that additional supply to be provided as part of the annual 5Year Housing Supply assessments. Both of these factors increase the risk of an "out of date" Plan due to economic fluctuations between now and 2038, completely outside the control of the Council. Additionally the Covid-19 pandemic has had short term effect on construction and its long term impact on the economy and growth is unknown. The impact on consumer demand for housing will be financial lead whilst in turn supply by developers is profit lead. Despite Government exaltations to "Build Build" the funding for Local Authority housing is limited and the supply is majority private sector. It is established fact that whenever there is a lack of demand housing is not built, but developers pursue consent on otherwise unattainable land An "out of date" Plan holds that inherent risk of exploitation by developers & landowners to gain consent for open market housing on sites not identified in the Plan, which will be contrary to the aims of "Right Homes in Right Place" in the Draft Housing Strategy 2020-2025. By the next Partial Review (5yearly) the repercussions of the pandemic will be clearer, and the Housing Target can be adjusted to suit the new circumstances then, rather than increasing now when a downturn in demand & supply is widely predicted. In view of the changed world circumstances we would again ask that the 15% "High Growth" Target is reconsidered by the Council, and changed to a more deliverable "Moderate Growth" 5% above identified needs to avoid a potential "out of date" Plan in the coming years. Black Country Plan housing provision We acknowledge the requirement for cross boundary co-operation with neighbouring authorities. Our concern is the incorporation of the additional 1500 homes into the overall Shropshire Housing Target. This will increase pressures on settlements across the county for the supply of 'out of county' needs unless sites or location close to that region can be identified. If the aim is to supply housing for residents of the Black Country surely these must be located close to that area, and not anywhere across the whole county.
A2463B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	The rationale for the retention of flexibility in the land supply, increase the delivery of affordable housing and other specialist housing types are in the spirit of the NPPF's pursuit of sustainable development and significantly boosting the supply of housing. Persimmon supports the Council's urban-focused spatial strategy as it is both deliverable and sound. Full support for the identification of Whitchurch as a Principal Centre
A2468B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	Policy SP2 sets out that 30,800 dwellings and 300 hectares of employment land will be delivered over the plan period 2016-2038. In order to achieve this, the plan will need to plan for more houses to provide against a number of factors that prevent some sites from coming forward at all, slower delivery rates, fewer windfalls, etc. To be positively prepared it is recommended that the plan builds in a buffer of 20% to guard against these potential outcomes and to ensure the plan is positively prepared. Policy SP2 also sets out the Strategic Approach to development across the plan area over the plan period. It is the only policy that provides an over-arching spatial dimension to the plan, but it is simply not clear, and is therefore ineffective, in explaining the levels of growth to various settlement hierarchies. Paragraph 5 of Policy SP2, and the schedule at SP2.1, lists the settlements in various categories, but no indication is provided to the levels of growth to be apportioned to the hierarchies or settlements. For example there appears to be no distinction between Principal and Key Centres and the levels of growth to be directed to these settlements. It is inferred in the policy that the schedule at SP2.1 represents a settlement hierarchy, where greater levels of growth are directed to the higher tier settlements – but this is not clear. One has to go to the individual settlement policies to ascertain how many dwellings and how much employment land is proposed for each place. When one does this, it is also not clear how the quantum has been arrived at; Bridgnorth and Oswestry are Principal Centres and are proposed to deliver 1,800 and 1,900 dwellings respectively, whereas the Principal Centre of Market Drayton is proposed for only 1,200 dwellings. There appears to be no rationale or explanation for the scale of growth directed to each settlement. The Sustainability Appraisal (SA) for this Reg 18 Plan does not assist in clarifying this position. The previous Preferred Scale and Distribution of Development Consultation in 2017 set out a Preferred Development Strategy of 'High' growth with a preferred 'Urban Focused' distribution. However, it is not clear if this preferred strategy is the one that this Reg 18 consultation is now based on. In light of the above it is concluded that Policy SP2 is not an effective policy. Please

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2470B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	Support the target of 30,800 over the Plan Period. However, the current White Paper possible changes to the standard methodology for calculating housing need would mean that Shropshire's housing need would increase by around 2,129 dwellings per annum (from 1,177). However, given the timescale and transitional arrangements it is not expected to affect the LPR. There is however an imbalance in Market Drayton. The employment growth is supported but the residential growth should be higher - minimising the need to commute and securing a sustainable pattern of development. The proposed policy framework in relation to development beyond the settlement boundary of Market Drayton appears to conflict with the positive consideration of housing growth to support economic growth outlined in SP10.
A2476B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	3.4 It is acknowledged that through the plan making process the Council has consulted on various options for housing growth. At preferred options stage the Council promoted the 'high growth' option of 28,750 dwellings. Policy SP2 (2) move that option forwards and now identifies that at least 30,800 new dwellings and around 300 hectares of employment land will need to be delivered over the plan period from 2016-2038.3.5 This is primarily as a result of the incorporation of an additional 1,500 homes to assist meeting the emerging needs of the Black Country Plan, and will be delivered through the Duty to Cooperate. This draft plan demonstrates effective cross-boundary working in this respect.3.6 The stated requirement of 30,800 dwellings over the plan period exceeds the local housing need as calculated at 25,894, using the Government's standard housing methodology. This housing requirement is supported as it assists meeting the National Planning Policy Framework objective of boosting housing supply whilst also seeking to address local housing affordability issues.3.7 Policy SP2(5) and Table SP2.1 recognise Shrewsbury's role as the Strategic Centre of Shropshire, which will be a focus for well-designed new housing and employment development, supported by the necessary infrastructure. The NWRR plays a role in ensuring this is achievable.3.8 This 'urban focussed' growth at Shrewsbury and the Principal and Key Centres has followed through from earlier public consultations and is considered to correctly acknowledge that Shrewsbury has the greatest opportunity to deliver further sustainable growth. It is the highest-ranking settlement in Shropshire in terms of access to facilities, employment and infrastructure and therefore the spatial development strategy is justified in directing growth towards Shrewsbury.
A2477B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Agree	This is supported too and agreed that Market Drayton is a principal centre.
A2497B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP2	Disagree	It was agreed by a large group vote in the Spring 2020 Parish Council meeting that the residents wanted the villages/hamlets Stoke, Hopton cangeford, Cleestanton and Cleedownton to remain as "open Countryside" and not as proposed as "Clusters" Please change this to ensure your plan is in line with residents wishes.
A0057B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	This is incorrect. This was the previous target in the Climate Change Act of 2008. Legislation was passed in June 2019 to enshrine in law the UK's new target to reduce carbon emissions to net zero by 2050.It is very concerning that the Council has got the wrong target in this policy. Surely the policy was written to meet the target the Council quotes i.e. the 2008 Climate Change target. The policy must surely be re-considered and re-written to meet the UK's current climate change target. This is a fundamental mistake to make and I am very surprised it was not noticed at an earlier stage before it was widely distributed.
A0117B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Climate Change policies do not meet the minimum standards set out in Government legislation. Should be strengthened and contain standards covering key issues such as active travel, energy efficiency and tree (canopy cover).
A0134B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		Explanatory text to policies make insufficient reference to the impact of the policy on viability and deliverability Key Evidence listed in Appendix 3 (Key Evidence Informing Local Plan Policies) for Policy DP12 fails to mention the Council's Delivery & Viability Study. Assuming Future Homes Standard (31% reduction) with Merton Rule, car charging points, 10% biodiversity net gain and water saving measures, the Total costs from climate change measures in Policies SP3 and DP12 will be around £246,689/ha. In addition, accessible homes and the Community Infrastructure Levy are estimated to increase contributions from development to around £554,093/ha, as summarised in table 12.8 of the Council's Delivery & Viability Study, reproduced below. These additional costs should be explicitly acknowledged by the Plan and reflected in realistic expectations in relation to other developer contributions.
A0158B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	We support the measures being put forward in the draft plan to move towards a zero-carbon society. We believe that promoting walking and cycling, and the use of zero/low emission vehicles is especially important in rural communities.
A0159B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Local Plan must include robust targets for reducing transport carbon and these targets must take into account the very large amounts of additional carbon that can be expected. Every statement and every policy must answer the question (based on evidence) "by how much will this policy reduce carbon emissions by 2030," and "will this policy add to carbon emissions" Any policies which cannot be convincingly related (with evidence) to its outcome measured in terms of carbon reduction it must be discarded. The Plan does not give climate change enough significance. Sites are in places that are car-dependent, have no or poor access to walking, cycling and public transport. Why does SP3 mention 2008 legislation to reduce carbon by 80% and not mention the 2019 "net zero by 2050" published on 27th June 2019? paras 1a-g in SP3 are at variance with established policies of Shropshire Council and its public statements that damage public transport and active travel e.g. its rejection of 20mph at full council in December 2019. There is nothing in the Local Plan that demonstrates a reversal of these policies and a significant shift in the direction of supporting alternatives to the car. Electric vehicles are not enough and it is a major weakness of the climate change sections of the Local Plan that this fundamental point about transport and climate change is missed. A completely new section should be included in the Local Plan explaining why we must reduce traffic levels (e.g. a 25% reduction in vehicle kms travelled in Shropshire). It is not acceptable that this reference to the largest capital expenditure on transport ever undertaken in Shropshire is not linked to its impacts on carbon emissions. The NWRR has not yet got planning permission and may be subject to a public inquiry. If it is the view of independent experts that the NWRR will reduce carbon then this must be stated in the Local Plan, with evidence. The NWRR is contrary to the objectives of net zero carbon. There is nothing in the Local Plan that gives substance to the aspiration of "maximising the ability to make trips by sustainable modes of transport". Shropshire Council has not used the provisions of the Bus Services Act (2017). If the Local Plan is to make a credible contribution to delivering net zero carbon then a refusal must be possible on grounds that the development will make the climate emergency worse by adding additional carbon
A0167B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		It is imperative that safe and suitable pedestrian and sustainable transport links are maintained between Oxon Hall Caravan Park and the town centre to encourage visitor spend and positively contribute to mitigating climate change. This policy seems to support this principle. Concerned that proposals for development of the SUE West site do not adhere to the adopted Masterplan due to proposed increases in levels of development and levels of open space, ecology, landscape and environmental considerations. Current and emerging policies must be applied when considering proposals for the SUE West and NWRR.
A0187B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	SP3 is not sufficiently integrated into the whole Plan. NPPF and the Climate Change Act require climate change to be central to all planning and development. In addition to DP12, DP15, DP21 and DP22, SP3's omission from Transport, Infrastructure, Economy, Health and Wellbeing shows the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents.
A0188B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	SP3 is not sufficiently integrated into the whole Plan. NPPF and the Climate Change Act require climate change to be central to all planning and development. In addition to DP12, DP15, DP21 and DP22, SP3's omission from Transport, Infrastructure, Economy, Health and Wellbeing shows the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents (respondent ref form 1)
A0214B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050, compared to 1990 levels. The 2019 Target Amendment order increased this to 100% Vehicle journeys make up 33% of Shropshire greenhouse gas emissions (2017 figures). Shropshire Council Policy SP3 ignores the 2019 Target Amendment. Shropshire Council has no 'fit for purpose' Climate Change Strategy relating to the transport needs of proposed developments. As a result, unsustainable 'car dependant' sites such as CST021 continue to be proposed
A0228B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The 2008 Climate Change Act and 2019 Target Amendment order introduced a legally binding target for the UK to reduce its carbon emissions by 100% by 2050 compared to 1990 levels. Shropshire Council's policy SP3 ignores the 2019 amendments and thus the council has no fit for purpose Climate Change Strategy (respondent ref; objection on SP3)
A0238B30	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Don't know / no opinion	Document Ref BTC20:Supports identified Strategic Policies and their application in managing development. Note the definition of Sustainable Development in paragraph 2.1.
A0240B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	2.54 Policy SP3(1)(f) requires new development to reduce carbon emissions through a number of means, including "wherever possible, integrating electric vehicle charging infrastructure in to new development, in line with the requirements of DP12".2.55 L&Q Estates are supportive of the encouragement for the use of electric and hybrid vehicles but consider this should be secured through a national standardised approach implemented through the Building Regulations. This will ensure a consistent approach to future proofing the housingstock.2.56 In this regard, the Department of Transport undertook a consultation on Electric Vehicle Charging in Residential and Non-Residential Buildings in July 2019. This consultation set out the Government's preferred option to introduce a new functional requirement under Schedule 1to the Building Regulations 2010, which was expected to come into force in 2020.2.57 The inclusion of EVCP requirements within the Building Regulations 2010 will introduce a standardised consistent approach to EVCPs in new buildings across the country. The requirements proposed apply to car parking spaces in or adjacent to buildings and considered a proposal for one charge point per dwelling rather than per parking space.2.58 The Government estimated installation of such charging points add on an additional cost of approximately £976 per car parking space for an average home.2.59 The Government has also recognised the possible impact on housing supply, where the requirements are not technically feasible: 'However, we recognise that the cost of installing charge points can be high in areas where significant electrical capacity reinforcements are needed. To mitigate any potential negative impact on housing supply as a result of these regulations, this consultation seeks views on an appropriate exemption from the charge point installation requirement based on the grid connection cost. The consultation proposes the threshold for the exemption is set at £3600,which is three times the high scenario cost of the average electrical capacity connection required for one chargepoint.'2.60 In the instances when this cost is exceptionally high, and likely to make developments unviable, it is the Government's view that the EVCP requirements should not apply and only the minimum Energy Performance of Buildings Directive requirements should be applied: 'The EPBD also sets out requirements for residential buildings undergoing major renovation with more than 10 parking spaces. As a starting point, the government proposes to transpose the EPBD requirements for major renovations - i.e. the installation of cable routes in all parking spaces in scope as we think this is a proportionate requirement. However, the consultation seeks views on the possibility of going further than the EU requirements.'2.61 The requirement for EVCPs should be deleted given the Government's proposed changes to Building Regulations are still at the consultation stage and therefore have not been finalised.2.62 Notwithstanding, L&Q Estates endorses the Council's requirement for development to support the transition to a zero-carbon economy and considers that its land interests at Shifnal would look to support this transition to a zero-carbon economy.
A0250B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		Whilst we support efforts to reduce carbon emissions, the Plan needs to be honest and recognise the significant costs of these measures on development. Local Plan Appendix 3 (Key Evidence Informing Local Plan Policies) fails to mention the Council's Delivery & Viability Study in relation to policy SP3. The significant costs deriving from policy SP3 and its accompanying DP policies need to be explicitly acknowledged by the Plan and reflected in reduced developer contributions in other areas, such as education and affordable housing.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0266B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Onsite energy reduction and generation policies are not in line with climate emergency declarations and are dated and unambitious. The 'Merton Rule' 10% rate onsite contribution dates from a time when energy use would have been much higher; prior to modern insulation and energy use practices common in construction. The combined effect of the fabric requirements and onsite renewable generation will still leave a considerable gap to be made up by 'retrofitting' if new developments are to achieve 'net zero carbon'. A more robust approach could demand a much higher reduction in emissions through a combination of fabric, onsite generation and meaningful offsetting. For example, Oxford Local Plan policy RE1 requires 'at least a 40% reduction in carbon emissions from a 2013 Building Regulations' rising to 'at least 50%' by March 2026 for certain categories of development, to be 'secured through on-site renewable energy and other low carbon technologies (this would broadly be equivalent to 25% of all energy used) and/or energy efficiency measures.' No policy statements have been brought forward to allow effective consideration of renewable energy generation site applications; it seems this is left to neighbourhood plans, of which Shropshire has only a handful, and none of which so far propose renewable energy generation sites. Without a proactive approach to renewable energy the chances of achieving a carbon zero Shropshire in either locally desired or nationally legislated targets seems unlikely. This also fails to capitalise on the economic opportunities identified in the Marches LEP Energy Strategy.
A0268B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		This draft policy places carbon reduction at its heart. A key component of this is the pattern of development, achieving a modal shift away from private car journeys through the location of housing and employment uses at the most sustainable locations. Please also see comments on proposed allocation SHR197VAR.
A0306B011	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Whilst we welcome the inclusion of a specific Climate Change policy, we feel it needs to be much stronger. For example "Climate Emergency" would be a better policy title reflecting Shropshire Council's declaration. SP3 (1e) Weak wording, change "encourage" to "ensure". SP3 (1f) The wording is weak as electric charging infrastructure should be provided in all new development. SP3 (2a) More clarity is needed on what is meant by 'renewable and low carbon energy systems' SP3 (3a) Weak wording, there should be more than 'encouragement'. SP3 (3b) There should be a requirement to restore habitats with potential for significant carbon sequestration and storage potential, including wetlands, peatland, and soils. SP3 (3b) Supporting" should be "requiring", as per Biodiversity Net Gain as a minimum. SP3 (4c) Supporting" should be "requiring", as per Biodiversity Net Gain as a minimum.
A0306B012	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.28 This is out of date. Under the amended Climate Change Act there is now a requirement to bring all greenhouse gas emissions to net zero by 2050.
A0311B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: • Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation
A0311B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Paras 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs
A0323B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)
A0323B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." A0406B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The statement is: 'Supporting the delivery of multiple benefits including ... reduced flood and drought risk ...' The selection of site MUWO12VAR does not support this statement as the development of this site does not guarantee that flooding will not reoccur
A0413B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	It should be clear that the ambition is for Net Zero Carbon emissions (which takes into account all the greenhouse gases as carbon equivalent or CO2 e) and that there should a low carbon economy. It should be clear that the ambition is for Net Zero Carbon emissions (which takes into account all the greenhouse gases as carbon equivalent or CO2 e) and that there should a low carbon economy. Part 2 should include that renewables are considered by Neighbourhood plans and Local Plans, those already in place should be reviewed and updated. The council could provide details of possible areas for renewables and allow for applications for schemes to be considered inline with National policies. The Marches LEP Energy Strategy has a target for 50 % of electricity local demand to be provided by locally produced renewable energy. We welcome the support shown for community energy projects.
A0486B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The amendment to the Climate Act (June 2019) requires net zero emissions by 2050 - para 3.28 refers to a reduction of 80%. This should be updated/clarified. Gases that contribute to climate change are more than just carbon. There is a need to reduce greenhouse gas emissions, including carbon. Object to the policy on these grounds.
A0501B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Shropshire Test needs to include more specific details relating to the need to mitigate the effects of climate change through reducing CO2 emissions. The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target and the planning system will need to play a full role in its achievement. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Within this context, the Shropshire Local Plan, which will set the county's direction until 2038, does not provide a positive framework necessary to guide the county towards a net zero carbon economy. It lacks three key components: 1. Detail in the four key areas necessary for a zero carbon future (see below). 2. The 'how much' and 'by when' targets for every aim; dates and time scale. 3. Baseline data; details of the county's current footprint (please state precisely which data sets are being used in figures : 3.29 i.e. full data set, subset, what is included or excluded) and percentage decrease needed every year to achieve targets, with explanation of what this will mean for each sector and for county residents. Four key areas include: policies to reduce energy demands; a comprehensive sustainable transport system; commitment to develop far more renewable energy; Council guidance to promote a low carbon/more plant based diet (this should be one of the principle aims within Health & Wellbeing strategy) and a county framework to increase re-forestation, using more land for carbon capture, increasing bio diversity and reducing livestock land use. Since such strategies are not clearly set out, with details, targets and time frames, I consider that this plan is not fit for purpose (respondent ref; Form 2)
A0501B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Paragraph 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. The graph below is based on this data: https://www.gov.uk/government/statistics/uk-local-authority-and-regional-carbon-dioxide-emissions-national-statistics-2005-to-2018 It has used the subset data which excludes motorway and diesel train emissions. Of the three main sectors of energy demand, transport continues to rise and has overtaken the other two sectors - Industry & Commerce and Domestic energy use. The trend for CO2 emissions for transport is rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. It is not fit for purpose. Therefore I disagree with these paragraphs.
A0642B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Whilst we welcome the inclusion of a specific Climate Change policy, we feel it needs to be much stronger. For example "Climate Emergency" would be a better policy title reflecting Shropshire Council's declaration. Paras 1a-g in SP3 are at variance with established policies of Shropshire Council and its public statements that damage public transport and active travel e.g. its rejection of default 20mph zones at full council in December 2019 when evidence reveals the effectiveness of these lower speed limits in terms of increasing walking and cycling and reducing transport's carbon emissions. Recent years have, in addition, seen reductions in bus funding and there are public statements from the council about demolishing Shrewsbury bus station and destroying a central principle of sustainability in transport which is "integration". Shrewsbury bus station is close enough to the train station to encourage bus and train use in combination and this combination (with attractive ticket deals) is a stimulus to modal shift (transferring car trips to public transport) which in turn reduces carbon emissions from the transport sector The Shropshire track record of neglect and damage to walking, cycling and public transport is at variance with statements in SP3 and there is nothing in the Local Plan that demonstrates a reversal of these policies and a significant shift in the direction of supporting alternatives to the car. There is nothing in the Local Plan that gives substance to the aspiration of "maximising the ability to make trips by sustainable modes of transport". It is possible to produce substantial increases in walking, cycling and bus use and the interventions that deliver these increase are well documented e.g. Cornwall County Council's bus strategy making full use of the Bus Services Act (2017). Cornwall County Council makes sure that buses run 7 days a week and that one ticket for all local bus and train services can be purchased. Shropshire Council has not used the provisions of this Act to improve bus services and there is nothing in the Local Plan to indicate that this will be done in the plan period. Our concerns remain that the text makes nothing compulsory. Great words, 'encourage' and 'where possible' and 'promoting'. Meaningless unless enforced. Our concerns remain that the text makes nothing compulsory. Great words, 'encourage' and 'where possible' and 'promoting'. Meaningless unless enforced. (f) The wording is weak as electric charging infrastructure should be provided in all new development. (g) Fabric energy efficiency should be defined with a minimum figure. 2a: More clarity is needed on what is meant by 'renewable and low carbon energy systems'. 3a: Weak wording, there should be more than 'encouragement'! 3b: There should be a requirement to restore habitats with potential for significant carbon sequestration and storage potential, including wetlands, peatland, and soils. 4c: Supporting" should be "requiring", as per Biodiversity Net Gain as a minimum.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0642B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.28 Why does SP3 mention 2008 legislation to reduce carbon by 80% and not mention the 2019 "net zero by 2050" published on 27th June 2019?
A0642B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.30 The Strategy framework is not a strategy - merely an outline of how the strategy will be developed. The Local Plan needs to reference a complete Climate Change Strategy that shows how the county will respond to the declared Climate Emergency and support the National net zero target. (b) The implications of this policy have not been followed through into the traffic forecasts that are used in the business case for the NWRR. Support for active travel is not in any way linked to adoption of EVs or ULEVs. Driving a car is a sedentary activity and not in any way "active". Years of sustainable transport research have identified how car ownership produces much increased use of cars (rather unsurprisingly) and reduces walk, cycle and bus use. If people sit inside cars and do not walk or cycle they do not meet public health targets for physical activity and they incur an elevated risk of "non-communicable diseases" including diabetes, obesity and cardio-vascular disease. Getting people out of cars and into non-car alternatives reduces carbon emission and there is nothing in the local plan that will stimulate or promote non-car alternatives. There is a large literature on what is needed by way of infrastructure to support walk, cycle and bus use e.g. excellent segregated cycle paths, joined-up networks to link housing with schools and commonly used destinations and these requirements are not supported or funded in Shropshire. Shropshire Council has refused to adopt 20mph contrary to the advice of the World Health Organisation advice in the Stockholm Declaration (communicated to all national governments) that this increases active travel and modal shift away from cars and towards walking, cycling and bus use. Support for active travel is not in any way linked to adoption of EVs or ULEVs. Driving a car is a sedentary activity and not in any way "active". Years of sustainable transport research have identified how car ownership produces much increased use of cars (rather unsurprisingly) and reduces walk, cycle and bus use. If people sit inside cars and do not walk or cycle they do not meet public health targets for physical activity and they incur an elevated risk of "non-communicable diseases" including diabetes, obesity and cardio-vascular disease. Getting people out of cars and into non-car alternatives reduces carbon emission and there is nothing in the local plan that will stimulate or promote non-car alternatives. There is a large literature on what is needed by way of infrastructure to support walk, cycle and bus use e.g. excellent segregated cycle paths, joined-up networks to link housing with schools and commonly used destinations and these requirements are not supported or funded in Shropshire. Shropshire Council has refused to adopt 20mph contrary to the advice of the World Health Organisation advice in the Stockholm Declaration (communicated to all national governments) that this increases active travel and modal shift away from cars and towards walking, cycling and bus use (quotes and from and link to Stockholm Declaration and Government report included in rep).
A0647B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The introduction to the draft Local Plan includes a definition of sustainable development, taken from the NPPF and based on quotes from the United Nations General Assembly. The explanation to Policy SP3 explains the legally binding target from the Climate Change Act (2008) to reduce carbon emissions by at least 80% by 2050, compared to 1990 levels. This clearly sets out that minimising carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. However, there is scant reference to this draft policy within the rest of the draft Local Plan. It is only referenced in draft policies DP12 (carbon emissions), DP15 (green infrastructure), DP21 (water/water efficiency), DP22 (water/flood risk) and will be monitored by the above DPs plus Natural Environment policies and Water policies. It is not referenced within the equally critical areas of transport, infrastructure, economy, and health and wellbeing. This omission indicates the Council's responsibility to reduce the carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. Disagree with this draft policy because it is not sufficiently integrated into the whole plan. It is also unclear which datasets are referenced in para 3.29. The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: Improving insulation. Reducing draughtiness. Recovering heat from air leaving the building through ventilation. CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs.
A0648B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The introduction to the draft Local Plan includes a definition of sustainable development, taken from the NPPF and based on quotes from the United Nations General Assembly. The explanation to Policy SP3 explains the legally binding target from the Climate Change Act (2008) to reduce carbon emissions by at least 80% by 2050, compared to 1990 levels. This clearly sets out that minimising carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. However, there is scant reference to this draft policy within the rest of the draft Local Plan. It is only referenced in draft policies DP12 (carbon emissions), DP15 (green infrastructure), DP21 (water/water efficiency), DP22 (water/flood risk) and will be monitored by the above DPs plus Natural Environment policies and Water policies. It is not referenced within the equally critical areas of transport, infrastructure, economy, and health and wellbeing. This omission indicates the Council's responsibility to reduce the carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. Disagree with this draft policy because it is not sufficiently integrated into the whole plan. It is also unclear which datasets are referenced in para 3.29. The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: Improving insulation. Reducing draughtiness. Recovering heat from air leaving the building through ventilation. CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs.
A0666B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan
A0666B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. A0698B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Paras 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0862B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		Support in general the measures to minimise carbon emissions. Explanatory text should note that the development industry is being asked to make significant sacrifices to achieve these higher standards. The list of evidence relating to Policies SP3 and DP12 in Appendix 3 (Key Evidence Informing Local Plan Policies) fails to mention the Council's Local Plan Delivery & Viability Study in relation to either policy SP3 or DP12. The implications of reducing carbon emissions are estimated in the Local Plan Delivery & Viability Study. Draft policies will increase development costs significantly, of which £246,689/ha of additional costs derive from climate change measures as calculated by the Council's Delivery & Viability Study. The significant costs deriving from draft Policy DP12 should be explicitly acknowledged by the Plan and reflected in reduced developer contributions in other areas, such as education and other s106 contributions. It will require higher densities in order to achieve viable developments. The explanatory text does not explain how the policy will be implemented. Local Plan Appendix 4 (Delivery and Monitoring Local Plan Policies) suggests measuring, "the proportion of planning consents in which the policy is referenced in planning conditions consistent with the policy criteria" (p321 of the Plan). The implication is that the policy will be applied through planning conditions. When applications to discharge those conditions are made, we can only assume that planning officers will consult building control for confirmation that buildings comply with the policy. We question whether building control (including private sector building control practices) have the resources to respond to such requests. If building control officers are required to check the detailed building designs of every new development, the Council must be able to evidence that the policy will not lead to undue delays, which in turn affect both the viability and delivery of development. Given the potential for the operation of this policy to impose delays at the discharge of conditions stage, greater clarity is required over how the policy will be implemented in practice
A0897B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Welcome sections 1a and 1e of the draft Policy, which seek to reduce carbon emissions by maximising the ability to make trips by sustainable modes of transport and encouraging new development to link to and where possible integrate with public transport. ALB017 helps support this policy by providing residential development within easy walking distance of a good railway service on the Shrewsbury-Wolverhampton line. Whilst supportive of efforts to reduce carbon emissions, the draft Local Plan needs to recognise the significant costs of these measures. Appendix 3 of the Draft Local Plan fails to mention the Council's Delivery & Viability Study in relation to Policy SP3. This study identifies significant costs associated with draft Policy SP3 and DP12. Significant costs deriving from Policy SP3 and accompanying DP policies need to be explicitly acknowledged and reflected in reduced developer contributions in other areas, such as education and affordable housing. Have significant concerns on the potential impact the Policy may have on the viability of residential development in Shropshire.
A0950B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The aim of transitioning to a zero-carbon economy is noted, as is the recognition in paragraph 3.28 of the explanatory text, that this is a very challenging target. As noted in 1. b. of the policy, the delivery of higher density development on the most accessible urban sites is one of the means to reducing carbon emissions. However, in terms of housing delivery this aim is compromised by the requirements of Policy DP16 'Open Space'. Policy DP16 includes a requirement of 30sqm per person of open space on site. This level of provision, which would be in addition to private gardens, would severely compromise the ability to provide higher density housing development. Policy SP3 part 2 goes on to refer to integrating or supporting both on and off-site delivery of renewable and low carbon energy in accordance with the requirements of Policy DP12, as well as supporting district heating and cooling networks, and community energy generation schemes. It is stressed that the practicalities and cost implications of such policy requirements will need to be fully considered and incorporated into the SLP Delivery and Viability Study. The July 2020 Delivery and Viability Study recognises that building to increased standards would require higher costs (paragraph 8.18) and sets out several scenarios for potential build cost implications. The Study needs to take account of local circumstances and up to date information from developers in the Shropshire area and appropriate industry bodies, to ensure that it reflects a true assessment of costs involved in the proposed climate change measures and how this effects site viability. Requested Change – Further consideration is needed in relation the deliverability of the measures set out. This must be reflected in the Delivery and Viability Study supporting the SLP and supported by up to date local evidence from developers and industry bodies.
A0957B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		Draft Policy SP3 makes limited reference to the 'climate emergency' declared by Shropshire Council. It is noted that many experts consider this draft policy is inadequate to provide zero emissions in the plan period. The NPPF considers this matter in terms of sustainability, but now needs stronger consideration of CO2, including construction methods, materials and future energy use.
A0970B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 2.1 of the draft Local Plan includes "The pursuit of sustainable development is at the heart of the planning process" and quotes the NPPF which itself quotes the UN General Assembly in defining sustainable development at the strategic level as "meeting the needs of the present without compromising the ability of future generations to meet their own needs". Taken together with para 3.28 of the draft Local Plan: "The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. The widespread and potentially devastating impacts of climate change place a responsibility on us all to minimise our carbon emissions, and this must be seen as an essential component of all development. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'". This clearly sets out the overriding requirement that minimising carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. Draft Policy SP3 has scant reference within the local plan. It is only referenced within draft policies DP12, DP15, DP21 and DP22. It is not referenced in the equally critical areas of transport, infrastructure, economy and health and wellbeing. Omission from these areas indicates the Council's responsibility to reduce the County's carbon emissions is not seen as essential to future health and wellbeing, economy and safety of its current and future residents. Draft Policy SP3 will be monitored by the above draft DPs plus others within the Natural Environment policies and Water policies. With regard to Paras 3.29 and 3.30 of the Explanation CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. Of the three main sectors of energy demand, transport continues to rise and has overtaken the other two sectors - Industry & Commerce and Domestic energy use. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Disagree with this draft policy because it is not sufficiently integrated into the whole plan.
A0972B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Creating a woodland on half of the proposed Tasley Garden Village site and halving the number of proposed houses would maximise carbon capture and storage & create a leisure opportunity. Not destroying existing woodland, especially ancient and veteran woodlands and trees, by pollution of huge value to our planet. Old trees are ecological treasures providing unique habitats and are far more valuable for biodiversity than younger and recently planted trees because they support a far wider range of species. The location of TGV will increase car use and will comprise a higher density development on a poorly accessible site for walkers and cyclists. Minimising the need to travel can only be done if there is local employment and other facilities. travel for non-food retail or delivery still required. Electric cars only create less carbon emissions if we can create sufficient electricity supply without carbon emissions. Extra housing will create extra journeys. Active travel either by walking or cycling will need to cross a 60mph highway. A particular problem for the less able. Delivery of on-site renewable and low carbon energy is desirable, but renewable often emits more carbon than non-renewable as it is less efficient. No plan for how this is to be achieved
A0981B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Sport England supports part 1a) of the policy to minimise the need to travel and to promote the use of sustainable modes of transport, as this ties into the health and well-being agenda generally, and to active travel by means of walking and cycling in particular. The explicit reference in part 1d) to prioritising active travel is welcomed, where emphasis is placed not only on new developments but also on linking those developments to existing neighbourhoods and communities. To facilitate a modal shift to cycling, the policy should go further by also making appropriate provision for high quality cycling facilities at destinations such as workplaces to include safe and secure cycle parking, shower/changing facilities and lockers etc.
A0984B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Support the aims of the draft policy and the transition towards a zero-carbon economy. In particular, support recognition of the need to minimise travel and maximise the ability to make trips by sustainable modes of transport including enhancement of walking and cycling links.
A1101B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Support development in Shropshire assisting with the transition to a zero-carbon economy. Identified means to achieve this draft policy are supported, but they should be extended to recognise contributions from land use planning - selection of site allocations and the benefits brought by the juxtaposition of uses. Section 9 of the NPPF includes consideration of sustainable transport and highlights the important of considering transport from the earliest stages of plan making. Directing development to the most sustainable settlements is a good starting point, but it should be recognised that within those settlements, some locations/sites can contribute more than others to a transition to zero-carbon. For example, some locations/sites will reduce commuting. In Bridgnorth, as commuting is generally to the east of the settlement to employment locations such as Stanmore Business Park, the conurbation to the east and Telford to the north, a development on the east side of the settlement will significantly reduce miles travelled by car compared to development on the south or west. Furthermore, by locating jobs next to housing, the need to travel is reduced. It is estimated that allocating BRD030 rather than Stanmore Garden Village this will result in an additional 2 million miles of commuting a year (based on BRD030 promoters consultants view that 75% of the peak time (i.e. workers) traffic generated would travel mainly on the single route east, across the River Severn). Planning for juxtaposition of uses can also reduce the need to travel. In the case of Stanmore Business Park at Bridgnorth, current evidence shows that for one of the major local employers circa 72% of its employees currently commute more than 10 miles each way to and from work (Employment Led Development of a Garden Village Community Report). New housing at Stanmore Garden Village would be within easy walking or cycling distance of Stanmore Business Park, can assist in increasing availability of employees to Bridgnorth companies and would reduce the number of in-commuters. The availability of a Local Centre (with convenience store) in the Stanmore Garden Village and potential diversion (and greater frequency of) bus services through the Business Park will also help reduce travel by private vehicle. Planning can and should actively manage patterns of development to reduce emissions and this should be recognised in the policy and applied in the approach to identifying sites. The location and juxtaposition of uses should be the starting point.
A1106B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	DLP SP3. 'Climate Change' states that the council will seek to support the "development or extension of district heating and cooling networks" and support "the development of community energy generation and distribution schemes". We see both these and other expectations in this policy as rather vague and perhaps leading to issues with v
A1116B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Carbon capture and storage is untried technology which is currently being described as the potential saviour of our planet by capturing and storing carbon, and is being used by those who do not want to abandon their attachment to the use of fossil fuels. It is basically an excuse to do little or nothing to clean up and convert energy production manufacturing, transport, building, and agriculture. We need to act now, decisively and fast, by reducing carbon emissions by 'powering down' our energy usage, and 'powering up' green energy. The Zero Carbon Britain Report produced by The Centre for Alternative Technology (CAT - https://www.cat.org.uk/) shows how we can do this in a relatively short time whilst keeping a reasonable living standard. CAT is advising organisations and Councils all over the country. Why not consult them. Coming back to carbon capture and storage it is unlikely that the raw materials needed for the construction of the plant will still exist by 2050 (or whenever) for the scale and number of installations required
A1117B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	In this section you say: 3. Maximising carbon capture and storage, including by: a. Encouraging development to offset its carbon emissions through investment in carbon capture and storage, informed by the Shropshire Climate Change Strategy Carbon capture technology is unproven, difficult to put into place and risks "overshooting the remaining carbon budget". It is better to work with proven technologies, such as wind, solar and hydro. Please refer to this excellent document from the Centre for Alternative Technology. At CAT, they have a zero carbon Britain Innovation hub which trains architects and renewable engineers and technicians who can build the necessary infrastructure, as well as providing education and practical solutions to organisations such as county councils. https://www.cat.org.uk/new-report-zero-carbon-britain-rising-to-the-climate-emergency/
A1143B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	In relation to section 3.28 (but not exclusively) the Council is bound to treat the reduction of carbon emissions as an essential component of all developments and yet SP3 The Climate Change Strategy has scant reference within the local plan. SP3 is only referenced within : DP12 - carbon emissions DP 15 - green infrastructure DP21 – water / water efficiency DP22 – water / flood risk and will be monitored by the above DPs plus others within the Natural Environment policies and Water policies. It is not referenced within the equally critical areas of : • Transport • Infrastructure • Economy • Health and Wellbeing SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1143B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	SP3 is fundamentally flawed, the policy identifies green house gasses (and equivalent) in the statement that the total greenhouse gas emissions for Shropshire were 1.76 million tonnes CO2e. In this statement the 'e' is presumed to stand for CO2 and other greenhouse gasses (CO2 + CH4 + N2O etc) but other than in a cursory paragraph in SP1 (4.171) the policy makes no reference to the other green house gasses many of which cause equally disastrous effects to CO2, this omission is perpetuated in DP12: Greenhouse gas Global Warming potential Carbon dioxide (CO2) 1 (20-20 years in atmosphere) Methane (CH4) 25 (12-15 years in atmosphere) Nitrous oxide (N2O) 298 (>100 years in atmosphere) Hydro fluorocarbons (HFCs) 124-14,800 Perfluorocarbons (PFCs) 7,390-12,20 Sulphur hexafluoride (SF6) 22,800 Nitrogen trifluoride (NF3) 317,200 IPCC Source – (2007).IPCCFourthAssessmentReport:ClimateChange2007.IntergovernmentalPanel on Climate Change. Cambridge University Press, Cambridge. For Shropshire as an agricultural county methane and nitrous oxide are of particular relevance and should not be ignored in this policy or in policy SP9(d)& paragraph 3.84. E.G of England GHG emissions for agriculture 2017: m tonnesCO2e CO2 - 5.6 N2O - 14.3 CH4 - 25.7 Agriculture accounts for about 10% of total UK GHG emissions development of agricultural in the county should be seen to seek to reduce more than just CO2 reductions. I disagree with this policy because it is not complete
A1149B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The pursuit of sustainable development is at the heart of the planning process. The National Planning Policy Framework (NPPF) quotes the United Nations General Assembly in defining what this means at a strategic level: "meeting the needs of the present without compromising the ability of future generations to meet their own needs" This means that the 'Shropshire Local Plan' should consider the carbon footprint of current and future activities and available carbon budget and priorities for addressing the climate and ecological emergency, and offer support for the new technologies and enterprises that Shropshire needs for the future. The draft plan targets for 2050, a generation away, do not meet the NPPF definition of sustainable development because as set out in the Paris Agreement, to allow emissions to continue would compromise the ability of the next generation to meet their needs. In particular, the draft plan reference to the planning system needing to play a full role in the achievement of 80% reduction by 2050 is out of date now that SC has recognised the climate emergency, and SC's own corporate proposals for net zero 2030 will be at odds with this goal. We request that you also recognise the ambition of Shropshire residents and enterprises as set out in the Zero Carbon Shropshire Plan (in preparation by Shropshire Climate Action Partnership) and elsewhere to ensure net zero carbon by 2030 at the latest and ensure that your plans will be re-aligned to be consistent with this goal. We request that you recognise the implications of the United Nations Paris Agreement for Shropshire as set out in the recent Tyndall report as follows: 'the recommended energy only CO2 carbon budget for the Shropshire area for the period of 2020 to 2100 is 11.5 MtCO2', and a consistent emissions reduction rate of -13.5% out to the end of the century is appropriate.' This provides an 'energy only' carbon emissions budget for Shropshire of 10.7MtCO2 from now until the end of your Local Plan period in 2038, and a further 0.8 MtCO2 during 2039 to 2100. The UK Climate Change Committee reported last year that 'Current policies and plans are insufficient to meet the fourth or fifth carbon budgets (covering 2023-2027 and 2028-2032).' There is therefore a clear and pressing need to fundamentally reconsider the policy framework in relation to any plans that Shropshire Council wishes to adopt, in the light of the need for Shropshire to achieve net zero carbon in line with the reductions required by the Paris Agreement and UK obligations under international law. The Centre for Alternative Technology, and others, have demonstrated that we have the solutions we need for net zero carbon Shropshire to be achieved by 2030: 'Our work clearly demonstrates that we already have the tools and technology needed to efficiently power the UK with 100% renewable energy, to feed ourselves sustainably and so to play our part in leaving a safe and habitable climate for our children and future generations.' SCAP is currently working to achieve an appropriate practical Zero Carbon Shropshire Plan (ZCSP) by end December 2020 for net zero carbon Shropshire by 2030, and this will consider the total carbon footprint rather than purely energy emissions, enabling the broadest possible scope for planning the change programme required for this fundamental but vital shift towards sustainable development, the investment in future enterprises and households fit for the future, and the discontinuation of unsustainable practices. Shropshire's carbon emissions continue to race out of control (as typical UK citizens our carbon footprints are more than twice the global average, with 46% of it outsourced overseas). We will burn through this century's carbon budget by 2027 if we continue on current trends. The consequences of failure to implement a ZCSP and achieve net zero carbon Shropshire by 2030 would be catastrophic. Please therefore take cognisance of the ZCSP in finalising the Local Plan for Shropshire.
A1151B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Maintaining and improving water quality and the treatment of water and wastewater in the face of population growth, changing environmental legislation and climate change pressures will be an ongoing challenge for the development industry over the coming years. As our customers' expectations change, there is likely to be greater demand from customers for environmental improvements which is likely to be reflected in increased environmental standards over time. It is important that United Utilities maintains the ability to flexibly respond to environmental and growth drivers both now and in the future. Future development within the region will need to be managed to enhance the environmental quality of the immediate area and manage the effects of climate change. United Utilities would seek to encourage the use of systems like rainwater harvesting and grey water recycling that help to reduce pressure on public water supply and the public sewerage system. Additional benefits result in a reduced environmental impact by making sure that valuable resources are used efficiently, at time reducing the costs associated with improving local water infrastructure for a new development as they require less mains water. Additional benefit is that such measures will reduce future occupants' costs for both water bills and energy bills (through heating water). We therefore very much welcome the approach to the policies SP3, DP20, DP21 and DP23 and the detail in them to ensure development is delivered in the most sustainable way. One comment to make on the policies quoted above is that would wish to see a linkage between policy requirements mentioned directly to ensure that opportunities as part of any new development are not missed. It is understood that areas like green infrastructure provision will seek to ensure the sustainable management of surface water through multi-functional benefits which are part of a high quality green / blue water environment. The detail within the policy is understood but we would recommend further linkage in policies to encourage holistic approaches as development comes forward. It is important to note that as strategies come forward, like surface water management, there will an expectation for them to reference the connectivity with Green Infrastructure and how the two interact. It is important for the Local Plan to consider the approach to developing strategies and outcomes holistically and would challenge the Local Plan to encourage this approach further in policy wording to ensure opportunities for new development is not missed.
A1152B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Agreement is subject to a note that the draft Policy is not consistent with other draft policies. Agree wholeheartedly with the thrust of draft policy SP3, in recognition that Climate Change is a present threat to life as we know it. However, the Council cannot at the same time adopt the policy of business as usual, or in fact even more so, as far as housing and economic growth is concerned. Need a 'step-change' in thinking around the issue of continued and relentless growth.
A1170B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The policy lacks strength and allows too much scope for avoidance – for example, policy statement 1 could read 'Reducing carbon emissions by the application of as many means as possible, including....' This reduces the scope for token gestures or cherry picking easy options. It is similar to many previous active transport policies, but it is still a stressful activity to ride a bicycle into Shrewsbury, due to traffic and a lack of priority. This policy should commit to field testing the effectiveness of active transport provision. If says 'wherever possible', but this is almost always possible, so a stronger commitment is needed – I have too much experience of schemes where the developer says something is 'just not possible' for very feeble reasons, when in fact the issue is economic – if they accept the requirement and another developer doesn't they are at a disadvantage.
A1180B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)
A1180B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.29 and 3.30: CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs (respondent ref; Form 9)
A1182B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)
A1182B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs (respondent ref; Form 9)
A1183B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	SP3 Climate Change We fully support the goals set out in paragraph 1-4. We would note that our community is off grid and the Policies included don't identify a strategy to adopt when as we move to further reduce dependence on gas delivery by tanker of course, replacement of gas boilers due soon or changes in Oil delivery and supply. We have also been made well aware of the more recent effects of climate change and changes in agricultural practice that have resulted in more flooding in our community.
A1630B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The NFU has set out an aspiration for the farming sector to achieve net zero by 2040. The NFU plan focuses on improving productivity within agriculture, increasing carbon stores on farms and boosting renewable and bioenergy production. British farmers have started on the road to net zero and want to do more. Local planning policies must match our climate ambition for farming and support the transition to low carbon business models but supporting our needs for new sustainable infrastructure. We are pleased to see a reference to renewable and low carbon energy in policy SP3. Boosting renewable energy and the bio economy to displace greenhouse gas emissions from fossil fuels and to create GHG removal through photosynthesis and carbon capture is a key part of the NFU ambition for achieving net zero. Therefore we would like to see support for small scale renewable energy in rural areas included in this policy. This could include a range of technologies; solar, anaerobic digestion, biomass crops and small scale wind. A specific reference to bioenergy/bio crop production should be included in paragraph 3.30 C. As our work on net zero evolves more information on the part local farms can play will become available. The NFU has also set out aspirations to maximise carbon capture and storage on farms via hedge and tree planting. Additional trees in the landscape can be delivered by a variety of mechanisms. Tree cover in the county has already been increased via engagement in agri-environment schemes, woodland grant schemes and voluntary planting. It is vital that tree planting is carefully planned and that the right tree is planted in the right place, taking care to recognise the environmental impacts and the effect on land required for food production. The policy indicates that the plan will be "Seeking opportunities to restore wetlands". It is not clear what this would mean in practice. The carbon benefits must be carefully considered along with the impacts on land availability for food production and the effects on the rural economy. We are pleased to see a reference to "Integrating water efficiency measures to mitigate the impact of drought and reduce resource and associated energy consumption". We would like to see support from the planning system for on-farm water storage to build drought resilience across all farming sectors, including livestock enterprises. There may also be opportunities to build catchment resilience with a network of water storage structures that capture peak flows for use during times of drought across the landscape. The explanation section does not outline how the aspirations of policy SP23 would be delivered via the planning system
A1634B1	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)
A1634B15	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: • Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation (respondent ref; Form 6)

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1634B18	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Paras 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs (respondent ref; Form 9)
A1648B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	This policy is supported
A1844B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Generally supportive. Welcome reference in para 1d to development prioritising active travel. Development in proximity to waterways can increase use of towpaths and we are keen to ensure that where appropriate, any potential impact is mitigated.
A1896B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. I disagree with this policy because it is not sufficiently integrated into the whole plan
A1896B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs
A1935B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	Linking development to public transport in rural areas will Achieve little unless there is an intensive service. More encouragement for renovation rather than Demolition will also reduce carbon emissions.
A2112B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	throughout the plan you are missing a great opportunity. Where is the great step forward our ancestors would have taken in our current circumstances? We need a plan with vision that reflects the environmental and social needs of our population that is so constrained by Covid -19. Open spaces , walks, energy efficiency etc But above all it seems to be missing contingency planning for the consequences of climate change, floods, water shortage, supply of utilities and food and farming support Seven years away is not long!
A2116B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Feels that the plan makes a move to address Climate change through policies in the plan, but that the targets in the plan are set too low and over too long a time scale. I think your balance on the triple bottom line is not weighted nearly enough towards our climate emergency, and your vision of a health and safe county by 2038 for me is in real danger of not being realised, let alone 2048 etc. I do wonder what'll happen to the most marginal in our society if/ when/ should this all start to seriously unravel? I acknowledge you operate in a broader landscape and that you have acknowledged a climate emergency as a council, but that this is focussed on your 2% of county emissions. You have a really strong and interesting chance here to be seriously helping tackle the other 98%, and with COP 26 next Nov, UK will be seriously in the global spotlight. We are working with Philip Dunne to take a NZC plan for south Shropshire to COP 26 with a 2030 deadline – see https://shropshireclimateaction.co.uk/ .
A2130B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Plan does not give enough consideration to onsite energy policies and generation which would allow new housing to be net zero carbon. No policy statements have been brought forward to allow effective consideration of renewable energy generation site applications; it seems this is left to neighbourhood plans, of which Shropshire has only a handful, and none of which so far propose renewable energy generation sites. Without a proactive approach to renewable energy the chances of achieving a carbon zero Shropshire in either locally desired or nationally legislated targets seems unlikely. This also fails to capitalise on the economic opportunities identified in the Marches LEP Energy Strategy.
A2132B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The plan should include initiatives and timescales to reduce the energy demand and put in place more efficient systems (e.g. heat pumps) The move to make electricity greener is underway but often heating is ignored and so need greater emphasis. Over half the energy consumption in a house is used for heating and hot water (e.g. https://energysavingtrust.org.uk/home-energy-efficiency/heating-and-hot-water). Reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector (new builds have a high embodied cost). There is little mention of addressing the heating issue – for newbuilds or retrofit – other than district heating (SP3 and DP12) which is generally only applicable in isolated, specific instances or for dense conurbations. Shropshire is a rural county with many properties using private gas and oil supplies with a resulting increased carbon footprint. Leadership and creative thinking needs to be applied if we are to achieve net zero carbon
A2132B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The plan needs to more explicitly mention the scope for updating and retrofitting existing buildings The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." Demolishing and rebuilding and newbuilds involve a considerable environmental cost. The Royal Institute of Chartered Surveyors has estimated that 51 percent of the lifecycle carbon from a typical residential premise is emitted before the building is even opened. In addition, Shropshire has a large number of character/older homes that cannot simply be replaced (without changing the character of the county). This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Some common options should be detailed (fabric improvements, heat pumps etc.) including the possibility of a reduction in council tax to help offset costs to home owners
A2138B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)
A2150B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. A2163B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Parts 1g and 2a of the draft policy make reference to promoting fabric energy efficiency, and integrating renewable and low carbon energy systems in line with draft Policy DP12 of this Pre-Submission Draft. These requirements should not undermine the deliverability of the Plan, as stated at paragraph 34 of the NPPF. Parts 1g and 2a should instead defer to the latest building regulations, as changes have already been made to those, to achieve energy efficiency standards. Planning Policy should not duplicate legal requirements covered elsewhere. Building Regulations already consider energy efficiency of buildings and this policy, as worded, adds no material value. Any requirement that go beyond building regulations should be on a needs only basis, informed by detailed evidence. Para 1g and 2a of this draft policy should therefore be amended to reference in line with building regulations rather than draft Policy DP12. Encouragement of development to offset its carbon emissions through investment in carbon capture and storage (informed by the Shropshire Climate Change Strategy) should be clarified as being an optional requirement. Draft policy should be amended in order to be found sound, as it needs to be fully justified and compliant with national policy.
A2167B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. I disagree with this policy because it is not sufficiently integrated into the whole plan
A2174B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	the plan is alarmingly light on measures to reduce carbon emissions. Indeed it does not seem to be aligned with the Council's current commitment. It mentions the planning system needing to play a full role in the achievement of 80% reduction by 2050!! But this is out of date now that the Council has recognised the climate emergency and has adopted proposals for net zero 2030. Particular concern that policies don't provide enough encouragement for sustainable transport such as cycling, nor for carbon neutral housing

Page 30

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2177B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>Draft Policy requires:</p> <ul style="list-style-type: none"> • wherever possible, integration of electric vehicle charging infrastructure into new development in line with Policy DP12 ; • integration of renewable and low carbon energy systems into all residential developments in line with Policy DP12 ; • the development or extension of district heating & cooling networks ; and • integration of water efficiency measures. <p>The Council is committed to an overall goal of making Shropshire net greenhouse gas neutral by 2030. Consider the Council's policy approach to climate change should reflect the Government's proposals on levels of energy efficiency, heat networks, electric vehicle charging points (EVCP) and water efficiency. Government's Future Homes Standard consultation (ended 07/02/2020), indicated the UK has set in law a target to bring all its greenhouse gas emission to net zero by 2050. New and existing homes account for 20% of emissions. Government intends to future proof new homes with low carbon heating and world-leading levels of energy efficiency. The consultation addressed:</p> <ul style="list-style-type: none"> • options to uplift standards for Part L (Conservation of Fuel & Power) and changes to Part F (Ventilation) Building Regulations ; • transitional arrangements to encourage quicker implementation ; and • clarifying the role of Councils in setting energy efficiency standards. <p>Government estimated Future Homes Standard increased costs by circa £2,557 - £4,847 per dwelling. The Council's own viability assessment identified viability challenges across the County and the cumulative impact of proposed policy requirements threatens housing delivery (see HBF response under Viability).</p> <p>The Council is also referred to the consultation on Heat Networks: Building A Market Framework (ended on 1st June 2020). To meet the Government's legal commitment on reducing greenhouse gas emissions virtually all heat in buildings will require decarbonising. Heat networks are one aspect of the path towards decarbonising heat, however currently the predominant technology for district-sized communal heating networks is gas combined heat and power (CHP) plants. Over 90% of district networks are gas fired. As 2050 approaches, meeting the Government's climate target of reducing greenhouse gas emissions to net zero will require a transition from gas-fired networks to renewable or low carbon alternatives such as large heat pumps, hydrogen or waste-heat recovery but at the moment one of the major reasons why heat network projects do not install such technologies is because of the up-front capital cost. The Council should be aware that for the foreseeable future it will remain uneconomic for most heat networks to install low-carbon technologies.</p> <p>Furthermore, some heat network consumers do not have comparable levels of satisfaction as consumers on gas and electricity networks, and they pay a higher price. Currently, there are no sector specific protections for heat network consumers, unlike for people on other utilities such as gas, electricity or water. A consumer living in a building serviced by a heat network does not have the same opportunities to switch supplier as they would for most gas and electricity supplies. All heat network domestic consumers should have ready access to information about their heat network, a good quality of service, fair and transparently priced heating and a redress option should things go wrong. Research by the Competition and Markets Authority (CMA) found that a significant proportion of suppliers and managing agents do not provide pre-transaction documents, or what is provided contains limited information, particularly on the on-going costs of heat networks and poor transparency regarding heating bills, including their calculation, limits consumers' ability to challenge their heat suppliers reinforcing a perception that prices are unjustified. The monopolistic nature of heat networks means future price regulation is required to protect domestic consumers. The CMA have concluded that "a statutory framework should be set up that underpins the regulation of all heat networks." They recommended that "the regulatory framework should be designed to ensure that all heat network customers are adequately protected. At a minimum, they should be given a comparable level of protection to gas and electricity in the regulated energy sector." Government's latest consultation on heating networks proposes a regulatory framework that would give Ofgem oversight and enforcement powers across quality of service, provision of information and pricing arrangements for all domestic heat network consumers.</p> <p>Council's proposed policy approach is unnecessary because of the Government's Future Homes Standard proposals. Before the pre-submission LPR consultation, Draft Policy SP3 Bullet Points 1f, 2a, 2b & 4d and Draft Policy DP12 Bullet Points 1a, 1b, 1c & 1d should be deleted.</p>
A2321B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>Policy SP3: Climate Change</p> <p>3.19 In recognition of Shropshire Council's declaration of a 'Climate Emergency', the Spatial Vision sets the precedent for the Local Plan which is centred on making significant steps towards a zero carbon economy whilst also meeting the identified housing and economic development needs. 3.20 In order to address climate change, as well as fundamental climate change targets and policies, in line with NPPF paragraph 103, it is essential that new development is directed to the most sustainable settlements which are already within close proximity to existing and emerging key employment locations, and which already benefit from sustainable means of transport.</p> <p>3.21 Albrighton's preferred housing guideline of 500 dwellings does not reflect its exceptional sustainability which is clearly evidenced within the Council's 'Hierarchy of Settlement Paper', including a railway station with services to Cosford, Wolverhampton, Birmingham, Telford and Shrewsbury, a wide range of services and facilities and also in close proximity to the Strategic Employment Site at RAF Cosford.</p> <p>3.22 Vistry are therefore concerned that a significantly greater quantum of growth is proposed for settlements without access to railway stations, such as Market Drayton and Ellesmere. The same amount of growth is proposed at Craven Arms, which has a significantly reduced provision of services and amenities compared with Albrighton and is a substantial distance from key regional employment sites, such as the M54 growth corridor. Some of the growth at these settlements should be delivered at Albrighton to enable the creation of truly sustainable development which will assist in meeting the challenge of climate change.</p>
A2323B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		<p>Support the Council's overall goal of making Shropshire Council net greenhouse neutral by 2030, as set out in the Climate Change Strategy Framework. Consider that more growth at Shifnal will assist the Council in their endeavours to transition to a zero carbon economy, and would avoid the need for development to be brought forward in less sustainable locations elsewhere in the District.</p> <p>Consider that SHF019 and P15b is located in a highly sustainable location and benefits from good access to existing public transport with the opportunity for everyday activities to be made by use of existing active transport opportunities, thereby assisting in reducing carbon emissions (the Hierarchy of Settlements indicates Shifnal is one of the most sustainable 'Key Centres' within the district). This therefore provides a strong evidence base for bringing forward residential development in Shifnal.</p> <p>The 2019 Spring Statement included a commitment that by 2025 the Government will introduce a Future Homes Standard for new build homes to be future-proofed with low carbon heating and 'world-leading levels of energy efficiency'. The Consultation document (October 2019) highlighted that changes to Part L, Part 6 and Part F of the Building Regulations are anticipated to come into force by mid/late 2020. Therefore, Building Regulations will require developers to build more resilient homes to assist the Council in achieving their target</p>
A2335B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>SP3 is not referenced enough throughout the Plan and in other policies. Its omission from Transport, Infrastructure, Health & Wellbeing and Economy indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents</p>
A2345B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan</p>
A2365B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan (respondent ref; Form 1)</p>
A2372B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>Paragraph 2.1 states:</p> <p>"The pursuit of sustainable development is at the heart of the planning process. The National Planning Policy Framework (NPPF) quotes the United Nations General Assembly in defining what this means at a strategic level:</p> <p>"meeting the needs of the present without compromising the ability of future generations to meet their own needs"</p> <p>Taken together with paragraph 3.28 :</p> <p>"The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. The widespread and potentially devastating impacts of climate change place a responsibility on us all to minimise our carbon emissions, and this must be seen as an essential component of all development. As well as taking actions to reduce emissions, it will also be important to maximise natural processes that can take carbon out of the atmosphere and lock it into features such as peat and trees, known as 'carbon capture and storage'.</p> <p>This clearly sets out the overriding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised.</p> <p>SP3 The Climate Change Strategy has scant reference within the local plan.</p> <p>SP3 is only referenced within : DP12 - carbon emissions, DP 15 - green infrastructure, DP21 – water / water efficiency, DP22 – water / flood risk and will be monitored by the above DPs plus others within the Natural Environment policies and Water policies.</p> <p>It is not mentioned at all within the equally critical areas of :</p> <p>ITransport IInfrastructure IEconomy IHealth and Wellbeing</p> <p>SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents.</p> <p>I disagree with this policy because it is not sufficiently integrated into the whole plan</p>
A2388B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	<p>This is quite simply insufficient.</p> <p>We would like to refer to the document 'Rising to the Climate Crisis, a guide for Local Authorities' produced by the TCPA and RTPI in 2018. This states that;</p> <p>"It is recommended that LA's should take the following action in evidence gathering for their LDPs. The supply and demand for renewable and low carbon energy must be mapped" (pgs 24/25)</p> <p>"LDPs must contain policies which, taken as a whole, secure radical reductions in CO2 emissions" (pg 30)</p> <p>"Strategic sites which are central to delivering a local planning approach for decentralised energy should be allocated in the local plan" pg 31</p> <p>"identify the most and least environmentally sensitive areas for deployment of different renewable technologies" pg 32</p> <p>"to deliver on the ambition of zero-carbon and energy-positive communities, LPS should set out decentralised renewable energy targets for application across a whole LA area. These targets should be designed to secure a minimum level of decentralised renewable energy use in new developments" pg 33/34</p> <p>We also wish to refer to the document 'Catalysing People-Powered Energy in Yorkshire & Humber' produced by Community Energy England and Sheffield Hallam University 2019. Whilst this is for a different area of the country we feel strongly that the findings also apply to Shropshire. The first recommendation in this report is called 'Planning for Community Energy' this states that,</p> <p>"to translate aspiration into action we recommend that Local Plans, and where relevant Neighbourhood plans and supplementary guidance, should set specific targets to significantly increase the proportion of community-owned and community-led renewable energy generation" pg 23</p> <p>"they should also seek to make use of powers to allocate land for renewable energy development" pg 23</p> <p>"local plans should specify that public or community owned buildings include integrated renewable energy systems" pg23</p> <p>"large private renewable energy schemes should, as a condition of planning permission, include 20% community ownership or an equivalent community benefit arrangement" pg 23</p> <p>And "procurement policies should not prevent community energy organisations from fulfilling the requirements of local plans". Pg 23/24.</p> <p>We trust that Shropshire Council will take note of these points and modify the Local Plan in ways that will enable real carbon reductions in a timely manner with community involvement and buy in.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2398B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Draft Policy SP3 and related draft Policy DP12 discuss the need to integrate renewable and low carbon energy systems into residential development. DP12 expands on this by stating that 10% of the predicted energy needs of a development needs to come from these two sources on-site; with it also requiring a minimum 19% improvement in the energy performance requirement of the 2013 Part L Building Regulations. Para 4.116 of the policy Explanation describes the five stages of the energy hierarchy and that energy options should be pursued in the following order: a. Reduce the need for energy; b. Use energy more efficiently; c. Use renewable energy; d. Use low carbon sources; and e. Use conventional energy. Council is correct to use the energy hierarchy but they appear to circumnavigate it by jumping straight to renewable and low carbon sources. Primary aim should be to reduce energy use; it should not matter if that can be achieved through a fabric first approach. A more sophisticated approach is needed than is currently being suggested.
A2427B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. This clearly sets out the over riding requirement that minimizing carbon emissions must be central to all planning and development, otherwise the ability of future generations to meet their own needs is compromised. The Climate Change Strategy has scant reference within the local plan, only being referenced in DP12, DP15, DP21, DP22 and not within Transport, Infrastructure, Economy, Health and Wellbeing. SP3's omission from these areas indicates that the responsibility the council has to reduce the county's carbon emissions is not seen as essential to the future health and wellbeing, economy and safety of its current and future residents. I disagree with this policy because it is not sufficiently integrated into the whole plan
A2427B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. The graph below is based on this data: https://www.gov.uk/government/statistics/uk-local-authority-and-regional-carbon-dioxide-emissions-national-statistics-2005-to-2018 It has used the subset data which excludes motorway and diesel train emissions. Of the three main sectors of energy demand, transport continues to rise and has overtaken the other two sectors - Industry & Commerce and Domestic energy use. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs.
A2432B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. This is a very challenging target, and the planning system will need to play a full role in its achievement. I disagree with this policy because it is not sufficiently integrated into the whole plan
A2462B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	We note that Policy SP3 – Climate Change – refers to supporting of renewable and low carbon technologies in development. We would highlight that the visual effects of some types of renewable energy developments e.g. wind turbines and solar farms have the potential to affect the statutory purpose of the AONB. However, we cannot find any reference to a strategic assessment for the planning of renewable energy which may indicate potential locations for development. Clarification on whether any such evidence has been prepared is required to confirm the Clwydian Range and Dee Valley Area of Outstanding Natural Beauty has been factored into your future plans.
A2469B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. A2471B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs (respondent ref; Form 9)
A2475B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Para 3. Carbon capture and storage is usually taken to mean the industrial process of capturing carbon such as from flue emissions of power stations and locking it up underground. In this more general context as here, 'carbon sequestration' would be a better terminology. (Also in para 3.28 and 3.30d). Explanation: This section should refer the declaration of climate emergency by the Council. The Strategy resulting is referenced, but the Council has many strategies and has not declared other emergencies. This underlines the over-riding importance of this cross-cutting issue.
A2477B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Agree	This deals with sustainable development. This policy supports development on site MDR015 ahead of allocated site MDR006.
A2489B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	Paras 3.29 and 3.30 CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. In whatever way the data is examined, the trend for CO2 emissions for transport is now rising in Shropshire. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Therefore I disagree with these paragraphs
A2489B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3	Disagree	The Climate Change Act (2008) introduced a legally binding target for the UK to reduce its carbon emissions by at least 80% by 2050 compared to 1990 levels. A2504B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP3		Supply of 6.42 years was considered 'sound' now the high growth target is to add 15%, but this ignores the current situation, pandemic, Brexit . when the recession ends we hope Shropshire will need more housing for young workers, recovery will take longer than 6.42 years supply and the assessed housing need i.e. FOAHN
A0238B31	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Don't know / no opinion	Supply of 6.42 years was considered 'sound' now the high growth target is to add 15%, but this ignores the current situation, pandemic, Brexit . when the recession ends we hope Shropshire will need more housing for young workers, recovery will take longer than 6.42 years supply and the assessed housing need i.e. FOAHN
A0306B013	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	This strategic policy is not a robust interpretation of the NPPF definition of sustainable development which is: "development which meets the needs of the present without compromising the ability of future generations to meet their own needs". Throughout the plan the term "sustainable" is used without adequate consideration of environmental implications.
A0318B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	We do not consider the council to have adequately set out the expectations in policy SP4. We do not consider the council to have adequately set out the expectations in policy SP4. The council have not adequately set out the expectations in policy SP4. There should be a link from Policy SP4 to DP12 to allow new development to be built to sustainable standards.
A0341B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete (respondent ref; Form 4)
A0430B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	Support the Council's commitment to their positive approach to sustainable development and this policy is considered to conform NPPF para 11.
A0447B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The context of the profound emergency that the world is and will increasingly experience as a result of pollution of land, sea and air and destruction of the natural world the plan is in general shockingly inadequate, not to say feeble in general tone. This paragraph seems to be unaware of developments of building technology such as 'the passive house' www.passivhaustrust.org.uk/

A0501B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the council should be requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it I disagree with this policy because it is incomplete
A0501B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no commitment within the local plan for supporting redevelopment of existing buildings rather than demolishing and rebuilding. Concrete is the most widely used man-made material in existence and cement, its key ingredient, has a massive carbon footprint. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. I disagree with this policy because it is incomplete.
A0501B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3:“ Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings.”This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council’s responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by:• Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation. HTTPs://www.cat.org.uk/info-resources/zero-carbon-britain/The local plan excludes real commitment to retro-fitting homes. Given that the number of existing houses far outweighs the number of new homes planned to be built, it is vital that energy demands in homes is significantly reduced, otherwise the county will not reach its net zero target. Therefore I disagree with this policy because it does not include clear commitment, with targets, to retro fit housing stock or give support to home owners to do the same.
A0573B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	Support SP4 recognition of national policy presumption for sustainable development. Support SP4 para 3.87 setting out the strategic approach to conforming with NPPF para 8 to build a strong and responsive local economy ensuring the right land, in the right place to support innovation, growth and productivity by focusing on princip settlements and key centres which recognises Shifnal as a sustainable location for employment development. NPPF para 11 should apply the presumption for development and this must seek opportunities to meet development needs and be sufficiently flexible to adapt to rapid change. Shifnal sites SHF032 and SHF18c would perform positively together or separately as safeguarded land or would contribute to a comprehensive settlement strategy. This responds positively to NPPF para 70 in planning for large scale development and satisfying the three social, economic and environmental tenets of sustainability. In combination, SHF032, SHF18c and SHF18b & SHF18d create a strong basis for local living, creating a cohesive community, reding the need to travel and reducing their carbon footprint
A0642B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	This strategic policy is not a robust interpretation of the NPPF definition of sustainable development which is: “development which meets the needs of the present without compromising the ability of future generations to meet their own needs”. Throughout the plan the term “sustainable” is used without adequate consideration of environmental implications. This is also true for the sustainability appraisals.
A0666B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	New builds cause high levels of carbon emissions (due to concrete/cement use), and there is a large pool of existing building stock that could be repurposed and redeveloped – especially given the current and probably closures due to Covid 19 of many sites, especially in Shrewsbury- is the Council planning to gather the data on this? The local plan shows no commitment to redevelopment, rather it refers to demolition & rebuild, leading to far higher concentrations of carbon emitted in the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35% of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51%.Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. I disagree with this policy because it is incomplete.
A0670B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. Concrete is the most widely used man-made material in existence and cement, its key ingredient, has a massive carbon footprint. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. A0888B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	See wider response.
A0902B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	SP4 is supported. However the policies have not promoted sustainable settlements and have resulted in certain cases of settlements becoming less sustainable as a result of the development plan policies that were adopted. Cockshutt is a case in point. It appears to be the case that the result of the past policies relating to development in Maesbury/Maesbury Marsh – that is, reduced sustainability - is likely to be repeated in the current Local Plan Review. There is a disconnect between the stated strategic aims of the Plan Review and the manner in which land allocations have been made. Maesbury/Maesbury Marsh will not become more sustainable as a result of the policy to regard it as open countryside, and is more likely to become a straightforward commuter village. They are of a size which is at a level of several other villages that have been designated Community Hubs, and have been allowed some development which will help support the existing village facilities and hopefully avoid the necessity to close some. In that way the joint settlement can be made more sustainable, and journeys away from the village for day-to-day facilities can be avoided.
A0910B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Don't know / no opinion	SP4 is supported. However, despite similar strategies being expressed in previous development plans, the policies have not promoted sustainable settlements and have, indeed, resulted in certain cases of settlements becoming less sustainable as a result of the development plan policies that were adopted. Cockshutt is a case in point, where over the past twenty years new development has been restricted through planning policies and this has resulted in the village losing local services and employment opportunities which have then led to further restrictions on development. In turn, this has led to an increase in car borne travel for employment and services. In fact, the policies have achieved precisely the opposite of what was intended. It appears to be the case that the result of the past policies relating to development in Cockshutt – that is, reduced sustainability - is likely to be repeated in the current Local Plan Review. The process of expressing a generalist strategic policy framework, but then making allocations that will not produce the outcome the strategic policies require, is becoming more apparent in the current Local Plan Review. There appears to be a disconnection between the stated strategic aims of the Plan Review and the manner in which land allocations have been made. Cockshutt will not become more sustainable as a result of the policy to regard it as open countryside, and is more likely to become a straightforward commuter village. The Council is asked to read the comments made in respect of Policy SP7 which goes into greater detail of how this process has manifested itself in the Local Plan Review.
A0957B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4		Draft Policy SP4 seeks to address issues of Sustainable Development, which in the NPPF has three aspects of Economic, Social and Environmental sustainability. These are not explicit in the Draft Local Plan and so lack the detailing that might prompt better living for future residents. For example, in the NPPF, the sustainable economic objective should be met by “identifying and coordinating the provision of infrastructure”. Shropshire Place Plans have brief discussion of this without any detailing.
A0970B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the draft local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. There is no commitment within the draft local plan for supporting redevelopment of existing buildings rather than demolishing and rebuilding. Concrete is the most widely used man-made material in existence and cement, its key ingredient, has a massive carbon footprint. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate, this is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. RICs has estimated that 35% of the lifecycle carbon from a typical office development is emitted before the building is opened. It says the figure for residential premises is even higher at 51%. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reduce the County’s carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. The greatest energy demand of buildings is heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the draft Local Plan within draft Policy SP3 “Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings.” The significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council’s responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: improving insulation, reducing draughtiness and recovering heat from air leaving the building through ventilation. I disagree with this policy because it is incomplete.
A0972B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	Planning law requires planning applications to be determined in accordance with the development plan unless material considerations indicate otherwise. Tasley Garden Village would be a material consideration in considering the Planning application for an Industrial Poultry Unit (IPU) on part of the land required for the proposed TGV development. If planning permission is granted for the proposed Industrial Poultry Unit, then this will surely prohibit the inclusion of Tasley Garden Village in the Local Plan.
A0984B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	Welcome the commitment to a positive approach to sustainable development. This policy accords with Para 11 of the NPPF.
A1101B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	Support a positive approach to sustainable development and recognition of the presumption in favour of sustainable development in the NPPF.
A1143B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete.

Heat loss from buildings can be reduced by:</p> <ul style="list-style-type: none"> • Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation. <p>https://www.cat.org.uk/info-resources/zero-carbon-britain/ I disagree with this policy because it is incomplete.</p>
A1146B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	<p>Policy SP4 indicates the Council's intention to take a positive approach in the consideration of development proposals, reflecting the presumption in favour of sustainable development contained in the National Planning Policy Framework. This policy is supported.</p> <p>However, it appears that, despite similar strategies being expressed in previous development plans, the policies have not promoted sustainable settlements and have, indeed, resulted in certain cases of settlements becoming less sustainable as a result of the development plan policies that were adopted. Leebotwood is a case in point, where over the past twenty years new development has been restricted through planning policies and this has resulted in the village losing local services and employment opportunities which have then led to further restrictions on development. In turn, this has led to an increase in car borne travel for employment and services. In fact, the policies have achieved precisely the opposite of what was intended.</p> <p>It appears to be the case that the result of the past policies relating to development in Leebotwood – that is, reduced sustainability - is likely to be repeated in the current Local Plan Review. The process of expressing a generalist strategic policy framework, but then making allocations that will not produce the outcome the strategic policies require, is becoming more apparent in the current Local Plan Review. There appears to be a disconnection between the stated strategic aims of the Plan Review and the manner in which land allocations have been made. Leebotwood will not become more sustainable as a result of the policy to regard it as open countryside with significant restrictions on development; it is more likely to become a straightforward commuter village.</p> <p>It does not appear that the Council has taken note of the manner in which Leebotwood actually functions. The development in Leebotwood is very scattered in nature. It has grown along the former Truck Road and with reference to the railway line. So it does not exhibit the more common nucleated form of development in Shropshire villages.</p> <p>Nevertheless, it supports a sizeable population, and acts as a hub for surrounding hamlets etc. to look to for service. Additional development in Leebotwood will help support the existing village facilities and hopefully avoid the necessity for some to close. In that way the joint settlement can be made more sustainable, and journeys away from the village for day-to-day facilities can be avoided.</p>
A1152B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4		<p>Draft policy SP4, its term 'sustainable' carries a quite different meaning to what is generally meant by sustainable when talking about Climate Change issues. It is increasingly realised that the 'sustainable' development envisaged by the NPPF, and the 'business as usual' thinking, will indeed compromise the ability of future generations to live healthy lives.</p>
A1180B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	<p>There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. A2177B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The NPPF confirms Local Plans should avoid unnecessary duplication including repetition of policies in the NPPF itself (para 16f). The presumption in favour of sustainable development is clearly set out in the NPPF (para 11). In attempting to repeat national policy in Draft Policy SP4, there is a danger that some inconsistencies creep in and lead to small but critical differences between national and local policy causing difficulties in interpretation and relative weighting. Draft Policy SP4 is unnecessary therefore before the pre-submission LPR consultation, it should be deleted.
A2321B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	Policy SP4: Sustainable Development 3.23 Policy SP4. ‘Sustainable Development’ duplicates the National Planning Policy Framework and reiterates the principles set out within Section 38 (6) of the Planning and Compulsory Purchase Act 2004. 3.24 PPG states: “Paragraph 11 of the National Planning Policy Framework indicates that Local Plans should reflect the presumption in favour of sustainable development. This should be done by identifying and providing for objectively assessed needs and by indicating how the presumption will be applied locally. However, there is no need for a plan to directly replicate the wording in paragraph 11 in a policy” (Paragraph: 036 Reference ID: 61-036-20190723). 3.25 It is considered that policy SP4 would be more effective if further details were provided relating to how the presumption will be applied locally, otherwise it should be deleted entirely.
A2323B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4		Draft Policy SP4. “Sustainable Development” duplicates the NPPF and reiterates the principles set out within Section 38 (6) of the Planning and Compulsory Purchase Act 2004 Planning practice guidance explains that Para 11 of the NPPF indicates that Local Plans should reflect the presumption in favour of sustainable development. This should be done by identifying and providing for objectively assessed needs and by indicating how the presumption will be applied locally. However, there is no need for a plan to directly replicate the wording in para 11 in a policy.” It is considered that draft policy SP4 would be more effective if further details were provided relating to how the presumption will be applied locally.

Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we reduce the use of new materials and their impacts.
A2427B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: “Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings.” This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. Reducing heat loss from buildings reduces the energy needed to keep them warm. Heat loss from buildings can be reduced by: <ul style="list-style-type: none"> • Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation.
A2469B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete. https://www.passivhaustrust.org.uk/
A2469B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. Concrete is the most widely used man-made material in existence and cement, its key ingredient, has a massive carbon footprint. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. I disagree with this policy because it is incomplete.
A2469B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: “Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings.” This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council's responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing. To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels. To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by: <ul style="list-style-type: none"> • Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation (respondent ref; Form 6)
A2470B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Agree	Support this policy
A2471B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete (respondent ref; Form 4)

Recovering heat from air leaving the building through ventilation (respondent ref; Form 6)
A2475B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	This whole section hinges on the 'presumption in favour', rather than any reference to what 'sustainable' development actually is. This is a huge missed opportunity and explanations of sustainable development should be included. There is ample material to draw on here, such as the UN Sustainable Development Goals. This would help this section to set out over-arching principles behind the Plan. This explanation and qualifier about sustainable development is needed, as the presumption in NPPF is often in practice taken simply to mean a presumption in favour of development.
A2489B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock is an excellent example and needs to be the start of this initiative, not the end of it. There is also a need for appropriate skills training within the county - Shropshire could be leading the way in this innovative approach. I disagree with this policy because it is incomplete.
A2489B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector. The need to retrofit existing buildings is mentioned just once in the plan within SP3: "Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings." We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. I disagree with this policy because it is incomplete.
A2490B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	New homes should be built to PassivHaus standards. 'Sustainable Development' could be interpreted in many different ways. Strict energy efficient regulations are not mentioned. This could be an area where the county could excel, encouraging developers, housing associations to build to PassivHaus standards. There is a prime example in Much Wenlock, the Callaughton's Ash development. This policy needs to be developed to include these standards, so I disagree with it
A2490B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	The local plan does not support the retro-fitting and redevelopment of existing buildings. In many situations this is a more carbon-efficient way of improving the housing stock. The Royal Institute of Chartered Surveyors estimates that 51% of the lifecycle carbon of residential properties is emitted before the home is occupied. Consequently, it is now accepted that demolishing and rebuilding is not the best procedure for climate warming mitigation. This is primarily due to concrete having a huge carbon footprint. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. I disagree with this policy because it is incomplete.
A2494B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	New homes should be built to PassivHaus standards. 'Sustainable Development' could be interpreted in many different ways. Strict energy efficient regulations are not mentioned. This could be an area where the county could excel, encouraging developers, housing associations to build to PassivHaus standards. There is a prime example in Much Wenlock, the Callaughton's Ash development. This policy needs to be developed to include these standards, so I disagree with it
A2494B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP4	Disagree	There is no commitment within the local plan for supporting redevelopment of existing buildings rather than demolishing and rebuilding. Concrete is the most widely used man-made material in existence and cement, its key ingredient, has a massive carbon footprint. A0238B32	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Don't know / no opinion	Supports identified Strategic Policies and their application in managing development. Note the definition of Sustainable Development in paragraph 2.1. Expect 'quality' in SP5 to include 'character' and 'variation', thus preventing large estate developments with very similar designs, no link to the local vernacular, and little variation to add character
A0266B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Statements on design do not add up to a coherent approach. The inclusion of a Shropshire Test as a gateway policy, SP5 on high quality design and the West Midlands Combined Authority Design Charter are all referred to (and there continues to be talk of a Shrewsbury Test) but none contain the level of detail that can guarantee robust challenge to poor design. The risk is that both planning applicants and objectors could be using the same form of words to justify opposite outcomes. A better approach would be to use a design panel – especially given a lack of capacity and skills within the planning authority - as other areas do and as recommended by the CPRE. Cornwall provides an example – the Cornwall Design Review Panel has been in place since 2015. Such panels can be paid for from developer funds as part of the planning application process
A0306B014	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	This could be strengthened by the additional guidance: "should be designed to integrate space for both people and wildlife, reduce carbon emissions and minimise water usage". High quality design should not compromise sustainability and should incorporate extensive sustainable design features beyond solar.
A0311B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref; Form 3)
A0323B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref; Form 3)
A0341B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref; Form 3)
A0356B03	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref; Form 3)
A0407B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	The Policy is very welcome. However, it is deficient in that it fails to include a reference to Government advice on effective community engagement on design. Too long developers have failed to engage with the community on design matters. Government clearly favours such engagement, and this should be included in the policy.
A0450B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Policy SP5 must define meaning of 'high quality' to enable developers to achieve this standard and to enable stakeholders to test proposed design schemes.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0501B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref; Form 3)
A0609B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	Support the detailed guidance to achieve high quality design.
A0642B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	This could be strengthened by the additional guidance: "should be designed to integrate space for both people and wildlife, reduce carbon emissions and minimise water usage". High quality design should not compromise sustainability and should incorporate extensive sustainable design features beyond solar.
A0647B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps). SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0648B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps). SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0666B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	High Quality Design. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. For example: PRINCIPLES of the West Midlands Design Charter 3 : Future Readiness Climate Resilience Developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle. Delivering Low Carbon Development proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction. The potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building : " Undertake Housing Needs Survey, support a survey of empty houses in the parish, investigate affordable housing and more good quality rental property options; ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps). " I disagree with this policy because it is incomplete.
A0670B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.)
A0679B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	High Quality Design. The plan does not specify in enough detail the standards for low carbon development that will not only be resilient to changes in climate, but also minimise the climate impact of its construction. The plan ought to guarantee a survey of empty houses in the parish, investigate affordable housing and more good quality rental property options; ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps), as with the Oswestry Place Plan
A0696B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Don't know / no opinion	The draft policy should include reference to improving the energy efficiency of new housing and commercial buildings. It should also mandate consideration of the total 'carbon cost' of ownership, including travel by the occupiers, over the life of the building.
A0698B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps). SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0862B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5		Draft Policy SP1 (The Shropshire Test) requires development which, "makes efficient use of land" and draft Policy SP5 (High-Quality Design) includes a requirement to make, "efficient and effective use of land and topography". Support these sections of Policies SP1 and SP5. SHRO54a is 3.86 hectares in size, the proposed guideline figure of only 60 dwellings is equivalent to a density of only 15.5 dwellings per hectare. This is inconsistent with draft Policies SP1 and SP5 as the site is capable of accommodating 116 dwellings at a density of 30 dwellings per hectare. Acknowledge that some of the site will be needed for compensatory car parking for the Shrewsbury Club, however this does not justify a reduction from 116 dwellings to only 60 dwellings. 85 dwellings (net density of 22 dwelling/ha) would be more appropriate.
A0954B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	35. This policy is supported. It generally echoes the aspirations and advice contained within the National Planning Policy Framework (NPPF), "Building Better, Building Beautiful Commission Report", published in January 2020 and the Planning White Paper, August 2021 36. Paragraph 3.38 of the emerging plan refers to the West Midlands Design Charter, which was launched in January 2020. The Charter, developed by the West Midlands Combined Authority, in partnership with the region's local councils, seeks to encourage developers to produce unique and innovative proposals that are grounded in a sound understanding of the local context to: • create a spirit of place; • to promote opportunities for walking, cycling and public transport use; • and incorporate climate adaptation measures as well as creating healthy living environments. 37. The site at Bayston Hill could be developed to accord with the principles set out within policy SP5 and create a high-quality development with a layout designed to maximise views of the AONB beyond, safeguard residential amenity for dwellings along the site edges. A further benefit, and a policy stance supported by Gleeson Strategic Land Ltd is the need to maintain and enhance the existing well used footpath that is located along the northern edge of the site which connects the Hereford Road with Kendrick's Bank and the wider residential development
A0957B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5		SP5 is a desirable policy but likely to suffer from the same lack of impact, due to imprecise wording and ambiguity. Additionally, without sufficient time and expertise the LA will have difficulty in evaluating how effectively the criteria have been considered. Draft policy SP5 seeks to "ensure the creation of better places" through "High Quality Design". It adopts the West Midlands Combined Authorities Design Charter (WMCADC) which is a well-drafted set of over-arching principles for designing developments. There are some 14 principles (e.g. "Opportunities for solar gain are maximised where possible"). Applications are meant to set out how the principles have been considered. These lack specificity and exemplification and consequently the Charter has already failed in the quest for better design - this has been evidenced by recent developments which were poor quality design but claim compliance with the WMCADC. Another problem is the lack of time and available expertise within the LA's Planning Department, since evaluating the degree to which a set of broad aims have been effectively considered by an applicant may require exemplification and detailed experience. The Authority has no trained architect and successful Appeals should be minimised. Shropshire's own voluntary Accreditation Scheme was not effective in raising design quality, despite having a similar set of design criteria. It would seem that design guidance must include enforceable rigour, if Shropshire is to improve building quality. The White Paper "Planning for the Future" also seeks much firmer guidance, following on from the report of the "Building Better – Building Beautiful Commission". Planning reforms are likely to require Local Plans to be shorter, more specific and to include unambiguous "Design Codes". (A design Code is defined as; "A set of illustrated design requirements that provide specific, detailed parameters for the physical development of a site or area. The graphic and written components of the code, should build upon a design vision, such as a masterplan or other design and development framework for a site or area." Now is the time to elevate standards of design (in all its aspects) by robustly wording policies to ensure they have real impact over their lifetime. Draft Local Plan policies lack sufficient specificity to ensure that developments are of high quality design.
A0961B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	Para 2 & 3 support the detailed guidance to achieve high quality design.
A0970B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	All local plan housing development strategies (not just SP5) require details of standards of design that the council requires of developers in response to climate. The West Midlands Design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. For example: PRINCIPLES of the West Midlands Design Charter 3 : Future Readiness includes Climate Resilience and Delivering Low Carbon Development. The Oswestry Place Plan includes this proactive statement on house building: " Undertake a Housing Needs Survey, support a survey of empty houses in the parish, investigate affordable housing and more good quality rental property options; ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps). " I disagree with this policy because it is incomplete.
A0970B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Draft policies SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: " The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. " Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?
A0972B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Tasley Garden Village is not a locally distinctive development and its scale is not in proportion to its locality & is of a poor design as too many houses, all of a bland and generic character

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0981B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>Sport England encourages LPA's to develop policies for securing high quality urban design that take into account the needs and opportunities to be physically active. This ties in well with the Council's overall vision and The Shropshire Test to ensure its community is safe and healthy. Sport England has developed its own guidance entitled 'Active Design', which sets out 10 principles to guide how places are designed to promote active lifestyles. A link to the guidance is attached: https://www.sportengland.org/how-we-can-help/facilities-and-planning/design-and-cost-guidance/active-design. The proposed policy wording should be amended, either by expanding the reference in part 1 of the policy to community well-being, or alternatively to include a separate paragraph within the policy to require developments to demonstrate how they have addressed the 10 Active Design principles. As part of the guidance, Sport England has developed a model policy which is set out on page 53 of the guidance and is attached on the separate sheet provided. This could be utilised to develop the policy wording. https://www.sportengland.org/how-we-can-help/facilities-and-planning/design-and-cost-guidance/active-design. Suggested model policy wording and reasoned justification:</p> <p>The design and masterplanning of development proposals will embrace the role they can play in supporting healthy lifestyles by facilitating participation in sport and physical activity. To do so they will, as far as is relevant to the specific development proposal, adhere to the following Active Design Principles:</p> <ul style="list-style-type: none"> • Activity for all : Enabling those who want to be physically active whilst encouraging those who are inactive to become active. • Walkable communities : Creating the conditions for active travel between all locations. • Connected walking, running and cycling routes Prioritising active travel through safe integrated walking, running and cycling routes. • Co-location of community facilities: Creating multiple reasons to visit a destination and minimising the number and length of trips and increasing the awareness and convenience of opportunities to participate in sport and physical activity opportunities. • Network of multifunctional open space : Providing multifunctional spaces opens up opportunities for sport and physical activity and has numerous wider benefits. • High quality streets and spaces : Well designed streets and spaces support and sustain a broader variety of users and community activities. • Appropriate infrastructure : Providing and facilitating access to facilities and other infrastructure to enable all members of society to take part in sport and physical activity. • Active buildings : Providing opportunities for activity inside and around buildings, rather than just between buildings. • Management and maintenance : A high standard of maintenance is essential to ensure the long-term attractiveness of sports facilities along with open and public spaces. <p>Reasoned justification: Active Design, developed by Sport England and supported by Public Health England, provides a set of principles for creating the right conditions within existing and proposed development for individuals to be able to lead active and healthy lifestyles. It focuses on those ingredients of cities, towns and villages that offer individuals the opportunity to be active. The planning system as a whole, including individual development proposals, has a key role to play in creating such opportunities. Planning applications will therefore be assessed against how they embrace the role they can play in supporting healthy lifestyles by facilitating participation in sport and physical activity. The Local Planning Authority will use the Active Design Principles to aid this assessment. Where Design and Access Statements are required to support an application they should explain how the design of the proposal embraces this role and reflects the Active Design Principles. Public Health leads for the local area should be encouraged to work with the planning department to engage at pre-application stage with applicants as they will be consulted on all relevant applications. The Local Planning Authority may use planning conditions and/or planning obligations where necessary to address issues where developments could, but do not, embrace this role and do not adhere to the Active Design Principles. The Active Design guidance, which provides further details for each of the Principles along with a set of case studies, can be found on Sport England's website.</p>
A0984B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	<p>Support the aims of this draft policy and the delivery of new high quality development to ensure creation of better places to live and work. This is consistent with recent Government consultations - Planning for the Future: White Paper (August 2020) and Changes to the Current Planning System (August 2020). Specifically, Pillar 2 of the Planning for the Future: White Paper includes delivery of beautiful and sustainable places, to do this the planning system should set clear expectations of the form of development expected in different locations in ways which reflect local character, address modern lifestyles, and facilitate modern methods of construction. Draft Policy SP5 upholds the aspirations set out in the White Paper and sets out the parameters and expectations of the design of new developments.</p> <p>Part 2 of the policy notes that developments must be in line with national planning policy and the design principles set out within the West Midlands Design Charter. Given the parameters within this draft policy, specific design guidance document for developments within Shropshire may be appropriate to provide applicants with clear guidance for the design expectations within the County. This would ensure design principles are grounded in an understanding of the County's defining characteristics and provides maximum clarity on design expectations within new developments. Such matters could also be dealt with through site specific SPDs.</p>
A0997B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	<p>Historic England welcomes the references to local character and historic interests, as well as building materials and detailing, included in this strategic policy which offers opportunity to conserve and enhance the historic environment.</p>
A1101B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	<p>Support delivery of high-quality design in new development to ensure the creation of better places; promote individual and community well-being; and enhance the way places are enjoyed and experienced by those who live, work or visit.</p> <p>Stannmore Garden Village has a focus on high quality design and with a legacy landowner there is an ability to ensure delivery above the standard and create a real sense of place. It could have a cohesive layout and design and through use of a design code complied with by local and regional housebuilders could deliver locally distinctive development and innovative design that positively contributes to the character, appearance and local identity. The development would be implemented to a high quality phased masterplan.</p> <p>The Community Centre will be designed for traditional retail uses such as independent butchers, bakers and greengrocers selling local produce alongside a café and associated leisure and cultural facilities in buildings with elevations responding to their location and surroundings. Committed to the principles of Garden Village design. The West Midlands Design Charter is fully supported.</p>
A1152B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	<p>Agreement is as far as it goes.</p> <p>Fully endorse the thrust of draft policy SP5, in recognition of the importance of design for creating better places and better buildings within them. Design is notoriously difficult to pin down and there have been the Building for Life standards (mentioned in para 129 of the NPPF), the Shrewsbury Test, and the guidelines developed by Shropshire Council Development Management.</p> <p>Concern is simply that the guidelines in both the West Midlands Design Charter and in the Shropshire Test are perhaps a bit general and possibly bland. Developers might therefore be able to say that they have met those tests whilst still presenting a development that is little better than those that are presently criticised.</p>
A1180B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps'). (respondent ref: Form 3)</p>
A1182B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps'). (respondent ref: Form 3)</p>
A1634B12	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps'). (respondent ref: Form 3)</p>
A1824B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>All the policies should include standards of design, including response to climate change. New schemes to meet zero net carbon should be considered from the outset. The policy is incomplete. Unless legislation pushes general development towards more sustainable solutions, the vast proportion of developers will not focus on carbon reduction or energy efficiency; their focus is on their profit margins.</p>
A1844B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	<p>The design of waterside development should be based on these key principles: orientation should positively address the water and optimise views and natural surveillance of the waterway; a public realm that integrates with the waterway, towpath and opens up access to the water and improvements to pedestrian access to, along and from the waterway. Whilst reference to waterside development within the policy or explanatory text would be welcome, we recognise that the policy is more general. As such we generally support it.</p>
A1896B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps').</p>
A2130B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>Statements on design do not add up to a coherent approach. The inclusion of a Shropshire Test as a gateway policy, SP5 on high quality design and the West Midlands Combined Authority Design Charter are all referred to but none contain the level of detail that can guarantee robust challenge to poor design. The risk is that both planning applicants and objectors could be using the same form of words to justify opposite outcomes. A better approach would be to use a design panel – especially given a lack of capacity and skills within the planning authority – as other areas do and as recommended by the CPRE. Cornwall provides an example – the Cornwall Design Review Panel has been in place since 2015. Such panels can be paid for from developer funds as part of the planning application process.</p>
A2150B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps').</p>
A2158B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps').</p>
A2163B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>Part 5 of the draft policy states developments of poor design will be refused, including those where inadequate information has been provided. This part of the draft policy is written in the negative form and should be more balanced, i.e. where development positively demonstrates design principles being incorporated then planning permission will be granted.</p> <p>The explanatory text of this draft policy requires all planning applications for new development to set out how they comply with this policy and the principles of the West Midlands Design Charter. It is noted that there is an absence of reference to the National Design Guide (Oct 2019) which has significantly more material planning weight than regional design guide. The DfT Cycle Infrastructure Design Guide (July 2020) could also be useful for reference.</p> <p>This policy should be amended in order to be found sound, as it needs to be fully justified</p>
A2173B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	<p>There is no reference to Neighbourhood Plans, Community Led Plans or Village Design Statements being considered as part of compliance with this policy.</p> <p>This should be included for these documents to be "material considerations" as part of overall siting, site layouts, housing styles, and individual dwelling designs</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2177B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Bullet 2 of draft Policy SP5 states development should be designed in accordance with the West Midlands Design Charter. The Council's policy approach to high quality design should align with the NPPF, the latest NPPG and the National Design Guide. Although the West Midlands Design Charter is not intended to set a local design policy (para 3.35), all planning applications for new development must set out their compliance with draft Policy SP5 and the West Midlands Design Charter (para 3.38). The HBF is supportive of the use of best practice guidance, however the use of such guidance should remain voluntary rather than becoming a mandatory policy requirement, which developers are obliged to use as a pre-condition for the Council's support. Draft Policy SP5 and its supporting text should not convey contrary to the Town and Country Planning (Local Planning) (England) Regulations 2012 (Regulations) development plan status onto the West Midlands Design Charter, which has not been subject to the same process of preparation, consultation and Examination as the Local Plan. Before the pre-submission LPR consultation, Policy SP5 Bullet Point 2 should be deleted.
A2180B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	We welcome this new policy setting out a lot of those material issues that the Town Council always seeks in a development. This goes more way to addressing the desires of the Shrewsbury Test
A2308B31	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Recognise the need to achieve high quality design in development and that this will become increasingly important in the future (given recent proposals in the Planning for the Future White Paper). However, there is a need to recognise with the policy/supporting text that there may be cases where the design of development required for defence purposes is constrained by specific technical and operational requirements and as such flexibility in design may be restricted. Part 3i of the draft policy highlights the need to ensure health and wellbeing of neighbours/other nearby residential, occupiers, businesses and visitors. The draft Policy should also recognise the need to consider the health and wellbeing of occupiers of new residential/business development. Recommend that the draft Policy specifies that development will only be acceptable where it is designed to ensure that it would cause no detriment to the activity or operational capability of MOD assets and sites
A2323B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5		No specific comments.
A2365B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref: Form 3)
A2372B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	High Quality Design. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. For example: PRINCIPLES of the West Midlands Design Charter 3 : Future Readiness Climate Resilience Developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle. Delivering Low Carbon Development: Development proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction. The potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps. " I disagree with this policy because it is incomplete.
A2412B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Agree	We support the Council's aspirations for high quality design. It is an important requirement for new development in the County. Our aspirations for sites MDR014 and MDR031 seek to deliver high quality design with the proposals carefully designed to provide a local distinctiveness, high quality materials, which seeks to utilise solar gains and integrate Green Infrastructure and sustainable drainage opportunities.
A2427B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	All the local plan housing development strategies (not just SP5) need details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter at least makes much clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. And the Oswestry Place Plan includes this proactive statement on house building : "Undertake a Housing Needs Survey, support a survey of empty houses in the parish, investigate affordable housing and more good quality rental property options; ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps)." Policy SP5 seems to me to be hopelessly inadequate..
A2469B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref: Form 3)
A2471B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	I disagree with this policy because it is incomplete. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan e.g. 'developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle', 'proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction' and the potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps.) (respondent ref: Form 3)
A2475B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	Since it is accepted that there should be higher standards of design within the AONB should this not be mentioned within this policy?
A2489B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	High Quality Design. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. For example: PRINCIPLES of the West Midlands Design Charter 3 : Future Readiness Climate Resilience Developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle. Delivering Low Carbon Development: Development proposals should seek to reduce greenhouse gas emissions by making clear, specific commitments to carbon reduction. The potential for new schemes to meet zero net carbon should be considered from the outset. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps. " I disagree with this policy because it is incomplete.
A2494B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP5	Disagree	High Quality Design. All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate. The West Midlands design Charter makes clearer statements over building for climate resilience and delivering low carbon development, than is contained in the Shropshire local plan. For example: PRINCIPLES of the West Midlands Design Charter 3 : Future Readiness Climate Resilience Developments should incorporate climate adaptation measures that respond to the short and long term impacts of climate change and address the environmental impact of the proposal across its life cycle. The Oswestry Place Plan includes this proactive statement on house building ensure all new housing is built to be energy efficient and carbon compliant, with 'green' sources of energy installed (e.g. solar tiles and heat pumps. " I disagree with this policy because it is incomplete.
A0240B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	2.63 Paragraph 3.44 of the Explanation text confirms that 'Appendix 7 of the Local Plan provides information on expected delivery timescales for Local Plan allocations.'2.64 NPPF paragraph 73 requires the following: 'Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites.'2.65 L&Q Estates raises significant concern regarding the form of the proposed housing trajectory in that it fails to adequately detail the specific expected rate of housing delivery over the plan period.2.66 The failure to outline specific delivery rates from the identified housing allocations renders the Policy SP6 unsound given its conflict with the requirement of NPPF paragraph 73.
A0430B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	Wallace support Part 1 of the policy which says that in addition to housing development at the allocations set out in policies S1-S20, there will be positive consideration of other sustainable housing development where this does not conflict with the policies of the plan. Wallace is also supportive of the wording of Part 3 of the policy, as it allows the residential guidelines to be exceeded where this is demonstrated to be appropriate. It is important that the residential guidelines are not seen as cap, as they are 'guidelines' after all, and settlements may be suitable for more housing growth than the residential guidelines suggest. The first part of Part 4 says that additional market housing development outside the development boundaries shown on the Policies Map will be controlled in line with policy SP9. Managing Development in the Countryside. Wallace take no issue with this part of the policy although do comment separately on policy SP9 below.
A0573B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Support SP6 and para 3.40 recognition that housing is essential for long term prosperity of Shropshire and para 3.41 recognising the NPPF and NPPG requirements that local plans be flexible and adaptable to change. SP6 requires more flexibility due to Covid-19 impacts and with proposed revision to standard methodology for housing need and satisfying unmet from Black Country. Sustainable development opportunities SHF032 (previously suggested as an allocation) and SHF018c (not previously suggested as an allocation but still positive, suitable and justified for residential use) adjacent to boundary in the east of Shifnal, adjacent to new employment, close to Stanton Road, A41 and M54 Junction 3, should be made available through the plan.
A0642B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Para 3.41 This all but guarantees that climate change will only be considered for a site in question, not the impact on Shropshire as a whole and not the impact on the whole country or planet.
A0647B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?
A0648B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?
A0685B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	Supported with a minor clarification. The policy says this at present: "In particular, additional housing development opportunities which would support the reuse of disused land or premises within settlement development boundaries as shown on the Policies Map; or contribute towards achieving wider town centre regeneration will be supported." It need not be quite so limiting and should instead read: "In particular, additional housing development opportunities which would support the use of all unprotected land or premises within settlement development boundaries as shown on the Policies Map; or contribute towards achieving wider town centre regeneration will be supported." This makes it clear that in principle all land within settlement boundaries not specifically identified for protection (e.g. public open space) will be acceptable in principle subject to compliance with other planning policies.
A0698B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0863B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Draft Policy SP6 seeks to manage the distribution of housing development across Shropshire beyond the allocated sites detailed in Policies S1-20. It is confined to development within settlement development boundaries. It controls the appropriateness of further residential development in settlements where the residential development guideline for a particular settlement has been exceeded. It provides the basis through which residential development outside of the settlement development boundary could be considered, through both Policy SP9 and through either: evidence showing the residential development guideline for a settlement being unlikely to be met over the plan period; or specific considerations set out in Settlement Policies. Draft Policy SP9 provides the basis through which residential development outside of the settlement development boundary could be considered in paragraphs 4 and 5. It tightly controls development in open countryside, with the types of development under consideration being isolated to conversions of existing buildings, or replacement of existing dwellings. Neither Draft Policy SP6 or SP9 provide meaningful flexibility for redevelopment of sites outside settlement development boundaries on brownfield land. Consider the policies, as drafted, cannot be found sound. The NPPF makes clear that there is a need to consider brownfield land for residential development and that where unallocated sites for particular uses are not likely to come forward, they should be considered for alternative uses. Paragraph 118(d) of the NPPF states that planning policies and decisions should: 'promote and support the development of under-utilised land and buildings, especially if this would help to meet identified needs for housing where land supply is constrained and available sites could be used more effectively'. Furthermore, paragraph 121 of the NPPF states: 'Local planning authorities should also take a positive approach to applications for alternative uses of land which is currently developed but not allocated for a specific purpose in plans, where this would help to meet identified development needs. In particular, they should support proposals to: a) use retail and employment land for homes in areas of high housing demand, provided this would not undermine key economic sectors or sites or the vitality and viability of town centres, and would be compatible with other policies in this framework; and b) make more effective use of sites that provide community services such as schools and hospitals, provided that this maintains or improves the quality of service provision and access to open space'. The Shropshire Local Plan should be more flexible to allow for circumstances whereby residential development outside of the settlement development boundary (and outside of Green Belt) on brownfield land can be supported, particularly where an existing use on the site can no longer be sustained, as directed by paragraph 121(a). This will ensure the Local Plan is compliant with the NPPF in that the most effective use of land is achieved and achieving deliverability through the plan on unallocated sites. Propose the wording of draft Policy SP6, paragraph 4, is altered to include where all of the following apply: 'The site is brownfield land; The site is not in Green Belt; and The site is no longer viable for its current use.'
A0895B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Fletcher Homes object to Policy SP6(3) because it makes residential development guidelines, "a significant policy consideration" and applies a number of additional policy tests where development will result in the settlement residential development guideline being exceeded. Fletcher Homes also object to paragraph 3.42 that states: "the guideline is not intended to represent a ceiling on development, but going beyond it by too great a degree could result in unsustainable development." Policy SP6 therefore contradicts NPPF para 59 that places an emphasis on "significantly boosting the supply of homes" and paragraphs 60 and 73 to regard housing requirements and land supply as minima and not maxima. SP6(3) will restrict the number of new dwellings in settlements identified in the Plan as 'sustainable settlements' creating tensions between the Plan and the NPPF. This can be resolved by deleting SP6(3) from the Plan and changing policy and text references that state "around x dwellings" to read "a minimum of x dwellings". The Council's 'Local Plan Delivery & Viability Study' finds many sites will not be viable which will require planning consent for 125% - 150% of the land needed to deliver 100% of housing needs or requiring a significant non-delivery allowance to be built into all assessments of whether a settlement might exceed its residential guideline. Fletcher Homes also object to the combined effect of SP6 with DP1 that will have unintended adverse consequences on housing delivery. Policy SP6 seeks to control numbers and Policy DP1 seeks a higher proportion of smaller houses, with a combined effect that sites require more dwellings to achieve the same saleable floorspace and taking the settlement closer to its housing settlement guideline. SP6 and DP1 pull in different directions and this tension is demonstrated in the Council's Viability Study where viability is finely balanced in many parts of the county so developers must maximise saleable floorspace. The dual pressure of Policy SP6 on the number of dwellings in combination with Policy DP1 on the size of dwellings will create deliverability issues across the county as smaller dwellings combined with a limit on numbers that inevitably push down saleable floorspace. To resolve this tension, the word "significant" should be deleted from SP6(3) so the development guideline is one "policy consideration" to be weighed in the planning balance with other policy considerations including housing mix and housing delivery. The words "and a 25% non-delivery allowance" should also be added to the SP6(3) and two further considerations added as additional criteria to read "e. the housing mix" and "f. the delivery of the Plan's allocated sites". This will make SP6(3) more compatible with policy DP1.
A0896B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Galliers Homes object to Policy SP6(3) because it makes residential development guidelines, "a significant policy consideration" and applies a number of additional policy tests where development will result in the settlement residential development guideline being exceeded. Galliers Homes also object to paragraph 3.42 that states: "the guideline is not intended to represent a ceiling on development, but going beyond it by too great a degree could result in unsustainable development." Policy SP6 therefore contradicts NPPF para 59 that places an emphasis on "significantly boosting the supply of homes" and paragraphs 60 and 73 to regard housing requirements and land supply as minima and not maxima. SP6(3) will restrict the number of new dwellings in settlements identified in the Plan as 'sustainable settlements' creating tensions between the Plan and the NPPF. This can be resolved by deleting SP6(3) from the Plan and changing policy and text references that state "around x dwellings" to read "a minimum of x dwellings". Galliers Homes also object to the combined effect of SP6 with DP1 that will have unintended adverse consequences on housing delivery. Policy SP6 seeks to control numbers and Policy DP1 seeks a higher proportion of smaller houses, with a combined effect that developers may not achieve an appropriate housing mix without taking the settlement closer to its housing settlement guideline. SP6 and DP1 pull in different directions and this tension is demonstrated in the Council's Viability Study where viability is finely balanced in many parts of the county so developers must maximise saleable floorspace. The dual pressure of Policy SP6 on the number of dwellings in combination with Policy DP1 on the size of dwellings will create deliverability issues across the county. To resolve this tension, the word "significant" should be deleted from SP6(3) so the development guideline is one "policy consideration" to be weighed in the planning balance with other policy considerations including housing mix and housing delivery. Two further considerations should be added to SP6(3) as additional criteria to read "e. the housing mix" and "f. the delivery of the Plan's allocated sites". This will make SP6(3) more compatible with policy DP1.
A0897B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Section 3 of draft Policy SP6 makes residential development guidelines, "a significant policy consideration" and applies additional policy tests for developments which result in residential development guidelines being exceeded. Para 3.42 of the explanation to this draft Policy notes "the guideline is not intended to represent a ceiling on development". Agree development guidelines cannot be a ceiling as this would run counter to paras 59, 60 and 73 of the NPPF regarding significantly boosting the supply of homes and treating housing requirements and land supply as minimums. However in practice section 3 of draft Policy SP6 restricts the number of new dwellings in settlements identified in the draft Local Plan as 'sustainable settlements'. This creates tension between the draft Local Plan and NPPF that can only be resolved by deleting section 3 of the draft policy and re-wording all the settlement policies from "around x dwellings" to "a minimum of x dwellings". Concerned this draft Policy (SP6) in combination with draft Policy DP1 will have unintended consequences that adversely impact on housing delivery. Draft Policy SP6 seeks to control numbers while draft Policy DP1 seeks a higher proportion of smaller houses, effectively requiring a larger number of units on a site to achieve the same saleable floorspace. It may make it difficult to achieve the housing mix sought by if doing so would result in exceeding the housing settlement guideline. This may cause problems on sites. Furthermore, given viability is finely balanced, as demonstrated in the Council's Viability Study, this could also create deliverability issues across the county. Suggest that if the Council is to retain section 3 of draft Policy SP6, "significant" is deleted, so that the development guideline is "a policy consideration" to be weighed in the round with regard to other policies such as the housing mix and housing delivery considerations (which could be added into the list under section 3 of the draft policy).
A0928B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	The aims and aspirations of this policy are somewhat confusing. It appears that the policy is aimed at supporting and explaining how the Plan's housing requirements will be delivered over the plan period in line with the settlement hierarchy and strategic settlement policies. It also seeks to provide some flexibility and adaptability to changing circumstances particularly in the context of the Housing Delivery Test, but we would also suggest could be a mechanism by which any future increase in housing need through a revised Standard Methodology could be flexibly accommodated within policy. The policy supports sustainable housing development even on sites not allocated provided they do not conflict with policies of the local plan. It also supports the reuse of disused land and premises within settlement development boundaries. Both aspects are not objective to. However, the policy also appears to resist housing development which would lead to the residential development guideline for a settlement being exceeded. This may be appropriate where disproportionate growth is proposed in less sustainable locations and settlements, but where additional development is proposed in sustainable locations, including for example in Shrewsbury and even exceeds its development guideline, such development which would otherwise be sustainable should not be restricted by the development guideline cap. The final section of the policy describes circumstances where additional market housing development outside of settlement development boundaries will be strictly controlled but "may be potentially acceptable where there is clear evidence that the residential development guideline for the settlement appears unlikely to be met over the plan or where specific considerations set out in the settlement policies apply". This additional flexibility outside of settlement boundaries is welcomed however the policy is still somewhat ambiguous and limited in its application. It may become a critical policy to provide the much needed flexibility given the shortcomings of the current plan requirement and clear evidence of increasing housing need emerging through the revised SM. The policy should additionally address circumstances where the need for housing could increase through the emerging revised standard methodology and could give priority to meeting such needs in line with the settlement hierarchy prioritising Shrewsbury as the main settlement. Giving some flexibility to meet housing needs would add to its soundness. The approach set out in this policy could be supplemented by identifying "reserve" sites which could be accelerated and delivered if housing needs increase. Such an approach would avoid the need for an early review of the plan and increase its longevity.
A0954B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	38. This policy states that in addition to the development of housing on the allocations set out within the Plan, there will be positive consideration of other sustainable housing development where this does not conflict with the policies of the local plan. This includes such a scenario when the residential guideline figure set for a settlement is exceeded – the benefits of the scheme, aside from increasing housing supply, would be weighed up to take account of the number of completions since the start of the plan period, as well as any outstanding commitments, cumulative impact arising from the development and the increase in number of dwellings relative to the guideline. 39. This approach is supported and it gives some assurance that the blanket allocation of specific number of dwellings is not set in stone and that the authority will take a more pragmatic approach to support sustainable development. This also demonstrates a degree of flexibility with the Plan in accordance with the NPPF. 40. It is also encouraging to note that although the policy sets out the importance of the settlement residential development guidelines (with numbers of dwellings directed to each settlement) it clearly states at paragraph 3.42 that: "the guideline is not intended to represent a ceiling on development, but going beyond it by too great a degree could result in unsustainable development." 41. The focus being firmly based on sustainable development rather than housing numbers or a slavish adherence to numerical guidelines.
A0956B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	The draft Policy states "Additional market housing development outside the settlement development boundaries shown on the Policies Map will be strictly controlled in line with Policy SP9, and will only be considered potentially acceptable where there is clear evidence that the residential development guideline for the settlement appears unlikely to be met over the plan period, or where there are specific considerations set out in the Settlement Policies." Whilst this monitoring-led approach to the delivery of the housing strategy is supported, the Council should ensure in the first instance that sufficient flexibility for housing land supply is provided in the draft SLP in a way that supports housing delivery in line with the urban focused spatial strategy.
A0972B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Para 4 Should housing development outside that included in the Local Plan, once adopted, be approved, will the development proposed under the Local Plan be limited in number to ensure that the overall numbers for the Bridgnorth area are not exceeded? How will the total numbers be monitored?
A0981B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	Sport England supports the reference in part 1) of the policy to ensure that new housing development will be supported providing it does not conflict with other policies in the Local Plan. Sport England also supports the reference in Part 3c) of the policy that regard will be had to any cumulative impacts on the needs for infrastructure, as this is consistent with other policies in the plan, particularly Policy DP27 to plan positively for the needs for social infrastructure to meet the needs of the proposed housing growth. Sport England recommends that a reference is added (either in the policy wording or reasoned explanation) as to how the Council propose to identify and deliver these infrastructure requirements through the Council's Place Plans and Infrastructure Delivery Plan, and to reinforce the Council's evidence base for infrastructure needs (which includes the Council's Playing Pitch and Outdoor Sports Facilities Strategy (PPOS), and Built Sports Facilities Strategy (BFS)).
A1152B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	Agreement is on the whole. Particularly welcome para 2 of the draft policy insofar as it will be used to actively encourage the re-use of brownfield land, and the regeneration of town centres. Also particularly welcome para 3 insofar as it will be actively used to refuse applications for development that are in excess of guideline figures. The public expect a guideline figure to be treated as a maximum, and are always perplexed that the Council permits development in excess of that. What is the point of a plan, they think, if its guideline figures can be exceeded with impunity? There would be a greater chance of the re-use of brownfield land were the guideline figures for housing not so high. The numbers game has had a catastrophic effect on the ability of brownfield land to contribute to housing land supply in Local Plans. The higher the housing number, the harder it is to pursue brownfield and under-used land for supply, and therefore the greater is the pressure on greenfield sites. This is exacerbated by the huge financial incentive to landowners simply to gain outline planning permission, which is why land market reform is also crucial. There are currently 1 million homes' worth of unbuilt planning permissions on both greenfield and brownfield land in England, which is enough land in the system to meet the Government's mantra of needing 300,000 new houses a year for at least the next three years.
A1170B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	I strongly support these policies to achieve a wider distribution of housing provision and development. My family life suffered harm from a lack of available housing in South Shropshire when it was under a district council. There is however a need to recognise that in many cases 'disused land' in urban and urban fringe locations is of great value for biodiversity; my own professional work in the Black Country has shown this.
A1649B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Don't know / no opinion	The proposed allocation of 250 within Highley in particular could adversely affect congestion in Bewdley town centre. By allocating the majority of development within the strategic and principal centres, the preferred sites document appears to be consistent with sustainable development as outlined in the revised NPPF.
A2177B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Policies SP6 – Managing Housing Development, SP7 – Managing Development in Community Hubs and SP8 – Managing Development in Community Clusters support sustainable housing development within development boundaries (subject to not exceeding residential development guidelines set out in individual Settlement Policies)
A2323B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6		Whilst the draft policy notes that "there will be positive consideration of other sustainable housing development where this does not conflict with the Policies in the Local Plan" there is no reference to the potential of safeguarded sites: Point 4 of the draft policy highlights that sites beyond the settlement boundary "will only be considered potentially acceptable where there is clear evidence that the residential development guideline for the settlement appears unlikely to be met over the plan period, or where there are specific considerations set out in the Settlement Policies". The Council have identified safeguarded sites to be delivered beyond the plan period (after 2038) – it would be sensible for the safeguarded sites to be considered in the first instance. It is therefore considered that a robust mechanism should be built into this policy to allow the safeguarded sites to be bought forward at an earlier date if certain criterion is met. Shifnal is one of the most sustainable 'Key Centres' within the district, scoring highly for the provision of existing local services and facilities, local transport, amenity spaces, local employment and schools. Whilst we state that more growth should be directed to Shifnal within the plan period the Local Plan Review would be more robust if a mechanism was built into this policy to allow safeguarded sites to be released at an earlier point (before 2038) should the need arise

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2367B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Para 4 SP4 S17.2 Clive Paragraph 4 of SP6 facilitates development outside development boundaries. S17.2 allows a community-led plan to be used to determine permissions for development outside designated boundaries. These may not be robust enough to inform such an important decision, given that they are not necessarily subject to the level of scrutiny as Shropshire Council documents/policies such as the Local Plan. Furthermore, the test of 'community need', is ambiguous and it unclear how this would be established/determined.
A2367B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Paragraph 3 Paragraphs 3 and 3.42 are not suitably specific to mitigate against limitless development based on subjective assessment. Specific limits/tolerances/criteria are not specified. This means that settlements in hub status have no guarantee of any development limits.
A2401B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Para 3 of SP6 and Para 3.42 of the explanation claim to provide clear guidelines regarding circumstances when development guidelines may be exceeded. However, the vagueness of these guidelines means a limitless amount of development may be approved based on a subjective test. For example, sub-para (d) states, "The increase of the number of dwellings relative to the guideline." Without any form of limit or tolerance, it makes this section of the policy worthless, meaning any number of dwellings could theoretically be approved provided it could be shown that 'due regard' had been given to the conditions. In order to provide residents with some form of peace of mind or confidence in the overall plan for a particular centre or hub, the guidance needs to be more robust and commit to the fact that the proposed guideline number of dwellings should be taken as an absolute maximum. This concern is amplified later in the same para with the statement, "The guideline is not intended to represent a ceiling on development."
A2401B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	Development boundaries are an important mechanism for controlling development. However, para 4 of SP6 provides too much leeway in allowing development outside the boundaries. The clause that allows development outside the boundary where, "there are specific considerations set out in the Settlement Policies," is too wide ranging. The Settlement Policy (S17) for Wem Place Plan Area, specifically S17.2, allows the contents of any community-led plan to be used in support of this decision. Given such plans are not necessarily subject to the same level of scrutiny and consultation as the local plan, I would contest that they are suitable means for informing such important decisions. Also, within the same par, the test of 'community need' is not defined. How is this metric to be assessed and by whom?
A2403B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	The Estate welcomes the flexibility within the plan to support windfall opportunities for housing in other sustainable locations, consistent with the wider policies of the local plan. We note the reference to residential development guidelines. We consider that in order for the plan to be consistent with the growth objectives of the National Planning Policy Framework and emerging Government aspirations as set out within the recent White Paper, it is important that these guidelines are not seen as ceilings for development, and that otherwise sustainable developments should be viewed positively and with consideration given to the overall benefits of the development, irrespective of the delivery position against the residential development guidelines
A2412B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	We support development the premise of allowing unallocated sites within settlement boundary within Shropshire. We would suggest an amendment to point 2: "2. In particular, additional housing development opportunities which would support the development of previously developed sites, or greenfield sites within settlement boundaries as shown on the Policies Map; or contribute towards achieving wider town centre regeneration will be supported." Such an amendment would allow for an appropriate level of windfall sites to come forward, as envisaged in the plan period, as worded it only allows for the reuse of disused land or premises.
A2470B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	Support the approach using Place Plan areas, as it allows local character, need and contexts to be accounted for.
A2476B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Agree	3.9 The thrust of this policy as a whole is for the positive consideration of other sustainable housing development outside of identified allocations, however it refers back to Policy SP9 which aims to strictly control housing outside of settlement development boundaries. 3.10 Policy SP6(4) is supported insofar as it provides some flexibility and the ability for the Plan to respond to development proposals in situations where the residential development guideline is unlikely to be met over the plan period, or where there are specific considerations set out in the Settlement Policies. 3.11 These representations make further comments to Policy SP9 and Policy S.16.1 in this respect, as it is considered that additional sites in sustainable locations adjoining key settlements, such as land at the Berwick Estate, should be capable of being brought forwards where it would accord with the wider aims and strategy within the plan. It is also important to note that the Berwick Estate will be delivering a Whole Estate Plan that is consistent with the themes emerging from this local plan. The attached Vision Document at Appendix 2 provides a snapshot of the emerging Whole Estate Plan and gives a clear opportunity for Shropshire Council to bring forward sustainable development and essential infrastructure with the Estate's support.
A2477B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP6	Disagree	This policy is broadly supported. The addition of a further category would be more positive and would help with plan and development flexibility. The policy could be changed to support windfall development in sustainable locations adjoining main or principal centres when such a development would not intrude into open countryside.
A0155B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	The Policy on Managing Development in Community Hubs (Policy SP7) is too dependent on small sites coming forward as windfall sites when there is no guarantee that this will happen.
A0158B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	The Council strongly supports the criteria set out in SP7, especially a., d. and e. The wording of criterion d. needs to be strengthened to say that "Any development must be accompanied by improvements in infrastructure which will benefit and have the support of the whole community."
A0207B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Hub status gives control over the future of the village in respect of some development identified together with a village boundary which hopefully will safeguard the community for the foreseeable future [NOTE: No Hub specified in B1 of rep - likely to be Cressage, see B2]
A0269B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	We agree provided that the Development Guidelines also inform the provision of Affordable Housing having regard to the evidence base for that strategic allocation
A0269B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Managing Development within Community Hubs In relation to allocated sites, we support this in so far as Neighbourhood and Community Led plans and policies are complementary to and do not seek material change to the Development Guidelines – see SP2 (7)
A0269B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Managing Development in Community Hubs We support the purpose of Development Guidelines as being, in part, to deliver certainty to the development industry
A0436B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.
A0437B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.
A0438B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.
A0439B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7		Support inclusion of a policy which supports the principle of new development in Community Hubs. Object to use of development boundaries in Community Hubs to tightly control additional open market housing. A less restrictive policy or 'looser' development boundaries will improve delivery of new homes. Competition amongst landowners increases preparation of well considered development proposals and ensures delivery (as learnt between 2013 and 2015 when there was no 5 year housing land supply). Overly tight development boundaries coupled with a limited number of allocated sites will not deliver the housing numbers required.
A0440B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7		Support inclusion of a policy which supports the principle of new development in sustainable rural settlements designated Community Hubs (rural service centres which should be the focus for suitable scales of development which respect the character of the village and affords tangible benefits the community). Object to use of development boundaries in Community Hubs to tightly control additional open market housing. CLV012 & CLV018 will provide 66% of Clive's residential guideline, affording important infrastructure and protection against speculative development by the provision of a development boundary.
A0441B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.
A0442B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0443B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Support principle of new development in Community Hubs. Object to use of development boundaries in Community Hubs to tightly control additional open market housing. Introducing competition between landowners results in well considered development proposals and ensures delivery - as was learnt between 2013 – 2015 when Shropshire Council couldn't demonstrate a 5-year land supply. Concerned that tight development boundaries coupled with a limited number of allocated sites will not deliver the housing numbers required. A less restrictive policy in respect of new open market housing, or 'looser' development boundaries will improve delivery of new homes across the county. As Draft Policy SP7 imposes a tightly drawn development boundary around sustainable settlements, it restricts windfall opportunities and the number of dwellings that could developed. For the Local Plan to be considered sound and consistent with para 70 of the NPPF, sufficient opportunities for windfall development need to be allowed.
A0444B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to use of development boundaries in Community Hubs to tightly control additional open market housing.
A0445B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Support principle of new development in Community Hubs. Object to use of development boundaries in Community Hubs to tightly control additional open market housing. Introducing competition between landowners results in well considered development proposals and ensures delivery - as was learnt between 2013 – 2015 when Shropshire Council couldn't demonstrate a 5-year land supply. Concerned that tight development boundaries coupled with a limited number of allocated sites will not deliver the housing numbers required. A less restrictive policy in respect of new open market housing, or 'looser' development boundaries will improve delivery of new homes across the county
A0446B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Support principle of new development in Community Hubs. Object to use of development boundaries in Community Hubs to tightly control additional open market housing. Introducing competition between landowners results in well considered development proposals and ensures delivery - as was learnt between 2013 – 2015 when Shropshire Council couldn't demonstrate a 5-year land supply. Concerned that tight development boundaries coupled with a limited number of allocated sites will not deliver the housing numbers required. A less restrictive policy in respect of new open market housing, or 'looser' development boundaries will improve delivery of new homes across the county
A0508B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	The policy states that appropriate development will be permitted on allocated sites and other sustainable sites within the development boundary of Community Hubs. Clearly where allocations are made or where there are suitable sites within the development boundary then this policy provides support for these Hubs to grow. However, where no allocations are proposed as is the case of Woore, it undermines the ability of the settlement to ensure its longer term sustainability. We, therefore, consider the policy unsound as it is not effective in that it will not enable Woore to ensure its longer term sustainability which is set out as an objective in Policy SP2.
A0609B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Support retention of the development boundary.
A0678B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Note criteria for development in Community Hubs and relevant to development in St Martins. The 3 draft policy criteria (including sub sections) provide a framework under which future development proposals can be appropriately considered.
A0685B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	The policy and its explanatory text are supported. This sentiment is agreed with: "Community Hubs are considered significant rural service centres and the focus for development within the rural area. As such appropriate development will be permitted on allocated sites and other sustainable sites within the development boundary of Community Hubs, as identified on the Policies Map." The site at London Road is within the settlement boundary of the made Woore Neighbourhood Plan and this boundary should remain unchanged in the emerging Shropshire Local plan. To avoid doubt this site should also be included as a housing allocation for up to 10 dwelling.
A0692B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7		Agree the proposed Community Hubs should be the focus for development within the rural area as they are the most sustainable rural locations Section 1f of the draft policy restricts development to the draft residential guideline for each Community Hub. This will stop development in those villages that are most successful in delivering housing, like St Martins and compound the problems identified by the Council's 'Local Plan Delivery and Viability Study', increasing risk that Shropshire will fail to meet the Housing Delivery Test set out in para 11 and footnote 7 of the NPPF. As currently worded this will restrict delivery in some proposed Community hubs and increase it in others, where viability and sustainability is weaker. the draft Local Plan will be more successful in meeting overall housing needs if delivery is the most successful, deliverable and sustainable rural settlements is not unduly constrained. Section 1f of the draft policy should therefore be deleted
A0895B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Fletcher Homes supports the Policy SP7 that, "Community Hubs are considered significant rural service centres and the focus for development within the rural area". Community Hubs must accommodate their own organic growth and that of their rural hinterland comprising the countryside and small hamlets. If Community Hubs are to be the focus for development in the rural area, their residential guideline figures should not be less than the average forecast growth in households. The Office of National Statistics household projections forecast an additional 36,424 households in Shropshire over 2016-2038, equivalent to 26.9% growth of the 2016 figure (equivalent to 1.22% per annum). This level of growth should be the minima for each Community Hub to be the focus for rural development, rather than held back by policies of constraint that diminish their sustainability. SP7(1)(f) restricts development in Community Hubs to that which will, "not result in the settlement's residential guideline being exceeded". This makes the guideline a maxima figure, contrary to NPPF endorsing housing numbers as minima not maxima. This is also contrary to the Government's key objective of, "significantly boosting the supply of homes" in NPPF paragraph 59 and recent Ministerial Statements SP7(1)(f) effectively turns Community Hubs from sustainable settlements in which development is appropriate, into locations where development is refused if the residential guideline is exceeded. This contradicts the policy's earlier statement that, "Community Hubs are considered significant rural service centres and the focus for development within the rural area." There is inadequate justification for why successful and sustainable villages should tip from a positive approach to development to a negative approach, simply because they exceed an arbitrary guideline figure. To resolve these issues, SP7(1)(f) should be completely deleted from the Local Plan.
A0896B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Galliers Homes supports the Policy SP7 that, "Community Hubs are considered significant rural service centres and the focus for development within the rural area". Community Hubs must accommodate their own organic growth and that of their rural hinterland comprising the countryside and small hamlets. If Community Hubs are to be the focus for development in the rural area, their residential guideline figures should not be less than the average forecast growth in households. The Office of National Statistics household projections forecast an additional 36,424 households in Shropshire over 2016-2038, equivalent to 26.9% growth of the 2016 figure (equivalent to 1.22% per annum). This level of growth should be the minima for each Community Hub to be the focus for rural development, rather than held back by policies of constraint that diminish their sustainability. SP7(1)(f) restricts development in Community Hubs to that which will, "not result in the settlement's residential guideline being exceeded". This makes the guideline a maxima figure, contrary to NPPF endorsing housing numbers as minima not maxima. This is also contrary to the Government's key objective of, "significantly boosting the supply of homes" in NPPF paragraph 59 and recent Ministerial Statements SP7(1)(f) effectively turns Community Hubs from sustainable settlements in which development is appropriate, into locations where development is refused if the residential guideline is exceeded. This contradicts the policy's earlier statement that, "Community Hubs are considered significant rural service centres and the focus for development within the rural area." There is inadequate justification for why successful and sustainable villages should tip from a positive approach to development to a negative approach, simply because they exceed an arbitrary guideline figure. To resolve these issues, SP7(1)(f) should be completely deleted from the Local Plan.
A0899B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Object to Policy SP7(1)(f) to restrict development to a scale not exceeding residential guideline figure. Means guidelines are maximum requirement contrary to NPPF para 59 to significantly boost supply and Ministerial Statements which raises the risk of the plan being found unsound. Policy SP7 regards Hubs as significant rural service centre and focus for development in rural areas. Hubs should accommodate their own organic growth and growth of their rural hinterland. Their residential guidelines should not be less than the average ONS forecast for household growth. The Office of National Statistics household projections forecast an additional 36,424 households in Shropshire over 2016-2038, equivalent to 26.9% growth of the 2016 figure. This level of growth should be the minimum for each Community Hub if they are to genuinely be the focus for rural development. This growth in Community Hubs increases the risk that Shropshire will fail to meet the Housing Delivery Test set out in paragraph 11 and footnote 7 of the Framework.
A0900B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Sansaw Estate supports Policy SP7 that, "Community Hubs are considered significant rural service centres and the focus for development within the rural area." This recognises Community Hubs accommodate not only their own organic growth but also that of their rural hinterland. The pandemic highlights the benefits of rural living with possible greater demand for homes and business in the countryside. It is disappointing that Policy SP7(1)(f) seeks to limit development in Community Hubs, only permitting development where it, "would not result in the settlement's residential guideline being exceeded, taking into consideration completions since the start of the plan period and outstanding commitments (including site allocations)". This turns housing guidelines into ceiling figures, contrary to NPPF's consistent use of housing numbers as minima not maxima. This is also contrary to NPPF para 59 to "significantly boost the supply of homes" and expressed in recent Ministerial Statements. It makes the Local Plan's job of delivering the housing and employment development that Shropshire needs much more difficult than it needs to be. In our view, Community Hubs should be allowed the flexibility to respond to changing needs and not have artificial constraints such as a ceiling on numbers imposed on them. The Council's 'Local Plan Delivery & Viability Study' identifies a very serious problem with viability and highlights that many sites may not come forward due to the significant additional costs of policies such as DP12 (Minimising Carbon Emissions), DP1 (Residential Mix) and the Community Infrastructure Levy. Table 12.8 of the Viability Study estimates the additional costs to be around £554,093 per hectare. As many sites will have marginal viability at best, there will be a higher proportion of committed sites (with planning permission or allocated) not delivered. The proposed wording of SP7(1)(f) assumes 100% delivery of outstanding commitments and allocations. In light of the evidence in the Council's 'Local Plan Delivery & Viability Study' that many sites will not be viable, this assumption is likely to result in under-delivery in most Community Hubs in Shropshire. To address this issue requires planning consent for 125% - 150% of the land needed in order to deliver 100% of housing needs. This could be addressed by requiring a 25% buffer to be added to settlement guidelines. Alternatively, consistent with our comments on Policy S17.2, we suggest that all residential guideline figures are expressed as minima. We suggest SP7(1)(f) should be completely deleted and would welcome a cross-reference to Policy SP12 (Whole Estate Plans) in SP7(2) and paragraph 3.55 to read; SP7(2) "Development proposals outside the development boundary of Community Hubs will be managed in accordance with Policies SP9 and SP12 and any other relevant policies of this Local Plan." And paragraph 3.55 "Outside the development boundaries of Community Hubs, new development will be managed in accordance with Policy SP9 and any other relevant policies of this Local Plan including applying as a material consideration Whole Estate Plans that have been endorsed by Shropshire Council."
A0902B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Agree with SP7 as a whole, but there are some weaknesses. Without Hub status a village in the rural area may well begin to lose services and facilities, as is the case in Maesbury/Maesbury Marsh, and the village(s) have become less sustainable as a result. The LPR ought to be looking to reverse these trends. Maesbury and Maesbury Marsh are two settlements that sit immediately adjacent to each other – where a garden in one village ends the garden in the other village begins, and should be a Hub. The residents of the two settlements share the facilities available. The points system used to determine whether or not a village should be regarded as a Community Hub calculated the points attributable to each settlement separately, but in addition missed awarding points for some important local facilities.
A0904B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	The proposal to make Community Hubs the focus for development in the rural area so as to increase the sustainability of the rural area is supported. The re-allocation of Site GOB012 for residential development is supported.
A0906B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	The proposal to make Community hubs the focus for development in the rural area so as to increase the sustainability of the rural area is supported. However, the focus is on housing, rather than any other types of development. Hinstock is identified as a Community Hub and has been provided with sufficient land to meet the assessed housing requirement. Earlier allocations for residential development (in the SAMDev Plan) have not yet been taken up, and yet an additional area of land for more residential accommodation has been allocated in the village (on a site previously considered unsuitable). No land is allocated for employment uses, and no indication of where people living in the new properties (which are mainly family houses, or, if they are smaller, affordable houses) might work. It appears that they are most likely to have to travel to Market Drayton, or Telford. The perpetuation of this trend does not foster sustainable communities. Policy SP7 should give greater advice on how employment opportunities can be introduced into the settlements in the rural area, and suggest that in some cases, employment opportunities might be more appropriately sited outside village development boundaries.
A0907B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	The criteria for managing development in Community Hubs set out in policy SP7.1.a – is supported. It is possible for the proposed allocated site WRP006 at Weston Rhyn to comply with or respond positively to any and all of the criteria set out in Policy SP7.1 (a) – (i).
A0908B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	SP7 is supported. However, the list of requirements set out in Policy SP7.1.a is far too imprecise for many would-be small developers, and these sorts of requirements are off-putting by their nature. Further, DP1 refers to "Residential mix" which will be expected to meet the identified needs of local communities, without any explanation of who will be setting the identified need, where the level of identified need can be sourced, or what may be the case if there is a dispute about the need identified. Reference to the documents listed in para 4.1 still leaves plenty of room for disagreement and interpretation. The list should be refined to ensure delivery is more easily achieved.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0914B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	The statement in Policy SP7 that "Community Hubs are considered significant rural service centres and the focus for development within the rural area" is supported. However it is very disappointing that Policy SP7 seeks to limit development in Community Hubs, only permitting development where it, "would not result in the settlement's residential guideline being exceeded. This section of the policy makes the guideline a ceiling figure, running counter to the National Planning Policy Framework's consistent use of housing numbers as minimums rather than maximums. It is contrary to the Government's key objective of, "significantly boosting the supply of homes" expressed in paragraph 59 of the Framework and in more recent Ministerial Statements. It makes the Local Plan's job of delivering the housing and employment development that Shropshire needs much more difficult than it needs to be. In our view, Community Hubs should be allowed the flexibility to respond to changing needs and not have artificial constraints such as a ceiling on numbers imposed on them. We therefore suggest that all residential guideline figures are expressed as minimums and that section 1f should be deleted from policy SP7 in its entirety.
A0954B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	42. This policy is very similar to SP6 but it specific to Community Hub settlements such as Bayston Hill. It is generally supported as Community Hubs are considered to be significant rural service centres and an appropriate focus for much of the development within the rural area. Specifically, Bayston Hill is described in 7.3.10 of the SLAA (August 2020) as: "Bayston Hill is a relatively compact settlement to the south of Shrewsbury on the A49. In terms of constraints, the settlement is flanked to the west by the Rea Brook, which takes a path along the north western edge of Bayston Hill. To the east, the settlement is again bordered by a watercourse which runs along the length of the village edge, and additionally by the railway line. To the north, the A5/A49 Shrewsbury Bypass separates the village from the southern fringe of Shrewsbury, and the land on either side of the A5 corridor a significant and important gap between the two settlements. There are also several dense tree belts of vegetation covered by Tree Preservation Orders on the north western edge of the settlement and on the south west edge. Due to its close proximity to Shrewsbury, the village has strong links with the town and as a consequence, access to good services, facilities and infrastructure. The settlement is serviced by a frequent bus service running from Monday to Saturday. There are a range of services in the village. There are three shops, post office, two schools and four pubs."
A0961B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Para 1 support the retention of the development boundary
A0981B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Sport England supports the reference in part 1d) of the policy to ensure that there is sufficient infrastructure capacity to support the development proposed, and to address any capacity constraints that result from proposed development. Sport England recommends that it would be appropriate to reference (either in the policy wording or reasoned explanation) how the Council propose to identify and deliver these infrastructure requirements through the Council's Place Plans and Infrastructure Delivery Plan, and also to reference the Council's evidence base for infrastructure needs (which includes the Council's Playing Pitch and Outdoor Sports Facilities Strategy (PPOSS), and Built Sports Facilities Strategy (BFS)).
A1126B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Fully endorse the retention of the Green Gap to the north of Bayston Hill.
A1146B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Policy SP7: Development in Community Hubs. Policy SP7 sets out the manner in which development in Community Hubs will be controlled. Outside Community Hubs development will generally be restricted to very special forms of development. However, this places much greater importance on the decisions made in respect of designation of particular villages as Community Hubs. Without that status a village in the rural area may well begin to lose services and facilities. Indeed, that process has begun in Leebotwood, and the village has become less sustainable as a result. The Local Plan Review ought to be looking to reverse these trends. Leebotwood is a very scattered settlement. The points system used to determine whether or not a village should be regarded as a Community Hub calculated the points attributable to Leebotwood missed awarding points for some important local facilities. The village enjoys a regular bus service, a pre-school nursery, a public house, a place of worship, extensive amenity green space, a library, a community hall, and unusually high employment opportunities. As the Plan stands Leebotwood will have no development for the next 18 years, and in that time is likely to struggle to maintain the services it currently provides. This has been the pattern over the past two or three Local Plan policies which have restricted development and led to the loss of the village primary school, shop, and post office. Those lost services are now being used as justification for further restrictions on development. An approach to development in villages that takes into account the way communities actually function, alongside a points system that more accurately reflects the current situation in settlements (and doesn't miss important facilities) would produce a more sustainable distribution of development in the rural area. The most concerning element in this situation is that there is no mechanism built into the Local Plan that will allow "upward movement" from a settlement being situated "countryside" to one that will undertake development to help support local services. This condemns villages that might presently not have sufficient points to 18 years without growth, while they might well be becoming more unsustainable as well. It would be helpful to all concerned if the Council were to propose such a mechanism in the current Plan, to allow villages that can demonstrate that they will become more sustainable
A1191B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Support identification of Community Hubs (including Burford) as 'significant rural service centres' and as the focus for development in the rural area. Consider that proposals for BUR004 comply with the proposed criteria for assessing development in Community Hubs within draft Policy SP7.
A2177B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	Policies SP6 – Managing Housing Development, SP7 – Managing Development in Community Hubs and SP8 – Managing Development in Community Clusters support sustainable housing development within development boundaries (subject to not exceeding residential development guidelines set out in individual Settlement Policies)
A2327B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Agree with maintaining Green Gap between Bayston Hill and Shrewsbury,
A2351B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	There appears to be a circular argument within SP7 Managing Development in Community Hubs. Development will be agreed where there is "sufficient infrastructure capacity to support the development". Hubs have been classed as having sufficient infrastructure but this does not appear to have been adequately assessed within the Hierarchy of Settlements. There is no provision for assessing vehicular access to Community Hubs, hence Clive village being deemed as having sufficient infrastructure despite only having single track roads to it. It could be argued that simply by being classified as a Community Hub the infrastructure is deemed sufficient even when this has not actually been assessed. This then allows for ongoing development beyond the allocated provision.
A2398B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Agree	Support acknowledgement that Community Hubs are significant centres and the inclusion of site allocations for development within the Plan. Para 3.52 of the draft Local Plan confirms that in order to recognise the diversity of the settlements, each Community Hub has been provided with an identified residential development guideline. The text highlights that the figure has been informed by consideration of the characteristics of each Community Hub and aims to provide greater certainty to local communities and the development industry. The SAMDev Plan was adopted in December 2015 and identified Bayston Hill as a Community Hub with a Development Guideline of only 50-60 dwellings between 2006 and 2026. It was considered that this could be achieved through infill development and without identifying specific allocations. This level of housing delivery has failed to sustain the delivery of much needed affordable housing within Bayston Hill, and the approach has had similar impacts in other Community Hubs. The draft Local Plan has identified a residential guideline for Bayston Hill of 200 dwellings which is to be met principally by two allocations. Support the higher level of development directed to sustainable Community Hubs and the acknowledgment that site allocations provide certainty for all parties. However, it is not clear how the guidelines for all tiers of settlement have come about and on what evidence they are based. There is no clarity on how the housing figure has been divided between the settlements. Suggest that further evidence is required to demonstrate how the characteristics have been taken into consideration. For instance 360 dwellings to Gobowen and 355 dwellings to St Martin (two small villages identified as Community Hubs located within 3km of each other and 4.4km from Oswestry) is significantly more than Bayston Hill which is only set to receive 200 dwellings. The Council's Hierarchy of Settlements paper (August 2020) reviews all settlements and establishes a hierarchy based on sustainability. As part of this assessment, settlements are assessed for their provision of primary and secondary services, transport and employment opportunities. Bayston Hill emerges as a highly sustainable settlement and is acknowledged to have good access to services. Overall, the Hierarchy of Settlements study scores Bayston Hill 80 out of a possible 116 total points for sustainability. St Martins and Gobowen score lower than Bayston Hill with overall scores of 77 and 71 respectively. They do not have the same range of services as Bayston Hill and this demonstrates that further justification is required for the identification of development guidelines. Market attractiveness should be a major consideration, as there is little value in allocating land in settlements with no market interest, such sites will remain undeveloped and undelivered. This has been identified by Shropshire Council who has set up Cornovii Developments, a housebuilding company to tackle a shortfall in commercial house building in the county which is pursuing development in St Martins, demonstrating the importance of allocating sufficient land in areas of the borough which are viable and attractive to market housebuilders. With regard to stage 3 of Settlement Hierarchy, consider the four categories identified provide a useful indicator for assessment, but also consider that population should be included in the analysis as larger settlements are generally more sustainable as a greater range of services and facilities can be supported. With regard to stage 4 of the Settlement Hierarchy, consider that Principal and Key Centres should have unique descriptions, given they perform different roles and Principal Centres serve a much wider catchment. With regard to the categorisation of settlements, the lower threshold for Key Centres was ultimately based on professional judgement including that Principal/Key Centres should be well dispersed with reasonable rural hinterlands between them and the strategic centre and other centres. It was specifically highlighted in the earlier consultation document on the Hierarchy of Settlements that some Community Hubs, particularly some of the higher scoring Community Hubs are satellites to larger settlements classified as either a Strategic/Principal/Key centres. Consider that settlements should be assessed based on the level of services that are provided as well as the size of the population. The fact that a centre is located close to a larger centre is not a factor which should impact on the categorisation of settlements. Examples of other Local Authorities provided. Remain of the view that failing to recognise certain settlements which are of significant size and contain key services is not sustainable. Smaller settlements which are close to larger towns are extremely sustainable places to live, given the services available, and there is demand for people to live there. Indeed, the residents of Bayston Hill are about the same distance from Shrewsbury Town Centre as those living in Battlefield or Bicton Heath/Shelton; the only difference being that Battlefield and Bicton Heath/Shelton are within the development boundary of Shrewsbury, whereas Bayston Hill is not. Sustainable development cannot be determined on the basis of a line on a plan. Note that the Settlement Hierarchy has been twice updated but the overall hierarchy remains the same. The identification of appropriate development guidelines for the most sustainable Community Hubs goes some way to addressing these concerns. Support identification of development guidelines for named Community Hubs. Housing figures seek to acknowledge sustainability of Community Hubs, as well as the requirement to meet the needs of small settlements for new housing and sustain the existing services. Allocation of sites in Community Hubs, such as Bayston Hill, provides certainty to communities over development and the security that much needed affordable housing as well as other benefits will be delivered. This approach acknowledges the sustainability of Community Hubs and the requirement to meet the needs of small settlements for new housing as well as sustain existing services.
A2475B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP7	Disagree	The now historical allocation of Community Hubs and Clusters arguably does not serve the AONB well. These are not in fact distributed evenly around the AONB and the south of the county. While in the far west this reflects sparsity of population, the fact of no definition of Community Hubs or Clusters within the Church Stretton Place Plan is something of an anomaly. It also feeds directly into the planning pressures affecting the town, since it is acknowledged that development opportunities are limited there due to the uniquely high quality landscape. The allocation of Community Hubs and Clusters should be reviewed in order to achieve a landscape-led approach to housing allocation for local need within the AONB, as is now identified nationally as good practice for these national landscapes. Again, if the Local Plan is to serve instead of an AONB specific policy document, it must address this need.
A0029B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Don't know / no opinion	SP8 typo error (S11.4 5,162 Page 219)
A0079B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	Llanyblodwel Parish Council support and agree with Policy SP8 and the outlined approach to managing development within Community Clusters.
A0183B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	The draft policy's restriction on site size to be no more than 0.1ha creates a number of inconsistencies in the Plan. It is inflexible, does not reflect typical rural densities, clashes with design policies and misses an opportunity to meet other policy objectives like balanced growth (including home-based businesses) and provision of self-build plots. Section 2c of the policy would be more robust and less open to challenge in the Local Plan examination if it were amended to: "Residential development will be delivered:....2 c. On suitable small-scale infill sites of 0.1ha about 0.2ha or less, which are clearly within and well related to the built form of the settlement, have permanent and substantial buildings on at least two sides and are for up to a maximum of 3 dwellings"
A0246B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Welshampton should be considered a Community Cluster within the Local Plan. The village is well provisioned with local amenities, a significant number of dwellings which are reliant on these amenities, located on the A495 close to Ellesmere and is currently a Community Cluster. Welshampton is perfect for small, well-considered infill development.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0435B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Support recognition that rural settlements have interdependent sustainable features. Support development in Community Clusters, as this is vital for the continued health of these settlements. However, the draft policy is too restrictive as: It does not recognise the diverse range of settlements identified as part of Community Clusters. Requiring a suitable site to be infill is too limiting. A maximum site size of 0.1ha is too small for up to 3 houses and does not allow sites to respond to local context. In rural areas single plots are on 0.1ha. Whilst it is acknowledged that an upper limit of houses will help ensure suitable small-scale development is delivered, the provision of an overly prescriptive policy in respect of new housing will be hugely limiting. It is considered unnecessary to impose that such developments are limited to sites 0.1ha and 'infill'. The draft Policy should be amended to allow for suitable larger sites and that a suitable site has permanent and substantial buildings on at least one side, this would increase windfall opportunities
A0436B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0437B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8		Welcome recognition that rural settlements have interdependent sustainable features. This policy supporting development in such communities is vital for their continued health. Support windfall development in Community Clusters. However, the draft policy is too restrictive as it will not deliver sufficient housing in Community Clusters. A maximum site size of 0.1ha is too small for up to 3 dwellings, in rural areas, individual plots occupy sites of 0.1ha and this is recognised as a suitable plot size in the current SAMDev Plan single ploy policy. This should be amended to 0.3ha. The definition of infill is too restrictive and does not recognise the diverse nature/spatial pattern of settlements. This should be amended to existing built form on one side. The proposed approach is a failure to plan positively and is overly restrictive. Whilst it is acknowledged that an upper limit of houses will help ensure suitable small-scale development is delivered, the provision of an overly prescriptive policy in respect of new housing will be hugely limitin
A0438B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0439B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0440B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0441B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0442B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0443B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0444B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0445B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Support recognition that rural settlements have interdependent sustainable features. Support development in Community Clusters, as this is vital for the continued health of these settlements. However, the draft policy is too restrictive as: It does not recognise the diverse range of settlements identified as part of Community Clusters. Requiring a suitable site to be infill is too limiting. A maximum site size of 0.1ha is too small for up to 3 houses and does not allow sites to respond to local context. In rural areas single plots are on 0.1ha. Whilst it is acknowledged that an upper limit of houses will help ensure suitable small-scale development is delivered, the provision of an overly prescriptive policy in respect of new housing will be hugely limiting. It is considered unnecessary to impose that such developments are limited to sites 0.1ha and 'infill'. The draft Policy should be amended to allow for suitable larger sites and that a suitable site has permanent and substantial buildings on at least one side, this would increase windfall opportunities
A0446B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Object to identification of very limited circumstances where new open market development can occur within Community Clusters.
A0903B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	Policy SP8 is supported in relation to development in Buildwas. The site identified on the SLAA residential sites plan, BUD007, is shown as a "rejected" industrial site (as are several others in Buildwas) but it currently enjoys planning permission for the development of 8 dwellinghouses (two of which would be affordable units). The existence of such permissions ought to be recorded in the text of Policy SP8, so the current planning situation is recorded in the Local Plan.
A0905B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	Support Cluster of Edstaston, Quina Brook, Northwood, Newton, and Tilley in Wem. However, development of only those sites within the restrictions and definition placed on infill development by Policy SP8 would be inappropriate for the form in which those settlements have developed to date. These settlements need a certain amount of growth to further their sustainability. It is suggested that the Policy should be modified to indicate the Council's appreciation of the need for flexibility in the interpretation of the definition of "infill", the implementation of the restrictions set out in Policy SP8, and the assessment of what the "immediate built form" of the settlement is, when considering future proposals for development in settlements where the characteristics of such villages militate against a hard and fast interpretation of the criteria specified in Policy SP8. The Policy should be re-worded to indicate the Council's acceptance that development sites in Cluster settlements will be determined with a significant degree of flexibility, very much having regard to the overall character and form of the settlement in question, rather than the rigid requirement for infill plots to be of less than 0.1 ha and be surrounded on all three sides by existing buildings.
A0922B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Draft Policy SP8 seeks to maintain or enhance the sustainability of Community Cluster settlements through provision of modest levels of development, this is supported. Community Clusters are sustainable locations for development in the rural area. The current pandemic has highlighted the benefits of rural living and we anticipate greater demand for homes and business to locate in the countryside in the future. Very disappointing that section 2.c of the draft Policy seeks to limit development in Community Clusters to "small-scale infill sites of 0.1ha or less, which are clearly within and well related to the built form of the settlement, have permanent and substantial buildings on at least two sides and are for up to a maximum of 3 dwellings". This section runs counter to the Government's key objective of, "significantly boosting the supply of homes" expressed in para 59 of the NPPF and in more recent Ministerial Statements. It also makes delivery of housing to achieve the Local Plan housing requirement/local need more difficult. Consider Community Clusters should be allowed the flexibility to deliver larger sites with a greater number of dwellings on them, so long as the proposals do not conflict with the criteria in section 4 of draft policy SP8 (criteria which provide sufficient control over the delivery of new development to ensure that new development is of an appropriate scale). Suggest section 2.c of the draft Policy is rephrased to enable larger developments (subject to the criteria in the remainder of the policy being met). Land identified as ELS001 is an example of a site that is larger than 0.1ha and can accommodate more than 3 dwellings but would otherwise accord with the criteria in the policy and should therefore be supported as a sustainable windfall development that would make a greater contribution to the overall need for housing in Shropshire. Site promotion with indicative site layout appended to submission.
A0924B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	The objective of Policy SP8 to maintain or enhance the sustainability of Community Cluster settlements through the provision of modest levels of development is supported. Community Clusters are sustainable locations for development in the rural area. The current pandemic has highlighted the benefits of rural living and we anticipate greater demand for homes and business to locate in the countryside in the future. It is therefore very disappointing that section 2.c of Policy SP8 seeks to limit development in Community Clusters to "small-scale infill sites of 0.1ha or less, which are clearly within and well related to the built form of the settlement, have permanent and substantial buildings on at least two sides and are for up to a maximum of 3 dwellings". This section runs counter to the Government's key objective of, "significantly boosting the supply of homes" expressed in paragraph 59 of the Framework and in more recent Ministerial Statements. It makes the Local Plan's job of delivering the housing development that Shropshire needs more difficult than it needs to be. In our view, Community Clusters should be allowed the flexibility to deliver larger sites with a greater number of dwellings on them, so long as the proposals do not conflict with the criteria in section 4 of policy SP8 (criteria which provide sufficient control over the delivery of new development to ensure that new development is of an appropriate scale). We therefore suggest that section 2.c of the policy is rephrased to enable larger developments (subject to the criteria in the remainder of the policy being met). Our client's land in Edstaston (submitted under Shropshire's 'Call for Sites' and identified by the Council as site EDS005 'The Old Post Office, Edstaston', provides an example of a site that is larger than 0.1ha. and can accommodate more than 3 dwellings but would otherwise accord with the criteria in the policy and should therefore be supported as a sustainable windfall development that would make a greater contribution to the overall need for housing in Shropshire. A site location plan is attached to this letter
A0981B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	Sport England supports the reference in part 4d) of the policy to ensure that there is sufficient infrastructure capacity to support the development proposed, and to address any capacity constraints that can be addressed by the development. Sport England recommends that it would be appropriate to reference (either in the policy wording or reasoned explanation) how the Council propose to identify and deliver these infrastructure requirements through the Council's Place Plans and Infrastructure Delivery Plan, and also to reference the Council's evidence base for infrastructure needs (which includes the Council's Playing Pitch and Outdoor Sports Facilities Strategy (PPOSS), and Built Sports Facilities Strategy(BFS)).
A1120B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Whilst the introduction of a definition for 'infill' is welcomed, it is felt that there is too much rigidity in directing new housing development, that does not take into account local context and character and will hamper new development on a otherwise sustainable development. Aston is a very much linear and tight-knit settlement, with a clear nucleated cluster of housing in a regimented form, as a result the availability for new development (aside from conversions) is few and far between. It is therefore requested that a degree of flexibility be introduced to the definition of infill, in recognition that no two sites or settlements are the same. For draft Policy SP8 to be applied so rigidly, with no allowance for slight interpretive anomalies would limit new development in Aston so heavily, that it is likely the settlement will not deliver on any windfall new-build. Instead new housing will be delivered through conversions, of which are disproportionately high-value and will exclude Aston from delivering its longer-term sustainability

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1123B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	However, with Tilley identified as a Cluster settlement, any new housing growth must be in accordance with draft Policy SP8, specifically Point 2. Whilst the introduction of a definition for 'infill' is welcomed, it is felt that there is too much rigidity in directing new housing development, that does not take into account local context and character and will hamper new development on a otherwise sustainable development. Tilley is a very much a tight-knit linear settlement and a largely historic settlement, hence the recent designation of a Conservation Area. As a result, the availability for new development (aside from conversions) is few and far between. It is therefore requested that a degree of flexibility be introduced to the definition of infill, in recognition that no two sites or settlements are the same. For example, land adjoining the north-western edge of the settlement, on a parcel of land that is physically and functionally well connected to the existing settlement, yet would fail to comply with draft Policy SP8 owing to a lack of development on two sides. For draft Policy SP8 to be applied so rigidly, with no allowance for slight interpretive anomalies would limit new development in Tilley so heavily, that it is likely the settlement will not deliver on any windfall new-build. Instead new housing will be delivered through historic conversions, of which are disproportionately high-value and will exclude Tilley from delivering its longer-term sustainability. Additionally, Tilley is characterised by large detached farmhouses and former barn conversions. The designation of a Conservation Area will add further pressures on any new housing scheme providing a sympathetic form and layout, whereby the requirement that no infill site be bigger than 0.1 hectare and provide no more than 3 units, will result in any new housing development unable to meet the requirements of draft Policy SP8 and draft Policy DP24 concurrently.
A1140B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Gravelsbank is no longer a Cluster without justification. It is unclear why Shropshire Council have gone from 42 Community Clusters in the Bishops Castle area, to just 16 in the Local Plan Review. It is our view that the development status of Gravels (including Gravelsbank) should remain designated as a Community Cluster to retain some limited development and help address the shortfall in delivery since the SAMDev was adopted and meet the growing need for different types of housing identified in the NPPF and the draft Local Plan (Policies DP1 – DP7). Lichfields have indicated that using the new methodology there is a significant increase from 1,400 dwellings per annum proposed in the Local Plan, to 2,129 dwellings per annum for Shropshire in the following publication https://lichfields.uk/grow-renew-protect-planning-for-the-future/how-many-homes-the-new-standard-method/#section18 .
A1168B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8		Draft Policy SP8.1. defines community clusters with reference to modest levels of appropriate development defined at SP8.2.c. Consider the criterion and reference to infill sites of less than 0.1hectares and up to a maximum of 3 dwellings to be too prescriptive. It is likely that such restrictions may not provide sufficient scope for meeting local housing needs or enough opportunity sites to genuinely sustain rural communities. Moreover, Community clusters are typically 'villages' characterised by a variety of settlement forms & for this reason, the reference to infill sites is likely preclude many candidate sites. Greater weight should be given to such issues as sustainability, connection to services, footpaths and avoidance of flood risk. Draft Policy SP8.2.c should be amended to refer to sites capable of accommodating between 5-10 dwellings to allow for example, a courtyard scheme, which may be far more appropriate in some rural location than 3 detached dwellings. As written Draft Policy SP8.2.c is unsound and in conflict with the Council's Strategic Approach to ensuring sustainable development.
A2169B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	It is good to see that the Council support the delivery of rural exception schemes, including cross-subsidy and entry-level exception sites, in community clusters consisting of individual or groups of small rural settlements. This will provide opportunities for the delivery of affordable housing in rural areas where there is a proven need which is particularly important in Shropshire which is rural in nature.
A2177B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	Policies SP6 – Managing Housing Development, SP7 – Managing Development in Community Hubs and SP8 – Managing Development in Community Clusters support sustainable housing development within development boundaries (subject to not exceeding residential development guidelines set out in individual Settlement Policies)
A2199B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Agree	The inclusion of the Neighbourhood Planning process as a mechanism to consider future additions to Community Clusters across the county is a welcome addition and a positive move Given the previous baseless decisions and non-consultative approach made by members of Sutton upon Tern Parish Council during 2012-2015, it is now reassuring to know that a robust mechanism will be in place going forward in the form of the Neighbourhood Planning process. This should ensure fair and balanced decision making based on thorough local community consultation; accountability; and expert oversight by the local authority and will act as a protective factor to mitigate against those with a vested interest on either side of any possible future debate:
A2416B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	THIS RESPONSE IS MADE UP FROM 2 ATTACHMENTS FOR A2416 SP8.2 1of2 and SP8.2 2of2) Sheet 1 of 2 The wording of policy SP8.2.c. is too restrictive and prescribed from a policy point of view and should be more flexible to allow for the judgment of the decision maker. Site Size Limit: Object to the use of a site size limit. A site size limit is unnecessary and sufficient safeguards to the scale of development are proposed elsewhere in the policy. Most Community Cluster settlements have low density patterns of existing development with average individual plot areas being in excess of 0.1ha (more typically between 0.2-0.5ha in many rural settlements) so even if one unit were proposed on a 0.1 ha site it would result in a scale/massing/pattern of development that is inappropriate to the surrounding area in terms of its relationship between existing buildings and streetscenes etc. and therefore conflict with policy SP8.4. With schemes of 3 units on up to 0.1ha it would obviously result in even more inappropriate development. The 0.1ha or less limit will result in very few schemes being able to comply with policy SP8 4a and also SP5 in particular SP5.2. and SP5 3.b) k) and l) so this policy wording is ineffective in terms of delivering the housing requirement in rural areas. Within and well related to the built form of the settlement: Object to the use of word "and". Recommend replacing "and" with "or" because many rural cluster settlements do not have a clear defined uniform built form in Shropshire, many are loose-knit or a combination of loose-knit and groups of dwellings but nevertheless they form a combined rural settlement where any one part of the settlement is no less sustainable than another. For example a site such a disused farm yard on the edge of cluster settlement may not always be considered as "within" but it may clearly be well related to the settlement and subject to complying with SP8.4. should be supported as SP8.4 gives sufficient safeguards to limit/avoid/control visual impact and any potential erosion/encroachment into open countryside. Have permanent and substantial buildings..... Object to the requirement of "permanent and substantial buildings" . Recommend either the removal of the whole of this phrase and allow the decision maker to assess impact of the a proposal against SP8.4. and other policies OR replacing "permanent and substantial buildings" with "existing built structures" which then allow the decision maker to assess the appropriateness of any proposal against the context of any surrounding buildings and streetscene, it is irrelevant whether adjacent buildings are permanent and substantial and this could also lead to unnecessary discussions/disputes on the type and condition of the adjoining building where for example a building that the LPA may consider to be temporary or poor quality in structure may have been and may still remain in situ for many decades. ...Continued on Sheet 2 Sheet 2 of 2on at least two sides: Object to the requirement for buildings on at least two sides. This is too restrictive and would exclude potentially suitable sites such as the above example on the edge of a settlement where they would otherwise fully comply with SP8.4. Recommend removal of this phrase or amending to "on at least one side". Ultimately it is considered that SP8.2.c. is too restrictive and will result in very few suitable Community Clusters site meeting this overly prescribed criteria and therefore the estimated delivery of units from Community Clusters is likely to be far less than the Local Plan anticipates. The policy should be made more flexible for the decision maker to assess appropriateness against SP8.4 and the plan as a whole including SP5.2&3.
A2454B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Don't know / no opinion	Farlow Parish has 3 housing clusters as detailed in '56 Cleobury Mortimer Place Plan Map': Hill Houses, Farlow and Oreton. While the Hill Houses area is quite specific, Farlow and Oreton are open villages spread out over a larger area. The cluster would seem to be a guide and the Parish Council takes a view with local knowledge and precedent. We assume the above is acceptable and no tighter limit is put on the area of a cluster.
A2475B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP8	Disagree	The now historical allocation of Community Hubs and Clusters arguably does not serve the AONB well. These are not in fact distributed evenly around the AONB and the south of the county. While in the far west this reflects sparsity of population, the fact of no definition of Community Hubs or Clusters within the Church Stretton Place Plan is something of an anomaly. It also feeds directly into the planning pressures affecting the town, since it is acknowledged that development opportunities are limited there due to the uniquely high quality landscape. The allocation of Community Hubs and Clusters should be reviewed in order to achieve a landscape-led approach to housing allocation for local need within the AONB, as is now identified nationally as good practice for these national landscapes. Again, if the Local Plan is to serve instead of an AONB specific policy document, it must address this need.
A0091B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Would like clearer guidelines for previously developed/brownfield land in the countryside. Would help clarify basis for consideration of planning applications for specific sites. Practice appears to be to treat sites as windfall but this seems inappropriate under SP9 .
A0100B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Policy should provide more flexibility and clarity for sites, adjacent to the existing settlement development boundaries, particularly Shrewsbury where growth required, which are considered 'countryside' by default but have no distinguishable countryside use/contribution. This will assist in the delivery of the Plan's housing and employment targets. Policy SP9 should be amended, to allow for sustainable and well-located development opportunities to be delivered on the edges of key settlements.
A0138B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9		Policy SP9 should be amended to recognise the need for specialist older person accommodation and suggested changes to Policy DP1, which would include specialist older person accommodation as an exception to restrictions in the countryside. We suggest under point 4 "h. specialist housing such as retirement living or sheltered housing; extra care housing or housing-with-care; and residential care homes and nursing homes where there is a shortage of provision locally."
A0167B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9		Welcome support for tourist related development within the countryside. However further clarification is required with regard to 3b. The retention and appropriate expansion of an existing established business, unless relocation to a suitable site within a settlement or other established or allocated employment location would be more appropriate; Tourist operators are concerned that they may be required to relocate (time, cost and inconvenience) at the discretion of the Council. Parameters as to when such considerations are required, criteria against which such decisions will be taken and explanation of how the process will be managed and paid for should be provided. Without such certainty this proposal cannot be supported as it is not considered consistent with the NPPF and could have a detrimental impact on the long term future of tourist related development. Current conditions mean policies should support economic growth, businesses and job retention
A0306B015	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	We feel intensive livestock units should be covered here, given their impact through ammonia on sensitive sites already subject to levels in excess of their critical threshold.
A0344B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	concerned that the policies will not address further application for intensive livestock units. Shropshire Council has found to its financial cost that there is currently a policy vacuum over ILU dev, yet this plan has little that will address the vacuum, despite the fact more and larger ILU proposals will come forward. Why does para 3 not also say no adverse community / social impacts and no adverse economic impacts on other businesses?. wants more clarity and strategic approach. proposes SC develops some simple guidelines which would help all parties. it is noticeable that the multiple mentions of tourism specify sustainable and green yet these words do not apply to farming developments.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0392B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	<p>Risk(s): That because of the location of a school, an area may be targeted for a large and/or multiple applications for these exception sites which would not be sustainable and adversely affect the character of the local area. It could also create blocks of affordable homes that goes against the policy for new developments of this being mixed in with market value homes. Exception sites could be targeted for affordable homes outside of the development boundary in blocks, rather than these being mixed in with market value homes within the development boundary where access to services is much better and sustainable than in the open countryside.</p> <p>Comment(s): 1. This policy actively encourages affordable exception site dwellings, entry level exception sites and cross subsidy exception housing schemes where they meet the relevant development policies. This provides criteria to be met but doesn't adequately ensure that development in the countryside does not adversely change the countryside from large and/or multiple applications in the same area. This paragraph needs to reflect this through the addition of wording (which could be added to Paragraph 6) such as: "Proposals for affordable exception site dwellings, entry level exception sites and cross subsidy exception housing schemes must be assessed, including in conjunction with other development in the local area, to ensure that local services are not overwhelmed and that the character of the local area is not adversely affected by the cumulative effect of the multiple schemes." 2. The cumulative impact on settlements of exception sites being built next to another exception site goes against the policy of mixing affordable housing within market value housing, therefore a control needs to be added to this policy to ensure that multiple exception sites located next to or in the close vicinity to each other don't create a block of affordable housing in one area, effectively causing "ghettoism" and also a lack of social cohesion. Although it could be argued that the "change of character" requirement prevents this, developers will use design and appearance to counter this as it is not specific enough regarding the mix of housing as required for new development sites. It is recommended that a statement is added to this policy to ensure that exception sites are not easily justifiable adjacent to another exception site and that where a second exception site is proposed in the same locality as an existing exception site, that this shall not change the mix of housing beyond what would be expected within a new development. 3. Affordable homes are more sustainable when built within a development boundary as the access to services is much more sustainable than the open countryside; all forms of multiple dwelling exception sites should be placed in higher level settlements where the infrastructure is more suitable and able to cope with the increased demand. Where allocated sites or windfall sites are available within a development boundary, then the policy should require that these are utilised first before any exception sites adjacent to the development boundary or in open countryside are allowed. Proper consideration must be given to housing allocations already identified within the Allocated Sites and other suitable windfall sites within the defined development boundaries. It is inevitable that there will be pressure to add exception sites adjacent to the development boundary, so it should be recognised that development boundaries have been identified for a reason and that expansion of this in some directions would be completely incongruous with the character of the settlement and its undesirability should be respected where appropriate representations are made. The above comments may also need to be reflected into the relevant DP for each type of exception site</p>
A0430B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	<p>The Council will wish to protect the open countryside around key settlements beyond those sites allocated, this policy wording further reinforces our view that the Site should be included within Shifnal's new development boundary – regardless of whether it is ultimately allocated or safeguarded in the plan. By including the Site within the proposed settlement boundary this provides greater scope to then add a monitoring / 'Plan B' policy should the Council be minded to consider such an approach within the plan when noting the various matters and issues cited in Section 3 of these representations. SP9(1) says: "The management of development in the countryside will reflect the Plan's urban focused development strategy which seeks to direct the majority of new development to the Strategic, Principal and Key Centres and new Strategic Settlements. Within the rural area, the Plan identifies Community Hubs and Community Clusters as the focus for new development, whilst also supporting new affordable housing provision for evidenced local needs and fostering appropriate rural employment opportunities, subject to the further controls over development that apply to the Green Belt, the AONB and other designated areas." This part of the policy clearly reflects the plans emphasis on the larger towns meeting the majority of the County's needs. However, SP9(4) goes on to say: "New market housing will be strictly controlled outside the development boundaries of the Strategic Centre of Shrewsbury, the Principle Centres, the Key Centres, the new Strategic Settlements and the Community Hubs. Within Community Clusters only new market housing which meets Community Cluster Policy SP8 criteria will be acceptable. Outside these areas, subject to the further controls that apply in Green Belt, residential development proposals will be positively considered where they meet all the relevant requirements of Local Plan policies and relate to..." It then goes on to list several criteria relating to affordable housing exception sites, gypsy and traveller development, reuse of building with heritage significance, sub-division of dwellings, replacement dwellings and essential rural worker dwellings. The criteria listed are generally consistent with the NPPF's rural exception policy (paragraph 64d) and isolated homes in the countryside policy (paragraph 79a-d). Wallace do not have any particular comments to make in relation to the set criteria. In this instance, the safeguarded land to the south and west of Shifnal is depicted as falling outside of the proposed settlement boundary. As such, this policy would also apply to the Site and arguably reads as though the Council would favour residential development in more rural locations over and above additional homes coming forward on the edge of the key settlements on sites located outside the settlement boundaries.</p>
A0436B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0437B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0438B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0439B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0440B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0441B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0442B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0443B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0444B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0445B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	<p>Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters. Acknowledge development within the Countryside needs to be carefully managed, however the countryside is a 'place of work and play' for a significant proportion of the county's population. Careful consideration of the impact of new development in the countryside is supported, however a careful balance needs to be struck so not to hamper growth and improvements to the local economy and housing stock. Proposals within the draft policy for replacement dwellings is overly onerous. Whilst it is acknowledged there is a desire to avoid modest houses being replaced with substantially larger properties, requirements for replacement dwellings to not be materially larger and occupy the same footprint is illogical. General Permitted Development Rights afford homeowners the opportunity to extend properties significantly and typically replacement of existing dwellings is only considered where the property is dilapidated, inefficient and no longer fit to serve as a modern house. Therefore, to limit the house to the same size of the existing footprint does not afford flexibility to improve the dwelling to cater for modern living and space standard. It is considered that an alternative suitable safeguard would be to afford a % limit on the increase of the Gross Internal Floor area of the replacement dwelling from the original dwelling.</p>
A0446B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the strict controls on additional market housing in the countryside beyond Community Hubs and Community Clusters.
A0506B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Section 4a of this policy allows for housing exception sites which comply with various policies but it does not mention Policy DP26 which relates to the AONB. DP4 (Affordable exception sites) and DP7 (Cross-subsidy exception sites) allow for local needs exception sites around key centres such as Church Stretton. It must therefore be made clear that this case applies in Church Stretton, even though the town is within the AONB.
A0508B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	In light of our objection to Policy SP7 and the absence of any allocations in the Plan for Woore, we also object to Policy SP9 in that it is overly restrictive in controlling new housing development on sites outside the development boundary around a settlement.
A0609B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Agree	Support the strict control of housing.
A0642B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Agree	Again, the aspiration to significantly reduce the need to travel has very significant implications for traffic modelling used to support the business case for the NWRR. This calls into question the plan's support for the NWRR.
A0647B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs." The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0648B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0692B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9		Draft Policy SP9 should recognise that all countryside is not equal and as such sites adjoining a settlement development boundary are more positively considered than those in isolated rural locations. Para 78 of the NPPF recognises sites adjoining villages can contribute to sustainable rural development and are different from deep countryside, stating "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities". As sites adjoining a Community Hub are not 'isolated', can contribute to meeting housing need (including need for self-build housing) and can be part of sustainable rural development, suggest an additional category is added to the existing list (a) - (g) in part 4 of the draft policy, to allow: (h.) Self-build and custom-build housing on suitable sites adjoining Community Hub settlements.
A0698B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0863B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9		Draft Policy SP6 seeks to manage the distribution of housing development across Shropshire beyond the allocated sites detailed in Policies S1-20. It is confined to development within settlement development boundaries. It controls the appropriateness of further residential development in settlements where the residential development guideline for a particular settlement has been exceeded. It provides the basis through which residential development outside of the settlement development boundary could be considered, through both Policy SP9 and through either: evidence showing the residential development guideline for a settlement being unlikely to be met over the plan period; or specific considerations set out in Settlement Policies. Draft Policy SP9 provides the basis through which residential development outside of the settlement development boundary could be considered in paragraphs 4 and 5. It tightly controls development in open countryside, with the types of development under consideration being isolated to conversions of existing buildings, or replacement of existing dwellings. Neither Draft Policy SP6 or SP9 provide meaningful flexibility for redevelopment of sites outside settlement development boundaries on brownfield land. Consider the policies, as drafted, cannot be found sound. The NPPF makes clear that there is a need to consider brownfield land for residential development and that where unallocated sites for particular uses are not likely to come forward, they should be considered for alternative uses. Paragraph 118(d) of the NPPF states that planning policies and decisions should: 'promote and support the development of under-utilised land and buildings, especially if this would help to meet identified needs for housing where land supply is constrained and available sites could be used more effectively'. Furthermore, paragraph 121 of the NPPF states: 'Local planning authorities should also take a positive approach to applications for alternative uses of land which is currently developed but not allocated for a specific purpose in plans, where this would help to meet identified development needs. In particular, they should support proposals to: a) use retail and employment land for homes in areas of high housing demand, provided this would not undermine key economic sectors or sites or the vitality and viability of town centres, and would be compatible with other policies in this framework; and b) make more effective use of sites that provide community services such as schools and hospitals, provided that this maintains or improves the quality of service provision and access to open space'. The Shropshire Local Plan should be more flexible to allow for circumstances whereby residential development outside of the settlement development boundary (and outside of Green Belt) on brownfield land can be supported, particularly where an existing use on the site can no longer be sustained, as directed by paragraph 121(a). This will ensure the Local Plan is compliant with the NPPF in that the most effective use of land is achieved and achieving deliverability through the plan on unallocated sites. Propose the wording of draft Policy SP6, paragraph 4, is altered to include where all of the following apply: 'The site is brownfield land; The site is not in Green Belt; and The site is no longer viable for its current use.'
A0894B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to Policy SP9(4) which should recognise land adjoining a settlement development boundary requires less protection than land in isolated rural locations to support self-build and custom build housing. Insert an additional clause (h) into SP9(4) to read: (h) Self-build and custom build housing on suitable sites adjoining development boundaries.
A0899B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Policy SP9 states that, "new market housing will be strictly controlled outside the development boundaries of... Community Hubs." The policy's approach of restricting development runs counter to Policy S14.2 (Community Hubs: Oswestry Plan Area) which seeks to deliver significant amounts of housing outside development boundaries of Community Hubs. This inherent contradiction will cause problems in the delivery of the Plan. We suggest that Policy SP9 recognises that all countryside is not created equal and that sites adjoining a settlement development boundary should be treated more positively than isolated rural locations. Paragraph 78 of the Framework recognises that sites adjoining villages can contribute to sustainable rural development and are different from deep countryside, stating, "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities." In recognition of the fact that sites adjoining a Community Hub are not 'isolated', can contribute to meeting Shropshire's housing needs and can be part of sustainable rural development, we suggest that an additional category is added to the existing list (a) - (g) in part 4 of policy SP9 to allow: (h.) Self-build and custom-build housing on suitable sites adjoining Community Hub settlements. This addition will assist Shropshire Council in meeting its needs for self-build housing. Our comments on Policies DP2 (self-build and custom-build housing) and DP7 (cross-subsidy exception sites) provide more detail on why the above change will help the Plan deliver its housing needs for this type of housing and more affordable housing.
A0899B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	NPPF para 71 also supports the provision of entry level self build on exception sites and this support should be introduced into policy DP7 to permit self build and custom build on exceptions sites possibly reflecting the approach in Telford and Wrekin Policy HO11.
A0900B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Support the objectives of policy SP9 which has a synergy with Sansaw's Whole Estate Plan. The Estate sees its role as one of long term stewardship of its land and buildings, maintaining its past heritage and creating new 21st century buildings that will provide a new heritage for future generations. The Sansaw Estate support the positive approach in sections 2 and 3 of Policy SP9 to economic and community development in the countryside. We welcome the policy's enablement of a wide range of uses that will strengthen rural sustainability. SP9(3)(a) could be restrictively interpreted as only supporting very small-scale development and so appears to contradict SP9(3)(c). The reference to small-scale is unnecessary, contradictory and potentially undermines the policy which already requires that proposals, "maintain or enhance countryside vitality and character" and so, the term "small-scale" should be deleted from SP9(3)(a). The Estate has a number of historic buildings in which it will invest in renovations over the plan period. We welcome SP9(4)(d) to permit the sustainable re-use of buildings with heritage significance but the policy is worded so tightly that it will render renovation unviable and/or impractical in most cases. There is little point in investing in the future of a building if it cannot be brought up to modern standards and in most cases this does involve some alterations or extensions to the original building. This can be done very sympathetically to provide a successful mix of the original and the modern and we suggest deleting the words "alteration, extension" from SP9(4)(d).
A0928B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	The Policy sets out various provisions in relation to the management of development in the countryside which reflect the plans urban focused development strategy. It includes provisions for economic activities as well as other activities appropriate to a rural area. In respect of housing it confirms that new market housing will be strictly controlled outside of development boundaries. However, the policy should cross reference to the flexibility allowed for open market housing in the countryside within policy SP6 if the circumstances of policy SP6 are met.
A0961B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Agree	Para 4 support the strict control of housing
A0970B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Draft policies SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A0971B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire. SP9 Managing Development in the Countryside The proposed amendments are to the wording of Policy SP9 (Managing Development in the Countryside) to include specific reference to Whole Estate Plans as a policy exemption.
A0972B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Para 1 Bridgnorth should not be included as a Principal Centre. Whilst 3rd largest town in Shropshire by population, there has been no improvement in the highways infrastructure, there is no Railway Station, and public transport is poor. These factors render Bridgnorth an unlikely choice for the uptake of employment land and also for the sustainability of a single large housing development as proposed in the draft SLP. Para 3 Small scale economic development is desirable and possibly achievable in Bridgnorth, insufficient to employ one member of each household on the scale of development proposed. The potential for expansion of tourism is limited without spoiling the nature of the town & experience that drives it.
A1119B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Laird Estates broadly welcomes the Council's approach in providing housing for a range of needs, particularly, older people, which is defined as "People over or approaching retirement age, including the active, newly retired through the very frail elderly..." (NPPF, Annex 2) and supporting age restricted general market housing. Laird Estates also broadly welcomes the approach of having specific policies for different types of residential accommodation yet is disappointed there is no such policy for residential park homes despite their wide-ranging benefits. As currently drafted, the absence of any recognition of residential park homes and the benefits and role that they play in housing markets means the LP is not sound because it fails two tests, namely: the test of positivity; and, consistency with national policy. To remedy this, Laird Estates suggests that the benefits listed above are referred to in supporting text (Paras 4.35 to 4.39). Laird Estates also recommends a new policy is prepared to provide guidance to promoters and operators of residential park home developments.
A1152B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Support the intention, within the Hierarchy of Settlements, that the countryside should come last in priority for development, below Strategic, Principal and Key Centres and new Strategic Settlements and below Community Hubs and Community Clusters. Would continue to support the inclusion of single plot rural exception sites within paragraph 4a of the draft policy but we do not support the intention, within that paragraph, that either entry level exception sites or cross subsidy exception housing schemes be allowed in the open countryside. If there is an identified need within a parish for affordable housing, then for reasons of sustainability, any affordable exception site housing other than single plots should always be situated near an existing Hub by preference, rather than even a Community Cluster, and certainly not in the countryside. To allow larger exception housing sites, such as entry level exception sites or cross subsidy exception housing schemes, in the countryside would conflict with the sustainability objectives of the Plan, particularly with the Climate Change objectives.
A1161B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Agree	We welcome the direction of this policy and the general reference to the AONB policies. This policy should be strengthened by including specific reference to the need to meet AONB design guidance and specifically within the AONB that all agricultural development comply with the Shropshire Hills Agricultural Building Design Guide
A1183B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	We welcome the revision of Policy in this draft as it clarifies as much as is possible what was outlined in CS5 (our own status currently) and recognises the need to support rural vitality. The Policy and associated linked narratives also emphasise the need to be sensitive to the changing demographic of rural communities, changes in agricultural practice and working or shopping from home and therefore different needs for support locally. This might well include supporting broadband as infrastructure (still poor in our community) but now a utility functionally, health and exercise agendas as well as support for small units of economic activity. The draft Policy again doesn't require any metric to assess performance against any standard or baseline measurement Cross Boundary Issues and Duty to Cooperate 2.24 Our location very near to both Staffordshire and Telford and Wrekin Council makes us very aware of the additional complexity generated by development in these local authority areas. This was briefly mentioned in the introduction to the draft Local Plan and we would suggest a section of narrative pulling together how this scoping and related work is managed would be helpful.

Page 47

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1630B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	For rural communities to remain vibrant and economically active they need a continued delivery of housing and the development of a broad based economy. Rural development can include the development of agricultural businesses and also the growth of innovative rural businesses or the relocation of businesses into rural areas. Rural workers dwellings We are concerned by the proposed limits on the size of a rural workers dwelling as outlined in section 3.76. Frequently a need for a second dwelling arises on the appointment of a manager for a farming enterprise (e.g. poultry and horticultural businesses). When new dwellings are constructed for farm businesses it is important that they are large enough to cope with the many demands of the farm business, together with the needs of a family. The house will almost certainly require adequate space for a farm office. It will also require an entrance porch and utility area where soiled outdoor clothing and shoes can be stored and washed in a space separate to the main living accommodation. This is especially important in poultry businesses for maintaining adequate biosecurity measures. These needs are often not met by an 'off the shelf' design for homes on new developments. As these dwellings are frequently required to accommodate workers 24 hours a day they would not be in a position to move house to accommodate a growing family. This policy should be reconsidered in order to provide adequate accommodation for a range of family circumstances. Agricultural buildings New agricultural buildings are often required to meet evolving environmental and animal welfare standards. New agricultural buildings and associated infrastructure (such as manure stores and farm reservoirs) also have a role to play in climate change mitigation by ensuring that food is produced efficiently while also protecting air, soil and water quality. Historic farm buildings were there to facilitate food production and modern buildings are simply the latest in a long line of rural buildings which are designed to accommodate the production of safe, affordable, high quality food. The scale of the building is often important to give livestock sufficient space and ventilation and to accommodate modern agricultural machinery and other infrastructure. Operations need to be of sufficient scale to make them economically viable.
A1871B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	3c is desirable but not always achievable, but is in conflict with DP13. DP9 should therefore reflect the wording of DP13
A2177B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Policy SP9 – Managing Development in the Countryside strictly controls new development outside development boundaries.
A2308B32	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	There are a number of operational defence sites in Shropshire including Tern hill Airfield, RAF Shawbury and Nesscliffe Training Area that are located within the countryside. It is vital that defence activities are protected from adverse impact from other development and that development in respect of the ongoing roles of defence sites supporting national defence is able to be undertaken to ensure that operational activities are not compromised. The need for the recognition of defence requirements within this draft Policy, as set out in Para 95 of the NPPF. Concerned that this draft Policy could potentially restrict development required in the national interest on defence sites in the countryside and that it does not adequately protect defence sites from third party development. Section 2 of the draft Policy recognises a need for flexibility in delivering development to support and meet rural economic and community needs but there is no recognition of development required in the national interest. Section 3 could potentially relate to defence related development, however none of the criteria a to f explicitly refer to defence and therefore there is currently insufficient clarity within the draft Policy. There is reference (criteria b) to existing established businesses but defence sites are not strictly businesses. There is also reference (criteria e) to infrastructure, but it is unclear whether this is only community infrastructure. Would like to see a specific policy within the draft Local Plan dealing with defence related development (raised in previous consultations). However, this issue could be addressed within draft policy SP9, to satisfy the requirements of NPPF Paragraph 95, as follows: Development required to support or meet operational defence requirements. Would also like to see the draft policy recognise development in the countryside should not adversely impact on defence sites/activities
A2337B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	This area has already had significant development recently. Drainage and sewers may not be able to cope with more development. The town's infrastructure is struggling already. The needs of the existing residents need to be taken into account first.
A2403B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	The Estate generally supports the council's proposed approach to managing development in the countryside as set out within Policy SP9, particularly the support for development outside of the identified Community Settlements, to support development needs and aspirations across the wider rural area. The Estate is pleased to see at Policy SP9 recognition of the countryside as a living-working environment and the need for flexibility and positivity in decision making to ensure the needs of rural businesses and communities can be met, where they do not result in unacceptable adverse impacts. A cross reference to Whole Estate Plans, and their importance as a material consideration and their role in facilitating such development, should be made within Policy SP9, to ensure clarity in future decision making. In respect of housing delivery, whilst generally supportive of the proposed criteria for new housing development, the Estate considers that the policy could be more positive by including opportunities for small scale infill development where the proposed development would maintain local character and landscape setting and give rise to no adverse impacts. This would mirror national policy provisions for small infill developments within green belt villages, and allow for a positive approach to development and an efficient use of land, and aid the delivery of new homes within the villages around the key settlements and strategic corridors, thus contributing to the sustainability of the districts rural communities.
A2412B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Agree	We support the principle of development within existing settlements. Such an approach should be brought forward within the Council's allocations, which seeks to allocate land within the countryside, where there are still potential sites within settlement boundaries to meet the housing need.
A2416B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Policy SP9.4.c.: Object to the wording of policy SP9.4.c. due to conflict with NPPF. Draft policy supports residential conversions of permanent buildings only in locations which are not isolated and are reasonably accessible to services and facilities whereas the NPPF supports isolated homes in the countryside where the development would represent the optimal viable use of a heritage asset or would be appropriate enabling development to secure the future of heritage assets. The draft policy SP9.4c should be amended in accordance with the NPPF
A2470B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	Object to the use of settlement boundaries in circumstances such as this where they preclude otherwise sustainable development from coming forward. This conflicts with the objectives of the Framework to significantly boost to boosting the supply of housing. NPPF is clear that sustainable development should proceed without delay in accordance with the presumption in favour of sustainable development, the use of settlement limits is likely to arbitrarily restrict such development from coming forward; this does not accord with the positive approach to growth required and set out in Policy SP2. It is suggested that due to the rural nature of the county, a blanket approach to development beyond the settlement boundary may not be appropriate nor effective. A criterion-based approach that considers additional residential schemes that adjoin the settlement boundaries of the Strategic Centre of Shrewsbury and the Principal Centres may be a more appropriate approach.
A2475B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	This policy does not adequately address the issue of large intensive livestock units, which have been the commonest form of major development within the AONB in the last decade. It has also been an area of significant contention elsewhere in Shropshire and so should be addressed in this policy as well as relying on the AONB policy DP26 The AONB Management Plan policy P5 Agricultural Development has some material to draw on here. Key issues are around airborne nitrogen, waste materials especially in relation to the water environment, the physical landscape impact of large buildings, noise and odours, and associated traffic. The Plan should actively encourage sustainable forms of farming (with explanation) as is done for other sectors and economic activity. The policy also does not provide adequate guidance on large scale renewable energy installations (i.e. those not directly associated with other built development, but sited in the countryside). This includes solar farms and onshore wind. Again this has been an area of contention in the AONB, and we have seen a solar farm outside the AONB refused on landscape grounds, while one within the AONB was granted. National policy has steered away from onshore wind, but the imperative of the Climate Emergency means an enormous shift to renewables. The AONB Partnership is fully supportive of urgent action for the climate, but believes this can be done without compromising the qualities of the AONB, which are important in the broader ecological and climate crisis. These are both key areas in which there is a case for an AONB specific policy document for the Shropshire Hills AONB, and the Local Plan must address this need if it is to serve the purpose instead
A2476B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	3.12 This representation supports the positive considerations of sustainable employment, tourism, other business and community development proposals in the countryside as set out in SP9(2)and SP9(3). Provisions within SP9(4) for the re-use or sub-subdivision of existing buildings in rural areas, including heritage assets, are also supported. These provisions will support sustainable rural growth across Shropshire. However the locations set out in the Local Plan would benefit from being more sustainably located and the Berwick Estate clearly provides land that is more sustainably located than the present options being considered. Please refer to Appendix 4 for the isochrones supporting this rationale.3.13 In respect of SP9(4) more broadly, we raise objection to such a blanket approach to dealing with residential development outside of settlement development boundaries is positive, or indeed in accordance with the spirit of the NPPF. The policy should recognise that sustainable development is capable of coming forwards in locations that are outside but adjoining settlement development boundaries, which may be well-served by infrastructure and have very good access to facilities and employment. The policy should also allow more consideration of development proposals based on their individual merits. The Berwick Estate is not presently included within the settlement boundary and consequently is not able to positively contribute to the sustainability of Shrewsbury. By including either within the settlement boundary, or a acknowledgement that the can be a valid and positive contribution of this land adjacent to the settlement boundary then the land promoted within the Vision Document at Appendix 2 is capable of supporting the Local Plan
A2477B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP9	Disagree	This could be amended in line with the above sentiment. There is much difference in sustainable and landscape impact terms between sites in open countryside with their inherent undeveloped nature and value and sites adjoining larger or principal towns which are sustainable and have little intrinsic landscape value. Policy should reflect these facts
A0100B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Highlight role of Policy SP10 supporting economic growth. Agree that the prioritisation of Shrewsbury, as a strategic centre, for the delivery of economic growth and investment is appropriate and will encourage the implementation of economic development proposals which deliver employment through both Class B and other employment generating uses.
A0167B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10		Support Council aspirations for economic growth/development and therefore the principles of the policy. However, it must be consistent with legislation, therefore changes to the use class order regarding the definition of employment uses need to be reflected. Given the current global health crisis, policies must meet the changing needs of businesses and is sufficiently positive and proactive in supporting growth, development and business investment to secure the long term future of the local economy and existing jobs and businesses.
A0306B016	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	5b: Improved digital connectivity can reduce the need for additional infrastructure and reduce the need to travel. SP10 (5d) Investment should be prioritised for sustainable transport in appropriate locations, as road transport is a major contributor to the Climate Emergency.
A0430B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	SP10(2) and (3) say that Shropshire will promote its economic potential by, amongst other things, developing and diversifying its local economy, and delivering sustainable economic growth and investment at Key Centres, Strategic Settlements and Strategic Corridors. To this end, it is set out elsewhere in the plan that at the Key Centre c Shifnal, 39.0ha of land will be removed from the Green Belt and allocated for employment use. At RAF Cosford, the plan is seeking to release a further 220.9ha to be allocated as a Strategic Site for economic growth. Wallace fully commend this, given their location within the M54/A5 Strategic Corridor. SP10(5) goes on to say that the delivery of employment will be supported by, among other things, housing of the right type, quality and tenure and affordability in the right locations. Indeed, Shifnal will be within the key area of search for housing for the growing workforce arising in Shifnal and RAF Cosford, as well as elsewhere in the strategic corridor, and on this basis is suitable not only for the level of housing growth set out in the plan but arguably more
A0501B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12:" Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources."10% is not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. The energy strategy must include the firm commitment to invest in, support and encourage renewables but it is missing from the local plan. Increasing our production and use of renewable energy must be central to future policy. It is positive that some steps have been made, e.g. the Bryn Y Plentyn Farm in Middleton, but this is just a small start and the local plan must be proactive, ambitious and really committed to massive investment and support. Therefore I disagree with this policy because it is incomplete.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0573B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Support SP10(5)(a) and para 3.87 that principal and key settlements are the primary focus for employment investment (also SP10(3)(a)(b)) based on their land offer, housing, services and accessibility. Employment allocations SHF18b and SHF18d adjoin the existing employment areas in the town and will improve availability of new employment conforming to SP10 aspiration that key centres are a focus for growth. Shifnal has delivered limited employment land over the last 10 years and recently lost employment and to other uses and these employment allocations redress the issues of low jobs density, a jobs deficit and lower employment levels. Delivery of employment needs to be supported by investment in housing in the right locations and the inclusion of alternative safeguarded land should be considered at SHF013 and SHF018c. SHF013 was previously to be allocated as residential land f suitable for release from the Green Belt and its continued protection as Green Belt is questioned by Shifnal's need for housing investment to support economic growth. SHF018c was previously identified as suitable for release from the Green Belt, sustainably located, within walking distance of services, at east of town, close to employment, on Stanton Road with ready access to M54 via A41 and Junc. 3 and supported by findings of M54 Growth Corridor Strategic Options Study.
A0642B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	5b: Improved digital connectivity can reduce the need for additional infrastructure and reduce the need to travel. Again has implications for NWRR Business Case. 5d: Investment should be prioritised for sustainable transport in appropriate locations, as road transport is a major contributor to the Climate Emergency.
A0670B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A0906B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	SP10 is supported. However, employment opportunities in Hubs Policy indicates only that employment opportunities will be limited in Community Hubs to "saved allocations", windfall development or small scale employment uses. There is little scope for matching residential growth in Hubs with appropriate levels of employment. There is little point in seeking to create sustainable communities if there are no job opportunities to match them; such a miss-match will only lead to extra commuting, almost certainly by private car, which is an unsustainable situation. If greater numbers of affordable housing are to be located in rural areas then there is an even greater need for employment development as transport costs to find employment are likely to wipe out the affordability of the properties concerned.
A0910B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	SP10 does not produce an environment that is encouraging to start-up, new, or expanding employment generating uses and provides a very negative approach to employment development., particularly SP10.4.f. Modern technology provides a wide variety of opportunity for employment in rural areas, and this should be encouraged. SP10, then, is not supported because it does not give appropriate support. It should be reworded to show support from all kinds of employment development in rural areas.
A0935B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	Support draft Policy SP10 in terms of delivering sustainable economic growth and investment in 'strategic corridors', as referred to under part 3 (c) of the Policy Consider 'Strategic Corridors' do not just comprise groups of settlements on transport corridors but also 'key nodes' such as sites which benefit from direct access and visibility from strategic corridors, for example those adjacent to strategic road junctions/roundabouts. These 'key nodes' are recognised in the Shropshire Employment Land Review (ELR) (2019) as a potential opportunity to deliver strategic growth. The ELR also adds that these strategic opportunities 'could complement the planned local growth associated with existing settlements.' Draft Policy SP10 should recognise that the M54 corridor is the most prominent strategic corridor in Shropshire and therefore has the greatest potential to support growth. This is acknowledged in the Shropshire ELR (2019)
A0956B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Urban focused approach to the spatial strategy for economic growth is supported. These opportunities should be aligned with the corresponding housing growth strategy. Support for provision of 300hectares of employment land over the Plan period. The urban focused approach to the spatial strategy for economic growth is supported, with the Strategic, Principal and Key Centres being a focus for growth. This potential for economic growth should be aligned and maximised by the corresponding housing strategy for growth. The aim to provide around 300 hectares of employment land over the Plan period is also supported. The Site benefits from a close location to the A5 and therefore is ideally located for a range of employment uses and has the potential to create a high number of jobs for the local population
A0970B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A0972B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	Bridgnorth is not on a strategic corridor and should be downgraded from a Principle Centre as it will be unable to produce the "expected" economic growth proposed in the SLP, and the large scale of the TGV development will lead to Bridgnorth becoming a dormitory town with the usual associated major traffic problems; The proposal from Taylor Wimpey includes 16 ha of employment with an additional 6.3 ha is from the SAMDEV employment land allocation in Tasley. The developers state that there will be 1250 economically active within the new development, this is in addition to the ca. 750 additional employable residents contained in the SAMDEV allocation. Whilst the TW proposal states that 1700 new jobs will be created by this development this figure is doubtful & there is agreement by the council that a lower target more achievable. Conflict with SAMDEV proposal that cattle market from its current site as part of a new industrial site on the south of the A458. TGV proposal would once again bring the cattle market within close proximity of housing. Currently only a few major employers (i.e. those with >100 employees) in Bridgnorth. Ninety per cent of Bridgnorth businesses employ fewer than ten people. No major employers have relocated to Bridgnorth in the last twenty years. Residents therefore justifiably sceptical of the TW and SC targets because historically employers are not highly attracted to Bridgnorth.
A0984B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Support the aims and objectives of this policy, which is consistent with Chapter 6 / para 81 of the NPPF, setting a clear vision and strategy to encourage economic growth and criteria to match the strategy and meet needs over the plan period There is significant potential within Shropshire to expand the current economy and secure economic growth, which this policy seeks to achieve. Shropshire is well located to secure economic growth as its geographic location and economic landscape provides significant opportunities: -Its location within the West Midlands Combined Authority and Midlands Engine and on the border of the Northern Powerhouse/Wales present significant collaborative cross-border benefits. -It is within the thriving Marches LEP (one of the largest LEPs in the Country). -It has a reputation for being a good place to live and has an economically active population with higher levels of qualifications than the national or regional average. Support part 5a of the draft policy which recognises the need to deliver housing of the right type, quality, tenure and affordability in the right locations in order to support economic growth and the delivery of new employment. However, greater weight should be afforded in the policy to this issue. Bridgnorth is well located to deliver and support a significant proportion of this economic growth, welcome the support for this within the draft policy. Bridgnorth is the principal market town in east Shropshire and recognised by The Marches LEP in their Strategic Economic Plan as an 'opportunity town' linked to its "large manufacturing sector with supply chain links into the West Midlands". Bridgnorth is also one of the main locations of businesses and jobs in the east of the County and the manufacturing industry in Bridgnorth is considered to be strong with close links to Telford and automotive chains in West Midlands. Delivering new homes within Bridgnorth will be key to delivering economic growth - housing and economic growth delivery are intrinsically linked. The HBF report on the Economic Footprint of UK House Building (2015 and 2018) recognises the positive impact of house building on the economy and that delivering appropriate levels of housing which is affordable for local people and allows them to move jobs and match skills supply with employer demand is an important part of providing a healthy, well-functioning local labour market (the opposite is also true). It is important that the supply of workers is not inhibited by a constrained housing supply or the availability/affordability of housing, particularly in Shropshire with its ageing population (well above national averages and expected to continue to rise) and given the affordability of housing. It is therefore particularly important for Shropshire, and Bridgnorth, to ensure that younger people and families are able to live (and work) in the local area, it is therefore critical that the plan delivers new housing in the right location and that is affordable in order to meet the aims of this draft policy. The Draft Housing Strategy recognises that "The largest challenge for essential rural workers, younger people and families is the affordability of housing, both social and market housing."
A0997B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Historic England welcomes reference to the historic environment in this policy, particularly in terms of reference. The context of the policy offers potential opportunities for heritage led regeneration which could conserve and enhance the historic environment.
A1101B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Support the principle of the economic growth vision in this draft policy. Consider the employment proposed for allocations at BRD030 will not make a meaningful contribution to delivering growth at Bridgnorth. Stanmore Garden Village can make a significant contribution as an employment led development of a garden community. Delivery of the draft economic strategy is dependent on delivering the right sites, in the right locations. The draft strategy supports economic growth and investment in the Principal Centres, such as Bridgnorth and in 'Strategic Corridors' including Bridgnorth within the eastern corridor. Bridgnorth is well placed to deliver growth, but to ensure delivery it is crucial that growth is on appropriate sites and in the right circumstances to allow it to thrive. Meaning locating employment, housing and facilities together in places where people and businesses want to be. A Socio-Economic Study (Appendix of this Rep) identifies the significance of the economy of Bridgnorth to Shropshire and the strength of the employment sector of Bridgnorth's economy. It highlights the thriving local economy with the highest quality employment largely located at Stanmore Business Park. It also considers Census data points to Bridgnorth having a lower rate of self-containment (people living and working in the town) than other locations, with around 39% of the residents working in the town and 61% working elsewhere (the majority (51%) commuting to locations elsewhere in Shropshire, Telford and Wrekin and Wolverhampton). An employment and residential allocation can rebalance this position. Part 5a of draft Policy SP10 recognises the importance of the right sites and circumstances for the economy to flourish. This needs to flow through to site allocations. Bridgnorth is important to the Shropshire economy and Stanmore Business Park is a major focus of that. Further evidence on the importance of Stanmore Business Park and associated opportunities is provided within a Report on the Employment Led Development of a Garden Community (Appendix of this Rep). Evidence supports growth at Bridgnorth and demonstrates the need for expansion of Stanmore Business Park and the contribution such expansion along with housing of the right type in the right place can make to reduce out commuting, leading to greater self-containment of Bridgnorth. For draft Policy SP10 to deliver, the allocation of BRD030 needs to be reconsidered as the economic evidence supports allocation of Stanmore Garden Village
A1143B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	A key requirement to the success of sustainable economic growth is the need for better integrated public transport systems that effectively connect rural communities with key employment areas, the 2017 Bus Services Act encourages and empowers local Authorities to do just that. "The government is making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim - and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future I disagree with this policy because it is incomplete.
A1143B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	In the light of the Council's climate change commitments a key requirement to the success of sustainable economic growth is the need for better integration off sustainable energy both as an economic source for work and power but also as part of all new industrial development Shropshire's economic growth strategy makes no mention at all of supporting renewable industries. Or the inclusion of alternative energy systems as being integral to sustainable economic growth. With the exception of a vague comment in paragraph 3.88(j) of SP10 there is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment; it is a fast growing industry and brings the carbon reduction energy that is needed. Section 6 of the Shropshire Climate Change Strategy Framework identifies the importance of supporting and increasing capacity for alternative energy production in Shropshire, and section 7.6 states that "The strategy's objectives will also be imbedded in and referenced from other Council plans and strategies right across the organisation". This intention is replicated as key priorities in the Marches LEP Energy Strategy. This strategy requires overt commitment to invest in, support and encourage renewable energy capacity in Shropshire and this is missing from the local plan. I disagree with this policy because it is incomplete

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1152B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	Consider the Shropshire Economic Growth Strategy is unsound and based on information which we heavily criticise given it is riddled with errors and includes fundamental errors such as suggesting "Shropshire can be a world leading rural economy by 2030", which is more hype than reality and based on subjective views and round-tab discussions rather than evidence. Also had doubts about the Oxford Economics Productivity Growth Forecast. The Shropshire Economic Growth Strategy has not been subject to Sustainability Appraisal, which underlines the view it is unsound. Draft policy SP10 includes four paragraphs from the Shropshire Economic Growth Strategy. The Sustainability Appraisal contains the puzzling statement that 'the policy has no effect on the sustainability objectives of reducing carbon emissions and promoting adaption and mitigation to climate change'. Consider that until all development becomes zero carbon, any development will make this problem worse, not better. To comply with draft policy SP3 Climate Change, the Council should seek to keep economic development to the minimum required. However, the Explanation to policy SP2 states the vision of the EGS is stated as "To be the best place to do business and invest, renowned for its pool of local talent and expertise. We will strive to maximise our economic potential and increase productivity by fully utilising the benefits of our special environment and high quality assets". This desire to 'be the best' and to 'maximise our economic potential' is precisely the sort of thinking that needs to be got away from if climate change objectives are to be met. The desire to be the best seems a worthy aim, but it is simply fostering competition with other neighbouring local authorities, and Shropshire is unlikely to become a better place to invest than say the West Midlands conurbation. At the moment it is well down in the 'league tables' of economic indicators for counties, and is likely to remain so because it contains a high proportion of farm land. On a more specific point we consider that reference to the Countryside should be removed in paragraph 3.e. For simplicity, the management of development in the countryside should be controlled solely via policy SP5
A1152B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	Consider the Shropshire Economic Growth Strategy is unsound and based on information which we heavily criticise given it is riddled with errors and includes fundamental errors such as suggesting "Shropshire can be a world leading rural economy by 2030", which is more hype than reality and based on subjective views and round-tab discussions rather than evidence. On a more specific point we consider that reference to the Countryside should be removed in paragraph 3.e. For simplicity, the management of development in the countryside should be controlled solely via policy SP5
A1182B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A1192B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	Proposed strategy for economic growth is supported. Support identification of Strategic Settlements such as Clive Barracks, as locations where economic growth and investment will be supported. As documented with draft Policy S19, Clive Barracks will deliver approx. 6 hectares of employment generating land. Committed to working with the Council to ensure employment opportunities at Clive Barracks are responsive to local need, market demands and the aspirations of the economic growth strategy for Shropshire. Flexibility over the nature of the employment generating uses at Clive Barracks will be key in ensuring success of this aspect of the scheme.
A1818B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	There should be support for renewable energy
A1896B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan
A2150B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A2158B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12 "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A2163B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	This policy places the focus for economic growth and investment towards Shrewsbury, to develop its role as the County Town and Strategic Centre. The delivery of employment will be supported by investment in housing to make Shropshire a good place to live, work and play. This policy is supported as it recognises the role of Shrewsbury, within the settlement hierarchy, (as set out in the Shropshire Council Hierarchy of Settlements and the need to balance employment growth alongside new housing developments to support an expanded workforce. The two go hand-in-hand, and sustainable growth is achieved when the desire and aspiration of a new workforce are satisfied by a complementary housing market.
A2167B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12 "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete. (response ref form 13
A2403B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	The Estate supports the aspirations of Policy SP10 to positively support enterprise, diversity of the local economy and sustainable economic growth, including in appropriate rural locations. We support the focus of this development on the key settlements, with Shrewsbury retaining its primary settlement function and key location for growth. We are also pleased to see provision made for windfall developments in the countryside where appropriate and in line with other policies in the local plan. A cross reference to Whole Estate Plans, and their role in facilitating such development, should be made within Policy SP10, to ensure clarity in future decision-making
A2412B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Agree	We support and welcome the Council's approach to economic development. Particularly in these current times, need to ensure support to economic generation. However, it is important that the policy considers the recent amendments to the use class order, and that employment generation isn't restricted to just the old B uses. A number of different commercial uses such as care homes and nurseries, for example, can employ a greater number of employees than some traditional B uses.
A2427B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A2469B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A2471B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A2475B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	Para 1. The first sentence reads like an Economic Strategy vision but not a planning policy. Para 3.88 The visitor economy is underpinned by Shropshire's high quality environment, especially in places such as the AONB. This is undermined by the history of major development in the AONB, and the new Local Plan must take steps to protect the AONB better from major developments, to safeguard the long term economy of the area as well as the environment.
A2489B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% not enough, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A2490B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is far TOO low, and 'low carbon energy sources' needs defining. 10% could be achieved by a few solar panels, no mention of homes being totally roofed in solar tiles, community ground source heat pumps, etc no encouragement to creativity. Also, it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast-growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2494B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP10	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12 "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is too little, and 'low carbon energy sources' needs defining ... however it is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. I disagree with this policy because it is incomplete.
A0100B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Policy SP11 generally supported. However, greater consideration should be given to the release of greenfield land in complimentary locations to ensure the level, variety and pace of delivery required for employment land development. Support provision for mixed-use development and site sustainability and infrastructure provision requirements. Greater support for edge of centre is needed. Provide opportunity, if appropriately located, to capitalise on and support existing infrastructure and that being provided as part of strategic urban extensions. Support Section 4 of Policy SP11 criterion for Windfall Employment Sites and scope for the development of windfall sites to meet the delivery requirements for employment land across the plan period
A0142B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Policy SP11.2.e. requires that employment development proposals demonstrate they satisfy the requirements of national and local policies especially relating to the protection of the Green Belt (amongst others). This element of the Policy is supported. (Form 3)
A0167B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11		Support Council aspirations for economic growth/development and therefore the principles of the policy. However, it must be consistent with legislation, therefore changes to the use class order regarding the definition of employment uses need to be reflected. Given the current global health crisis, policies must meet the changing needs of businesses and is sufficiently positive and proactive in supporting growth, development and business investment to secure the long term future of the local economy and existing jobs and businesses.
A0238B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Document Reference BTC12 :Agree with Policy intent that requires that "Development proposals will be expected to demonstrate that ... The infrastructure investment is sufficient to serve the proposed or intensified use ...". However, the draft Local Plan does not identify the infrastructure needed to support the proposed development around Bridgnorth or identify sufficient investment to implement it.
A0299B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11		Housing numbers are fine, but may be issues with safe pedestrian access to site and nearby facilities and affordable houses
A0306B017	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	In paragraph 3.29, it is stated that business energy use is the highest contributor to Climate Change. We see no obvious reference to addressing this in SP11 - there should be.
A0306B018	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Para 3.108 There is a contradiction within a single sentence. Development should "respond positively" but then refers to environmental assets as "constraints". Further definition on the meaning of a 'positive response' is needed. This should include as a minimum actively enhancing biodiversity, as required by the NPPF, and supported by the Nature Recovery Strategy and Biodiversity Net Gain
A0508B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	No specific comment on the content of the policy although the uses classes that have been referred need updating in accordance with The Town and Country Planning (Use Classes) (Amendment) (England) Regulations 2020.
A0538B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Support for SP11, but the proposed removal of land from the Green Belt at Stanmore would not protect the Green Belt and no very special circumstances have been advanced that would justify its removal. The proposal to remove the land from the Green Belt is, then, in conflict with the stated aim of sub-section 2.e. of Policy SP11, and is also in conflict with Policy DP25 of the Draft Local Plan and the National Planning Policy Framework.
A0539B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Support for SP11, but the proposed removal of land from the Green Belt at Stanmore would not protect the Green Belt and no very special circumstances have been advanced that would justify its removal. The proposal to remove the land from the Green Belt is, then, in conflict with the stated aim of sub-section 2.e. of Policy SP11, and is also in conflict with Policy DP25 of the Draft Local Plan and the National Planning Policy Framework.
A0540B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Support for SP11, but the proposed removal of land from the Green Belt at Stanmore would not protect the Green Belt and no very special circumstances have been advanced that would justify its removal. The proposal to remove the land from the Green Belt is, then, in conflict with the stated aim of sub-section 2.e. of Policy SP11, and is also in conflict with Policy DP25 of the Draft Local Plan and the National Planning Policy Framework.
A0573B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Support SP11 to deliver 300 hectares of employment development and the delivery of allocated sites. This policy approach is considered sound and critical to the ambition to deliver sustainable economic growth in the Shropshire Economic Growth Strategy. Sites SHF018b and SHF018d are strategically important opportunities for sustainable economic growth as outlined in the Shropshire Employment Land Review and the significant role of Shifnal as a Key Centre in the growth objectives for the east of Shropshire. There are currently no employment sites suitable and readily available for employment uses and Green Belt Opportunity Area 3 including SHF018b and SHF018d can address this shortfall and rebalance the employment land supply. A submitted employment land study supports this position noting the employment allocations are vital in stimulating growth in the town and rebalancing housing and employment uses which currently defines its distinctive dormitory character evident in the relatively large net outflow of commuters. Shifnal struggles to achieve growth in the its employment base and new investment will help reverse the stagnation in employment growth.
A0642B21	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	In paragraph 3.29, it is stated that business energy use is the highest contributor to Climate Change. In fact transport is the biggest contributor in Shropshire and is not adequately addressed in the Local Plan. In any case we see no obvious reference to addressing business carbon emissions in SP11 - there should be!
A0642B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Para 3.108 There is a contradiction within a single sentence! Development should "respond positively" but refer to environmental assets as "constraints"! Further definition on the meaning of a 'positive response' is needed. This should include as a minimum actively enhancing biodiversity, as required by the NPPF, and supported by the Nature Recovery Strategy and Biodiversity Net Gain.
A0910B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	SP11 appears to allow Class B employment development anywhere in the County outside the Strategic Centre and the Principal Centres, as long as it complies with the stated policies. This is seemingly a very flexible and encouraging policy. However, compliance with the restrictions imposed by those other policies referred to, make compliance very difficult, and thus compliance with SP11 will create serious problems for delivery. Employment development is essential in rural locations. The number of people employed in agriculture has significantly diminished over the past thirty years, and it is important that new forms of employment are introduced into villages if they are to become more sustainable. The idea of focussing such development on Community Hubs is supported, but this must be matched by a willingness to accept that new development in the rural area will not always be associated with agri-type employment. Whilst then, the basic aims of Policy SP11 are supported, the way proposals for such development are considered as expressed in the Review is not something that can readily be accepted.
A0912B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Strategic Policy S11 'Delivering Sustainable Economic Growth and Enterprise': The aim and objective of this policy, to support the delivery of the economic growth strategy and promote a 'step change' in the economic productivity of the Shropshire economy is supported. However, the supporting text to the policy details that "employment development on allocated and larger windfall sites will primarily comprise Class B uses at around 80% of the land area", whilst "other employment uses may therefore comprise 20% of the land area to maintain these uses below the historical rate of non-Class B development on employment land" (paragraph 3.99). Given the uncertainty of post COVID marketplace it is considered that policy SP11 should provide greater flexibility in the employment uses permissible on allocated sites to ensure that the needs of Shropshire and its communities are met. It is therefore requested that bullet point 2 of policy SP11 be amended to provide greater flexibility by removing the word 'predominantly' and consequential changes made to the wording of supporting paragraphs 3.98 and 3.99.
A0928B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Employment needs are set out in Policy SP2. In the current economic climate, it is essential that Shropshire provides support to business and opportunities for economic growth consistent with the economic objectives of the Framework. Key to this is adopting a strategy which plans for growth and provides sufficient land and other flexible development opportunities to support economic growth. Taylor Wimpey and Persimmon support the Plan in the way it supports the overall Economic Growth Strategy for Shropshire. Shropshire has a real opportunity to continue to be a highly attractive location for investment. It is essential that there is a sufficient workforce available to meet the jobs growth associated with the proposed employment development requirement and this must be provided sustainably, reducing the need for in commuting to Shropshire and stemming out commuting. The strategy for employment land delivery must be integrated with and supported by growth in housing provision which will both retain and attract the required workforce.
A0935B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Draft Policy SP11 provides further guidance on the delivery of the strategic land supply and the use of established employment areas. The strategic supply of land and protected employment areas are identified on the Policies Map and in the Authority Monitoring Report which will monitor the delivery of employment development. The need for new sites is recognised. However, as referred to under comments on draft Policy SP2, additional land beyond the proposed requirement of around 300 hectares is likely to be required in certain locations in order to provide choice and competition in the market and a good range of sites to meet different employment needs to 2038, as well as supporting the Economic Growth Strategy and the growth aspirations of the wider area.
A0956B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Urban focused approach to the spatial strategy for economic growth is supported. These opportunities should be aligned with the corresponding housing growth strategy. Support for provision of 300hectares of employment land over the Plan period. The urban focused approach to the spatial strategy for economic growth is supported, with the Strategic, Principal and Key Centres being a focus for growth. This potential for economic growth should be aligned and maximised by the corresponding housing strategy for growth. The aim to provide around 300 hectares of employment land over the Plan period is also supported. The Site benefits from a close location to the A5 and therefore is ideally located for a range of employment uses and has the potential to create a high number of jobs for the local population
A0972B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Does this include a proposal to build a rail link from Bridgnorth. Given the level of housing and economic growth proposed, a rail link along with an upgraded highway network would enable Bridgnorth to take its rightful place as a Principal Centre. Para 4.98 obvious place for new industrial/business development would be close to the i54. b proposed car battery factory development, an industry which will facilitate 'green' vehicle transport, and had the potential to create 3000 jobs & more than £1 billion to the region's economy was rejected by Shropshire Council reflecting muddled decisioning. The M54 is a logical place for industry and business development, not winding A roads near Bridgnorth.

Page 51

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0984B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Seeks to deliver around 300ha of employment land. Overall welcome this, as it recognises the need to address a structural imbalance between the provision of new housing and the employment opportunities in towns such as Bridgnorth! Part 2 of the draft policy states employment development will predominantly comprise Class B uses but will include some employment generating sui generis, Class A2, C1, C2, C2A and D1 uses with appropriate ancillary Class A1, A3, A5 services uses. Support the recognition of the need to provide a mix of uses within employment areas, and the employment land generating potential of other uses. However, this draft policy will need to be updated to take into account amendments to the use classes order which came into force in September 2020. Part 5 of the draft policy seeks to protect employment areas primarily for Class B employment uses. Support protection of employment land and consider there to be a need for employment land within Bridgnorth and Shropshire, however are concerned part 5a which would require a market assessment of the employment land both in the settlement and the County to show there is a satisfactory supply for the remaining period of the Local Plan. Shropshire is very large and diverse as such a review of all the employment land is considered unjustified. Employment land in one settlement may seek to achieve a different vision and objectives than another and therefore each settlement is not comparable. This should be amended to require a market assessment of the employment land within the settlement which the application relates to as opposed to a county-wide review. The Shropshire Employment Land Review (2019) (ELR) considers Bridgnorth to be well placed to deliver economic growth, as the second largest of 5 market towns in Shropshire and given its location to the west of the West Midlands conurbation, the town has potential to attract investment into Shropshire and to trade into these larger urban markets and it is necessary to open up new areas of land for development. Key market signals include loss of key local employers. The ELR makes recommendations on the potential for employment on sites in and around Bridgnorth, although it should be noted that this pre-dated promotion of BRD030. The ELR identified land around Stanmore Industrial Estate as Category B (general suitable location which the market might regard as a reasonable investment prospect, subject to the degree of environmental/technical constraints and impact on viability), however the ELR also noted that this area is in the Green Belt and a robust exceptional circumstances case would be needed to justify the release of Green Belt land. Again, since this report was published BRD030 has been promoted in a non-Green Belt location and is considered to be a more suitable location for employment land.
A1101B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Support the principle of the economic growth vision in this draft policy. Consider the employment proposed for allocations at BRD030 will not make a meaningful contribution to delivering growth at Bridgnorth. Stanmore Garden Village can make a significant contribution as an employment led development of a garden community. Delivery of the draft economic strategy is dependent on delivering the right sites, in the right locations. The draft strategy supports economic growth and investment in the Principal Centres, such as Bridgnorth and in 'Strategic Corridors' including Bridgnorth within the eastern corridor. Bridgnorth is well placed to deliver growth, but to ensure delivery it is crucial that growth is on appropriate sites and in the right circumstances to allow it to thrive. Meaning locating employment, housing and facilities together in places where people and businesses want to be. A Socio-Economic Study (Appendix of this Rep) identifies the significance of the economy of Bridgnorth to Shropshire and the strength of the employment sector of Bridgnorth's economy. It highlights the thriving local economy with the highest quality employment largely located at Stanmore Business Park. It also considers Census data points to Bridgnorth having a lower rate of self-containment (people living and working in the town) than other locations, with around 39% of the residents working in the town and 61% working elsewhere (the majority (51%) commuting to locations elsewhere in Shropshire, Telford and Wrekin and Wolverhampton). An employment and residential allocation can rebalance this position. Part 5a of draft Policy SP10 recognises the importance of the right sites and circumstances for the economy to flourish. This needs to flow through to site allocations. Bridgnorth is important to the Shropshire economy and Stanmore Business Park is a major focus of that. Further evidence on the importance of Stanmore Business Park and associated opportunities is provided within a Report on the Employment Led Development of a Garden Community (Appendix of this Rep). Evidence supports growth at Bridgnorth and demonstrates the need for expansion of Stanmore Business Park and the contribution such expansion along with housing of the right type in the right place can make to reduce out commuting, leading to greater self-containment of Bridgnorth. For draft Policy SP10 to deliver, the allocation of BRD030 needs to be reconsidered as the economic evidence supports allocation of Stanmore Garden Village
A1152B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Do not believe that the evidence supports the aim to deliver around 300ha of employment development. Not only is there a lack of evidence, but such an aim is not consistent with Climate Change objectives Furthermore, individual guidelines for employment land within the Settlement policies add up to 375ha, well in excess of the 300ha requirement, which is an unsound inconsistency. Para 2 of this draft policy is too vague, as it encompasses almost all use classes. The opening statement that employment development will predominantly comprise Class B uses is also unhelpful without specifying more particularly which use classes will be favoured. The EGS seeks 'smarter' jobs. That aim will not be achieved if the Council has to allow Class B8 Storage and Distribution development, with low employment density and low wage jobs attached to it. Para 4d's reference to the Countryside should be removed and dealt with in draft Policy SP9. Para 3.107 welcome the explanation that in the Countryside, agricultural and non-agricultural diversification and green tourism and leisure may also be supported at a scale that is appropriate for their location, as these are important economic activities in the rural economy. We note however the recent tendency in Development Management to refuse applications for tourist-related applications on the grounds that they are unsustainable, specifically because they are in rural locations, and will therefore foster the use of private cars for access. In this context, the word 'green' in para 3.107 might need to be further defined. In para 2e and 3.108 welcome the fact that proper protection will be given to the Green Belt, the Area of Outstanding Natural Beauty, areas of landscape value and the natural and historic environment!
A1192B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11		Principle of draft Policy SP11, to deliver around 300 hectares of employment development over the Plan period, is supported. However, it is essential that flexibility is retained over the nature of the employment generating uses at sites such as Clive Barracks. Employment Opportunities at Clive Barracks need to be able to respond to local need, market demands and what will be changing aspirations of the economic growth strategy for Shropshire. Flexibility over the nature of the employment generating uses at Clive Barracks will be key in ensuring success of this aspect of the scheme. Draft Policy SP11 refers to need for development on allocated sites, such as Clive Barracks to satisfy site-specific guidelines. Concerned about the guidelines for Clive Barracks (See S19).
A1609B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Why has such a large proportion of the employment requirement been allocated to Shifnal? Shifnal lacks the required highway network, infrastructure and level of services needed to facilitate the addition of 41 hectares of employment land on its fringe. We would also like Shropshire Council to illustrate why in their Highways Assessment is the employment allocation (Site 2- plot SHF018b & d) identified as having a low or medium for highways impact, whilst adjoining sites 1 and 3 are considered as having a high to very high highways impact. We would like evidence from Shropshire Council that the methodology used is correct when used to calculate Shifnal's employment need, particularly with the possible double-counting of the 40% at para 5.204
A1649B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Don't know / no opinion	Wyre Forest District Council welcomes further employment land allocated in the local plan review. Employment land should be located within sustainable locations, with access to the strategic road networks and where possible to encourage vibrant town centres with a day/night economy. Wyre Forest has already a strong employment relationship with Shropshire, with 638 out commuting and 1,037 inflowing to Wyre Forest per day2. Coupled with greater land allocation for employment this may contribute to further employment out-migration from Wyre Forest.
A1871B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	The policy could be a barrier for Sui Generis uses for waste management. A change to policy is required over Explanation Text
A2308B33	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Agree	Welcome reference to employment generating sui generis development within this draft policy. Welcome reference within Para 3.110 to ensuring that strategic and local employers can secure their operational base and meet their future development needs for growth and expansion.
A2403B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	Policy SP11 advises that the employment requirement for Shropshire is of around 300ha of employment land over the plan period from 2016 to 2038. The need to allocate new strategic allocations to provide sufficient land to deliver against these aspirations is supported. The Estate supports the recognition that the introduction of wider use employment (non B uses) on allocated sites will provide flexibility to meet land demands for other employment generating uses. This also reflects changing Government legislation to introduce more flexibility into the planning use class system in order to ensure a responsive and efficient use of land and premises to meet changing economic needs, as supported by paragraph 81d) of the National Planning Policy Framework. It is suggested that the policy also needs to acknowledge the flexibility encouraged by Paragraph 120 of the Framework, and provide for a mechanism whereby historic allocated sites which have not come forward for their allocated use, should be considered positively for alternative uses. An example would be the Estate's employment allocation at Battlefield (Site Ref SHR203), which could potentially be utilised more efficiently as a mixed use site reflecting the residential allocation on the adjacent half of the site, as well as surrounding commercial uses. The provision for additional windfall development out with the strategic allocations and existing employment sites, is also supported.
A2475B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP11	Disagree	3.108 Shropshire Hills AONB not Shropshire AONB.
A0306B019	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	What constitutes an 'Estate?'; how small or large an enterprise? 'Estates' have great potential to contribute to Nature Recovery Networks and so there should be reference to the forthcoming Nature Recovery Strategy.
A0310B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	The TC support the decision not to allocate land at J3 as a garden village, however, it could appear that the policies are written in a way to allow for such a scheme to be promoted again. The Plan gives little explanation for the reasoning of this policy. The TC object to this policy as being unnecessary and prejudicing the future protection of Green Belt and public participation on development proposals.
A0900B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	Object to SP12 and the explanation in paragraph 3.116 which notes that Whole Estate Plans may add value to the planning process but do, "not replace the primacy of the Local Plan in decision making." This acknowledges that where there is a fundamental conflict between an Estate's vision and the Local Plan, the Local Plan will prevail. Consequently, Policy SP12(1)(a) requires the Whole Estate Plan does, "not conflict with the objectives and policies of the Local Plan." This requirement for compliance with the Plan in all respects renders a Whole Estate Plan marginal in terms of added value in the planning process and will result in far fewer coming forward. This would be a missed opportunity as they are hugely valuable in delivering balanced and sustainable land management and providing transparency and insight around estate's activities to the wider community. Amend SP12(1)(a) by deleting the words "and do not conflict with" to read "The objectives, policies and land use proposals of the Whole Estate Plan complement the objectives and policies of the Local Plan". This will allow the flexibility to endorse Whole Estate Plans that are considered to add value to the Local Plan, even if they depart to some extent from county-wide policies. A suitable policy to achieve this objective has been adopted by South Downs District Council.
A0917B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	The Leighton Hall Estate welcomes the Plan's acknowledgement of Whole Estate Plans in managing land. We support their use by the Council as a material consideration in circumstances where the Whole Estate Plan complements the Local Plan. However The current wording of Policy SP12: Whole Estate Plans requires in section (a) that the Whole Estate Plan does, "not conflict with the objectives and policies of the Local Plan." This requirement for compliance with the Plan in all respects renders a Whole Estate Plan marginal in terms of added value in the planning process and will result in far fewer coming forward. This would be a missed opportunity as they are hugely valuable in delivering balanced and sustainable land management and providing transparency and insight around estate's activities to the wider community. We therefore suggest the following change to Policy SP12 to allow flexibility that will give the Council leeway to endorse Whole Estate Plans that they consider add value to the Local Plan, even if they depart to some extent from county-wide policies: "Whole Estate Plans are a method by which Estates can articulate their long-term vision for their land and premises interests and how these will be achieved. In recognition of the nature of Shropshire, and the potentially important role they play in managing land within the County, Whole Estate Plans prepared by Estates will be endorsed by the Council and used as a material consideration in decision making where they have demonstrated all of the following: a. The objectives, policies and land use proposals of the Whole Estate Plan complement and do not conflict with the objectives and policies of the Local Plan; b. It has been prepared in collaboration with relevant external organisations, including statutory bodies; and c. It has been subject to meaningful public consultation."
A0935B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	Draft Policy SP12 states Whole Estate Plans prepared by estates will be endorsed by the Council and used as a material consideration in decision making subject to identified conditions. Support the principle of draft Policy SP12, but consider that it is not clearly written as currently drafted, contrary to para 16 of the NPPF. For example, it is not clear how to interpret what is meant by 'meaningful' public consultation. In addition, sections (b) and (c) could easily be combined into one criterion.
A0971B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire SP 12 Whole Estate Plans the inclusion of a Whole Estate Plan policy within the pre-submission draft Local Plan is welcomed. However, for the full range of benefits of a Whole Estate Plan to be realised, amendments to policy wording are required. These amendments would in effective allow the endorsement of Whole Estate Plans that, to some extent, conflicted with the development boundaries policies of the local plan. The proposed amendments are to the wording of Policy SP12 (Whole Estate Plans), removing the requirement that the Plan does not conflict with the Local Plan and replacing it with a requirement that the Whole Estate Plan is in general conformity with the local plan.

Page 52

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1152B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	The central concept of seeking to ensure sustainable land management is sound when, the overriding concern of current policy for land use should be to mitigate against the effects of both the climate emergency and the ecological emergency. However that should be achieved by a Whole Shropshire Plan (which should be this entire Draft Shropshire Local Plan) not by separate piecemeal Whole Estate Plans. Proposed policy SP12 should define what constitutes an 'Estate', for instance whether it would be of a size equivalent to that of a Parish. The Council normally only adopts or endorses as a material consideration documents such as Neighbourhood Plans, which cover a substantial area and which have been subject to statutory consultation. Whether or not there is a policy allowing Whole Estate Plans to be endorsed, it is always open to Estates, as it is to any developer, to put in planning applications to be tested against the policies in the Local Plan. If, as stated in para 3.115, many Estates are engaged in the preparation of Whole Estate plans, it would have been open to them have presented those plans for consideration as part of the current process. Given these issues, this draft policy seems irrelevant, and would be better omitted. If retained, something more than 'meaningful' consultation is required. The existing wording of para 1c should instead state: "It has been subject to the same level of public consultation as is required for Neighbourhood Plans"
A1609B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	We do not understand why Policy SP12 has been included, as plans put forward by estate owners are non-statutory. Does this policy intend to put greater weight on such proposals? The purpose of this policy and general wording are both unclear. Policy SP12 would give the Bradford Estates the opportunity to promote J3 again during the plan period which undermines certainties and assurances given to the group and the public in meetings. Policy SP12 does refer to "meaningful public consultation" but the group and the public are concerned this can be open to wide interpretation depending on the point of view of the promoters, planning authority etc. Shifnal Matters object strongly to these policies which we feel are unnecessary and will prejudice the future protection of the green belt and will be prejudicial to public participation on any future development proposals.
A1630B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	Whole Estate Plans are an interesting concept and we support the aim of building a long-term vision and objectives for the way an Estate manages and utilises its land and assets. It is encouraging that the plan acknowledges the important role estates play in the management of land and premises. They also have an important role in biodiversity and landscape delivery and within communities. Shropshire also has many large scale agricultural enterprises which manage substantial areas of land. They may also benefit from a similar approach which would consider future planning and infrastructure needs along with climate change and biodiversity delivery. Collaboration between farm businesses and estates is likely to be encouraged as part of the new ELMS scheme. Therefore we would welcome a conversation about how this concept could be expanded to involve additional land managers
A2403B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Agree	We support the use of Whole Estate Plans (WEP) by the Council as a material consideration in circumstances where the WEP complements and supports the objectives of the Local Plan.
A2403B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Disagree	Sundorne Castle Estate welcomes the Plan's acknowledgment of the role of Whole Estate Plans(WEP) in managing land in the county. We support their proposed use by the Council as a material consideration in decision making. We would suggest that the policy wording could be more ambitious to ensure that the policy does not stifle the ambition or the particular needs and aspirations of an Estate, where the WEP remains complementary to the overall strategic aspirations of the Local Plan, but perhaps goes beyond what the local plan policies anticipate more generally for the rural areas. For example, the South Downs National Park Local Plan recognises that whole estate plans may be able to demonstrate particular material considerations that may justify development outside of settlement boundaries. We would suggest the policy could be re-written as follows: Whole Estate Plans are a method by which Estates can articulate their long-term vision for their land and premises interests and how these will be achieved. In recognition of the nature of Shropshire, and the potentially important role they play in managing land within the County, Whole Estate Plans prepared by Estates will be endorsed by the Council and used as a material consideration in decision making where they have demonstrated all of the following: a. The objectives, policies and land use proposals of the Whole Estate Plan complement (Remove: "and do not conflict with") the strategic objectives and policies of the Local Plan's. It has been prepared in collaboration with relevant external organisations, including statutory bodies; and c. It has been subject to meaningful public consultation. It is also important that other key policies within the plan contain cross references to Policy SP12 to ensure that the role of WEPs is seen as a clear enabler for the acceptability of development which might otherwise be constrained in rural areas. This would provide clarity in decision making moving forwards. This might be applicable for example to Policy SP11 under the windfall section; Policy SP6 section 4 when discussing housing outside of settlement boundaries; and of particular importance, Policy SP9, the key policy for managing development in the countryside. The unique ability of an estate to bring forward development in a cohesive manner and which provides for overall sustainability benefits when viewed as a whole, should be an important consideration in support for giving whole estate plans an appropriate weight in decision making.
A2476B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP12	Agree	3.14 Policy SP12 allows for Estates to prepare non-statutory Whole Estate Plans in order to articulate a long-term vision for their land and premises. In order for this to be endorsed by the Council it must compliment the policies and objectives of the local plan, been prepared in collaboration with relevant external organisations and has been subject to meaningful public consultation. This policy is generally supported. The Council should identify priority Estates where it is important for them to deliver Whole Estate Plans that will contribute to the success of the Local Plan and also community initiatives such as the Shrewsbury Town Plan. Berwick Estate will be pleased to engage with this.3.15 The Vision Document submitted on behalf of the Berwick Estate provides a snapshot of the long-term ambitions for the Estate, however this will be shortly followed by the production of a Whole Estate Plan. In order for a Whole Estate Plan to be established and meet the tests of SP12 as drafted, the strategic objectives for Shrewsbury within S16.1 should be amended to support additional development arising at Berwick Estate, safeguarding land for the delivery of the NWRR, and to facilitate capturing resilience in the housing land supply, as set out in the following sections of these representations. As it stands, the Local Plan does not specifically identify land at the Berwick Estate for development and for the Whole Estate Plan to become consistent with the Local Plan, the Council should consider including land at Berwick Estate as a key contributor toward meeting the tests of soundness to successfully deliver the LocalPlan.3.16 Should this occur, the Estate will be pleased to work with relevant authorities to produce along-term Whole Estate Plan, which will be of clear benefit to the local area.
A0241B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Agree	The Coal Authority supports the inclusion of this policy which identifies a Mineral Safeguarding Area for the Shropshire Local Plan Area which includes surface coal resource.
A0306B021	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Disagree	Para 3.122 Restoration and aftercare of mineral sites should follow Biodiversity Net Gain principles as a minimum.
A0644B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Disagree	Object to the placement of responsibility for critical infrastructure such as design and construction of on and off site flood alleviation measures especially on such a sizeable development. Hunters Gate developers failed to deliver satisfactory infrastructure and nobody was made accountable for the flooding of homes affected. Serious flooding in 2007 and 2020 with many reports, including EA, on flood alleviation measures necessary. Also strongly opposed to any significant further development in and around MW which causes the Farley Brook to flood, as the sole drainage watercourse from the town to the River Severn.
A0997B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Agree	The reference to locally distinctive materials is noted and welcomed
A1871B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Disagree	There appears to be no reference to the avoidance of sterilisation by non-mineral development within MSAs, though this does appear in DP31. This is confusing. It should explicitly apply to any non-mineral develop either within or adjacent to MSAs or protected infrastructure. DP31 could then provide details of the extent of buffer zones etc. it currently does (Form 3). Is Point 3 sufficient to compensate for a possible shortfall in production of sand and gravel in the region as it becomes increasingly challenging to find replacements for major sites nearing the end of production? There needs to be sufficient flexibility to cope with changes in local circumstances or to accommodate national guidelines for aggregate provision (Form 4)
A2163B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13		The draft policy states that Shropshire's important and finite mineral resources will be safeguarded to avoid unnecessary sterilisation, with protection afforded to Mineral Safeguarding Areas (MSA). SHR173 is included within a sand and gravel safeguarded area (as illustrated in Figure SP13.1). Draft policy MD16 (3) requires non-mineral applications within a MSA to be accompanied by a Mineral Assessment. A Mineral Resource Assessment report has been prepared for SHR173, which demonstrates that minerals cannot be extracted in an economically viable way, and is constrained further by existing residential properties, the railway line and a gas pipeline. It also demonstrates there is an abundance of high-quality Sand & Gravel deposits within the County and that the seven-year landbank required by the NPPF has been exceeded. Additionally, prior extraction of the mineral was also shown to be unfeasible, and so the background evidence base demonstrates that on this particular site, safeguarding the land for mineral extraction would be inappropriate to take forward within this emerging Shropshire Local Plan. SHR173 should be a strategic allocation and excluded from the need to be safeguarded further with an MSA, as the Minerals Report we prepared demonstrates extraction of minerals on the site would be unpractical and unviable, and is in compliance with the Minerals Plan.
A2308B34	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP13	Disagree	To ensure that mineral working/extraction or restoration of a mineral site does not result in creation of an attractant environment for large or flocking bird species that can cause detriment to aviation safety, would like to see an additional criterion added to the draft policy: "Where an application would result in mineral working or extraction falling within a designated safeguarding zone (Birdstrike Zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for both the extraction and post restoration phases. It would also be necessary to agree details of the restoration of an extraction site to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A0306B021	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP14	Disagree	Para 3.124 We welcome reference to the government's 25 Year Environment Plan but there should be greater reference to this throughout the document, especially in sections SP3, SP4, and SP9.
A0696B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP14	Don't know / no opinion	Encouragement for reductions in the amount of waste, including packaging and single use plastic should be added to this strategy. The need for a circular economy should be emphasised. Item 6 of the draft policy should include "The detailed performance of the waste recycling process will be fully visible at all times to the public, regardless on whether the recycling is carried out by SC or a private contractor."
A1648B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP14	Agree	There are significant movements of waste from Cheshire West and Chester into Shropshire, but as policy SP14 ensures the continued operation of existing waste management facilities is safeguarded, this does not raise any strategic issues.
A2308B35	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP14	Disagree	To ensure waste processing/management sites do not result in the creation of an attractant environment for large and flocking bird species that can cause detriment to aviation safety, would like to see an additional criterion added to this policy: "Where an application would result in waste management development falling within a designated safeguarding zone (Birdstrike Zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for operation of the business which would include measures designed to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A0306B022	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP15	Disagree	Para 3.127 Planning policy should encourage and enable the reduction of waste akin to the waste management hierarchy. This policy seems to accommodate 'inevitable' increase in waste.
A0642B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP15	Agree	Para 3.124 We welcome reference to the government's 25 Year Environment Plan but there should be greater reference to this throughout the document, especially in sections SP3, SP4, and SP9.
A0642B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy SP15	Disagree	Para 3.127 Planning policy should encourage and enable the reduction of waste akin to the waste management hierarchy. This policy seems to accommodate 'inevitable' increase in waste.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0101B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Para 2a: The requirement to carry out a Housing Needs Survey is likely to deter development of very small sites by small developers. Suggested that the threshold for this policy should be 10 units.</p> <p>Para 2b: Object to this - experience in delivering homes in Shropshire is that demand for 2 bedroomed houses is limited and has diminished further in recent years. More people work from home than before, which is accelerated by Covid, meaning extra bedroom is more necessary. 2 bed-houses generally represent less efficient use of land. If the Council decide a minimum proportion is required this should be reduced from 25% to 10%.</p> <p>Para 3: This should be more prescriptive in the case of open market dwellings stating that national space standards will apply unless specific considerations justify otherwise. The proposed requirement that affordable homes should comply with space standards and that open market housing doesn't necessarily have to also contradicts policy DP3 which requires affordable and open market homes to be indistinguishable.</p> <p>Para 5: Suggested that the threshold be increased to 10 dwellings and the percentage of M4(2) dwellings be reduced to 35% which is still a high proportion and better reflects the level of need outlined in the explanation without undermining viability and deliverability.</p> <p>Para 6a: Inappropriate & illogical to require specialist housing of this type to be provided on general market housing sites - these are generally developed and operated by specialist organisations. Location or specific site conditions means that not many sites are suited to these type of development - housing of this type will in many instances qualify as affordable housing. The threshold for provision of specialist housing should be increased to 200 dwellings & subject to evidence of need. The policy would deter many SME developers from delivering medium sized sites of 50-100 dwellings & undermine the ability of the Local Plan to meet its delivery targets</p> <p>Para 6b: The objectives of this policy appear to be similar to policy 5 which, subject to the points outlined above, is supported. It might be appropriate to combine the two policies</p>
A0134B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Section 2a of the Policy requires development to reflect the profile of housing need established by a Local Housing Need Survey, where one exists</p> <p>However, there is a need to provide clarity about when a Local Housing Need survey is considered up to date within the Explanation of this policy. Currently the policy is inflexible and will distort the market which changes very quickly.</p> <p>An example of rapid change is Covid-19 which increased demand for home offices and larger properties.</p> <p>Another is the ageing demographics which increase demand for granny annexes and additional ground-floor en-suite bedrooms.</p> <p>Other changes cannot be predicated, but surveys over 3 years old will not be reflective of current need, given its emphasis on smaller properties.</p> <p>We strongly encourage the Council to identify and monitor how many older person housing units are needed in each of the four types of housing that it identifies in paragraph 4.36, namely, "a. Age-restricted general market housing; b. Retirement living or sheltered housing; c. Extra care housing or housing-with-care; and d. Residential care homes and nursing homes". As a minimum, the need for each of the above types of housing should be quantified.</p> <p>The Policy will encourage older persons' housing on larger sites, but is unlikely to meet Shropshire's total need for this type of housing. To help meet these needs, specific allocations for older persons housing should be made. Furthermore, the Policy should also provide guidance on how applications for 100% specialist housing to re-balance the local housing stock will be considered. We suggest "7. Specialist housing developments will be considered positively on sites within settlement development boundaries. Where there is a shortage of specialist housing relative to recognised needs, proposals outside but adjoining development boundaries will be considered positively."</p>
A0138B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Welcome recognition of the need to provide older persons housing.</p> <p>Statistics on the level of growth in older people within the Plan do not consider the 2018-based SNHP.</p> <p>The SHMA and associated policies should be updated to consider the 2018-based SNHP.</p> <p>Whilst the Plan indicates it will monitor the number of older person specific dwellings permitted in Shropshire, it is only possible to measure the effectiveness of a policy if there is also a target figure.</p> <p>We strongly encourage the Council to identify and monitor how many older person housing units are needed in each of the four types of housing that it identifies in paragraph 4.36, namely, "a. Age-restricted general market housing; b. Retirement living or sheltered housing; c. Extra care housing or housing-with-care; and d. Residential care homes and nursing homes". As a minimum, the need for each of the above types of housing should be quantified.</p> <p>The Policy will encourage older persons' housing on larger sites, but is unlikely to meet Shropshire's total need for this type of housing. To help meet these needs, specific allocations for older persons housing should be made. Furthermore, the Policy should also provide guidance on how applications for 100% specialist housing to re-balance the local housing stock will be considered. We suggest "7. Specialist housing developments will be considered positively on sites within settlement development boundaries. Where there is a shortage of specialist housing relative to recognised needs, proposals outside but adjoining development boundaries will be considered positively."</p>
A0228B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	There is a greater need for adapted homes than affordable. The policy should reflect this (respondent ref; objection 4 on DP1)
A0238B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Don't know / no opinion	Document Reference BT19:generally supportive of policies for controlling development and the level of affordable housing. However, it appears that larger developments are anticipated to proceed under the control of single, large developers, with a potentially dominant say over masterplanning and commercial participation. Concerned that there should be clear provision in these policies for Shropshire Council and local communities to have adequate control over these matters.
A0240B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	<p>3.1 Policy DP1(3) requires that 'all affordable dwellings will achieve the nationally described space standard' and that 'all open market dwellings are strongly encouraged to comply with the nationally described space standard'.3.2 Should the Council wish to apply the optional nationally described space standards ('NDSS') to both market and affordable new-build dwellings, this should be done in accordance with Footnote 46 of NPPF Paragraph 127(f): policies may 'make use of the nationally described space standard, where the need for an internal space standard can be justified.'3.3 In justifying the requirement for NDSS on affordable dwellings, it is noted that an explanation is provided through the DSLP at paragraphs 4.7-4.16; justification for the requirement on open market dwellings is provided at 4.17. However, whilst the justification makes reference to the SHMA, at paragraph 4.11-4.12, it is noted that the SHMA itself undertakes no assessment or analysis of the need for NDSS on either affordable or market new-build dwellings. Consequently, it is understood that justification for this policy requirement is set out solely through the DSLP at paragraphs 4.7-4.17.3.4 As set out under Paragraph 31, all policies should be 'underpinned by relevant and up-to-date evidence', and 'should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned.' Additionally, the PPG28 sets out: 'Where a need for internal space standards is identified, the authority should provide justification for requiring internal space policies. Local planning authorities should take account of [need, viability and timing]'3.5 In this regard, paragraph 4.11 refers to a finding of the SHMA which identified overcrowding in11% of social rented accommodation. Clearly, social rented accommodation represents only one tenure of affordable housing; such a finding disregards other affordable housing tenures, whereby households in Shropshire may not necessarily experience overcrowding, and thus does not represent the overall trend.3.6 The Council also speculates on the impact of the 'bedroom tax' on overcrowding within the social rented sector; it provides no further evidence otherwise justifying the need for NDSS on new-build affordable housing.3.7 L&Q Estates consider the Council has erroneously conflated the issue of overcrowding with the need for NDSS. Simply put, NDSS assists in mitigating impacts from overcrowding and does not in itself reduce the level of overcrowding. Whilst overcrowding in the region may be an issue requiring tackling, the Council should consider it a symptom of an under-supply of housing29.3.8 Before adopting the NDSS, the Council should provide an accurate local assessment evidencing the case for Shropshire as this has not been demonstrated, and thus the policy requirement fails the test of soundness and should be removed.</p>
A0250B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Section 2a of the Policy requires development to reflect the profile of housing need established by a Local Housing Need Survey, where one exists</p> <p>However, there is a need to provide clarity about when a Local Housing Need survey is considered up to date within the Explanation of this policy. Currently the policy is inflexible and will distort the market which changes very quickly.</p> <p>An example of rapid change is Covid-19 which increased demand for home offices and larger properties.</p> <p>Another is the ageing demographics which increase demand for granny annexes and additional ground-floor en-suite bedrooms.</p> <p>Other changes cannot be predicated, but surveys over 3 years old will not be reflective of current need, given its emphasis on smaller properties.</p> <p>We suggest that section 2a of the Policy should be amended to refer to, "a recent Local Housing Need Survey that has been undertaken within the past 3 years...</p> <p>Section 2b requires set proportions of housing to be 2 and 3 bed where there is no local housing need survey, this was assessed in the Councils Delivery and Viability Study, which concludes a high proportion of typologies are not viable. We agree with comments on this study regarding the mix being too restrictive and with too many small units the mix should be left to the market.</p> <p>Our experience is that majority of housing developments have a relatively high proportion of larger homes to ensure viability. If section 2b is retained, developers will increase dwellings on a site to ensure viability. This will increase densities and may alter local character, particularly in rural area.</p> <p>Section 5 of the policy requires 5% of dwellings on larger sites to be built to the M4(3) (wheelchair user dwellings) standard and a further 70% to be built to the M4(2) (accessible and adaptable dwellings) standard. To accommodate these costs, there is a need for flexibility about house types.</p> <p>The policy should therefore be less prescriptive to ensure viability. This could be achieved by deterring section 2 or editing to include consideration of a sites specific characteristics e.g. "c. The site's characteristics require a different mix</p>
A0269B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Residential mix Overly prescriptive, policy should allow developers to bring forward their own evidence of local demand to inform mix Please
A0316B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	I am very pleased to see acknowledged the tremendous need for additional social housing and for smaller homes, rather than the 4+ bed detached dwellings that make up the majority of the housing I've seen built in Shrewsbury recently.
A0318B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	<p>We question the legitimacy of DP1.3. The explanatory text sets out that providing dwellings with sufficient internal floorspace positively contributes to the future occupier's ability to achieve a high quality of life and is responsive to changing household requirements. The explanatory text identifies that it is equally relevant for both market and affordable housing provision.</p> <p>In considering the evidence that a greater proportion of social renters are in overcrowded accommodation, we consider it unlikely that this will be solved through adherence to the nationally described space standards. Instead, the right size dwelling would overcome overcrowding issues — for example, having affordable renters in the correct number of occupants to bedrooms, rather than an additional 3sqm of space. We recommend the following amendment to the text:</p> <p>"DP1.3. All affordable dwellings and open market dwellings are strongly encouraged to comply with the nationally described space standard."</p> <p>We consider the policy fails to set out what type of housing should be delivered for older persons, with no set range identified in the policy for sites of 50 or more dwellings or indication for where the housing should be provided</p>
A0430B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Object to DP1 because evidence still needs to be provided to justify the figures set out in this policy. DP1(1) states that residential development will be expected to provide a mix of dwelling sizes, types and tenures, in accordance with the Council's SHMA. This policy should offer flexibility and account for changing requirements throughout the plan period and localised and site specific evidence to support a departure from the district wide requirements set out in the SHMA. This flexibility is important since clearly any policy on residential housing mix must ensure that it does not frustrate delivery by being over prescriptive. DP1(5) requires developments of five or more new homes to provide at least 5% of the dwellings to be built to the M4(3) (wheelchair user dwellings) and a further 70% of the dwellings to be built to the M4(2) (accessible and adaptable dwellings). DP1(6) requires developments of 50 dwellings or more to deliver a range of specialist housing to meet the diverse needs of older people and those with disabilities. Support the provision and delivery of these types of homes, however the blanket approach of this policy may not be appropriate, so an element of flexibility should be incorporated.
A0436B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. However, latest evidence only provides a snapshot of current housing needs. Further, the accuracy of the 'Right Home Right Place' Local Housing Need Surveys is questioned as it is understood it is challenging to get local communities to engage. Hence the proposal that 50% of open market dwellings reflect the resulting profile seems overbearing and will hamper developers ability to respond to market forces. Need to retain the ability for developers to respond to the market and build properties to cater for market demand.</p> <p>The alternative proposal that at least 25% of open market dwellings have 2 bedrooms or less and at least a further 25% of open market dwellings have 3 bedrooms both limits housebuilders ability to respond to local demand and fails to recognise that the profile of first time buyers has changed with entrants to the housing market often being in their 30's when they typically have a family. It is considered more reflective of modern demographic trends to have a split of 35% 3 beds and 15% 2 beds (3 bed houses are preferred by families and 2 beds by individuals).</p> <p>The policy needs to provide flexibility so the plan is able to respond to changes in circumstances, meet need and make best use of land.</p> <p>Support the general approach of the policy, particularly section 2 which allows flexibility within the mix and variety of dwellings sizes for market dwellings, however urge further flexibility be demonstrated and robust evidence presented on the type of housing demanded.</p>
A0437B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		<p>Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. It is considered more reflective of modern demographic trends to have a split of 35% 3 beds and 15% 2 beds (3 bed houses are preferred by families and 2 beds by individuals). The policy needs to provide flexibility so the plan is able to respond to changes in circumstances, meet need and make best use of land. Support the general approach of the policy, particularly section 2 which allows flexibility within the mix and variety of dwellings sizes for market dwellings, however urge further flexibility be demonstrated and robust evidence presented on the type of housing demanded.
A0443B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. However, latest evidence only provides a snapshot of current housing needs. Further, the accuracy of the 'Right Home Right Place' Local Housing Need Surveys is questioned as it is understood it is challenging to get local communities to engage. Hence the proposal that 50% of open market dwellings reflect the resulting profile seems overbearing and will hamper developers ability to respond to market forces. Need to retain the ability for developers to respond to the market and build properties to cater for market demand. The alternative proposal that at least 25% of open market dwellings have 2 bedrooms or less and at least a further 25% of open market dwellings have 3 bedrooms both limits housebuilders ability to respond to local demand and fails to recognise that the profile of first time buyers has changed with entrants to the housing market often being in their 30's when they typically have a family. It is considered more reflective of modern demographic trends to have a split of 35% 3 beds and 15% 2 beds (3 bed houses are preferred by families and 2 beds by individuals). The policy needs to provide flexibility so the plan is able to respond to changes in circumstances, meet need and make best use of land. Support the general approach of the policy, particularly section 2 which allows flexibility within the mix and variety of dwellings sizes for market dwellings, however urge further flexibility be demonstrated and robust evidence presented on the type of housing demanded.
A0444B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. The policy needs to provide flexibility so the plan is able to respond to changes in circumstances, meet need and make best use of land. Support the general approach of the policy, particularly section 2 which allows flexibility within the mix and variety of dwellings sizes for market dwellings, however urge further flexibility be demonstrated and robust evidence presented on the type of housing demanded.
A0445B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Recognise importance of new development providing an appropriate mix of housing types, sizes and tenures to meet identified local needs. However, latest evidence only provides a snapshot of current housing needs. Further, the accuracy of the 'Right Home Right Place' Local Housing Need Surveys is questioned as it is understood it is challenging to get local communities to engage. A0450B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Policy DP1 should set a target provision for specialist housing on sites of 50+ dwellings to clearly define the developers planning obligations.
A0506B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	The Town Council carried out a Housing Needs Survey (HNS) in conjunction with Maria Howell and Tim Shrosbree of Shropshire Council. Prior to any site being developed the Town Council would suggest that, as laid down in the NPPF (Para 128), early discussion between applicants, the local planning authority and the local community about the design and style of emerging schemes is important for clarifying expectations and reconciling local and commercial interests. Applicants should work closely with those affected by their proposals to evolve designs that take account of the views of the community. This also includes looking at the results of the HNS to ensure the required mix of housing and tenure is addressed. The need for specialist housing designed to meet the diverse needs of an ageing population which is living longer, is important, especially in Church Stretton.
A0513B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Policy DP1 sets out guidance in relation to the anticipate residential mix of housing developments. This largely reflects the findings of Council's Strategic Housing Market Assessment (SHMA). However, Criterion 6 requires (on sites of 50 or more dwellings) the provision of an appropriate range of specialist housing to meet the diverse needs of older people such as age restricted general market housing, retirement living or sheltered housing, extra care housing and residential care/nursing homes. Whilst such provision is an important component of the residential market, no justification has been provided for such a requirement. There is no evidence base document that sets out the need for such facilities and as a result Criterion 6 should be deleted as it cannot be justified. The provision of such facilities should be market led and justified at the development management/application stage based on a demonstrable need for such a facility.
A0609B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	Support this in order to achieve more smaller dwellings than at present.
A0636B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Local housing requirements are not realistically taken into account. In my opinion "affordable housing" is a misnomer and in no way provides housing for those most in need. The use of the term "affordable housing" is misleading, the reality is workers on the average national wage or below cannot obtain a mortgage and aspire to own a home for their family. The provision of 14 "affordable" homes, whatever that implies, is ignoring the real problems with the provision of housing for the less well off in society.
A0678B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	Support the principle that a mix of house sizes, types and tenure provide the most effective means of meeting a range of community and also market needs. Policy requirements are noted.
A0697B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Acknowledge need for housing that meets the specific needs of certain household and age groups in the community is likely to increase nationally due to the general ageing of the population. However, footnote 46 of the NPPF states requirements regarding optional technical standards (M4(2) accessible and adaptable dwellings and M4(1) wheelchair user) and national space standards must address an identified need for such properties and only be applied where the need for an internal space standard can be justified. The draft Local Plan relies on wheelchair use in households nationally and the demographics of Shropshire as justification of optional technical standards. Question whether this is sufficient evidence. Suggest this requirement is loosened to reflect lack of specific justification in Shropshire. Object to the proposal to provide an appropriate range of specialist housing for the elderly on all sites of 50 dwellings or more, as there is a lack of justification on need/viability of this policy. Such a requirement is also contrary to national policy, which does not specifically require provision of such housing to meet specific needs akin to an affordable housing policy (para 62 of the NPPF). Policy wording should be revised to reflect local evidence and national policy

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0853B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Object to Policy DP1(6) requiring specialist housing, including older persons accommodation and specialist dwellings to meet the needs of those with disabilities and special needs, on all sites of 50 or more dwellings. Whilst we recognise that there is a need for specialist accommodation in Shropshire, as demonstrated by the SHMA, it is unclear how DP1(6) will operate in practice. DP1(6) states that 'a range' of specialist housing will be provided, but it does not specify how much specialist housing within an individual proposal. Achieving a 'range' of specialist housing on many sites of less than 200-250 dwellings will be extremely challenging. Most sites within the range of 50-250 dwellings are acquired and developed by a single developer, with limited capacity to deliver specialist housing such as a care homes or extra care accommodation. This is balanced by the likelihood that some smaller sites will be acquired by providers of specialist accommodation where 100% specialist housing may be delivered. DP1(6) should be amended so that, sites below 250 dwellings are not obliged to provide specialist housing but are encouraged to do so. Large strategic sites of 250+ dwellings could maintain a requirement for specialist housing as part of an appropriate mix of dwelling types. Specific requirements may be set out in relation to sites where specialist accommodation would be appropriate in part or whole, having regard to the suitability of individual sites and any specific locational needs.
A0853B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	For the Local Plan to be sound, a far more flexible policy approach is needed in DP1 to properly reflect the nature of the evidence base, which has inherent demographic limitations and cannot fully reflect market demand and people's aspirations. Such an approach would also reflect the fluid nature of the issue, having regard to changing practices such as increased levels of working from home, which may increase demand upon house sizes and bedroom spaces. We therefore consider that the policy should be amended to state that, where appropriate, residential development will be expected to provide a mix of dwelling sizes, types and tenures in order to meet the identified needs of local communities, having regard to evidence from the SHMA, market demand and any other local evidence (including the Council's Right Home Right Place survey). Demographic-based projections produced by the SHMA fail to consider the full picture and do not accurately reflect market demand. It is therefore essential that Policy DP1 recognises this and is amended to make clear that the dwelling mix set out in the SHMA is a starting point only, and is to be applied flexibly, reflecting local needs and market demand. The SHMA (as referenced in Policy DP1(1)), sets out an analysis of housing need broken down by sizes, types and tenures (SHMA Part 2, Section 3). However, there are several significant issues when using this analysis to determine the mix of housing on sites: Firstly, the 2020 SHMA assesses household change using the 2014-based Sub National Household Projections (SNHP), which equates to household growth of 19,136 over the plan period (989 household per annum). This does not correlate with the proposed housing requirement figure in the plan (1,400 dwellings per annum). It cannot be assumed that the difference (just over 400 dwellings per annum) needs to be provided at a similar mix to the elements of household growth that have been assessed. Secondly, the SHMA does not assess the size, type, tenure and range of housing that is required in particular locations or settlements. Shropshire is a large authority area and there will be significant divergences between the demographic and demand drivers behind housing mix within different areas and settlements. Thirdly, the SHMA fails to adequately consider market trends and demand. Even if the SHMA methodology is considered to provide a robust projection in terms of the baseline demographics, it does not provide any evidence to suggest that the disaggregation of this data into different household groups accurately reflects the needs of the current or future population (factoring in demand and habits). For example, there is no reason why a single or two person household cannot buy or rent a three or four-bedroom home – indeed, they might even prefer to do so; hence demographic projections which suggest an increase in smaller households, for instance, do not necessarily translate into a need for smaller units. Additional factors to consider include the demand for spare bedrooms for family guests (particularly relevant to an ageing population), and increasing demand for home working which often results in the need for an additional bedroom to be utilised as a home office. Whilst the COVID-19 pandemic has forced people to homework on a temporary basis, significantly higher levels of homeworking (potentially for multiple persons within a household) are likely to continue in the future.
A0853B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	The Council's Right Home Right Place survey is both a positive and innovative method for assessing need but DP2(2)(a) is not a sufficiently robust method for determining the mix of 50% of the dwellings on a site, particularly larger sites, as the survey is likely to only capture a small part of the market at any one time. The survey also appears to have a focus upon certain segments of the market such as affordable housing, noting that it does not seek to disaggregate rents above £650 per month or market value of a property above £180,000. We would therefore question whether the survey would adequately reflect the need and demand for market housing, and whether sufficient numbers of households seeking housing within higher price bands are likely to engage with this type of survey to provide an accurate reflection of the market. Therefore whilst such a survey could be a material consideration in determining the mix of housing, we do not consider that it is appropriate for the policy to stipulate that 50% of the housing should follow the mix deriving from such a survey. Finally, in relation to Policy DP2(2)(b), this sets out a precise mix for 50% of the market dwellings (25% 2-bedroom and 25% 3-bedroom) in the event that a Right Home Right Place survey has not been undertaken. It is not clear what justification there is for setting these requirements. Table 11 of the SHMA estimates a need for 5,459 2-bedroom dwellings and 9,454 3-bedroom dwellings. Notwithstanding the significant limitations in the SHMA data (see paragraph 4.4 of this statement), even these figures do not justify the proposed mix of 25% 2-bedroom and 25% 3-bedroom dwellings. The policy appears to be seeking a disproportionately high level of 2-bedroom dwellings. It is not clear why the policy does not similarly set out any minimum requirement for larger 4+ bedroom homes, given the important role that such housing can play in meeting the needs of families and freeing up smaller accommodation elsewhere in the supply chain.
A0853B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Object to DP1(4) requiring all dwellings specifically designed for older people or those with disabilities or special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and also to DP1(5) requiring this provision in 5% of dwellings on sites of 5 or more dwellings. These requirements are not consistent with NPPG paragraph 56-009 requiring the wheelchair accessible homes standard (i.e. M4(3) standard) to be applied only to dwellings where the local authority is responsible for allocating or nominating a person to live in that dwelling (i.e. certain types of affordable housing). DP1(4) needs to be amended and DP1(5) must state that the 5% requirement only applies to the element of affordable housing. In terms of viability, the Council's Viability Study (paragraph 8.15) assumes that any wheelchair accessible homes will be affordable homes, in accordance with the section of the NPPG referred to above. However, the cost is still projected to be significant (£10,111 per dwelling, or £32,750 per hectare based on a 5% requirement). The Viability Study indicates that viability in many parts of the borough is challenging, with the affordable housing requirement of 10% being pursued on the basis of 'on-the-ground' experience rather than the results of the assessment itself. However, such on the ground experience was achieved prior to the introduction of additional policy requirements. The NPPG tests of necessity and viability have not been met in relation to the proposed requirements for both M4(2) and M4(3) standard dwellings.
A0853B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Object to Policy DP1(5) that requires, on sites of 5 or more dwellings, 70% of new housing be built to the M4(2) (accessible and adaptable dwellings) or higher standard within Building Regulations. The need for higher accessibility, adaptability and wheelchair housing standards is addressed at paragraphs 6.267 – 6.294 of the SHMA. However, the evidence does not appear to support the proposed requirement for 70% of all new dwellings to meet M4(2) standard in accordance with Paragraph 56-007 of the NPPG that requires local planning authorities to use specific evidence to justify setting higher accessibility, adaptability and wheelchair housing standards. We therefore consider that the evidence and policy should be reviewed, and more realistic assumptions applied. We note that in other recent Local Plans where requirements for M4(2) housing have been introduced, the requirement has been far lower than proposed in Shropshire. For example, in Central Lincolnshire the requirement is 30%, and in Harrogate the requirement is 25% for the following reasons: Firstly, the analysis in the SHMA (paragraphs 6.290 – 6.294) cites the upper levels of need identified in Table 94. However, the preceding analysis at paragraphs 6.258 – 6.266 indicates that this need could be met through homes built to M4(1) standard, which is required by building regulations for homes. It does not represent a total need for homes to be built to the higher M4(2) standard. Secondly, and notwithstanding the above, Table 94 of the SHMA applies the very broad assumption that only 53% of Shropshire households in current or future housing need due to a long-term health or physical disability (LTHPD) could be absorbed by converting existing properties to bring them up to M4(1) standard. However, that assumption fails to recognise that for households who require adaptations where these are not possible in their current home, their choice is not simply to stay in their current home or acquire a new dwelling built to M4(1) or M4(2) standard. It is reasonable to assume that such households would also consider moving to one of the 10,000 houses already built to M4(1) standard, or one of the 73,000 properties within Shropshire which the SHMA estimates can be brought up to M4(1) standard (SHMA, Figure 70). Furthermore, paragraph 6.292 of the SHMA also recognises that a proportion of this need will be met within specialist older person accommodation, but this does not appear to be quantified within the assessment. Thirdly, even if the upper need figures set out in Table 94 are realised, and it is assumed that all of that need is for M4(2) or M4(3) accommodation and none of that need is met within the existing stock, it is not realistic to assume that such a large proportion of the 30,800 dwellings planned in the Local Plan Review need to be built to that standard to meet the need. The housing market does not work in such a way that building thousands of homes to M4(2) standards will result in them being purchased and occupied by households falling within that need. There will be significant demand for new housing from other elements of the population, and furthermore many households will stay (by choice) in their existing homes even if it is not of an accessibility standard which meets their needs. The NPPG tests of necessity and viability have not been met in relation to the proposed requirements for both M4(2) and M4(3) standard dwellings.
A0862B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		Section 2b of draft Policy DP1 states where there is no local housing need survey, "at least 25% of open market dwellings will be dwellings with 2 bedrooms or less. At least a further 25% of open market housing will be dwellings with 3 bedrooms or less." This mix is reflected in the Council's Delivery & Viability Study, which proceeds to find that a high proportion of its typologies are not viable. Concur with comments received by the Council when it consulted on the Delivery & Viability Study, that: • The mix may be overly restrictive with too many small units. • Housing mix is too general and should not be used. Mix should be left to the market." Consider the majority of housing developments have a relatively high proportion of larger homes in order to achieve sufficient saleable floorspace to make development deliverable. Retaining section 2b will mean developers will be forced to increase the number of dwellings on a site in order to achieve sufficient saleable floorspace to make a scheme viable. Pressure to deliver sufficient saleable floorspace from smaller dwellings will result in pressure to exceed housing guideline figures for a site. To be deliverable, the Plan should be amended to ensure that guidelines are always expressed as a minimum. Section 5 of the draft Policy requires 5% of dwellings on larger sites to be built to the M4(3) (wheelchair user dwellings) standard and a further 70% to be built to the M4(2) (accessible and adaptable dwellings) standard. The Council's Delivery & Viability Study reports that these requirements impact on development costs of 10% of dwellings M4(3) £65,500/ha and 100% of dwellings M4(2) £22,000/ha. Using these figures and assuming a proportionate cost, the equivalent costs of 5% of dwellings to M4(3) standard and 70% of dwellings to M4(2) standard would be £32,750/ha and £15,400/ha respectively, a total of £48,150/ha. To accommodate these extra costs, developers need sufficient sellable floorspace and that requires a degree of flexibility to match housing types to current market demand. As currently worded, draft Policy DP1 severely limits that flexibility. The Local Plan will be more viable and deliverable if the policy is less prescriptive. Consider section 2 of the draft policy should be deleted (preferred) or amended so part a recognises need for a recent Local Housing Need Survey and reduces the proportion the policy applies to 33% of the development; part b applies 20% to 2 bed or less and 20% to 30 bed or less; and a new part c is added which states "A convincing case is made that current market conditions or the site's characteristics require a different mix". Residential development will have to comply with draft Policy DP1 (Residential Mix) which requires sites of over 5 dwellings to include 25% of dwellings to be 2 bed or less and a further 25% 3 bed or less; and sites of over 50 dwellings to include a range of specialist housing to meet the needs of older people. These requirements will reduce the average size of dwellings significantly. The indicative layout plan for SHR054a was submitted with the 'Call for Sites' assumed an average floorspace of around 115sqm per dwelling. The emerging policies will bring the average floorspace down to around 85sqm. Smaller units require an increase in the number of dwellings by approximately 35% in order to achieve the same floorspace coverage. Therefore, in order to achieve the same floorspace as shown in the indicative layout plan at these smaller sizes, there would need to be at least 81 dwellings on the site.
A0888B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	See wider response.
A0896B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		Galliers Homes objects to Policy DP1(2) and recommends that this section of the policy is entirely deleted from the Plan. This is because DP1(2)(a) requires development proposals to reflect the profile of need recorded in a Local Housing Need Survey. These surveys are snapshots of need and accurate for only a short period of time. DP1 in the explanatory text provides no qualifiers as to how recently a survey should have been conducted and may be used which makes DP1 inflexible and open to distorting a local market that is changing very quickly. If DP1(2) retained then DP1(2)(a) should refer to "a recent Local Housing Need Survey that has been undertaken within the past 3 years.....". It should also be recognised that local needs surveys may not be appropriate where a development is catering for Shropshire-wide need including households moving into Shropshire. The existing households in the parish may not be representative, particularly for larger developments that cater for county-wide housing need. Evidence from other sources may be appropriate in establishing an appropriate mix of housing. DP1(2)(b) also requires that, where there is no local housing need survey, "at least 25% of open market dwellings will be dwellings with 2 bedrooms or less. At least a further 25% of open market housing will be dwellings with 3 bedrooms or less." This mix is reflected in the Council's Delivery & Viability Study, which concludes a high proportion of its typologies are not viable. Galliers Homes agrees with the comments on the Delivery & Viability Study, reported on page 260 of the Study, that: The mix may be overly restrictive with too many small units. Housing mix is too general and should not be used. Mix should be left to the market." In our experience, many housing developments have larger homes to achieve sufficient saleable floorspace to be viable. If section 2b is retained, developers will be forced to increase the number of dwellings on a site in order to achieve sufficient saleable floorspace to make a scheme viable. This increases densities and alters the local character, especially in areas characterised by relatively low density housing across rural Shropshire. The pressure to deliver sufficient saleable floorspace from smaller dwellings will result in pressure to exceed housing guideline figures for both specific allocations and for settlements (our comments on Policy SP6 refer). To be deliverable, the Plan should be amended to ensure the number of dwellings is always expressed as a minimum. DP1(5) requires 5% of dwellings on larger sites to be built to the M4(3) (wheelchair user dwellings) standard and a further 70% to be built to the M4(2) (accessible and adaptable dwellings) standard. The Council's Delivery & Viability Study reports that these requirements impact on development costs to the order of 10% of dwellings at M4(3) costing £65,500/ha and 100% of dwellings at M4(2) costing £22,000/ha. These figures with assumptions on proportionate costs, the equivalent costs of 5% of dwellings to M4(3) standard and 70% of dwellings to M4(2) standard would be £32,750/ha and £15,400/ha respectively, a total of £48,150/ha. Significant extra costs are imposed by Policy DP12 Minimising Carbon Emissions, estimated in the Council's Viability Study at £249,689/ha. In addition to CIL and affordable housing contributions, the burden on development is substantial. To accommodate these extra costs, developers need sufficient sellable floorspace and that requires a degree of flexibility to match housing types to current market demand. As currently worded, Policy DP1 severely limits that flexibility. The Local Plan will be more viable and deliverable if the policy is less prescriptive. In light of the above, we suggest that the Council either deletes section 2 of the policy in its entirety (preferred) or amend DP1(2) to require that a Local Housing Need Survey is recent and has been undertaken within the past 3 years and that only 33% of open market dwellings will reflect the profile of the housing need established within the survey; or 20% of open market dwellings will be dwellings with 2 bedrooms or less. Also that at least a further 20% of open market housing will be dwellings with 3 bedrooms or less; or to consider a further clause as DP1(2)(c) that a convincing case is made that current market conditions or the site's characteristics require a different mix.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0897B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Section 2a of the draft policy requires development to reflect the profile of housing need established by a Local Housing Need Survey, where one exists. However such surveys are only ever accurate for a very short period of time. There is no qualifier in the explanatory text as to how recent a survey should be to be relevant. The current policy wording could be interpreted that a needs survey conducted 8 years previously should be adhered to. This is inflexible and will distort the market, which can change very quickly. Recent examples of rapid change are the Covid19 pandemic, which has dramatically increased the demand for home offices, larger homes and suburban gardens. Another example is rapidly rising elderly population resulting in demand for granny annexes and additional ground-floor, en-suite bedrooms. A third is the number of young people renting rooms in shared houses, demand met by private landlords purchasing larger 4 and 5 bedroomed properties to let as HMOs. Difficult to predict what other changes might occur during the draft Local Plan period, but it can be stated with a high degree of certainty that housing needs surveys over 4 years old will no longer reflect current needs and that the current profile of need, with its emphasis on smaller properties, may no longer be relevant in future years. To ensure the policy is not rapidly out-dated, section 2 of the policy should be deleted in its entirety. If retained, section 2a should be amended to refer to, "a recent Local Housing Need Survey that has been undertaken within the past 4 years.....". It should also be recognised that local needs surveys may not be appropriate where a development is catering for Shropshire-wide need including households moving into Shropshire. Existing households in the parish may not be representative, particularly for larger developments that cater for county-wide housing need. Evidence from other sources may be appropriate in establishing an appropriate mix of housing. Section 2b identifies a dwelling mix where there is no Local Housing Need survey. This mix is reflected in the Council's Delivery & Viability Study, which finds a high proportion of its typologies are not viable. Agree with the comments received by the Council when it consulted on the Delivery & Viability Study (summarised within it) that: "The mix may be overly restrictive with too many small units and Housing mix is too general and should not be used. Mix should be left to the market". In our experience, the majority of housing developments have a relatively high proportion of larger homes in order meet market demand and to achieve sufficient saleable floorspace to be viable. If section 2b is retained, developers will be forced to increase the number of dwellings on a site to achieve sufficient saleable floorspace to make a scheme viable. This will increase densities and may alter local character, especially in locations where existing character comprises relatively low density housing, as occurs in many parts of Shropshire. This may also result in housing guideline figures being exceeded for both specific allocations and settlements (see comments on draft Policy SP1 and draft Policy S1.1). To be deliverable, the draft Local Plan should be amended to ensure the number of dwellings is always expressed as a minimum. Section 5 of the draft policy requires 5% of dwellings on larger sites to be built to the M4(3) (wheelchair user dwellings) standard and a further 70% to be built to the M4(2) (accessible and adaptable dwellings) standard. This requirement potentially conflicts with section 2b's requirement for 25% of houses to be small with 2 bedrooms or less. Using the Council's Delivery & Viability Study the impact of this draft policy requirement on development costs can be extrapolated to £32,750/ha and £15,400/ha respectively, a total of £48,150/ha. To accommodate these extra costs, developers need sufficient sellable floorspace and that requires a degree of flexibility to match housing types to current market demand. As such suggest deletion of section 2 of the policy in its entirety (preferred) or amends section 2 to specify timescales for local housing needs assessments (4 years) and the proportion this is applied to is reduced to 33%; and that the requirement for an alternative mix is changes to "developer demonstrates a mix appropriate to market conditions and/or the site's characteristics."
A0928B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	The Policy requires that residential development will be expected to provide a mix of dwelling sizes, types and tenures in order to meet the identified needs of local communities. It is suggested this should be in accordance with the councils strategic housing market assessment. Specific provisions are made for at least 25% of open market dwellings to be 2 bedroom properties or less; a further 25% of open market housing should be 3 bedrooms or less. We believe that this policy needs to be applied flexibly. Any housing survey relied on needs to be up to date and the policy should highlight this. Consideration should also be given to the expertise of house builders who are the forefront of the housing market and have a strong understanding of housing needs and demands in an area. Equally consideration needs to be given to the urban context and locality as some areas may be small suitable for a particular housing mix in urban design terms than others. In respect of other building standards proposed for house building, it is unclear as to the evidential justification for the requirements set out and why they have been set at such prescriptive levels. Certain aspects of the policy are vague. It is not clear as to the extent to which these provisions have been assessed in terms of their impact on development viability and delivery.
A0961B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	Para 2 support this in order to achieve more smaller dwellings than at present
A0972B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Query if Shropshire Council undertaking a housing needs assessment for Bridgnorth to ensure needed housing mix achieved, as prescribed in DP1.2? If not, why? Query how a housing needs assessment can be invoked by the local town and parish councils
A0984B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	Support the aims of Part 1 of the draft policy and the need to provide a mix of homes that meet local needs. However, it is important that the draft policy offers flexibility to respond to changing needs and site specific evidence. Any policy on residential housing mix must ensure that it does not frustrate housing delivery by being over prescriptive. Part 2 of the draft policy is more prescriptive. Generally support the use of Local Housing Need Survey to help guide at least 50% of the open market housing mix, as specified within Part 2a of the draft policy. However, it is understood that such surveys are not available for all settlements, if this requirement is retained, surveys should be available for all Principal/Key Centres and regularly reviewed, otherwise the effectiveness of the policy and the ability to meet community needs is reduced. There is also a need to define what an equivalent survey to a local housing needs survey is. Part 2b states an alternative requirement (25% of open market dwellings with 2 bedrooms or less and at least a further 25% with 3 bedrooms or less), this needs to be clarified. Clarification is required as to when this applies (as introduced by the use of 'or' at the end of part 2a is this applicable in all circumstances or only where a Local Housing Need Survey has not been carried out); and whether provision of say 50% 2 bedroom properties complies with the requirement. The requirements of Part 2b also need to be based on up-to-date evidence, without publication of SHMA part 2 it is unclear if this is the case. Part 5 of the draft policy requires developments of 5 or more dwellings to provide 5% M4(3) and 70% M4 (2), whilst the explanation explains the ageing demographics of Shropshire more specific evidence of these requirements should be provided (consistent with NPPF footnote 46 and NPPG section 56 paras 005-007). Part 6 requires development of 50 dwellings or more to deliver a range of specialist housing to meet the diverse needs of older people and those with disabilities. Committed to providing homes that are accessible/adaptable and suitable for a the whole population.
A1106B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Policy DP1. Residential Mix part 3 states that "all affordable dwellings will achieve the nationally described space standard. All open market dwellings are strongly encouraged to comply with the nationally described space standard". We object to this as a requirement for open market residential units. Ultimately the imposition of prescriptive NDDS should be justified, as made clear in footnote 46 of the NPPF. In DLP para 4.11 it is stated that the around "11% of households in social rented accommodation were overcrowded as opposed to around 6% of households in private rented and 2% of households in owner-occupied accommodation". In other words, 89% of households in social rented accommodation are not overcrowded. It seems unclear why Shropshire should use this as a justification for the imposition of the NDDS on any new affordable housing. Other Local Authorities have a much higher proportion of overcrowded households. For example, the London Borough of Brent's 2018 SHMA calculated that 29.6% households were overcrowded (https://www.brent.gov.uk/media/16415908/eb_h_01-brent-strategic-housing-market-assessment.pdf). Brent's Design Guide (2018) states "new development should provide adequate space, access and orientation and adhere to the relevant space standards". Parts of the policy could potentially, inadvertently, cause developers and housing associations to be unable to deliver the much-needed affordable housing. For example, within the policies supporting text it is stated that the "minimum floor to ceiling height is set at 2.3m for at least 75% of the Gross Internal Area". This requirement will lead to potentially significant cost increases and is unjustified. No reason is provided for this to cover 75% of the internal area. Floor to ceiling heights can be discussed with Shropshire's planners and urban design officers on a case by case basis. Design policy should be flexible enough to provide a wide range of dwelling types, in order to ensure residents are able to have a choice and can express their own individual tastes. The provision of extra ceiling height could add significant cost on to the construction of dwellings. In simple terms, this and other NDDS requirements do not actively promote an increase in floorspace and the benefits to future residents are negligible. The NDDS are not justified and given that the NDDS have the potential to lead to viability issues, which consequentially may lead to affordable housing not being provided, these elements should be removed or re-worded to advise the use of the NDDS rather than demand it. Without further evidence the policy should be removed.
A1152B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Disagreement is in part. Fully endorse intention of para 1 of the draft policy, to provide a mix of dwelling types to meet the needs of the different sections of society, in accordance with the SHMA. However, part 2 of the SHMA, giving details of the different sections of society, was not published until 22 September 2020. There is also differences between sections of society addressed in the Right Home Right Place (RHRP) surveys, SHMA and para 1 of the draft policy. Idea behind the RHRP surveys is admirable. However, currently surveys only cover 18 of the 59 settlements with proposed housing guidelines, so there is still a way to go before there is widespread coverage. Para 2 of the draft policy refers only to open market dwellings. There should also be reference to the affordable housing need. Para 2a requires only 50% of open market housing to reflect the need profile identified in the RHRP surveys. From the wording of paragraph 2b, the implication is that it is the number of bedrooms that is being referred to, although that is not specifically stated. RHRP surveys show that the vast majority of need is for 2 and 3-bed houses. The corollary of paragraphs 2a and 2b is that up to 50% of open market houses will still be 4+ bedroom houses, which are patently not what is being shown as needed. The draft policy contained in para 2 will therefore continue to make worse the shortfall of houses that are needed. The conclusion here is that the profile of need should be met to the extent of much more than 50%. The final sentence of para 2 is weak, in referring to a 'suitable' mix and variety. Developers are always likely to plead that what they propose is 'suitable'. The sentence would have more teeth if it read 'the remainder of the open market dwellings will include a mix and variety of dwelling sizes to be determined by the latest available evidence of need'
A1161B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Agree	We strongly support the mix of residential types but request the policy is strengthened to ensure that the proposed proportions are applied to any future full planning permissions including where outline permission is already granted and that this is expressly stated in the policy.
A1191B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		Part 2 of the draft policy sets out requirements for sites of 5 or more dwellings to provide a mix of housing types. Generally support this, however consider the proposed policy wording should be amended as follows: "The remainder of the open market dwellings will include a suitable mix and variety of dwelling sizes having regard to housing market demand". Note requirements within the remainder of the draft Policy. The Illustrative Masterplan prepared for BUR004, shows how a range of different housing types can be accommodated within the site in line with emerging policy.
A1192B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Consider draft policy wording relating to consideration of a Local Housing Need Surveys needs to be updated to have regard to up to date Local Housing Need Surveys, to ensure delivery of housing reflects current needs and not a snap shot in time (over a 22 year period). Also consider the alternative proposed split (based on the SHMA), should be the starting point and not a definitive requirement. As with the Local Housing Need Survey, such a requirement is reflective of a certain point in time and housing needs could easily change over a 22 year period. Suggested wording is as follows: "On sites of 5 or more dwellings: a. In locations where an up to date Local Housing Need Survey has been undertaken through the 'Right Home Right Place' initiative to an equivalent survey endorsed by Shropshire Council, at least 50% of open market dwellings will reflect the profile of housing need established within the survey; or b. The developer should seek to deliver: 25% of open market dwellings at 2 bedrooms or less 25% of open market dwelling at 3 bedrooms or less". Generally support the principle that the remaining 50% of dwellings should include a suitable mix and variety of dwelling sizes. However, consider proposed wording should be amended to provide greater certainty and ensure deliverability as follows: "The remainder of the open market dwellings will include a suitable mix and variety of dwelling sizes having regard to housing market demand". Note proposed requirements relating to affordable dwellings and dwellings designed for older people and those with disabilities or special needs
A1644B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	During the Plan period, households with a person aged 65-84 years are projected to increase by 42.8%. In response, it is stated that the policy approach which enables people to remain in their own homes for longer is complemented by policies which support the provision of specialist accommodation for the elderly. The Plan's definition of the types of accommodation is not realistic or up to date in its thinking and approach, as schemes are now more sophisticated and comprise a mixture and gradation of care within a range of accommodation types. What is needed is more of the emerging generation of care communities which offer a gradation of staged care and support as the inhabitants become older and / or their needs change. The Council's suggestion that all housing developments in excess of 50 units will deliver specialised care or retirement living is unrealistic, not researched, not based on the facts and it will not deliver. At best the Council's policy approach may secure one or two standard care homes, but that will fall short of adequately addressing this serious issue. It is suggested that instead a proportion of specialised purpose built accommodation is also required, in the form of purpose built and managed care communities, which deliver a range of accommodation incorporating staged, flexible and responsive levels of supporting healthcare and well-being. A highly suitable location is that proposed by on behalf of the landowner at Hencote vineyard and winery
A2163B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Part 6 of this draft Policy requires sites of 50 or more dwellings to include specialist housing for older people and those with disabilities. This needs to be robustly justified by the preparation of needs assessments to be reasonably applied, and found sound. This draft policy should be amended in order to be found sound, as it needs to be fully justified and compliant with national policy.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2169B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	We welcome the inclusion of policy DP1 which will guide the dwelling and tenure mix of residential developments. We understand that part two of the Shropshire SHMA will identify the mix of dwelling sizes, types and tenures needed to meet the needs of the local community. It is a shame that part two of the SHMA has not been published alongside this pre-submission consultation in order for us to ascertain if the proposed housing mix is appropriate. Seeks clarity on Right Home Right Place surveys as a means of identifying local affordable housing need during the Covid-19 outbreak. Wishes to see the need for Nationally Described Space Standards (NDSS) removed from policy DP1 unless it can be demonstrated that there is a clear need for such a standard in all residential properties in Shropshire.
A2169B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Referring to part five of policy DP1 in relation to accessible and adaptable dwellings, we support incorporating a proportion of new affordable dwellings that meet the category standard in order to provide for those in need. However, we have viability concerns over the level of accessible and adaptable dwellings which are required to be provided on site. Part 5 of policy DP1 states the following: "On sites of 5 or more dwellings, at least 5% of the dwellings will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and a further 70% of the dwellings will be built to the M4(2) (accessible and adaptable dwellings)" This equates to 75% of the dwellings on site meeting either M4(2) or M4(3) standards, which will have considerable implications on viability. In order to justify this policy requirement, the Council must be able to demonstrate that delivering these proportions of M4(2) and M4(3) dwellings on site is a viable prospect for housing associations and developers through undertaking robust viability testing that considers an array of variables. It is common knowledge that both these types of dwellings are more costly to provide than regular dwellings, however, there is a significant difference between what is expected for M4(2) and M4(3) accessible dwellings. For example, M4(3) compliant dwellings require a greater footprint than M4(2) dwellings and are therefore significantly more costly for developers to provide. Our members inform us that for many developers, M4(3) dwellings can often only be delivered through bespoke housing types which increases costs. Bullet point 3 requires all affordable dwellings and encourages all market dwellings to achieve Nationally Described Space Standard (NDSS)
A2177B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	If the Council wishes to apply the optional NDSS to new build dwellings, this should be done in accordance with the NPPF (para 127f & Footnote 46). Footnote 46 states "policies may also make use of the NDSS where the need for an internal space standard can be justified". The NPPF also states all policies should be underpinned by relevant and up to date evidence, which should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned (para 31). The NPPG states "where a need for internal space standards is identified, the authority should provide justification for requiring internal space policies. Authorities should take account of the following areas need, viability and timing". Before adopting the NDSS, the Council should provide a local assessment evidencing the case for Shropshire. The Council has not demonstrated in its supporting evidence the need for all affordable housing to meet NDSS. The Council's evidence only identified overcrowding in 11% of social rented accommodation (para 4.11) as opposed to all affordable housing tenures. The Council also suggested such overcrowding may be an unintended consequence of the "bedroom tax" (para 4.13) rather than a systemic problem to resolve. NDSS should only be introduced on a "need to have" rather than a "nice to have" basis. Need is generally defined as "requiring something because it is essential or very important rather than just desirable". Identification of a need for the NDSS should identify harm caused or may be caused in the future. If it had been the Government's intention that generic statements simply stating in some cases the NDSS had not been met justified adoption of the NDSS then the standard would have been incorporated as mandatory in Building Regulations, which is not the case. There is a direct relationship between unit size, cost per square metre, selling price per metre and affordability. The Council should recognise that customers have different budgets and aspirations. An inflexible policy approach to NDSS for all affordable housing will impact on affordability and effect customer choice for affordable homeownership products such as First Homes. Introduction of NDSS for all dwellings may lead to customers purchasing larger homes in floorspace but with bedrooms less suited to their housing needs. This may lead to unintended consequences of potentially increasing overcrowding and reducing the quality of their living environment. Non-NDSS compliant dwellings may be required to ensure that those on lower incomes can afford a property, which meets their bedroom requirements. The Council should assess potential adverse impacts on meeting demand for First Homes and other affordable homeownership products, which may affect delivery rates of sites included in the housing trajectory. The delivery rates on many sites will be determined by market affordability at relevant price points of dwellings and maximising absorption rates. An adverse impact on the affordability may translate into reduced or slower delivery rates. If the proposed requirement for NDSS is carried forward, the Council should include transitional arrangements. The land deals underpinning residential sites may have been secured prior to any proposed introduction of the NDSS. These sites should be allowed to move through the planning system before any proposed policy requirements are enforced. NDSS should not be applied to any reserved matters applications or any outline or detailed approval prior to a specified date. Before the pre-submission LPR consultation, the requirement for NDSS should be deleted. If the NDSS is adopted, then the Council should put forward appropriate proposals for transitional arrangements. Bullet Point 4, states all dwellings specifically designed for older people or those with disabilities or special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations. Bullet 5 states on sites of 5 or more dwellings, at least 5% of the dwellings will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and a further 70% of the dwellings will be built to the M4(2) (accessible and adaptable dwellings) or higher standard within Building Regulations, unless site-specific factors indicate that step-free access cannot be achieved. If the Council wishes to adopt optional standards for accessible & adaptable dwellings, this should be done in accordance with the NPPF (para 127f & Footnote 46) and the NPPG. Footnote 46 states "that planning policies for housing should make use of the Government's optional technical standards for accessible and adaptable housing where this would address an identified need for such properties". As set out in the NPPF, all policies should be underpinned by relevant and up to date evidence which should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned (para 31). NPPG sets out the evidence necessary to justify a policy requirement for optional standards. The Council should apply the criteria set out in the NPPG to ensure an appropriate evidence base is available to support any proposed policy requirements. NPPG sets out evidence should include identification of: likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; variations in needs across different housing tenures; and viability. Detailed information on the accessibility and adaptability of the existing housing stock, the size, location, type and quality of dwellings needed and variations in needs across different housing tenures in the County should be incorporated into the Council's supporting evidence. Many older householders already live in the County. Many will not move from their current home but will make adaptations as required to meet their needs, some will choose to move to another dwelling in the existing stock rather than a new build property and some will want to live in specialist older person housing. The existing housing stock (146,126 dwellings in 2019) is considerably larger than the new build sector (only 0.8% annual addition to existing stock) so adapting the existing stock is likely to form part of the solution. The optional standards should only be introduced on a "need to have" rather than a "nice to have" basis. Need is generally defined as "requiring something because it is essential or very important rather than just desirable". If the Government had intended that evidence of an ageing population alone justified adoption of optional standards then such standards would have been incorporated as mandatory in the Building Regulations, which is not the case. The SHMA Report dated March 2020 identified that the percentage of Shropshire residents reporting "very good" or "good" health was higher than comparisons with England & Wales and West Midlands (para 3.76). The number of households containing someone with a health problem is in line with the proportion for England & Wales and slightly lower than that found in West Midlands (para 3.81). Long Term Health Problem or Disability is in line with England and slightly lower than West Midlands (para 3.83). It is important to note that not all health problems affect a household's housing needs therefore not all health problems require adaptations to homes. All new homes are built to Building Regulation Part M Category 1 (M4(1)) standards, which include level approach routes, accessible front door thresholds, wider internal doorway and corridor widths, switches and sockets at accessible heights and downstairs toilet facilities usable by wheelchair users. These standards are not usually available to the older existing housing stock and benefit less able-bodied occupants. M4(1) standards are likely to be suitable for most residents. There is no rationale for the selection of 5 dwellings as the threshold for qualifying developments or the percentage provisions of 5% for M4(3) and 70% for M4(2) sought. The Council state the requirement for M4(3) is for a wheelchair adaptable home (which includes features to make a home easy to convert to be fully wheelchair accessible) rather than a wheelchair accessible home (which includes the most common features required by wheelchair users) (para 4.31). This distinction should be set out in the policy wording rather than in the supporting text. The Council is also reminded that the requirement for M4(3) should only be required for dwellings over which the Council has housing nomination rights as set out in the NPPG. Government's consultation "Raising Accessibility Standards for New Homes" (ending on 1st December 2020) estimates the additional cost per new dwelling is approximately £1,400 for dwellings, which would not already meet M4(2). In September 2014 during the Government's Housing Standards Review EC Harris estimated the cost impact of M4(3) per dwelling as £15,691 for apartments and £26,816 for houses. M4(3) compliant houses are also larger than NDSS (DCLG Housing Standards Review Illustrative Technical Standards Developed by the Working Groups August 2013) therefore larger sizes should be used when calculating additional build costs for M4(3) and any other input based on square meterage. The Council's own viability assessment identifies viability challenges and threats to housing delivery from the cumulative impact of proposed policy requirements. Before pre-submission LPR consultation, Bullet points 4 & 5 of draft Policy DP1 should be re-considered and modified by the Council. Bullet Point 6 states on sites of 50 or more dwellings an appropriate range of specialist housing designed to meet the diverse needs of older people, such as age-restricted general market housing, retirement living or sheltered housing, extra care housing or housing-with-care and / or residential care homes / nursing homes and an appropriate range of specialist dwellings to meet the needs of those with disabilities and special needs will be provided. The NPPF states housing needs for different groups should be assessed to justify any policies on the size, type and tenure of housing including a need for affordable housing (paras 61 & 62). All households should have access to different types of dwellings to meet their housing needs. Market signals are important in determining the size and type of homes needed. When planning for an acceptable mix of dwellings types to meet people's housing needs, the Council should focus on ensuring that there are appropriate sites allocated to meet the needs of specifically identified groups of households such as the elderly without seeking a specific housing mix on individual sites. The Local Plan should ensure that suitable sites are available for a wide range of developments across a wide choice of appropriate location
A2321B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	The draft plan should not include a prescriptive policy on housing mix, size, types or tenure as needs will change over the plan period. Such a policy would potentially undermine viability and delivery of sites. We consider that any such policy should be dealt with as a supplementary planning document which can be regularly updated and, in addition, there should be no 'blanket' policy – standards should reflect the needs of specific settlements and areas.
A2323B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1		Recognise that draft policy DP1 states at point 1 that "Residential development will be expected to provide a mix of dwelling sizes, types and tenures in order to meet the identified needs of local communities, including families with children, older people, people wishing to build their own homes and people with disabilities and special needs in accordance with Shropshire Council's Strategic Housing Market Assessment" the following points (2 to 6) each state that new development "will" meet the requirements set out in policy rather than being "expected". The draft policy should acknowledge that the final mix of any development will be subject to further negotiation between the applicant and the District Council during the planning application stage. This approach is justified in that demography and market signals will change over the plan period to 2038. Detailed prescription should be avoided in order to not undermine market demand and financial viability, which can put delivery at great risk. Such factors are will ensure the emerging Local Plan Review responds to paragraph 122b of the NPPF.
A2412B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	The plan fails to adequately provide for the need for the growing older person population. Specific allocations should be made for retirement living.
A2412B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	We note and support the aspiration to deliver a mix of properties on a development. However, within point 2, a threshold of five is proposed. The threshold is too low and too hard to implement on a practical scale. Suggest that a threshold of 20 or more dwellings is implemented.
A2441B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	As stated in the document, Shropshire has an older population and that segment of the population will increase. With that in mind, could it be part of the policy that a percentage of new homes must be bungalows. There seems to be an assumption that once older people want to down size or find something more manageable they'll happily go into care homes or assisted living. This is not the case. Many older people would like to remain in their homes, and a bungalow would meet those needs. Bungalows also help with providing homes for disabled people.
A2463B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Disagree	Concern that the SHMA findings will be overruled on a settlement-by-settlement basis. If a settlement-specific approach to housing mix is justified by the evidence, then this should be incorporated as part of a duly made Neighbourhood Development Plan rather than a housing needs survey that would not be consulted upon or independently tested. We cannot see from the supporting text to Policy DP1 or the plan's evidence base how the threshold of 50 dwellings has been arrived at and how it responds to the quantum of need for such housing types over the plan period.
A2470B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP1	Don't know / no opinion	The policy should provide for flexibility going forward so that the Plan is able to respond to changes in circumstances at the time of an application being submitted to the local planning authority so that development opportunities can make better use of the land available whilst responding to the housing needs at that time. In this regard Gladman support the general approach of the policy. Gladman suggest that further clarity is required to justify the inclusion of the WMS (2015) requirements, notably those included in Paragraph 5 of Policy DP1. It is difficult to ascertain the conclusions of the viability studies and therefore how the policy requirements have been derived. It does not appear that the viability study has acknowledged the data relating to M4(3) standards, nor has it been reflected within the SHMA. It may also not be appropriate to have a blanket policy approach to wheelchair accessible properties as the need may vary across locations, sites and schemes. We do not object to this policy, but believe that further justification is required for some of its aspects.
A0101B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Whilst supporting the principle of the provision of self-build plots we do not believe this policy to be practicable and in many cases it may undermine the viability of developments. If the Council wishes to encourage self-build housing more appropriate policies should be developed.
A0156B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	The draft plan makes minimal provision for self build projects. Policy DP2 simply says that developers will be "encouraged" to make serviced and self build plots available within their sites. The wording of the policy should be changed to state that developers will be "required" to provide a percentage of self build plots unless they can prove that there is no local demand or that the scheme will thus become financially unviable.
A0238B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Document Reference BTC3: Re Point 2, policy should be extended to include "small local builders", suggest allocating at least 10% of larger sites for their use & policy rephrased so that the default position is that 10% of the dwellings must be made available for Self-Build and Custom-Build developers as serviced plots. The use of the word 'encouraged' makes this policy unenforceable.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0430B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Support provision of self-build and custom-build housing and the contribution to the overall housing supply but concerned in relation to the level of self-build and custom-build housing suggested and that the demand for such a significant number of serviced self and custom-built plots over the plan period is not yet fully evidence. Furthermore, were 10% be applied to the safeguarded land at Shifnal it would equate to over 100 self-build plots and the distribution of these plots would need careful consideration to prevent there being large areas of undeveloped land within the Site if there was insufficient demand. In terms of the requirement for self-build and custom-plots, DP2(2) suggests that on sites of ten or more dwellings, 10% of the dwellings are encouraged to be made available as serviced plots for self-build and custom-build developers, where there is an identified need on the Self-Build Register. It is noted that the Self-Build Register identifies that the number of applications for self-build plots in the County is falling year-on-year with applications for just 62 self-build plots made between October 2018 and October 2019.
A0436B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0437B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0438B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0439B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0440B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0441B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0442B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0443B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0445B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0446B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome principle of supporting self-build and custom-build housing, which is consistent with government aspirations. The policy will open up a range of opportunities for individuals to develop their own homes. The complexity and timescales of development should not be overlooked. Flexibility about the location of self-build plots should be provided, so they don't hamper the development of the remaining site. To ensure delivery flexibility should be provided to allow plots to revert to normal market housing if they are not taken up within a given time-period, say 12 months.
A0513B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Policy DP2 requires the provision of 10% of residential schemes (over 5 or more dwellings) to be provided as serviced plots for Self-Build and Custom-Build developers where there is an identified need on the Self-Build Register. No justification is provided for this requirement and there is no indication within the policy as to how developments that don't provide serviced plots will be considered and assessed. As a result, the policy cannot be justified. Whilst MD&DP appreciate that demand for Self-Build and Custom Build properties is increasing, they believe these are best provided on dedicated plots rather than being required as part of each individual/larger development schemes.
A0678B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Support the aim of the delivery of self-build or custom build housing. Note the draft policy does not seek provision as an absolute requirement. Note the minimum marketing requirement of 36 months. This period represents a significant time and, particularly in the context of small to medium scale developments, could extend beyond the actual completion of development works associated with the main site delivery. As such the 36 month timescale is considered too long and it is considered that a reduced marketing period is appropriate and a policy 'return mechanism' required should self / custom build disposal not be achieved.
A0692B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		Welcome support for self-build housing in this draft policy. Agree self-build housing provides wider choice of quality homes, can contribute to meeting the needs of different groups in the community and represent part of the solution to achieving mixed and balanced communities. Council estimate around 9% of local housing need is for self-build and custom-build plots (around 2,400 dwellings over the draft Local Plan period). Rural areas are capable of delivering a high proportion of this need as they have strong market demand and suitable sites. The draft Local Plan could better deliver this level of self-build housing if it enables delivery where market demand is strongest. However the draft Local Plan currently restricts development of self-build sites adjoining Community Hub settlements, which is a missed opportunity to increase self-build delivery. The first section of the draft policy promises "support" for self-build housing, but is not explicit on how. Suggest the policy explanation states that in decision-making, provision of self-build plots will be a positive benefit when applying draft policies SP6 (Managing Housing Development), SP7 (Managing Development in Community Hubs) and SP9 (Managing Development in the Countryside). The second section of the draft policy states the Council will "encourage" 10% of dwellings on larger sites to be self-build plots. "Encourage" needs to be defined. Suggest the policy explanation states to encourage provision of self-build/custom-build plots, the Council will accept their inclusion adjoining development boundaries and on cross-subsidy exception sites.
A0853B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Object to DP2(2) for all sites of 10 or more dwellings to provide 10% of houses as serviced plots for self-build, as a need has not been demonstrated for this type and scale of provision. Table 131 of the SHMA suggests that around 2,390 applications will be made for inclusion on the Self-Build Register during the plan period. However, the evidence at tables 132 and 133 of the SHMA shows that the supply of such units is exceeding additions to the Self-Build Register. The SHMA sets out the positive steps that the Council has taken to encourage self-build, for which it should be commended. However, as supply is currently outstripping demand by 33% (SHMA, paragraph 11.16) it not clear why a further policy requirement to deliver self-build plots on all sites above 10 dwellings is needed. Notwithstanding the above, DP1(1) that supports appropriately located Self-Build and Custom-Build housing developments is supported where they comply with all relevant policies of this Local Plan. However, if there is unmet demand for self-build plots, there is no evidence that it could be satisfied through the provision of serviced plots on large residential developments. The Inspectors Report paragraph 168 to the Cornwall Local Plan states: "The Council's published change on this policy (J.1, 46) was too prescriptive in requiring larger developments to provide at least 5% of development as serviced plots for self-build/custom-build. There is not yet the evidence to justify this level of prescription and there must be considerable uncertainty as to whether plots on large new housing estates would be attractive to self-build/custom-build from the anticipated small site windfalls and the modification to policy 8 to apply the WMS would ensure that plots for 1-5 dwellings do not have to contribute to affordable housing, thus making gaining permission and implementation more straightforward." Therefore whilst the principle of providing plots for custom and self-build development is supported, it is more appropriate to firstly identify the scale of demand for such units, and then allocate suitable sites specifically for this purpose through a call-for-sites exercise. In fact, smaller sites are much better placed to meet the demand for self-build development, which is likely to be for bespoke units in rural or semi-rural locations, rather than serviced plots within large scale housing developments. Without prejudice to in-principle concerns, the draft policy also contains a requirement to market plots for 36 months at a 'fair plot valuation'. This is not a reasonable timeframe for marketing the site as a shorter period would bring forward demand where there is an unmet need for land for this type of housing.
A0897B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Para 4.43 of the draft Local Plan notes the SHMA estimates 2,400 applications are likely for inclusion on the Self-Build Register over the draft Local Plan period. It also notes "this equates to around 9% of the calculated local housing need. As such it is considered appropriate to encourage larger development sites to make 10% of dwelling available for Self-Build developers..." This reasoning displays an exclusive focus on the quantity of self-build plots combined with a complete disregard for the location and suitability of those plots. There is no evidence that self-builders wish to live on larger, modern housing estates. Conversely, there is considerable anecdotal evidence that they prefer more individual plots. Larger housing estates are not the right location for most self-builders. The policy would be better framed to take a positive approach towards small scale self-build plots across the county. The wording/requirements of the policy are problematic as: -It is unclear whether the requirement for self-build plots is a requirement and non-compliance will result in refusal of a Planning Application. Needs to be clarified. -The self-build register provides only a county-wide figure. Given the size of the county provision may not meet needs. As such the wording of the policy should be amended to reflect need for self-build plots in the settlement not just in general. -The 10% requirement does not match evidence. The SHMA (Part 2) demonstrates need is being met, as such a requirement for 10% which is not in current policies is unnecessary/not justified by evidence and will fail the tests of soundness. It should be deleted. Section 2b of the draft policy requires self build plots to be accessible at an early stage in the development, "prior to 25% occupation of the relevant phase". However simultaneous construction of self-build and housebuilder development is impractical. Proposed requirement to provide plots "prior to 25% occupation of the relevant phase" be deleted. Section 2d of the draft policy requires plots to be marketed, "for at least 36 months at a fair plot valuation and in accordance with a marketing strategy to be approved by Shropshire Council." Timescales envisaged mean occupants of new housing estates could be living next to unfinished plots for over 3 years. Purchasers want to know the end date for construction work around them, not be faced with the inherent uncertainty over the timing, size and appearance of the self-build plots. Lack of certainty will significantly reduce sales values of the housebuilders' product and undermine viability and delivery on larger estates. The Council's Viability Study does not factor this impact on sales values in its assumptions (it states self-build requirement "has been tested" however Appraisals in Appendix 11 of the Viability Study only show the development value of built properties, with no values for self build plots - neither do the cashflow spreadsheets include any self-build plots, or allow for up to 36 months to sell them), this undoubtedly requires more work/explanation/consideration before the Local Plan examination.
A0899B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Object to policy DP2 despite the well intentioned objective to increase self build and custom build and the recognition in explanatory para 4.41 that these forms of housing meet the needs of different groups in communities. DP2 starts by offering support for these forms of housing but this needs to be explained in the text below the policy by adding the following paragraph to read: "In its decision-making, the Council will consider the provision of self-build plots as a positive benefit of development in the planning balance when applying policy SP6 (Managing Housing Development) and SP7 (Managing Development in Community Hubs) and SP9 (Managing Development in the Countryside)". DP2 ends by offering encouragement for 10% of dwellings to be self build plots but this needs to be explained in the text below the policy by adding the following words "To encourage provision of self-build and custom-build plots, the Council will accept their inclusion on cross-subsidy exception sites". DP2 overlooks the capacity of the rural area to provide a significant proportion of the 9% of dwellings needed in the form of self or custom build dwellings. The rural area offers a powerful combination of strong market demand and suitable sites. This would be facilitated by permitting this self build dwellings adjoining Community Hub settlements which has the following three fold benefit: helps deliver the quantity of self-build and custom-build housing that Shropshire needs; and provides a suitable form of cross-subsidy to enable the delivery of rural affordable housing that Shropshire needs, and helps ensure Shropshire meets the Housing Delivery Test set by the Framework. NPPF para 71 also supports the provision of entry level self build on exception sites and this support should be introduced into policy DP2, DP7 and SP9 to permit self build and custom build on exceptions sites possibly reflecting the approach in Telford and Wrekin Policy HO11.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0984B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Support delivery of self-build and custom-build housing and the contribution that this makes to the overall housing supply, but concerned by the level suggested (10%) particularly on larger strategic sites: For example 10% of dwellings on BRD030 would equate to 105 dwellings, which is a considerable amount, almost a whole year of registrations on the self-build register. Suggest further consideration of evidence and a cap on larger strategic sites. There appears to be a lack of evidence to support this requirement. Also concerned with the requirement to market self-build plots for 36 months, which is considerably longer than other locations. This could hamper the delivery of other adjacent plots. 12 months would seem more appropriate
A1106B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Policy DP2. sets out Shropshire's approach towards Self-Build and Custom-Build Housing. Part 2 of the policy states "2. All sites of 5 or more dwellings in designated rural areas and 10 or more dwellings or sites of 0.5 ha or more elsewhere, are encouraged to make 10% of the dwellings available as serviced plots for Self-Build and Custom-Build developers, where there is an identified need on the Self-Build Register". Although we support the policy as only an encouragement rather than a requirement, we disagree with the sentiment that a policy for self-build and custom-build housing is justified. There is no evidence that Self-Build homes are desired by residents who live within development sites. Self-Build homes are more commonly found on individual plots and not within development sites. This policy's encouragement for the development of self-build houses on sites larger than 0.5 ha could be problematic for several reasons. If the self-build house is designed in such a way that it is not in keeping with the general vernacular of the rest of the site then it will be noticeably out of character; unsuitable and jarring for residents. If the design of the self-build is similar to the other homes on the site, then the development of the self-build home is aesthetically open to debate, as it is for all intents and purposes the same as the houses, with the only difference being it was erected by an independent construction team. The construction of a self-build house is likely to be slower than the construction of houses which are being developed by a housebuilder who is carrying out works with a consortium of specialised workmen who have a wealth of experience erecting similar homes. This approach is neither justified nor sensible. It will be impractical, and we recommend the removal of section 2 of the policy.
A1116B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	The DP2 policy seems to be aimed more at self-builders with financial means. DP6 seems aimed at individual self-builders with reduced financial means which is good. There is also a need to make provision for low-income self-build groups of people, like the Walter Segal self-build groups of the past but updated to today's Building Regs, PassivHaus standard, and 'green' site development. The Walter Segal schemes often proved successful in supporting community building and in establishing stable occupation, as well as providing the opportunity to gain skills and make people employable.
A1152B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Don't know / no opinion	Unsure. The wording of para 2 may need rethinking, or refining, in that 10% of 5 is only 0.5, so the requirement would be for only half a plot to be provided for self-build on sites with only 5 dwellings in designated rural areas. One disadvantage of self-build is that they are currently exempt from CIL, so the burden of funding infrastructure falls elsewhere. We suggest that a discounted rate of CIL may be more appropriate for self-build rather than complete exemption.
A1191B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Agree	Note requirements of Part 2 of the draft Policy. BUR004 is able to provide 10% of the total 100 dwellings as plots for Self-Build/Custom-Build homes.
A1192B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	Note the draft policy encourages rather than requires or expects provision of 10% sold-build/custom-build housing. Appreciate this flexibility, given sites such as Clive Barracks could be required to deliver up to 75 dwellings as self-build/custom-build plot The draft Policy should recognise that for large-scale developments, it is often very difficult to accommodate self-build/custom-build plots without having a negative impact on viability. For Clive Barracks, it is not clear whether implications have been fully assessed. Would not rule out providing such plots at Clive Barracks, however provision must be seen as part of the proposals for the whole site, including all aspects such as planning obligations and abnormal costs of development. Key practical considerations for self-build/custom-build include: preference for remote/private settings (difficult on large development sites); low sale relates for such plots due to the restricted nature of the market (can make sites unviable); mainstream developers offer small plot areas/assign low values to avoid risk; and on large strategic sites with high infrastructure investment, accommodating these plots is difficult/costly (viability concern). Request the draft Policy is reworded to provide further flexibility and ensure that there is no expectation all sites deliver self-build/custom-build plots
A2163B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	This draft policy has a prescribed level of 10% serviced plots for self-build purposes on sites delivering 10 or more dwellings, where there is an identified need on the Self-Build Register. This sentiment is supported, but it is suggested that the spatial strategy that underpins this amended. Reference is made to the HBF comments on self-build, where it is acknowledged that customers seeking self-build opportunities also seek smaller, more rural sites rather than serviced plots within a larger strategic allocation. It is suggested that rural housing sites are encouraged to be proposed as self-build sites, which may be more attractive and thus more deliverable/successful. Para 61 of the NPPF requires the housing needs of different groups to be assessed and footnote 26 of the NPPF refers to self-builders, however the NPPF does not provide a specific percentage of self-build plots to be provided and that the Self-Build Register should inform demand, with enough suitable development permissions allowed to meet the identified demand. This draft policy should be amended in order to be found sound, as it needs to be fully justified and compliant with national policy
A2321B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Disagree	In line with Vistry's response to Policy DP1, the imposition of an inflexible requirement for the delivery of serviced plots on sites could again undermine the viability and deliverability of sites.
A2323B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2		It is noted that residential developments of 10 or more homes are encouraged to make 10% of the new homes available as serviced plots for self-build and custom-build developers, where there is an identified need. However, we consider that a consideration is whether providing such homes in large scale new build developments is meeting the needs and aspirations of those people who have registered for a self-build / custom-build home. To avoid self-build and custom-build plots being left undeveloped a mechanism should be built in to enable the plots to be delivered by the developer if a self-build and custom-build developer is not found after a certain period. Phasing and legal agreements will have to ensure that the provision of 10% of all homes on a development for self-build / custom-build homes would not have an impact on the delivery and occupation of the wider development. This should be a requirement of any policy to ensure that overall housing need for the District can still be met, most likely through the ability of major housebuilders to deliver at scale
A2470B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP2	Don't know / no opinion	In general, this policy is supported – any such policy must have robust evidence. But there is no reference to the council's figures given (in the LPR) within the SHMA. In addition, the conclusion on the viability for self-build plots is not clear in the assessment as no further reference to such housing types is given within the rest of the study. Further evidence is therefore needed for this policy. We would request that the policy has added flexibility as there is no guarantee that these units will be delivered and there may be situations when they are difficult to deliver which may result in the non-delivery of otherwise sustainable land for housing.
A0026B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	The Parish Council asks that registered providers should work with Town and Parish Councils to ensure that there is a requirement to offer local residents first option on affordable homes. This could be achieved via a Local Lettings Policy. This is important in order to provide family support from childcare, to help with the elderly. We request that this is added to policy DP3.
A0101B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support this policy but suggest that para 1c is in conflict with policy 1h, particularly on larger sites. This could be addressed by including a phasing provision or introducing a graduated requirement – e.g. 50% of affordable to be provided before 50% general market occupancy and 100% before 80% general market occupancy.
A0158B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	We agree that there should be a very strong focus on affordable housing in future. During the Local Plan period, more than half of new homes should be affordable. The Council agrees that there should be a higher affordable housing ratio in the south of the County, but would prefer this to be 30%.
A0238B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Don't know / no opinion	We agree that there should be a very strong focus on affordable housing in future. During the Local Plan period, more than half of new homes should be affordable. The Council agrees that there should be a higher affordable housing ratio in the south of the County, but would prefer this to be 30%.
A0240B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	As concluded in its response to draft Policy SP2 (Strategic Approach), L&Q Estates recommends that the Council affords further consideration to an uplift of its LHN to account for acute affordable housing need, and subsequently adjusts its housing requirement to reflect this.
A0269B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Affordable Housing Provision We object, in that no exception is made where Development Guidelines record that local provision of Affordable Housing is adequate and has been catered for elsewhere
A0306B023	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield
A0316B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Disappointed that the project notes the overcrowding in social housing and the need for affordable housing, yet only allocates 10% of housing developments to affordable dwellings (20% in South Shropshire). I would like to see the very greatly increased so that local people can afford to stay in their county. Without young people, working people and young families, rural communities will die. We need affordable housing, not estates where 90% are unaffordable to the local community.
A0318B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	We support policy DP3 and the provision of affordable housing within Shropshire. There is a clear need to maximise the affordable housing provision, accepting the constraints regarding land value. However, we note that the delivery of the affordable housing requirement for the area will fall short through this policy. The affordable housing provision should be revised to accord with SP2.
A0392B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Risks: That the applicant still has the ability to easily argue that the affordable housing can be grouped in one area for their convenience and perceived benefit for the selling of the market value houses. Comment(s): We welcome and support the requirement for affordable housing to be indistinguishable from the open market housing, including by way of character, design, location and size. We strongly believe that the affordable housing shall be distributed amongst the market value housing and not all in one place. We believe that this is the intention of this statement, but would like the distribution of affordable housing throughout the site to be made clear and unambiguous as the wording in paragraph h states "appropriately" and this could still result in them all in one location if the applicant argues that this is appropriate for convenience rather than the benefit of the residents.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0392B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Risks: That low income families may not have sufficient access to private cars to support access to employment and that they become further disadvantaged from the location / infrastructure / services of a particular site. That tenuous and clearly unsustainable statements are made about the ability to meet the walking, cycling and public transport criteria, particularly in open countryside where there might be a bus service, but it is not suitable to support access to employment and local services. Comment(s): We welcome and support the requirement for affordable housing to "maximise opportunities for future residents to access services and facilities by walking, cycling or public transport". However, affordable housing that doesn't provide sustainable public transport to employment opportunities as a minimum will further disadvantage those with low incomes who do not have access to their own vehicle. We believe that this should be changed to a firm requirement for all affordable housing sites to provide access to services and facilities, including schools and employment, by means other than just private cars. As experience has shown that some of the claims that sites have access to services and facilities by walking, cycling and public transport in a rural setting are very tenuous, we strongly suggest that the following requirements are placed on applicants: a. Claims that access is available by walking shall be risk assessed with appropriate mitigation added to the application to cover where the routes cannot be assessed as safe (e.g. where there are no pavements and/or the roads are narrow and support large/fast moving vehicles). b. Claims that access is available by cycling shall be risk assessed with appropriate mitigation added to the application where the routes cannot be assessed as safe (e.g. narrow roads that are also used by large/fast moving vehicles). Where cycle routes are proposed, these shall meet the latest Government Guidelines for the provision of cycle routes. c. Where access is by public transport, the sustainability based on the current timetable shall be assessed and how this works for employment, visiting the local Doctor's Surgery plus access to schools and shops.
A0430B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Support the need to deliver affordable housing and fully recognise obligations on site promoters to assist in meeting such needs, as set out in DP3(1)(a) which requires 20% of homes to be affordable. Committed to delivering the required amount of affordable homes on the Site. Notwithstanding this, DP3(2) is also welcomed, which allows for reduced rate of affordable housing based on the viability or otherwise of sustainable schemes where evidence is clearly presented and agreed by the Council, as this approach is endorsed by the NPPF. DP3(1)(d) says that where affordable housing is to be secured on site, its tenure should comprise 70% social or affordable rent accommodation and 30% intermediate or other affordable housing, unless evidence of local need indicates otherwise. Support the flexibility this part of the policy provides. However, clarity is required on whether the "other affordable housing" includes First Homes for sale at a discount of least 30%, and it is respectfully requested that DP3(1)(d) be kept under review to ensure consistency with the Government's policy changes with regards to First Homes.
A0433B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	The draft policy headed affordable housing target rates, which implies they are not minimums and are liable to reduction as seems to typically happen when Planning Permission is granted. The rates are very low.
A0436B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0437B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0438B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0439B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0440B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0441B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0442B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0443B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support different affordable housing provision levels, depending on location within the district, as assessed within section 3 of the SHMA and the Viability Assessment. Support the flexibility for reduced rates of affordable housing where viability concerns exist.
A0450B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Policy DP3 needs a more rational justification for the two affordable housing requirements (at 10% and 20%) beyond the reasons given in paras 4.47 and 4.49. The justification must explain the need for two different levels of provision in the County and the differences between the circumstances in the north and south of the County. The exact location of the boundary between the two areas requires a better rationale than relying on the River Severn with no other justifiable rationale in other locations across the County. This rationale should explain how the circumstances differ to the immediate north and south of the boundary to justify its location.
A0508B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	We support the differentiation in the affordable housing requirement on those sites in the north of the County to sites in the south and welcome the lower threshold for sites in the north
A0609B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support the percentage differential and same build quality for all types of dwellings.
A0636B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Local housing requirements are not realistically taken into account. In my opinion "affordable housing" is a misnomer and in no way provides housing for those most in need. The use of the term "affordable housing" is misleading, the reality is workers on the average national wage or below cannot obtain a mortgage and aspire to own a home for their family. The provision of 14 "affordable" homes, whatever that implies, is ignoring the real problems with the provision of housing for the less well off in society.
A0642B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield. Playing pitch strategy 2010-2020 states; (the updated one due out October 2020 is being used to support the local plan!) Building new facilities on new sites is generally a 'last resort' approach when all other options have been explored given the capital investment implications. It is only appropriate where there is a lack of provision overall and deficiencies across a number of sports which cannot be fully addressed by implementing the policy options outlined above. In other words not only is there a lack of infrastructure for cycling and pedestrians but also a lack of infrastructure in the design of new facilities including public open spaces that families can actually access.
A0697B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Object to the insertion of a planning condition with the draft policy regarding the need to transfer affordable dwellings prior to completion of 50% of the consented open market housing. This criteria is not necessary, as such requirements are set out in planning conditions accompanying a Planning Permission. It may not be appropriate or viable to apply this criteria in such a prescriptive manner. Circumstances/events may occur through the life of a consent/development which necessitate changes to such triggers. This requirement should be removed and such triggers determined in consultation with the applicant and relevant registered provider during the Planning Application process.
A0896B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	The proposed approach of a fixed 10% affordable in the north and 20% affordable in the south provides certainty and is considered deliverable for medium-sized sites (10-50 dwellings). Policy DP3.1d requires a split in affordable housing tenures of 70% affordable or social rent and 30% intermediate housing. The Government have since published a consultation on proposed changes to planning policy and regulations that propose that 25% of the affordable units must be First Homes. If this change is introduced, the tenure split will need to reflect Government policy.
A0897B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Local Plan Delivery and Viability Study finds proposed policy requirements (discussed in more depth under Policy DP12) make viability very challenging for all sites over 60 dwellings in the south of the county (sites from 60-250 dwellings are shown to be unviable if affordable housing requirements are higher than 10%). At 15% or 20% affordable housing, the residual land values (RLV) of these schemes fall below the benchmark land value (BLV) of £425,000, which represents the minimum return at which a reasonable landowner is likely to sell their land. These types of development comprise 76% of the planned development in the south of the county (according to the Local Plan Delivery and Viability Study). The issue raised by the Delivery & Viability Study is therefore very significant for delivery in the south of the county. As such consider that the rate for affordable housing contributions should be reduced from 20% to 10%. Draft Policy DP3.1d requires a split in affordable housing tenures of 70% affordable or social rent and 30% intermediate housing. This is inflexible and is likely to be problematic over the lifespan of the Plan. The draft Policy would be strengthened by stating, "unless evidence of local need indicates otherwise or unless an alternative mix is considered appropriate and agreed with the developer." Government have recently published a consultation on proposed changes to planning policy and regulations that propose that 25% of the affordable units must be First Homes. If this change is introduced, the tenure split will need to reflect Government policy. The most effective response is to ensure the policy is flexibly worded to enable change over the lifespan of the Local Plan.
A0928B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	The approach to simplify the provision of affordable housing to two bands of 10 and 20% across Shropshire is generally welcomed. Reference to viability review is also in line generally with the approach set out within national policy. However, the policy is overly detailed and prescriptive on the type of affordable housing to be provided with elements which would be better included within an SPD. Affordable housing needs change over time and such prescription on tenure split, rent caps and equity share is inappropriate in a Local Plan policy intended to apply for a 22 year plan period. Equally we would highlight the broader definition of affordable housing with the Annex to the Framework and the policy should allow for a more flexible approach to the provision of a wider range of affordable housing. The Government are also consulting on further changes to the provision of wider affordable housing types including a focus on First Homes and the policy should allow flexibility for this and include for this within the affordable housing definition.
A0935B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Subject to viability testing, support draft Policy DP3 with regard to the affordable housing thresholds. There should be flexibility within the draft Local Plan to respond to changing housing needs over the Local Plan period. Consideration of individual site circumstances and the circumstances of a local area should be taken into account to determine the appropriate type of housing for development sites.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0961B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Para 1a support the percentage differential and same build quality for all types of dwellings
A0984B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	Support the need to deliver affordable housing. Support applying different affordable housing ratios to different parts of the County, based on needs and viability, as this accords with para 34 of the NPPF. The requirement in the south is 20%, committed to achieving this on BRD030. Support tenure split and provision of flexibility on this to ensure local needs are met. Support the distribution of affordable housing throughout the site
A1106B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	We support Shropshire's approach towards affordable housing in general. We urge the Council to take notice of the potential for open-book viability assessments to be used for determining the provision of affordable housing expected within developments. The approved application for 296 residential units (ref: 14/00246/OUT) underwent de
A1152B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	A much greater numbers of affordable houses are needed. Table 35 of the SHMA part 2 (published on 22nd September) indicates a need in Shropshire for 17,574 affordable houses between 2016 and 2038 (799pa), this is referenced in the draft Local Plan. Satisfying this need would equate to 57% of the overall guideline figure of 30,800 houses. Yet the Council proposes an overall target of only 25% affordable housing (7,700 of the 30,800) in draft Policy SP2, whilst draft policy DP3 proposes targets of only 10% in the north and 20% in the south. At present (according to the latest AMR) only 21% affordable housing is achieved. If only 10% of houses in the north are affordable then nine open market houses will be built for every one affordable house built. That will make the problem of the overall inadequate proportion of affordable houses worse, not better. The ambition should therefore be to build a greater proportion of affordable houses than is provided for in draft Policies SP2 or DP3. It is noted that an Inspector at the rerun Teal Drive, Ellesmere Inquiry indicated that a more effective means of solving the housing crisis than building more home is to build more council housing, this is supported by housing completion data which shows a reduction in completions since councils stopped building housing. The existing Core Strategy originally aimed for 30% affordable housing. Understood this was reduced after the 2008 financial crash, by reference to viability assessments, to the current proportions of 10%, 15% and 20% in different geographical areas. Viability studies have again been carried out to inform the draft Local Plan. Do not see the need for the proposed para 2 of draft policy DP3. Developers will know from the outset what percentage of affordable housing provided for in policy, and should therefore be able to pay an appropriate amount for the underlying land in order to provide them with an acceptable profit level, without recourse to further pleading of exceptional circumstance as to viability.
A1191B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Note that draft Policy DP3 would mean BUR004 is required to provide 20% affordable housing. Do not object to this requirement and have provided for 20% affordable within the Indicative Masterplan. Proposed requirements c. to f. are noted. However, consider these are detailed matters for S106 Agreements and should be considered on a site by site basis e.g. it may not be appropriate on every site to deliver all the affordable dwellings by completion of the 50% market dwelling, and for some areas depending on housing need the tenure split of the affordable may need to be varied from the 70/30 split proposed. Therefore, proposed requirements c. to f. should be deleted to ensure flexibility and enable the Authority to best respond to its housing need at that time.
A1192B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Draft Policy DP3 seeks 10% affordable housing in the north and 15% in the south. Clive Barracks lies in the 10% north 'zone'. Welcome this in comparison to the provision of 15% affordable housing. However, note the previous Shropshire Dynamic Viability Index 2013 (SDVI) suggests affordable levels should be in the 0% to 5% region for the north. Appears to be a disconnect between the evidence base of the SDVI and the draft policy. The Council's 2020 Local Plan Delivery and Viability Study, states in Para 12.97: "Just under half of the planned development is in the lower value North area. Very little development is shown as viable, even without affordable housing. In spite of these results, based on this 'on the ground' experience there is a strong case to have a minimum requirement of 10% affordable housing. The Council should be cautious about relying on development from this area to deliver the housing requirement." Evidence to support 'on the ground' claims that sites in the north can deliver 10% affordable housing is limited. Table 10.17 of the Local Plan Delivery and Viability Study provides details of sites in the north that are far smaller than most proposed through the emerging Plan; the largest is a 48-dwelling scheme. These sites are, simply, not comparable to larger strategic sites and trying to suggest these comparable make a "strong case" for a blanket 10% affordable level is incorrect. Note many of the supplied comparable to support a 10% rate 'on the ground' are dated from 2015 to 2017, based on historic assessments of Section 106, CIL and other planning obligations. In addition, there is no analysis of those comparable site's abnormal and infrastructure costs, or their CIL and Section 106 obligations. This means the few examples provided cannot form a reliable body of evidence on which to base a policy for a blanket 10% affordable contribution. Given the SDVI and Viability Study both confirm that an extremely reduced quantum of affordable housing is deliverable in the north, it is considered the amount of affordable housing to be secured through sites in the north of the Authority should be revisited, with a far lower percentage, which reflects the evidence base, taken forward in the draft Local Plan. Recognise Part 2 of the draft Policy provides for reduced rates of affordable housing if exceptional circumstances are evidenced. However, if 10% affordable provision is progressed in the north, evidence suggests all sites will have to go through the process of evidencing exceptional circumstances to reduce the affordable housing provision. This is not considered a suitable or appropriate methodology and is misleading as the public/Councillors will expect delivery of 10% affordable housing, which in most instances will not occur. Strategic Brownfield Sites, such as Clive Barracks are viable and deliverable, but at lower affordable housing levels than greenfield sites, meaning a need to apply part 2 of the draft Policy. Whilst a flexible approach in respect of viability is appropriate, some certainty is required. As such the starting point for affordable housing provision will not be a percentage requirement evidenced as undeliverable. Para 63 of the NPPF states "To support the re-use of brownfield land, where vacant buildings are being reused or redeveloped, any affordable housing contribution due should be reduced by a proportionate amount". Footnote 28 suggests this should be equivalent to the existing gross floorspace of the existing buildings. The draft policy should be revised to better reflect the evidence base and nature of sites which are to be brought forward in the north. Alternatively, strategic sites should be omitted and the approach to affordable housing, CIL and other contributions addressed in the site-specific policy (see comments on draft Policy S19).
A2130B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	We highlight that Shropshire Council's own assessment of housing need, published after the main consultation document, requires more affordable homes than planned – by almost 10,000. So both the overall target and the proportion of affordable homes target require a complete rewrite. We also query the definition of affordable. The amount people pay for their housing is taking up an increasing proportion of their income. Nationally, 2/3 of private renters pay 1/3 of their income on rent – The Green Party thinks this is wrong. The Government's definition of "affordable" is 80% of market value. This is ridiculous and doesn't address the need of so many households in south Shropshire. The South Shropshire Green Party believes that "affordability" should be linked to local incomes rather than property values. The current definition of "affordable" as 80% of average property values is in truth not "affordable" for many. We don't just need more homes, we need more affordable and particularly best quality social housing homes. We need to make sure that any new housing in is the right sort in the right place. We need to make sure that any new houses are built to the standards we need for our sustainable future.
A2163B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	The requirement for 10 or more dwellings or sites of 0.5ha or more to provide 10% affordable housing in the north of the District is supported. It is also supported that reduced rates of affordable housing will be considered in exceptional circumstances, where evidence is presented demonstrating viability concerns.
A2169B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	We are pleased to see that the Council recognises the importance of affordable housing delivery. Observing these affordable housing need figures, the thresholds laid out in part a) of policy DP3 seem exceptionally low considering the Council's key concerns regarding the demand for affordable housing. The council should be more ambitious their targets in order to ensure an adequate of AH is delivered over the plan period. Although we acknowledge that the council have recognised the sometimes difficult 3 viability hurdles that come with housing development in Shropshire, we think the minimum threshold is too low and should be of a higher value for developers to aspire to
A2169B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Affordable Rents Part e) of policy restricts affordable rents to 80% of market rent, noting that this should not exceed the Local Housing Allowance. This is acceptable as long as the guidance within the MHCLG policy statement on Rents for Social Housing is applied, which permits annual rent increases on both social rent and affordable rent properties of up to CPI+1 percentage point from 1 April 2020. However, there is no certainty as to whether LHA will increase annually or remain static as it did for four years prior to the recent raise in April 2020. Typically, when pursuing a new development, Registered Providers often cap affordable rents equal to Local Housing Allowance (LHA) on first let, assuming that rents will inflate in line with Government policy on rent increases. By capping affordable rents in perpetuity, it prevents Housing Associations from increasing their affordable rents in line with Government policy. Preventing such inflation can have critical impacts on Registered Providers. For example, a Housing Associations long term assets may experience a static rent against a rise in all of their costs of management and maintenance in the face of inflation. In essence, this would give the effect of a rent cut for these businesses. The significant concern is that this scenario would be highly unsustainable and uncompetitive for Housing Associations and could potentially severely threaten the delivery of affordable housing across Shropshire
A2169B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Retaining affordable housing in perpetuity The sole reference to retaining affordable housing in perpetuity is in Annex 2 where this is sought for affordable housing delivered on rural exception sites. This principle is appropriate and supported by our Members as this helps to secure land for delivery of affordable housing in rural areas where housing delivery would otherwise not be supported. Securing affordable housing in perpetuity more widely is not supported by the NPPF and housing associations for a number of reasons, foremost of which is that it restricts lenders appetite to fund development, as mortgage provision becomes more difficult with greater restrictions on individual properties. Private companies will not typically invest in developments if there is no prospect of realising the original investment and any returns
A2173B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	DP3 Affordable Housing Provision - DP3.1(h) DP4 Affordable Exceptions - DP4.1(k) DP5 Entry Level Exceptions - DP5.1(i) DP6 Single Plot Exceptions - DP6.1(h), DP7 Cross Subsidy Exceptions - DP7.1(l) and (n). None of these Policies refer to access to employment. There is a requirement for reasonable access to local services by walking, cycling or public transport, but none of these Policies refer to daily access to employment. Sustainable travel to work is key for the suitability of developments and meeting Climate Emergency aims and Policy SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 If employment is not available in the settlement then there must be daily peak time public transport - and many low paid jobs are weekends or shifts. Also access to key Secondary services like GP, dentist, and pharmacy by return public transport at suitable times of day is vital. These Policies aim to assist lower income households. If they are not to become burdened with additional costs and/or isolated from a wider range of opportunities (e.g. budget supermarket shopping, leisure and cultural activities) then a regular and frequent public transport, including evenings and weekends, is fundamental.
A2173B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	The whole document is not objective but puts a positive spin on everything that the Cabinet sought to promote from the outset of the Review in its "highly ambitious" High Growth strategy for both housing and economic growth. Hierarchy of Settlements There are clear contradictions between the Sustainability Objectives set out in the Report with the application of Policy within the Hierarchy of Settlements and with Community Hub designations which are purported to give significant positive effects on sustainability. The relaxation of key criteria for Community Hub settlements in the HoS to not require multiple significant employment and peak time public transport is still included. Lack of these will fundamental requirements will result in additional private vehicle use travel use which is contrary to the Council's Climate Emergency Policy, to NPPF, and to Government's Zero Carbon aims. It is contrary to the "Spatial Vision" and SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 which seeks to minimise car travel and maximise trips by sustainable travel, and to reduce carbon emissions. Road transport is identified as the largest single contributor of CO2 emissionsSO6 is explicit to focus developments to accessible locations, and reduce vehicle use. Table 1.1 Housing Targets All options proposed at initial Issues & Options stage were above the FOAHN identified needs of the county, with additional growth additions of 5%, 10% or 15% respectively. Therefore they all have significant benefits, irrespective of current SAMDev targets. The lower rates might as well not have been included as options if they were never going to be given creditability in the sustainability assessment Table 1.2 'Poor' sites. Numerous sites assessed as 'Poor' appear to have been selected to be allocated for development. That makes no sense. Table 2.7There is no assessment of employment opportunities within the Sustainability assessments for residential sites – if they are available in the settlement, how far they are from the site, how accessible they are by sustainable travel walking wheeling or cycling, or by public transport at times when they will trade (including shift patterns if applicable)These are key factors in achieving sustainable development to meet Sustainability Objectives SO2 & SO4economy and services, and also SP3 Climate Change and Sustainability Objectives SO5, SO6 & SO12which seek to minimise car travel and maximise trips by sustainable travel, and to reduce carbon emissions. Road transport is identified as the largest single contributor of CO2 emissionsSO6 is explicit to focus developments to accessible locations, and reduce vehicle use.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2173B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Table 2.7 Services assessment The footnote states that the list of services is consistent with the Primary Services in the Hofs That is incorrect. Table 2.7 does not assess Nursery, Convenience Store, Post Office, Petrol Station which are considered "essential for day-to-day life", whilst including many Secondary items that are "nice to have but not essential". Access to all the Primary services is fundamental to sustainability. Table 2.8 Peak time public transport provision is included in Table 2.7 but not in Table 2.8 This should be a key factor in assessing and comparing sites. DP3 Affordable Housing Provision This policy does not itself "reduce the need for people to travel by car", that is purely determined by the siting of the Open Market development that it forms part of and that being accessible by sustainable travel. If sites or settlements do not have that provision then all residents will have to use cars, potentially impacting more on lower income households, and on the environment. DP4 Affordable Exception Sites This policy does not itself "allow for a reduction in the need for private car use" It may not increase the need if every one of the new residents uses the other options. Also the requirement is only to access "local services" which in a rural settlement might not include many secondary services or, crucially employment. If settlements or sites do not have that provision then all residents will have to use cars, potentially impacting more on lower income households, and on the environment. Whilst minimal harm to landscape character and historic feature is noted for urban settings, the impact to rural settlements from these developments is not specifically considered, and the likely impact is played down to suit. DP5 Entry Level Exceptions includes consideration of this fact. DP6 Single Plot Exceptions. Only reference is to urban settings with no mention of locations in or adjacent to rural settlements where impacts will be greater DP7 Cross Subsidy Exceptions This completely overlooks developments adjacent to rural settlements. These do not have the "best access to services and facilities in the county" It cannot be said that they "naturally" reduce the need for travel by car, or that they "encourage" sustainable travel. DP7 only requires access to local service and facilities, but makes no mention of accessibility to employment opportunities If settlements or sites do not have work opportunities then all residents will have to use cars, which potentially impacts more on lower income households, and on the environment.
A2177B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Draft Policy DP3 requires new residential development of 5 or more dwellings in Designated Rural Areas and 10 or more dwellings elsewhere to provide onsite affordable housing of 10% in the north and 20% in the south as defined by geographical areas in Figure DP3.1. Onsite affordable housing tenure to comprise of 70% social or affordable rent accommodation and 30% intermediate or other affordable housing unless local need evidence indicates otherwise. The Council's own viability assessment identified viability challenges across the County and the cumulative impact of proposed policy requirements threaten housing delivery. The NPPF promotes affordable home ownership by requiring at least 10% of new dwellings built to be available for this tenure leaving only the remainder for other affordable housing tenures (para 64). The Council's policy approach to affordable housing tenure is inconsistent with national policy. The Government's consultation on Changes to the Current Planning System (ending on 1st October 2020) also proposes further changes to delivering First Homes. Before the pre-submission LPR consultation, draft Policy DP3 should be re-considered and modified by the Council
A2321B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Paragraph 20 of the NPPF states that strategic policies should make provision for housing, including affordable housing. Paragraph 62 of the NPPF goes further to distinguish that affordable housing can be provided off-site or an appropriate financial contribution paid in-lieu if it can be robustly justified. 4.4 Vistry therefore consider that the reference to the identification of 'exceptional circumstances' in part 1B of Policy DP3 to be removed for the draft plan as it directly conflicts with guidance contained within the NPPF.
A2323B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3		Acknowledge para 20 of the NPPF states that strategic policies should make provision for housing, including affordable housing. However, the terminology used at point b of draft policy DP3 states "Ensuring that only in exceptional circumstances will either an offsite provision or a financial contribution in lieu of on-site provision be supported on major housing development" is not in accordance with para 62 of the NPPF. Para 62 of the NPPF states that affordable housing can be provided off-site or an appropriate financial contribution paid in-lieu if it can be robustly justified. The NPPF does not specify any such definition of "exceptional circumstances" for off-site provision or an appropriate financial contribution in lieu. This terminology should be removed from the emerging Local Plan Review.
A2441B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Disagree	Up until this document is approved Bicton Parish is in North Shropshire. In a BID board meeting on 29 September, Councillor Nutting referred to Bicton as North Shropshire. Why has it been moved to South Shropshire in the Local Plan? There is no explanation. Please reinstate it as North Shropshire.
A2470B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP3	Agree	This policy is supported
A0158B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Agree	The Council would be inclined to support an affordable exception site on the strict understanding that the dwellings would be affordable in perpetuity, there is suitable community engagement in advance and proper consideration is given to the infrastructure requirements arising from the development.
A0238B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Don't know / no opinion	This policy is supported
A0306B024	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield
A0316B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Agree	I'm very happy to see provision for large-scale affording housing sites. Hopefully this can be used widely across the county to offset the mere 10/20% allocated to affordable dwellings in DP3.
A0392B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	Risks: That the criteria allows these sites to be almost anywhere in Shropshire due to the very subjective terms for appropriate, sustainable and, but to a lesser extent, isolated. There is also a risk that areas in the vicinity of a village school will be targeted for multiple applications which are not appropriate for the area which has been covered by the comment to SP9. Comment(s): The suitability criteria for Affordable Exception Sites in "Another settlement with a school or appropriate access to a school by sustainable modes of transport" could be argued to be anywhere in Shropshire as what is meant by the following subjective statements: a. Appropriate access b. Sustainable mode of transport c. Isolated Location in Paragraph b Also, many rural locations do not have sustainable access to local services by walking cycling or public transport (including school transport) to support the appropriate access and sustainable mode of transport requirements. This needs to be considered in conjunction with the response to SP9.
A0392B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	Risk(s): That low income families may not have sufficient access to private cars to support access to employment and that they become further disadvantaged from the location / infrastructure / services of a particular site. That tenuous and clearly unsustainable statements are made about the ability to meet the walking, cycling and public transport criteria, particularly in open countryside where there might be a bus service, but it is not suitable to support access to employment and local services. Comment(s): We welcome and support the requirement for affordable housing to have "reasonable access to local services by walking, cycling or public transport". However, this should also include employment opportunities to ensure that those without access to a private car, have sufficient opportunity to be able to travel to work. Also, as experience has shown that some of the claims that sites have access to services and facilities by walking, cycling and public transport in a rural setting are very tenuous, we strongly suggest that the following requirements are placed on applicants: a. Claims that access is available by walking shall be risk assessed with appropriate mitigation added to the application to cover where the routes cannot be assessed as safe (e.g. where there are no pavements and/or the roads are narrow and support large/fast moving vehicles). b. Claims that access is available by cycling shall be risk assessed with appropriate mitigation added to the application where the routes cannot be assessed as safe (e.g. narrow roads that are also used by large/fast moving vehicles). Where cycle routes are proposed, these shall meet the latest Government Guidelines for the provision of cycle routes. c. Where access is by public transport, the sustainability based on the current timetable shall be assessed and how this works for employment, visiting the local Doctor's Surgery plus access to schools and shops.
A0438B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Agree	Draft policy DP4 affords a great opportunity to develop a significant number of affordable dwellings across rural settlements. However, it should be noted that securing land for such developments proves extremely challenging as landowners are not motivated to sell land for development unless they feel an appropriate land value is being paid, hence policy DP7 which assists in affording an element of cross subsidy is strongly supported.
A0642B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield. Playing pitch strategy 2010-2020 states; (the updated one due out October 2020 is being used to support the local plan!) Building new facilities on new sites is generally a 'last resort' approach when all other options have been explored given the capital investment implications. It is only appropriate where there is a lack of provision overall and deficiencies across a number of sports which cannot be fully addressed by implementing the policy options outlined above. In other words not only is there a lack of infrastructure for cycling and pedestrians but also a lack of infrastructure in the design of new facilities including public open spaces that families can actually access.
A0665B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	The Explanation text to DP4 says that there is an expectation that exception sites will not exceed 25 dwellings. The policy wording itself needs to say this, but 25 homes should not be open to debate and the new policy wording should say a maximum of 25 dwellings. Paragraph 4.57 should be amended to reflect this. Exception sites are supposed to be just that, an exception. If you let them be any size then they should be defined in the local plan as specific allocations. 25 is a reasonable number under this policy, and whilst the plan thinks this is the right amount, it needs to be enshrined in the actual policy.
A1152B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Agree	Broadly agree with these policies. Note in particular that the wording of the policies prevent such sites being built in the open countryside. That reinforces views that the wording of policy SP9 should be amended to remove para 4a. Only single plot local needs affordable exception sites should be allowed in the countryside.
A1870B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	request that this paragraph be removed from the policy, as we are concerned that it will be exploited in order to seek development in isolated rural hamlets It seems unnecessary as it should be covered in paras 1.a.i. and 1.a.ii. It also appears to contradict with 1.b, as such a location will by definition be in an isolated location. If a school is not in a Strategic, Principal, Key Centre, Community Hub or a Community Cluster Settlement it surely must be in an isolated rural location away from the normal facilities you would find in the above. We are also concerned about the wording "... appropriate access to a school by sustainable modes of transport" and the scope for this being exploited. Just because a school is accessible in this way, it does not mean that sustainable modes of transport will be used once the development has been completed. It is also very ambiguous and is vital that "sustainable modes of transport" be defined, with appropriate examples such as walking, cycling, transit, carpooling, car sharing, and green vehicles

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2173B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	DP4.1(c) limits development to that required by Identified Local Needs survey However, the Policy does not include a definition of scale, which is only set out in the Explanation para 4.57 saying there is an "expectation" that will not exceed 25dwellings adjacent to Strategic, Principal & Key Centres. That is very open to interpretation and not binding, so gives no confidence to local residents. For Community Hubs & Clusters and other rural settlements there is no limitation to scale of development. As 'Affordable Exception' developments are predominately intended to be built adjacent to those rural settlements, any development could be large in relative terms. There is also no cumulative impact limitation on multiple developments adjacent to settlements. In Policy DP5 Entry Level Exception Sites DP5.1(b) includes limitations of scale within policy wording In Policy DP7 Cross Subsidy Exceptions DP7.1(e) includes guide of scale within policy wording We believe that Policy DP4 Affordable Exception Sites must define limits of scale and cumulative impact adjacent to Community Hubs & Clusters and other rural settlements (as well as limited to Identified Local Needs) within Policy. DP4.1(k). Does not refer to access to employment. Sustainable travel to work by walking, wheeling, cycling, or public transport are key for the sustainability of settlements and meeting Climate Emergency aims and Policy SP3 Climate Change.
A2173B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	Multiple or phased "exception" developments would have a cumulative impact amounting to the same, or arguably greater impact, as a large development on rural settlements over the course of time. We do not believe that this is the intention of NPPF in allowing Rural Exceptions. Limitations on cumulative "Exception Site" developments adjacent to individual settlements must be included within these policies.
A2173B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP4	Disagree	DP3 Affordable Housing Provision - DP3.1(h) DP4 Affordable Exceptions - DP4.1(k) DP5 Entry Level Exceptions - DP5.1(i) DP6 Single Plot Exceptions - DP6.1(h), DP7 Cross Subsidy Exceptions - DP7.1(l) and (n). None of these Policies refer to access to employment. There is a requirement for reasonable access to local services by walking, cycling or public transport, but none of these Policies refer to daily access to employment. Sustainable travel to work is key for the suitability of developments and meeting Climate Emergency aims and Policy SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 If employment is not available in the settlement then there must be daily peak time public transport - and many low paid jobs are weekends or shifts. Also access to key Secondary services like GP, dentist, and pharmacy by return public transport at suitable times of day is vital. These Policies aim to assist lower income households. If they are not to become burdened with additional costs and/or isolated from a wider range of opportunities (e.g. budget supermarket shopping, leisure and cultural activities) then a regular and frequent public transport, including evenings and weekends, is fundamental.
A0238B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Don't know / no opinion	DP4.1(c) limits development to that required by Identified Local Needs survey However, the Policy does not include a definition of scale, which is only set out in the Explanation para 4.57 saying there is an "expectation" that will not exceed 25dwellings adjacent to Strategic, Principal & Key Centres. That is very open to interpretation and not binding, so gives no confidence to local residents. For Community Hubs & Clusters and other rural settlements there is no limitation to scale of development. As 'Affordable Exception' developments are predominately intended to be built adjacent to those rural settlements, any development could be large in relative terms. There is also no cumulative impact limitation on multiple developments adjacent to settlements. In Policy DP5 Entry Level Exception Sites DP5.1(b) includes limitations of scale within policy wording In Policy DP7 Cross Subsidy Exceptions DP7.1(e) includes guide of scale within policy wording We believe that Policy DP4 Affordable Exception Sites must define limits of scale and cumulative impact adjacent to Community Hubs & Clusters and other rural settlements (as well as limited to Identified Local Needs) within Policy. DP4.1(k). Does not refer to access to employment. Sustainable travel to work by walking, wheeling, cycling, or public transport are key for the sustainability of settlements and meeting Climate Emergency aims and Policy SP3 Climate Change.
A0306B025	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield
A0392B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	Risk(s): That the criteria allows these sites to be almost anywhere in Shropshire due to the very subjective terms for appropriate, sustainable and, but to a lesser extent, isolated. There is also a risk that areas in the vicinity of a village school will be targeted for multiple applications which are not appropriate for the area which has been covered by the comment to SP9. Comment(s): The suitability criteria for Entry Level Exception Sites in "Another settlement with a school or appropriate access to a school by sustainable modes of transport" could be argued to be anywhere in Shropshire as what is meant by the following subjective statements: a. Appropriate access b. Sustainable mode of transport c. Isolated Location in Paragraph b Also, many rural locations do not have sustainable access to local services by walking cycling or public transport (including school transport) to support the appropriate access and sustainable mode of transport requirements. This needs to be considered in conjunction with the response to SP9.
A0392B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	Risk(s): That low income families may not have sufficient access to private cars to support access to employment and that they become further disadvantaged from the location / infrastructure / services of a particular site. That tenuous and clearly unsustainable statements are made about the ability to meet the walking, cycling and public transport criteria, particularly in open countryside where there might be a bus service, but it is not suitable to support access to employment and local services. Comment(s): We welcome and support the requirement for affordable housing to have "reasonable access to local services by walking, cycling or public transport". However, this should also include employment opportunities to ensure that those without access to a private car, have sufficient opportunity to be able to travel to work. Also, as experience has shown that some of the claims that sites have access to services and facilities by walking, cycling and public transport in a rural setting are very tenuous, we strongly suggest that the following requirements are placed on applicants: a. Claims that access is available by walking shall be risk assessed with appropriate mitigation added to the application to cover where the routes cannot be assessed as safe (e.g. where there are no pavements and/or the roads are narrow and support large/fast moving vehicles). b. Claims that access is available by cycling shall be risk assessed with appropriate mitigation added to the application where the routes cannot be assessed as safe (e.g. narrow roads that are also used by large/fast moving vehicles). Where cycle routes are proposed, these shall meet the latest Government Guidelines for the provision of cycle routes. c. Where access is by public transport, the sustainability based on the current timetable shall be assessed and how this works for employment, visiting the local Doctor's Surgery plus access to schools and shops.
A0438B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Agree	Draft policy DP5 affords a great opportunity to develop a significant number of affordable dwellings across rural settlements. It will assist in delivering additional affordable housing, although concerns about the need for landowners to be motivated to sell land by an appropriate return apply to this policy.
A0642B28	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield. Playing pitch strategy 2010-2020 states; (the updated one due out October 2020 is being used to support the local plan!) Building new facilities on new sites is generally a "last resort" approach when all other options have been explored given the capital investment implications. It is only appropriate where there is a lack of provision overall and deficiencies across a number of sports which cannot be fully addressed by implementing the policy options outlined above. In other words not only is there a lack of infrastructure for cycling and pedestrians but also a lack of infrastructure in the design of new facilities including public open spaces that families can actually access.
A1152B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Agree	Broadly agree with these policies. Note in particular that the wording of the policies prevent such sites being built in the open countryside. That reinforces views that the wording of policy SP9 should be amended to remove para 4a. Only single plot local needs affordable exception sites should be allowed in the countryside.
A1870B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	request that this paragraph be removed from the policy, as we are concerned that it will be exploited in order to seek development in isolated rural hamlets It seems unnecessary as it should be covered in paras 1.c.i. and 1.c.ii. We are also concerned about the wording "... appropriate access to a school by sustainable modes of transport" and the scope for this being exploited. Just because a school is accessible in this way, it does not mean that sustainable modes of transport will be used once the development has been completed. It is also very ambiguous and is vital that "sustainable modes of transport" be defined, with appropriate examples such as walking, cycling, transit, carpooling, car sharing, and green vehicles
A2169B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	We welcome the inclusion of a policy on entry-level exceptions. Entry-level exception sites have been widely welcomed as an addition to the opportunities Housing Associations have to meet housing needs in areas that may not otherwise have been considered suitable for general housing proposals. However, it is important to note that unlike the policy on rural exception sites, the NPPF does not seek to secure affordable housing delivered on entry-level exception sites in perpetuity. Therefore, we request that part e) of Policy DP5 is removed as it would be inappropriate to require this in a local policy.
A2173B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Disagree	DP3 Affordable Housing Provision - DP3.1(h) DP4 Affordable Exceptions - DP4.1(k) DP5 Entry Level Exceptions - DP5.1(i) DP6 Single Plot Exceptions - DP6.1(h), DP7 Cross Subsidy Exceptions - DP7.1(l) and (n). None of these Policies refer to access to employment. There is a requirement for reasonable access to local services by walking, cycling or public transport, but none of these Policies refer to daily access to employment. Also access to key Secondary services like GP, dentist, and pharmacy by return public transport at suitable times of day is vital. These Policies aim to assist lower income households. If they are not to become burdened with additional costs and/or isolated from a wider range of opportunities (e.g. budget supermarket shopping, leisure and cultural activities) then a regular and frequent public transport, including evenings and weekends, is fundamental.
A2412B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP5	Agree	We support the Councils aspirations in line with the NPPF for the delivery of modest entry level homes schemes to assist first buyers or renters.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0238B28	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Don't know / no opinion	request that this paragraph be removed from the policy, as we are concerned that it will be exploited in order to seek development in isolated rural hamlets It seems unnecessary as it should be covered in paras 1.c.i. and 1.c.ii. We are also concerned about the wording "... appropriate access to a school by sustainable modes of transport" and the scope for this being exploited. Just because a school is accessible in this way, it does not mean that sustainable modes of transport will be used once the development has been completed. It is also very ambiguous and is vital that "sustainable modes of transport" be defined, with appropriate examples such as walking, cycling, transit, carpooling, car sharing, and green vehicles
A0306B026	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield
A0392B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	Risk(s): That multiple applications over time will gradually erode the current gaps between settlements and areas within settlements changing the character of the local area. Comment(s): The policy of single plot exception sites is acceptable if they do not risk joining together settlements or elements of settlements that are separated by agricultural land as this will adversely affect the character of the settlement. The requirement for "is within and well related to the built form" provides some protection, but the requirement "has permanent and substantial buildings on at least one side", would allow a slow progression of single plot exception sites to gradually move the built form and close up any current gaps in development. To prevent this, it is suggested that a single plot exception site cannot be built next to another dwelling approved within the plan period, unless it is genuine in-fill
A0392B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	Risk(s): That low income families may not have sufficient access to private cars to support access to employment and that they become further disadvantaged from the location / infrastructure / services of a particular site. That tenuous and clearly unsustainable statements are made about the ability to meet the walking, cycling and public transport criteria, particularly in open countryside where there might be a bus service, but it is not suitable to support access to employment and local services. However as these are single dwelling sites, proportionality needs to be in place and therefore the public transport is deemed the key criteria. Comment(s): We welcome and support the requirement for single plot exception sites to have "reasonable access to local services by walking, cycling or public transport". However, this should also include employment opportunities to ensure that those without access to a private car, have sufficient opportunity to be able to travel to work. Also, as experience has shown that some of the claims that sites have access to services and facilities by walking, cycling and public transport in a rural setting are very tenuous, we strongly suggest that the following requirements are placed on applicants: a. Where access is by public transport, the sustainability based on the current timetable shall be assessed and how this works for employment, visiting the local Doctor's Surgery plus access to schools and shops.
A0434B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	The current single plot exception policy is very innovative. Recognise need for clarity on what represents a suitable site, but there is a need for flexibility as often sites adjacent to the existing built form are not available due to 'hope value'. There remains a key role for local members and town/parish councils to inform the suitability of sites, reflecting local characteristics - for instance in 'loose-knit' communities.
A0445B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	The current single plot exception policy is very innovative. Recognise need for clarity on what represents a suitable site, but there is a need for flexibility as often sites adjacent to the existing built form are not available due to 'hope value'. There remains a key role for local members and town/parish councils to inform the suitability of sites, reflecting local characteristics - for instance in 'loose-knit' communities.
A0609B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Agree	Support requirement for substantial structure on one side.
A0642B29	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield. Playing pitch strategy 2010-2020 states; (the updated one due out October 2020 is being used to support the local plan!) Building new facilities on new sites is generally a 'last resort' approach when all other options have been explored given the capital investment implications. It is only appropriate where there is a lack of provision overall and deficiencies across a number of sports which cannot be fully addressed by implementing the policy options outlined above. In other words not only is there a lack of infrastructure for cycling and pedestrians but also a lack of infrastructure in the design of new facilities including public open spaces that families can actually access.
A0961B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Agree	support the requirement for substantial structure on one side
A1152B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Agree	Broadly agree with these policies. Note in particular that the wording of the policies prevent such sites being built in the open countryside. That reinforces views that the wording of policy SP9 should be amended to remove para 4a. Only single plot local needs affordable exception sites should be allowed in the countryside.
A1870B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	concerned that this will lead to development spread beyond settlement undefined boundary lines. We ask that you replace it with the following wording "The site is within and well related to a built form of a settlement and has permanent and substantial buildings on at least two sides of the proposed site."
A2173B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP6	Disagree	DP3 Affordable Housing Provision - DP3.1(h) DP4 Affordable Exceptions - DP4.1(k) DP5 Entry Level Exceptions - DP5.1(i) DP6 Single Plot Exceptions - DP6.1(h), DP7 Cross Subsidy Exceptions - DP7.1(l) and (n). None of these Policies refer to access to employment. There is a requirement for reasonable access to local services by walking, cycling or public transport, but none of these Policies refer to daily access to employment. Sustainable travel to work is key for the suitability of developments and meeting Climate Emergency aims and Policy SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 If employment is not available in the settlement then there must be daily peak time public transport - and many low paid jobs are weekends or shifts. Also access to key Secondary services like GP, dentist, and pharmacy by return public transport at suitable times of day is vital. These Policies aim to assist lower income households. If they are not to become burdened with additional costs and/or isolated from a wider range of opportunities (e.g. budget supermarket shopping, leisure and cultural activities) then a regular and frequent public transport, including evenings and weekends, is fundamental.
A0158B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	The Council would be unlikely to support the development of a cross-subsidy exception site in Alveley and Romsley. We consider that the main purpose of any such proposal would be to build more open-market housing in the Green Belt.
A0238B29	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Don't know / no opinion	support the requirement for substantial structure on one side
A0256B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	It is not clear how the number of 10 dwellings was reached, as it then goes on to say "will not normally exceed 10 dwellings". Why the figure of 10 I agree with a Local Lettings Plan and particularly in Green Belt locations and in the more rural areas, the first priority for housing allocation should be the established need for housing within the respective Parish. Local families and individuals do not take kindly to the wider area being included in housing allocations. Local Lettings policy should be developed further to enhance the opportunities for local people to acquire housing appropriate for their needs. There should not be a preference for the affordable homes to be delivered and managed by a Registered Provider. The other options included in J should be able to deliver cross-subsidy schemes, as it increases the opportunity to deliver affordable housing
A0258B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	Concern that the cross-subsidy policy will lead to housing in inappropriate locations, such as outside the development boundary. In the case of Hanwood, the parish council wishes to emphasise that the integrity of the development boundary and physical separation and policy distinction of Hanwood being a hub vs. Hanwood Bank open countryside must be maintained and not compromised as result of cross-subsidy development outside the boundary
A0306B027	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield
A0318B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	We support the inclusion of a policy about cross-subsidy exception sites, but the policy restricts the market housing proportion to 30% on sites not normally exceeding 10 dwellings. 70% is considered excessive and a lower ratio of 50% would enable affordable housing to be delivered in Shropshire. We do not consider a cap to provide the necessary result, but should one be considered the cap should increase to 20-25 dwellings, providing a realistic funding model for the registered provider. We note that paragraphs 1.f and 1.g replicate each other and therefore recommend a single, revised, paragraph: DP7.1.f. At least 50% of the homes provided will be affordable housing and of a type, size and tenure that meets the local housing needs evidenced in the housing needs survey.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0392B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	<p>Risk(s): That the criteria allows these sites to be almost anywhere in Shropshire due to the very subjective terms for appropriate, sustainable and, but to a lesser extent, isolated. There is also a risk that areas in the vicinity of a village school will be targeted for multiple applications which are not appropriate for the area which has been covered by the comment to SP9.</p> <p>Comment(s): The suitability criteria for Cross-Subsidy Exception Sites in "Another settlement with a school or appropriate access to a school by sustainable modes of transport" could be argued to be anywhere in Shropshire as what is meant by the following subjective statements: a. Also, as experience has shown that some of the claims that sites have access to services and facilities by walking, cycling and public transport in a rural setting are very tenuous, we strongly suggest that the following requirements are placed on applicants: a. Claims that access is available by walking shall be risk assessed with appropriate mitigation added to the application to cover where the routes cannot be assessed as safe (e.g. where there are no pavements and/or the roads are narrow and support large/fast moving vehicles). b. Claims that access is available by cycling shall be risk assessed with appropriate mitigation added to the application where the routes cannot be assessed as safe (e.g. narrow roads that are also used by large/fast moving vehicles). Where cycle routes are proposed, these shall meet the latest Government Guidelines for the provision of cycle routes. c. Where access is by public transport, the sustainability based on the current timetable shall be assessed and how this works for employment, visiting the local Doctor's Surgery plus access to schools and shops.</p>
A0437B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7		<p>Support this draft policy as it recognises that to deliver affordable housing, landowners need appropriate incentives. Landowners in rural areas have typically owned land for generations and sell they need a fair return whilst also addressing community needs. Standard exception sites don't typically yield attractive land values and due to economies of scale Registered Providers wish to develop at least 15-20 units, which are often too much development for modest rural settlements. The draft policy strikes a compromise, enabling delivery of affordable housing by allowing 30% of the development to be open market housing and the affordable units to respond to local need. It will also allow for creation of more balanced communities. Concerned that the policy is too rigid and does not allow proactive landowners/developers to deliver affordable housing. Why is there a need to demonstrate no public grant is available and affordable exception schemes are unviable. It could be argued that a standard exception site will be viable, as it will deliver a land value greater than existing (typically agricultural) value, but ignores the fact landowners will not sell unless they achieve a reasonable return. Proving local need is key to the success of this draft policy. Obtaining data is challenging. Flexibility is required to allow landowners to assess the housing need and not rely on historic (out dated) data. Whilst Shropshire Council 'Right Home Right Place' Survey attempts to collate suitable data, local communities are only motivated to engage once a development proposal is tabled / application prepared. As such Cross Subsidy proposals should be publicised to gauge the community's attitude, level of demand, nature of demand etc. Welcome flexibility regarding the size of cross-subsidy schemes, where there is local need. Flexibility regarding management of properties is also welcome, as registered providers may not want to manage them, whilst others may value involvement (landed estates, community land trusts, development companies and private landlords). Represents an opportunity to deliver affordable housing without relying on the public purse.</p>
A0438B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Agree	<p>Draft policy DP7 affords a great opportunity to develop a significant number of affordable dwellings across rural settlements. It recognises that to deliver affordable housing, landowners need appropriate incentives. Landowners in rural areas have typically owned land for generations and sell they need a fair return whilst also addressing community needs. Standard exception sites don't typically yield attractive land values and due to economies of scale Registered Providers wish to develop at least 15-20 units, which are often too much development for modest rural settlements. The draft policy strikes a compromise, enabling delivery of affordable housing by allowing 30% of the development to be open market housing and the affordable units to respond to local need. It will also allow for creation of more balanced communities. Concerned that the policy is too rigid and does not allow proactive landowners/developers to deliver affordable housing. Why is there a need to demonstrate no public grant is available and affordable exception schemes are unviable. It could be argued that a standard exception site will be viable, as it will deliver a land value greater than existing (typically agricultural) value, but ignores the fact landowners will not sell unless they achieve a reasonable return. Proving local need is key to the success of this draft policy. Obtaining data is challenging. Flexibility is required to allow landowners to assess the housing need and not rely on historic (out dated) data. Whilst Shropshire Council 'Right Home Right Place' Survey attempts to collate suitable data, local communities are only motivated to engage once a development proposal is tabled / application prepared (example provided). As such Cross Subsidy proposals should be publicised to gauge the community's attitude, level of demand, nature of demand etc. Welcome flexibility regarding the size of cross-subsidy schemes, where there is local need. Flexibility regarding management of properties is also welcome, as registered providers may not want to manage them, whilst others may value involvement (landed estates, community land trusts, development companies and private landlords). Represents an opportunity to deliver affordable housing without relying on the public purse. Clarification that cross-subsidy schemes could be appropriate in settlements with a school or appropriate access to a school by sustainable modes of transport is considered helpful. List of 74 settlements (excluding Strategic/Principal/Key Centres) identified, this offers scope for the policy to deliver a significant proportion of affordable housing albeit flexibility needs to be shown into how a local communities housing need can be ascertained. Several potential cross subsidy sites have been appraised to assess if the proposed 30% open market housing results in a reasonable land value to incentivise landowners. This concluded costs and land values vary greatly dependent on servicing costs/site specific abnormals. Subsequently consider suitable flexibility should be included in this policy, allowing sites with evidenced abnormals/servicing costs allow an increase in the proportion of open market housing. Initial viability assessments suggest that modest linear development, located adjacent mains services are the most likely to be delivered. The advantage of the draft policy proposed is that it affords the opportunity to assess a range of suitable sites and in turn negotiate with a number of different landowners.</p>
A0439B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7		<p>Support this draft policy as it recognises that to deliver affordable housing, landowners need appropriate incentives. Landowners in rural areas have typically owned land for generations and sell they need a fair return whilst also addressing community needs. Standard exception sites don't typically yield attractive land values and due to economies of scale Registered Providers wish to develop at least 15-20 units, which are often too much development for modest rural settlements. The draft policy strikes a compromise, enabling delivery of affordable housing by allowing 30% of the development to be open market housing and the affordable units to respond to local need. It will also allow for creation of more balanced communities. Concerned that the policy is too rigid and does not allow proactive landowners/developers to deliver affordable housing. Why is there a need to demonstrate no public grant is available and affordable exception schemes are unviable. It could be argued that a standard exception site will be viable, as it will deliver a land value greater than existing (typically agricultural) value, but ignores the fact landowners will not sell unless they achieve a reasonable return. Proving local need is key to the success of this draft policy. Obtaining data is challenging. Flexibility is required to allow landowners to assess the housing need and not rely on historic (out dated) data. Whilst Shropshire Council 'Right Home Right Place' Survey attempts to collate suitable data, local communities are only motivated to engage once a development proposal is tabled / application prepared. As such Cross Subsidy proposals should be publicised to gauge the community's attitude, level of demand, nature of demand etc. Welcome flexibility regarding the size of cross-subsidy schemes, where there is local need. Flexibility regarding management of properties is also welcome, as registered providers may not want to manage them, whilst others may value involvement (landed estates, community land trusts, development companies and private landlords). Represents an opportunity to deliver affordable housing without relying on the public purse.</p>
A0442B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7		<p>Support this draft policy as it recognises that to deliver affordable housing, landowners need appropriate incentives. A0609B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Agree	Support community engagement and restriction to 10 dwellings.
A0642B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	There should be a greater recognition of the need to supply more accessible natural greenspace for affordable housing developments, as residents tend to have more difficulty sustainably accessing this further afield. Playing pitch strategy 2010-2020 states; (the updated one due out October 2020 is being used to support the local plan) Building new facilities on new sites is generally a 'last resort' approach when all other options have been explored given the capital investment implications. It is only appropriate where there is a lack of provision overall and deficiencies across a number of sports which cannot be fully addressed by implementing the policy options outlined above. In other words not only is there a lack of infrastructure for cycling and pedestrians but also a lack of infrastructure in the design of new facilities including public open spaces that families can actually access.
A0665B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	Part (e) of DP7 says the scale of the development will solely be dictated by the evidence of local affordable housing need but will not normally exceed 10 dwellings. As with my comments on DP4, this needs to be more precise and there should be no room for being imprecise. The words "not normally" should therefore be deleted from the policy.
A0692B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7		The draft Policy offers great potential, but is fatally undermined by the requirement to prove that a 100% affordable scheme is "unviable". This undermines the point of cross-subsidy exception sites, para 77 of the NPPF states "Local planning authorities should support opportunities to bring forward rural exception sites that will provide affordable housing to meet identified local needs, and consider whether allowing some market housing on these sites would help facilitate this." (emphasise facilitate). The purpose of cross-subsidy housing is to enable more exception sites to come forward by making them more attractive not more viable. In Shropshire, only limited numbers of exception sites have come forward in recent years (as evidenced by low delivery). Increasing delivery requires significant change to the current situation by providing incentives to landowners to make land available for affordable housing and housing associations to build them. Therefore requirement to demonstrate an exception site is unviable should be removed.
A0899B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	Object to Policy DP7 as it does not conform with NPPF para 77 by improving land valuations on rural exceptions housing schemes which is the principal barrier to the delivery of more affordable housing schemes. Amend Policy DP7(1)(a) by deleting the words "...and that that an affordable exception scheme is unviable" to read "It is demonstrated that no public grant is available". The policy and explanatory text do not identify how a scheme will be judged to be unviable. The reliance on abnormal development costs for a scheme overlooks the core issue of plot valuations which deter landowners from selling land. The Delivery and Viability Study para 6.25 identifies that Housing Associations often buy affordable plots at £15,000/plot but open market housing plots can attract £40,000 - £100,000/plot. There is a need in NPPF para 77 to facilitate the delivery of cross subsidy schemes by providing incentives to landowners to sell and this incentive will be the proportion of open market housing that is permitted in a cross subsidy scheme. Amend DP7(1)(f) by deleting the words "At least 70%" to read "A majority of the homes provided will be affordable housing of a type and tenure that meets the local housing needs evidenced in the housing needs survey".
A0899B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	NPPF para 71 also supports the provision of entry level self build on exception sites and this support should be introduced into policy SP9 to permit self build and custom build on exceptions sites possibly reflecting the approach in Telford and Wrekin Policy HO11.
A0932B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	No site in Shropshire has come forward for development under this policy since its adoption The policy is not supported by any evidence to demonstrate that the improvements will lead to the delivery of local needs affordable housing across the county, thereby undermining its ability to ensure there is adequate housing opportunities for households with a local connection.
A0961B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Agree	Para 1 support community engagement and restriction to 10 dwellings
A0976B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Agree	We support the Policy although the level of Cross Subsidy should be tailored to each site through a viability assessment. In certain settlements, 70% affordable is more achievable than others. In addition, evidence gathered from Right Home Right Place should form the level of cross subsidy. Not all people in the rural area want an affordable home and it is important that the RHRP initiative feeds into the communities aspirations.
A1118B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	Ruyton XI Towns Parish Council has agreed that it has no major concerns about the proposals specifically relating to Ruyton XI Towns parish, e.g. community hub status, development boundary, site allocation etc. However, there are very serious concerns about the broader exception site policies over various headings, and specifically Cross-subsidy exception site policy DP7. It is felt that all the different types of exception scheme policies (100% affordable exception sites, entry-level housing, single plot exceptions, cross-subsidy, etc.) include vague and undefined references to proximity to services and facilities, as well as undefined references to "sustainable modes of transport". It is also noted that proximity to employment does not seem to be included in the conditions for exception sites under any of the various headings, which impacts the sustainability of a proposed development, e.g. if residents still have to drive by car to their place of employment. There are serious concerns that this vagueness and lack of definition could therefore be open to exploitation by developers. In terms of policy DP7 for example, the initial conditions of cross-subsidy exception sites are that they must be:[...] within or immediately adjoining the built form of: i. A Strategic, Principal or Key Centre; ii. A Community Hub or Community Cluster Settlement; or iii. Another settlement with a school or appropriate access to a school by sustainable modes of transport. The lack of definition of "sustainable transport" in point iii) above potentially allows for cross-subsidy exception sites to be built outside the main built form of Ruyton XI Towns village, and instead be attached to much more rural settlements, such as Wykey, Wigmarsh, Eardiston, Weirbrook, etc. It was felt by the Council that the wording in this example and other exception scheme policies would make it very difficult for Shropshire Council Planning department to refuse applications for exception sites in these areas, which are currently classed as open countryside. The consequences of this are significant and worrying. Under the cross-subsidy exception site policy for example, if additional development is permitted on exception sites of up to ten houses each time, this would have a significant negative impact on not just the character, but also the infrastructure demands of these settlements outside of Ruyton XI Towns village. It would also represent significant residential development in addition to the proposed housing guideline figure for Ruyton XI Towns Community Hub (around 125 dwellings). We also note that the wording of the housing guideline figure of "around 125 dwellings", as well as policy SP6, both allow for the housing guideline figures to be exceeded, rather than 125 being the maximum, which also raises some concerns. It would be much more appropriate for affordable housing (under its various forms) to be provided within or adjoining the built form of community hubs where possible, so that the new affordable housing is in genuinely sustainable locations, i.e. next to schools, shops, medical centres, bus services, etc. The Parish Council strongly believes that policy DP7 and all other exception scheme policies should be urgently clarified as per the points raised above, in order to protect rural settlements that are outside the community hub boundary from contentious and inappropriate development. On a related note, the Parish Council also notes (in the Appendix, Oswestry area Place Plan site assessments, pages 33-35) that out of 22 potential sites considered for preferred development sites in the parish, after assessment by Shropshire Council only site RUY019 has been put forward for allocation for development. All other sites were therefore effectively rejected on the grounds of their sustainability assessment. The Parish Council would like to suggest that Shropshire Council includes an additional clause in policy DP7 (and other relevant exception scheme policies) to the effect that any sites that have previously been assessed and rejected by Shropshire Council should not be considered for exception sites.
A1152B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Agree	Broadly agree with these policies. Note in particular that the wording of the policies prevent such sites being built in the open countryside. That reinforces views that the wording of policy SP9 should be amended to remove para 4a. Only single plot local needs affordable exception sites should be allowed in the countryside.
A1271B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7		Extract of a response to a previous consultation provided: Cross-subsidy policy should be applied in very special situations on sites where the construction of the affordable housing would GENUINELY not otherwise be viable. The ACTUAL purchase price of the land (or property to be converted) included in the build-out cost as a condition. The mix must be determined locally after consultation with the Local Member and the local communities likely to be affected.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1870B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	request that this paragraph be removed from the policy, as we are concerned that it will be exploited in order to seek development in isolated rural hamlets It seems unnecessary as it should be covered in paras 1.b.i. and 1.b.ii. It also appears to contradict with 1.c, as such a location will by definition be in an isolated location. If a school is not in a Strategic, Principal, Key Centre, Community Hub or a Community Cluster Settlement it surely must be in an isolated rural location away from the normal facilities you would find in the above. We are also concerned about the wording "... appropriate access to a school by sustainable modes of transport" and the scope for this being exploited. Just because a school is accessible in this way, it does not mean that sustainable modes of transport will be used once the development has been completed. It is also very ambiguous and is vital that "sustainable modes of transport" be defined, with appropriate examples such as walking, cycling, transit, carpooling, car sharing, and green vehicles.
A2169B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	In a similar vein to our response to entry level exception sites, we support this policy although part h) which seeks to secure the affordable housing in perpetuity should be removed.
A2173B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	We do not consider this specific policy is required as the NPPF Para 77 allows for viability discretion on 100% Affordable Housing Rural Exception developments, which are allowed in 'Countryside' outside existing settlements. A key factor in viability of 100% Affordable Exception schemes is land value. If landowners can foresee higher land value via a Cross-subsidy Exception scheme that will be what they will hold out for. By introducing this specific policy it could reduce the percentage Affordable Homes provided. Without prejudice to the above, if this Policy is to be included then we disagree with the minimum 70% Affordable Homes requirement in DP7.1(f). We consider it should mirror the Open Market development Affordable Homes requirements for its location within the county i.e. it should be in North 90%AH / 10%OM and in South 80%AH / 20%OM to reflect identified local needs. Para DP7.1(a) refers to viability of schemes – how will this be determined? Without public grant, viability is synonymous with profitability. It is inherent that Developers are profit led, and therefore they will seek to build the maximum Open Market housing within any development to maximise profit. Clearly, every development will differ in terms of land values and build costs related to site factors, and saleability of Open Market housing. No indication is given of what might be deemed an acceptable profitability level on a scheme for the developer; nor how this would be assessed and determined within the Planning Application process (indeed is it a legally a consideration under the Planning Act?). DP7.1(l) and (n). Neither refer to access to employment. Sustainable travel to work by walking, wheeling, cycling, or public transport are key for the sustainability of settlements and meeting Climate Emergency aims and Policy SP3 Climate Change.
A2173B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP7	Disagree	DP3 Affordable Housing Provision - DP3.1(h) DP4 Affordable Exceptions - DP4.1(k) DP5 Entry Level Exceptions - DP5.1(i) DP6 Single Plot Exceptions - DP6.1(h), DP7 Cross Subsidy Exceptions - DP7.1(l) and (n). None of these Policies refer to access to employment. There is a requirement for reasonable access to local services by walking, cycling or public transport, but none of these Policies refer to daily access to employment. Sustainable travel to work is key for the suitability of developments and meeting Climate Emergency aims and Policy SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 If employment is not available in the settlement then there must be daily peak time public transport - and many low paid jobs are weekends or shifts. Also access to key Secondary services like GP, dentist, and pharmacy by return public transport at suitable times of day is vital. These Policies aim to assist lower income households. If they are not to become burdened with additional costs and/or isolated from a wider range of opportunities (e.g. budget supermarket shopping, leisure and cultural activities) then a regular and frequent public transport, including evenings and weekends, is fundamental.
A0158B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP8	Don't know / no opinion	Shropshire's future policy and practice must ensure that there is no need to provide sites for gypsies/travellers on Green Belt land.
A1170B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP8	Disagree	Overall I find the policy good and thorough, but as I have worked on planning applications in this matter, I have found a recent trend in the traveller community to seek to establish one or two unit sites on their privately owned land. This allows much better integration with the local community, although the planning applications are often met with prejudice and almost blatant racism. Many travellers have realised, as a consequence of the COVID 19 emergency, that large sites have serious social and health problems. This policy could give stronger support to small private site development.
A1648B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP8	Don't know / no opinion	The Shropshire GTAA 2017 reported movement between Cheshire West and Shropshire as a potential cross-boundary issue identified by stakeholders. Cheshire West and Chester is part of a sub-regional partnership with Halton, Warrington and Cheshire East that prepares the GTAA. The latest GTAA was published in June 2018 and does not recommend the counting of vacant pitches as a component of supply for Cheshire West and Chester. Further discussion on this point would be useful to understand the approach to meeting Traveller needs in Shropshire.
A2180B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP8	Disagree	Whilst this policy sets out the criteria for the development of a transit site, we are a bit disappointed that a site hasn't been identified. This seems to go against the grain of our constant battle to address unauthorised encampments in the town and the time and expense of moving them on. There was also suggestion that the Police wouldn't continue to use their powers to move travellers on if the Council did not consider suitable transit arrangements. We respectfully request that this be revisited.
A2353B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP8		It has been a continual problem on the industrial estates and office parks around the town not merely on vacant land but also on office and factory car parks that gypsies and travellers have frequently used these areas in transit between seasonal destinations. Whilst difficult to secure allocated gypsy sites we press Shropshire Council for more efforts in providing a long-term solution to this issue which is extremely disruptive to many individual businesses in Shrewsbury
A0100B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	Agree with sequential preference to the development of strategic corridors and prioritisation of both allocated and windfall sites in Shrewsbury. Policy will allow positive response to demand from new businesses and supported by the delivery of new housing. Approach encourages the prioritisation of significant new development and will make effective use of existing transport routes. The sequential release of additional employment land may also help to attract major employment development into the County and encourage other scales of employment uses
A0167B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9		Whilst it is understandable to focus developments in accessible and well connected locations, there are concerns that this could lead to additional development in and around Oxon Hall Caravan Park. This location has already and will continue to be disrupted by proposals at SUE West and there is also the NWRR and a potential flood alleviation strategy to consider. Would not wish to see further development which would undermine viability as such would have to object to any proposals for a strategic corridor in the vicinity of Oxon Hall. Genuinely concerned that Oxon Hall Caravan Park may not survive in circumstances where the noise, dust, pollution and disturbance created both during construction and operation of these developments discourages visitors to the site.
A0306B028	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.91 We would like to see a preference for strategic corridors to focus on rail.
A0306B029	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.93 Replace "should" with "must" in para 4.93.
A0306B030	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.94 Replace "should" with "must" in para 4.94.
A0406B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Whilst there are planned improvements to the A5 road, there is no mention of possible improvements to the A4169/A458 junction in Much Wenlock to enable any enhancement to this strategic corridor to take place. This would seem to contradict what is stated in the Explanation 4.89 and 4.90, e.g. 'making effective use of the ...road route through these corridors'.
A0430B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Support the acknowledgement of this Strategic Corridor and the opportunities arising in Shifnal and RAF Cosford. DP9(1) sets the strategic approach to the delivery of significant development and infrastructure investment within the 'Strategic Corridors' served by the principal rail network and strategic and principal road networks in Shropshire. Paragraph 4.91 identifies the strategic corridors including, amongst others, the M54/A5 Strategic Corridor with opportunities in and around Shifnal as a Key Centre and RAF Cosford as a significant location. Consequently, DP9(3) goes on to say that development at the strategic corridors should be sequentially located, starting with the Principal and Key Centres on an allocated site firstly or a windfall site. Support this approach and acknowledgement of Key Centres at the top of the hierarchy, but consider that safeguarded sites if included within the settlement boundary could also be included in the hierarchy, particularly if there is a monitoring / 'Plan B' policy in the plan.
A0506B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	The document states: "Church Stretton and Craven Arms as Key Centres within the Shropshire Area of Outstanding Natural Beauty. 4.92. Shropshire Economic Growth Strategy seeks to promote a 'step change'". Craven Arms is not in the AONB, so a correction is required here.
A0573B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	Support DP9 to focus major development along principal rail and strategic road routes through Shropshire including the strategic corridor of the Eastern Belt M54/A5 and the opportunities in and around the Key Centre of Shifnal. The significance of the M54 is recognised in the M54 Growth Corridor Strategic Options Study. Shifnal is the first major town on the M54 west of the conurbation and represents a logical first location for growth to assist the County's aspirations and to meet an identified local need for employment land. Development of SHF018b and SHF018d is recognised in the M54 Study which reflects the significance of Shifnal and recognises the site location, east of the town, is within the significant M54 Growth Corridor. The Shropshire Economic Growth Strategy recognises the location as a highly sustainable location to support economic growth and to deliver jobs and investments, possibly offering an element of residential use by co-location and adjoining the Shifnal Industrial Estate to provide a natural extension to this established area of commercial activity.
A0642B31	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.91 We would like to see a preference for strategic corridors to focus on rail. See comments made on: 3.26 (b) We question the ability for this strategic corridor to deliver true sustainable economic growth in the absence of a clear policy of promoting sustainable transport: 3.26 (d) The identification of a strategic corridor linking to HS2 that is based solely on road transport is an example of the unsustainable results of the scheme and we do not welcome its mention in the Local Plan and on 3.26 (e) We question the ability for this strategic corridor to deliver true sustainable economic growth in the absence of a clear policy of promoting sustainable transport.
A0642B32	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.93 Replace "should" with "must" in para 4.93.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0642B33	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 4.94 Replace "should" with "must in para 4.94.
A0697B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Not this draft policy seeks to deliver step change in the capacity and productivity of the local economy and to contribute to this "Strategic Corridors" (particularly those with rail and road links) will be the primary focus for major development and a sequential approach will be taken to this development of which a. includes principal and kt centres. Greater recognition needed of the potential contribution from settlements such as Albrighton to delivering draft policy objectives. Albrighton is one of only two settlement situated on the corridor into the West Midlands conurbation with the greatest economic demand and potential for economic growth and prosperity. The level of growth planned for Albrighton (just 500 dwellings or 22 dwelling per annum)completely ignores wider economic objectives in the draft Local Plan and is unlikely to contribute significantly to delivering this draft policies objectives. Greater integration of this draft policy and the draft settlement policy for Albrighton (Policy S1) is required, through identification of additional growth at Albrighton, consistent with its location along the Borough's principal strategic corridc
A0911B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	Representation on behalf of Hobbins Management Company covering a range of Policies relating to Bridgnorth. Broadly in support of the policies, but stress that the policy position doesn't appear to have been followed in setting the allocation of employment land at Stanmore. Policy DP9 sets out how the Council believe that the "step change" in capacity and productivity of the local economy might be achieved – by the identification of "strategic corridors" The concept of focusing employment development along major transport routes is supported, as is the requirement that there should continue to be regard for national and local policies that relate to the Green Belt. However land at Stanmore has poor links to the M54 and principal road network and is difficult to access by foot or cycle. National policies restrict development in the Green Belt unless exceptional circumstances exists. No exceptional circumstances have been advanced by the Council that would justify removing the proposed employment sites at Stanmore from the Green Belt.
A0912B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	The supporting text to this policy specifically identifies (paragraph 4.91(e)) Ludlow as a Principal Centre on a Strategic Corridor and the policy states that the "Shropshire Economic Growth Strategy seeks to deliver a 'step change' in the capacity and productivity of the local economy. To contribute to this aim, 'Strategic Corridors' along the principal rail and strategic road routes through the County will be the primary focus for major development especially along 'strategic corridors' with both rail and road connectivity". Policy DP9 is therefore supported as it identifies the importance of Ludlow as a significant centre for growth in Shropshire, both socially and economically.
A0916B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	The supporting text to this policy specifically identifies (paragraph 4.91(b))Oswestry as a Principal Centre on a Strategic Corridor and the policy states that the "Shropshire Economic Growth Strategy seeks to deliver a 'step change' in the capacity and productivity of the local economy. To contribute to this aim, 'Strategic Corridors' along the principal rail and strategic road routes through the County will be the primary focus for major development especially along 'strategic corridors' with both rail and road connectivity". Policy DP9 is therefore supported as it identifies the importance of Oswestry as a significant centre for growth in Shropshire, both socially and economically.
A0935B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Support the aim of 'Strategic Corridors' with both rail and road connectivity being the primary focus for major development especially along 'strategic corridors.' However, as referred to under draft Policy SP10, it should be noted that 'Strategic Corridors' do not just comprise groups of settlements on transport corridors but also 'key nodes' such as sites which benefit from direct access and visibility from strategic corridors, for example those adjacent to strategic road junctions/roundabouts. Draft Policy DP9 should also recognise that the M54 corridor is the most prominent strategic corridor in Shropshire and therefore has the greatest potential to support growth.
A0972B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Para 1, 3 & 4Bridgnorth is the only Principal Centre with no rail link and the last upgrade of the highways infrastructure was the by-pass. Given the level of housing and economic growth proposed, a rail link from Bridgnorth along with an upgraded highway network would enable Bridgnorth to take its rightful place as a Principal Centre. Para 4.98 obvious place for new industrial/business development would be close to the i54. but proposed car battery factory development, an industry which will facilitate 'green' vehicle transport, and had the potential to create 3000 jobs & more than £1 billion to the region's economy was rejected by Shropshire Council reflecting muddled decisioning. The M54 is a logical place for industry and business development, not winding A roads near Bridgnorth.
A0984B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	Supportive delivery of a 'step-change' in the capacity and productivity of the local economy. To contribute to this, the primary focus of major development will be along 'Strategic Corridors', where there is a concentration of rail and strategic road routes. Support identification of the eastern belt (M54/A5, A41/A464 and A4169/A458/A454) in which Bridgnorth is located as a strategic corridor. This is a key road corridor located in proximity/connected to the rest of the West Midlands. This strategic location allows both Bridgnorth and Shropshire to take advantage of the growth potential and collaboration associated with the West Midlands economy and supply chain. Support recognition (Part 2) that significant development and infrastructure investment will be located within the Strategic Corridors. Bridgnorth is well connected to the West Midlands economy and investment in this strategic Corridor will assist in economic growth of both Bridgnorth and Shropshire. Support Part 3 which recognises Principal Centres as top of the hierarchy of sequentially located sites.
A0997B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	The inclusion of the historic environment in Criteria 4c is welcomed and we note would be supported by Policy DP24
A1143B69	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	"Proposals for development in the 'strategic corridors' must satisfy the requirements of Policy SP11(Delivering Sustainable Economic Growth & Enterprise)and consider b. The need for infrastructure investment to support: i. The delivery of the development; and ii. The accessibility of the rail and road networks;" Whilst road networks might include better integrated bus services this statement is at best ambiguous. A key requirement to the success of sustainable economic growth is the need for better integrated public transport systems that connect rural hubs with key employment areas this policy and especially section 4 / 4b would be greatly strengthened by making a clear link to policy DP, the 29. 2017 Bus Services Act encourages and empowers Local Authorities to do just that, and "The government is making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future I disagree with this policy because it is incomplete and could be strengthened.
A1152B21	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Broadly disagree as the 'step change' that is referred to in this policy is fundamentally at odds with Climate Change objectives. Consider responses to previous consultations are relevant The first sentence of the draft policy appears to be somewhat tautological and could do with being refined. It essentially says 'Strategic Corridors' will be the primary focus for major development along 'strategic corridors'. Para 2 should first emphasise that there should be a presumption against development in the Green Belt or the AONB, regardless of whether a HRA is also produced. Emphasis in para 4a on the need to balance the delivery of housing and employment growth is not fostered by the proposals in Bridgnorth, Market Drayton, Oswestry and Shifnal, where there are considerable and marked imbalances between the proposed housing and employment land guidelines. The policy will therefore foster increased levels of commuting, which is against the Climate Change objectives.
A1183B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	DP9 Strategic Corridors We note that a strategic corridor i.e. Eastern Belt and North East Shropshire and A41 corridor runs through our locality and note that although there are no proposals for development at present the increase in traffic activity and use of the A41 generally even though the road is de-trunked remains a significant concern. We are concerned that the use of major roads and the negative impacts of this use are not captured sufficiently within a Planning context and would suggest consideration of more clarity in the relevant Policies. Once again we would prefer as a Parish Council to be involved early in discussions should development occur along this corridor.
A2142B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Agree	Policy DP9 sets out how the Council believe that the "step change" in capacity and productivity of the local economy might be achieved – by the identification of "strategic corridors", which are corridors served by the principal rail network and strategic and principal road networks in Shropshire. Bridgnorth is included within the Eastern Belt Strategic Corridor. However, Policy DP9.2 says that development within the strategic corridors through the Green Belt will be subject to appropriate national and local policy. The concept of focusing employment development along major transport routes is supported, as is the requirement that there should continue to be regard for national and local policies that relate to the Green Belt. However, land at Stanmore (Sites S57 and S58) is proposed for allocation for employment purposes, though the town has relatively poor links to the M54 and the Principal road network that runs through Shropshire and into the West Midlands. This land is located in the Green Belt, and transport links to Bridgnorth town are difficult, and very difficult for pedestrians and cyclists. National and local Green Belt policies restrict development in the Green Belt unless it comprises certain specified types of development (general industrial classes not being of such types) or in exceptional circumstances. No exceptional circumstances have been advanced by the Council that would justify removing the proposed employment sites at Stanmore from the Green Belt.
A2321B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	Policy DP9: Strategic Corridors 4.5 The Shropshire Economic Growth Strategy identifies the 'M54 growth corridor' as one of the key strategic corridors and growth zones. It is recognised as a: "...key road and rail transport corridor which reinforces Shropshire's close proximity to the West Midlands and the growth potential that will develop from the Land Commission as part of the Combined Authority structure". 4.6 The report enclosed at Appendix 2 provides further interrogation and consideration of the importance of the M54 growth corridor and the significance of the role which it plays within the County. Specifically it acknowledges that reports such as the Shropshire Economic Growth Strategy identify this important corridor as having potential for significant employment growth focusing on key sectors linked to the advanced manufacturing opportunities to create a hub maximising the opportunity of i54 and RAF Cosford. 4.7 In considering the implications of the strategic M54 growth corridor for Albrighton, the 'M54 Growth Corridor – Strategic Options Study' (June 2019), identifies RAF Cosford as one of the key strategic sites considering the existing levels of employment it provides and also future expansion and opportunities. 4.8 With regards the current use of the site, it notes that between 2,500 and 3,000 people are located on the site at any one point in time, excluding visitors to the museum where it is noted that there are in excess of 100,000 visitors annually. There are also more than 400 dwellings on the site accommodating over 1,700 people. The study confirms that the MOD is planning a £40 million ten year investment programme for the site to develop a hub for training, skills and development aligning with the rationale for its allocation as a Strategic Site within the draft plan. 4.9 Significantly, it is also noted as having the potential to draw further investment into Shropshire and raise its profile as an innovative and self-sustaining economy. It is equally suggested that the realisation of investment, in the context of the existing concentration of advanced manufacturing/ engineering excellence, 'may lead to the development of a cluster of businesses in this sector', similar to how i54 is recognised as one of the most desirable places to invest within the West Midlands with key occupiers including Jaguar Land Rover, Eurofins and Moobs. 4.10 It is apparent that there is a significant degree of strategic support from a national to a local level for realising the economic growth potential of the M54 corridor. There is already evidence of the corridor's impact in attracting investment and development. Existing strategies provide assurance that this will be sustained. It is also evident from the Strategic Allocation of RAF Cosford, and the infancy of the MOD's plans to move its No.4 School of Technical Training to the site that the draft plan is not yet able to fully consider the full potential of RAF Cosford, and the potential increased need for market and affordable housing within close proximity. This is a significant risk to both the success of RAF Cosford, and the creation of sustainable communities. 4.11 Albrighton's location on the growth corridor in close proximity to RAF Cosford, and the also its strong connectivity to Shropshire, Cosford, Wolverhampton and Birmingham by sustainable means, makes it ideally places to accommodate more housing growth now and through land safeguarded for future. Vistry's site is well placed to provide new market and affordable housing in close proximity to existing services and facilities and also within close proximity to RAF Cosford
A2323B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9		Support the purpose of this policy to enable Shropshire to respond positively to demand from new businesses attracted into District as inward investment and note that the Council recognise that such inward investment needs to be supported by the delivery of new housing. The proposed allocation of a large employment site in Shifnal is strongly supported as a means of sustainably accommodating inward investment and enabling local business to grow building on the advantages of the M54 corridor. This will offer the opportunity to create a more sustainable balance between housing and employment in Shifnal over the plan period.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2475B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP9	Disagree	As well as considering the direct impact of possible strategic corridor development within the AONB, the indirect impacts on the AONB of this policy overall need to be considered. This would include development in the corridor outside the AONB but within its setting, but also the impact of increased road traffic along the corridor. The noise road traffic on the A49 has been shown to be the major factor affecting tranquillity in the AONB, one of the special qualities and key attractions to visitors and inward investment. 4.91e Shropshire Hills AONB not Shropshire AONB. Craven Arms is not within the AONB. 4.93 "Very special circumstances" – if this refers to NPPF's "exceptional circumstances" for major development in AONBs, the same wording should be used
A0295B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10		Consideration of the use of town centres to make them an experience - to compete with the internet.
A0306B031	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Agree	We support town centre development proposals which promote ethical, sustainable, and low-carbon consumer opportunities
A0430B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Agree	Support DP10(8) as it provides some support for local facilities to be delivered to support significant new residential developments. The Council may also wish to consider including a monitoring / 'Plan B' policy in the plan to refer to these sites.
A0642B34	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Disagree	We support town centre development proposals which promote ethical, sustainable, and low-carbon consumer opportunities.
A0972B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Disagree	Para 1 & 2 Impact of the Covid19 pandemic crisis, is that the UK and world economy is and will continue struggling. town centres have lost business as a result of home working from home and businesses are failing. The Local Plan should utilise empty office, shops and other buildings/land in town centres to regenerate and revitalise our town centres to bring residential properties to town centres. This would solve the problem of empty buildings and would bring a consumer base directly to town centres which would help to revitalise existing businesses, such as cafes and restaurants. Residents would not need to use a car thus reducing carbon emissions Para 4 : need to be vigilant with regards to Retail Parks on employment land sites and creating out of centre locations which take business from the real town centre e.g. Merry Hill Retail Park impact on Dudley. Para 8: If the Local Plan distributed housing around the town rather than in one area it would bring more businesses to the High Street and there would be less need for neighbourhood based local shopping. Already too many charity shops in Bridgnorth town centre. We could use housing expansion to drive the revitalisation of the High Street if it were in the right locations distributed across the Bridgnorth place, not centralised in a single Garden Village model.
A0984B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Agree	Support Part 8 of the draft policy which provides some support for local facilities to be delivered in order to support significant new residential developments. However, it is noted that the retail hierarchy excludes planned local centres at strategic sites such as BRD030. Given that the delivery of a local centre is a requirement for BRD030 (as set out in draft Policy S3.1), it is recommended planned local centres and included in the hierarchy within draft Policy DP10, to provide appropriate policy support for the uses, as well as protection from future out-of-centre proposals which could affect the viability or deliverability of a local centre at this location.
A0997B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP10	Agree	The content of this policy is noted and would offer opportunities to conserve and enhance the historic environment including projects such as Oswestry High Street Heritage Action Zone
A0020B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	This supports regeneration and tourism development proposals of canals and specifically lists the Shropshire Union Canal and its Llangollen and Montgomery branches. The Shrewsbury Canal needs to be included.
A0020B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	6. "The Policies Map identifies the canals and lines to be protected against other forms of development that conflict with their use as a multifunctional resource or potential for restoration or regeneration. "Although under the sub-heading "Canal side facilities and new marinas", this is the key policy supporting restoration of canals. The Draft Policies Map clearly shows the Shrewsbury "Canal Line" in the key and on the map, and the Policies Map Inset S16 Shrewsbury Town shows that section on a detailed OS map, which is identical to the current Site Allocations and Management of Development (SAMDev) Plan adopted 2015, where it is part of Policy MD11: Tourism facilities and visitor accommodation. I support this policy but suggest that the sub-heading be changed to "Canal side facilities, new marinas and canal restoration". The identified "Canal Line" on the Shrewsbury Inset Plan stops at the boundary along the A5112 although the canal clearly continues west through Ditherington and beyond. Please therefore continue this Canal Line along its full historic length.
A0159B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	It is astonishing and unacceptable that DP11 fails to recognise the importance of shifting tourism car trips as much as possible to public transport and bikes.
A0167B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11		Welcome support growth and expansion of new and existing tourist related developments within Shropshire, but would draw attention to comments made in relation to draft policy SP9 in relation to the matter of potential relocation.
A0306B032	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	Developers should be required to contribute to the upkeep of natural assets to maintain and enhance the tourism offer. DP11 (f) The natural environment has been recognised as the major draw for tourists to the county. Retaining and enhancing natural features is therefore key to the long term success of the tourism industry. Stronger wording is recommended.
A0642B35	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	Developers should be required to contribute to the upkeep of natural assets to maintain and enhance the tourism offer. (f) The natural environment has been recognised as the major draw for tourists to the county. Retaining and enhancing natural features is therefore key to the long term success of the tourism industry. Stronger wording is recommended.
A0997B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Agree	Reference to the historic environment within this policy is welcomed and offers opportunities to conserve and enhance the cultural and historic environment while linking with natural environment (including green and blue infrastructure) and well being elements too.
A1124B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	Generally support the main cruxes that DP11 seeks to achieve - sustainable tourism development. Concerned over the reluctance to allow new tourism development in the rural areas. The draft policy wording creates a 'catch-22' scenario in that 1(a) seeks to support new and extended tourism development, with 1(f) supporting rural diversification. However, in contrast 1(g) restricts new tourism development in the rural areas to either be close to or within a settlement, or be part of an established and viable tourism enterprise. In supporting rural diversification, it is somewhat accepting that locations outside of, and neither adjoining, settlements will be acceptable, by virtue of most farmsteads being far removed from settlement confines. Equally, you support established tourism enterprises in the rural areas, but then restrict and limit any new enterprises from establishing themselves. Of considerable concern is the requirements of para 10 within DP11 and the requirement for new holiday let accommodation to meet the test of exceptional quality as outlined at para 79 of the NPPF. As is commonly known, this is an exceptionally high test and one which would far outweigh the viability of a small-scale tourism enterprise establishing themselves. Furthermore, para 79 is to be applied on new "homes", not holiday accommodation. It also seems somewhat juxtaposed that in order to allow a holiday let, separate to a residential unit, this needs to meet the test of exceptional quality, but it then goes on to say that conversion to residential would be resisted; however, the test of para 79 has already been met in granting the holiday let and by virtue, the LPA would be unable to resist its change of use to a dwelling. Points 10 and 11 of DP11 are going far above and beyond the requirements of a positively worded planning policy and would fail to be in conformity with the NPPF. It is our opinion that there should be greater support for new, small-scale tourism development in the rural areas, away from settlements and that support rural diversification. This is not to say that the general principles of sustainable development (landscape, amenity) be forgotten, but that a greater degree of allowance be had on the location of new tourism development. The provision of new tourism development, in the rural areas and away from settlements, can have a positive impact on the protection and management of the landscapes which DP11 seeks to protect, yet fails to recognise the intrinsic benefits of allowing. Much like new housing development, the provision of tourist accommodation is very much market-led and does not need to be so tightly controlled through the planning process as DP11 would suggest. No new or existing enterprise would be willing to install/purchase new tourism accommodation, unless there was a demand for such accommodation. Equally, should a demand cease to be apparent, it is likely that the accommodations offerings (of which are mostly temporary and transportable, in accordance with 9) will also cease and the landscape would be reverted back to its former state
A1143B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	If Policy DP15 is relevant then surely DP13 is equally relevant and in this instance failure to include DP13 significantly erodes the integrity of including DP15 as both policies are mutually supportive. To include DP 15 only is a contradiction suggesting that DP13 is of no or little value in this instance
A1161B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Agree	Strongly support this. We have recently lost significant bed space as result of reversion to residential use. This has not been the result of a down-turn in the market but other non related factors. This policy is required to ensure beds are retained and this important part of our economy strengthened.
A1616B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	We suggest that the sub-heading under which this paragraph falls should be changed to read, "Canal side facilities, new marinas and canal restoration".
A1844B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	May be useful to include need for applicants to undertake pre-application discussions with Canal and River Trust to demonstrate that the canal network is capable of accommodating the proposal. The policies map needs to be updated to show the correct canals and lines to be protected against other forms of development. Para 4.109 should be updated to read 'The restoration of the canal from Frankton Junction to near Newtown is fully supported by the Canal and River Trust. The Montgomery Canal Partnership may also be able to provide updated information about the restoration works on the Montgomery Canal.
A2394B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	Please amend to read "Shropshire Union Canal – Montgomery Branch. To realise the potential benefits from full restoration, the Council supports the aim of the Montgomery Canal Partnership to re-open the Canal." Reason: This would bring the Policy into line with Para TD3 (Montgomery Canal and associated development) of the Powys LDP. A copy of that policy is attached.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2403B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	The Estate supports the objectives of Policy DP11 to deliver high quality, sustainable tourism and leisure offers including those which are sensitive to but also respond to the opportunities presented by the natural and built, including historic, environment of the district. The acknowledgment of the value of these sectors to the local economy is also welcomed. The Estate already contributes to the leisure opportunities in the district, being an important enabler of access to the countryside through the public access available to a network of rights of way and areas of woodland at Haughmond Hill, which provide a major amenity for Shrewsbury. There is potential to further enhance this, which will be explored as part of the Whole Estate Plan process. The Estate is therefore pleased to see support for new tourism, culture and leisure developments in the district, including appropriate development in rural areas. The Estate also supports the acknowledgment of the appeal to people of rural locations for holiday stays and supports the opportunities for the delivery of new visitor accommodation in rural areas. Point 1 g) should remove the reference to 'existing' viable tourism enterprises, to allow new proposals for visitor accommodation, to be brought forward where appropriate, in conjunction with new, well evidenced tourism proposals. We would suggest the criteria under point 9, in relation to the legal caravan definition, is possibly too restrictive a requirement, and may not allow for innovative accommodation offers to come forward. It would be helpful for the policy to clarify whether this reference is made purely in relation to the permanence tests of the legal definition and not for example size, which would be better judged by way of consideration of impacts in each particular case.
A2441B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	have ticked disagree because of what is missing from the information. I would like to see more cycling opportunities in Shropshire promoted / enhanced / developed. There is very little promotion of cycling in Shropshire. I would like to see more cycling proposals in the Local Plan and more concrete definitions when they are mentioned as part of policies.
A2475B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP11	Disagree	The focus from the start on sustainable tourism is welcomed. This can be explained further and covered more fully, as in comments below along with some improved wording in places. 1b. Suggest 'engagement' rather than 'connections' and access to 'high quality nature and heritage sites' rather than 'heritage trails and parkland'. 1c. Suggest 'rivers, meres and mosses'. 1e. The heritage is what should be preserved rather than the brand. 1g. Suggest the 'reputation' of Shropshire rather than the 'role'. Rural areas sentence – should cross reference DP26 – appropriate scale and character is key for tourism development in the AONB. Suggest 'or to an established...' Text is ambiguous – but is assumed to mean proposals should be close to rather than be an established enterprise. Para 3 Screening has too much prominence here – suggest 'well designed and sited...' Tranquillity can also be threatened by inappropriate development or activities. The policy should also refer to tranquillity and the need to take into account noise and light pollution. Para 7. Camping sites have the least impact of any tourism development, due to their limited built development and temporary occupancy. They are an under-represented feature of the holiday accommodation offer in the county and should not be unduly discouraged. Para 8. Cumulative impact is much more likely to be an issue for caravans, chalets and cabins than for campsites (which are unlikely to be clustered in a small area). Reference should be made to limiting caravan, chalet and cabin development for reasons of capacity and scale (including cumulative impacts) as well as referring to landscaping and design. The policy paragraphs should recognise other aspects of sustainable tourism - energy efficient (cross reference to DP12), sustainably sourced materials, actively supporting conservation, access to recycling, public transport, waste reduction/management, local employment, low pollution (noise, light, emissions, waste) strong retention of benefits in the local economy, social benefits – to local community, and addressing needs of diverse range of visitors. Explanation There is a need for greater explanation of sustainable tourism. One definition is: The aim of sustainable tourism is to increase the benefits and to reduce the negative impacts caused by tourism for destinations. This can be achieved by: •Protecting natural environments, wildlife and natural resources when developing and managing tourism activities •Providing authentic tourist experiences that celebrate and conserve heritage and culture •Creating socio-economic benefits for communities through employment and income earning opportunities 4.106 Suggest 'humans' in place of 'man'. Add 'nature' before produce. 4.107 Offa's Dyke Path National Trail, and suggest add 'and the Shropshire Way'. 4.108 Suggest mention Montgomery Canal. 4.109 British Waterways is now the Canal and River Trust. The depth of content on railways and canals in the policy is not matched by that on the natural environment which probably has a broader appeal and this balance should be redressed.
A0026B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Agree	The Residents of Cross Houses and Berrington recently completed a Community Led Plan which showed that a significant number of residents have concerns for the environment and development within that. The Parish Council therefore strongly support the proposal to achieve 19 % increased improvement over the current building regulations: Ensuring all proposals for 10 or more dwellings achieve a minimum of 19% improvement in the energy performance requirement in Part L of the 2013 Building Regulations, until such time as the Building Regulations are increased to a level which exceeds this uplift and: c. Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources. d. Strongly encouraging all proposals for one or more dwellings and in particular residential development of 50 or more dwellings to: i. Achieve zero net-carbon emissions; ii. Maximise the use of on-site district heating and cooling systems, especially where these utilise renewable energy and iii. Maximise opportunities to connect to wider heating and cooling networks both for energy supply and export, especially where these utilise renewable energy
A0101B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Agree	Para 1a: Fully support Para 1b: should be amended to require all developments to comply with the requirements of the Building Regulations prevailing at the time
A0117B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Para 1a: Fully support Para 1b: should be amended to require all developments to comply with the requirements of the Building Regulations prevailing at the time
A0159B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Point 1 in DP12 does not mention the carbon emissions that arise from the transport choices made by residents when they move into new homes. Locations with no or poor public transports would increase the need for car usage. The Local Plan states that transport carbon is responsible for 33% of Shropshire's total carbon but transport is not used to support policies that explicitly and tangibly reduce car use. Para 4.114 mentions the 2008 Climate Change Act and not the 2019 "net zero by 2050" published on 27th June 2019.
A0238B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Agree	(Document Reference BTC21)Generally supportive of identified policies for controlling aspects of development related to carbon emissions, the natural environment, water, the historic environment, the Green Belt and AONB. For DP12: would support relaxing restrictions in Conservation Areas to explicitly allow any energy-efficient glazing that is reasonably consistent with local fenestration.
A0250B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12		The draft policies will increase development costs significantly, of which £246,689/ha of additional costs derive from climate change measures as calculated by the Council's Delivery & Viability Study The list of evidence relating to Policy DP12 in Appendix 3 (Key Evidence Informing Local Plan Policies) fails to mention the Council's Delivery & Viability Study in relation to policy DP12. Welcome acknowledgement in section 4 of Policy DP12 that requirements may make some development unviable, in particular the delivery of affordable housing. Support in general the measures to minimise carbon emissions but note that the explanatory text makes insufficient reference to the impact of the policy on viability and deliverability. In the interests of honesty and transparency, the explanatory text should note that the development industry is being asked to make significant sacrifices to achieve these higher standards and as a consequence some developments will be difficult to deliver. It will be necessary for the Council to recognise that a higher proportion of sites may not come forward, which will have a knock-on effect on land supply requirements. This consequence of the policy should be explicitly recognised in the Plan. The explanatory text does not explain how the policy will be implemented. Appendix 4 implies that this will be through condition, it is assumed planning officers will consult building control officer on whether compliance is achieved, but question whether building control (including private sector building control practices) have the resources to respond to such requests. If building control officers are required to check the detailed building designs of every new development, the Council must be able to evidence that the policy will not lead to undue delays, which in turn affect both the viability and delivery of development. <u>Given the potential for the operation of this policy to impose delays at the discharge of conditions stage, greater clarity is required over how the policy will be implemented in practice</u> This policy essentially serves as a counterpart to Policy DP3 and sets out various construction standards for both residential and commercial properties The policy provides a range of suggestions on the way new buildings can be as energy efficient as possible, including designing them to maximise fabric energy efficiency including such measures as: building orientation; high levels of insulation of roofs, floors and walls; maximising airtightness and using solar gain through window/door orientation whilst avoiding overheating. Specifically, the policy requires all new non-residential development of 1,000m ² or more floorspace or with a gross site area of 1ha or more will achieve the BREEAM Excellent rating. Please also see comments on proposed allocation SHR197VAR.
A0268B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12		This policy essentially serves as a counterpart to Policy DP3 and sets out various construction standards for both residential and commercial properties The policy provides a range of suggestions on the way new buildings can be as energy efficient as possible, including designing them to maximise fabric energy efficiency including such measures as: building orientation; high levels of insulation of roofs, floors and walls; maximising airtightness and using solar gain through window/door orientation whilst avoiding overheating. Specifically, the policy requires all new non-residential development of 1,000m ² or more floorspace or with a gross site area of 1ha or more will achieve the BREEAM Excellent rating. Please also see comments on proposed allocation SHR197VAR.
A0306B033	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Shropshire Wildlife Trust welcome this policy but feel that it needs both greater ambition and strength. DP12 (1c) We welcome this but we would like to see a commitment to an increased level of on-site renewable energy sources. DP12 (2) We believe large commercial/industrial developments must have the same commitment to providing a percentage of their predicted energy needs through on-site renewable and low carbon sources. DP12 (4) Disappointing that when reducing carbon emissions and addressing climate change is balanced against profit, profit wins.
A0311B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining
A0323B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining (respondent ref; Form 13)
A0356B14	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining (respondent ref; Form 13)
A0413B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Part 1 c the minimum level of 10% renewable energy should be raised to 25%. Part 4 should state 'strongly demonstrate' and also 'show that there are no alternative solutions for the development'. The developers are responding to the need for higher standards and the provision of renewables, eve charging points and energy efficiency in their new designs for developments. It is important to build for the future and not provide slums that will need retrofitting. Part 5 should be added to support renewable energy schemes that are in line with national policies. The criteria for applications should be made clear and may need to be a separate Development policy (or DP 12 part one and two.)
A0430B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Object to DP12 as these are matters solely for Building Regulations and are not matters that should be included in the plan. DP12(1)(c) requires new residential development on sites of one or more dwellings to ensure that 10% of the predicted energy needs of the development be delivered from on-site renewable and low-carbon energy sources. DP12(1)(d) strongly encourages all proposals of 50 dwellings or more to achieve zero net-carbon emissions. Support the need to minimise carbon emissions and commend the Council's efforts towards creating a zero net-carbon emission society. But the Deregulation Act 2015 removed the provision set out in the Planning and Energy Act 2008 which allowed a local planning authority to include in their plans energy efficiency standards that exceeded the energy requirement of Building Regulations. The Written Ministerial Statement (March 2015) is clear in that local planning authorities should not set in their emerging Local Plans any requirements relating to the performance or construction of new dwellings. PPG is also clear that local planning authorities only have the option to set additional technical requirements exceeding the minimum standards required by Building Regulations in respect of access and water, and an optional nationally described space standard. DP12(2) states that all non-residential developments of 1,000sqm or more will achieve BREEAM 'excellent' rating, and whilst buildings should be well-designed, this is not a matter for the plan.
A0486B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	DP12, Paragraph 4.114 contains an incorrect reference to the Climate Act and the need for 80% reduction in greenhouse gas emissions although the Act was amended in June 2019 to require net zero emissions by 2050. Paragraph 4.121 refers to District Heating schemes. It should be possible for these to obtain much of their heat from renewable resources in most cases using heat pumps sourcing heat from air, water or ground, waste, biomass and solar with batteries.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0642B36	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	This only talks about minimising emissions – not road to net zero. It is astonishing that the information in the Local Plan that transport carbon is responsible for 37% of Shropshire’s total carbon, transport is not used to support policies that explicitly and tangibly reduce car use. Transport carbon reduction is not mentioned in 1a-1d or sections 2, 3 and 4. Bearing in mind what has happened regularly with affordable housing, this leaves far too much scope for backtracking. 1c: We welcome this but we would like to see a commitment to an increased level of on-site renewable energy sources. 2: We believe large commercial/industrial developments must have the same commitment to providing a percentage of their predicted energy needs through on-site renewable and low carbon sources. Comment on 3.108 is referenced: There is a contradiction within a single sentence! Development should “respond positively” but refer to environmental assets as “constraints”! Further definition on the meaning of a ‘positive response’ needed. This should include as a minimum actively enhancing biodiversity, as required by the NPPF, and supported by the Nature Recovery Strategy and Biodiversity Net Gain. 4. Disappointing that when reducing carbon emissions and addressing climate change is balanced against profit, profit wins!
A0647B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12:“ Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources.”10% is not enough, and ‘low carbon energy sources’ needs defining (respondent ref; Form 13)
A0648B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12:“ Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources.”10% is not enough, and ‘low carbon energy sources’ needs defining (respondent ref; Form 13)
A0696B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Don’t know / no opinion	An additional part should be added to the draft policy, supporting renewable energy schemes that are in line with national policies The criteria for applications should be made clear, this may need to be expressed in a separate/part 2 of the draft policy. Para 3.30 of the Explanation to SP3 relating to The Shropshire Council: Climate Change Strategy Framework can be read as only setting out carbon reduction technology to be used in the Shropshire Council estate. This draft policy needs to make it clear that the Theme and Example measures therein are available for use in all development within the scope of this draft Local Plan. The draft policy should also make clear that air-source and ground source heat systems are included and that other new technologies that may arise during the period covered by this plan will be considered for adoption
A0698B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12:“ Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources.”10% is not enough, and ‘low carbon energy sources’ needs defining (respondent ref; Form 13)
A0853B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Object to DP12(1)(b) and (1)(c) and (1)(d) which are well intentioned but inconsistent with national planning policy and guidance, which make clear that only the optional technical standards in NPPG can be sought in planning policy and so, these sections of DP12 should be deleted. In addition, DP12(1)(d) suggests that achieving zero net-carbon is not obligatory but paragraph 4 then goes on to state that: “The requirements expressed in this policy will apply unless it is demonstrated through open book accounting that they would make the development unviable, having regard to the policy requirements of the Local Plan, in particular the delivery of affordable housing”. This requirement indicates that DP12(1)(d) will apply in every case unless a developer can prove an exception to the policy.
A0862B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12		Support in general the measures to minimise carbon emissions. Explanatory text should note that the development industry is being asked to make significant sacrifices to achieve these higher standards. The list of evidence relating to Policies SP3 and DP12 in Appendix 3 (Key Evidence Informing Local Plan Policies) fails to mention the Council’s Local Plan Delivery & Viability Study in relation to either policy SP3 or DP12. The implications of reducing carbon emissions are estimated in the Local Plan Delivery & Viability Study. Draft policies will increase development costs significantly, of which £246,689/ha of additional costs derive from climate change measures as calculated by the Council’s Delivery & Viability Study. The significant costs deriving from draft Policy DP12 should be explicitly acknowledged by the Plan and reflected in reduced developer contributions in other areas, such as education and other s106 contributions. It will require higher densities in order to achieve viable developments. The explanatory text does not explain how the policy will be implemented. Local Plan Appendix 4 (Delivery and Monitoring Local Plan Policies) suggests measuring, “the proportion of planning consents in which the policy is referenced in planning conditions consistent with the policy criteria” (p321 of the Plan). The implication is that the policy will be applied through planning conditions. When applications to discharge those conditions are made, we can only assume that planning officers will consult building control for confirmation that buildings comply with the policy. We question whether building control (including private sector building control practices) have the resources to respond to such requests. If building control officers are required to check the detailed building designs of every new development, the Council must be able to evidence that the policy will not lead to undue delays, which in turn affect both the viability and delivery of development. Given the potential for the operation of this policy to impose delays at the discharge of conditions stage, greater clarity is required over how the policy will be implemented in practice
A0896B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Galliers Homes generally support Policy DP12 and measures to minimise carbon emissions but note that the explanatory text makes insufficient reference to the impact of DP12 on viability and deliverability. In the interests of honesty and transparency, the explanatory text should note that the development industry is being asked to make significant sacrifices to achieve these higher standards and as a consequence some developments will be difficult to deliver. It will be necessary for the Council to recognise that a higher proportion of sites may not come forward, which will have a knock-on effect on land supply requirements. This consequence of the policy should be explicitly recognised in the Plan although DP12(4) acknowledges that these requirements may make some development unviable, in particular the delivery of affordable housing. The list of evidence relating to Policy DP12 in Appendix 3 (Key Evidence Informing Local Plan Policies) fails to mention the Council’s Local Plan Delivery & Viability Study in relation to policy DP12. The implications of reducing carbon emissions are estimated in paragraph 12.63 of the Local Plan Delivery & Viability Study and draft policies will increase development costs significantly, of which £246,689/ha of additional costs derive from climate change measures as calculated by the Council’s Delivery & Viability Study and summarised in table 12.8 on page 233 of that study. The significant costs deriving from policy DP12 should be explicitly acknowledged by the Plan and reflected in reduced developer contributions in other areas, such as education and affordable housing. The explanatory text does not explain how the policy will be implemented. Local Plan Appendix 4 (Delivery and Monitoring Local Plan Policies) suggests measuring, “the proportion of planning consents in which the policy is referenced in planning conditions consistent with the policy criteria” (p321 of the Plan). The implication is that the policy will be applied through planning conditions. We can only assume that planning officers will consult building control for confirmation that buildings comply with the policy, but question whether building control (including private sector building control practices) have the resources to respond to such requests. If building control officers are required to check the detailed building designs of every new development, the Council must be able to evidence that the policy will not lead to undue delays, which in turn affect both the viability and delivery of development. Given the potential for the operation of this policy to impose delays at the discharge of conditions stage, greater clarity is required over how the policy will be implemented in practice. In light of the above, we suggest an additional explanatory paragraphs below paragraph 4.121 of the policy stating: “In recognition of the significant impact of policy DP12 on the viability of development and on the proportion of sites that may in consequence not be deliverable, the Council will apply a 20% buffer to its housing land supply in order to prevent any negative impact on housing delivery. The Council will ensure that the policy does not lead to delays in processing applications, including applications to discharge conditions”.
A0897B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Draft policies will increase development costs significantly. £246,689/ha of additional costs derive from climate change measures (Table 12.8 of the Council’s Delivery & Viability Study). Welcome the acknowledgement in section 4 of draft Policy DP12 that these requirements may make some development unviable, in particular the delivery of affordable housing. The Council’s Delivery and Viability Study shows the effect of the proposed policies on the viability of different types of sites. A site is considered viable if the residual land value exceeds ‘benchmark land value’. For large greenfield sites this is £425,000/ha, for small greenfield sites it is £500,000/ha and for brownfield sites it is £600,000/ha. The Study’s concludes a high proportion of sites coloured red are ‘not viable’ and that “The results clearly show a challenging viability context in Shropshire.” The list of evidence relating to Policy DP12 in Appendix 3 fails to mention the Council’s Delivery & Viability Study. Given the vital importance of the Delivery & Viability Study, it should be referenced in Appendix 3 of the Plan. Generally support measures to minimise carbon emissions but note the explanatory text makes insufficient reference to impact on viability and deliverability. Explanatory text should note that the development industry is being asked to make a significant stretch to achieve these higher standards and as a consequence some developments will be difficult to deliver without a reduction in affordable housing to compensate for the additional costs. Other developments will simply be rendered unviable. The Council should recognise a higher proportion of sites will not come forward, which will have a knock-on effect on land supply requirements. It may be necessary to identify 133% of the land needed in order to be able to deliver 100% of the housing required. Consequences should be specifically recognised in the draft Local Plan. The Policy Explanation does not explain how draft Policy DP12 will be implemented. Appendix 4 suggests measuring, “the proportion of planning consents in which the policy is referenced in planning conditions consistent with the policy criteria”. Given potential for this to impose delays at discharge of conditions stage, greater clarity is required over how the policy will be implemented in practice. It is currently far from clear whether the policy is viable or achievable.
A0984B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12		Part 1c of this draft policy requires new residential development on sites of one or more dwellings to ensure that 10% of the predicted energy needs of the development are delivered from on-site renewable and low-carbon energy sources. Whilst supportive of the need to minimise carbon emissions, there is a need to be aware that energy requirements for new housing development are a matter solely for Building Regulations. Part 1d of this draft policy strongly encourages all proposals of 50 dwellings or more to achieve zero net-carbon emissions. Use of the words ‘strongly encourages; suggests flexibility, and that this would not be a requirement for all such development. Support the flexibility within this policy, given that this may not be possible for all sites and the end of the plan period is some 12 years from 2050 (Governments target date for net zero greenhouse gas emission housing) which will allow further time for different building materials to be uncovered which make such aspirations more achievable. Suggest the wording is amended to state ‘encourages’ and opposed to ‘strongly encourages’ to ensure that zero net-carbon emissions are achieved where possible. Part 2 of this draft policy requires all non-residential developments of 1,000m2 or more will achieve BREEAM ‘excellent’ rating. Whilst supportive of the delivery of sustainable and well-designed/constructed buildings, to achieve BREEAM excellent the building would be within the top 10% of the UK’s new non- domestic buildings. This is considered to be a very high bar for developments of over 1,000m2 to achieve. Suggest achieving a minimum BREEAM rating of ‘very good’ to be more appropriate and where possible/appropriate, an excellent rating. As noted within the viability assessment, the additional cost of building to BREEAM ‘Very Good’ standard is negligible however there are significant additional costs to achieving BREEAM ‘Excellent’ standard. Part 4 notes that the requirements expressed within the policy will apply unless it is demonstrated through open book accounting that it would make the development unviable. Support recognition that some requirements may not be deliverable/viable on all schemes and welcome the flexibility to provide a reduction in the requirements where appropriate.
A1106B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Policy DP12. ‘Minimising Carbon Emissions’ states that it is expected “all proposals for 10 or more dwellings achieve a minimum of 19% improvement in the energy performance requirement in Part L of the 2013 Building Regulations.” Although we support that this policy doesn’t exceed the 2013 regulations, it should be noted that those regulations are not permanent. The ‘Future Homes Standard’ consultation on Part L of the Building Regulations ended in February 2020. The Future Homes Standard is targeted for publication by 2025 and therefore it will be unlikely to have any bearing on this local plan’s policies. However, it does, demonstrate that the regulations are subject to change. It is important that Shropshire ensure that local policy aligns with national guidance. The ‘Future Homes Standard’ consultation noted that the energy performance requirements increase the costs for home builders and goes on to propose removing the ability of local planning authorities to set higher energy efficiency standards than those in the Building Regulations. DP12. also states that it will be expected that “all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources”. Although the aspiration of the council to promote more sustainable methods of extracting and creating energy, the cost to install the required technologies is often financially costly, this cost can significantly impact on viability making this policy unworkable for some developments. The DLP does state that these measures can be avoided by demonstrating via “open book accounting” that they would make the development unviable. We support this clause but submit that it would be helpful if further guidance was given with regard to the relationship between affordable housing, climate change measures and viability; namely which matter should be prioritised within viability assessments.
A1116B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	The details of DP12 seem to have been framed along the right lines, including building orientation which has been overlooked for too long. There needs to be encouragement for innovative approaches to design that can create a sense of place as well as achieving energy efficiency e.g. there are examples of recent designs where dwellings have been linked to achieve a high architectural standard combined with energy efficiency. Also, PassivHaus must be a development requirement from individual to any number of new dwellings if we are to meet the need to reduce carbon emissions well before 2050 - as set out in the Centre for Alternative Technology’s (CAT) Zero Carbon Britain Report (www.cat.org.uk) PassivHaus is seen and promoted as a requirement for all new development by the majority of those who are climate-aware.

A1152B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Agree	<p>Agree but it does not go far enough.</p> <p>Strongly agree on the need to minimise carbon emissions, and the hierarchy shown in para 4.116. However, the fact remains that until zero carbon new builds (housing and employment), all development will continue to contribute to making the problem of global warming worse, not better. The hope embedded in the policy is presumably that before the zero-carbon deadline of 2030 is upon us, costs of the technology will somehow have reduced such that the provisions in para 4 of the draft policy and 4.4.120 of the explanation as to viability (i.e. profit) will not need to apply.</p>																
A1629B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>I agree in principle with PP12 but object to the potential weakening of the policy by Paragraph 4. To quote "The requirements expressed in this policy will apply unless it is demonstrated through open book accounting that they would make the development unviable, having regard to the policy requirements of the Local Plan, in particular the delivery of affordable housing."</p> <p>This paragraph is unnecessary and should be deleted as it provides a potential loophole in the policies set out in Paragraphs 1 to 3 which should be applied with rigour if emissions are to be minimised.</p> <p>The policy should not be influenced by, or traded off against, a separate policy aimed at provision of affordable housing.</p> <p>The policy should include measures to ensure that housing development will not unduly increase transport emissions, by location close to public transport, cycleways and walkways, and by the provision of electric car hire facilities. Also low cost housing should be available to those willing to forego parking space, thereby reducing the cost of such provision.</p>																
A1630B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>The NFU has recently set out is aspiration for the farming sector to achieve net zero by 2040. The three pillars are outlined in the NFU's net zero plan: productivity, carbon storage and renewables and bioenergy. We are involved in a number of initiatives nationally and locally which focus on this aspiration.</p>																
A1634B04	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>It is encouraging to see some commitment to renewable energy in SP3 and DP12, with passing reference in DP35. As stated in DP12: "Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources." 10% is not enough, and 'low carbon energy sources' needs defining (respondent ref; Form 13)</p>																
A2163B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>Requirements for fabric energy efficiency, minimum energy performance requirements and low carbon energy systems should not undermine the deliverability of the Plan, as stated in para 34 of the NPPF. This draft policy seeks to achieve a minimum of 19% improvement in the energy performance requirement in Part L of the 2013 Building Regulations, and that 10% of predicted energy needs is from on-site renewable and low carbon energy sources.</p> <p>It also strongly encourages that new dwellings, particularly those for 50 or more dwellings, achieve zero net-carbon emissions, utilise district heating and cooling systems and connect to wider heating and cooling networks both for energy supply and export.</p> <p>There is no justification for why 10% of energy needs is required to come from onsite renewable and low carbon energy sources. As long as power comes from renewable and low carbon sources, it should not matter whether this is sourced on or off-site. Para 151 of the NPPF promotes use and supply of renewable and low carbon energy and heat, but does not specify that these must be met onsite. Therefore, this policy is not justifiable as the delivery mechanism should be flexible to enable developers to provide their own solutions rather than providing onerous requirements that are too prescriptive and may stifle development from being delivered.</p> <p>District wide heating/cooling systems, may be unsuitable as they may be unreliable, expensive and may also attract high management and repair costs. Also, the current predominant technology for district wide heating is gas combined heat and power (CHP) plants, with over 90% of district networks being gas fired. Furthermore, some heat network consumers do not have comparable levels of satisfaction as those on standard gas and electricity networks, and pay a higher price. Given that there are other options such as solar and alternative off-site generations of carbon neutral energy, which may be more reliable maintenance free options, there is no justification for an emphasis on on-site district heating.</p> <p>The policy should be flexible, not prescriptive, so that it can keep pace with technology which is dynamic, whilst the local plan process is not.</p> <p>The broad principles of this draft policy should be further refined as changes have already been made to Building Regulations to achieve energy efficiency standards. Building Regulations already considers the energy efficiency of buildings and this policy, as worded, adds no material value and will potentially stymie development that accords with government/building regulation standards. Any requirement that goes beyond building regulations should be informed by detailed evidence, as to viability, when evidenced with the objectives of the Plan when read as a whole.</p> <p>This draft policy should be amended in order to be found sound, as it needs to be fully justified and compliant with national policy.</p>																
A2177B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>Draft Policy requires: maximising fabric energy efficiency ;</p> <ul style="list-style-type: none"> all proposals for 10 or more dwellings achieving a minimum of 19% improvement in the energy performance requirement in Part L of the 2013 Building Regulations, until such time as the Building Regulations are increased to a level which exceeds this uplift ; all proposals providing a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources ; and encouraging all proposals in particular residential development of 50 or more dwellings to achieve zero net-carbon emissions, to use on-site district heating / cooling systems, and to connect to wider heating / cooling networks both for energy supply and export, especially where these utilise renewable energy. <p>The Council is committed to an overall goal of making Shropshire net greenhouse gas neutral by 2030. Consider the Council's policy approach to climate change should reflect the Government's proposals on levels of energy efficiency, heat networks, electric vehicle charging points (EVCP) and water efficiency.</p> <p>Government's Future Homes Standard consultation (ended 07/02/2020), indicated the UK has set in law a target to bring all its greenhouse gas emission to net zero by 2050. New and existing homes account for 20% of emissions. Government intends to future proof new homes with low carbon heating and world-leading levels of energy efficiency. The consultation addressed:</p> <ul style="list-style-type: none"> options to uplift standards for Part L (Conservation of Fuel & Power) and changes to Part F (Ventilation) Building Regulations ; transitional arrangements to encourage quicker implementation; and clarifying the role of Councils in setting energy efficiency standards. <p>Government estimated Future Homes Standard increased costs by circa £2,557 - £4,847 per dwelling. The Council's own viability assessment identified viability challenges across the County and the cumulative impact of proposed policy requirements threatens housing delivery (see HBF response under Viability).</p> <p>The Council is also referred to the consultation on Heat Networks: Building A Market Framework (ended on 1st June 2020). To meet the Government's legal commitment on reducing greenhouse gas emissions virtually all heat in buildings will require decarbonising. Heat networks are one aspect of the path towards decarbonising heat, however currently the predominant technology for district-sized communal heating networks is gas combined heat and power (CHP) plants. Over 90% of district networks are gas fired. As 2050 approaches, meeting the Government's climate target of reducing greenhouse gas emissions to net zero will require a transition from gas-fired networks to renewable or low carbon alternatives such as large heat pumps, hydrogen or waste-heat recovery but at the moment one of the major reasons why heat network projects do not install such technologies is because of the up-front capital cost. The Council should be aware that for the foreseeable future it will remain uneconomic for most heat networks to install low-carbon technologies.</p> <p>Furthermore, some heat network consumers do not have comparable levels of satisfaction as consumers on gas and electricity networks, and they pay a higher price. Currently, there are no sector specific protections for heat network consumers, unlike for people on other utilities such as gas, electricity or water. A consumer living in a building serviced by a heat network does not have the same opportunities to switch supplier as they would for most gas and electricity supplies. All heat network domestic consumers should have ready access to information about their heat network, a good quality of service, fair and transparently priced heating and a redress option should things go wrong. Research by the Competition and Markets Authority (CMA) found that a significant proportion of suppliers and managing agents do not provide pre-transaction documents, or what is provided contains limited information, particularly on the on-going costs of heat networks and poor transparency regarding heating bills, including their calculation, limits consumers' ability to challenge their heat suppliers reinforcing a perception that prices are unjustified. The monopolistic nature of heat networks means future price regulation is required to protect domestic consumers. The CMA have concluded that "a statutory framework should be set up that underpins the regulation of all heat networks." They recommended that "the regulatory framework should be designed to ensure that all heat network customers are adequately protected. At a minimum, they should be given a comparable level of protection to gas and electricity in the regulated energy sector." Government's latest consultation on heating networks proposes a regulatory framework that would give Ofgem oversight and enforcement powers across quality of service, provision of information and pricing arrangements for all domestic heat network consumers.</p> <p>Council's proposed policy approach is unnecessary because of the Government's Future Homes Standard proposals. Before the pre-submission LPR consultation, Draft Policy SP3 Bullet Points 1f, 2a, 2b & 4d and Draft Policy DP12 Bullet Points 1a, 1b, 1c & 1d should be deleted.</p>																
A2180B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	<p>We would urge Planners to look at the Stroud and (now approved) Oxford Local Plans and their ambitions for minimising carbon emissions. Both aim high by setting the reduction in emissions from the Building Regulations target and allowing achievement to be achieved through higher fabric standards, onsite renewables and offsetting contributions. Shropshire currently only sets fabric condition as is now common (+19%) + 10% Merton Rule. Oxford also sets a sliding scale which increases the demand over time in line with the requirement to move towards zero carbon and as the technology gets cheaper and more widespread. All London development now requires an Energy Statement explaining how the development, in actual use, will achieve targets, and Oxford is now requiring this too. We ask that the Shropshire Local Plan does this also. The wording should be strengthened in this area. The Shropshire Plan says 'strongly encouraging' whereas Stroud states 'should' and Oxford says 'will'. That this is possible in Shropshire is shown by the inclusion of 'will' when it comes to non-residential large developments achieving BREEAM excellent standard. Additionally this policy should be requiring no gas usage on new development sites.</p>																

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2194B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	The paragraph in DP12 states: a. Being designed to maximise fabric energy efficiency including such measures as: building orientation; high levels of insulation of roofs, floors and walls; maximising airtightness and using solar gain through window/door orientation whilst avoiding overheating and: b. Ensuring all proposals for 10 or more dwellings achieve a minimum of 19% improvement in the energy performance requirement in Part L of the 2013 Building Regulations, until such time as the Building Regulations are increased to a level which exceeds this uplift and: c. Ensuring all proposals for the formation of one or more dwellings provide a minimum of 10% of the predicted energy needs of the development from on-site renewable and low carbon energy sources. These stipulations for buildings are significantly lacking in ambition. All such buildings should be carbon neutral in future., and the aspiration should be that ALL energy needs are from renewable and low carbon energy sources, to ensure Shropshire meets its aspirations in relation to the climate emergency. Furthermore, it should be ensured that provision for electric vehicle charging is included within the energy efficiency concerns of the development, with attention to economies of scale
A2308B36	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Would like to see this draft policy recognise that there are appropriate alternative environmental performance assessment tools, equivalent to BREEAM. Specifically, would like to see reference to the Defence Related Environmental Assessment Method (DREAM) which is an environmental assessment tool developed by the Defence Infrastructure Organisation for new build and refurbishment projects on the defence estate. The draft policy contains references to renewable energy sources but provides no criteria against which applications for generation would be assessed. Wind turbines have the capacity to have a considerable impact on both aviation safety and operation of radar and technical assets. Recommend that the draft policy echoes Government's Planning Practice Guidance and makes clear that MOD will be consulted where a proposed turbine is 11 metres to blade tip or taller, and/or has a rotor diameter of 2 metres or more. This will allow the impacts of the turbine(s) to be assessed and appropriate guidance provided.
A2321B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	As set out above, the 2019 Spring Statement included a commitment that by 2025 the Government will introduce a Future Homes Standard for new build homes to be future-proofed with low carbon heating and 'world-leading levels of energy efficiency'. The Consultation document (October 2019) highlighted that changes to Part L, Part 6 and Part F of the Building Regulations are anticipated to come into force by mid/late 2020. Policy DP12 should therefore be deleted as it will be a duplication of national guidance.
A2323B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12		The 2019 Spring Statement included a commitment that by 2025 the Government will introduce a Future Homes Standard for new build homes to be futureproofed with low carbon heating and 'world-leading levels of energy efficiency'. The Consultation document (October 2019) highlighted that changes to Part L, Part 6 and Part F of the Building Regulations are anticipated to come into force by mid/late 2020. Therefore, Building Regulations will require developers to build more resilient homes to assist the Council in achieving their targets. Consider that Policy DP12 is not required due to the fact that the Council's ambitions to minimise Carbon Emissions are set out in draft policy SP3 and any new homes will have to be in compliance with the proposed changes to Building Regulations. This policy should therefore be delete
A2398B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	Draft Policy SP3 and related draft Policy DP12 discuss the need to integrate renewable and low carbon energy systems into residential development. DP12 expands on this by stating that 10% of the predicted energy needs of a development needs to come from these two sources on-site; with it also requiring a minimum 19% improvement in the energy performance requirement of the 2013 Part L Building Regulations. Para 4.116 of the policy Explanation describes the five stages of the energy hierarchy and that energy options should be pursued in the following order: a. Reduce the need for energy; b. Use energy more efficiently; c. Use renewable energy; d. Use low carbon sources; and e. Use conventional energy. Council is correct to use the energy hierarchy but they appear to circumnavigate it by jumping straight to renewable and low carbon sources. Primary aim should be to reduce energy use; it should not matter if that can be achieved through a fabric first approach. A more sophisticated approach is needed than is currently being suggested.
A2406B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Disagree	This draft Policy requires a BREEAM assessment for all new non-residential development of 1,000sq.m or more floorspace, or with a gross site area of 1ha or more and that such developments achieve a BREEAM Excellent rating The draft Policy states that the requirement will apply unless it is demonstrated through open book accounting that they would make the development unviable. Whilst supportive of sustainable design and seeking opportunities to minimise carbon emissions, the blanket requirement to achieve BREEAM Excellent is onerous and not supported on the basis that it is unviable and not deliverable. In accordance with para 16 of the NPPF, consider this draft policy requirement would not be deliverable by many organisations (particularly charitable and not-for-profit organisations) due to significant viability implications. Consider the draft policy should be amended to ensure all charitable and not-for-profit organisations are exempt from this requirement, without having to produce a full open book viability assessment at the planning application stage.
A2407B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP12	Agree	We note that the plan has a strategic policy SP2 specifically around climate change and Natural England would support this. We also consider that addressing climate change is a theme throughout the plan and that there are specific development management policies (DP12) to minimise carbon in new developments. Natural England supports this approach, especially with regard to the climate emergency and climate change running as a thread throughout the whole plan.
A0101B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Agree	No comment
A0187B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	This policy does not go far enough to encourage land use change to reduce CO2 emissions. It needs to set targets, deadlines and publish baseline data.
A0189B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	This policy does not go far enough to encourage land use change to reduce CO2 emissions. It needs to set targets, deadlines and publish baseline data (respondent ref form 16).
A0198B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Disagree with Para 8 d as the only clause in the policy that is prefaced with "Encouraging" rather than "Ensuring" i.e. "Encouraging new development to plant new trees, woodland, and hedgerows" "A suitable and effective new clause would read," Ensuring that all new developments will achieve at least 20% Tree Canopy Cover (TCC). This would allow application of respected & widely used Tree Canopy Cover approach pioneered by Wycombe Council. This requirement sought by tree team also for many of the Shropshire Council's planning application approvals. TCC is easy to assess using Google Earth mapping and would transform and give environmental benefits, character to all new developments and prevent bland treeless building estates as well as increase house values. TCC could be a valuable part of the requirement of 10% net gain to the environment.
A0198B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Biodiversity Net Gain. Welcome the adoption of Net Gain in policy derived from the New Environment Bill 2020. However, disagree with policy, as it is incomplete. Suggested new policy- Degradated Habitats as a result of stronger requirement for Net Gain "The Local Authority will address concerns about new Net Gain driving habitat degradation prior to planning applications, through suitable provision in legislation. Decision makers will be supported with clear guidance on using appropriate base line data" Shropshire Local Plan needs to reference how the LA will respond to the Governments promise of legislation and support reflected in Government response to consultation replies Environment Bill : "The Government will address concerns about net gain driving habitat degradation prior to applications through suitable provisions in legislation Decision makers will be supported with clear guidance on using appropriate baseline data". A new policy with its legislation and implementation should discourage new unlawful acts of wilful destruction of trees, habitats and wildlife prior to a planning application
A0238B35	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Agree	Document Reference BTC21 :Generally supportive of identified policies for controlling aspects of development related to carbon emissions, the natural environment, water, the historic environment, the Green Belt and AONB.
A0238B40	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Agree	This policy does not go far enough to encourage land use change to reduce CO2 emissions. It needs to set targets, deadlines and publish baseline data (respondent ref form 16).
A0266B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The plan does not reflect what we now know about the dangerous decline in biodiversity. It reads as something written prior to the widespread recognition of the scale of the challenge, and of the economic and carbon-capture opportunities available through best practice UN agreed targets look for 30% of land and sea to be protected. Shropshire currently 'protects' (to varying degrees) 15%. The plan should be looking to ensure 30% of the land is protected. So a 10% increase in biodiversity contained in the plan falls far short of what is required. Shropshire should be aiming for a doubling of protected habitats, especially considering the potential for biodiversity gain in a largely rural county and the lack thereof for many other planning authorities. Possible biodiversity loss mitigation seems to include the possibility for unspecified financial contributions that do not immediately identify opportunities for compensation. Good practice elsewhere is that compensation schemes are identified and put in train as a condition of development, rather than as a yet-to-be-determined schemes, by which time further biodiversity loss may well have occurred. The dated nature of the plan is reflected in the lack of reference to a range of national and local policies and strategies that relate to the environment: the 25 year plan for the environment; the Environment Act; nature recovery networks or nature recovery strategies; the marches woodland strategy. Whilst reference is made to EU protected sites (SACs, as legally obliged) there are no policies for protecting and enhancing SSSIs, local nature reserves or wildlife sites. The Shropshire Council identified Environmental Network is hardly mentioned and some settlement policies and site allocations will conflict with this. Indeed some sustainability appraisals overlook SSSI and wildlife sites in site assessments (for further detail see submission from Shropshire Wildlife Trust). Low ambition is evidenced in the wording throughout; many policies are expressed as aspirations rather than as requirements; environmental features are described as 'constraints' rather than as assets. The plan aims low in many areas: for example, BREEAM 'Good' standard for water is expected, not 'excellent' or 'outstanding'
A0306B034	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	(3) The ambition of 10% gain for nature is not ambitious enough; both the Wildlife Trusts and the UN have identified a need for 30% of land to be protected and in recovery for nature. Government proposals are for at least 10% gain, why are we only looking at the minimum figure? The Nature Recovery Strategy is about much more than just Biodiversity Net Gain and thus, it should be a constant theme throughout the plan. DP13 (4) Add areas within any future Nature Recovery Network to the list to be assessed. DP13 (5) Proposals which are shown to have an adverse effect, directly, indirectly or cumulatively, to those natural assets listed should be refused. Exceptions should only be made in the most exceptional circumstances and there would need to be a clear methodology for how you compare the value of a natural asset to economic or social benefit. DP13 (7) The 'bigger' element of the Lawton principle is missing here. Policies should seek to maximise the size of environmental assets. DP13 (8) We would like to see reference to the Marches Woodland Strategy. DP13 (8c & 8e) We would like to see greater emphasis on protecting existing trees/woodland/hedgerow assets. Using phrases such as 'overriding reasons/benefits for development to proceed' is unclear and will result in the loss of existing trees and hedgerows. Replace hedgerows with hedgerows at least as diverse, or ideally more, in conjunction with biodiversity enhancement and gain
A0306B035	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.124 Both priority habitats and species, as outlined by Natural England should be added to the list of triggers for assessment.
A0306B036	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.129 There is a high level of subjectivity and scope for how biodiversity net gain will be determined. For most schemes the Local Authority ecologists will be able to determine biodiversity net gain however, in some circumstances partner organisations, such as Natural England and SWT, should be consulted. We would assume the biodiversity net gain assessments will be done using the latest Defra metric. We feel there needs to be explicit mention of how biodiversity net gain will be monitored and assessed to ensure long-term net gain is delivered.
A0306B037	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.131 We understand that the Nature Recovery Network under the Local Nature Strategy will be superseding the SEN. We would like this to be clear in this wording.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0306B038	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.133 How are public benefits and the value of effected assets going to be measured and assessed against each other? Para 4.133 (c) Include reference to biodiversity net gain as part of compensation measures.
A0306B039	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.136 Whether on or off-site mitigation/compensation is proposed, the measures need to be delivered in a timely manner in accordance with biodiversity net gain principle (CIEEM). We view a 'timely manner' to be measure in place prior to the loss of assets. This gives us particular concern in para 4.137 where the delivery of measures is unclear.
A0306B040	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.137 It should be made clear that this is very much an option of last resort. Given both best practice and the current state of the natural environment
A0306B041	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 4.140 We would like to see greater emphasis on protecting existing trees/woodland/hedgerow assets. Using phrases such as 'overriding reasons/benefits for development to proceed' is unclear and will result in the loss of existing trees and hedgerows. Replace hedgerows with hedgerows at least as diverse, or ideally more, in conjunction with biodiversity enhancement and gain.
A0311B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting
A0323B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A0341B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A0398B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Biodiversity I strongly support 4.156 However, p92 DP13 1, 4.122 ignores Shropshire natural assets of trees, hedgerows and pastures which re the first thing newcomers notice on our beautiful landscapes. Far too much emphasis in this document on protecting designated sites which account for only 6% of Shropshire. Only one of the many walks in and round Much Wenlock which draws many tourists, actually includes a designated site. The document includes ambitions to increase habitat with tree and hedge planting. DP13, 3, promotes this but a hedge of mixed species will promote higher diversity than privet, cypress or laurel. (Such a hedge on Walton Hill along with undergrowth including nettles which are the food plant of many insects including 5 common butterflies annually results in a spectacular diversity and number of butterfly species). Offering potential buyer and option of a fence or mixed hedge, might add to peripheral hedging to new estates, tree planting or other measures to achieve the 10% In the Natural Environment section, 4.13 biodiversity onsite is to be encouraged. I suggest:- a) our dwindling number of hedgehogs can be encouraged to include new build sites in their nightly rambles of around 2 miles, by incorporating access between properties. A CD sized hole in or under boundaries facilitates this. b) retention of front gardens of new builds. 20% of front gardens are subsequently tarmacked or hard landscaped. Provision of a garage and drive o accommodate two cars should be encouraged in new builds but remaining vegetation left to encourage biodiversity. DP11 promotes the connection between visitors and Shropshire's natural environment. Hedgerows, trees, pastureland and views and accessibility to numerous paths are the main attraction, not just designated sites. Most people walking for their health and pleasure seek out the quieter routes. Please preserve the existing hedges and trees and walking routes. DP16 lacks promotion of biodiversity which is easy to include on playing pitches, playgrounds and public parks. Include mixed hedging with undergrowth including nettles, job done. Or do a Jmie Oliver and build a meadow bank.
A0430B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Support DP13 but ask that certain matters are kept under review. DP13(1) and (2) are supported, which seek to protect designated sites and priority species and habitats. DP13(3) requires all development to deliver at least 10% net gain for biodiversity. The NPPF says that planning policies and decisions should minimise the impacts on and provide net gains for biodiversity (paragraph 170) and that in order to protect and enhance biodiversity and geodiversity, plans should identify and pursue opportunities for securing measurable net gains for biodiversity (paragraph 174). Whilst the NPPF does not refer specifically to a 10% net gain, the Environmental Bill is due to be enacted towards the end of year which will require developers to ensure habitats for wildlife are enhanced with a 10% increase in habitat value for wildlife. On this basis, there is no issue with DP13(3) but suggest that the Council monitor progress of the Environmental Bill and any policy reforms and ensure that the policy reflects the latest guidance prior to examination. DP13 (4) to (7) seek to protect natural assets within the County, which include Local Wildlife Sites, Local Geological Sites, Local Nature Reserves and Local Green Spaces, and sets the hierarchy of avoidance, mitigation and compensation. These are fully supported. DP13(8) seeks to retain trees, woodland and hedgerows where possible and increase the extent and distribution of trees and hedgerows. The retention and planting of trees will assist in delivering the Council's vision for the green infrastructure within the County and there is no issue with this.
A0447B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	It is madness that crops grown in an area are not consumed locally. Need to encourage communities to grow their own produce, establish shops selling local produce (which could subndent many modern functions not previously available – cafés, parcel delivery centres, home working facilities, walking, and bike hire and transport hubs etc.) Transport and housing is important in this context. Proposals are predictable there needs to be creativity too. The context of the profound emergency that the world is and will increasingly experience as a result of pollution of land, sea and air and destruction of the natural world the plan is in general shockingly inadequate, not to say feeble in general tone.
A0450B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Policy DP13 needs to consider whether a 10% net gain in biodiversity is a good target or whether it is too low. The Policy must then identify measures to assess whether significant housing developments are actually achieving this net gain in biodiversity given the disruption and destruction of habitats during the construction of the development.
A0501B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A0642B37	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	References Shropshire Green Infrastructure Strategy – but I don't think that this is publicly available/exists? A contract was let for its development and the document quotes it as 2020. The ambition of 10% gain for nature is not ambitious enough; both the Wildlife Trusts and the UN have identified a need for 30% of land to be protected and recovery for nature. Government proposals are for at least 10% gain, why are we only looking at the minimum figure? The Nature Recovery Strategy is about much more than just Biodiversity Net Gain and thus, it should be a constant theme throughout the plan. 4: Add areas within any future Nature Recovery Network to the list to be assessed. 5: Proposals which are shown to have an adverse effect, directly, indirectly or cumulatively, to those natural assets listed should be refused. Exceptions should only be made in the most exceptional circumstances and there would need to be a clear methodology for how you compare the value of a natural asset to economic or social benefit.
A0647B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Desire to conserve, enhance and restore Shropshire's natural environment is welcome. However it appears at odds with practices at a local level including cutting down trees without permission, planning new roads over sensitive areas and prioritising building over environmen Land use is one of the four key net zero strategies. Currently almost 40% (or more) of our food and around 70% of fruit and vegetables are imported. We could become more self-reliant in food, (reducing imports from 42% to 17%) and reducing the impact of food production/consumption elsewhere in the world. Health would also be improved by eating a better and more balanced diet and 75% of the land currently used for grazing livestock could be repurposed, freeing up space for a range of other uses, which could also offer new income streams to farmers. Making these changes would release enough land in the UK not only for producing food but to offer new potential income streams. UK sourced biomass can be used as a fuel and combined with hydrogen from surplus renewables to make carbon neutral synthetic gas and liquid fuels, which increases the amount of fuel produced per acre of land. These are 'carbon neutral' as the greenhouse gases they contain were initially captured by the biomass as it grew, resulting in no net increase in the atmosphere. Forest area is doubled to 24% of the land area of the UK, roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas. Local Plans needs to be down to earth and set targets & deadlines, publish baseline data and present clear plans. The Oswestry Place Plan is particularly proactive in seeking re-planting of woodlands, tree surveys and setting a target: "A survey of trees in the town in order to inform future planting and to provide a baseline. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%) (Oswestry Town)". Other Place Plans also seek to restore verges as well as increasing tree planting. The support exists in the county, and the county local plan needs to take the lead. I disagree with this policy because it is incomplete.
A0648B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Desire to conserve, enhance and restore Shropshire's natural environment is welcome. However it appears at odds with practices at a local level including cutting down trees without permission, planning new roads over sensitive areas and prioritising building over environmen Land use is one of the four key net zero strategies. A0670B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. At a local level it appears at odds with the practices commonly seen of cutting down trees without permission, planning new roads over sensitive areas and prioritising building over environment. Moving beyond this, the way we use land is one of the four key net zero strategies. We currently import almost 40% (or more) of our food and around 70% of our fruit and vegetables. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. Our health would be improved by eating a better and more balanced diet and 75% of the land currently used for grazing livestock could be repurposed, freeing up space for a range of other uses, which could also offer new income streams to farmers. Making these changes would mean that we have enough land in the UK not only for producing food but to offer new potential income streams. As well as being used directly as a fuel, UK sourced biomass can be combined with hydrogen from surplus renewables to make carbon neutral synthetic gas and liquid fuels, which increases the amount of fuel produced per acre of land. These are 'carbon neutral' as the greenhouse gases they contain were initially captured by the biomass as it grew, resulting in no net increase in the atmosphere. Forest area is doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas. A recent study: "Sheep farmers could make more money by growing trees instead" https://www.edp24.co.uk/business/farming/university-of-sheffield-studies-sheep-and-woodlands-1-6821180As in so many areas the local plans needs to be down to earth and set targets & deadlines, publish baseline data and present clear plans. The Oswestry place plan is particularly proactive in seeking re-planting of woodlands, tree surveys and setting a target: "A survey of trees in the town in order to inform future planting and to provide a baseline. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%) (Oswestry Town)" Other place plans also seek to restore verges as well as increasing tree planting. The support exists in the county, and the county local plan needs to take the lead. I disagree with this policy because it is incomplete.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0698B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting.
A0853B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Object to DP13(3) requiring a 10% biodiversity net gain. The requirement for a biodiversity net gain is consistent with national planning policy but the NPPF does not specify the level of net gain to be achieved. The only justification for the 10% figure is the emerging Environment Bill that is still subject to consultation and government response and this might not be enacted in law and so the 10% requirement should be deleted from DP13. It appears that the implications of applying 10% BNG on development within Shropshire, including the impact upon the developable areas of site allocations, and potentially development yield have not been assessed. Paragraph 10.28 of the Council's Viability Study assumes the development cost of achieving a 10% BNG would be £31,000, but it is not clear how this is derived. This figure may be very conservative if the developable area is reduced on sites, as we would expect in some cases. Furthermore, if 10% BNG is to be required by policy, there is likely to be a need for off-site compensation and offsetting measures to be in place from the adoption of the plan. This would be necessary to ensure that development proposals are not delayed, and to ensure that negotiation is not required with third party landowners. This should be set out and secured within the plan to provide the necessary levels of certainty for developers and the Council that off-site mitigation is available, and that development will not be unduly delayed. Where the requirement for 10% BNG is introduced through the Environment Bill, this would be part of separate legislation and would provide further clarity to the Local Plan requirement.
A0970B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. At a local level it appears at odds with the practices commonly seen of cutting down trees without permission, planning new roads over sensitive areas and prioritising building over environment. I disagree with this policy because it is incomplete.
A0972B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 2 & 4 Pam's Pools SWT wildlife site and Thatcher's Wood and Westwood Covert SSSI are close to the proposed Tasley Garden Village site. In addition there are several veteran trees at the nearby The Leasowes
A0984B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13		Fully support this policy which seeks to avoid harm to Shropshire's natural assets and ensure the assets are conserved, enhanced and restored Support parts 1, 2 and 4-7 given their intention to protect designated sites and priority species and irreplaceable habitats and protection for the natural assets within the County, which included Local Wildlife Sites, Local Geological Sites, Local Nature Reserves and Local Green Spaces. Note that Bridgnorth contains a number of open spaces in and around the settlement, as well as a local wildlife site and a regional important geological site to the north east of the settlement, development around these assets which would have an adverse impact should be prevented. Part 3 requires 10% biodiversity net gain, which is fully supported. Currently the NPPF includes a strong recommendation to achieve biodiversity net gain, but the Environment Bill will establish a legal framework for a mandatory biodiversity net gain
A1116B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Designated Sites & Priority Species & Habitats: 1. In my view permission for development should be refused in all cases. The presumption now, in the climate crisis, must be to retain all vegetation, which added together forms a natural carbon sink. Mitigation is not a substitute for retaining existing vegetation and habitats which have evolved over centuries and even millennia. If habitats are irreplaceable, they are irreplaceable. 2. There should be no development within an SSI, or near it where proximity will have an impact on the SSI Natural Assets 5. & 6. The presumption now, in the climate crisis, must be to retain all vegetation, which added together forms a natural carbon sink. Mitigation is not a substitute for retaining existing vegetation and habitats which have evolved over centuries and millennia. Compensation would never be adequate and would be a confession of failed oversight of vegetation and habitats. Developers are not a privileged group in our society; they must become part of the urgent measures required to save the earth and everything on it. Trees, Woodland & Hedgerows 8. There must be no exceptions to the retention of trees and hedgerows. Developers must be required to reduce the number of dwellings that they try to squeeze onto sites where this would have an adverse impact on the trees and hedgerows
A1143B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The statement "Where appropriate, replacement trees or mitigation measures will be sought through the imposition of planning conditions". Is well intentioned but leaves developers with an argument for putting off details for tree planting until after a site layout has planning consent; assessments by Shropshire Council's own Tree Team have identified that a high percentage of trees on development sites (domestic and commercial) fail to thrive, die or are removed within a short period (<10 years) of most developments completion, this is generally due to poor layout, lack of healthy above and below ground space, poor standards of planting and after care, and planting into corrupted and confined growing mediums. Successful and sustainable tree planting (Trees that thrive and can reach their full potential) on development sites can only be secured through the inclusion on approved layouts of appropriate space both above and below ground for trees to thrive. In the absence of this space all the conditions under the sun will not deliver sustainable tree planting. In the light of the consideration section 4.140 might be significantly improved if the last sentence read it read as follows: "Where appropriate, replacement trees or mitigation measures will be sought / secured primarily through sustainable design agreed prior to the determination of the application and subsequently consolidated through the imposition of planning conditions"
A1143B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	In principle I support the statement as it stands but on the basis that LPAs are expected to act upon The Natural England's & Forestry Commission's standing advice on protecting ancient woodland and veteran trees this paragraph would be significantly improved by including reference to that guidance (as amended). https://www.gov.uk/guidance/ancient-woodland-and-veteran-trees-protection-surveys-licences
A1152B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Agree	Agree with draft policy DP13, as a step towards helping to minimise the ecological crisis. Particularly welcome adoption of the 10% net gain for biodiversity within the Environment Act (which has yet to become law), although we foresee differences of opinion in measuring existing and augmented biodiversity.
A1170B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Agree	I agree with the tree planting policies, but they should emphasise that tree planting stock should be 'of British native origin, and preferably local origin, and not simply of British provenance' since there is much plant stock that is not genetically native and which does not contribute effectively to biodiversity, but which can be described as being of British provenance. For example, Quick thorn is hedging hawthorn of Italian origin, and has different seasonality to native hawthorn.
A1180B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A1182B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A1630B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Farmers and landowners must be fully engaged with discussions on the natural environment and any future Local Nature Recovery Strategy as they own and manage many of the areas key environmental assets. For many farmers environmental management is a core business activity, but this is not acknowledged by the document. Previous studies have shown that agricultural businesses routinely invest in landscape management and enhancement works for example hedging, tree planting, cutting and grazing. For many farmers the landscape management and biodiversity enhancements on their farms are a source of great pride and it does them a disservice to not have this aspect of land management recognised by this paper. The document starts to set out how Biodiversity Net gain would operate and acknowledges that there would be a need for off-site habitat enhancements. This is a potential opportunity for farmers in Shropshire. However it is very early in the process and a market for delivery of these enhancements has not yet emerged. A discussion is needed about the arrangements for delivering off site mitigation, to ensure that projects operate appropriately and that those delivering biodiversity enhancements are adequately funded for what are potentially long term agreements
A1634B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting (respondent ref; Form 16)
A1844B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Suggest that the canal network could be an appropriate recipient for the delivery of mitigation and compensation measures identified in the policy
A1896B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting The way we use land is one of the four key net carbon zero strategies. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. We have enough land in the UK not only for producing food but to offer new potential income streams such as biomass. Forest area could be doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MTCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas
A2108B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	Para 5b, which states that "the social or economic benefits of the proposal outweigh the adverse effect." should be deleted as this is highly likely to be abused as the ultimate get-out clause for developments which damage natural assets. Since it is generally impossible to put a price on such important natural assets as those listed in para 4, there is no basis for making a comparison on economic grounds, especially given that some natural assets are irreplaceable. Furthermore, any development which might invoke para. 5b would automatically fail para. 1d of The Shropshire Test.
A2110B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	There is an underlying assumption throughout this section that it is possible to implement biodiversity offsetting to mitigate losses of habitat. This argument is fundamentally flawed. The planning system must be strengthened, including by Planning policy being explicit about the priority of protecting nature and ecosystems. Ending the presumption in favour of development under planning rules if net gain cannot be proven to work on all levels. Ensuring that no offsetting can take place unless as a very last resort. This requires a planning application to fully explore avoidance of damage, including the possibility of no development taking place, or it being located elsewhere. Providing clear guidance on how any new development should incorporate nature; developers should be required to retain and create space for nature and to provide high-quality green infrastructure within and around their scheme. As a nation we have been warned of the substantial losses that have occurred in our natural capital and the impact on the wider environment and the health and wellbeing of communities. As the Council moves towards a carbon neutral future it must protect the existing natural capital and put in place plans to expand this resource throughout the county

A2489B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP13	Disagree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting
A0238B36	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	The considerable description of the desire to conserve, enhance and restore Shropshire's natural environment is welcome. Minimum standards need to be included in core planning policies regarding trees (possible minimum of 20%). Other place plans also seek to restore verges as well as increasing tree planting
A0306B042	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	We welcome this policy and would not like to see it compromised in any way
A0642B38	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	We welcome this policy and would not like to see it compromised in any way.
A0908B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	The Policy should be justified more and re-worked to give greater surety that it will be fulfilled. The policy of nutrient neutrality for development may result in the current situation remaining as it is, but that is not a situation that will achieve the conservation objectives set out in the HRA. It should be possible, now, to estimate what rate improvement to the River Clun is taking place, and whether, in fact, the prediction that the colony might not survive past 2034 is now more likely. The Nutrient Management Plan contained proposals for monitoring the situation, and so these figures should be readily available. The reason for the delay in delivery is the issue of the River Clun SAC. The Nutrient Management Plan does not appear to have been revised to be taken into account in the LPR, and so the existing policies that have failed improve the situation for the mussels in the River Clun and which do not allow development anywhere in the catchment, persist. If that is the case, then the mussels remain under threat and still face extinction and no further development will take place for the lifetime of the current Local Plan Review. The LPR ought to be putting forward positive policies that would resolve the issue, clean up the water quality in the River Clun, safeguard the pearl mussel colony, and allow development that has been put on hold since 2006 to get underway. If this does not happen delivering the allocated housing is going to be delayed by at least another 18 years (on top of the 10 it has already suffered). At present Policy DP14 has not been positively prepared, and is not properly evidenced or justified, and therefore cannot be supported.
A1152B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	See wider representations.
A1161B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Disagree	We have significant concerns that DP 14 is ossifying development. Clun Town Council with Chapel Lawn wish to facilitate and help move things forward. The need for greater clarity on the types of mitigation measure that are deemed suitable must be expedited. We would wish the policy is cast in some way more strongly to ensure that mitigation measures are made clearer. The current lack of practical mitigation measures mentioned in the explanation is stifling development in the area and on specifically on the two allocated sites in Clun Town. This is unacceptable and we would wish for more explicit guidance to be made publicly available, so larger sites can progress more readily.
A1630B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Disagree	The NFU and local agricultural business have long been engaged in the discussion around measures to reduce the nutrient and sediment load of the River Clun. The implementation of many phosphate reduction measures has already taken place either through involvement with initiatives such as Catchment Sensitive Farming, long term participation in agri-environment schemes or through individual voluntary changes in farming practice. We are concerned about the impacts of Policy DP14 and of the recently produced guidance on farmers who seek to build environmentally sustainable businesses. Often farmers need to replace farm infrastructure because they are no longer suitable for modern livestock rearing and crop production. For example, they may no longer meet environmental, animal welfare or food hygiene standards. An unintended consequence of this guidance could be that it restricts investment in new farm infrastructure which would deliver water quality improvement. This is due to the uncertainty regarding the meaning of nutrient neutrality, the outcome of applications and the considerable costs of producing evidence to support applications. The long term phosphate target of 0.01mg/l is very low and previous reports commissioned into the river (Atkins, February 2014) have questioned whether meeting this is achievable. Furthermore we query why nitrogen is now included within nutrient neutrality. Can you confirm whether nutrient neutrality for nitrate is required to meet SAC targets? The policy states that "All measures relied on to deliver either nutrient neutrality or nutrient betterment must demonstrate with sufficient certainty that they a. Meet the required nutrient reduction or improvement; and b. They can be secured and funded for the lifetime of the development's effects." Paragraph 4.145. outlines Natural England's advice on "certainty". We are concerned by "d. Not undermine the objective of restoring the site to favourable condition by making the 'restore' objective appreciably more difficult, or prejudicing the fulfilment of that objective." This could mean that Natural England could object to any development in the catchment on the basis that additional development further reduces the potential for catchment restoration, particularly in relation to translocation proposals. This is particularly concerning given that previous studies have stated that the 0.01mg/l target for phosphate cannot be met. Therefore we would urge you to look again at whether nutrient neutrality is a reasonable aspiration for development within this catchment
A2194B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Disagree	Whilst the Committee generally endorses the thrust of paragraphs 1-2, it is clear that river water quality is acknowledged as already inadequate for the pearl mussel. Hence nutrient neutrality is incompatible with development of any kind within the River Clun Catchment.2. It is therefore essential that the Local Plan is specific about what mechanisms will be put in place to improve water quality, considering both sewage and domestic water, and nutrients arising from agricultural activities. They should also specify a timescale for introduction of these measures and any other forms of mitigation, and this timescale should be compatible with the development plans, the rationale for which is amply justified in the Strategic Policies of the document. Only when nutrient betterment has been achieved can development of any kind be accepted.3. We are aware of many natural measures which may be introduced immediately to improve water quality and suggest these (e.g. introduction of 'leaky' dams, reintroducing native wildlife)4. In a situation such as this, where one policy to which Shropshire Council adheres incompletely inconsistent with another, we consider it vital that mitigation starts immediately and that local residents are kept informed about progress and monitoring. What measures will the authority have in place to monitor and publicly report on nutrient neutrality? What advice has been made available both to residents and land owners/managers? What results will be made available to the public so that they can monitor success? e.g. Will the authority fund the App currently available so that the public can do simple monthly water testing, upload results, and download locality maps and localised information to aid citizen involvement and monitoring? What links will be made with, for example, local SWT groups such as ours, to facilitate this?5. This should not be taken as expressing a view that the committee is against housing development within our settlements. We are agreed in the view that development broadly similar in extent to that proposed is important to maintain a vibrant community within the River Clun Catchment and retain amenities like shops, businesses and primary school. Thus there is an urgent need for the various works required to commence, and the vague timetable suggested within the Local Plan is inadequate in this regard.
A2407B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Agree	Natural England supports the principle of a specific policy for development in the Clun catchment. The policy currently states that "development within the catchment of the River Clun will only be permitted if it can demonstrate either nutrient neutrality or nutrient betterment." Natural England urges caution around this. The River Clun SAC is failing its water quality targets. As the site is currently failing the council needs to consider how it might permit development without compromising the ability to restore the site to favourable condition. It may be necessary first to understand what is required to restore the site and then to use that as a baseline for nutrient neutrality. Natural England is seeking legal advice on this matter and we advise the council that it may want to do the same. We look forward to continued dialogue with your authority as the plan progresses in order to achieve an solution which enables development in the catchment while protecting and restoring the site.
A2475B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP14	Disagree	The AONB Partnership has done as much practical work as any organisation on the Freshwater Pearl Mussel and water quality in the Clun Catchment, and welcomes this policy. Publicly funded work over many years to address these issues on the ground has been undermined by factors working against water quality. Should there be some clarification regarding Permitted Development? In these cases the onus is more on the developer/farmer/agent to make sure the River Clun is not impacted, but the system of PD notification should enable the importance of these issues to be flagged. Should there be some reference to indirect impacts of development? e.g. manure spread to land and ammonia deposition from Intensive Livestock Units, and exercising control through the planning system. The effects of these on the river and catchment far outweigh those from domestic developments.
A0101B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	No comment
A0198B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Welcome the new Green Infrastructure network proposals and the new Green Infrastructure Strategy being developed. Our disagreement is that this policy is incomplete We would seek to add to proposal DP15 at 1.b 1.b " Enhances existing infrastructure assets and extends the green infrastructure network in accordance with the Shropshire Green Infrastructure Strategy Proposals also have regard to Neighbourhood Plans and other relevant strategies such as the Shrewsbury Big Town Plan and Cleobury Mortimer's seven Wildlife Corridors, where these are available. Explanation It is essential to exemplify other relevant local strategies apart from the major urban Shrewsbury Big Town Plan, in order to encourage smaller community based initiatives in rural Shropshire and their Neighbourhood plans such as those of Cleobury Mortimer. Wildlife Corridors are naturally occurring green infrastructures that play an important and vital part in achieving all the objectives of DP15 by improving and expanding habitats, biodiversity, green networks and access & open space provision. The Seven Wildlife Corridors are a vital part of Cleobury Mortimer's Neighbourhood Plan with a range of benefits as part of the open space provision relating to: greater connectivity of their existing green infrastructure and natural framework for expansion and further development; greater ease of conservation/enhancement biodiversity; support climate change awareness and adaption; improve urban air quality ; help address local health and wellbeing needs encouraging active and healthy lifestyles in line with policy DF30 .
A0238B37	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	No comment
A0260B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	I support the approach outlined in the new Green Infrastructure Strategy Policy DP 15, which states (Para 5.c) that "...Providing strong policies for Green Infrastructure, protection, enhancement and creation are fundamental to the delivery of high quality Green Infrastructure..." Para 5 also confirms that "... Development proposals that result in a significant fragmentation or loss to the green infrastructure network will be resisted..." I am particularly concerned that the Kingsland /Rad Valley which provides a priceless mature asset, should be recognised as a key element of the Green Infrastructure within Shrewsbury. This river corridor should not be vulnerable to entirely inappropriate development proposals, similar to the recent Planning application ref: 20/03270/FUL
A0268B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15		Note the requirements for strategic sites to make provision for green infrastructure improvements and a landscape scheme that strengthens local biodiversity that complement and link existing networks. Please also see comments on proposed allocation SHR197VAR.
A0268B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15		Note the requirements for strategic sites to make provision for green infrastructure improvements and a landscape scheme that strengthens local biodiversity that complement and link existing networks. Please also see comments on proposed allocation SHR197VAR.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0306B043	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	We welcome this policy and would not like to see it compromised in any way. DP15 (4) Green space should be managed and maintained for at least the lifetime of any development.
A0306B044	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Para 4.151 We would question the infeasibility of producing a green infrastructure opportunity map. If this is purely due to a lack of resources, partnership with other organisations should be explored to develop a map. In the NPPF paragraph 174, it is suggested that maps are needed for restoration/creation areas.
A0430B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	Support DP15 to provide better green infrastructure and all new development to make a reasonable contribution wherever possible, including linking up to existing green infrastructure in the area. This also ties-in with other policy aims, including improvements in biodiversity, tackling climate change, protecting landscape, reducing recreational impact on internationally designated wildlife sites and ensuring a high-quality local environment and an enhanced quality of life. In the context of DP15 the landscape strategy for safeguarded land in Shifnal aims to maintain and enhance the existing green infrastructure network and provide a series of proposals for existing and new green infrastructure that respond to local landscape characteristics such as landform, field boundaries, tree belts etc.
A0642B39	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	We welcome this policy and would not like to see it compromised in any way. 4: Green space should be managed and maintained for at least the lifetime of any development
A0642B40	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Para 4.151 We would question the infeasibility of producing a green infrastructure opportunity map. If this is purely due to a lack of resources, partnership with other organisations should be explored to develop a map. In the NPPF paragraph 174, it is suggested that maps are needed for restoration/creation areas.
A0981B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Its currently unclear whether this policy is intended to provide a criteria based policy for the protection of playing fields to address para 97 of the NPPF and Sport England's Playing Fields Policy? Parts of the policy elude to potentially providing such protection, and the reasoned explanation in para 4.146 expressly states that Green Infrastructure (GI) includes playing fields, however discussions with the Council have indicated that this is not the intention for this policy. Part 1a) of the policy states that all new development will avoid the loss of, or harm to, existing green infrastructure (GI) assets, and the disruption or fragmentation of existing GI network. Part 5 of the policy states that a significant fragmentation or loss to the GI network will be resisted. In such instances mitigation and compensatory measures will be expected. Whilst this wording could be interpreted to provide protection of playing fields, it does not accord with the criteria based wording of para 97 of the NPPF and Sport England's Playing Fields Policy, which set out that there will be a presumption against the development of existing open space, sports and recreational buildings or land, including playing fields unless at least one of certain criteria are demonstrated to be met. To address this, it is recommended that a separate policy is included in the Local Plan that relates to the protection of playing fields and other sports facilities (appendix provided of Sport England's Playing Fields policy guidance to assist the Council in developing the wording of their policy). If a separate policy relating to playing fields is then included, Policy DP15 and its associated reasoned explanation can be amended to expressly state that playing fields are addressed separately. Sport England also assumes that the references to new provision of GI are not therefore intended to relate to the provision of new playing fields, which is addressed separately in Policy DP16, however it would help to make this explicitly clear for the avoidance of doubt in the reasoned explanation. Sport England supports the reference in part 1.c.v) of the policy to ensuring that new GI to be delivered on-site should address identified local health and well-being needs and encourages active and healthy lifestyles in line with Policy DP30. Subject to addressing my comments on policy SP5 regarding an Active Design policy, and appropriate cross-reference should also be included here.
A0984B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	Support the aims of this policy which seeks to provide better green infrastructure and looks to all new developments to make a reasonable contribution wherever possible, including linking up to existing green infrastructure in the area. This has been integrated into the masterplan for BRD03 Ties-in with other policy aims, including improvements in biodiversity, tackling climate change, protecting landscape, reducing recreational impact on internationally designated wildlife sites and ensuring a high-quality local environment and an enhanced quality of life. Part 1a requires a Infrastructure Assessment in support of new development proposals, would welcome clarification on what this entails and when it is required. Part 1b references the Green Infrastructure Strategy - welcome the reference and the guidance within it as to what Green Infrastructure is required within each settlement
A1152B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	Agree with draft policies DP15 and DP16. The fundamental importance of Green Infrastructure and Open Space, which has sometimes been undervalued in the world of development, has been brought home and emphasised by the Covid-19 emergency. It is important to take all opportunities to extend and enhance networks of inter-linked Green Infrastructure in particular, rather than considering each development in isolation.
A1630B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	The council should have regard to green and blue infrastructure on development sites but it should not seek to extend planning controls over agricultural and rural land. The restoration and creation of new areas of habitat in association with development must be proportionate and have regard for food production. Displacing food production from productive landscapes merely exports our food production and therefore is environmentally questionable. We need to be able to produce food locally in order to meet our own needs and those of future generations. We are concerned that moves to create large areas of habitat with bigger mitigation areas will result in higher food imports from other areas of the world who do not produce food to the same environmental and animal welfare standards as UK farmers.
A1844B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Request that para 4.146 include canal network as part of blue infrastructure.
A2163B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15		For significant new development, including strategic sites, green infrastructure should be an integral part of a masterplan that links existing and new green infrastructure, and connects to the green infrastructure network in the surrounding area and improves that network's accessibility and linkages where possible. Support the aim of maximising green infrastructure and expanding the current network, it should be recognised that existing local strategies, such as the Shrewsbury Big Town Plan that has a vision for Green Networks across Shrewsbury, must accord with the Development Plan which takes precedent as policy. Where there is conflict, the Development Plan will provide the prevailing policy.
A2394B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Disagree	Para 4.146 defines "green infrastructure" but does not mention canals and canal towpaths. Please add in "canals and canal towpaths" Reason: to ensure that canals and canal towpaths are recognised as being part of green infrastructure
A2407B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP15	Agree	Your authority should consider the requirements of the NPPF (paragraph 72, 102, 118 and 170) and seek opportunities for wider environmental net gain wherever possible. This can be achieved by considering how policies and proposed allocations can contribute to wider environment enhancement, help adapt to the impacts of climate change and/or take forward elements of existing green infrastructure, open space of for environmental gains, including nature based solutions to help adapt to climate change, might include: Identifying opportunities for new multi-functional green and blue infrastructure • Managing existing and new public spaces to be more wildlife friendly (e.g. by sowing wild flower strips) and climate resilient • Planting trees, including street trees, characteristic to the local area to make a positive contribution to the local landscape. • Improving access and links to existing greenspace, identifying improvements to the existing public right of way network or extending the network to create missing footpath or cycleway links • Restoring neglected environmental features (e.g. a hedgerow or stone wall or clearing away an eyesore) • Designing a scheme to encourage wildlife, for example by ensuring lighting does not pollute areas of open space or existing habitats. Any habitat creation and/or enhancement as a result of the above may also deliver a measurable biodiversity net gain. Green Infrastructure has been incorporated into the plan as a strategic policy area, supported by appropriate detailed policies (DP15) and proposals to ensure effective provision and delivery. Evidence of a strategic approach is underpinned by your Green Infrastructure Strategies. We support that the provision of green infrastructure as a specific policy in the Local Plan.
A0101B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	Suggesting that a threshold for open space provision of at least 10 dwellings would be appropriate
A0238B38	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	For significant new development, including strategic sites, green infrastructure should be an integral part of a masterplan that links existing and new green infrastructure, and connects to the green infrastructure network in the surrounding area and improves that network's accessibility and linkages where possible. Support the aim of maximising green infrastructure and expanding the current network, it should be recognised that existing local strategies, such as the Shrewsbury Big Town Plan that has a vision for Green Networks across Shrewsbury, must accord with the Development Plan which takes precedent as policy. Where there is conflict, the Development Plan will provide the prevailing policy.
A0238B39	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	Para 4.146 defines "green infrastructure" but does not mention canals and canal towpaths. Please add in "canals and canal towpaths" Reason: to ensure that canals and canal towpaths are recognised as being part of green infrastructure
A0306B045	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	Para 4.155 We feel that both quality and quantity are important and perhaps need to be considered more equally.
A0430B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	Support DP16 alongside policy DP15 as both policies provide a clear emphasis for using open space provision as a means of creating and improving green infrastructure links as a priority wherever possible, and this is commended.
A0436B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		Acknowledge that the 30sqm per person requirement within the draft policy is consistent with the current SAMDev Plan policy Welcome proposed consideration of reducing this level of provision in instances where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents. Landscaping and open space can transform developments and the experiences that residents have, therefore incentivising developments to afford better quality housing is a positive step. Flexibility should be provided for development with a greater number of smaller properties, responding to demand, as opposed to a fewer larger dwellings. Subsequently it may be more practical to suggest that the lesser of 20% of the Gross Site Area should be open space or 30sqm per person.
A0438B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		Acknowledge that the 30sqm per person requirement within the draft policy is consistent with the current SAMDev Plan policy Welcome proposed consideration of reducing this level of provision in instances where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents. Landscaping and open space can transform developments and the experiences that residents have, therefore incentivising developments to afford better quality housing is a positive step. Flexibility should be provided for development with a greater number of smaller properties, responding to demand, as opposed to a fewer larger dwellings. Subsequently it may be more practical to suggest that the lesser of 20% of the Gross Site Area should be open space or 30sqm per person.
A0439B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		Acknowledge that the 30sqm per person requirement within the draft policy is consistent with the current SAMDev Plan policy Welcome proposed consideration of reducing this level of provision in instances where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents. Landscaping and open space can transform developments and the experiences that residents have, therefore incentivising developments to afford better quality housing is a positive step. Flexibility should be provided for development with a greater number of smaller properties, responding to demand, as opposed to a fewer larger dwellings. Subsequently it may be more practical to suggest that the lesser of 20% of the Gross Site Area should be open space or 30sqm per person.
A0441B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		Acknowledge that the 30sqm per person requirement within the draft policy is consistent with the current SAMDev Plan policy Welcome proposed consideration of reducing this level of provision in instances where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents. Subsequently it may be more practical to suggest that the lesser of 20% of the Gross Site Area should be open space or 30sqm per person
A0450B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	Policy DP16 should not allow any exceptions to the open space requirement for 30sqm per person to maintain an acceptable density standard in new housing developments. The exception to the open space requirement of 30sqm per person is proposed in para 4.155 where developers provide high quality open space tailored to the needs of all residents of the development.
A0697B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	The draft policy identifies a requirement to provide at least 30sqm of open space per person assuming one person per bedroom. Question the evidence for this requirement, given the lack of any specific evidence/justification in the draft Local Plan. Suggests rather than applying prescriptive and arbitrary open space standards across all developments, a 'design-led' approach specific to the locality would be a better, ensuring appropriate access to open space as part of the wider design and layout of sustainable places.
A0981B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	The policy would seem to relate to the provision of open space and playing fields to meet the needs of new residential development. It does not relate to the protection of open space and playing fields. It is assumed that the protection of open space is addressed under policy DP15 Green Infrastructure, however if its not the purpose of the GI policy to protect open space, the wording of policy DP16 should be expanded to ensure this complies with para 97 of the NPPF in respect of open space protection. Sport England have advocated in the response to Policy DP15 that the protection of playing fields and other sports facilities should be addressed in a new policy to accord with para 97 of the NPPF and Sport England's Playing Fields Policy. Part 6) of the policy states that the outcomes of the Council's Playing Pitch Strategy will be taken into account in determining the level of need within an area, and that development will be expected to address any settlement constraints either on site or by way of a developer contribution (does this mean off site provision, this should be clarified?) The title of the assessment is the Playing Pitch and Outdoor Sports Strategy (PPOSS), and so for consistency its recommended that the same phrasing is used within the policy. Sport England generally supports the approach taken which is to use the PPOSS to inform the provision required to meet the needs of proposed developments. This could include a range of measures to best meet identified needs such as the provision of new grass pitches, improvements to existing grass pitches, securing community use of existing pitches currently unavailable for community use, provision of new Artificial Grass Pitches (AGP's) and improvements to ancillary facilities such as changing rooms and car parking, in line with the findings and recommendations sets out in the PPOSS. What the policy doesn't provide is a basis for how the quantum of provision will be determined. The PPOSS uses Sport England's Playing Pitch Calculator (PPC) to set out the demand generated by the proposed housing growth. The policy should therefore reference the PPC as a basis to inform expected developer contributions, unless the Council proposes to calculate contributions in some other way? Since the PPC provides a calculation for new provision, in circumstances where new provision is not proposed there will be a need to calculate the relevant contribution to deliver the proposed improvement works. In such circumstances, the PPC provides a useful calculation to inform negotiations for developer contributions to meet the cost of pitch improvement works in lieu of new provision. It is therefore recommended that part 6) of the policy is expanded to address the above points so that its clear how developer contributions will be calculated. The reasoned explanation should also be expanded to set out that the Council have recently completed the PPOSS as the evidence base to inform the policy, that the PPOSS will be reviewed annually to keep it up to date, and will be replaced in due course in line with SE guidance and to align with the subsequent review of the Plan. The explanation should then draw out the heading findings of the PPOSS regarding the current identified needs, including the provision of new 3G AGP's to meet needs for football, new hockey AGP provision including the need to return Market Drayton Hockey Club Shropshire, and the provision of both new grass pitches and improvements to existing grass pitches, and associated ancillary provision to meet the needs of football, cricket, rugby union, tennis, netball and crown green bowls. The explanation should also set out that the Council will consult with Sport England and relevant NGB's on playing field investment priorities arising from proposed developments to ensure that proposed investment maximises the benefits to sport and aligns with the current evidence base regarding identified needs.
A0984B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		Fully encourage and support concept of using open space provision as a means of creating and improving green infrastructure links Whilst supportive of the provision of 30 sqm of open space per person, welcome the flexibility within this policy which states that consideration will be given to reducing this level of provision where the development is able to provide high quality open space which meets the needs of all residents. Fully support the recognition of the importance of delivering good quality, useable open space which is available, accessible and appealing to all residents rather than a specific amount that is of poor/average quality that many residents may not fully utilise (part 2 of the draft policy). Part 5 of the draft policy relates to on-site provision of functional areas of play and recreation. Whilst not disagreeing with this, the policy should acknowledge the specific open space needs for each settlement (identified in The Open Space Recreation Needs Assessment (Appendix D) and Green Infrastructure Strategy (Appendix C)) and encourage development to provide the open space needed in the settlement, informed by most up-to-date evidence. For Bridgnorth the documents identify a need for accessible public open space, as such BRD030 seeks to provide function areas of play and new accessible public open space throughout the development to serve the existing and proposed residents. Part 6 of the policy refers to the outcomes of Shropshire's Playing Pitch Strategy, however this does not appear to be available
A1106B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	Policy DP16. Sets out the council's draft approach towards open space. We support that the council will apply the notion of 'quality over quantity', when it comes to open space. However, we are concerned by the specific 30sqm per person figure which is set out in part 2 of the policy. The draft DLP states: "2. There is an expectation that new housing developments provides on-site open space provision equivalent to 30sqm per person, assuming one person per bedroom. However, consideration will be given to reducing this level of provision in instances where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents". It is our view that this approach is unjustified. The 30sqm per person figure seems to be chosen at random with no evidence provided as to how it has been calculated or come to. There is no evidence the provision of open space is an issue in Shropshire. The 'Shropshire Great Outdoors' website states: "Shropshire has many special landscapes including the Shropshire Hills Area of Outstanding Natural Beauty, the Stiperstones and Corndon Hill Country crossing the border in the south west of the county and the internationally important Meres and Mosses in the north. The Pontcysyllte Aqueduct and Canal World Heritage Site also includes part of Shropshire around Chirk in the north. (http://www.shropshiregreatoutdoors.co.uk/)" Shropshire has a range of parks and open countryside that residents will be able to take advantage of. Unlike say Birmingham City Council or a London Borough, Shropshire is not a local authority with a significant problem when it comes to open space provision. Open space which is shared should not be calculated on the same basis as an individual garden. The shared open space, of say a block of flats, would be used by multiple residents of different flats, where as a garden would be private to only that house. If the council can evidence that there is a need for a specific figure of open space per person then we request that a lower figure is designated per person when it comes to shared open space. Furthermore, we request that the policy takes a view that all open space should first and foremost be should be design-led, informed by the character and context of the development proposed. Shropshire should use flexibility in its approach towards open space, and judge each site's provision on a case-by-case basis.
A1119B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	Laird Estates welcomes the objectives of Policy DP16 (Open Space) but is disappointed that the policy does not acknowledge that there will be some sites whose existing open spaces will contribute and be available for new residents, particularly if they are subject to development expansion (such as establish residential park home sites, which are spacious and already meet, or exceed the standard). In these cases, they should be taken into account and form part of the proposed on-site open space standard of 30sqm per person otherwise it would be unfair. On this basis, the Policy is currently not fully justified so is not sound. To fix this, Laird Estates recommends the wording of Policy DP16 part 2 is amended so that it reads as follows: "2. There is an expectation that new housing developments provides on-site open space provision equivalent to 30sqm per person, assuming one person per bedroom. However, consideration will be given to reducing this level of provision in instances either where the development is able to provide a particularly high quality of open space on site which meets the needs of all residents or, it forms an extension to an existing site that already meets or exceeds the standard." Laird Estates generally supports Policy DP17 (Landscaping of New Development) but does not believe specimen trees up to 15-20m high is appropriate in all cases, such as on sites where trees would be in proximity to single storey residential properties. For clarification, Laird Estates considers the wording of Policy DP17 part 5 is amended as follows: Hedgerow and shrub planting and other soft landscaping should include specimen trees with a mature height up to 15-20 metres within both the hard and soft landscaped areas where it is both safe and compatible with the character of the area."
A1152B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	Agree with draft policies DP15 and DP16. The fundamental importance of Green Infrastructure and Open Space, which has sometimes been undervalued in the world of development, has been brought home and emphasised by the Covid-19 emergency. It is important to take all opportunities to extend and enhance networks of inter-linked Green Infrastructure in particular, rather than considering each development in isolation.
A1630B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	The impacts of new residential development on adjacent agricultural land need to be carefully thought through. Many field parcels adjacent to housing developments suffer from repeated trespass, fly tipping (particularly of garden waste), dog worrying and concerns about disease carried in dog faeces (such as Neosporosis) and also in some areas "gentrification" where margins and hedges are cut inappropriately by urban residents and contrary to the requirement of the Basic Payment Scheme and agri-environment commitments. We welcome policy DP16 as where new housing is proposed adequate green space must be incorporated into the development in order to relieve pressure on adjacent farmland and investment must be made (with prior consultation of local farmers) in the surrounding areas access infrastructure. This is to mitigate the impact of new urban development on the surrounding farmland. We have heard of instances where farmers on the urban fringe have had to radically change their management practices in order to accommodate such pressure which often leads to a financial penalty for the business. Therefore "an appropriate off-site provision" must be carefully considered and cannot rely on existing rights of way across farmland without consultation with the adjacent farmer and investment in the network. It may also be an appropriate moment to consider a rationalisation of the local footpath network to build recreation infrastructure that is fit for purpose. Our experiences during the spring and summer of 2020, when unprecedented pressure was put on the right of way network from large numbers of new users, has demonstrated the importance of careful planning and investment.
A1655B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	Our current leisure centre is often saturated and facilities are often full and hard to book, particularly the provision of all-weather pitches, racks or facilities that could support outdoor training (athletics, rugby, football, running, taekwondo) when the weather is bad. Current Rugby facilities are often unusable when we have heavy rain due to flooding along the River Severn. Our excellent community leisure centre is a shared facility with the school and is often double booked during school performances, leaving sporting clubs without a facility. Several sporting clubs currently have no facilities for toilets, showers or refreshments which is extremely difficult when encouraging young people to engage. Ideally the town needs a community/sporting centre with a larger hall suitable for sports classes and general events, a smaller hall designated to spin and a licenced cafe, toilets, showers. Outside there needs to be parking, a picnic area, an all weather surface pitch for basketball/five a side football (could also be used by the rugby club and others for winter fitness training) and two or three community all weather bookable tennis courts. Something similar to the Severn Centre at Highley would be ideal.
A2163B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16		The delivery of quality open space is considered an essential part of new development and is supported in principle. There is an expectation in this draft policy for on-site open space for new housing development at a provision equivalent to 30sqm per person, assuming one person per bedroom. However, this level can be reduced where development is to provide a particularly high-quality area of onsite open space which meets the needs of all residents. In consideration that the policy expects 'good' quality open space, but the provision can be reduced if 'high' quality open space is delivered, clarity is required in the policy as to what defines good and high quality open space, and what developments are expected to deliver. Reference made to Epping Forest GI Strategy which recognises the importance of multi-functional open space rather than rigid definitions of typologies. It also emphasises the importance of quality rather than a pure focus on quality. It is suggested that a flexible approach is taken by Shropshire Council in the approach to open space, where quality can sometimes be a higher priority to provide than quantity of open space
A2403B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	The Estate supports the aspirations of Policy DP9 to positively deliver a step change in the local economy, and the focus on a network of strategic corridors along the principal rail and strategic road routes deliver this. The Estate is supportive of the opportunity for new sites, both brownfield and greenfield, to be brought forward for development within these strategic corridors, in addition to allowing development on sites allocated within the plan. The estate lands are well located to the direct north of the Shrewsbury gateway to the 'Eastern Belt' strategic corridor (i.e. the A5) and through existing employment hosting sites and development opportunities are well placed to contribute to the economic growth of this important strategic corridor.
A2407B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Agree	The plan should make provision for appropriate quantity and quality of green space to meet identified local needs as outlined in paragraph 96 of the NPPF. Natural England's work on Accessible Natural Greenspace Standard (ANGST) may be of use in assessing current level of accessible natural greenspace and planning improved provision.
A2463B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP16	Disagree	The policy does not continue the flexibility from SAMDev as it references that new development must provide "on-site" open space provision. Mandating such a high requirement without any regard to local variation in need and provision and seemingly no option to make off-site contributions in lieu of on-site provision could have a significant effect on site capacity and therefore upon the delivery the plan's identified requirement for market and affordable housing.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0101B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Agree	We support this policy
A0306B046	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	Species for landscaping should be of local provenance wherever possible, unless there are other environmental justifications. Landscaping opportunities afforded by green roofs and facades should be encouraged.
A0430B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Agree	Support DP17 which seeks to create and maintain an attractive and well-designed environment, and development proposals will be expected to provide landscaping on site, unless the Council agrees that off-site landscaping would be more appropriate. It goes on to list a number of criteria that landscape schemes should meet. Wallace take no issue within this policy and the criteria listed therein, although asks that clarity is provided as to what 'trees within adoptable areas' means.
A0506B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	Church Stretton is known for its tree coverage. Over recent years more and more planning application have been received for trees to be felled. Replanting of trees is vital, every time a tree is removed a new one should be planted, always remembering "Right tree Right place". Boundary treatment is important in conservation areas and in the AONB. Green landscaping as opposed to 'closeboard fencing in a rural setting is important not only for its visual qualities but also for creating a feeling of wellbeing.
A0984B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17		Support this policy which seeks to create and maintain an attractive and well-designed environment, and development proposals will be expected to provide landscaping on site, unless the Council agrees that off-site landscaping would be more appropriate. Criteria that landscape schemes should meet is provided within Part 3 of the draft policy, this aligns with the NPPF and is supported.
A0997B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Agree	The reference to heritage assets and setting in Criteria 3b is welcomed
A1116B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	The policy states: To create and maintain an attractive and well-designed environment, development proposals will be expected to provide landscaping on site, unless the Council agrees that off-site landscaping would be more appropriate... (Speaking from a lifetime in Landscape Architecture), would it not be better to have a Policy title of: Landscape and Urban Design and then go on to talk about the context of site planning. 'Landscaping' is an outdated and misleading idea that perpetuates a cosmetic approach whereas we need to have a 'wholesome' approach where the site's qualities shape any development, and as the design develops there is a constant interplay among all the elements to achieve an end product that is fully integrated into the local context of vegetation, topography, and all the other aspects of a given plot or larger piece of landscape. 'Landscaping' is like an ingredient rather than a process that brings out the best of what's already there and what's proposed. In addition, where the context is urban or semi-urban, 'landscaping' becomes even more a cosmetic in the sense of having to have a certain input of plants on a project, when maybe one urban type tree or no plants at all would be appropriate. Finally, 'landscaping' gives a developer permission to mess up a plot or larger area and then stuff in some plants to 'comply' with the planning condition
A1152B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Agree	See wider representations.
A1170B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	Large trees are valuable, but this policy ignores the biodiversity value of smaller native trees such as field maple (and a great variety of other) and of traditional fruit trees, which are also often more suited to small sites and landscaping needs. Many landscape varieties of trees are so altered from their origins that they make little contribution to biodiversity.
A2163B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	Part 2 of the policy states that existing landscapes of ecological value or those with heritage significance should be conserved and enhanced, with schemes being designed to be sympathetic to their importance to avoid harm. Instead of avoiding harm this should be amended to require harm to be minimised. With reference to heritage and conservation, the degree of harm and the importance attached to it should be consistent with Chapter 16 of the NPPF, which requires the harm to the significance of any heritage asset to be taken into account. Part 6 of this policy states, "Trees within adoptable areas should be incorporated as part of the infrastructure planning and design stage in accordance with current best practice". Any tree planting on adoptable areas will require County Highways agreement, and therefore should be amended to read, "Trees within adoptable areas should be, where practical and in agreement with County Highways, incorporated as part of the infrastructure planning and design stage in accordance with current best practice". This policy should be amended in order to be found sound, as it needs to be fully justified, effective and compliant with national policy.
A2180B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Agree	We believe that open space allocation and green space allocation on development sites is hugely important in setting the right ambience for the site adding to the physical and mental wellbeing of its residents. We would also like to see greater reference to the planting of trees to support the Climate Emergency agenda and there should also be better rigour in ensuring that developers plant the right trees once rather than the current arrangements where it seems acceptable to replace them if they die due to poor maintenance. Every tree has a carbon footprint and we should be looking to reduce this waste.
A2307B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Landscaping schemes should, where they fall within a safeguarding zone designated to reduce the risk of birdstrike, be designed to ensure that an attractant environment is not formed for large and flocking bird species that might pose a danger to aviation safety and operational capability."
A2475B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP17	Disagree	This policy should mention the AONB in the cross-reference DP26 and also refer to guidance within the AONB Management Plan on landscaping.
A0101B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Agree	We support this policy
A0430B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Disagree	Support DP18 to respect, safeguard, and wherever possible, restore or enhance landscape character and visual amenity in Shropshire and refers development proposals back to the LVSS for guidance. Further Preliminary Landscape and Visual Appraisal for the safeguarded land in Shifnal finds that the proposed development complies with this policy and accommodates a sensitively designed residential scheme with only limited landscape and visual effects at a localised level and that such impacts can successfully be avoided or reduced through effective mitigation.
A0984B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Agree	Fully supports this policy, which seeks to respect, safeguard, and wherever possible, restore or enhance landscape character and visual amenity in Shropshire and refers development proposals back to individual Landscape and Visual Sensitivity Assessment (LVSS) for guidance. Support the need for all major development proposals to be accompanied by an appropriate landscape/visual assessment. Agree with Part 3 of the draft policy which states that where there are visual and landscape effects, there is the opportunity to reduce the impacts and offset residual effects. There is an opportunity within major development proposals to create a landscape led development which will provide additional opportunities to access green infrastructure, open spaces, the open countryside which would offset any effects of the proposals, this is the approach taken in BRD030. This could be built upon further and dealt with through any future SPD and masterplan for the site. The Shropshire LVSS has been considered and a LVIA prepared for BRD030 which has informed the draft masterplan [appendices to representation]
A0997B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Agree	The reference to the Shropshire Landscape Typology within this policy is welcomed. We are aware that the typology includes historic landscape characterisation information
A1152B28	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Agree	Agree with the vital importance of draft policy DP18. Shropshire has a particularly rich variety of landscape and geological forms and it is reassuring to know that the Council places a high priority on their conservation and enhancement.
A1609B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Disagree	We consider that the strategic housing and employment allocations proposed at Shifnal do not conform with provisions set out under policy DP18. We consider under the sustainability appraisal that allocations have not been properly assessed against other sites and no justification has been provided to explain the reasons for rejecting reasonable alternatives in the area. Sites SHF018b and P15b score poor for overall sustainability in their SA. It should be considered that the proposed extension of the site east of Upton Lane would be contrary to national policy, as no exceptional circumstances have been provided for its release.
A2475B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP18	Disagree	4.159 The AONB designation is mentioned but the additional protection conferred by the designation and the statutory AONB Management Plan should also be referred to.
A0167B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	Support provisions of draft policy DP19. Such provisions should be implemented in relation to the assessment of the current planning application relating to the SUE West and the upcoming application on the NWWR. Both raise significant concerns in relation to impact on the environment including air, water, light, noise and protected species. Given the importance placed on these matters in both adopted and emerging Plans appropriate safeguards should be provided to Oxon Hall Caravan Park.
A0238B41	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	Agree with the vital importance of draft policy DP18. Shropshire has a particularly rich variety of landscape and geological forms and it is reassuring to know that the Council places a high priority on their conservation and enhancement.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0241B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	The Coal Authority are pleased to see that this policy includes consideration of unstable land and identifies that appropriate information will be required to support development proposals where land instability poses a potential risk.
A0306B047	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	We welcome this policy and hope it will address some of our concerns about the number of intensive livestock unit developments in the county. SACs, other than the River Clun, and the majority of sensitive habitats are beyond critical thresholds. DP19 (4) We welcome greater protection for the county's best agricultural land. Additional consideration should also be given to peatland areas where development should be further resisted to prevent the loss of future opportunities for restoration, biodiversity gain and carbon sequestration.
A0413B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	Air quality is an important issue for our health and should be given a stronger policy separate from the other issues of pollution.
A0430B21	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	Support DP19 which seeks to safeguard environmental quality and public amenity; minimise pollution; mitigate adverse effects and maximise opportunities for improvements where practicable because the criteria are considered to generally reflect the aims of the NPPF to prevent development from contributing to, or being put at risk from, unacceptable levels of soil, air, light or noise pollution or land instability.
A0911B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	Representation on behalf of Hobbins Management Company covering a range of Policies relating to Bridgnorth. Broadly in support of the policies, but stress that the policy position doesn't appear to have been followed in setting the allocation of employment land at Stanmore. The response supports policy DP19 but questions its implementation in regards to Stanmore Policy DP19: Pollution and Public Amenity Policy DP19 sets out the Council's desire to reduce pollution and safeguard public amenity through development proposals. Policy DP19.1 says that development must be appropriate to its location, and the site must be suitable for its proposed use. Policy DP19.2 and.3 express concern about air quality. Policy D19.4 confirms that development should avoid, if possible, the use of Grade 1, 2 and 3a agricultural land. Policy DP19.5 says that the use of previously developed land is encouraged. Policy DP19.7 indicates that development should not create unacceptable adverse effects through increase in noise levels. The proposed employment development at Stanmore (Sites S57 and S58) would conflict with most of the issues set out in Policy DP19 because the land proposed for employment allocation is, a) In "countryside" and in the Green Belt – this is not a suitable location for operators that are engaged largely with the motor and steel fabrication, b) Is divorced from Bridgnorth town and thus is likely to encourage the use of motor cars, which will increase pollution and have a detrimental effect on public amenity. c) The local environment is relatively calm, quiet and with good air quality which would be adversely impacted by the proposed employment development at Stanmore and, d) The land proposed for allocation is not 'previously developed land' as defined in the NPPF
A0981B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	Sport England supports the wording of Part 1 of the policy that references the 'agent of change' principle as set out in para 182 of the NPPF. This will ensure that existing community facilities including sports clubs are not unreasonably constrained by having new sensitive receptor development in their vicinity that could lead to restrictions being placed upon them. Sport England supports parts 7 and 8 of the policy in relation to noise. Noise issues affecting sports facilities most often occur due to the relationship between outdoor sports facilities such as Artificial Grass Pitches (AGP's), artificial courts and other playing areas where associated sports lighting is used to maximise their use during periods when there is insufficient daylight levels to maintain player safety. Commonly, evening use until 10pm is critical to business planning to sustain the management and maintenance of the sports facility. To ensure an acceptable relationship that balances the need for sports lighting with amenity issues, Sport England has developed its own noise and sports lighting guidance, see attached links: https://www.sportengland.org/how-we-can-help/facilities-and-planning/planning-for-sport/artificial-grass-pitches-acoustics-planning-implications https://www.sportengland.org/how-we-can-help/facilities-and-planning/design-and-cost-guidance/artificial-lighting . In so far as parts 7 and 8 of the policy are intended to relate to noise from outdoor sports facilities, it is recommended that either the policy, or the reasoned explanation are expanded to refer to relevant industry guidance so that appropriate consideration is given to Sport England's best practice guidance when applying the policy. In respect of part 10 of the policy, Sport England considers that the policy wording should be expanded to require development proposals to demonstrate the need for and the benefits of providing the proposed lighting which should be balanced with potential impacts set out in parts a-g. This will ensure that where there is a need for new sports lighting to serve the use of existing or proposed sports facilities that this can be appropriately taken into account when applying the policy.
A0984B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	Support the policy, which seeks to safeguard environmental quality and public amenity, minimise pollution, mitigate adverse effects and maximise opportunities for improvements where practicable. Criteria are generally consistent with the aims of the NPPF. Support vision to improve air quality within the County and in particular welcome the flexibility with Part 3 of this draft policy. Recognise that there may be a number of different methods and opportunities to improve air quality as part of new development. Welcome the recognition within part 7 and 8 of this draft policy that although new developments may create additional noise and/or new developments may be sensitive to existing noise, a good standard of amenity can be achieved through mitigation measures and this is considered to be acceptable.
A1152B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	See wider representations.
A1192B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19		Support part 5 of the draft policy, which encourages re-use of brownfield land Consider the draft Policy should identify priority brownfield sites for delivery under this policy. As such the policy should be amended as follows: "The re-use of previously developed (brownfield) land is encouraged, particularly on the following sites: • Clive Barracks • Ironbridge Power Station • Former Depot, Riddings Road, Ludlow • The Eagles public house on A458, Cressage • Former Dairy Site, School Road, Ruyton XI Towns • Former Ifton Heath Primary School, St Martins • Former Oaklands School Site, Bayston Hill; and • Brownfield sites subject to saved site allocation policies of the SAMDev Plan. Alternatively, consider creating a new previously developed land/brownfield land policy. This would ensure the importance of the redevelopment of key brownfield sites is not overlooked during the draft Local Plan period. This policy would be as follows: "Brownfield/Previously Developed Land Shropshire Council is committed to maximising the number of homes built on suitable brownfield land/previously developed land. The re-use of previously developed (brownfield) land is encouraged, particularly on the following sites (include list above
A1630B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	This policy covers many areas and there is potential for it to cause duplication where it overlaps with the role of environmental regulators (Environment Agency), particularly on permitted sites. This could add unnecessary cost and complexity to the planning process We have already seen developments facing considerable uncertainty and delays due to air quality concerns. Applicants must be given consistent and clear guidance at an early stage so that they and their advisors know what information will be required in order to determine an application. Too often, this has been very unclear and has caused significant costs overruns and stress for applicants. Paragraph 4.171. sets out how agricultural development has been affected by concerns over ammonia and nitrogen deposition. We are concerned that there is still considerable uncertainty about the determination of these applications. In many cases standard figures and models are used which may overestimate ammonia and nitrogen emissions. More study is required to understand the true impacts of these developments. It should also be noted that the developments listed in paragraph 4.171 are not the only emitters of ammonia and nitrogen.
A1844B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	You may wish to consider whether the supporting text to this policy should expand on the issue of land stability and whether the policy title should be widened to include reference to ground conditions.
A2308B01 MOD	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	Shropshire includes an important operational training area at Nesscliffe and a number of sites where defence flying activities take place. Therefore, defence activities in Shropshire have potential to impact adversely on sensitive development. Shropshire is also covered by Low Flying Area 9, a dedicated helicopter training area for military helicopters. Noise sensitive development close to areas where defence activities create noise can lead to noise complaints, which in turn can result in the need to alter/stop defence operational activities/use of a site. This has the potential to adversely impact on national defence interests. Increasing volumes of development proposals could lead to an increase in noise complaints and, in many cases, the applicants fail to adequately assess noise arising from defence activities nor effectively engage with the Ministry of Defence (MOD) within noise assessments. Para 95 of the NPPF requires planning policies and decisions to ensure "operational sites are not affected adversely by the impact of other development proposed in the area". Support requirement within this draft policy for noise assessments to accompany proposals where new development would be sensitive to existing noise. However the explanation (para 4.175) should be extended to also refer to noise assessments being required for development that may be sensitive to noise given that Part 7 of the draft policy makes reference to this. Also consider that this para could refer to a requirement for appropriate noise assessment to consider noise arising from all relevant sources, including noise arising from defence activities and a recommendation that MOD be consulted by applicants proposing noise sensitive development.
A2407B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Agree	The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our well being and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver. Note: representation includes links to several documents which cover the functions of soils, their conservation and sustainable management, agricultural land quality, soil types, and DEFRA's Construction Code of Practice for Sustainable Use of Solid on Construction Sites. Air pollution. The proposed growth within the plan is likely to generate additional nitrogen emissions as a result of increased traffic generation which can be damaging to the natural environment. We note that policy DP19 outlines the potential requirements for air quality assessments to be submitted in support of a planning application and would support this.
A2475B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP19	Disagree	4.171 "Background levels of ammonia in the air and nitrogen loads deposited on natural habitats are generally well above the levels and loads recognised as causing damage throughout Shropshire." This is the only reference to ammonia in the whole document – it seems inadequate with regard to controls especially as we are at exceedance. There should be policy to address how ongoing development will contribute to bringing N2 and NH3 deposition down to sustainable levels. There will be in-combination effects regardless of mitigation – should this section specifically refer to Shropshire Council Interim Guidance Note GN2?
A0167B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20		Trust that the necessary assessments and mitigations concerning protection of the water environment and provision of draining required by this policy will be required of proposals associated with the SUE West and NWRR, to ensure that there will be no detrimental impacts on water storage capacity, water quality and drainage to protect adjacent land from surface water flooding.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0238B42	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	Shropshire includes an important operational training area at Nesscliffe and a number of sites where defence flying activities take place. Therefore, defence activities in Shropshire have potential to impact adversely on sensitive development. Shropshire is also covered by Low Flying Area 9, a dedicated helicopter training area for military helicopters. Noise sensitive development close to areas where defence activities create noise can lead to noise complaints, which in turn can result the need to alter/stop defence operational activities/use of a site. This has the potential to adversely impact on national defence interests. Increasing volumes of development proposals could lead to an increase in noise complaints and, in many cases, the applicants fail to adequately assess noise arising from defence activities nor effectively engage with the Ministry of Defence (MOD) within noise assessments. Para 95 of the NPPF requires planning policies and decisions to ensure "operational sites are not affected adversely by the impact of other development proposed in the area". Support requirement within this draft policy for noise assessments to accompany proposals where new development would be sensitive to existing noise. However the explanation (para 4.175) should be extended to also refer to noise assessments being required for development that may be sensitive to noise given that Part 7 of the draft policy makes reference to this. Also consider that this para could refer to a requirement for appropriate noise assessment to consider noise arising from all relevant sources, including noise arising from defence activities and a recommendation that MOD be consulted by applicants proposing noise sensitive development.
A0306B048	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Disagree	DP20 (3) Proposals with any potential to effect water quality in Source Protection Zone 1 should be refused. DP20 (6) We would like to see an explicit hierarchy of measures, with management the highest priority and compensation the lowest. DP20 (6 & 7) We welcome the aims to conserve, enhance, and restore river course and riverside habitats.
A0642B41	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	We agree with this policy and point out that the promotion of the NWRR in SP21 of the Shelton Water Supply within the Local Plan is inconsistent with this. We would like to see an explicit hierarchy of measures, with management the highest priority and compensation the lowest.
A0984B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	Dully support this policy which seeks to ensure development does not adversely affect the quality, quantity or flow of both ground and surface water and the Council's standards to ensure there is sufficient water of a good quality to meet the needs of new development: Part 1 of the draft policy relates to water bodies covered by the WFD, support the protection of these water bodies and ensuring that development (both during construction and when operational) does not have an impact. Tiddle Brook has been fully considered and taken into account throughout the initial design and masterplanning of BRD030. Part 6 of this draft policy states proposals should help conserve and enhance existing watercourses/riverside habitats and water quality. The Tiddle Brook runs along the west/south boundary of BRD030, the masterplan has been designed and developed to create a new Country Park along the Tiddle Brook boundary which will enhance the natural environment of this watercourse and encourage additional habitats creation. This also upholds the principles of paragraph 170 of the NPPF
A1151B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	Maintaining and improving water quality and the treatment of water and wastewater in the face of population growth, changing environmental legislation and climate change pressures will be an ongoing challenge for the development industry over the coming years. As our customers' expectations change, there is likely to be greater demand from customers for environmental improvements which is likely to be reflected in increased environmental standards over time. It is important that United Utilities maintains the ability to flexibly respond to environmental and growth drivers both now and in the future. Future development within the region will need to be managed to enhance the environmental quality of the immediate area and manage the effects of climate change. United Utilities would seek to encourage the use of systems like rainwater harvesting and grey water recycling that help to reduce pressure on public water supply and the public sewerage system. Additional benefits result in a reduced environmental impact by making sure that valuable resources are used efficiently, at time reducing the costs associated with improving local water infrastructure for a new development as they require less mains water. Additional benefit is that such measures will reduce future occupants' costs for both water bills and energy bills (through heating water). We therefore very much welcome the approach to the policies SP3, DP20, DP21 and DP23 and the detail in them to ensure development is delivered in the most sustainable way. One comment to make on the policies quoted above is that would wish to see a linkage between policy requirements mentioned directly to ensure that opportunities as part of any new development are not missed. It is understood that areas like green infrastructure provision will seek to ensure the sustainable management of surface water through multi-functional benefits which are part of a high quality green / blue water environment. The detail within the policy is understood but we would recommend further linkage in policies to encourage holistic approaches as development comes forward. It is important to note that as strategies come forward, like surface water management, there will an expectation for them to reference the connectivity with Green Infrastructure and how the two interact. It is important for the Local Plan to consider the approach to developing strategies and outcomes holistically and would challenge the Local Plan to encourage this approach further in policy wording to ensure opportunities for new development is not missed.
A1152B30	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	Agree with the fundamental thrust of these policies in managing water resources and flood risk, in the light of the Climate Emergency and the ecological emergency. In some cases development, particularly major development, should take account of effects in other wider parts of the catchment area of which that development is part. No development should contribute to increased flood risk in other parts of the county or the wider catchment area.
A2308B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where existing watercourses are to be enhanced within safeguarding zones designated to reduce the risk of birdstrike, they should be designed to ensure that the development/enhancement does not result in the creation of an attractant environment for large and flocking bird species that might pose a danger to aviation safety and operational capability."
A2407B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Agree	Natural England believes that the Plan considers the strategic impacts on water quality and resources as outlined in paragraph 170 of the NPPF.
A2475B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP20	Disagree	The policy and explanation should refer to Natural Flood Management.
A0101B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Agree	We support this policy
A0238B43	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Agree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where existing watercourses are to be enhanced within safeguarding zones designated to reduce the risk of birdstrike, they should be designed to ensure that the development/enhancement does not result in the creation of an attractant environment for large and flocking bird species that might pose a danger to aviation safety and operational capability."
A0240B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	3.10 Policy DP21(1) requires that 'new housing will be expected to meet the Building Regulations 110litres per person per day standard for water as recommended by the Shropshire Water CycleStudy.'3.11 In determining the standard which should be applied to new dwellings, the PPG30 confirms: 'All new homes already have to meet the mandatory national standard set out in the Building Regulations (of 125 litres/person/day). Where there is a clear local need, local planning authorities can set out Local Plan policies requiring new dwellings to meet the tighter Building Regulations optional requirement of 110 litres/person/day.'3.12 Should the Council wish to adopt the higher optional standard for water efficiency of 110 litres per person per day, a clear need for this should be established based on the following, as also advised by the PPG:• existing sources of evidence. • consultations with the local water and sewerage company, the Environment Agency and catchment partnerships. • consideration of the impact on viability and housing supply of such a requirement.3.13 The Shropshire Water Cycle Study (2020), which forms part of the Council's evidence base, confirms that the regions served by Severn Trent and United Utilities are areas of 'moderate' water stress and that Shropshire is not in an area of high water stress compared with the south and east of England3.14 The requirement for the higher water efficiency standard is unsound because it is unjustified and inconsistent with national policy. This policy requirement should be deleted.
A0306B049	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	DP21 (1) We would consider building regulations to be a minimum and thus proposals that don't meet these should be refused. DP21 (2) BREEAM status has 5 categories, with 'good' being the second worst classification – this is not ambitious enough. DP22 (7c) How can this be achieved? DP22 (12) We welcome this policy.
A0430B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	Support DP21(1) where the evidence for the tighter control is set out in the Shropshire Water Cycle Study. DP21(1) expects new housing to meet the Building Regulations 110 litres/person/day standard for water. PGG recognises that all new homes already have to meet the mandatory national standard set out in the Building Regulations (of 125 litres/person/day), but where there is a clear and evidenced local need, local planning authorities can set out Local Plan policies requiring new dwellings to meet the tighter Building Regulations optional requirement of 110 litres/person/day. DP21(2) says that non-domestic buildings will be expected to reach BREEAM 'good' rating for water efficiency as a minimum, unless it can be demonstrated that this would make the development unavailable. However, the Written Ministerial Statement (March 2015) is clear in that local planning authorities should not set in their emerging Local Plans any requirements relating to the performance or construction of new dwellings. DP21(3) is supported in expecting major development schemes to provide a programme of water efficiency promotion and consumer education to effect behavioural change with regards to water use.
A0642B42	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	Para 4.183 So let's not mess ours up! References comments on DP20: We agree with this policy and point out that the promotion of the NWRR in SP21 of the Shelton Water Supply within the Local Plan is inconsistent with this. We would like to see an explicit hierarchy of measures, with management the highest priority and compensation the lowest.
A1151B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Agree	Maintaining and improving water quality and the treatment of water and wastewater in the face of population growth, changing environmental legislation and climate change pressures will be an ongoing challenge for the development industry over the coming years. As our customers' expectations change, there is likely to be greater demand from customers for environmental improvements which is likely to be reflected in increased environmental standards over time. It is important that United Utilities maintains the ability to flexibly respond to environmental and growth drivers both now and in the future. Future development within the region will need to be managed to enhance the environmental quality of the immediate area and manage the effects of climate change. United Utilities would seek to encourage the use of systems like rainwater harvesting and grey water recycling that help to reduce pressure on public water supply and the public sewerage system. Additional benefits result in a reduced environmental impact by making sure that valuable resources are used efficiently, at time reducing the costs associated with improving local water infrastructure for a new development as they require less mains water. Additional benefit is that such measures will reduce future occupants' costs for both water bills and energy bills (through heating water). We therefore very much welcome the approach to the policies SP3, DP20, DP21 and DP23 and the detail in them to ensure development is delivered in the most sustainable way. One comment to make on the policies quoted above is that would wish to see a linkage between policy requirements mentioned directly to ensure that opportunities as part of any new development are not missed. It is understood that areas like green infrastructure provision will seek to ensure the sustainable management of surface water through multi-functional benefits which are part of a high quality green / blue water environment. The detail within the policy is understood but we would recommend further linkage in policies to encourage holistic approaches as development comes forward. It is important to note that as strategies come forward, like surface water management, there will an expectation for them to reference the connectivity with Green Infrastructure and how the two interact. It is important for the Local Plan to consider the approach to developing strategies and outcomes holistically and would challenge the Local Plan to encourage this approach further in policy wording to ensure opportunities for new development is not missed.
A1152B31	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Agree	Agree with the fundamental thrust of these policies in managing water resources and flood risk, in the light of the Climate Emergency and the ecological emergency. In some cases development, particularly major development, should take account of effects in other wider parts of the catchment area of which that development is part. No development should contribute to increased flood risk in other parts of the county or the wider catchment area.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2163B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	This draft Policy seeks to introduce an optional standard for water efficiency of 110 litres per person per day. If this is wanted, then this should be justified against the criteria in National Planning Policy Guidance (NPPG). Also, under current Building Regulations, all new dwellings achieve a mandatory level of water efficiency of 125 litres per person, which is a higher standard than that achieved by much of the existing housing stock. The expectation for a programme of water efficiency promotion and consumer education is not required if minimisation of water use through the development construction is being implemented. This part of the policy requires further justification and clarity as to what this entails and how long it is expected. This policy should be amended in order to be found sound, as it needs to be positively prepared, fully justified and effective.
A2177B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	Draft policy requires new housing to meet Building Regulations 110 litres per person per day standard for water. This needs to be justified as outlined within a Written Ministerial Statement (25/03/2015 which included this standard should only be introduced "if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG" and the NPPG which states "helping to use natural resources prudently ... to adopt proactive strategies to ... take full account of water supply and demand considerations ... whether a tighter water efficiency requirement for new homes is justified to help manage demand". The Housing Standards Review was explicit that this standard solely applies to water stressed areas. Current Building Regulations requires all new dwellings to achieve a mandatory level of water efficiency of 125 litres per day per person, which is a higher standard than that achieved by much of the existing housing stock. This mandatory standard represents an effective demand management measure. The Shropshire Water Cycle Study (2020) reports that the Environment Agency and Natural Resources Wales assess the Severn Trent and United Utilities supply regions as areas of only "moderate" water stress (para 4.6.1) rather than an area of serious water stress. Consider that before the pre-submission LPR consultation, Bullet Point 1 should be deleted from Policy DP21.
A2308B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP21	Disagree	Would like to see this draft policy recognise there are appropriate alternative environmental performance assessment tools, equivalent to BREEAM. Specifically, would like to see reference to the Defence Related Environmental Assessment Method (DREAM) which is an environmental assessment tool developed by the Defence Infrastructure Organisation for new build and refurbishment projects on the defence estate.
A0167B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22		It is accepted that proposals to address flood risk management within Shropshire are evolving, and recent proposals for flood alleviation schemes as part of the NWRR were published following commencement of consultation, it is assumed these matters will be presented for consultation in future drafts of the Plan. It is also assumed relevant parties will be contacted by the Council to discuss these proposals and to provide assurances regarding potential impacts. Particularly concerned that any flood alleviation proposals forming part of the NWRR do not risk the future or increase flood risk of the Oxon Hall Caravan Park.
A0187B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt. Alongside this we must mitigate and reduce CO2 emissions.
A0189B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt. Alongside this we must mitigate and reduce CO2 emissions (respondent ref form 14)
A0238B44	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Agree	Document Reference BTC21: Generally supportive of identified policies for controlling aspects of development related to carbon emissions, the natural environment, water, the historic environment, the Green Belt and AONB. For DP22: We suggest that consideration be given to the option of funding residents to relocate from houses subject to a high flood risk, when this is more economic than installing high-cost flood protection for a relatively small number of houses.
A0306B050	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Para 4.190 A potential failure of the Sequential Test is that it just gives the 'least bad' option, highlighted by the fact that some of the allocated sites are in flood zone 2/3.
A0311B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. Yes we do need to adapt – but alongside it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A0323B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt (respondent ref; Form 14)
A0430B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Agree	Support DP22 to apply the sequential and exception test to ensure that the causes and impacts of flooding as well as residual flood risk, will be reduced through design measures, wherever possible. It is considered that the criteria reflect the requirements of the NPPF and PPG on this matter and confirm the development of safeguarded land in Shifnal will meet these objectives.
A0447B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	The context of the profound emergency that the world is and will increasingly experience as a result of pollution of land, sea and air and destruction of the natural world the plan is in general shockingly inadequate, not to say feeble in general tone. The draft policy needs to be more proactive/forward thinking, setting an example of how it can be done.
A0501B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Understandably, flood risk has its own strategy in the local plan. At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. Fourteen of the eighteen place plans have specific concerns with flooding and need action. The UK government guidance 'Climate Change Explained' https://www.gov.uk/guidance/climate-change-explained#the-impacts-of-climate-change warns that "All these climate models tell us that under a scenario of ever-increasing greenhouse gas emissions the world could become up to 4.8°C warmer than the pre-industrial period by the end of this century. "As the local plan acknowledges:"...even with concerted action, current levels of greenhouse gases in the atmosphere will lead to changes in the climate, such as increased average global temperatures, more extreme weather events and heightened flood risk. It will therefore be vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate." DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. The effects at 1.1°C above pre-industrial levels are already having severe impact on people and the economy. We do need to adapt – but alongside it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A0642B54	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	NWRR and planned pseudo flood scheme will increase flood risk upstream. This aspect was not featured adequately in the public consultation and this will need to be repeated with consequent implications for timing of the scheme.
A0647B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Understandably, flood risk has its own strategy in the local plan. At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of 14 of the 18 Place Plans include specific concerns about flooding and need action. UK government guidance 'Climate Change Explained' warns: "All these climate models tell us that under a scenario of ever-increasing greenhouse gas emissions the world could become up to 4.8°C warmer than the pre-industrial period by the end of this century". The draft local plan acknowledges "...even with concerted action, current levels of greenhouse gases in the atmosphere will lead to changes in the climate, such as increased average global temperatures, more extreme weather events and heightened flood risk. It will therefore be vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate". A0669B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	I object to the proposal for a large development at MUW012VAR, which is in contradiction to your own policies as outlined in DP22, since you are proposing to build on a site which is highly vulnerable to flooding. Worse still, residents already badly affected by flooding on the adjoining development of Hunters Gate – who have never received recompense from the developers, nor has any action been taken to address their problem by their Town Council or Shropshire Council – are now being expected to trust a partial, developer led solution to flooding on the proposed site, which could make the problem even worse. Shropshire Council has still not answered a question to Cabinet by a member of the public to say who will be liable if the developer-led flood solution doesn't work. Last time, nobody was liable! People are entitled to written assurances. They also need to know whom they should sue

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments

A1609B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	This report has also identified that Shifnal had one of the highest surface water flood risks in the county and would be the most vulnerable to cumulative increases in flood risk due to new development. With most of this risk coming from Wesley Brook being a source to confluence with River Worfe. The Planning Policy Statement 25 (PPS25) requires that new development should not increase flood risk; due to this we feel that no new development should be permitted until this risk has been identified and reduced.
A1630B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Large new developments in urban areas have the potential to cause downstream impacts, even when new SUDs techniques are employed. It is important to recognise that farmers have to deal with these impacts as they are responsible for maintaining many of the area's watercourses and drainage infrastructure. Waterlogging and flooding has the potential to directly impact upon the productivity of agricultural land so it is important to value and maintain our existing drainage infrastructure. The proposals for growth outlined in the document could lead to large new housing and employment developments in the urban area but despite the reference to the importance of flooding, scant information is provided on the downstream impacts.
A1634B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. Yes we do need to adapt – but along side it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2150B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. Yes we do need to adapt – but along side it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2158B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. Yes we do need to adapt – but along side it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2163B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Part 2 a. of the draft policy requires a sequential test for development on land allocated in this plan unless the proposed use is in a More Vulnerable category (as set out in the Flood Risk Vulnerability Classification in national guidance). This draft policy establishes a blanket approach requiring a Sequential Test on sites that may only be partly in Flood Zones 2 and/or 3, even though there may not be any intention of developing these areas of a site. For allocated sites, the Development Guidelines seeks to avoid the particular development of these constrained areas. For instance draft guidelines for SHR173 state: "Development will also be excluded from the elements of the site located in Flood Zones 2 and/or 3, which will form part of the Green Infrastructure network." This draft policy should be amended to remove the requirement for a sequential test of allocated sites where they do not involve development in flood zones 2 and/or 3. This policy should be amended in order to be found sound, as it needs to be fully justified and effective.
A2167B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. Yes we do need to adapt – but along side it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2389B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Some of this policy looks to be incorrect in line with NPPG requirements e.g. ST requirements for More Vulnerable only. One part implied the sequential test would be for more vulnerable if allocated? Policies should reflect local circumstances, justified by evidence and the NPPF/G contains policy for use in determining applications so perhaps no need to duplicate locally – except perhaps fundamentally critical ones. Repeating some of the NPPG doesn't perhaps make the document unbold but it can make it longer than it needs to be and the main policy messages can be lost if it is perhaps unfocused and generates confusion.
A2407B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Agree	We believe the Plan positively contributes to reducing flood risk by working with natural processes and where possible use Green Infrastructure policies and the provision of SUDs to achieve this. Support should also be given for natural flood management schemes.
A2427B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	Understandably, flood risk has its own strategy in the local plan. At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. Fourteen of the eighteen place plans have specific concerns with flooding and need action. The UK government guidance 'Climate Change Explained' https://www.gov.uk/guidance/climate-change-explained#the-impacts-of-climate-change warns that: "All these climate models tell us that under a scenario of ever-increasing greenhouse gas emissions the world could become up to 4.8°C warmer than the pre-industrial period by the end of this century." "... even with concerted action, current levels of greenhouse gases in the atmosphere will lead to changes in the climate, such as increased average global temperatures, more extreme weather events and heightened flood risk. It will therefore be vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate." DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. The effects at 1.1°C above pre-industrial levels are already having severe impact on people and the economy. Yes we do need to adapt – but alongside it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2469B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt.
A2494B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP22	Disagree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. Understandably, flood risk has its own strategy in the local plan. Fourteen of the eighteen place plans have specific concerns with flooding and need action. The UK government guidance 'Climate Change Explained' https://www.gov.uk/guidance/climate-change-explained#the-impacts-of-climate-change warns that : "All these climate models tell us that under a scenario of ever-increasing greenhouse gas emissions the world could become up to 4.8°C warmer than the pre-industrial period by the end of this century." As the local plan acknowledges: "... even with concerted action, current levels of greenhouse gases in the atmosphere will lead to changes in the climate, such as increased average global temperatures, more extreme weather events and heightened flood risk. It will therefore be vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate." DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue, for instance, to make barriers higher. The effects at 1.1°C above pre-industrial levels are already having severe impact on people and the economy. Yes adaptation is needed, but along with this we need to do everything in our power to mitigate and reduce CO2 emissions. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. If the local plan does not commit to serious CO2 reductions then it is not fit for purpose. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adaptions.
A0026B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	The Parish Council supports Shropshire Councils Sustainable Urban Drainage measures that Shropshire Council is proposing and feels that developers countywide need to be aware of the local issues when developing sites.
A0101B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	Including urban creep as part of the drainage strategy for new developments is over and above the EA requirement - urban creep should be assessed as part of strategic modelling as undertaken by the Environment Agency and national climate change allowances amended to suit.
A0238B45	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	At present, flooding is the most tangible evidence of impending climate crisis that most people in the county are aware of. It is vital to the long-term sustainability of Shropshire, and the health, safety and quality of life of its communities, that the County is able to adapt to changes in the climate. DP22 is working on the assumption that we can continue to adapt to extreme weather and that we can design our way around flooding. After the February 2020 floods the environment agency was clear in pointing out that we cannot continue e.g. to make barriers higher. Yes we do need to adapt – but along side it we need to do everything in our power to mitigate and reduce CO2 emissions. If the local plan does not step up to serious CO2 reductions then it is not fit for purpose. No amount of adaptation is going to prevent flooding and other extreme climate effects from destroying homes, livelihoods and ultimately people's lives. I disagree with this policy because it is incomplete and makes no reference to the steps that must be taken to mitigate the effects of flooding as well as adapt
A0430B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	Support DP23 which requires developments to integrate measures for sustainable water management to reduce flood risk, avoid adverse impacts on water quality and quantity within Shropshire, including groundwater resources, and provide opportunities to enhance biodiversity, health and recreation. This requires major development (as defined in the NPPF) to include sustainable urban drainage systems and it is confirmed that development of safeguarded housing land in Shifnal will incorporate sustainable urban drainage systems.
A1151B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	Maintaining and improving water quality and the treatment of water and wastewater in the face of population growth, changing environmental legislation and climate change pressures will be an ongoing challenge for the development industry over the coming years. As our customers' expectations change, there is likely to be greater demand from customers for environmental improvements which is likely to be reflected in increased environmental standards over time. It is important that United Utilities maintains the ability to flexibly respond to environmental and growth drivers both now and in the future. Future development within the region will need to be managed to enhance the environmental quality of the immediate area and manage the effects of climate change. United Utilities would seek to encourage the use of systems like rainwater harvesting and grey water recycling that help to reduce pressure on public water supply and the public sewerage system. Additional benefits result in a reduced environmental impact by making sure that valuable resources are used efficiently, at time reducing the costs associated with improving local water infrastructure for a new development as they require less mains water. Additional benefit is that such measures will reduce future occupants' costs for both water bills and energy bills (through heating water). We therefore very much welcome the approach to the policies SP3, DP20, DP21 and DP23 and the detail in them to ensure development is delivered in the most sustainable way. One comment to make on the policies quoted above is that would wish to see a linkage between policy requirements mentioned directly to ensure that opportunities as part of any new development are not missed. It is understood that areas like green infrastructure provision will seek to ensure the sustainable management of surface water through multi-functional benefits which are part of a high quality green / blue water environment. The detail within the policy is understood but we would recommend further linkage in policies to encourage holistic approaches as development comes forward. It is important to note that as strategies come forward, like surface water management, there will an expectation for them to reference the connectivity with Green Infrastructure and how the two interact. It is important for the Local Plan to consider the approach to developing strategies and outcomes holistically and would challenge the Local Plan to encourage this approach further in policy wording to ensure opportunities for new development is not missed.
A1152B33	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Agree	Agree with the fundamental thrust of these policies in managing water resources and flood risk, in the light of the Climate Emergency and the ecological emergency. In some cases development, particularly major development, should take account of effects in other wider parts of the catchment area of which that development is part. No development should contribute to increased flood risk in other parts of the county or the wider catchment area.
A2163B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Disagree	Part 5 of this policy requires an additional, but unspecified, allowance to reduce the impact of urban creep and notes that guidance for this is provided by the Lead Local Flood Authority (LLFA). However, it is not clarified what the guidance is and places an onus upon the LLFA to engage with developers at the pre-submission stage. Clarity should be provided by more specific reference to the guidance within the draft policy. This policy should be amended in order to be found sound, as it needs to be fully justified.
A2308B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP23	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where Sustainable Drainage Systems are to be created/installed within safeguarding zones designated to reduce the risk of birdstrike, they should be designed to ensure that the development/enhancement does not result in the creation of an attractant environment for large and flocking bird species that might pose a danger to aviation safety and operational capability."
A0020B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	This policy applies to "non-designated heritage assets" which are set out in the Shropshire Historic Environment Record. It therefore needs to cover the whole of the Shrewsbury Canal, its water channel and towpath as well as all remaining structures.
A0238B46	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	The Parish Council supports Shropshire Councils Sustainable Urban Drainage measures that Shropshire Council is proposing and feels that developers countywide need to be aware of the local issues when developing sites.
A0306B051	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	Weak wording - Remove 'wherever possible'
A0430B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	Support DP24 to protect the heritage assets in the County. The heritage assessment that has been undertaken so far for the Wallace site and provided in Appendix 1 confirms there are no heritage constraints that would prevent the Site coming forward for housing.
A0573B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	Object to DP24 to protect and conserve heritage assets and to make balanced judgements about the benefits of proposals which may have impacts causing loss or harm to heritage assets. DP24(4) simply requires the benefits of a scheme to clearly outweigh the loss or harm to a heritage. This would conform with NPPF para 196 in making judgements about impacts on a designated asset. DP24(4) would not also conform with NPPF para 197 which requires a balanced judgements about impacts on non-designated assets to consider the scale of any harm and the significance of the asset. DP24 must distinguish between the tests for designated and non-designated assets and DP24(4) should reflect the tests in NPPF para 197. The tests in DP24 require the removal from the Plan of proposed allocation SHF032 to be reviewed in relation to its proximity to Grade II* Aston Hall based on the submitted Heritage Assessment. This should consider the significance of the setting and the potential impacts of residential development on the asset. At present, SHF032 makes a moderate positive contribution to the significance of the asset as part of its wider rural setting but the significance of Aston Hall relates to high quality architecture, historic fabric and immediate setting which are not impacted by SHF032. Suitable mitigation measures are also possible - landscaping the north and north-west boundary adjoining the Hall and Garden, tree planting in the north sector of SHF032 to soften the appearance of development, restraining the scale and massing of development in the north to two storeys, restraining dwelling design in the north to more traditional architectural forms with prominent dwellings using local details in their design and avoiding repetitive dwelling sizes and design. This has public benefits from contributing to housing supply in Shifnal following a long period of restraint to meet Black Country needs and support the new standard methodology. Sites SHF032 with SHF018b - SHF018d will contribute to the economic growth objectives: increasing productivity, delivering jobs, balancing housing and employment.
A0672B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24		Agree with the draft policy of Conserving and Enhancing the Historic Environment.
A0957B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24		Draft policy DP24 seeks to conserve and enhance designated and non-designated heritage assets. This draft policy recognises the importance of Shropshire's heritage assets. However, it lacks the specification or illustration that is needed to clarify issues such as degrees of harm to an asset and loss of significance. It states how proposals that will deliver positive benefits to heritage assets will be supported. However, it lacks a robust refusal where harm will affect the asset and instead discusses mitigation measures. This policy is not strong enough to overcome the poor environmental husbandry of Shrewsbury's buildings alone. Nevertheless, there is reference to more detailed supplementary planning guidance. However, the Shrewsbury Place Plan makes only passing reference to the Town's precious, architectural and heritage richness. This Place Plan has categories concerning housing development, retail improvement, industry and employment, etc., but none for heritage enhancement and protection – the very aspects that make the town an enduring visitor destination. Reflecting this, Shropshire Council owns several of the town's heritage asset buildings that are in poor repair. Too many of Shrewsbury's buildings are allowed to stay in poor condition. The advice from the LA concerning the juxtaposition and alterations to heritage assets lack conservation rigour
A0984B21	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	Fully agree with this policy and the protection of Shropshire's heritage assets. Support recognition within Part 3 of this draft policy that the likely loss, or harm to, the significant of a designated heritage assets should be determined in line with the NPPF.

Page 86

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0997B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	The inclusion of this policy is welcomed. The additional information on Heritage Assessment requirements set out in the explanatory text following the policy is clear, as are expectations set out in paras. 4.208 and 4.209.
A0997B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Don't know / no opinion	It remains unclear how impact on the historic environment has been considered as part of the Plan process. On this basis it seems that the Plan puts forward a number of sites which, if developed, have the potential to affect the significance of one or more designated heritage assets in their vicinity. Without clarity of any assessment of the degree of harm which the proposed site allocations might cause to the historic environment or, indeed, what measures the Plan might need to put in place in order to ensure that any harm is minimised, at present, the authority cannot demonstrate that the sites it is putting forward for possible development is compatible with the draft policy for the protection of the historic environment set out in the draft Plan or the requirements set out in the NPPF. We would welcome opportunity to discuss whether assessment information has been produced but not shown as part of the current evidence base at this time, and to discuss sites which are of particular concern to use at this time without such assessment information
A1152B34	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	Agree with all measures designed to protect, conserve, enhance and restore Shropshire's Historic Environment, including the setting of its historic assets.
A1161B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	We support the policy regarding Heritage assets such as listed buildings, but this needs to be strengthened and extended to include impacts on designated conservation areas. This would assist in ensuring the impact from CLU002 and CLU005 are minimised in regard to the impact on the character of the Town of Clun from its eastern approach.
A1609B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	No reasoning is provided to justify why other sites have rejected in the area and Shropshire Council's exceptional statement (para 8.74) indicates that opportunities for industrial development within neighbouring Telford have not been considered. There are contradictions under Shifnal's Development Strategy – at point 7 which contradicts point 4 in relation to special circumstances. Shifnal does not require 1,500 new dwellings and 41 hectares of employment land and therefore the release of land is not justified, as very special circumstances outlined are not applicable. The proposed housing sites total 13 Ha and the LPR suggests that 230 homes will result from these sites. This seems to be an unusually low housing density particularly if the housing is to be affordable. The average housing density in the strategic sites consultation was 28.6 homes per Ha and if this is used for these 3 sites then they are more likely to provide 372 more homes in Shifnal.
A1844B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	We would welcome recognition that the canal network is an important part of Shropshire's industrial heritage in the explanatory text to this policy.
A2163B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	Heritage policy is clearly set out on the NPPF, with an emphasis on avoiding harm to the significance of designated heritage assets, with more flexibility provided to non-designated heritage assets. There is a significant risk that the local plan is seeking to reframe the language of national policy, through parts 1-4. Whilst there is a need for a historic environment policy as part of the local plan, this need only comprise parts 2 and 3 of the draft policy. Part 7 of the draft policy states that applications for development affecting designated or non-designated heritage assets are to be determined in line with more detailed supplementary planning guidance where applicable. From the wording, it is clear that this guidance has not yet been published and it is assumed that it will be produced alongside the local plan review. However, applications can only be determined in accordance with the development plan, unless material considerations indicate otherwise, i.e. the NPPF/supplementary guidance. Decisions made on applications can only be made in accordance with relevant policies of the development plan that have gone through the scrutiny of public examination, with supplementary planning guidance being a material consideration. This part of the policy is vague and imprecise, and it is not clear how the supplementary guidance will differ from the NPPF. There would be no justification for supplementary guidance to depart from NPPF policy, which has been scrutinised and clarified by courts in a number of high profile cases, and should therefore be removed. This policy should be amended in order to be found sound, as it needs to be fully justified, effective and compliant with national policy.
A2394B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Disagree	1. There is no mention here of 5 106 contributions (or money from CIL payments) from developments in the area of heritage assets (e.g. new housing beside a canal) being used to assist to restore or repair heritage assets. We should like to see an extra policy being added along the lines of "Developments near to heritage assets should be the subject of Section 106 (or CIL) payments which should be used to restore/repair the heritage assets, recognising the added value of such new properties due to their being close to the heritage assets". Anecdotal evidence suggests that the value of Canalside properties can be 20% higher than similar properties which are not canal side. Reason: to provide funding (from the increased sale prices developers can achieve) for restoration/repairs 2. Para 4.203 which describes non-designated heritage assets should be amended to include "canals, canal towpaths, canal locks, tunnels, aqueducts, bridges, houses, warehouses and similar structures" Reason: to ensure that canals and related structures are included in the list of non-designated heritage assets 3. The area in Llanyrnech shown as a heritage area is, we believe, only the area covered by the Scheduled Monument designation for the historic limekilns etc. We ask that the area including the Montgomery Canal itself (including the towpath), the canal yard to the west of the designated area and the canal loading basins and wharves to the east of the designated area, be protected from unsuitable development - not added to the Scheduled Monument area Reason: When the restoration of the Montgomery Canal gets to Llanyrnech, there will be a need for a boat based hub, including for visitors arriving by boat, bringing increased economic activity to the area. This would also enable sympathetic treatment of the waterside parts of the Scheduled Monument which are at present quite neglected.
A2403B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24	Agree	The Estate acknowledges the need to ensure the areas heritage assets will be protected, conserved, enhanced and restored as appropriate. The Sundorne Castle Estate is an important part of Shropshire's history and remains responsible for a number of county's heritage assets. The Estate takes its heritage responsibilities seriously and is focused on the conservation of significant heritage assets, as well as taking opportunities to breathe new life into historic structures. It is therefore pleased to see that the policy encourages development which would bring positive benefits to heritage assets. This should include giving weight in the consideration of proposals to where public access and appreciation of a heritage asset would arise as a result of a development.
A2479B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP24		DP24: Conserving and Enhancing the Historic Environment (pgs. 120-122) The following are responses to the numbered paragraphs in this section of the Local Plan. DP24 is a key component of the Local Plan as regards the Bishop's Castle Key Centre. DP24 is highly significant as regards future development in the town as the Conservation Area constitutes a significant portion of the settlement. It is also one of Shropshire's significant heritage assets and thus is defined by DP24 as needing to be "protected, conserved, sympathetically enhanced and restored." A Character Assessment (CA) of the Bishop's Castle Conservation Area (BCCA) has recently been produced jointly by the Bishop's Castle Community Partnership (CP) and the Bishop's Castle Town Council (TC): the former as part of the annual update of their Community Led Plan; and the latter in preparation of the Bishop's Castle Neighbourhood Development Plan. The CA which forms Appendix 1 of the Neighbourhood Development Plan (NDP) (currently in Draft Regulation 14 Stage) identifies and evidences critical issues that need to be addressed if this significant heritage asset is to be "protected, conserved, sympathetically enhanced and restored." The DP24 Policy includes 7 actions required to address the Policy. As regards the BCCA, to realise the 7 actions, the following is required: 1. Ensuring that wherever possible, proposals avoid harm or loss of significance to designated or non-designated heritage assets, including their settings. The boundary of the BCCA is that of the original Norman planted town. The current settlement and its infrastructure mirror the original 12th century settlement. Hence the Historic Environment Record lists 267 separate heritage assets, within the BCCA including: 1 Scheduled Monument; 5 Grade II* Listed properties; 100 Grade II Listed premises; and 161 non-designated heritage assets. Through the following 8 centuries the town has prospered and developed, enhanced by the impact of its Tudor and Georgian edifices and its position as a Rotten Borough. It has also retained its original form, street pattern and buildings, including the medieval thoroughfares with premises hard up against the carriageway or narrow pavement. The consequence of this in the 21st century is the difficulty of accommodating the demands of modern traffic and parking requirements without "harm or loss of significance to designated or non-designated heritage assets, including their settings." The CA provides evidence of both harm already done to heritage assets within the BCCA and the ongoing dangers that are regularly occurring to assets and their settings because of the conflict between traffic and parking demands and the medieval street pattern that exists within the Conservation Area setting. The traffic conflict is exacerbated by the fact that the A488, which lies immediately to the east of the town provides the only access to the English hinterland and to major centres along the Welsh borders to the south. The rural lanes leading out of Bishop's Castle on the western side access only the rural Welsh hills and the Montgomery Road, the B4385 leads only to Welshpool and Newtown and then to distant towns and their hinterland in north and west Wales. The A488 therefore is by far the major route for both commercial and residential journeys to and from the town. Consequently, all traffic including commercial deliveries to and from premises on the western side of the Conservation Area, must travel through the Conservation Area to access the hinterland either via the A488 or the B4385. To satisfy DP24 1. It is essential that no future development of sites outside the development boundary that would require to use a Conservation Area street(s) to access the A488 either by School House Lane or Brampton Road is permitted. 2. Ensuring that proposals which are likely to affect the significance of a designated or non-designated heritage asset, including its setting, are accompanied by a Heritage Assessment. The level of detail in the Heritage Assessment should be proportionate to the asset's significance. The CA includes a detailed analysis of what constitutes the character of the Conservation Area and each of the 9 zones that were surveyed within it. This includes architectural design features and decorative embellishments through the ages. To satisfy DP24 2. The Heritage Assessment should be required to always reference consideration of the CA (NDP Appendix 1) document including the appropriate zone analysis and acknowledge any relevant architectural or setting features that may be appropriate. 3. Ensuring that proposals which are likely to result in any loss of, harm to, the significance of a designated heritage asset, including its setting, either directly or indirectly, are determined in line with the National Planning Policy Framework. To satisfy DP24 3. When undertaking Local Plan Reviews to accommodate the required, ongoing 5 year supply of housing land, a priority rating must be given in the assessment process to eligible sites that do not require access to the A488 via a street(s) in the Conservation Area. 4. Ensuring the proposals which are likely to result in loss of, or harm to, the significance of a non-designated heritage asset and/or its setting, either directly or indirectly, will only be permitted if it can be clearly demonstrated that the benefits of the proposal outweigh that loss or harm. In making this assessment the following will be taken into account: a. The degree of harm or loss of significance to the asset and/or its setting; b. The importance of the asset; and c. Any potential beneficial use. 5. Where such proposals are permitted, measures will be required to: a. Mitigate and record the loss of significance to the asset and/or its setting; and b. Advance understanding in a manner proportionate to both the asset's and/or its setting's importance and the level of impact. The CA identifies the collective nature of the BCCA in that the footprint of the settlement today mirrors that of the 12th century settlement and its medieval street pattern. The Conservation Area setting is in itself part of the significance of each of its assets and is inseparable from them. The fact that in this small area there are 267 separate heritage assets, tightly packed together, including a Scheduled Monument, 5 Grade II* Listed properties and 100 Grade II Listed premises as well as 161 non-designated heritage assets confirms that the area as a whole is a unique heritage asset of great significance. Damage to a single asset within it, regardless of whether it has a designated or non-designated status, impacts therefore on the whole setting and as such is of equal importance (Point 4.b.). To satisfy DP24 4. and 5. It is necessary when assessing "loss of or harm to the significance of a non-designated heritage asset and/or its setting" to take account of the fact that in the case of this 12th century settlement and its footprint, the interrelationship between the designated and non-designated assets and between the setting as a whole and a non-designated asset are significant factors in the overall character of the BCCA. Thus, a property's significance is greater than its non-designated status would imply. 6. Encouraging development which delivers positive benefits to heritage assets. Support will be given in particular, to proposals which appropriately conserve, manage or enhance the significance of a heritage asset including its setting, especially where these improve the condition of those assets which are recognised as being at risk or in poor condition. The CA identifies 9 sensitive sites, 5 of which are within the BCCA boundary and 4 immediately adjoining it. Development on all these sites could either enhance or harm the heritage asset that is the Conservation Area.
A0142B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	No need or special or exceptional circumstances justification to remove from Green Belt or alter Green Belt boundary and land should not be taken out of the Green Belt. The Council's Green Belt Review is not an "exceptional circumstance" and the Review undertaken did not identify a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A0158B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Don't know / no opinion	The Council notes that the only parcels of Green Belt land which it is proposed to release for housing or mixed use are in Alveley. This increases the obligation on Shropshire Council to ensure that future developments are appropriate and adequately supported by infrastructure improvements.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0238B47	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	We support the policy regarding Heritage assets such as listed buildings, but this needs to be strengthened and extended to include impacts on designated conservation areas. This would assist in ensuring the impact from CLU002 and CLU005 are minimised in regard to the impact on the character of the Town of Clun from its eastern approach.
A0240B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Don't know / no opinion	3.15 Policy DP25(1) confirms that 'safeguarded land, being land removed from the Green Belt for future development needs beyond the current Local Plan period, is shown on the Policies Map.' 3.16 As set out in its response to Policy S15 (Shifnal Place Plan Area), L&Q Estates consider that the existing safeguarding of 'land between Revells Rough, Lamedge Lane and the eastern rail line is inappropriate and should instead be allocated for housing to meet an increased housing requirement necessary for the delivery of Policy SP2 (Strategic Approach). 3.17 A Vision Document has been prepared and is submitted alongside these representations. This demonstrates that the land at sites SHF022 and 23 is capable of delivering 100 dwellings, with the safeguarded land able to deliver a further 240 dwellings, alongside open space and necessary highway infrastructure.
A0261B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Green Belt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A0261B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A0306B052	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Our concerns relate to the loss of green belt. Given the green belt review and classification of green belt areas, we find it unacceptable to develop (or 'safeguard') where a release of greenbelt would cause a moderate or above risk of harm.
A0357B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such. The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan. The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A0397B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Green Belt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A0397B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A0413B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Don't know / no opinion	The green belt must be protected and developments restricted.
A0430B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Support DP25(1) and reference to Policies Map to identify the extent of the Green Belt and safeguarded land for future development needs beyond the plan period. Table DP25.1 in the supporting text identifies the locations of Green Belt release and whether it is proposed to be allocated for housing or employment or safeguarded. Comment on the decision to release land from the Green Belt, particularly at Shifnal, but note that the Green Belt release does not include any housing allocations in Shifnal or the M54/A5 Strategic Corridor and there is a compelling case to allocate the Site for housing in the plan period rather than safeguard for the future. There is a sound justification for allocating safeguarded housing land in Shifnal or at least providing a monitoring / 'Plan B' policy for safeguarded sites. DP25(2) to (7) are recognised setting out when development in the Green Belt would be considered appropriate or not inappropriate.
A0507B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Comments concern a range of issue around policy DP 25 Green Belt land at RAF Cosford. Removal of the strategic site from the Green Belt is welcomed although its considered that the site allocated in inadequate to meet the requirements of the Local Plan. Issues raised include - Remaining undeveloped land at the site is very small when existing use is considered (S21.4); Consideration must be given to the fact that much of the open area is green space alongside the runway and hangers which limits future use if the runway is to remain operational; allocation of land should also consider the needs of the annual Air Show and expansion of the RAF Museum and should not detract from these important existing uses; any loss of accommodation on land east of the A41 and north of Sydnal Lane could impact on the sites future growth as a training centre which is estimated to expand in the next 10 years.; The constricting nature of the land allocation is further demonstrated by the need to remove 15 hectares of land at Neachley Lane to accommodate the formation of a new headquarters for the Midland Air Ambulance Charity referred to in S21.3. The existing site area obviously could not accommodate this fairly insignificant proposal without requiring the removal of this additional land from the Green Belt; In conclusion while the removal of land from the Green Belt in Policy DP25 is welcomed it fails to meet the Councils own requirements and those of the NPPF require the Green Belt review to considered both Shropshire's current Plan development requirements as well as the need to safeguard land to accommodate future development needs beyond 2038. To meet this shortfall the Council should re-examine the site to the west of the A41 bounded to the north by Sydnal Lane and to the west by Shackerley Lane. This would provide an additional 16 hectares of land for future development without significant impact on the aims of the Green Belt and by retaining an element of open Green Belt between Cosford and Albrighton to maintain a strategic gap.
A0538B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	As per DP25, if the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no exceptional circumstances have been advanced that would justify the development of the land at Stanmore, and it would represent inappropriate development, cation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A0539B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	As per DP25, if the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no exceptional circumstances have been advanced that would justify the development of the land at Stanmore, and it would represent inappropriate development, cation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A0540B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	As per DP25, if the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no exceptional circumstances have been advanced that would justify the development of the land at Stanmore, and it would represent inappropriate development, cation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A0566B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Green Belt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified no exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as exceptional circumstances in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A0697B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Support proposal to remove ALB014 from the Green Belt, However consider the site should not be proposed as safeguarded land but allocated for residential development in the draft Local Plan. See wider representation Long considered there was a need to review the Green Belt given it constrains growth in east Shropshire (including Albrighton). The SAMDev Plan inspector instructed a Green Belt Review to occur as part of an early Local Plan Review. Comments on the Green Belt Review are addressed in the response to the Sustainability Appraisal Site Assessment process. With regard to the Exceptional Circumstances Statement, recent legal judgements need to be considered. The judgments clarify that if Green Belt is to be released, it should happen as part of a two-stage process. First 'strategic' level exceptional circumstances for release need to be justified; and second site-specific exceptional circumstances need to be justified. Justification for release is primarily under draft Policy DP25 supported by an Exceptional Circumstances Statement. Broadly support the approach to the release of Green Belt as it relates to Albrighton: At the strategic level, broadly agree that there are exceptional circumstances to justify release of Green Belt at Albrighton. Clearly the needs of Albrighton (and thus the development strategy as a whole) cannot be achieved simply by redeveloping and intensifying the existing built-up area of the settlement (completions since 2006 have been very low, primarily as a result of the constraint provided by the Green Belt). At the site specific level, agree that ALB014 is suitable for removal from the Green Belt. However, the case made is to remove ALB014 from the Green Belt to safeguard for future development, object to this as exceptional circumstances exist to release the site for development now. This is supported by the Council's own evidence, including conclusions that release of this land from the Green Belt would not undermine the purposes of the Green Belt (although consider additional evidence submitted in support of this representation shows likely harm to the Green Belt of developing ALB014 would be 'low-moderate' rather than 'moderate', as claimed by the Council). An illustrative masterplan also submitted as an appendix to this representation demonstrates compensatory measures are capable of being delivered in accordance with the NPPF, principally through open space on adjacent land to south of ALB014, that would be available and accessible to residents of the site and the wider community. These factors taken together provide sufficient benefits to support site specific exceptional circumstances of ALB014. Consider the draft Local Plan should go further and allocate additional land at Albrighton, and the only way of doing this is to release land from the Green Belt. ALB014 offers a great opportunity to deliver additional growth at Albrighton on a sustainable site that would not undermine the purposes of the Green Belt in this location if developed as such consider ALB015 should be allocated rather than safeguarded for development beyond the proposed Local Plan period. A Landscape Appraisal and Green Belt Assessment of ALB014 are submitted as appendices to the representation. These support the proposed changes to the Green Belt boundary in Albrighton. The Green Belt Assessment concluded the release of ALB014 from the Green Belt would have low-moderate harm to the Green Belt, rather than the moderate harm concluded within the Shropshire Council Green Belt Review. The Landscape Appraisal concluded that the overall landscape character of ALB014 is more enclosed than typical Sandstone Estate lands Landscape Type (which it is considered within the 2006 Shropshire Landscape Typology), with well-defined hedgerow/hedgerow tree field boundaries. There are no statutory/non-statutory landscape designations and no public access, although likely valued at a local level for its openness. Landscape quality is influenced by proximity to the settlement edge and overlooking from a number of properties. Overall considered to have medium landscape quality and value and not considered a valued landscape. With regard to visibility, ALB014 is well contained from its surroundings by established boundary vegetation. There are only limited opportunities for views of ALB014, beyond its immediate surroundings. Both reports conclude that the removal of this site from the Green Belt would result in limited harm to the Green Belt and that it would be consistent with national policy and is fully justified.
A0836B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	DP25.1 No necessity to alter Green belt boundary. Land proposed for employment should not be taken out of green belt. No exceptional circumstances have been put forward to justify or evidence this action. Other reasonable options exist for the development within the vicinity. DP25.2 developing the land would be regarded as "inappropriate development" as it conflicts with the aims of the green belt and no special circumstances have been shown. Support SP11.2.e but the proposal to remove land from the green belt is in conflict with this aim.
A0864B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Greenbelt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0864B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be indirect conflict with Policy DP25.2.
A0888B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	With regard to draft Policies DP25 (Green Belt and Safeguarded Land) and S21 (Strategic Site RAF Cosford) or S1 (Albrighton Place Plan Area), proposed an amendment to the policies to allow the allocation (or safeguarding) of land at Newport Lane, Cosford which should be removed from the Greenbelt and allocated for housing development to support the strategic growth objectives of RAF Cosford. See wider response.
A0911B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Representation on behalf of Hobbins Management Company covering a range of Policies relating to Bridgnorth. Broadly in support of the policies, but stress that the policy position doesn't appear to have been followed in setting the allocation of employment land at Stanmore. In regards to DP25 the client supports Policy DP25.2 Policy DP25.2 which says that the Green Belt will be protected against inappropriate development, as defined by national policy. However there is great concern, however, that this Policy is not being properly applied with regard to Stanmore. A detailed review of why its considered exceptional circumstances have not been submitted is included in the response, and concludes that It is clear that "exceptional circumstances" sufficient to justify the removal of Green Belt designation from the land at Stanmore do not exist and the allocations should be deleted from the Plan.
A0911B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Representation on behalf of Hobbins Management Company covering a range of Policies relating to Bridgnorth. Broadly in support of the policies, but stress that the policy position doesn't appear to have been followed in setting the allocation of employment land at Stanmore. In regards to DP25 the client supports Policy DP25.2 Policy DP25.2 which says that the Green Belt will be protected against inappropriate development, as defined by national policy. However there is great concern, however, that this Policy is not being properly applied with regard to Stanmore. A detailed review of why its considered exceptional circumstances have not been submitted is included in the response, and concludes that It is clear that "exceptional circumstances" sufficient to justify the removal of Green Belt designation from the land at Stanmore do not exist and the allocations should be deleted from the Plan.
A0928B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The approach to Green Belt Review is noted as part of the plan. However, the exceptional circumstances to justify the need to amend Green Belt boundaries to accommodate development needs must have regard to the significant availability of non-Green Belt land within Shropshire to accommodate needs as a first and important priority. It is noted that only a limited amount of Green Belt is lost to meet housing needs, and most Green Belt loss is associated with employment needs, but either way the Plan needs to provide for the exception circumstance justification to make these changes. Paragraph 137 of the Framework states that "before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development." Green Belt should only be released if the development strategy demonstrates growth at certain locations/settlements should/needs to take place to provide a sustainable approach to the distribution of development. If no Green Belt alternatives exist at such a settlements, then such an approach may lead to exceptional circumstances
A0956B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	In light of opportunities for further development at non-Green Belt locations at the Strategic and Principal Centres consider whether the case for 'exceptional circumstances' for the release of Green Belt proposed is fully justified. Draft Policy identifies areas that are to be removed from the Green Belt and it identifies areas of 'safeguarded land' for future development (subject to a further Local Plan Review, in line with the NPPF, paragraph 139). Given that safeguarded land can only be released for development following a further Local Plan review that proposes the development the Council should consider the need for further flexibility beyond the plan period via the identification of sites which could come forward in a more timely manner to respond to future market circumstances. The NPPF (paragraphs 136-137) requires the Council to fully demonstrate 'exceptional circumstances' exist to justify amendments to the Green Belt. As such the draft SLP is supported by an 'Exceptional Circumstances Statement' (August 2020). This has utilised the Green Belt Assessment (Part 1, 2017) and Green Belt Review (Part 2, 2018) alongside other pieces of evidence to inform its conclusions. In relation to the proposals for Green Belt amendments (particularly those at Shifnal where over 90ha of safeguarded land are identified for potential housing and employment development) the Exceptional Circumstances Statement provides a summary for each settlement on how the provisions of the NPPF (paragraphs 136-137) are met. This includes an assessment of all other 'reasonable options' to the release of Green Belt land. It is queried if the release of Green Belt land is fully justified in this context. For instance, in relation to Shifnal the Exceptional Circumstances Statement (paragraphs 8.73-8.81) it is noted that there are potential alternative non-Green Belt options at other urban locations along the strategic growth corridor, including Shrewsbury, which could mean that in the balance a case for exceptional circumstances is not fully justified. The case for exceptional circumstances should be fully justified as per the NPPF. The Council should consider the appropriateness of non-Green Belt housing land supply options for beyond the plan period within the context of its urban focused strategy to ensure the SLP is effective.
A0981B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Sport England supports part 7) of the policy which identifies that outdoor sport and recreation development are permitted exceptions to the principle of inappropriate development in the Green Belt, in accordance with para 145 of the NPPF, where this relates to the construction of new buildings and also para 146 in so far as this relates to changes of use of land. In this regard, it is recommended that the wording of the policy be amended to make this explicitly clear that part 7) of the policy relates to both construction of new development and changes of use of land to be consistent with national Green Belt policy. In respect of part 4) of the policy that relates to development on previously developed sites, it is noted that local community uses are included within the range of permitted uses, however to ensure consistency with part 7) of the policy and national Green Belt policy, it is recommended that the wording is clarified to make it clear that such local community uses can include outdoor sport and recreation uses for the avoidance of any doubt.
A1101B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	This draft policy is a development management policy designed to guide decision making. However, the explanation is about the Green Belt review (reasons for it, methodology and outcomes) and includes a schedule of proposed Green Belt release. Consider the Green Belt Review methodology is too limited and falls short of testing all five purposes of Green Belt. Consequently it does not provide sufficient detail to consider overall performance of parcels assessed. Specifically in respect of Purpose 3 - to assist in safeguarding the countryside from encroachment. A Green Belt Position Note (including a landscape character led approach) has been submitted (Appendix to this Rep) in relation to Stanmore Garden Village. The assessment concludes that given the reduced size of the site (it now excludes much of Parcel P54), the function of the site relative to Green Belt Purpose 3 actually diminishes in certain areas due to the effect of limited representation of key characteristics of the countryside, urbanising features and recreational access to the wider Green Belt. It considers that Parcels P56 (Hermitage Farm) and P57 (north west Stanmore Business Park) make no more than a 'moderate' contribution to Green Belt Purpose 3, not a 'strong' contribution as in the Council's evidence. The Council's Green Belt Review also identified high levels of harm to the Green Belt is P54 were released (south of the A454 and Swancote), this parcel is primarily excluded from the revised boundary for Stanmore Garden Village. Stanmore Garden Village can readily provide defensible, durable boundaries to west, south, north and east and through delivery of Public Open Space and new planting could reinforce the defensible boundary and buffer to the wider Green Belt. These factors ensure the site is an isolated parcel of land with functioning Green Belt buffers established by an arc of existing development. In respect of other Green Belt purposes, the Council's assessment shows the site to make either no contribution or a weak performance.
A1135B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	We do not accept the conclusions of the 2018 Green Belt Review. That review takes a cell-based approach to the assessment process and it is evident that the subject site has been assessed as part of a much wider whole (cell P36). We do not understand how certain cells have been conveniently sub-divided to allow more detailed critique of particular field parcels. Had a similar exercise been undertaken in respect of the Harp land/ALB023, a different conclusion would have emerged. None of the sites identified as safeguarding are known to be available. Inclusion of the Harp Land in P36 is not logical nor reasonable and its allocation / release would neatly "round off" the settlement pattern in this location. If the Harp land is developed, it would not undermine the characteristics of the countryside and the "limited urbanising development" characteristic of parcel P36. By the Council's own evidence the development of the Harp Land would give rise to limited harm to the Green Belt as it presently fulfils only 2 of the 5 Green Belt purposes. By our own assessment it fulfils none. We have reservations about Policy S1.1 sub paragraph 8 and the long-term locations for growth beyond the Albrighton development boundary that are proposed to be safeguarded from the Green Belt to meet future development needs. Comparably, release of the Harp Land would have a lower level of harm than the proposed safeguarded areas P32a, P35 and P36. P36/ALB014 protrudes into the open Green Belt and does not comprise a logical extension to the settlement boundary in this location.
A1152B35	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25		Agreement with the overall thrust of the policies. Disagreement with particular proposals. Agree with all measures designed to protect the Green Belt and the AONB against inappropriate development. Endorse comments made to this consultation by the AONB partnership. On the whole we welcome the increased recognition of the importance of the AONB and references to it and its Management Plan in a number of the draft policies, particularly draft policy DP26. The proof of Shropshire Council's commitment will come in future responses to planning applications, which in the past have sometimes paid scant attention to the importance of this designation. In the long term we would like to see adopted at the policy stage the recommendations, in the Glover report, that the AONB should become a statutory consultee for applications within the AONB. Disagree with para 4 of draft policy DP25, as do not think it will be appropriate for Affordable Exception Sites of more than one house to be allowed in the Green Belt or the AONB. Do not agree with the proposals for release of Green Belt land as set out in para 4.218. Do not think that a sufficient exceptional circumstances case has been made for these releases. At the Strategic Sites stage of consultation argued that there is no need to release the RAF Cosford land from the Green Belt because existing policies allow for the type of development being proposed by RAF Cosford. The new area of release proposed for the Midlands Air Ambulance Charity is significantly larger than MAAC's identified need for its proposed operation there.
A1195B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such. The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan. The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A1280B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such. The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan. The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A1280B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Policy DP25.2 indicates that the Green Belt will be protected against inappropriate development (consistent with the NPPF). An industrial estate represents inappropriate development in the Green Belt, as it would harm openness. If the land were subject to a Planning Application for employment uses it would be refused due to conflict with the Green Belt and lack of very special circumstances. The Local Plan Review should not be used to justify inappropriate development of the Green Belt. As there are no very special circumstances and employment development is considered inappropriate in the Green Belt, proposed allocations STC002 and P58a conflict with policy DP25.2.
A1281B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such. Development of Industrial Estates is "inappropriate development" in a Green Belt. No very special circumstances had been advanced. An LPR should not be used to justify inappropriate development in the Green Belt.
A1851B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The Green Belt boundary should not be amended at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out. No exceptional circumstances have been put forward. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity.
A1851B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NPPF and DP25.2. say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt. No very special circumstances had been advanced. An LPR should not be used to justify inappropriate development in the Green Belt.
A1860B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The Green Belt boundary should not be amended at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out. No exceptional circumstances have been put forward. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity.
A1860B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NPPF and DP25.2. say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt. No very special circumstances had been advanced. An LPR should not be used to justify inappropriate development in the Green Belt.
A1875B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The Green Belt boundary should not be amended at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out. No exceptional circumstances have been put forward. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity.
A1875B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NPPF and DP25.2. say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt. No very special circumstances had been advanced. An LPR should not be used to justify inappropriate development in the Green Belt.
A2119B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such. The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan. The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A2119B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2. say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A2123B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Our clients Dugdale, Main, Inglis and Orr are owners of the northern part the proposed safeguarded site in Shifnal south of Stanton Road. The family are supportive of the Regulation 18 proposal to remove the land and adjoining land owned by others from the Green Belt and safeguard it for development post 2038. Accordingly these representations are supportive of that proposed policy. The removal of my clients and adjoining land from the Green Belt would allow the new Green Belt boundaries of Stanton Road, the railway line and the eastern edge of the proposed Shifnal Local Plan Employment allocation SHF018d to be well defined and permanent as required by the NPPF para 139f. On behalf of our clients in June 2018 we submitted a fully detailed SLAA representations proving that our clients land is suitable, available, deliverable and viable and could come forward for development when needed post 2038. Accordingly we support the Reg 18 policies that are related to allocating new employment land to the east of Shifnal and removing the adjoining land to the west from the Green Belt and safeguarding it for development post 2038. Hence my clients support the following proposed policies: DP25. Green Belt and Safeguarded Land. Table DP25.1 Employment land allocation of 39 ha and safeguard land at Shifnal 92.8 ha. Schedule S15.1(i). Residential Allocations: Shifnal Key Centre. That allocates new residential sites in the town. Schedule S15.1(ii). Employment Allocations: Shifnal Key Centre and specifically employment allocations at: Land east of Shifnal Industrial Estate, Upton Lane, Shifnal (SHF018b & SHF018d) Schedule S15.1(iii). Safeguarded Land: Shifnal Key Centre. Safeguarded Land adjoining junction of Stanton Road and Lamledge Lane 4.5 hectares. My clients site. And land adjoining Shifnal Hillcrest School and Shifnal Industrial Estate 9.4 hectares. (adjacent to my client's site and part of 'a whole')
A2130B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Shropshire's current Local Plan reads as something written prior to the widespread recognition of the scale of the challenge, and the capacity to restore nature available through best practice, and of the economic and carbon-capture opportunities this enables. UN agreed targets look for a minimum of 30% of land and sea to be protected and this has been assented to by the UK Government. Shropshire currently 'protects' (to varying degrees) 15%. So the Local Plan should be looking to ensure that, at least a minimum of 30% of the land in Shropshire is protected. A 10% increase in biodiversity contained in the plan falls far short of what is required. Shropshire should be aiming for doubling of protected habitats, especially considering the potential for biodiversity gain in a largely rural county and the lack thereof for many other planning authorities. Whilst reference is made to EU protected sites (SACs, as legally obliged) there are no policies for protecting and enhancing SSSIs, local nature reserves or wildlife sites. The Shropshire Council identified Environmental Network is hardly mentioned and some settlement policies and site allocations will conflict with this. Indeed some sustainability appraisals overlook SSSI and wildlife sites in site assessments. We note that low ambition is evidenced in the wording throughout; many policies are expressed as aspirations rather than as requirements; environmental features are described as 'constraints' rather than as assets.
A2140B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	I strongly object to the use of Green Belt land for further housing - which seems to be in direct contradiction to DP15; where the Plan seeks to encourage a 'green infrastructure'. This needs a complete re think and it is a sad comment on Local Government that the willingness to remove 'green belt' land from Shropshire has reached this stage.
A2142B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	Whilst in agreement with the policy the statement sets out a contradiction between the Policies of DP25 and their implementation in policy in relation to Bridgnorth. Detailed response on why there is a lack of evidence for the change in Greenbelt policy;
A2156B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Green Belt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2156B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2
A2169B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	We are pleased to see part five of policy DP25 allows for the delivery of affordable housing on rural exception sites within the Green Belt, where there is a proven need, in line with national policy.
A2177B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	As set out in NPPF, where fully evidenced and justified Green Belt boundaries can be altered in "exceptional circumstances" through the preparation or updating of Local Plans (paras 136 & 137). The HBF supports the findings of the Council's Green Belt Release Exceptional Circumstances Statement dated August 2020, which justifies the release of Green Belt land for allocation and safeguarding at locations in Albrighton, Alveley, Cosford, Shifnal and Stanmore.
A2181B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Greenbelt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A2181B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be indirect conflict with Policy DP25.2.
A2193B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Greenbelt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A2193B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be indirect conflict with Policy DP25.2.
A2281B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore to allow the two proposed employment allocations. The NPPF indicates Green Belt boundaries should only be re-drawn and land excluded where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to the NPPF.
A2281B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NPPF and draft Policy DP25.2 state the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in Green Belt – it harms openness. If land proposed for allocation as employment land at Stanmore were the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A2284B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore to allow the two proposed employment allocations. The NPPF indicates Green Belt boundaries should only be re-drawn and land excluded where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to the NPPF.
A2284B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NPPF and draft Policy DP25.2 state the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in Green Belt – it harms openness. If land proposed for allocation as employment land at Stanmore were the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.
A2308B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Support reference to RAF Cosford being a strategic site inset within the Green Belt. However, consider that paragraph 4.225 is confusing as it states RAF Cosford is a strategic site within the Green Belt, this needs to be clarified to ensure it is clear that the site is being removed from the Green Belt.
A2321B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Policy DP25: Green Belt and Safeguarded Land 4.14 Paragraph 136 of the NPPF states that where necessary, Councils should identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching beyond the plan period. 4.15 The role of safeguarded land is not just to ensure that Green Belt boundaries are enduring, but also to provide a 'contingency' of land in sustainable locations, outside the Green Belt, which can come forward for development to meet housing needs. It assists in 'de-risking' the plan, should any of its allocations not come forward or if there are any significant delays. 4.16 Albrighton is one of the most sustainable settlements within the district and also one of only a small number which is constrained by the West Midlands Green Belt given its proximity and functional relationship with the built up area of Wolverhampton. As such unlike other more rural and less sustainable settlements, there are limited instances within which windfall sites can come forward to meet local need. 4.17 Table DP25.1 'Green Belt Release by Location and Type', identifies the mechanisms for the release of land from the Green Belt to meet the identified housing and employment needs. This table underlines a fundamental concern around the limited release of land from the Green Belt to facilitate new housing development. Apart from sites ALB017 / ALB021, which were previously safeguarded in the SAMDev (2006) (Some 14 years ago), and are now proposed to be allocated (which we contest in Section 4), there are no other proposed sites to be removed from the Green Belt, and only a small number of sites proposed for safeguarding. 4.18 While we comment on the site specific limitations of sites identified for allocation / safeguarding in section 4 of these representations, in the context of our wider comments in response to Policy SP2, we consider that a higher level of growth should be directed to Albrighton through allocations as a priority to both address a significant period of suppressed growth (commentated on within Appendix 2), and to assist in recognising the strategic importance and opportunities presented by RAF Cosford.
A2323B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25		Whilst the draft policy title makes reference to Safeguarded Land, the only text relating to safeguarded land within the policy states: "Safeguarded land, being land removed from the Green Belt for future development needs beyond the current Local Plan period, is shown on the Policies Map". There is an opportunity to make this policy more robust by including a mechanism for when the safeguarded land could come forward within the plan period. It would also be beneficial to allocate site reference numbers to each of the safeguarded sites so that the Policies Map can be cross referenced at the appropriate points within the Local Plan Review.
A2379B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Greenbelt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A2379B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be indirect conflict with Policy DP25.2.
A2380B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Greenbelt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.
A2380B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstances" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be indirect conflict with Policy DP25.2.
A2412B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	Object to Point 4 of the Policy. This does not comply with paragraph 145 (g) which does not limit redevelopment of a PDL Green Belt site to affordable housing rather than market homes. There is significant case law to substantiate this. The merits of such sites and the form of development proposed should be considered on the balance/test of openness and other policies in the plan and not limit the tenure of housing on such. Again as demonstrated in case law, 145 g does allow for up to substantial harm in the Green Belt where affordable homes are being provided in an area of affordable housing need. I'd be happy to discuss this further with the Council.
A2484B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is no necessity to alter the boundary of the Green Belt at Stanmore. The land that is proposed for employment use at Stanmore lies within the Green Belt and should not be taken out of the Green Belt. The National Planning Policy Framework indicates that Green Belt boundaries should only be re-drawn and land excluded from the Green Belt where there are exceptional circumstances that are fully evidenced and justified. No exceptional circumstances have been put forward in the Pre-submission Draft Local Plan that would justify the proposed action. The Green Belt Review that the Council commissioned does not qualify as an "exceptional circumstance" and in any event the Review undertaken did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy. Stanmore Green Belt contains Stanmore Country Park which is a valued resource for the local community. It is easily accessible and well utilised, thus improving the health and wellbeing of many local residents. It is also a rich habitat and resource for wildlife.
A2484B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The National Planning Policy Framework 2019 and Policy DP25.2 say that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt- it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be the subject of a planning application it would be regarded as "inappropriate development" as it would conflict with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt. As no "very special circumstance" have been advanced that would justify the development of the land at Stanmore, and it would represent "inappropriate development", allocation of the land at Stanmore for employment purposes would be in direct conflict with Policy DP25.2.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2485B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Disagree	There is not a necessity to alter the boundary of the GREEN BELT at Stanmore. The land that is proposed for employment use at Stanmore lies within the GREEN BELT and should not be taken out of the GREEN BELT. THE NATIONAL PLANNING POLICY FRAMEWORK indicates that GREEN BELT boundaries should only be redrawn and land excluded from the GREEN BELT where there are exceptional circumstances that are fully evidenced and warranted. No exceptional circumstances have been put forward in the PRESUBMISSION DRAFT LOCAL PLAN that would justify the proposed action. The GREEN BELT REVIEW that the council commissioned does not qualify as an 'exceptional circumstance' and in any event the REVIEW undertaken did not demonstrate or suggest that there was any necessity for change to the GREEN BELT boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the GREEN BELT, in the near vicinity. The proposal is contrary to NATIONAL PLANNING POLICY. Stanmore Country Park, which is in the GREEN BELT is of notable natural status and is a well used public resource for leisure which enhances health and the environment
A2485B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP25	Agree	The NATIONAL PLANNING POLICY FRAMEWORK 2019 and POLICY DP25.2 say that the GREEN BELT should be protected against inappropriate development. Development of Industrial Estates is 'inappropriate development' in GREEN BELT – it harms the openness of the area. If the land that is proposed for allocation as employment land at Stanmore were to be subject of a planning application it would be regarded as 'inappropriate development' as it would conflict with the aims of the GREEN BELT and no very special circumstances had been advanced. A LOCAL PLAN REVIEW should not be used to justify inappropriate development in the GREEN BELT. As no 'very special circumstances' have been advanced that would justify the development of the land at Stanmore, and it would represent inappropriate development allocation of the land at Stanmore for employment purposes would be in direct conflict with POLICY DP25.2
A0506B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Disagree	Page 128 DP26 Shropshire Hills AONB This policy is the most important in relation to Church Stretton, Little Stretton and All Stretton, where the majority of the development lies in Conservation Areas. The whole parish lies in a particularly sensitive area of the AONB, surrounded as it is, to the west and east by many heritage assets some of which are designated. Appropriate development in the AONB is necessary for the economic and social wellbeing of those who work and live there. However, it is important for the planning system to protect the qualities which people value about the area, and some forms of development which may be appropriate elsewhere should be controlled in the AONB. The Town Council has some concerns about the policy explanation in paragraphs 4.227 to 4.237. Paragraph 4.230 implies that development which causes some harm might be acceptable and paragraph 4.235 merely says development, "likely to have a significantly negative effect" will be "very carefully considered." This seems to imply that some negative effect is acceptable in the AONB. The Town Council considers that more emphasis should be given to seeking protection and enhancement of the area, rather than appearing to accept a degree of harm. This is stated in NPPF para172 where it says, "Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues." Policy DP26 has two main implications. First, it says 'minor' development will be resisted. This could be a problem for obtaining certain development such as infill housing in the town itself. It also seems to conflict with S5.1.3 where it says, new residential development will be delivered through, "...small-scale windfall development within the Church Stretton development boundary.." The Town Council asks that this position be clarified. Second, the policy does not rule out 'major' development which may be allowed in exceptional circumstances. These include the need for the development, the cost of, and scope for developing outside the designated area, or meeting the need for it in some other way and any detrimental effect on the environment, the landscape and recreation. The Snatchfield Farm, proposed site, represents a major development in the AONB and as such is subject to the tests for 'exceptional circumstances' (NPPF Para 172). These are addressed in our submission on Schedule S5.1 (i) Site allocation – Land at Snatchfields Farm.
A0609B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Agree	To protect the setting of the AONB and raise design standards.
A0961B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Agree	Para 1 & 2 To protect the setting of the AONB and raise design standards
A1152B36	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26		Agreement with the overall thrust of the policies. Disagreement with particular proposals. Agree with all measures designed to protect the Green Belt and the AONB against inappropriate development. Endorse comments made to this consultation by the AONB partnership. On the whole we welcome the increased recognition of the importance of the AONB and references to it and its Management Plan in a number of the draft policies, particularly draft policy DP26. The proof of Shropshire Council's commitment will come in future responses to planning applications, which in the past have sometimes paid scant attention to the importance of this designation. In the long term we would like to see adopted at the policy stage the recommendations, in the Glover report, that the AONB should become a statutory consultee for applications within the AONB. Disagree with para 4 of draft policy DP25, as do not think it will be appropriate for Affordable Exception Sites of more than one house to be allowed in the Green Belt or the AONB. Do not agree with the proposals for release of Green Belt land as set out in para 4.218. Do not think that a sufficient exceptional circumstances case has been made for these releases. At the Strategic Sites stage of consultation argued that there is no need to release the RAF Cosford land from the Green Belt because existing policies allow for the type of development being proposed by RAF Cosford. The new area of release proposed for the Midlands Air Ambulance Charity is significantly larger than MAAC's identified need for its proposed operation there.
A1154B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Disagree	An alternative model for planning within the AONB The current planning system does not deliver what is needed by local communities. At the previous informal consultation, the Preferred Options stage, there was very strong local opposition to the development of Snatchfield and, many other sites which had been put forward because they were in conflict with the landscape protection principles of the NPPF and DP 26 of the Local Plan for an AONB. Only 9% of respondents accepted the allocation of Snatchfield for housing and just 11% agreed with the overall housing and employment guidelines for the town, so there is little public support for the Council's plans and aspirations. Nor is the situation better in the wider, less contentious, parts of the AONB, which is classified as open countryside, where development is exceptional, but where a few affordable homes would be welcomed. The Shropshire Hills AONB Management Board has made a proposal to Shropshire Council that a separate Development Plan Document (DPD) should be drawn up for the area. This would effectively withdraw the AONB from the Local Plan and provide scope for a rational examination of housing and employment provision which would meet local needs and maintain the principles of landscape protection within the designated area. This approach has been successfully adopted in the Arnsdale and Silverdale AONB where the DPD for the area was adopted in 2019 and won an Award for Planning Excellence from the Royal Town Planning Institute. The two AONBs are very different in size and character but the precedent is sound and its adoption should produce better outcomes for local communities in the Shropshire Hills, for Shropshire and Telford & Wrekin Councils and for the landscape of the AONB.
A1630B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Disagree	Farmers are largely responsible for maintaining the special features that are valued in landscapes like the Shropshire Hills. These features have developed as a result of generations of farming activity and there have been many changes over time. Farming businesses and techniques will no doubt continue to change and therefore the challenge is to grow sustainable and profitable farming businesses whilst also safeguarding the special qualities of the landscape. Farming businesses face many challenges and are currently in a period of unprecedented uncertainty. AONB's need to take account of the long term ambitions of the people who live, work and maintain the protected landscapes. They need to address the wider economic challenges, including the socio-economic issues, to be effective. For farmers to deliver high quality produce meeting high welfare standards and to reduce environmental risk they need to be viable businesses. They need to be able to adopt new technologies or implement new approaches to animal welfare. Equally they need to respond to changes in legislation and update infrastructure to be compliant. Farm workers, or a son or daughter returning to the farm business, need to be able to access housing near the farm. We have raised a number of concerns about the content of the AONB Management Plan in relation to agriculture and have an ongoing dialogue with the AONB team. Our particular concern is the ability of farmers to invest in new technology, buildings and infrastructure that will enable them to build sustainable businesses for the future.
A1818B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Disagree	There should be a paragraph stating that the presumption in the AONB should be against development
A2407B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Agree	We note that the plan includes a policy, DP26 specifically relating to the Shropshire Hills AONB. Natural England supports the policy and considers it should protect the AONB if the policy is implemented alongside the AONB management plan. The National Planning Policy Framework (NPPF) provides the highest level of planning protection for protected landscapes (National Parks, the Broads and Areas of Outstanding Natural Beauty). We advise you to take into account the relevant AONB Management Plan for the area. For Areas of Outstanding Natural Beauty, you should seek the views of the AONB Partnership. Development proposals brought forward through the plan should avoid significant impacts on protected landscapes, including those outside the plan's area and early consideration should be given to the major development tests set out in paragraph 172 of the National Planning Policy Framework (NPPF). The NPPF does not refer to the settings of protected landscapes but NPPG paragraph 42 states that land within the setting can often make an important contribution to natural beauty and poorly located or designed development can do significant harm, especially where long views from or to the protected landscape are identified as important or where the landscape character is complementary. Para 42 makes clear that development within settings should be handled sensitively. All public bodies have a "duty of regard" to National Park/AONB purposes in exercising their functions. The duty applies to planning advice provided by Natural England and to LPA planning decisions. Further guidance on statutory purposes of protected landscapes and the duty of regard is set out in the paragraph 39 of the NPPG. Note: Response includes excerpts from NPPF on AONBs, notably paragraph 172, footnote 55, footnote 6 to paragraph 11, paragraphs 170 and 171. It also includes para 41 of the NPPG: How should development within National Parks, the Broads and Areas of Outstanding Natural Beauty be approached? and draws attention to paragraphs 36-42.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2475B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP26	Disagree	<p>This is the first time in planning policy under Shropshire Council there has been a specific and distinct policy for the Shropshire Hills AONB, and this is welcomed. We feel however there are areas where this policy can be improved. Para 1. Development should "contribute... towards the policies and actions set out in the AONB Management Plan". The positive framing of this section is understood, but the aspiration that developments governed by the planning system 'contribute to' the actions as they are set out in the Management Plan seems unrealistic. Similarly, developments should comply with the Management Plan policies, but 'contributing to' the policies seems the wrong phrasing. The important thing is that development contributes to conserving natural beauty. It may on occasions enhance natural beauty. But in reality how much development in the rural context of the AONB actually enables better management of wildlife sites, heritage assets or the wider countryside and how would it enable this? This part of the policy could be used to justify harmful developments on the basis that profit generated may be used to invest in this sort of conservation activity. The sections on design and enhancing sense of place and character are valuable, but this section about better management adds little and should probably be removed. Seeking betterment or improvement of the AONB from development is a laudable aim, but minimising harm should come first. Intrusive developments are sometimes claimed to 'improve' the landscape through add-on bits of tree planting, etc, when the actual built development is harmful to landscape character. In the AONB statutory purpose 'conserve' comes first, 'enhance' second. Adapted text from part 1 should be moved lower down the policy and the first section should be used to set out overall policy for protection of the AONB applicable to all development. This should be consistent with the wording of AONB Management Plan Policy P1 Protection of the AONB. This should include the wording 'great weight' being given to the purposes of designation in planning decisions' – that is all decisions. References to the Management Plan should not just be about 'contributing to' and about special qualities. Reference should be made to 'having regard to guidance within the AONB Management Plan' (those narrative parts of the Plan which are not policy or actions).</p> <p>Suggested wording All development in the AONB should be sustainable, consistent with the primary purpose of the designation to conserve and enhance natural beauty, and support the Special Qualities of the AONB as set out in the AONB Management Plan. 'Natural beauty' encompasses the natural and human elements that make the AONB distinctive – geology and landform, climate and soils, wildlife and ecology, the history of human settlement and land use, archaeology and buildings, cultural associations and people. In line with national policy, great weight will be given in planning decisions to the purpose of AONB designation, and account taken of the policies and guidance within the AONB Management Plan as a material consideration.</p> <p>Para 2 – The wording is ambiguous – does the 'significant adverse effect' bar apply just to development proposals outside the AONB or also to minor developments within it? This ambiguity can best be resolved by separating out consideration of development outside the AONB into a new clause (probably moved down to before the current para 4). This should make reference to the 'setting' of the AONB, the established terminology in relation to development outside an AONB, as introduced within the most recent Management Plan, and align with Management Plan Policy P1 viii). 'Significant adverse' is the highest category of impact and it is quite easy for assessments to judge impact to be less than this. Applying this high bar to minor developments does not provide the AONB with adequate protection. The problem in practice for the AONB from minor developments is small scale cumulative change through lack of quality of development, and this will not be addressed by a policy which only restricts developments with 'significant adverse' effects. The policy needs to also cover developments with lesser degrees of impact – these may not necessarily be refused but they should be adapted to minimise impact. Location, form and massing should be considered within 'design' as well as architectural aspects of building design and materials. Specifically mentioning 'minor development' may not be necessary (major development being the exception to which extra provisions apply), and the remainder of this section could be rolled into an improved section 1 covering protection of the AONB with regard to all development.</p> <p>Para 3 This policy must be seen in the context of contentious casework in recent years – large scale housing proposals, large scale agricultural developments, and the history that since the 2012 NPPF, the vast majority of major developments within the AONB have been recommended by the Council for approval. This cannot be seen to be 'exceptional circumstances' and has been flagged in published reviews by national bodies as a poor record of protection of the AONB by Shropshire Council through planning control. This new policy must drive a new approach to major development in the AONB by the Council. The need for better protection from major development is a key reason the AONB Partnership has expressed interest in following new national best practice for a bespoke AONB planning policy document (such as a DPD). If the Local Plan is to serve instead of an AONB specific policy document, it must address this need. The final sentence of section 3 "Permission will be granted in exceptional circumstances." does not reflect the strength of the NPPF policy, and the NPPF wording should be quoted directly "Planning permission should be refused for major development other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest." Other policies in the Plan will be quotable in support of certain types of development and will be used against this policy – so it needs to be clear, as with NPPF, that the AONB policy is a geographically specific one which in that limited area is an exception to policies supporting certain kinds of development. The definition of major development in Annex 2 of NPPF is excepted by footnote 70 specifically with regard to paras 173 and 173 of the Framework – para 172 being the AONB policy. This definition does not therefore apply universally for development within AONBs, though it may be used as a guide. The policy needs to make provision for developments falling out with this definition to be classed as 'major', which could be smaller developments than those in the NPPF definition. The AONB Management Plan on p33 sets out some criteria to guide judgements of whether a development affecting the AONB is major, and these should be referenced in the policy.</p> <p>Suggested additional text: Whether a proposed development constitutes major development will be a matter for the relevant decision taker, taking into account the individual characteristics and circumstances of the proposal and the local context. In determining whether a proposed development constitutes major development the Councils will consider whether by reason of its location, scale or massing, form, character or nature, the proposal has the potential to have a significant adverse impact on the natural beauty of the AONB. Criteria set out in the AONB Management Plan will be used as a guide. The nature of the AONB landscape means that even some smaller-scale proposals may be considered to be major development depending on the local context.</p> <p>Comments on explanatory notes: 4.227 Suggest 'and are deemed in government policy to have equal landscape quality and protection to National Parks'. The statutory primary purpose is to 'conserve and enhance natural beauty'. 4.229 The AONB Partnership prepares the Management Plan but both local authorities formally approve it. 4.231 Section 87 – this duty applies to AONB Conservation Boards only, not to AONB Partnerships, and should be omitted here. Similarly in the last lines of this section – the secondary functions are not statutory for AONBs without a Conservation Board and so this part of the Act is not applicable to the Shropshire Hills AONB. 4.235 Mention 'setting' of the AONB as above. Views into the area are also important. The wording "developments... likely to have a significantly negative effect" will be "very carefully considered" is not really adequate, or consistent with the policy para 2 where it says these will be 'resisted'.</p>
A0010B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Object to the absence of recognition for the emergency services within the list of infrastructure types specified in paragraph 4.23:</p> <p>Development in the Local Plan will lead to greater demand on emergency services. This demand should be planned for in advance and be supported by developer contributions. Greater demand will be in the form of more 999 and 101 calls, increases in numbers of incidents that need a response and day to day community policing. The largest schemes may need a police post whilst more development generally may need police station expansion or additional equipment. Suggest para 4.239 is amended to "...They include a focus on local needs such as highways, flood defences, educational facilities, medical facilities, emergency services, sporting and recreational facilities and open spaces...". Such amendment would be consistent with NPPF paras 8, 26, 32 and 92 and para 20 in particular. Paras 16, 26, 28, 32 and 38 envisage this through partnership working through all parties concerned with new development. Para 95 states up to date information should be obtained from the police. WMP thus ask Shropshire Council to engage in constructive discussions as to what emergency services infrastructure is required to support new development across the County</p>
A0238B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Document Reference BT4: Whilst policy covers the provision and funding of infrastructure covered policy fails to address cases where significant infrastructure investments are required that cannot be funded from the development e.g. funding for major highways improvements, from sources such as the Highways Agency. Local Plan should be self-consistent and identify the infrastructure and investment that will be required to implement proposals e.g. Adequate plans for infrastructure needed for Bridgnorth</p>
A0240B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Don't know / no opinion	<p>Supports the Council's proposed approach to Policy DP27, and particularly the requirement that 'new development only take place where there is sufficient existing infrastructure capacity available. In this respect, L&Q Estates considers that its land interests at Shifnal are well situated to accommodate residential development, as new dwellings would be located close to existing green spaces and the proposed site layout will promote walking and cycling. Additionally, the proposed development is well located to employment opportunities, community facilities and transport connections, and should therefore be considered favourably in the context of Policy DP27. A Vision Document supporting these representations is enclosed at Appendix 1, and further outlines how the proposed development in well placed to align with the objectives of Policy DP27</p>
A0306B053	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>We would like to see inclusion of policy preference for sustainable infrastructure, e.g. active/public transport over road, renewable energy over fossil fuels.</p>
A0306B054	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Para 4.241 Local strategic highway improvements should be aimed at improving provision of public transport, walking and cycling.</p>
A0430B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Agree	<p>Support DP27(1) which effectively only allows development to come forward where existing capacity allows or where any shortfall can satisfactorily be addressed through reasonable contributions. Developers will work with the Council on a timetable for infrastructure delivery particularly for safeguarded housing land in Shifnal and would be willing to consider how this could be embedded into an allocation policy should the Council decide there is justification and merit to allocate the land released from the Green Belt rather than safeguarding the land for the future.</p>
A0450B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Policy DP27 needs to require approval of any off-site infrastructure improvements at the same time as approving a proposed development, in addition to securing the funding for the infrastructure improvements. This will ensure that proposed developments do not create further infrastructure constraints.</p>
A0573B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Support policy objective to locate development where there is sufficient infrastructure capacity. Shifnal Place Plan advocates development to the east of town with access to A41 / M54 Junc 3 where sites SHF032, SHF018b, SHF018c, SHF018d are located. These sites are in a single ownership unlike the safeguarded land to the south-west offering simpler provision of infrastructure investments. Preferred sites to south-west now have limited capacity to by-pass town following removal of site P17a. Sites to east direct traffic away from town centre, have good access to schools and rail station offering realistic opportunities for sustainable travel options. SHF018c could also offer health/medical facility and day nursery.</p>
A0972B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>What plans are in place to set out contributions from the Tasley Garden Village development</p>
A0981B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Agree	<p>Sport England supports the wording of the policy to require new developments to meet their needs for infrastructure, and to fund any necessary improvements where there is a lack of capacity to accommodate the development proposed. Sport England notes the contents of para 4.239 which sets out the range of infrastructure needs that include sport and recreation facilities. This term is taken to mean both playing pitches and built indoor and outdoor sports facilities, though it would be beneficial to expand upon the explanation to make this completely clear. Sport England supports the approach taken to use both CIL and section 106 agreements dependent on the circumstances as set out in parts 2-5 of the policy and notes that the Shropshire Place Plans and Shropshire Infrastructure Plan will set out the identified infrastructure needs. Sport England considers that it would be appropriate to refer to the evidence base in the reasoned explanation which for sport includes the Playing Pitch and Outdoor Sports Strategy (PPOSS) and the Built Sports Facilities Strategy (BFS). Sport England notes the contents of para 4.241 that refers to the prioritisation of the use of CIL funds. Given the findings of the PPOSS and the BFS regarding the need for sports facilities investment to meet the needs of planned housing growth, and bearing in mind the overall vision for the Plan to develop healthy and safe communities, particularly at this time where the impacts of COVID-19 have elevated the importance of mental and physical health and well-being, Sport England considers that the investment in sport and recreation facilities should also be referenced as critical provision. This would then tie in with policy DP30 relating to Health and Well-Being.</p>
A0984B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Disagree	<p>Support Part 1 of the policy which allows development to come forward where there is existing infrastructure capacity or any shortfall can satisfactorily be addressed.</p>
A1152B37	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27	Agree	<p>Agreement is as far as it goes. Agree new development should only occur where there is sufficient existing infrastructure capacity available. Provisions as to CIL and Section 106 contributions may be overtaken by proposals in the Government paper 'Changes to the current planning process' (which was released as this consultation began), to replace them with a single new Infrastructure Levy. It is vital that measures to promote good infrastructure and design are brought into the Local Plan in a way that gives them real teeth and the prospect of implementation. Efforts need to be targeted at infrastructure which will mitigate against Climate Change. Better provision is also needed for social facilities, and for rural broadband and public transport. Argue that the Local Plan should incorporate master plans. The separate Place Plans are largely concerned with the provision of infrastructure. Regrettably, a lot of the funding for this infrastructure is to come from CIL. The trouble with CIL is that (1) it is made available only after housing developments that require infrastructure have been constructed, and (2) it takes years to decide how to spend it. Infrastructure provision therefore lags behind development, rather than being in place to facilitate it. That is one of the reasons why a masterplan would be a good idea. Para 3b of draft policy DP29 provides for protection, extension or improvement of footways, cycleways, public rights of way and bridleways. That is welcome, but it is much more important to have a fully integrated Transport Strategy that discourages transport using fossil fuels and which positively encourages, and more importantly facilitates, active travel like walking and cycling. Presently, there is no such integrated policy</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1192B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP27		Fully support need for development to deliver/fund any critical or statutory infrastructure required as a result of a proposed development. However, CIL and Section 106 contributions need to be at a level that enables development to take place and does not challenge viability. In addition, need to ensure there is no double counting e.g. infrastructure delivered by the developer, but also counted for through CIL. Note part 1 of draft Policy DP27 includes the words "other means" for funding infrastructure. Clive Barracks will need to provide infrastructure for the scale of development proposed, this should only be paid for once, not multiple times through a developer building the infrastructure, via CIL payments or S106 obligations. Similarly, part 2 of draft Policy DP27 notes the hierarchy of CIL expenditure. If CIL is to be used to provide the infrastructure for Clive Barracks, and avoid double payment for this, then this is acceptable. Part 4 of draft Policy DP27 advises Section 106 contributions will be used to 'top up' additional infrastructure spend. Whilst acceptable in principle, reiterate that strategic sites should not pay for infrastructure through multiple methods or pay for infrastructure not necessitated by their development. Draw attention to the Local Plan Delivery and Viability Study and the initial brief which states (para 4.48): "Viability should not compromise the quality of development. But it is important to ensure that the total cumulative cost of relevant policies, local and national standards, design requirements, any site-specific considerations and development contributions are not of a scale that will make development unviable." Consider the blanket approach within the draft Local Plan, with no mention of a CIL review or real flexibility on CIL/Section 106 and other planning obligations is not appropriate for Strategic Sites, which require greater flexibility. Consider that the draft Local Plan should commit to a CIL review, to ensure a more appropriate level of contribution is sought across the Authority, and that Strategic Sites are excluded from CIL payments in the Local Plan (in line with other Authorities). This is also recommended within the Local Plan Delivery and Viability Study. Whilst noting the Council's "preference" to continue to receive CIL at the current rates (as stated within the Local Plan Delivery and Viability Study), it is already at a level which challenges viability of many sites in the area, as their own viability consultant acknowledges. In light of the above, consider draft Policy DP27 should be updated to reflect an immediate commitment to undertake a detailed review of CIL. In addition, the wording should provide for S106 agreements alone for the Strategic Sites.
A0026B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	The Parish Council strongly supports this policy for the following reasons.The Parish Council is based in a rural area and there have been a few accidents in the agricultural community where there have been delays getting emergency treatment due to the lack of a mobile phone signal. This needs to be drastically improved.There are a number local people who work from home and the need for decent and reliable broadband provisions and mobile signals is vital to their livelihood. Again this needs to be improved for the outlying areas where there is not always a good reception or signal.
A0101B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	Paras 3a and 3b goes beyond the requirements of Approved Document R of the Building Regulations, and requires the 'development' to deliver 'Gigabit-capable broadband infrastructure' when the physical network in most areas is not able to deliver that speed and is dependent on third parties to upgrade it in order to do so. The policy should be re-worded such that broadband provision must be provided on developments in accordance with the Building Regulations at the time or the maximum download speed available from the local supporting network.
A0238B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	Document Reference BTC5 : Support the policy and the aim to deliver gigabit-capable broadband infrastructure which is a necessary requirement for growth around Bridgnorth.
A0240B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	3.22 Policy DP28(3) requires that residential development will be expected to deliver 'gigabitcapablebroadband infrastructure using 'fibre to the premises' technology wherever practical' or 'alternative gigabit-capable technologies where justified for reasons including viability,distance from the network or other constraints preventing "fibre to the premises".3.23 DP28(4) requires residential development to deliver 'passive ducting wherever possible, tofacilitate the delivery of competitive fibre broadband services'.3.24 L&Q Estates consider the Council should not impose new electronic communicationsrequirements beyond the provision of infrastructure as set out in the statutory BuildingRegulations.3.25 In the Budget 202032, the Government confirmed future legislation to ensure that new buildhomes are built with gigabit-capable broadband33.3.26 The Department for Digital, Culture, Media and Sport subsequently outlined its intentions onthe practical workings of this legislation through 'Press Release: New-build homes to come with gigabit-speed ready'34.3.27 'The government will amend building regulations to guarantee that all new homes have theright infrastructure to support gigabit broadband and housing developers must work withnetwork operators to install internet speeds of over 1,000 megabits per second (Mbps) in newbuildhomes, up to a cost cap of £2,000 per dwelling.'3.28 The Press Release confirmed the requirement will apply to all to new builds development, andthat the new measures will place responsibilities on both developers and network operators. Italso confirms that the legislation is to be laid as soon as parliamentary time allows and will be laid as secondary legislation so that it can be introduced quicker.3.29 As a result, the proposed requirements of Policy DP28 are unnecessary and repetitive ofBuilding Regulations and should therefore be deleted.
A0306B055	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	We welcome this to help us move away from less sustainable practices (reducing need to travel, etc.).
A1106B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	Discusses broadband infrastructure and states that developments should "ensure access for all to high speed broadband and on-line services". This may be interpreted as meaning residential developers would be expected to provide broadband and mobile communication infrastructure. Developers should not be expected to ensure access to on-line services, as this is beyond their remit, and future residents are likely to want to choose their broadband provider.
A1152B38	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	Agreement is as far as it goes. Agree new development should only occur where there is sufficient existing infrastructure capacity available. Provisions as to CIL and Section 106 contributions may be overtaken by proposals in the Government paper 'Changes to the current planning process' (which was released as this consultation began), to replace them with a single new Infrastructure Levy. It is vital that measures to promote good infrastructure and design are brought into the Local Plan in a way that gives them real teeth and the prospect of implementation. Efforts need to be targeted at infrastructure which will mitigate against Climate Change. Better provision is also needed for social facilities, and for rural broadband and public transport. Argue that the Local Plan should incorporate master plans. The separate Place Plans are largely concerned with the provision of infrastructure. Regrettably, a lot of the funding for this infrastructure is to come from CIL. The trouble with CIL is that (1) it is made available only after housing developments that require infrastructure have been constructed, and (2) it takes years to decide how to spend it. Infrastructure provision therefore lags behind development, rather than being in place to facilitate it. That is one of the reasons why a masterplan would be a good idea. Para 3b of draft policy DP29 provides for protection, extension or improvement of footways, cycleways, public rights of way and bridleways. That is welcome, but it is much more important to have a fully integrated Transport Strategy that discourages transport using fossil fuels and which positively encourages, and more importantly facilitates, active travel like walking and cycling. Presently, there is no such integrated policy
A1630B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Agree	We welcome the policy support for rural broadband and mobile infrastrucure. It is vital for all types of rural businesses. Mobile phone coverage has reduced in quality in some areas of Shropshire. It remains important for farming businesses and for the health and safety of all people living and working in rural areas.
A2163B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	Part 3 of the policy requires residential developments to deliver gigabit-capable broadband infrastructure using 'fibre to the premises' technology wherever practical. The capacity to deliver gigabit-capable broadband is determinate upon broadband providers and cannot be guaranteed by developers. Approved Document R: Physic Infrastructure for High-Speed Electronic Communications Networks is a consideration for Building Regulations and requires in-building infrastructure for copper or fibre-optic cables or wireless devices capable of delivering broadband speeds greater than 30 Mbps to be installed. Broadband infrastructure is already covered by Building Regulations and the requirement of this policy that is well above 30 Mbps, is not justified. This policy should be amended to require broadband installation without being more specific about the type of broadband required
A2177B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	Bullet Point 3 states residential developments will be expected to deliver gigabit-capable broadband infrastructure using "fibre to the premises" technology wherever practical (provision in residential developments of less than 10 dwellings may be subject to viability constraints) or alternative gigabit-capable technologies where justified for reasons including viability, distance from the network or other constraints preventing "fibre to the premises". Bullet Point 4 states residential developments will also deliver passive ducting wherever possible, to facilitate the delivery of competitive fibre broadband services. The Council should not impose new electronic communications requirements beyond the provision of infrastructure as set out in statutory Building Regulations. In the Budget (11th March 2020), Government confirmed future legislation to ensure that new build homes are built with gigabit-capable broadband. Government will amend Part R "Physical Infrastructure for High Speed Electronic Communications Networks" of the Building Regulations 2010 to place obligations on housing developers to work with network operators to install gigabit broadband, where this can be done within a commercial cost cap. By taking these steps, the Government intends to overcome any existing market failure. The Department for Culture, Media and Sport (DCMS) has outlined its intentions on the practical workings of this policy. The policy will apply to all to new builds. Any type of technology may be used, which is able to provide speeds of over 1000 Mbps. All new build developments will be equipped with the physical infrastructure to support gigabit-capable connections from more than one network operator. The new measures will require: -Developers to ensure new homes have gigabit broadband. This includes ensuring that the physical infrastructure necessary for gigabit-capable connections is provided on site for all new build developments and homes are connected by an operator to a gigabit-capable connection. Unless the cost to the developer of providing connectivity exceeds £2,000, or the operator declines to provide a connection. Developers must seek a second quote from network operators, where the first quote suggests gigabit-capable broadband cannot be installed within the cost cap. -If gigabit broadband exceeds the cost cap, developers must provide connectivity to other technologies, which can provide at least superfast connection within the same cost cap, unless the operator declines to provide a connection and a commitment to contribute to the costs of connection by network operators. Virgin Media has committed to contributing at least £500, rising in the case of some larger sites to £1,000. Openreach has committed to a combined Openreach and Developer Contribution of £3,400, with a maximum developer contribution of £2,000. Government intends to lay the legislation to amend the Building Regulations as soon as Parliamentary time allows. Supporting statutory guidance will also be published as soon as possible. Consider the Council's approach in Policy DP28 is unnecessary and repetitive of Building Regulations. Before the pre-submission LPR consultation, Bullet Points 3 and 4 should be deleted from Policy DP28
A2308B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	Would like to see additional wording within the policy to protect defence interests: "Where new mobile communications infrastructure is proposed within a designated safeguarding zone that preserves operational capability or the operation of technical assets it should be referred to MOD Safeguarding to ensure that any impacts are mitigated or designed out."
A2412B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP28	Disagree	We welcome the aspirations of the Council to improve Broadband capacity. However, we object to point 3, as it is hard for developers to deliver such requirements as it has to be delivered by infrastructure providers who developers have little influence/control over.
A0131B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Strongly disagree with the suggestion that "The sub-regional role of Shrewsbury is to be enhanced by the delivery of the North West Relief Road to extend the A53 around the north and west of Shrewsbury". Supporting evidence against this proposed is provided within the Consultation Document itself, for instance: - Paragraph 4.254 within the Explanation of Policy DP29 states "Key objectives are to reduce our dependency on private motor vehicles and fossil fuels by using 'active' travel opportunities by walking, 'wheeling' (using all forms of mobility devices or aids for the very young and the very old) or cycling wherever possible before using public transport or 'shared' vehicles and before using private vehicles". - Figure DP29.1: Hierarchy of Sustainable Transport within the Explanation of Policy DP29 lists private cars at the bottom of the list. - Paragraph 4.255 within the Explanation of Policy DP29 states "This process of managing change starts with the decision whether we need to travel at all. The most sustainable travel option is to access work, goods, services, leisure and social interaction remotely using electronic communication media or to achieve key elements of these activities in this way, as our first choice, irrespective of age or technological ability. The response to the Coronavirus restrictions shows how we might respond positively to the effects of global challenges on our lives and realise tangible benefits for ourselves and our local, national and global communities". - Paragraph 4.252 within the Explanation of Policy DP29 states "Shropshire will continue to promote and support improvements to the communications and transport infrastructure serving the County. This is central to the delivery of sustainable economic growth and the creation of sustainable patterns of development in the settlements, 'strategic corridors' and 'strategic sites' of the County.This will still require everyone to consider how they contribute to the process of reversing the adverse changes to our climate, global temperature and to our seas and oceans". Page 8 of the Sustainability Appraisal and Site Assessment Environmental Report should be considered as should Sustainability Objective: SO6 Reduce the need of people to travel by car. The council needs to be doing everything it can to promote walking and cycling, not building another expensive, environmentally damaging road.
A0159B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	There is no content around "widen travel and transport choices". Only vague statements not backed by tangibility of any kind. Does the demolition without replacement of Shrewsbury bus station as announced by the leader of the Council contribute to widening transport choices? The least important thing in the Transport Hierarchy is the private car. Shropshire Council has demonstrably reversed this hierarchy in every way possible by spending approximately £17 million on the NWRR and trivial amounts of walking, cycling and buses. It has cut bus funds and now wishes to close the bus station.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0238B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Document Reference BTC6: Para 4.258 Agree with the objectives set out in point 3, which are consistent with the existing Local Plan. However little/no investment in footways and cycleways in the Bridgnorth area. A funded action plan contributing to sustainability urgently needed to progress this before the Local Plan is finally approved.
A0266B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	As we know at least a third of the counties CO2 emissions come from transport and somewhere between a third and a half of car journeys are sufficiently short to have the potential to be replaced by walking or cycling journeys. The government has released detailed strategies for this including 'Gear Change'. The transition to active travel has seen a significant boost during the pandemic, with widespread agreement that this needs to be captured and built upon. The pre-submission report does not rise to this challenge. The plan refers to a Local Transport Plan, however there is no current plan in place and the development of a new plan is in the early stages. Similarly, there is no Local Cycle and Walking Infrastructure Plan as recommended by government. Consequently, planners will have no recourse to robust local policies on transport when dealing with development proposals. There is significant risk that, without strategies that include detailed strategic active travel networks, opportunities will be lost as they have been in recent years (see the Spring Gardens development where land that could have provided an ideal off-road cycle route was lost to the development). Such losses need to be prevented in policy. Similarly routes within developments are little use unless joined up to networks. Active travel needs further robust support and encouragement in design features. An example is the integration of secure accessible bicycle storage as now adopted in the Oxford local plan. There is no reference to this here. Alongside active travel both the climate emergency and equity in accessibility require appropriate public transport to be in place for new development. This should be in place as soon as sites are begun to ensure workers travel plans during construction can promote active and public transport. SP3 states the transition to a zero-carbon economy will be supported by... 'e. Encouraging new development to link to and where possible integrate public transport'. 'Encouraging' and 'where possible' fall far short of what is needed to ensure new developments do not increase car dependency, especially when coupled with the explanation in DP29 that 'Developer contributions to improvements in our transport networks and infrastructure will be encouraged wherever possible'. By contrast Oxford Local Plan states (policy M1) 'development that will add to demands on public transport should contribute towards improvements to bus network infrastructure including pedestrian and cycle routes to bus stops, shelters, passenger seating, waiting areas, signage, timetable information and infrastructure relating to zero emissions.'
A0295B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Policy DP29 (para 4.261, page 138) lists proposed enhancements to the Strategic and Local Highway Networks, none are around Bridgnorth. This would imply that there are no plans to improve connections between Bridgnorth and the A5/M54 strategic corridor, or to Wolverhampton, Stourbridge or Kidderminster. Welcome investment on footpaths and cycleways (DP29, point 3, page 136) in and around Bridgnorth. However there have been past commitments that have not been achieved.
A0306B056	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	(2 & 3 d, e & g): We agree we should respond positively to the climate problems, but we feel the focus on unsustainable transport should be reconsidered. For example, DP29, 3 d, e & g still promotes road and other unsuitable transport links, i.e. HS2 and NWRR.
A0306B057	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Para 4.261 The NWRR would be contrary to a number of policies in the plan including, SP3, DP1, DP5, DP15, DP16, DP17, DP18, DP20, DP23, DP24. The inclusion and support of the NWRR in the draft local plan compromises any attempt at sustainability or of addressing the climate and ecological emergency.
A0311B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete
A0323B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A0341B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A0356B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A0413B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Don't know / no opinion	These two issues should have separate improved policies.
A0430B28	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	Support DP29 to promote and support improvements to the communications and transport infrastructure serving the County as it is central to the delivery of sustainable economic growth and the creation of the sustainable pattern of development in Policy SP2.
A0447B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The context of the profound emergency that the world is and will increasingly experience as a result of pollution of land, sea and air and destruction of the natural world the plan is in general shockingly inadequate, not to say feeble in general tone. Can see nothing locally that looks like integrated transport. Integration of transport is the 'right thing to do' and would be cheaper than building roads and mass car parks the 'wrong thing to do' in the present crisis. Agree with draft policy DP29 with regard to the need for "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure", required for a sustainable and active transport system. All 18 Place Plans references some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A0450B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Policy DP29 needs to determine whether the requirements of paras 4.254 and 4.261 should be enforced differently: requirement in para 4.254 for walking and cycling should be rigorously enforced in housing developments especially larger schemes to reduce dependency on private vehicles delivery of NWRR in para 4.261 should not be promoted in order to achieve the broader objective of delivering a net zero carbon economy
A0484B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Paragraph 4.253 Policy DP29 Communities and Transport Site MUW012VAR The proposed development site is too far from the town centre for easy access without a car for most residents and many will therefore drive to the local shops (as is already the case from Hunter's Gate and Forester Avenue) or further afield, adding to the congestion of the town's streets. Even now, locals are parking on Barrow Street and St Mary's Road when visiting the town centre which makes access for public and community buses difficult. The large number of additional motor vehicles passing through the town to places of work, recreation and shops will cause greater congestion through the town particularly at the junction around the Gaskell Arms public house. This junction would require a major upgrade and there is limited space to achieve this.
A0486B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	If the aim of the Policy is to encourage a switch from car travel to public transport, there will be a need for an expanded bus station, not its elimination. We support the Policy, but doubt the Council's intention to carry it out. We would urge the Council to incorporate a specific Policy to support and improve Shrewsbury's bus station, either as part of this Policy or within the Place Plan for Shrewsbury. As drafted, the Policy is inadequate to ensure that integrated bus and rail services are maintained and developed at the heart of the County's public transport network.
A0501B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. Every single one of the eighteen place plans include references to the need for some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates to make it happen. There are no statements of urgency, priority or commitment to make active travel an inclusive part of Shropshire transport planning. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A0501B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. Lower car speed makes walking and cycling safer and therefore facilitates increasing the amount of active travel throughout the county. Making people feel safe to walk in high streets brings economic benefits; the improved footfall when streets are closed to traffic and shoppers are safe to browse and buy is evident in many towns. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete.
A0501B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim - and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated. "I disagree with this policy because it is incomplete.
A0573B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Support DP29 to improve communications and transport networks and promote access to sustainable transport modes. Support DP29 to manage environmental impacts of travel on climate change, air quality and public health. Land east of Shifnal at SHF032, SHF018b, SHF018c and SHF018d all appraised in relation to these objectives and will improve network connections in the town including National Cycle Route 81. Travel strategy for sites will ensure long term delivery and promotion of sustainable travel initiatives prepared in accordance with DP29 and NPPF para 103.
A0642B43	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	There is no content at all in the Local Plan around "widen travel and transport choices". This is an astonishing omission and vague aspirational statements not backed by tangibility of any kind are worthless. Does the demolition without replacement of Shrewsbury bus station as announced by the leader of the Council contribute to widening transport choices? 5: the Business Case for the NWRR needs to be substantially reworked compared to the Outline Business Case to take into account falling rather than growing levels of traffic.
A0642B44	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Para 4.253 Note that the strategic developments are not located on existing rail infrastructure and so this implies additional road building which is not consistent with the need to address the Climate Emergency
A0642B45	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Para 4.254 The hierarchy is a prioritisation tool setting out important principles that will inform overall public policy including the policies of Shropshire Council. The hierarchy is very clear about the most important things (the top 3 lines) and the least important thing, the private car. Shropshire Council has demonstrably reversed this hierarchy in every way possible by proposing to spend approximately £17 million on the NWRR and trivial amounts of walking, cycling and buses. It has cut bus funds and now wishes to close the bus station. It is astonishing that the Council quotes the hierarchy when important decisions (20mph and bus station) have ignored the hierarchy.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0642B49	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	the business case for the NWRR is built around forecasts of increasing traffic whereas the Climate Emergency and Net Zero CO2 target require national and local government to adopt policies that will see traffic levels drop steadily over coming years. The business case for the NWRR therefore needs to be completely re assessed in the light of this falling demand. We do not see how the cost of the road can be justified against a poorly stated and quantified case that it will enhance the sub regional role of Shrewsbury. Adoption of the NWRR in the plan is contrary to the national objectives of net zero carbon by 2050 i.e. to prioritise "development opportunities" above reducing carbon emissions. It is not acceptable that this reference to the largest capital expenditure on transport ever undertaken in Shropshire is not explicitly linked to its impacts on carbon emissions. The NWRR has not yet got planning permission and may be subject to a public inquiry. A Local Plan written in the months following the declaration of a climate emergency must not remain silent on the carbon impacts of NWRR. If it is the view of independent experts that the NWRR will reduce carbon then this must be stated in the Local Plan, with evidence, so we can evaluate the robustness and fitness for purpose of the Local Plan. If it is the view of independent experts that the NWRR will substantially increase carbon emission in 2 ways (1) embodied carbon from the whole life cycle of raw materials, earth disturbance, construction etc and (2) in use carbon associated with the very well documented evidence that "new roads generate new traffic" then this must be stated and fed into a realistic assessment of whether or not Shropshire Council can contribute to the achievement in net zero carbon by any deadline. New roads like the NWRR generate new traffic (additional to current totals) and this increases transport's carbon emissions. This is well understood and summarised in a UK government report published in 1994 (link provided in rep).
A0647B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Agree with recognition in draft Policy DP29 a sustainable and active transport system requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure". All 18 of the Place Plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the draft Local Plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The draft Local Plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. Another item in all 18 Place Plans is the need for speed limits and/or traffic calming measures. As well as safety, reducing traffic speeds, reduce carbon emissions and increase walking and cycling. This draft Local Plan makes no reference to strategies to reduce speed limits or provide more traffic calming measures, despite the obvious requirement throughout the County. This indicates a real lack of joined up thinking on active and sustainable transport systems. The need for electric vehicle charging points is acknowledged in a number of places. Hope the Council understands that electric cars are not the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this draft Local Plan. Recent examples in the UK include Surrey and Maidenhead Councils. Government is making it easier and more convenient to take the bus through a new £20 million fund to encourage development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for Local Authorities to help improve current bus services or restore those that have been lost. Every Local Authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." Disagree with this draft policy because it is incomplete.
A0648B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Agree with recognition in draft Policy DP29 a sustainable and active transport system requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure". All 18 of the Place Plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the draft Local Plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The draft Local Plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. Another item in all 18 Place Plans is the need for speed limits and/or traffic calming measures. As well as safety, reducing traffic speeds, reduce carbon emissions and increase walking and cycling. This draft Local Plan makes no reference to strategies to reduce speed limits or provide more traffic calming measures, despite the obvious requirement throughout the County. This indicates a real lack of joined up thinking on active and sustainable transport systems. The need for electric vehicle charging points is acknowledged in a number of places. Hope the Council understands that electric cars are not the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this draft Local Plan. Recent examples in the UK include Surrey and Maidenhead Councils. Government is making it easier and more convenient to take the bus through a new £20 million fund to encourage development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for Local Authorities to help improve current bus services or restore those that have been lost. Every Local Authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." Disagree with this draft policy because it is incomplete.
A0661B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	DP29 states that Shropshire will continue be an attractive place to live and work by improving its communications and transport networks and supporting the infrastructure and services to widen travel and transport choices. The planned developments in Ironbridge, Bridgnorth, Cressage, Cross Houses, Shrewsbury and Much Wenlock will have a big impact on the town of Much Wenlock especially the traffic congestion and pedestrian crossing for school children at the Gaskell Corner The provision of a roundabout on the A458 described in the preferred option site MUW012VAR will not ease the flow of traffic or ease the congestion at the Gaskell Corner. This roundabout will increase the level of noise and pollution close to the Primary School and it is ideally positioned for further developments along this stretch of the A458.
A0669B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Objects to the site on grounds that it is too far from the main centre of Much Wenlock and so would encourage people to use their cars to access these services - in contradiction of policy DP29.
A0670B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29		A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A0670B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29		An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete
A0679B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	As DP29 states, improving transport routes for pedestrian, bicycles and other active forms of transport are key in encouraging a healthier, safer and greener population. The plan includes great ideas on this front, but no concrete plan to achieve these goals. This is what is lacking
A0696B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Don't know / no opinion	Transportation is a significant issue in Shropshire because of its scale and low density It is vital for job mobility and healthcare that provision of green public transport must be much enhanced. Reliance on CIL and developer input is not sufficient, it must be accepted that direct funding is required. No development should be permitted unless adequate public transport is already available or part of the development. Adequate means access to employment, leisure, state services such as DWP and NHS and social travel comparable to that possible with private transport. Reliance on market forces to provide public transport is clearly not working
A0698B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A0970B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Para 2.12 of the introduction references bus and train links. Do not agree with the assertion that Shropshire has an 'extensive' bus network. Seven Place Plans specifically mention the need for more or improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one Place Plan calls for a train halt to be re-instated (Baschurch). The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. Draft Policy DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Shropshire Council has made considerable cuts to the county's bus service in recent years is NOT in line with aims to provide a transport service that reduces the need to use private cars. In addition, the information coming out from the council about closure / demolition (carbon footprint implications) of the existing bus station is contrary to the principle of a sustainable transport system for the county. It also invalidates claims to link up public transport systems (it's a short walk from the bus station to the train station) which is key to making it possible for people to stop using cars. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions. A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This draft local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." I disagree with this policy because it is incomplete.
A0972B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	– para 1-3 Reducing car dependency in Bridgnorth could be achieved by delivery of a new railway station linking to the national network, as would cycle lanes, walkway, and support for electric transport such as scooters, bicycles.
A0981B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	Sport England supports the wording of part 3b) of the policy relating to protecting and improving existing networks for active travel, and notes and supports the associated explanation in para 4.258 that references the benefits of walking and cycling for health and well-being. However, the policy does not make it clear how this will be delivered? Can the policy be expanded to explain how the Council propose to invest in extending the opportunities for active travel?
A0984B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	Fully support the Council's efforts to improve transport networks, improve connectivity and accessibility, reduce car dependency and manage the impacts of transport movements. We agree that this can be achieved by delivering a sustainable pattern of growth and development with the County which is endorsed within Chapter 9 of the NPPF. Support the flexibility provided in Part 3d of the draft policy (supported by para 4.260 of the explanation) regarding the approach to changes in transport technologies. The policy promotes the movement to more sustainable modes of transport, without enforcing specific requirements which we fully endorse. Enforcing a blanket requirement would create capacity issues within the network. Encourage the Council to work with the appropriate infrastructure providers to ensure a balanced and flexible energy infrastructure which meets needs whilst avoiding over provision. Fully support parts e and f of this draft policy, which promotes investment in the strategic and local highways and also the networks where economic activity will take place. Investment in the highway network and in employment areas will facilitate economic growth of individual settlements/economies and the County as a whole.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1116B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Can something be included about the development of a County-wide bus service that serves all people, and identifies bus stops that are well located in both rural and urban areas to attract the maximum number of people, as well as times and frequencies that don't leave big gaps between buses, and as part of integrated public transport with co-ordinated connection times. Can bus companies be required to provide facilities to carry bikes on buses.
A1143B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	At the time of this consultation the environmental and climate change implications of the Shrewsbury bypass extension had in no way been shown to represent sustainable or necessary development. It is not clear that given the current changes in travel and work practices that equal / better benefits might not be achieved through better investment in alternative sustainable transport options as identified in the hierarchy of sustainable transport. The statement of support for the bypass extension is presumptuous and should be diluted to identify that support is subject to evidence that the impacts of the development can be justified in line with the hierarchy of sustainable development, the aspirations of the 25 Year Plan on the Environment and the coming Environment Bill and commitments to the climate change mitigation.
A1152B39	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	Agreement is as far as it goes. Agree new development should only occur where there is sufficient existing infrastructure capacity available. Provisions as to CIL and Section 106 contributions may be overtaken by proposals in the Government paper 'Changes to the current planning process' (which was released as this consultation began), to replace them with a single new Infrastructure Levy. It is vital that measures to promote good infrastructure and design are brought into the Local Plan in a way that gives them real teeth and the prospect of implementation. Efforts need to be targeted at infrastructure which will mitigate against Climate Change. Better provision is also needed for social facilities, and for rural broadband and public transport. Argue that the Local Plan should incorporate master plans. The separate Place Plans are largely concerned with the provision of infrastructure. Regrettably, a lot of the funding for this infrastructure is to come from CIL. The trouble with CIL is that (1) it is made available only after housing developments that require infrastructure have been constructed, and (2) it takes years to decide how to spend it. Infrastructure provision therefore lags behind development, rather than being in place to facilitate it. That is one of the reasons why a masterplan would be a good idea. Para 3b of draft policy DP29 provides for protection, extension or improvement of footways, cycleways, public rights of way and bridleways. That is welcome, but it is much more important to have a fully integrated Transport Strategy that discourages transport using fossil fuels and which positively encourages, and more importantly facilitates, active travel like walking and cycling. Presently, there is no such integrated policy
A1180B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A1180B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. 20mph should be considered as a rule for residential areas. I disagree with this policy because it is incomplete.
A1180B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated ((respondent ref; Form 12)
A1633B3	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	generally in agreement with the aims - there is not enough management of freight movements that use the unsuitable roads. E.g. travelling via Much Wenlock rather than use the motorways and Major A roads. The lorry park at Much Wenlock is a bad idea. Building more housing in Shropshire will increase road traffic as most will commute to workplaces in the West Midlands. This may be tempered by more home working but it is not know if that will on a long term or just be temporary. If it is more permanent then you need to look at local hubs with a short distance of new settlements that can be used for on line work. your comments on environmentally friendly vehicles make no comment on the pollution both plastic and other chemicals that come from tyre wear and eventually end up in water courses. The need for housing needs better consideration concerning future employment patters and new houses are where they are needed and not to make up numbers to satisfy a central government diktat.
A1634B2	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated
A2130B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Don't believe that the plan does enough to reduce travel by car, and so won't be in a position to reduce carbon created by transport which accounts for 30% of Shropshire's output. Plan should consider allocation more housing in sustainable areas and must include active travel options. Greater links to the Local Transport Plan need to be made. There is nothing in the Local Plan that gives substance to the aspiration of "maximising the ability to make trips by sustainable modes of transport". It is possible to produce substantial increases in walking, cycling and bus use
A2150B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A2150B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete.
A2150B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated. "I disagree with this policy because it is incomplete.
A2158B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A2158B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete.

A2177B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Draft Policy DP29 requires provision of infrastructure investment including domestic charging points in dwellings. DfT held a consultation on Electric Vehicle Charging in Residential & Non-Residential Buildings (ended on 7th October 2019) which set out Government's preferred option to introduce a new functional requirement under Schedule 1 to the Building Regulations 2010, which is expected to come into force in 2020. Inclusion of EVCP requirements within the Building Regulations 2010 will introduce a standardised consistent approach to EVCPs in new buildings across the country. The requirements proposed apply to car parking spaces in or adjacent to buildings and the intention is for there to be one charge point per dwelling rather than per parking space. It is proposed that charging points must be at least Mode 3 or equivalent with a minimum power rating output of 7kW (expected increases in battery sizes and technology developments may make charge points less than 7 kW obsolete for future car models, 7 kW is considered a sufficiently future-proofed standard for home charging) fitted with a universal socket to charge all types of electric vehicle currently on the market and meet relevant safety requirements. All charge points installed under the Building Regulations should be un-tethered and the location must comply with the Equality Act 2010 and the accessibility requirements set out in the Building Regulations Part M. The Government has estimated installation of such charging points add on an additional cost of approximately £976. Government has also recognised the possible impact on housing supply, where the requirements are not technically feasible. Government's recent consultation proposed introducing exemptions for such developments. The costs of installing the cables and the charge point hardware will vary considerably based on site-specific conditions in relation to the local grid. The introduction of EVCPs in new buildings will impact on the electricity demand from these buildings especially for multi-dwelling buildings. A requirement for large numbers of EVCPs will require a larger connection to the development and will introduce a power supply requirement, which may otherwise not be needed. The level of upgrade needed is dependent on the capacity available in the local network resulting in additional costs in relation to charge point instalment. Government recognises that the cost of installing charge points will be higher in areas where significant electrical capacity reinforcements are needed. In certain cases, the need to install charge points could necessitate significant grid upgrades, which will be costly for the developer. Some costs would also fall on the distribution network operator. Any potential negative impact on housing supply should be mitigated with an appropriate exemption from the charge point installation requirement based on the grid connection cost. The consultation proposes that the threshold for the exemption is set at £3,600. In the instances when this cost is exceptionally high, and likely to make developments unviable, it is the Government's view that the EVCP requirements should not apply and only the minimum Energy Performance of Buildings Directive (EPBD) requirements should be applied. Consider electric vehicles will be part of the solution to transitioning to a low carbon future but there are practical and financial challenges associated with the Government's proposed approach, which goes beyond the requirements of EPBD. The supply from the power grid is already constrained in many areas across the country. Concerned about the capacity of the existing electrical network in the UK. Major network reinforcement will be required across the power network to facilitate the introduction of EVCPs and the move from gas to electric heating as proposed under the Future Homes Standard. The cost of infrastructure reinforcement and additional sub stations has not been considered. These costs can be substantial and can drastically affect the viability of developments. Under Government's proposal the capped figure of £3,600 would automatically be levied on developers therefore this figure should be included in any impact assessment. If developers are funding the potential future reinforcement of the National Grid network at significant cost, this will have a significant impact on their businesses and potentially jeopardise future housing delivery. Introduction of EVCPs along with other electric demand technology could lead to problems with capacity not only in the grid but inside the dwelling too. The proposals place an undue burden on new build dwellings without making any inroads into provision of EVCPs in the existing housing stock. Consider that the physical installation of fixed EVCPs is not necessary. The evolution of this automotive technology is moving quickly therefore a cable and duct approach is a more sensible and future proofed solution, which negates the potential for obsolete technology being experienced by householders. A cable and duct only approach means that the householder can later arrange and install a physical EVCP suitable for their vehicle and in line with the latest technologies. The Council's proposed policy approach is unnecessary because of the Government's proposals to change Building Regulations. Before the pre-submission LPR consultation, Policy DP29 Bullet Point 3d should be deleted.
A2180B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The word 'should' is not used: instead we see 'Shropshire will continue to promote and support. We would also like to question why there is no reference to cycle storage as in the Oxford Plan: "Planning permission will only be granted for development that complies with or exceeds the minimum bicycle parking provision as set out in Appendix 7.4." This relates to Minimum Bicycle Parking standards of Houses and flats up to 2 bedrooms at least 2 spaces per dwelling; Houses and flats of 3 or more bedrooms at least 3 spaces per dwelling; Student Accommodation at least 4 spaces for every 4 study bedrooms unless site specific evidence indicates; HMOs At least 1 space per occupant.
A2308B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Would like to see additional wording within the draft policy to protect defence interests: "Development that might compromise the operation of MOD airfields within Shropshire will not be permitted. Development will be expected to either be located outside designated Safeguarding Zones or be designed to minimise impact. The input of MOD Safeguarding should form a fundamental part of the application process."
A2323B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29		This draft policy recognises that the following objectives will be achieved by delivering a sustainable pattern of growth and development, investing in the necessary communications and transport infrastructure and services, providing remote access to services and employment and making available accessible, safe, reliable, low carbon transport modes and active travel choices: "Shropshire will continue to be an attractive place to live and work by improving its communications and transport networks and supporting the infrastructure and services to widen travel and transport choices, to improve connectivity and accessibility, to reduce car dependency and manage the impacts of transport movements on communities and our environment." "Responding positively to changes in our climate will require access to better communications infrastructure and more sustainable travel options offering choices about the need to travel and the best transport modes. This will help to manage the environmental impacts of travel on climate change, air quality, network noise and public health contributing to the sustainability of communities and protecting our environment."
A2365B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A2372B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete (respondent ref; Form 10)
A2394B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Line 2, please delete "canals" and insert "canal towpaths". Reason: it is the towpath, not the canal channel, which provides the capacity for people to walk alongside canals. If towpath is omitted, then the Policy is not clear and towpath improvements might not qualify for support
A2407B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Agree	Natural England notes that the Plan includes policies to ensure protection and enhancement of public rights of way and National Trails, as outlined in paragraph 98 of the NPPF (policy DP29). Recognition should be given to the value of rights of way and access to the natural environment in relation to health and wellbeing and links to the wider green infrastructure network. The plan should seek to link existing rights of way where possible, and provides for new access opportunities
A2423B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	This response concerns the issue of Active Travel, which covers walking and wheeling, including adapted cycles for people with disabilities, cargo cycles, tricycles, scooters, wheelchairs. This response is mainly with reference to Shrewsbury. All of the suggestions that follow can be achieved without building a North West Road. The road should be cancelled for many reasons including the fact that it will increase carbon emissions. There are two main reasons why the local plan should prioritise measures that make active travel safer and more convenient: 1. About 40% of carbon emissions in Shropshire come from travel so we need to move quickly to achieve a much greater percentage of journeys being zero-carbon 2. The measures would be cheap and easy to implement, more so than carbon-reducing measures in other sectors, and so represent a "quick win" in Shropshire Council's plan to achieve zero carbon. The local plan makes reference to "sustainable travel" (active travel and public transport) in various places but shows little understanding of the detailed policies needed to make a real change in transport options. The following objectives of the Sustainability Appraisal need significant increases in active travel, if they are to succeed in their aims: SO4 Promote access to services for all sections of society SO5 Encourage the use of sustainable means of transport SO6 Reduce the need of people to travel by car SO7 Support active and healthy communities SO11 Conserve and enhance Shropshire's air quality and reduce the risk of air pollution SO12 Reduce carbon dioxide emissions SO13 Promote adaptation and mitigation to climate change SO16 Conserve and enhance landscape character and local distinctiveness : – this cannot be done while promoting the North West Road and other road building schemes. The LTP should sit alongside the Local Plan and provide guidance and policy statements on transport decisions. However Shropshire Council has no adopted LTP and work has only recently started on drafting the LTP4 (summer 2020) This means that there is currently no strategy for transport in the county. A new LTP is urgently needed, which takes into account the changes of recent years and particularly the council's commitment to zero carbon. Shropshire Council should draw up a Local Cycling and Walking Infrastructure Plan (LCWIP) as recommended by the Department for Transport (DfT). This should include protection from development for the future, so that opportunities to build safe active travel routes are not lost in future planning decisions as they have been many times in recent years. This is a serious omission from the Draft Local Plan A strategic network plan should also include a requirement for developers to create access points for walking and cycling on to new developments, to provide more direct and safer access, away from traffic and linking to local quiet routes and rights of way. This almost never happens on new developments but is often a very low-cost way of encouraging walking and cycling. The Local Plan lacks commitment to active travel. Policies to ensure a large increase in active journeys are needed to contribute to health and welfare, social equality, cleaner air and reduction in carbon emissions. The lack of a Local Transport Plan or Local Cycling and Walking Infrastructure Plan means there are no targets and no action plan to achieve progress on active travel.
A2427B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A2427B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete.
A2427B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future "The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." I disagree with this policy because it is incomplete.
A2427B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	Para 4.261 NWRR To deter heavy traffic flow and to encourage pedestrians and cyclists into the centre of Shrewsbury, the temporary calming measures introduced during the pandemic to make provision for social distancing should be made permanent. There has been obvious economic benefit to hard-pressed shop and café owners as a result of the colonisation of pavements by diners and coffee drinkers throughout July, August and most of this month. However, this is a minor aspect in relation to the issue of greatest significance ever faced by humankind which is the almost unprecedented changes to the bio-sphere on which we depend that are now occurring as a result of the radical and uncontrolled experiment we are conducting with our planet's atmosphere. If the Thwaites glacier in Antarctica were to collapse, sea level rise would be so great as to inundate all our port cities, including London. The New Scientist and The Washington Post have reported very recently that this massive volume of ice is now unstable because of infiltration by sea-water from beneath. We need urgently to implement massive reductions in greenhouse gas emissions now, not in the next two decades. Steel manufacture emits 1.85 tonnes CO2 per tonne of steel made. Cement production causes 0.82 t CO2 per tonne to be released to air. Projects dependent on huge consumption of these materials must be halted until their carbon impact can be reliably off-set. Regrettably, the draft plan not only fails to reflect this urgent need, it runs counter to it by having the proposed North Relief Road as a centre piece. In addition to the great CO2 emission impact caused by its construction, the extra traffic such a project would inevitably generate would contribute its part, as a consequence of the CO2 emissions from the increased traffic volume, in the destruction of our native islands by encroachment of the rapidly rising seas surrounding them.

Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." I disagree with this policy because it is incomplete.
A2489B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic also (a) reduces carbon emissions and air pollution, (b) reduces congestion e.g. around schools at drop-off/pick-up times and (c) leads to an increase in the amount of walking and cycling (as safety increases). This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measures, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. I disagree with this policy because it is incomplete.
A2489B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. I agree with this. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. For example, local residents in the Cross Houses area have been exploring the possibility of an off-road cycle path into Shrewsbury, making use of the disused railway line. Council support and financing for such a project would be a suitable concrete action to promote more active travel. I disagree with policy DP29 because it is incomplete.
A2490B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	I disagree with this policy as there is no mention of speed restrictions or traffic calming measures. Many Shropshire towns suffer from vehicles exceeding the speed limit. This is not only an issue of safety but also of carbon emissions and pollution. Obviously slower traffic speeds mean less fuel and consequently less carbon emitted. Reduced speed limits also increase the take-up of Active travel. The North West Road will not do anything to decrease traffic in the long term, due to the increased number of houses proposed to be built along its route, all adding to the existing traffic, and carbon emissions. Many of the vehicles will take the exit for Shrewsbury town, so increasing the traffic congestion entering the town centre.
A2490B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable, they are, at least, part of an interim solution. However, converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated." I disagree with this policy because it is incomplete
A2494B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	A sustainable and active transport system also requires: "Protection, extension or improvement of footways, cycleways, public rights of way and bridleways for active travel and canals to provide local transport routes to home, work, services and leisure;" as DP29 states. Every single one of the eighteen place plans include references to some or all of the above items. This is clearly a very widespread and deeply felt need that requires support from the local plan with details, timetables for action, targets and dates. A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen. I disagree with this policy because it is incomplete.
A2494B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. I disagree with this policy because it is incomplete.
A2494B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP29	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. I hope the council fully understands that electric cars are NOT the solution to sustainable transport, but while public transport and active transport methods are unavailable they are, at least, part of an interim solution. However converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? https://www.gov.uk/government/news/britains-first-all-electric-bus-town-to-pave-the-way-for-green-communities-of-the-future The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated. "I disagree with this policy because it is incomplete.
A0010B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Agree	Support para 5b of DP30. By encouraging applicants to use the police initiative within the Design and Access statement, it will help to promote crime free and safe environment and reduce opportunities for antisocial behaviour. Policy is wholly compliant with NPPF paras 91 (b) and 127 (f) and NPPG Paragraph: 010 Reference ID: 53-010-20190722 Revision Date: 22 07 2019. Shropshire Council can be assured that Secured by Design is recognised by government and the police Design Out Crime Officer's role is endorsed in NPPF para 95 and NPPG paragraph 012, reference ID: 53-012-20190722 revision date 22 07 2019.
A0159B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	The Council has adopted a clear policy of worsening public health outcomes. Its rejection of 20mph is a clear decision to worsen the incidence of obesity, diabetes and cardio vascular disease and it also reduces the potential for carbon-reducing barbers to walking and cycling. It is also contrary to public health advice
A0187B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. I disagree with this policy because it is incomplete (respondent ref form 15)
A0189B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. I disagree with this policy because it is incomplete (respondent ref form 15)

A0240B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Don't know / no opinion	3.30 L&Q Estates supports the Council's proposed approach to Policy DP30, and particularly the requirement that 'new development should ensure the health and well-being of individuals, communities and places.'3.31 In this respect, L&Q Estates considers that its land interests at Shifnal are well situated to accommodate residential development, as new dwellings would be located close to existing green spaces and the proposed site layout will promote walking and cycling.3.32 Additionally, the proposed development is well located to employment opportunities, community facilities and transport connections, and should therefore be considered favourably in the context of Policy DP30(3).3.33 A Vision Document supporting these representations is enclosed at Appendix 1, and further outlines how the proposed development in well placed to align with the objectives of PolicyDP30.
A0306B058	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	DP30 (2) It is well-established that access to natural greenspace is beneficial for health and well-being. We feel high quality accessible greenspace should be included in 'external space standards' DP30 (4) Weak wording. In addition to promotion, the provision of walking and cycling routes and infrastructure should be included in development. There should be a defined 'walking distance', e.g. NE Access to Natural Greenspace standard. DP30 (6b) A hierarchy of action is required, with 'enhance' as a high priority. There should also be recognition of the value of 'natural play' and the need to enhance, retain and protect areas where this can occur. DP30 (8c) Should include the promotion of local food supply, in the form of allotments/garden space/farmers markets.
A0311B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health but a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. Paragraphs 2.2 and 2.3 make it clear that the local plan has a major role in moving the county towards net zero in "... all facets of sustainability ...". " Through dietary change, food waste reduction and improved agricultural practices we could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels
A0323B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health but a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. A0501B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. We continue to import meat and analysis shows that while meat and dairy provide just 18% of calories and 37% of protein, it uses the vast majority – 83% – of farmland and produces 60% of agriculture's greenhouse gas emissions. Simply because we do not see in the UK, the enormous cattle herds of other countries, does not mean that we have no part to play in Shropshire, or that we are not contributing to these agricultural carbon emissions. We simply import meat that has been obtained through climate destructive practises. Paragraphs 2.2 and 2.3 make it clear that the local plan has a major role in moving the county towards net zero in "... all facets of sustainability ...". " Through dietary change, food waste reduction and improved agricultural practices we could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels. " https://www.cat.org.uk/info-resources/zero-carbon-britain/ disagree with this policy because it is incomplete.
A0642B46	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	The Council has adopted a clear policy of worsening public health outcomes. Its rejection of default 20mph zones is a clear decision (and contrary to the hierarchy) to worsen the incidence of obesity, diabetes and cardio vascular disease and it also reduces the potential for carbon-reducing barbers to walking and cycling. It is also contrary to public health advice. 20mph is supported by major public bodies and public health professionals e.g. •The House of Commons Select Committee on Transport •The World Health Organisation of Directors of Public Health •The National Institute of Health and Care Excellence •Public Health England •Public Health Wales (20mph is now accepted as the default speed limit throughout Wales) •The Royal College of Paediatrics and child health. 20mph also reduces carbon emissions because it smooths the flow of vehicles (less acceleration and less braking) and it reduces road traffic danger which boosts walking and cycling. Shropshire Council has rejected a key measure that improves public health and reduces transport's carbon emissions.
A0647B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Encouraging to see inclusion of walking and cycling as important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" a strategy on health and wellbeing needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. We continue to import meat and analysis shows while meat and dairy provide just 18% of calories and 37% of protein, it uses the 83% the vast majority of farmland and produces 60% of agriculture's greenhouse gas emissions. Simply because we do not see enormous cattle herds of other countries in the UK, does not mean we have no part to play in Shropshire. We simply import meat that has been obtained through climate destructive practises. Paragraphs 2.2 and 2.3 make it clear that the draft Local Plan has a major role in moving the county towards net zero in "... all facets of sustainability ...". Dietary change, food waste reduction and improved agricultural practices could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels. Disagree with this draft policy because it is incomplete.
A0648B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Encouraging to see inclusion of walking and cycling as important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" a strategy on health and wellbeing needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. Simply because we do not see enormous cattle herds of other countries in the UK, does not mean we have no part to play in Shropshire. We simply import meat that has been obtained through climate destructive practises. Paragraphs 2.2 and 2.3 make it clear that the draft Local Plan has a major role in moving the county towards net zero in "... all facets of sustainability ...". Dietary change, food waste reduction and improved agricultural practices could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels. Disagree with this draft policy because it is incomplete.
A0679B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	carbon foods. This is essential not only for the health and wellbeing of our population, but also to reduce our climate impact. A reduction in high-impact animal products is key in reaching net-zero. Meat and dairy uses 83% of farmland and produces 60% of agriculture's greenhouse gas emissions. This is wildly disproportional to the nutritional benefit we gain from it, and is simply too inefficient to maintain on the current scale of consumption. Much of the UK's meat is imported from countries with significantly lower environmental standards, resulting in the UK meat industry having very high environmental impact. Through dietary change, food waste reduction and improved agricultural practices we could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels. " https://www.cat.org.uk/info-resources/zero-carbon-britain/ disagree with this policy because it is incomplete
A0698B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health but a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. A0972B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Para 1 Designs for the Tasley Garden Village development demonstrate little relationship with the historic town of Bridgnorth and its environs, are pedestrian and the proposed development looks the same as any in UK. Whilst existing farm buildings will be retained, designs need to reflect local architectural style ad character of existing traditional & historic buildings. Site size proposed for Garden Villages, too large to be absorbed into a historic town the size of Bridgnorth, and it will change the character which is central to it as a tourist destination. Highlight that there are already 500 dwellings allocated in Tasley & query whether development on Westgate site and the residential park homes at Park Hollins Estate off the A442 at Quatford, have been considered with their impact on the town's facilities & infrastructure. Deep concern regarding rational for overall figures and 9% dwelling requirement uplift which is not supported locally. This ignores role of Shropshire Council in representing the electorate. New housing for the area is welcomed, but it needs to be of a volume compatible with, and sensitive to, the town and all inhabitants. Para 4 The A458 is a fast and dangerous road and one footbridge insufficient to access Bridgnorth Town & if not achievable, as subject to ground investigations and available land, no footbridge would be dangerous. At least three footbridges regularly spaced out along the Tasley Garden Village frontage with the A458 required to ensure residents crossing safely. Ideally, the A458 would be moved to incorporate the Tasley Garden Village into the town to facilitate safe pedestrian & cyclist access to Bridgnorth high street. Para 6 Unclear how Shropshire Council will ensure sufficient primary health care delivery for the increased population given that GP surgeries are private enterprises, Amenities services & infrastructure – should be provided as needed and not after 9 years as Taylor Wimpey proposes. Reference DP30 para 7 query how SC ensure retention of community services such as local shops given that they are private enterprises? Reference DP30 para 9 Query What measures would be put in place to reduce the effects of pollution on residents of Tasley Garden Village from the busy A458 & airborne pollutants emitted by intensive livestock installations such existing or proposed Industrial Poultry Unit's .
A0981B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Sport England is generally supportive of this policy. The reference in part 1) of the policy to good design should be strengthened so that there is a more direct reference to designing places and spaces that stimulate physical activity for all generations within the local community. The policy wording should require developments to demonstrate how the proposal accords with the 10 active design principles put forward in the model Active Design policy as set out in Sport England's representation for policy SP5. In respect of part 4) of the policy, it is recommended that the wording of the policy is strengthened to refer to high quality routes for walking and cycling that are safe and well lit as this influences peoples active travel choices. The provision of safe and secure cycle parking and secure changing and locker provision at destinations such as places of work should also be referenced as such provision is important to making active travel choices. Whilst the reference to new developments being within walking distance of open space is supported as a general objective, the wording of the policy is currently too imprecise to be applied consistently. If the Council are proposing an include an accessibility standard to open space, this should be more clearly defined and set out in policy DP16, with cross reference to it in policy DP30. This should be informed by the Council's open space needs assessment. In relation to part 6) of the policy, Sport England supports the intention to protect existing and promote new community infrastructure that promotes healthy and active lifestyles, and in particular part b) as this relates to sports and recreation facilities to meet existing needs. However, the wording of the policy is not consistent with para 97 of the NPPF which sets out the permitted exceptions in respect of development proposals that result in the loss of sports and recreational buildings or land. As set out in Sport England's representations on Policies DP15 and DP16, it is recommended that a separate policy is included in the plan that provides protection to such sport and recreation related community facilities to ensure consistency with para 97 of the NPPF. The promotion of new sport and recreation related community facilities could then also be addressed in this new policy. In respect of part 7) of the policy, its not clear how this differs from part 6) as they seem to relate to the same point in terms of protecting local community facilities and so there seems to be some duplication between parts 6) and 7) of the policy? It is therefore suggested that parts 6 and 7 are re-drafted to relate to the protection and development of non sport and recreation related community facilities, where the protection and development of sports and recreation related community facilities is addressed in a separate new policy. Policy DP30 could then cross-refer to this new policy accordingly. Part 9) of the policy misses the opportunity to cross refer to policy DP19. Whilst the reference to requiring Health Impact Assessments in part 11) of the policy is noted, the policy does not seem to be sufficiently detailed to be clear how this is proposed to be applied consistently. Does this need to be developed further? The reasoned explanation for the policy should be expanded to refer to the Council's evidence base which includes the Playing Pitch and Outdoor Sports Strategy (PPOSS) and Built Sports Facilities Strategy (BFS). The priorities for investment should be appropriately referenced in the explanation for the new policy that relates to provision of new sports and recreation facilities, to include for instance, the need to invest in improving the Council's stock of swimming pools, sports halls, health and fitness suites and other built sports facilities and to reference that these investment priorities will also be prioritised in the Council's Place Plans and Infrastructure Plan. This would then accord with para 96 of the NPPF which requires LPA's to assess their needs and to plan positively to meet those needs.
A0984B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Agree	Supports this policy which states that new development should ensure the health and well-being of individuals, communities and place. Part 9 of the policy relates to implementation of the Council's Air Quality Action Plans, however this has not been published.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1117B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Section 8. "Ensuring access to healthy food by: a.Ensuring good access to appropriate food shops; and b.The need to promote healthy eating through taking into consideration the cumulative impact of A5 uses (hot food takeaways)." a. would benefit from expansion and detail, as I'm not sure what you mean by "appropriate food shops". I understand the plan promotes local shops, which is good, but perhaps consideration needs to be given to community owned shops where people can bulk buy and thereby reduce plastic and packaging waste. This kind of community shop might also provide more 'affordable' produce and goods for those on lower incomes which could encourage healthy eating if a range of fairly priced local produce was available through not-for-profit schemes. It could also support local sustainable farming practices. b. What do you mean by this paragraph? Again, perhaps it could do with more explanation in terms of what constitutes healthy eating e.g. reduction in meat consumption to help mitigate climate change?
A1152B40	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Agree	Agree new development should ensure health and well-being of individuals, communities and places, and agree with the intention that permission will be refused for development proposals that would adversely affect or prejudice the health and well-being of individuals, communities and places. In practice such matters are difficult to pin down. The Council currently has such applications on its books, where the presumption in favour of development means that the tests for a valid refusal on health or other environmental grounds are set at a level which is higher than merely precautionary.
A1180B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health but a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. Paragraphs 2.2 and 2.3 make it clear that the local plan has a major role in moving the county towards net zero in " ... all facets of sustainability ...". " Through dietary change, food waste reduction and improved agricultural practices we could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels (respondent ref; Form 15)
A1182B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health but a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels
A2163B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	This draft policy lists a variety of requirements that new developments should achieve to ensure the health and well-being of individuals, communities and places; and that major applications must be accompanied by a Health Impact Assessment (HIA). However, HIAs require a screening and scoping process, and not all developments will require one. An HIA can be in the form of an Intermediate HIA or Rapid HIA. Therefore, the policy should make clear that major developments would be required to screen/scope the need for a HIA and that these can either be intermediate or rapid submissions. This policy should be amended in order to be found sound, as it needs to be fully justified.
A2177B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	Draft Policy Bullet Point 7b ensures access for all to high speed broadband and on-line services. Draft Policy DP28 already requires residential developers to provide broadband and mobile communication infrastructure. The developer should not also be expected to ensure access to on-line services, which is beyond the control of a developer. This Bullet Point is inappropriate, before the pre-submission LPR consultation, Bullet Point 7b should be deleted from Policy DP30. Draft Policy DP30 Bullet Point 11 requires major development proposals (more than 10 dwellings) to be accompanied by a Health Impact Assessment (HIA) including details of ongoing management or mitigation of issues where necessary. NPPG confirms that a Health Impact Assessment (HIA) can serve a useful purpose at planning application stage and consultation with the Director of Public Health as part of the process can establish whether a HIA would be a useful tool for understanding the potential impacts upon wellbeing that development proposals will have on existing health services and facilities. Any requirement for a HIA should be based on a proportionate level of detail in relation to the scale and type of development proposed. The requirement for HIA without any specific evidence that an individual scheme is likely to have a significant impact upon the health and wellbeing of the local population is not justified by reference to the NPPG. Only if a significant adverse impact on health and wellbeing is identified should a HIA be required, which sets out measures to mitigate the impact. Before the pre-submission LPR consultation, draft Policy DP30 Bullet Point 11 should be re-considered and modified by the Council.
A2194B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	SWT Clun and BC Committee endorse the broad aims of DP 30 but as elsewhere, these are unambitious and non-specific in relation to the needs of the wider rural area including the settlements of Bishop's Castle, Clun and Bucknell, and lack attention to the detail of need in these communities. General points :1) All development in an area lacking significant public transport will lead to greater use of cars and all use of cars will, at present, lead to more emissions of noxious gases, particulates etc. Increasing use of deliveries at home increases this and this transport is often large, in a hurry and unfamiliar with the area. All the villages lack of 20mph limits, and in Clun particularly, lack adequate pavements and have no specialised provision for cyclists . All increases in car, van lorry transport make cycling more dangerous and less confident cyclists less likely to cycle. Tolerance of parking within villages and the expectation of parking close to home has not been addressed and as a result village centres are cluttered with dangerously parked vehicles making walking and cycling uncomfortable at times and downright dangerous at others. Thus no development of further housing in South West Shropshire is compatible with the objectives of DP30 without extra work in mitigation.2) The mitigation required to achieve DP30 will be substantial and should not only include an aggressive approach to the reintroduction of significant public transport in the form of buses, but include review of village pavements, parking , cycle routes, and consideration of the development of cycle paths between the settlements and major hubs e.g. between Craven Arms and Clun. Substantial work will be required to change the behaviour of village residents but also to address the physical infrastructure and parking patterns within villages. (This is not trivial or idealistic, it is a long overdue issue and would be welcomed by many village residents especially those on foot or on bicycles.) If Shropshire Council is serious about their plan, they must begin this work throughout the county but it is most urgently required in those areas which have least public transport, are most rural and most at the mercy of the car but are tourist venues.3) Walking is a major reason for coming to the area to live or for tourism, but in order to achieve the Health and Wellbeing objectives, footpaths require both development and constant attention. In relation to Social Prescribing and the health of the population (especially considering the population distribution in Shropshire as laid out in the plan, heavily weighted to older citizens), many more footpaths could be developed, allowing for less strenuous walking (and cycling), (e.g. between Clun and Clunbury or The Hurst, along the river). Developing such paths would also increase opportunities for development of habitats both riparian and other, helping to create more Stepping Stones to help join up wildlife corridors. (A joint cycle path and footpath up the valley between Clun and Newcastle could link with routes to Craven Arms). The point is that although the DP30 objectives are excellent, that considering road vehicle pressure and population ageing, together with housing development, that there needs to be a major investment in more level and accessible footpaths and more cycle paths and work within village infrastructure, if the population is to become more active and these objectives , achieved.4) These comments should not be taken as opposing development of further housing in BC, Clun and Bucknell. But, as with our statements about the incompatibility of development and water quality, it is essential the actions in reparation are taken before development occurs. We support the development proposals as essential to maintain the health of our villages. But specific monitoring of walking, cycling and air quality issues should be undertaken together with significant improvements and change.
A2365B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well-being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. This is not a suggestion to force everyone to become a vegan, but a recognition of the fact that our meat and dairy consumption needs to be reduced; this is a key requirement for reaching net zero. We continue to import meat and analysis shows that while meat and dairy provide just 18% of calories and 37% of protein, it uses the vast majority – 83% – of farmland and produces 60% of agriculture's greenhouse gas emissions. Simply because we do not see in the UK, the enormous cattle herds of other countries, does not mean that we have no part to play in Shropshire. We simply import meat that has been obtained through climate destructive practises. Paragraphs 2.2 and 2.3 make it clear that the local plan has a major role in moving the county towards net zero in " ... all facets of sustainability ...". " Through dietary change, food waste reduction and improved agricultural practices we could provide a healthy, sustainable diet for the whole UK population. These changes would mean that greenhouse gas emissions from agriculture would be reduced by 57% from 2017 levels. " https://www.cat.org.uk/info-resources/zero-carbon-britain/ I disagree with this policy because it is incomplete. (response ref form 15)
A2427B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. A2475B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	The policy should refer to the proven benefits of contact with nature for health and wellbeing, and the need therefore to protect and provide and maintain high quality natural areas as well as local greenspace sites.
A2489B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP30	Disagree	It is encouraging to see the inclusion of walking and cycling as being important to health. In order to deliver on the NPPF requirement of "meeting the needs of the present without compromising the ability of future generations to meet their own needs" then a strategy on health and well being needs to include proactive measures to move people's diets towards more plant based and low carbon foods. A0241B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP31	Agree	Agree
A0984B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP31		Part 1 of the policy confirms that applications for non-mineral development within any MSA and which could have the effect of sterilising mineral resources will not be granted unless at least one of the three named criteria is relevant. Criterion c. confirms that an exemption policy will apply in accordance with the rest of the policy wording. However the policy wording does not reference sites allocated to deliver development. It is recommended that this policy is amended to include allocated sites within the exemptions and remove the requirement to submit any Mineral Assessment with an application on an allocated site.
A2308B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP31	Disagree	Would like to see additional wording within the draft policy to reduce risk of birdstrike: "Where a proposed development would result in mineral working or extraction falling within a designated safeguarding zone (Birdstrike Zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for the extraction, restoration and post restoration phases. It would also be necessary to agree details of the restoration of extraction sites to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A1648B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP32	Don't know / no opinion	We note that Table DP32.1 includes a sand and gravel windfall allowance of 10.5 million tonnes, and it would be helpful to clarify through further discussion how this anticipated windfall level has been established
A2308B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP32	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where an application would result in sand and gravel working or extraction falling within a designated safeguarding zone (Birdstrike zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for the extraction, restoration and post restoration phases. It would also be necessary to agree details of the restoration of extraction sites to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A0306B059	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33	Disagree	There is no justification for the winning and working of coal when we are facing a Climate Emergency.
A0984B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33		Support Part 1 of this draft policy regarding the need for mineral development to demonstrate that potential adverse impact on the local community and the natural/historical environment can be satisfactorily controlled. Although supportive of sustainable mineral working, it is important that mineral sites are not detrimental to residential receptors or the natural/historical environment. Part 1c of the draft policy is particularly important, regarding cumulative impact of mineral working sites. Bridgwalton Quarry (active) and Morville Quarry (inactive) are in close proximity (800m), if both are fully operational at the same time there is risk of an adverse impact on the natural and historic environment. Support Part 2 of this draft policy regarding restoration of mineral sites to an agreed after use state, following completion. This should occur at the earliest opportunity.
A0997B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33	Agree	We note the minerals safeguarded areas and site allocations carried forward in DP32 and welcome the reference to the historic environment in Policy DP33 in respect of development proposal impacts and considerations.
A2308B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where an application would result in mineral working or extraction falling within a designated safeguarding zone (Birdstrike zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for the extraction, restoration and post restoration phases. It would also be necessary to agree details of the restoration of extraction sites to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A2389B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33	Disagree	This looks like it could be improved and have a greater emphasis on the need for a HRA and groundwater assessment (which causes issues at some sites if not undertaken/monitored sufficiently upfront) – look at the adopted Gloucestershire minerals plan.
A2475B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP33	Disagree	There are some significant mineral sites and reserves within the AONB, and this policy should cross-reference the AONB and policy DP26.
A0501B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP34	Disagree	With the emphasis on reducing CO2 emissions it is disappointing to see that carbon from the Veolia Battlefield site has increased each year from 2015 to 2018. Reference : https://www.gov.uk/government/statistics/uk-local-authority-and-regional-carbon-dioxide-emissions-national-statistics-2005-to-2018 Final sheet headed 'Pollution Inventory'. Whatever the reason for this increase, action is required to understand and reverse this trend. The local plan should include a commitment to require waste management of every kind to reduce carbon emissions. I disagree with this policy because it has ignored rising CO2 emissions from the waste management service employed by the county.
A2308B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP34	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike: "Where an application would result in waste management or processing development within a designated safeguarding zone (Birdstrike Zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A2308B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy DP35	Disagree	Would like to see additional wording within the draft policy to reduce the risk of birdstrike along the lines of: "Where an application would result in landfill or landraising sites falling within a designated safeguarding zone (Birdstrike zone/Plan B) it will be necessary for the applicant to provide and agree bird hazard management plans for the landfill / landraising process, restoration and post restoration phases to ensure that the development does not result in the creation of an attractant environment for large and flocking bird species that would reduce aviation safety."
A0399B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Agree	Support the identification of Land bounded by Kingswood Road, High House Lane and the By-pass, Albrighton, as Safeguarded Land. Our client, landowner of part, has confirmed that the land is suitable, available and achievable for development.
A0400B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Agree	Support the identification of Land bounded by Kingswood Road, High House Lane and the By-pass, Albrighton, as Safeguarded Land. Our client, landowner of part, has confirmed that the land is suitable, available and achievable for development.
A0697B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	See wider comments, particularly those relating to draft Policy S1.1 and the Sustainability Appraisal.
A0888B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	See wider response.
A0897B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Agree	Draft Policy S1.1 seeks to deliver 500 dwellings in Albrighton over the plan period 2016-2038, equivalent to an average of 22.7 dwellings per annum Support the proposed growth of Albrighton in the draft Local Plan and specifically the proposed allocation of ALB017. However concerned that the draft Local Plan period has been extended by 2 years, but this is not reflected in the proposed housing requirement. A proportionate increase to reflect the longer timescale, namely 550 dwellings, would be appropriate. Government recently published proposed changes to planning legislation and NPPF. This include ensuring 300,000 new homes are delivered nationally per annum, a level that is significantly higher than recent delivery rates. To keep the draft Local Plan in step with forthcoming changes to the NPPF would welcome a higher housing guideline for Albrighton. A higher housing guideline would also be consistent with the strategy to direct development to urban area and strategic corridors (the M54 is a key strategic corridor as noted in the M54 Growth Corridor - Strategic Options Study). Given Albrighton's strategic location, good range of services and excellent rail links to a wide range of employment opportunities, a higher housing guideline of at least 700 dwellings would be appropriate. The housing market in this area is very strong and capable of delivering this. For the above reasons, would support an increase in Albrighton's housing guideline. Strongly support the allocation of site ALB017 together with site ALB021 for around 180 dwellings. The site represents a sustainable, deliverable and suitable development option for housing delivery in the early years of the plan period. ALB017 is 450m from Albrighton Railway Station, making it consistent with paras 102/103 of the NPPF and within walking distance of all services and facilities in Albrighton. Technical evidence has been provided in support of the site. Development guidelines stipulate ALB017 is served from a roundabout off Kingswood Road. However, this is considered unnecessary on highways grounds as a priority junction is able to provide the required capacity to serve the development. This avoids land take associated with a roundabout junction and minimises impact on the mature tree belt along Kingswood Road. All development guidelines are achievable. Confirm that the site is viable and deliverable, having regard to the policy requirements in the draft Local Plan. Confirm the delivery timescales for this site shown in Appendix 7 of the draft Local Plan are appropriate. The site is able to deliver in the early years of the draft Local Plan period and an outline application will be submitted at the earliest opportunity once the plan has reached an advanced stage.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0935B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	To provide long-term locations for growth, three areas of land beyond the Albrighton development boundary, totalling 19.9ha, are safeguarded for Albrighton's future development needs beyond the current Local Plan period. The Council's Green Belt Release: Exceptional Circumstances Statement (2020) comments in reference to two of these sites (totalling 12.9ha) that, 'the availability of the site is currently unknown however given that it is proposed for safeguarding for future development beyond the Local Plan Review period it is considered that this will change in the future'. Consider this cannot be relied upon to be a source of future housing or employment land. Furthermore, it is unlikely that substantial growth at Albrighton would be appropriate. A more appropriate solution would be the inclusion of a 'Strategic Settlement' at Land at J3 as this would allow for greater distribution of growth along the M54 corridor. The majority of the Land at J3 site falls within the Albrighton Place Plan Area.
A0985B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	In broad agreement with draft Policy S1.1 and support inclusion of ALB021 as a housing allocation. Discussions with a housebuilder to commence shortly to ensure the site is delivered in a timely manner. However, consider an amendment to the wording of the draft site guidelines should be made to ensure ALB017 does not unduly delay delivery of ALB021 and ensure the whole site contributes to housing delivery within the draft Local Plan period. This amendments should state that full vehicular access will be provided into ALB21 before any dwellings are occupied on ALB017, in order to ensure the site is delivered in a timely manner. If this amendment is not made, there will be a need to explore the possibility of creating a new access off Beamish Lane to serve ALB021. Do not consider this would prejudice delivery of a holistic masterplan for ALB017 and ALB021 – committed to working with the promoters of ALB017. Consider a second access would not prevent Beamish Lane from being largely protected from through traffic via an appropriate TRO. Initial advice from a highways engineer is that a single access into ALB021 is entirely possible and in light of the lack of accidents or obvious issues with the existing junction, there is scope for an appropriate design to work. Indeed, pedestrian and cycle links would still exist between the site and the railway station/wider site. Supporting evidence for ALB021 is to be prepared to support an eventual Planning Application, which will align to the development plan examination process and having regard to an indicative masterplan for the wider site, which should involve the promoters of ALB021. Once agreed, it is expected this masterplan will support the development plan, as an addendum to the proposals map.
A1135B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	We object to the proposed development boundary as drawn on the pre-submission draft proposals map for Albrighton and are disappointed to see that the Harp Land has not been proposed for allocation. It lies adjacent to the existing housing allocation ALB003 at 'White Acres' which at the time of the assessment was considered by the Council to be "well located for the active retired market, being within easy walking distance of Albrighton centre's services and facilities". This land has not been brought forward for development despite its status as an adopted allocation since 2015. It is not clear whether the land is available; it does not appear to have been reviewed in any way for its suitability going forward. Over five years of no action in a buoyant market would suggest not.
A1834B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area		Consider that proposed site allocation ALB017 & ALB021 would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: ALB017 & ALB021: traffic; M54 J3. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.
A2308B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: ALB017/ALB021: Safeguard Zone - RAF Cosford Plan AT 15.2m (small section at extreme east of site in 10.7m).
A2321B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Don't know / no opinion	Vistry (who have previously engaged with the Local Plan Review under their former trading name, Bovis Homes) is promoting approximately 11.7 hectares of land to the west of Albrighton (the site), which represents a sustainable and deliverable residential land opportunity for around 218 new market and affordable homes, and public open space. Throughout the promotion of the site Vistry have developed a site specific evidence base to inform the masterplanning of the site and underpin its deliverability. This site specific evidence base was submitted in support of Vistry's representations to the Issues and Options Consultation in April 2017 and then compiled into a 'Vision Framework' which supported their representations to the 'preferred sites' consultation in February 2019. The proposed growth of Albrighton 3.11 Policy S1.1 states that: 3.12 "Albrighton will act as a Key Centre and contribute towards strategic growth objectives in the east of the County, delivering around 500 dwellings and around 5 hectares of employment development" 3.13 While we go on to comment on the specific proposed allocation in response to Policy S1.1 in section 4 of these representations, the 'Technical review of the need for new homes in Albrighton' report prepared by Turley demonstrates that the level of growth directed to Albrighton may have been artificially suppressed, particularly for the reasons set out in paragraph 3.2 of these representations. 3.14 Specifically the report has identified that Albrighton is exhibiting the consequences of a long-term limiting of its growth, despite sustained need and demand. Principally this is illustrated by a long-term decline in its population and a more recently static picture which is materially changing the demographic profile of the town. Where historically it has demonstrated a notably sustainable profile, including a high proportionate share of those of working age, it is rapidly seeing an ageing of its population. Where the ageing of its population is an inevitable consequence of earlier growth, this is compounded by a sustained reduction in younger people including children. 3.15 Where the absence of new supply is an important contributing factor – with Albrighton having seen one of the lowest rates of housing delivery of the key centres in Shropshire – this is compounded by high demand for homes. There is evidence of an acute worsening of market conditions, with consequences for the affordability of housing. This is further limiting the ability of younger households to access housing in the settlement, which is further inhibited by the lower representation of smaller homes in Albrighton. 3.16 Albrighton has demonstrated relatively strong connections between home and work, with this influenced in part by its proximity and accessibility to RAF Cosford as a significant employer, and also with its wider alignment with key strategic corridor along the M54 / A5. Insufficient consideration has been given in the draft plan to the relationship between the planned level of new homes in Albrighton and the anticipated creation of a substantial number of new jobs, associated with the supported growth of this strategic site. Where new jobs materialise in the plan period, it is reasonable to suggest that these will place increased demand for housing in Albrighton. Indeed the draft plan goes as far as acknowledging that the: "...relationship between Albrighton and the nearby Strategic site at RAF Cosford, with many employees and personnel based at RAF Cosford choosing to live in Albrighton and/or use the facilities within the settlement and certain facilities at RAF Cosford being available for residents of Albrighton". 3.17 Clearly the full extent of the employment growth and corresponding increase in the numbers of jobs at RAF Cosford has not yet been fully realised (as set out in response to Policy S21 in Section 5 of these representations), and Vistry consider that the level of growth directed to Albrighton will not allow it to respond to existing issues in affordability, social structures, first-time buyer affordability, and more significantly, will prevent the village from being able to provide sustainably located new housing within close proximity to the significant employment development at RAF Cosford and the wider M54 growth corridor. 3.18 In light of the above and our response to Policy S1 and S21 below, a greater quantum of growth should be directed to Albrighton to ensure the LPR is positively prepared, effective and justified. Vistry's site to the west of Newport Road can make a significant contribution to this, as well as the wider county's housing needs. The Vision Framework (enclosed at Appendix 1) demonstrates that the land east of Newport Road, Albrighton is sustainable, deliverable and appropriate for release from the Green Belt to provide around 218 dwellings (market and affordable) and public open space. The Vision Framework demonstrates that the site could deliver new homes in a sensitive and highly responsive manner to the local context and character, including significant green infrastructure which will link into the existing Donnington and Albrighton Local Nature Reserve, creating an attractive place where people will want to live, and a new northern gateway to Albrighton. The site has been previously promoted through the Site Allocation and Management of Development Plan (SAMDev), and more recently the Issues and Strategic Options Paper in March 2017, the consultation on preferred scale and distribution of development in December 2017 and consultation on the preferred sites in April 2019. The site is located to the east of Newport Road, adjacent to the existing built up area of Albrighton. It is bounded by Newport Road to the west, the railway to the north and Rectory Road to the east. Sandy Lane runs through the northern area of the site connecting Newport Road to Rectory Road, although in part it is an unmade track. The site's peripheral boundaries and the internal field boundaries are formed by maintained native hedgerows. The Albrighton and Donnington Local Nature Reserve lies directly to the south of the site set within a small, shallow wooded valley. It contains a historic pool, Willow Carr woodland, a series of ponds and informal pathways running through areas of woodland and meadow. The whole site is located within the West Midlands Green Belt. The site is located adjacent to the Albrighton and Donnington Conservation Area which includes St Cuthbert's Parish Church, St Mary Magdalene Church, St Cuthbert's Well, Albrighton Pool and the Old Rectory. Both churches are grade II* listed buildings. Albrighton is a very sustainable location for housing growth with a wide range of local shops, restaurants, facilities and services as detailed within the 'Technical review of the need for new homes in Albrighton' report enclosed at Appendix 2 which has been prepared by Turley. These services and facilities are mainly centred on the High Street and can be easily reached by foot and cycle. Albrighton has very good public transport services. There are currently three bus services which serve Albrighton, providing frequent services to local higher order settlements including Telford and Wolverhampton. All three services run along the site boundary with Newport Road and serve the existing stops near to Worthington Drive. Albrighton and Cosford train stations are both within walking and cycling distance of the site (1.3km and 0.9km away respectively). Both stations are served by West Midland services which operate hourly, between Birmingham, Wolverhampton, Telford and Shrewsbury. Policy S1.1: Development Strategy, Albrighton Key Centre 5.1 As set out throughout these representations, it is right that Policy S1.1 recognises the importance of the strategic allocation of RAF Cosford, and the associated opportunities which this brings, although consider that the full extent of these opportunities has been missed. 5.2 Moreover, as set out in response to Policy SP2, the Draft Plan fails to recognise the inherent sustainability of Albrighton and years of suppressed housing growth which have led to an ageing population, rising housing prices outstripping the Shropshire average, and an inability for first-time buyers to get onto the housing market. 5.3 Vistry consider that these matters require a considered response to respond to both the historic under provision of housing and the opportunities which RAF Cosford proposes through new housing allocations and identification of safeguarded land including sustainable and deliverable sites such as land to the east of Newport Road which Vistry are promoting. Schedule S1.1 (parts i & ii) Residential Allocations and Safeguarded Land 5.4 Notwithstanding wider comments on the need for more housing growth to be directed to Albrighton, when considering the proposed allocation and land identified for safeguarding, Vistry do not agree that the sites identified are the most sustainable as well as having deliverability concern.
A2321B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	The preferred housing allocation at ALB017 adjoins the existing allocation 'ALB1' of the BDL. ALB017 would need to take access from Kingswood Road, given that Beamish Lane to the east of the site is a single track road. The Council's Strategic Land Availability Assessment (SLAA) (Site Assessments: Albrighton Place Plan Area) (SLAA) dated November 2018 identifies "concerns related to the bend in Kingswood Road" and identifies that development of ALB017 should consider the provision of a roundabout junction into this parcel to resolve the access issues.
A2321B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	5.13 Site ALB021 adjoins proposed allocation ALB017 and is bound by the railway to the north and A41 to the east with Beamish Lane to the south east. The SLAA is clear that site ALB021 cannot be accessed from Beamish Lane (a single track road) without significant improvements and goes on to identify that there is a need to consider the capacity of the A41 / Beamish Lane junction with consideration of whether it should be closed. Therefore by admission in the SLAA, ALB021 can only be developed in conjunction with ALB017 and will be wholly reliant upon ALB017 for access into the site. As a result, any delays in the delivery of ALB017 will have an impact upon ALB021. In addition to our concerns relating to the access into ALB017 and ALB021, the SLAA identifies that ALB017 should seek to link to the existing undelivered allocation to the west to facilitate sustainable travel means into the village centre. 5.14 ALB021 (which is approx. 1ha in size), is heavily constrained by the railway and A41 to the north and east, an ecological corridor to the north, and a number of mature hedgerow and trees on site which are likely to limit the net developable area on site. 5.15 The Council's SLAA identifies that site ALB017 has an accessibility rating of 11 / 24 (based upon accessibility to Primary School, GP surgery, convenience store and public transport). Site ALB021 scores 15 / 24, yet it is further away from services and facilities than ALB017 and is reliant upon ALB017 for its access. The SLAA does not explain the methodology behind this assessment of accessibility. Vistry has reviewed the scoring for a number of other sites and it appears a higher score indicates better accessibility and sustainability. Vistry contend that ALB021 cannot be assumed to be accessible to services and facilities given its location, isolated from the village centre and reliant upon ALB017 for access. In any event, it certainly cannot be scored as being more sustainable than ALB017 and this inconsistency should be amended. 5.16 Given the well evidenced deliverability issues with existing allocation ALB1, Vistry strongly object to the Council's preferred direction of growth to the east of the village, which is heavily reliant upon an existing allocation which has not delivered any meaningful residential development within the fourteen years which it has been allocated. In addition, similarly to the existing allocation, there is no evidence the site is controlled by a housebuilder or promoter with a track record for delivery. The proposed allocations at ALB017 and ALB021 therefore represent a significant risk to the delivery of Albrighton and the wider County's housing needs. They are neither justified nor positive prepared.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2321B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>5.17 In addition to the above, Vistry is concerned that proposed safeguarded site P35 will significantly alter the form and character of Albrighton. The site is on the periphery of the village and any development will materially change gateway views on a key approach route into the village, impacting upon the setting of the Albrighton Conservation Area, within which part of the site is located within. The Council's Green Belt Assessment (September 2017), assesses a wider parcel of land to the south and east of Albrighton which includes P35. In the assessment of this parcel, it is considered that the Green Belt in this location is relatively open "with the openness of the land playing a major role in its setting". Indeed the Green Belt Assessment considers that "the openness of the land within the parcel is considered to contribute positively to the historic significance of Albrighton and to its special character".</p> <p>5.18 The topography of P35 plays an important role in enclosing the village from the surrounding countryside. Development here would be prominent on the rising slope when approaching Albrighton along Kingswood Road from the southeast. Works to High House Lane or Kingswood Road necessary for development would adversely affect their rural character, views experienced from them, and is likely to result in the loss of mature vegetation.</p> <p>5.19 In addition the gross site area identified within Site P35 (some 6.3ha) includes approximately 14 existing dwellings in separate land ownership to the wider site. It is not clear if these dwellings would form part of any future development at the site, should it come forward following its removal from the Green Belt.</p> <p>5.20 Furthermore, the Council's SA is overly simplistic in respect to the proposed safeguarded sites and does not provide a robust appraisal of accessibility. The SA fails to consider sustainable travel options of bus and train and instead focuses on a simplistic approach of access to specified facilities (primary school, GP surgery, library, leisure centre, children's playground, outdoor sports facility, amenity green space and accessible natural green space).</p> <p>5.21 For example, the SA identifies that site P35 is within 480m of a Primary School, GP Surgery, Library, Leisure Centre and Outdoor Sports Facility. This is not correct. Using the Council's methodology of measuring a straight line from the boundary of the site, the distances are:</p> <ul style="list-style-type: none"> • Primary School, 510m; • GP Surgery, 650m; and • Library, 980m. <p>5.22 When the actual walking / cycling distances are considered, the distances are all well in excess of 1km from the site. The straight line distances used by the SA are therefore not a robust measure of a site's sustainability. In addition, it is not just length of route which should be considered, but also its quality. Site P35 is disconnected from Albrighton and there are currently no safe routes for pedestrians to access the facilities of the town or public transport facilities.</p> <p>5.23 Vistry therefore consider that the site should remain in the Green Belt given the adverse impacts it would have upon the setting of Albrighton and the Albrighton Conservation Area. In addition, even if the Council were to release this site from the Green Belt, it is considered that the actual contribution the site would ultimately make to the Council's supply of housing should it be allocated at any point, would be minimal.</p>
A2409B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>The Local Plan proposals provide for an additional 165 houses on land to the east of the existing developments approved to the north of Kingswood Road plus 30 to the north of Beamish Lane and a further allowance for windfall development during the plan period. In addition it is proposed that further land between Kingswood Road and the A41, between the railway line and A41 be released from the Green Belt for future development together with the area south of Cross Road between Newhouse Lane and Patshull Road which was approved some years ago by the Parish Council and Bridgnorth District Council but rejected by the Secretary of State in favour of the existing development off Kingswood Road. It is recommended that the Council raises no objections to the above proposals. There is concern that there is little reference in the Local Plan to the infrastructure requirements which will arise from the developments referred to above apart from a mention of priorities identified in the Albrighton Place Plan and to the need for a roundabout in Kingswood Road at the access point to the development to the north which appears to have been overlooked. In particular, apart from a brief reference to the existence of areas flood risk, there is no reference to any proposals for flood defence measures apart from a brief statement that there will be sustainable drainage within the site and that "water measures must not displace water elsewhere". There is also no reference to the need to alleviate local parking problems apart from a statement that the residential allocation east of Shaw Lane will "help provide additional parking in the vicinity of Albrighton railway station" which now seems to be increasingly unlikely. Although there is no proposal for employment land development at Albrighton within the Local Plan Review there is reason for concern that "the need for additional employment land will be assessed in the context of proposals for the development of a strategic development site in the M54 corridor which will be addressed within a future stage of consultation. Strategic Site Policy – RAF Cosford</p> <p>The only contentious issue relating to developments proposed for RAF Cosford, most of which are to be welcomed, is the proposal for release of 36 acres of land bounded by the railway line in the south, Neachley Lane in the east, woodland in the west and agricultural land in the north for provision of a headquarters for the West Midlands Air Ambulance Charity. While the development of this headquarters is to be welcomed it is not understood why it would require 36 acres which is roughly the same size as the whole of the officers' married quarters, officer's mess and sergeant's mess to the east of the A41 or the area which accommodates all of the hangars and the main museum building on the airfield.</p>
A2409B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>This statement in 5.15 is not correct:- "Recognising the relationship between Albrighton and the nearby Strategic Site at RAF Cosford, with many employees and personnel based at RAF Cosford choosing to live in Albrighton and/or use the facilities within the settlement and certain facilities at RAF Cosford being available for residents of Albrighton, new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site. "...certain facilities at RAF Cosford are NOT available for residents of Albrighton..."</p>
A2409B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>There is no reference to the need to alleviate local parking problems apart from a statement that the residential allocation east of Shaw Lane will "help provide additional parking in the vicinity of Albrighton railway station" which now seems to be increasingly unlikely. There is a need for SC to commission an independent Professional Comprehensive Review of Traffic Issues in Albrighton and District. This is an urgent matter and this request is strongly supported by residents and Albrighton Parish Council</p>
A2409B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>Over the last 15 years Albrighton Village has suffered several flooding events resulting in properties being damaged to a point where residents have had to leave their homes to allow repairs etc to be carried out. During these events the village also gets isolated with Surface water and Highway Drainage causing flooding under both of the Railway Bridges on Station Road and Newport Road.</p> <p>As a result of recent investigations (including Section 19 report re May 2018 event) it has been established that the main causes of flooding are Surface Water, Ground Water, associated saturated land, and topography of the village. These three factors combine to surcharge completely the current drainage infrastructure resulting in excess water flooding properties. Clearly this needs to be given careful consideration in future developments and in particular make sure that any studies are carried out independently rather than being led by the developers representatives.</p> <p>A local community led flood action group has been working with all the main agencies and whilst some mitigation of risk has been made progress is very slow.</p> <p>In the SC Plan there is very little reference to flood mitigation apart from in Schedule 51.1 (i) where it mentions water management measures in relation to development ALBO17 and O21.</p> <p>The SC Plan for Albrighton needs to recognise the critical nature of effective management of surface water and ground water during storm events to minimise risk of property flooding There also needs to be an acceptance that climate change is producing more isolated storm events and that housing numbers should be based on this. Climate change needs to be an integral part of the planning process to ensure any future development puts in place the right level of infrastructure to manage today's storm events with enough spare capacity to manage predicted future climate change storms, its not clear in the SC plan as to whether future developments will implement water management infrastructure based purely on the predicted life of the development or in actual fact on say 100+ years? Within the SC plan there should be some more specific reference to effective, future proofed water management and flood prevention. By way of example below are a few recommendations of what should be included:</p> <p>An independent flood risk and outline drainage plan needs to be carried out which is holistic in approach and considers more than just the development. The flood risk investigation must consider three main aspects, modelling, local resident or community group knowledge, and other forms of evidence e.g. water table height . Modelling alone rarely leads to an accurate assessment.</p> <p>An explicit reference to consideration of impact of any future development on Riparian ownership. This is particularly relevant when SUDS discharges into a watercourse that runs adjacent to properties.</p> <p>Local planning authorities to ensure that appropriate professional expertise (including local expertise) is involved early enough in the process to ensure the right decisions are made in particular where there are known surface water, ground water, and flooding issues.</p> <p>One final point there doesn't appear to be any reference to "Rain Water harvesting" on future developments? This clearly would help in places like Albrighton.</p>
A2409B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy CS5 states that limited defence related development will be permitted, SAMDev policy MD6 not only permits additional development for military uses, but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MoD at RAF, but also that required for the Museum and the proposed Aviation Academy..</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities, there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the future.</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MD6 in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military, museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future development proposals to those specifically stated in the Plan, proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that "economic growth and investment will be supported in...strategic sites"; "windfall Class B employment development... will be supported... if located on a Strategic Site"; "the Council's objective is to prioritise significant new development into ...identified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a "significant location in the Shropshire Green Belt" in respect of two of these corridors.</p> <p>1.9 The Plan also states that "Shropshire Economic Growth Strategy seeks to promote a 'step change' in the capacity and productivity of the local economy. The 'strategic corridors' have the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified 'Strategic Sites' at RAF Cosford ...".</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at...RAF Cosford...". And "future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt"; "new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non-site related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of I54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt..</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site, refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p> <p>2.3 It is noted that there was no mention in the Strategic Sites consultation response summary that any comment had been received from MAAC regarding a new site. No indication or evidence has been published as to when MAAC submitted details that led to Shropshire Council allocating this site subsequent to the Strategic Site</p>

A2413B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S1 Albrighton Place Plan Area	Disagree	Over the last 15 years Albrighton Village has suffered several flooding events resulting in properties being damaged to a point where residents have had to leave their homes to allow repairs etc to be carried out. During these events the village also gets isolated with Surface water and Highway Drainage causing flooding under both of the Railway Bridges on Station Road and Newport Road. As a result of recent investigations (including Section 19 report re May 2018 event) it has been established that the main causes of flooding are Surface Water, Ground Water, associated saturated land, and topography of the village. These three factors combine to surcharge completely the current drainage infrastructure resulting in excess water flooding properties. Clearly this needs to be given careful consideration in future developments and in particular make sure that any studies are carried out independently rather than being led by the developers representatives. A local community led flood action group has been working with all the main agencies and whilst some mitigation of risk has been made progress is very slow. In the SC Plan there is very little reference to flood mitigation apart from in Schedule S1.1 (i) where it mentions water management measures in relation to development ALB017 and 021. The SC Plan for Albrighton needs to recognise the critical nature of effective management of surface water and ground water during storm events to minimise risk of property flooding. There also needs to be an acceptance that climate change is producing more isolated storm events and that housing numbers should be based on this. Climate change needs to be an integral part of the planning process to ensure any future development puts in place the right level of infrastructure to manage today's storm events with enough spare capacity to manage predicted future climate change storms, It's not clear in the SC plan as to whether future developments will implement water management infrastructure based purely on the predicted life of the development or in actual fact on say 100+years ? Within the SC plan there should be some more specific reference to effective, future proofed water management and flood prevention. By way of example below are a few recommendations of what should be included: An independent flood risk and outline drainage plan needs to be carried out which is holistic in approach and considers more than just the development. The flood risk investigation must consider three main aspects, modelling, local resident or community group knowledge, and other forms of evidence e.g. water table height . Modelling alone rarely leads to an accurate assessment. An explicit reference to consideration of impact of any future development on Riparian ownership. This is particularly relevant when SuDS discharges into a watercourse that runs adjacent to properties. Local planning authorities to ensure that appropriate professional expertise (including local expertise) is involved early enough in the process to ensure the right decisions are made in particular where there are known surface water, ground water, and flooding issues. One final point there doesn't appear to be any reference to "Rain Water harvesting" on future developments? This clearly would help in places like Albrighton.
A0003B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Within Lydbury North Community Cluster the best land for affordable housing not put forward.
A0007B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Whilst not opposed to development, farmer needs access for livestock to have safe DAILY access to get from field to yard, the ONLY alternative route which is unsafe is 'higher up at the Whittery junction which would be incredibly hazardous to both cars, lorries and the livestock being moved.' Asks that planners preserve the current safe access via fields, safely crossing road straight into yard.
A0027B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Site BKL008a local objection to site but support for site at old timber and coal yard
A0055B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	In SAMDev Bucknell agreed to be a hub and accept up to 100 new dwellings by 2026 mainly on the former coal yard area. Mr Nutting assured us during the Bucknell Parish Council meeting on 11/9/2018 that until the above brownfield sites and any other 'windfall sites' had been delivered, no other sites would be considered. He also assured us that the Wishes of the villagers are paramount. Site BLK008a is not supported. Myself and other residents are therefore appalled that comments conveyed in 2018/9 have been totally ignored and our trust in Shropshire Council has therefore been seriously undermined. I have been assured that Parish Council previous comments still stand, i.e. that the brown field site must come first in any development of the village and site Buck 008a must now be excluded from the latest Local Plan revision as per the wishes of the village.. Please respect the views of Bucknell residents and remove site BKL008A from the Local Plan Revision now
A0055B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Duplicate of A0055B1
A0102B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Limited employment opportunities in Bucknell, should not build on greenfield or AONB, dangerous blind corners at the site
A0102B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The housing guideline/site guideline for Bucknell is too large. There are no employment opportunities for the new houses. The brownfield site should be extended, there should be no build on green belt or AONB.
A0111B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	No comments other than confirmation site viable and deliverable
A0118B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area		Newcastle on Clun Parish would like to "opt in" the village of Newcastle and also Whitcott Keysett as a 'cluster settlement' in the Local Plan. Newcastle functions as a 'hub' for the area west of Clun with its pub, school, community centre and church and there are locations where renewal of permissions have been refused.
A0127B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Support sustainable housing but not the site identified. The Timber Yard (brownfield site) should be developed first not this greenfield land. We need to focus on more sustainable solutions - the village has been drastically affected by flooding this year and there are increased threats to biodiversity and climate change.
A0169B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to greenfield development in the village of Bucknell (BKL008a). Any development should be on brownfield sites (including BUCK001 the current SAMDev allocation). This is particularly important given the current climate crisis Native hedgerows should be planted and existing ones protected. The rate of development proposed in Bucknell is too high and would equate to a 30% increase in the size of the village. Views of local residents have been ignored. In the past, the Parish Council agreed to be a Community Hub subject to determining the location of development, this is no longer the case
A0184B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Site is not suitable. The road crossing is dangerous, even with a pelican crossing. The B4386 adjacent floods. Footpaths are inadequate and difficult to change. The site is at the edge of the village and more isolated from facilities that WBR010.
A0184B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	Prefer this site to WBR007 & WBR008. Its closer to services and facilities, is a more natural infill and will provide residents with a more pleasant view.
A0233B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	CHR001 site is deliverable and available. It is a natural extension to the built form of Chirbury village hub. It will be the gateway to the village and good design will be expected from the landowner. Chirbury Village is in need of more housing in order to support the various business and other enterprises of the settlement hub, not least the church, pub, village shop and post office, the school, the nursery and all other local business

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0233B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area		CHR002 site is deliverable and available. It is a natural extension to the built form of Chirbury village hub. It will be the gateway to the village and good design will be expected from the landowner. Chirbury Village is in need of more housing in order to support the various business and other enterprises of the settlement hub, not least the church, pub, village shop and post office, the school, the nursery and all other local business. However unimplemented consented residential building plot (18/00497/OUT) immediately adjacent to the north/west between CHR002 and the village ought to be included within the Local Plan Allocation of CHR002 in case the current planning consent lapses.
A0259B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	There is a need for 2 and 3 bedroom housing for families, however 25 properties would cause a negative visual impact on the landscape. Poor roads in the village to access services. WBR010 is situated at the top of a field that drains down towards Millstream and Worthen Brook.. There are ongoing drainage issues with Worthen Brook which continues to flood. Further properties on WBR010 will exacerbate the situation. This inadequate sewage system will not be able to cope with another 55 properties. WBR010 would be intrusive and would have an adverse visual impact particularly because of the sites elevation. Site would affect wildlife. The consultation process is unfair and flawed due to Covid and people being unable to attend meetings or do not have the facility to complete your paperwork online or print out the forms for completion.
A0273B2	Viability and Deliverability of Proposed Site	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	From the demand that we have had we consider that the site could be delivered within the short term (2021/20214/2025) period.
A0317B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Housing numbers are fine, but may be issues with safe pedestrian access to site and nearby facilities and affordable houses
A0317B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Principle of housing here is fine. But safe pedestrian access from the site to all the village facilities is problematical, houses need to be affordable, there are sewage issues, new houses should be in-keeping with the existing properties.
A0327B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Development of all 3 sites, WBR007, WBR008 and WBR010 would result in a significant over development of the village for the faculties that the village has. The lack of pavement provision in that area of the village (WBR010) would reduce the safety of pedestrians in that part of the village, coupled with no current provision of safe crossing to places such as the school and doctors surgery. The number of proposed housing would impact on the already inadequate sewage provision in the village and the site already has a flooding issue to it nearby. If the land is allocated for development then there will be far more houses developed on the site than those specified which is unacceptable on many fronts including safety and a strain on local amenities and services. If development in WBR007/8 goes ahead plus infill in Worthen AND Brockton, then that would be adequate for the village to take. If there is going to be any development in Worthen this is the preferred site as long as there is provision in the plan for improved vehicular access (not out onto the double blind bend off Back Lane) and a significant improvement in the footpath provision for pedestrian safety through the village, with additional traffic calming measures.
A0472B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to BKL008a land adjoining Redlake Meadow as it is outside the current development boundary in the countryside adjoining Bucknell. Development of BKL008a will be a precedent for extending the village into the countryside to provide new housing. It is accepted that Bucknell is a Community Hub but the preferred development option is to further extend the existing proposed development at the Timber Yard (from 70 dwellings to 90 dwellings). This site is located on the southern edge of the village and the development will address the contamination on the site and create a better gateway feature for Bucknell. There is a need to address the service capacity constraints in the village and to respect the landscape setting of Bucknell, partially within the AONB. The willingness of Social Landlords to dispose of affordable homes in Bucknell to fund investments in larger settlements will result in a never ending cycle of developing affordable homes in Bucknell.
A0491B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Development of this site combined with other expands village by 1/3, changing its character. There is no pavement from this site, the road floods, it is dangerous and additional traffic will not help. Expansion of the village will increase demand for a new doctor's surgery. Parking for the school is already dangerous. Pavements are inadequate. Hardstanding on this site will exacerbate existing flood problems. The sewage treatment plant does not have capacity. The bus service does not allow people to get to work for 9am in Shrewsbury so this development will increase car use. This site is inappropriate - we need housing for families who would support the local community.
A0491B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Development of this site combined with other expands village by 1/3, changing its character. There is no pavement from this site, the road floods, it is dangerous and additional traffic will not help. Expansion of the village will increase demand for a new doctor's surgery. Parking for the school is already dangerous. Pavements are inadequate. Hardstanding on this site will exacerbate existing flood problems. The sewage treatment plant does not have capacity. The bus service does not allow people to get to work for 9am in Shrewsbury so this development will increase car use. This site is inappropriate - we need housing for families who would support the local community.
A0551B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to development on this site. The Old Timber Yard should be developed instead.
A0565B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Worthen needs more housing but there are issues with these sites. 2-3 bedroomed houses are needed to support the school, pub shop village hall church and doctors. But road safety in Worthen is poor and narrow footpaths and fast vehicles and a blind corner at the junction of back lane onto the B4386 are an issue. The high density of housing proposed is also an issue because Worthen has problems with capacity of sewerage. Large houses are not needed. A roundabout to slow traffic and improvements to sewerage capacity and narrow footpaths are also needed
A0565B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Amount of housing proposed for site is too much for the village and would create problems for sewerage capacity. Footpaths through the village are narrow and speeding traffic makes pedestrian safety an issue. New developments in the village should be starter homes, 2-3 bed homes or bungalows not large 4-5 bed properties
A0569B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Worthen needs more housing but there are issues with these sites. 2-3 bedroomed houses are needed to support the school, pub shop village hall church and doctors. But road safety in Worthen is poor and narrow footpaths and fast vehicles and a blind corner at the junction of back lane onto the B4386 are an issue. The high density of housing proposed is also an issue because Worthen has problems with capacity of sewerage. Large houses are not needed. A roundabout to slow traffic and improvements to sewerage capacity and narrow footpaths are also needed
A0569B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Site previously been turned down for housing development; against linear layout of the village; sewerage capacity in village can't cope; sets precedent for further development; pavements are narrow and unsafe; environmental issues shouldn't be overlooked. Flooding is also an issue on the site and surrounding area. Concern consultation took place during Covid restrictions so community discussion on sites wasn't possible
A0592B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Total of 55 houses is too big for this small community; access from Back Lane is poor; improved pavements and crossings on the B4386 are essential if there was increased traffic movement in the village; space and gardens are important especially since the Covid outbreak - 55 houses on these sites would be over crowded and more green space is needed; concern about increase in flood risk if the site is developed
A0592B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	75 homes on this site is far too many especially if WBR007 and WBR008 are also developed
A0597B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The site has already been turned down for development by Shropshire Council and the planning inspector; The size of the site should be reduced; there is a major issue with sewerage drainage in the village which should be addressed before new development is allowed; B4386 is a dangerous road with HGV's, farm traffic and has narrow pavements so pedestrian safety is an issue. New development would add to traffic issues. We, like other residents are not against new homes but feel they should be on smaller scale sites and focused on bungalows, starter homes and small family homes
A0597B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	If site is allocated the following issues need to be addressed - flooding on main road needs to be looked at; traffic calming in main road and especially at the junction to Aston Rogers; a safe crossing for pedestrians needs to be developed in the village; the original 30 homes designated to the site seems sensible but increasing to 55 will make it difficult for the village to absorb these and there will be an impact on local infrastructure
A0604B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Concerned at the extension of the village envelope to include green belt land for housing. Full use of brownfield sites near the station is much more sensible. Priority should be given for housing for local young people so that a more balanced demographic is obtained for the village. Concerned previous consultations with local people have been ignored regarding housing numbers.
A0608B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Planning Permission has previously been refused on WBR010 as it was considered out of character with that part of the village The extent of the site is such that it could be of a scale that significantly increase the size of the village with all of the associated sustainability, environmental and infrastructure issues. It is located on a busy road without a pedestrian crossing - there has been one fatality several near misses on the village road. There would be a need to provide substantial safe pedestrian pavements to access local amenities including the school, doctors, shop and pub. Lack of public transport means more cars/traffic which is not environmentally friendly. There is a need for 2 to 3 bedroom affordable housing in this area. The area is prone to flooding and sewage issues, development of WBR010 may add to this issue. There are existing parking issues outside the school at drop-off/pick-up time, associated road safety factors will be added to.
A0608B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The initial allocation of 30 dwellings seemed reasonable compared to the existing 148 dwellings. However, this has now increased to 55 dwellings, which is a lot for an area of this size, given its existing services, infrastructure and communication links Need for 2 to 3 bedroom affordable housing in this area. It is located on a busy road without a pedestrian crossing - there has been one fatality several near misses on the village road. There would be a need to provide pedestrian access to local amenities including the school, doctors, shop and pub. Lack of public transport means more cars/traffic which is not environmentally friendly. There is a need for 2 to 3 bedroom affordable housing in this area. The area is prone to flooding and sewage issues, development of WBR010 may add to this issue. There are existing parking issues outside the school at drop-off/pick-up time, associated road safety factors will be added to.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0610B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Planning Permission has previously been refused on WBR010 as it was considered out of character with that part of the village The extent of the site is such that it could be of a scale that significantly increase the size of the village with all of the associated sustainability, environmental and infrastructure issues. Lack of public transport means more cars/traffic which is not environmentally friendly. There is a need for 2 to 3 bedroom affordable housing in this area. The area is prone to flooding and sewage issues, development of WBR010 may add to this issue. There are existing parking issues outside the school at drop-off/pick-up time, associated road safety factors will be added to.
A0610B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The initial allocation of 30 dwellings seemed reasonable compared to the existing 148 dwellings. However, this has now increased to 55 dwellings, which is a lot for an area of this size, given its existing services, infrastructure and communication links Need for 2 to 3 bedroom affordable housing in this area. It is located on a busy road without a pedestrian crossing - there has been one fatality several near misses on the village road. There would be a need to provide pedestrian access to local amenities including the school, doctors, shop and pub. Lack of public transport means more cars/traffic which is not environmentally friendly. There is a need for 2 to 3 bedroom affordable housing in this area. The area is prone to flooding and sewage issues, development of WBR010 may add to this issue. There are existing parking issues outside the school at drop-off/pick-up time, associated road safety factors will be added to.
A0612B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Opposes allocation of the two sites, reasons given - Planning application previously refused on the site; there are pre existing issues with sewerage and waste water in Worthen and this development would increase pressure on the system; pavements through Worthen are narrow and traffic is fast flowing - safety of pedestrians from new properties walking to services would be an issue; traffic volume through the village will increase as a results of the development. Not against new housing but needs to be on a smaller scale with more delivery for local need and affordability
A0618B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Objects: Site won't provide 2-3 bedroomed homes needed; access issues are a problem due to narrow roads in Worthen with high-volume of speeding traffic next to narrow footpaths; flooding on and near the site is an issue along with sewerage capacity in the village. Density of development on these sites is too much
A0618B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Community recognises need for new homes but not to this scale and need more affordable and smaller 2-3 bedroomed homes; Roads in the village are narrow and speeding traffic is an issue so has concerns about pedestrian safety and junction s onto the main road will be dangerous; run off water and sewerage issues exist inn this area and development will put a strain on already struggling services
A0619B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Whilst there is a need for development in Worthen the scale of this development is too big for the village, and will make it difficult to absorb this number of people into the community. Additionally there are problems with speeding traffic and narrow pavements through the village which makes safe access to shops and services unsafe for pedestrians. The road where this development is located also floods and development would add to this problem
A0619B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Obviously some housing is needed to continue to maintain the numbers of people in the village to allow the school, doctor's, pub, shop, village hall and pub to thrive, but the scale of this development would be too much for the village to absorb. I am also concerned the site won't deliver homes we need such as 2-3 bedroom and starter homes. The development would also generate more traffic in the village where speeding is an issue, and narrow pavements make pedestrian safety an issue. Traffic calming safe crossing places would be needed to help people walk to school, shop and medical practice. The area also has issues with the sewerage system which would need significant capacity increase to address the issue. Safety and environmental issues should not be overlooked
A0631B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	The Hereford Diocesan Board of Finance supports the inclusion of land (orchard and garden) to the west of The Vicarage, Vicarage Road, Clun (CLU003), together with land south of The Vicarage, Clun (CLU004) within the village's proposed development boundary.
A0680B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	In early 2019 Shropshire Council held a local election with intention of creating a 'HUB' combining Worthen & Brockton, (a Local Government Classification, with no obvious local advantage), despite the fact that these remain 2 distinct separate villages with little demographically or visually in common. The two local communities voted a majority at the time to reject the Council's 'Hub' jurisdiction over them as not being in the best interests of the residents of either. Shropshire Council, however, chose to ignore the result of the poll, rendering the referendum pointless, and instituted a 'HUB' status - fait accompli for Worthen/Brockton, and also including two pre-acquired housing development land sites - WBR007/8 and WBR010 (previously subject to the planning application 14/00398/out - inspector refusal, and then on appeal, refused again!). There is quite clearly no mandate here for a Hub or any intended development of 55+(why?) houses, so when the Council offers their 'Open Market' opportunity to any outside developers' housing schemes, - the bigger, far more profitable 4/5 bed luxury properties will benefit just those developers. These types are irrelevant white elephants in these villages. Unsuitable and unaffordable for local people who specifically need 2/3 bed family homes. - Or they might just throw max bricks and mortar into the spaces for the greatest return per hectare. We'd soon find out! Needless to say, there has been no consultation with the Parish Council or the local community on what number, architectural style, size or landscape design of any such new properties. Local residents will have no say in what happens in their 'backyard'. Just what some speculative developer thinks he can get away with! This would be a completely unacceptable disregard of local democracy! This now shows all the characteristics of local government intervention by diktat, tuckbox driven, little concerned with local issues or well-established community requirements. Worthen has remained a neglected South Shropshire village for many years. Still no mains gas supply, broadband pathetically slow, roads poorly maintained, traffic speeding uncontrolled, footpaths dangerously narrow, major flooding issues annually (including raw sewage in gardens,) - Situations that should have been addressed years ago by Shropshire general maintenance protocols. As of September 2020 Worthen requires no more than 30 new 2/3 bed family homes. (there are still numerous village properties for sale, but unsold for months). A compact rural community, the last thing Worthen needs now is the addition of two inappropriate developer driven mass-housing suburban style cracker box estates, or mini stockbroker piles, drawn up far away, just to fulfil a Shropshire Local Plan quota! Shropshire Council, please reconsider the quite disproportionate scale of your Local Plan as currently scheduled to be imposed uncontested on Worthen.
A0704B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to the increase in the housing guideline for Bucknell to 110 dwellings from 100 dwellings in the SAMDev Plan.
A0704B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to BKL008a land adjoining Redlake Meadow because this is a greenfield site. The suggested footway from the proposed new development into Redlake Meadow will affect the amenity and safety of existing residents. Provision of a new highway access onto the B4367 will increase existing safety issues on the B4367 and at the existing junctions and river bridge. It was agreed the preferred site for new housing is the brownfield Timber Yard, adjoining the B4367 on the southern edge of the village, currently proposed for 70 new homes. These proposals are worrying in relation to the government proposals to change the planning system in England (see attachment) to relax the need for planning permission for new housing .
A0707B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to WBR007 and WBR008 because rural land should not be used for large scale housing. Farmers should be encouraged / subsidised to keep land in food production.
A0707B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Object to WBR010 for the following reasons: proposed number of houses does not respect the rural character of the village, circumstances have not changed since the recent refusal of applications to develop in the village, build on brownfield sites to improve accessibility between work and home and reserve farm land for food production.
A0829B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	We need affordable housing for local people in Brockton at the junction adjacent to Brockton Hall. The farmhouse and yard would be an infill providing a terrace and avoiding the need to build on greenfield land. The roads are not good enough to accommodate additional traffic in Worthen and Brockton and the road to Shrewsbury is dangerous. The allocation of 30% more houses in a small village is too much.
A0850B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	concerns - Narrow footpath along main road, more traffic and large lorries, motorists ignore the 30 mph signs and parked cars by the school. The number oh houses proposes would change the character of the beautiful village and make the sewage problem worse
A0886B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Against allocation of three sites in Worthen; reasons given are - scale of development is inappropriate for a village of Worthens size; the lack of adequate footpath provision through Worthen will make accessing services by foot unsuitable, making people reliant on cars; traffic speed and volume through the village is an issue and impacts on peoples ability to use roadside pavements. Its is essential that if permission is given for these sites that the developer provides adequate and convenient footpath provision is secured to service existing residents and the proposed village growth. Where housing is developed a supply of smaller affordable properties available to local people is essential
A0887B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Against allocation of three sites in Worthen; reasons given are - scale of development is inappropriate for a village of Worthens size; the lack of adequate footpath provision through Worthen will make accessing services by foot unsuitable, making people reliant on cars; traffic speed and volume through the village is an issue and impacts on peoples ability to use roadside pavements. Its is essential that if permission is given for these sites that the developer provides adequate and convenient footpath provision is secured to service existing residents and the proposed village growth. Where housing is developed a supply of smaller affordable properties available to local people is essential
A0908B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	BUCK001 is a site for 70 dwellings. This allocation is supported. Site BUCK001 was allocated for development in the SAMDev Plan - and despite a planning application having been under consideration for seven years, planning permission has not yet been issued because of the restrictions imposed by the situation relating to the water quality in the River Clun. It is clear that the development at Bucknell is going to make very little difference to the water quality in the River Clun, and a much greater effort ought to be made by the public authorities involved to come up with a workable solution to the River Clun rather than clinging to an unsatisfactory status quo that is of no advantage to anyone.
A0914B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Agree with the designation of Clun as a community hub within the Bishop's Castle Place Plan area. But disagree with the development guideline of 95 dwellings in the settlement and the reliance on small scale windfall development to meet this requirement. The level of growth identified for Clun, together with a significant reliance on windfall development, is therefore considered inappropriate given the role of the settlement and its unique natural and historic built environment. Given the above, it is contended that our client's site (Clun Garage) should be allocated for residential development, with a potential site capacity of 9 dwellings. A current planning application has been submitted for this development (ref. 18/05270/FUL) which is supported by the Council subject to a section 106 agreement relating to the provision of Affordable Housing (a site plan is attached which illustrates how 9 dwellings will be accommodated on site). The allocation of this site would result in a greater level of certainty that the growth needs of the settlement and surrounding hinterland, and therefore the aims and objectives of the Plan, will be met over the Plan period. In addition, the site's redevelopment will provide significant benefits, including enhancing the character and appearance of Clun's built environment.
A0914B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Clun as a Hub settlement accords with the Local Plan's vision in this regard, given Clun's historic significance and role as a service centre for a wide rural hinterland. Nonetheless, we consider part 2 of Policy SP2 undermines its own aims to meet the county's needs because its proposals for only 1,400 dwellings per annum amounts to a reduction in the amount of housing in the adopted Core Strategy, which plans for 1,530 dwellings per annum from 2021. There is a danger that the Plan will fail to be consistent with the National Planning Policy Framework, specifically the requirement in paragraph 60 to determine the minimum number of homes needed using the standard method in national planning guidance. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038. The above change to policy SP2 should be reflected in the Community Hub policies, including policy S2.2 in relation to Clun, which can accommodate a higher residential guideline figure

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0914B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Agree with the designation of Clun as a community hub within the Bishop's Castle Place Plan area. But disagree with the development guideline of 95 dwellings in the settlement and the reliance on small scale windfall development to meet this requirement. The level of growth identified for Clun, together with a significant reliance on windfall development, is therefore considered inappropriate given the role of the settlement and its unique natural and historic built environment. Given the above, it is contended that our client's site (Clun Garage) should be allocated for residential development, with a potential site capacity of 9 dwellings. A current planning application has been submitted for this development (ref. 18/05270/FUL) which is supported by the Council subject to a section 106 agreement relating to the provision of Affordable Housing (a site plan is attached which illustrates how 9 dwellings will be accommodated on site). The allocation of this site would result in a greater level of certainty that the growth needs of the settlement and surrounding hinterland, and therefore the aims and objectives of the Plan, will be met over the Plan period. In addition, the site's redevelopment will provide significant benefits, including enhancing the character and appearance of Clun's built environment.
A0915B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	Agree with allocation of site in the plan on behalf of clients, for which there is an outstanding outline planning application. 13/03440/OUT for construction of 38 dwellings including affordable homes and a new vehicular access. Outlines the issue of the "Dutch case" and need to manage nitrogen neutrality and improvement from development along with suggestions on how this issue can be resolved in the Clun Catchment however additional land will need to be allocated to meet the requirements.
A0937B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Regarding land adjacent to Lavender Bank: we were pleased to see it had been identified within the development boundary of Bishop's Castle during the Preferred Sites consultation. However, it is no longer within the boundary in the Reg 18 consultation. We would like this changed back immediately. The site is available for development and the other half of the field has been developed for housing. The allocated site BISH013 has been marketed for some time and not delivered the housing needed for Bishops Castle so we believe it would be advantageous for BISH014 to either be allocated or included in the development boundary.
A1003B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Worthen is a village accessed by a minor road the B4386 . This is a narrow road with many sharp bends and short straight sections marked with double white lines to stop the traffic overtaking , and keeping the speed limit to 60 mph . The speed limit is invariably ignored . This is because Worthen has become a commuter village with people needing to get to and from work, and they are in a hurry. I counted that your proposal is for more than 130 houses to be built , and each one will need at least one car. I cycle the road , which I have very right to do , but I am becoming more and more aware of the danger I am putting my self into . Nothing has been done to help . Finally there is a problem with the A488 from Shrewsbury which has a railway bridge North of Pontesbury which is too low for large trucks to use , so they are directed onto the B4386 . I often use the bus to go into town and invariably we have to stop and back into a drive to allow these trucks to pass. The road is too crowded, and too narrow. Has anyone from your planning department ever checked on the traffic using this road ? Do the traffic conditions matter to you ? And does putting this application in now , while we are in the middle of a pandemic , mean that fewer people will have the freedom to challenge your proposal ? I suspect you are using this opportunity to get what you want without being challenged
A1004B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Response raises concerns about the volume and speed of traffic passing through Worthen on the B4386, including large agricultural vehicles. Adding more traffic onto the road would only make problems worse. There is a well used shop and church in Worthen which people access by foot and increased traffic would affect these facilities
A1005B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Try to develop an integrated transport plan. The road could be used 70,000 times more per annum. HGV's cause excessive wear using the B4396 as a back door to Welshpool and Craven Arms. Infrastructure first then housing
A1006B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	WBR007 & WBR008 Problem with access. Dangerous for pedestrians and cars. I personally would not live up this lane for the reasons given WBR010 I understand there is extensive flooding at times and therefore problems with sewage and very difficult access. This would create difficulty for emergency services
A1007B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Raises concerns about speed and volume of traffic through Worthen, which already makes cycling and horse-riding on the road unsafe. Concern about access onto the B4386 from new development. Concerns also raised that flooding exists on the site. Doesn't want to see character of Worthen change and feels that development at nearby Pontesbury has changed the character of the village and new homes are non descript and of poor vernacular design. Also concern raised that consultation took place during pandemic when no public meetings could be held.
A1008B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Response raises concerns about the volume and speed of traffic passing through Worthen on the B4386, including large agricultural vehicles. Adding more traffic onto the road would only make problems worse.
A1009B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	WBR010 - This site was previously rejected by a planning inspector so should not be included in the plan. Reasons for opposing the site inclusion include the impact on views from the AONB; flooding in the area particularly on Mill Bank Road which causes sewage to flow into the fields and backs up to Brockton; the road through Worthen is narrow and already has a lot of traffic using it including HGV's and pavements are narrow which causes concern for pedestrians who walk to the school, shop, pub, village hall, church or doctors, especially children and the elderly
A1010B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I have only one disagreement with this housing policy and that is that the safety of the pedestrians. The village is "dead" and needs more housing of all descriptions to keep it "alive" otherwise we will have a "ghost village". There is very little life in it at the moment
A1147B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Increasing the size of the village by this amount of house is madness. We do need up to 10 local need affordable 2/3 bedroom houses, & bungalows for local families to either rent or buy. 10 being the maximum across all sites put forward in the local plan. What we do not need is executive 3/4/5 bedroom homes which will be unaffordable to the majority of local people who have been brought up in the area, attended local schools and want to continue living in the area. If these sites are included and obtain outline planning the developers will cram as many houses as they can on the site and build as many large houses as they can for maximum profit. I also see within these sites the number of proposed houses are guidelines only which means they will be exceeded. Also mentioned in the document is an extra 10 houses due to infill sites, so effectively this means 65 new houses, this increases the size of the village by over 40%! A lot of heritage buildings in the vicinity of the proposed site, these need protecting. This will completely change the character of the village of Worthen, if houses continue to be built in these small villages none of the infrastructure will cope. There are no safe footpaths to walk up or down Worthen Bank, there has recently been a fatality with a pedestrian crossing the road there. Increase in cars, road maintenance is appalling now but with extra vehicles it will decline even further Flooding problems in both Worthen & Brockton, homes were flooded several times last year, and previous years have also been flooded, to date nothing has been done to improve the situation. Worthen & Brockton are within Worthen and Shelve Parish Council area, the majority of which is within Shropshire Area of Outstanding Beauty, if you look at how many plots have received planning permission within this area within the last 3 years it is approx. 140 plus. These permissions have irreversibly changed the character of some of the clusters, namely Pentirvin, The Gravels, Shelve, yes we need the odd house here and there but not the quantity & size that have been built
A1147B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Residents voted against increasing houses numbers and did not want to be a hub Increasing the size of the village by this amount of house is madness. We do need up to 10 local need affordable 2/3 bedroom houses, & bungalows for local families to either rent or buy. 10 being the maximum across all sites put forward in the local plan. What we do not need is executive 3/4/5 bedroom homes which will be unaffordable to the majority of local people who have been brought up in the area, attended local schools and want to continue living in the area. If these sites are included and obtain outline planning the developers will cram as many houses as they can on the site and build as many large houses as they can for maximum profit, the total area of this field is large and extends to the bottom of Millstream, I assume once outline is approved for this site it will only be a matter of time before the rest of the field is included. I also see within these sites the number of proposed houses are guidelines only which means they will be exceeded. Also mentioned in the document is an extra 10 houses due to infill sites, so effectively this means 65 new houses, this increases the size of the village by over 40%! A lot of heritage buildings in the vicinity of the proposed site, these need protecting. This will completely change the character of the village of Worthen, if houses continue to be built in these small villages none of the infrastructure will cope. There are no safe footpaths to walk up or down Worthen Bank, there has recently been a fatality with a pedestrian crossing the road there. A1159B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Consultation should not have been carried out during Covid restrictions when public meetings were not possible. Parish residents have shown they would rather Worthen is designated as open countryside, as there has been significant housing delivery in the parish in recent years and this has impacted on the village character and its place within the AONB. Should development take place it needs to be sympathetic to the character of Worthen and key issues of climate change and habitat loss need to be addressed. In specific reference to the sites concerns about flooding, vehicle and pedestrian access, road safety, sewerage capacity and the type of homes needed in Worthen also needs to be considered.
A1159B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Consultation should not have been carried out during Covid restrictions when public meetings were not possible. Parish residents have shown they would rather Worthen is designated as open countryside, as there has been significant housing delivery in the parish in recent years and this has impacted on the village character and its place within the AONB. A1161B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	In the case of Clun the Conservation area covers the whole of the old town, the two designated areas for development CD002 and CD 005 are out side this area but in view of the overall size of the development it will have a significant and substantial impact on the sense and character of whole of the Town. We request that specific reference be made to the requirements to adhere to the design principles laid out in the Clun Design Statement which provides clear guidance on new development. We wish to see specific mention of the need to comply with SP4 on building design and the requirement to use of environmentally sustainable materials, energy conservation, energy generation, electric charging points and sustainable drainage etc.
A1161B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The current development boundary as proposed follows the boundary of CLU005 and CLU002. We would wish the potential for employment development to the E of the boundary either as windfall opportunities or SAMDEV savings. This area is directly opposite the Current employment area and business units and we envisage with more housing that more employment land will, be required. We support the essential principles, however development on CLU002 and CLU005 will stretch our already challenged infrastructure. We wish for specific reference under S2.2 that development needs to ensure and support improvement to public transport access, connection to the Town Centre and Medical facilities that does not require the use of car. In addition that the Sewage works has sufficient capacity to take the additional housing to the quality of discharge required. Also required, the mix of use on the site maximises the range and types of property available, including single story dwellings, the range of affordable dwellings as well as provision for home based working through good internet provision and space within properties. The current lay out and volume of traffic in Clun creates a number of highway and traffic related issues we ask that this Section includes expressed reference to the fact that development with not increase these problems and actively help to reduce them. This could include support for the development of other off street parking in Clun, and encouragement for the use of non car connections to the public transport network.
A1161B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	We support the essential principles, however development on CLU002 and CLU005 will stretch our already challenged infrastructure. Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1162B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Regarding the following statement in paragraph 5.37 "there is a need to continue to support the sustainable growth of Bucknell." Sustainable growth is an oxymoron.
A1162B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Contrary to the perception created in the Regulation 18: Pre-Submission Draft of the Shropshire Local Plan 2016-2038 document, Bucknell has been identified elsewhere as a remote rural community and it is still a village not a town as stated in Paragraph 5.38. The development's visual impact - The area for the proposed development, BKL008a will have a detrimental visual impact. It adjoins the South Shropshire Hills Area of Outstanding Natural Beauty (AONB) and is outside the village envelope. The likely effect of the development on the residential amenity of neighbours is clearly an important consideration as it will further degrade the visual impact of the village. 2006 and 2009 Parish Plans 87% of respondents said local environment in Bucknell was important or very important. Parish Plan 2017 - Bedstone and Bucknell Parish generally has good quality environment with surrounding countryside being largely in AONB. Established base for walking, cycling, bird/wildlife watching and fishing attracts visitors and contributes to local economy. Protecting and improving the environment is important to nearly everybody. The development's effect on the character of a neighbourhood - As can be seen in the attached graph (Figure 1), the number of proposed dwellings already imposed on the village in the SAMDev Plan with the resultant massive increase in the population of the village will significantly affect the character of the village. The additional expansion in housing, evidenced by the proposed development, BKL008a, is a further example of overdevelopment and a lack of regard for the opinion of local residents and disregard of the character of the neighbourhood. The additional housing guideline of around 100 dwellings that have already been proposed in the SAMDev Plan will increase the village population to over 1000, which will result in an obvious negative change in the character of the neighbourhood. That is an increase of nearly 40% in the population in probably less than 10 years with associated cars, etc. It is a massive increase to be absorbed over a relatively short period and will obviously have a significant impact on the character of this small village. A further 20 houses and associated families and cars, as proposed, will have an additional detrimental effect and provides further evidence of the systematic overdevelopment of the village. NOTE - GRAPH ATTACHED TO RESPONSE INFORMATION.
A1164B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I responded to an advisory consultation on 2019 about the future status of the settlement, I was in favour of the village returning to open country side. I own Grade II listed Worthen Hall and farm opposite and adjacent to the proposed sites and witness the speeds vehicles are travelling as they pass the farm, which is located in a 30 mph zone. Cars, buses and Lorries travel in excess of 40 mph. There are a huge number of vehicles using this once rural road. The B4386 is now a main route for all vehicle types including HGVs. I find it is dangerous to exit or enter the farm due to the speed of traffic and dangerous overtaking. The roads are congested, the poorly maintained B4386 will not cope with extra traffic. Additional people living in Worthen will increase vehicles on the roads and more pedestrians on the inadequate pavements. Busy farm, working unsociable hours, we move livestock to fields across this road next to the site on a daily basis. A new urban housing estate with associated cars and vehicles will make this difficult. More people and more vehicles will make it more difficult for farming and other rural land based businesses. More housing development will mean more surface water run-off, likely to cause more flooding to roads and agricultural land. I am very concerned about the flooding of the B4386 in this location. Our weather patterns are such that this is a regular occurrence. WBR007 & WBR008 are located at the bottom of a hill and when it rains heavily the track next to the site turns into a river, flooding the road. I am concerned that a new development will cause further flooding of the road and potentially the farm buildings at Worthen hall farm. The site is not only on higher ground but the road drain passes under the farm yard and water is discharged into a pool on the farm. The Cellars at Worthen hall have flooded twice in 12 months due to the excessive water on the B4386. Worthen lacks the infrastructure to cope with new developments there is already insufficient capacity in the sewage system with raw sewerage appearing in householders drains. The building of any new housing estates will change the character of Worthen from a rural village in open countryside to suburbia.
A1164B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I was somewhat surprised about the size of the new site WBR010, which has been included in the Draft Local Plan. It has been suggested that this site has "capacity" to provide 20 new dwellings. The site can accommodate many more as much as 50. WBR010: a portion only of this site was the subject of a planning application in 2014 (14/00398/OUT) for the construction of 25 dwellings. This was refused at Southern Planning Committee Stage, the parish council objected and indeed when the applicant appealed the decision of Shropshire Council. The Planning Inspector upheld the refusal of this application. Road Safety – The condition of the poorly maintained B4386 is a concern, there has been a dramatic increase in the usage, type and excessive speed of traffic in recent years. To exit onto the B4386 when there are speeding cars flying down the hill towards a blind bend will be interesting especially as almost all homes have at least two cars and if they follow the pattern of other residents who seem to prefer having goods delivered these days. The sites put forward will increase road usage in the village considerably. Sewerage - whilst Severn Trent have a duty to connect new dwellings to the already over capacity facilities they do not have a duty to upgrade. There is already a significant sewage problem in this part of the village which backs up towards Brockton and beyond. Sewage enters residential gardens and homes in Brookside. Flooding – The Worthen Brook is subject to flooding. When the brook floods residents are effectively cut off and this site has the potential to exacerbate this problem, neighbouring farmland is flooded in this location too. When it floods, the sewerage system backs up and raw sewerage enters gardens and homes.
A1165B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I was about the size of the new site WBR010, which has been included in the Draft Local Plan. It has been suggested that this site has "capacity" to provide 20 new dwellings. The site can accommodate many more as much as 50. Worthen lacks the infrastructure to cope with new developments there is already insufficient capacity in the sewage system with raw sewerage appearing in householders drains. The building of any new housing estates will change the character of Worthen from a rural village in open countryside to suburbia and will not provide housing for our local families.
A1190B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	We need 2- and 3-bedroom housing for families only to keep the school, shops, pub, Village Hall and Doctors thriving. Those families need safe pedestrian access to the School, Doctors and Village Hall. Crossing the road at the Back lane turning is blind and there is a speeding issue through the village. Access to Worthen Hub Services. These sits do not provide this. Crossing the road at Back Lane has poor visibility in both directions and the traffic exceeds the speed limit. The Road Safety Partnership Camera Van has been visiting for many years. <ul style="list-style-type: none"> •There is no safe pavement to carry people to the above services. It narrows to less than half a metre in several places. •People also must cross the road to access the pavement near the old Post Office. There have been several near misses with pedestrians here and a fatality. •If at least 2 safe crossings are not installed families will be forced into cars to access school and the doctors. •There is already an issue with parked cars on the B4386 which a main access road to Shrewsbury at school times is. •Environmentally we should not force people into cars either. Highways issues <ul style="list-style-type: none"> •Speeding traffic hits Little Worthen on first and does not slow until the bend. The access to this site needs to have excellent splay but there also needs to be traffic calming installed to help prevent collisions. • Extending 30mph is useful but will not deal with the entire issue. Flooding <ul style="list-style-type: none"> •There is a significant flooding issue on the road between this site and just before Little Worthen •This site needs not to add to this issue and needs to help ameliorate it in planning conditions within the published plan. S2 Bishops Castle Place Plan area House numbers allocated – S2.2 There were initially 30 allocated which in a settlement of 148 houses is reasonable. There are now 20 and 25 allocated on sites and a further 15 infill – total 55. This increases the settlements by one third. This is exceptionally big to be absorbed by a small rural communi
A1383B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Against allocation of this site and does not believe Worthen Should be designated as a hub. Agrees with some small scale development in Worthen to meet local need but scale proposed in the plan. Site has issues with pedestrian and car access and particular concern about safety on narrow pavements leading to the village services.
A1821B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Don't know / no opinion	Difficulty with speeding traffic – extensive traffic calming required. Blind Corners. Should be maximum of 20 houses, trouble with floodwater and drainage (from all 4 Forms submitted)
A1837B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I am against this proposal/development for the following reasons:1. The site includes the one next to Millfield House, which was turned down on appeal in 2015as being out of character with that part of the village and impacting on the view of the AONB. Akey part of the appeal decision was whether or not the development site was deemed to be in open countryside. Paragraph 10 of the appeal decision letter dated 25 February 2015 is clear in that the inspector shares the council's view that the site is in the countryside and is a stated reason for the appeal decision. Nothing has changed and so I feel that this new proposal must also be refused.2. The proposed site now could hold 50 to 75 dwellings, so potentially triple the amount of the original proposal that was refused on appeal. The appeal decision letter (paragraph 16) refers to the original 25 dwellings being inappropriate in terms of the SAMDev and LIP. How can a significantly larger development now be conceivable? At that size, and unphased, it will have a significant impact on the village in terms of character. Paragraph 19 refers to 'up to 25dwellings' resulting in 'an urbanisation of this area of countryside which would be harmful to its intrinsic character and beauty. Further harm would be caused to the attractive landscape setting of the village that I observed on my site visit'. Again, nothing has changed and a larger development must result in an even higher degree of urbanisation and harm to the intrinsic character and beauty of the village.3. The appeal decision letter refers to affordable housing and at paragraphs 17 and 18, states that it was not clear how affordable housing would be achieved and that therefore the Framework's objective to create sustainable, inclusive and mixed communities would not be achieved. As a village, our feedback has been clear in that it is affordable housing that is required. I understand that the new proposal aims to provide more open market housing – more expensive, larger homes that will not benefit local people from an affordability or sustainability perspective. As such, this current proposal must also fail to support the Framework's objectives to create sustainable, inclusive and mixed communities.4. The appeal referred to the depth of the site itself (paragraph 19). The proposal does not respect the linear character of that part of the village as it projects into the countryside far beyond neighbouring properties. Again, nothing has changed.5. The potential size of this development could increase the volume of housing in the village by. 30%, possibly up to 50%. The infrastructure in the village is just not set up to deal with that increase without ruining the nature of the environment (points above). Specifically, road safety is a significant issue with a number of near misses, a fatality and the need for constant traffic enforcement. Dealing effectively with this, for a larger volume of traffic, will only increase the urbanisation referred to above. Traffic calming would address speed and safety issues, but within increased volume of traffic on the roads through the village but at slower speeds (meaning usually lower gears at higher revs) would have a detrimental environmental and noise impact.
A1837B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	I am against this proposal/development for the following reasons:1.The main road through the village is already very dangerous for pedestrians and beyond the village the junctions to Aston Pigott and Aston Rogers are extremely hazardous because of the speed and weight of traffic. This problem would be made worse by the substantial increase of traffic on the road caused by this development. In particular, people living in this development wanting to reach the shop, church, school or doctor's surgery by pedestrian access would have to cross the main road into places, both of which are dangerous. They would also have to use a ridiculously narrow pavement which leaves pedestrians highly exposed. This would lead either to further injury or fatalities, or increased car use for short journeys (resulting in an environmentally unsustainable development). It is vital that any development includes substantial increase in safe pedestrian routes around the village, which would add to the degree of urbanisation required a reason given in support of the refused appeal for the Millfield House site in 2015.2.Increased urbanisation – a substantial increase in the number of houses in the village will change the character of it. The increased people, cars, buildings and related infrastructure will produce a more urban environment with effects on both the character of the place and the quality of the environment.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1846B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	against the development of a green field which is outside of the development boundary. Wants to instead to develop the brownfield site within the village (BKL001) Bucknell residents and the Parish Council are extremely concerned that Shropshire Council are ignoring their previous objections to green field development in the village when we have a large brownfield site long overdue for development which has planning consent already in place I believe. Where are the assurances from former Councillor Nic Laurens and the present Council Leader Peter Nutting in particular, who both visited Bucknell in 2018 to assure parishioners that the wishes of the community will be respected because we have not seen any evidence of those assurances yet. There is very little employment in our village and very few foreseeable vacancies likely, so new properties would almost certainly only be occupied by people moving into the village either for the purpose of retirement or if they are willing to commute to a place of work. Many residents are concerned that building 70+ properties on the brownfield site will in itself cause further strain on our village infrastructure and community cohesion, yet most concede that the brownfield site needs to be developed but that it should be our only contribution to new housing in Shropshire and must include much needed additional facilities for the village. Additional housing needs for local people does exist but it is extremely minimal, just nine or so according to the latest Right Home Right Place survey, and there is certainly not the need in our community for the large number of new dwellings proposed by Shropshire Council who suggest they are needed for the community when they are clearly and most certainly not. I would imagine that the proposed house building frenzy planned for Shropshire is just a numbers game to Shropshire Council who are unlikely to have any regard for the fabric of villages like Bucknell that are being targeted with over-development. Our Parish Council has organised a petition on its website for people to object Covid-securely to green field development and they will forward these additional objections along with their own to Shropshire Council. Even our local Liberal Democrat councillor is objecting to green field development in Bucknell, so he is likely to get the support of more villagers at future elections, including myself, if Shropshire Council do not remove the threat of green field development in our village from their current and future Local Plans.
A1933B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The path between the two halves of the village is too narrow to consider adding more houses until this is put right and pedestrians can have a clear view of the road in both directions
A2152B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	The Local Plan document refers to "The Shropshire Test" which provides key principles for supportive development. Aspects of this which WBR007/008 can help to support and deliver include: Meeting local need, making settlements more sustainable, developing cohesive communities, to conserve and enhance the natural environment, raise design standards, and make efficient use of land. Overall, development of the sites can provide quality housing, especially for families, and others who aspire to rural living, and all the benefits that accrue. The "bottom line" is that people need quality housing in which to live. A recent Rightmove survey, reflecting the impact of coronavirus which has boosted the popularity of living and working in a rural environment, highlights peoples' aspirations for - bigger gardens, access to one. - to be able to live in bigger accommodation. - to live in a pet-friendly home. - to be closer to parks and green spaces. - access to parking space/garages. All of the above, in an age of increased home-working, can be delivered through a quality development such as this site could provide. Other considerations: Worthen/Brockton, is undoubtedly a Community Hub, having all the aspects such settlements provide, and deserves the residential accommodation which such a significant rural service centre requires. Worthen in particular is a very popular village, with a key primary school, GP Surgery, successful Grocery Store, an ancient and well-loved church. All of these important community assets would be underpinned and supported by residential development in the village. The site is on the edge of the village, so less disruptive in terms of positioning. The site is relatively secluded without impacting adversely on views/sightlines across the Rea Valley. It should be quite feasible for a successful development to contain inbuilt flood alleviation infrastructure (e.g. attenuation), which would need to be supported by the regular clearing of adjacent drains, culverts and drainage channels. Slowing the traffic on the B4386 via an extension of the existing 30 mph speed limit would be necessary and sensible and more likely to occur should the proposed site go ahead as there will be more houses to serve. These new houses will, as aforementioned, support vital local services as well as extending what is already a thriving community network. To include houses of varying sizes will allow for a diversity of inhabitants and will potentially allow local families to better meet their needs in more appropriate housing
A2154B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Para 2 – refers to the likely adverse effect of development on the River Clun ; there needs to be a clearer justification of this issue delaying and or causing additional costs to the essential provision of affordable housing in and around Bishop's Castle – local people in need of housing are growing tired of hearing this trotted out as an issue. Para 3 – it is crucial that the development plan is shaped by the Town Council's Neighbourhood Plan ; our Councillors whom we appoint have an excellent appreciation of what our Town needs in the way of housing needs and employment opportunities and the locations in which they should be provided. The key issues will be to preserve the historic architecture and design of the town as much as possible and to manage the flow of additional traffic which will result from any development. To reflect this it is critical to ensure that significant housing development is concentrated on land that is available close to the main trunk road the A488. Para 6 – mentions that retail development will be directed to the Town Centre ; one issue that requires urgent and overdue attention is the need for policies to address the filling up of existing empty and increasingly derelict properties – the outstanding example is the Stars Newsagents
A2194B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	We believe the plan is inadequate and fails to take account of the Climate and ecological emergencies we face, the consequences of the Covid19 pandemic, Shropshire Council's own declaration of a Climate emergency and ambition for a 'Net Zero Carbon County' by 2030. Thus the growth and development strategies for rural homes cannot be justified without much greater attention to the need to reduce carbon emitted by transport, development of alternative strategies including public transport, better conditions for walking and cycling and greater attention to the habitats within which development is proposed, so that the natural environment and biodiversity are paid far greater attention. Whilst we have written in detail elsewhere about issues in relation to the River Clun Catchment, these only add power to the arguments laid out here. We support the need for modest development within the area outlined and note the importance of this for continued vibrancy of our communities. We particularly note the rail link at Bucknell, which gives additional sustainability to development in that community. But as we have also argued elsewhere, the importance of the development of other forms of public transport is vital, and even more so given the virtual absence of public transport at present, is a much more robust strategy to encourage and promote walking and cycling within these communities. The development of 20mph limits in all village communities, as recommended by the World Health Organisation, is essential. These strategies are also required in relation to meeting our obligations in terms of the Climate Emergency - and the timescale is brief, for transport emissions must be reduced promptly - incompatible with development as proposed. But as a Wildlife Trust Organisation, our primary concern in considering these documents is to consider whether they will safeguard our area of Shropshire in terms of 'green' issues. Here too we believe the plans are inadequate. We wish to see much greater attention in to plans to the 25 year plan for the Environment, the Environment Bill, and to how these, and Nature Recovery Networks, will apply to our area. We wish to see far more attention to the solutions for the ecological and climate change emergencies. And most of all, we wish development to be considered in the context of our local natural environment - where we believe 30% of land should be under recovery for biodiversity by 2030. We want to see more attention to local green space being accessible - so, more footpaths and dedicated cycle paths, with more attention to the accessibility of these paths to the older and less mobile members of the community. More attention to verges, hedges and tree planting, with more attention to the joining up of accessible and inaccessible green spaces to give more opportunity for natural recovery. Attention to these issues, together with the vital issues of safeguarding the Clun Catchment, will provide the proper protection and natural recovery for this part of Shropshire, within which modest carbon-neutral development may be successful in achieving its goals of sustaining our community.
A2256B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	This is prime and well established farmland and should not be used for housing development. Development should only be on brownfield sites. Worthen does not require any housing: this would be unsustainable and there are problems with flooding, sewerage capacity and electricity supplies. Increased traffic flow through village would be detrimental to resident's safety. This site has already been turned down on appeal and will impact on the settlement and the view from the AONB. The whole feel and ethos of Worthen will be changed beyond repair and current residents will be uneasy, disrupted and stressed. Avoid this by choosing brownfield land.
A2257B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	This is prime and well established farmland and should not be used for housing development. Development should only be on brownfield sites. Worthen does not require any housing: this would be unsustainable and there are problems with flooding, sewerage capacity and electricity supplies. Increased traffic flow through village would be detrimental to resident's safety. This site has already been turned down on appeal and will impact on the settlement and the view from the AONB. The whole feel and ethos of Worthen will be changed beyond repair and current residents will be uneasy, disrupted and stressed. Avoid this by choosing brownfield land.
A2259B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	We support the development of an appropriate number of affordable homes in the village but the site has some issues: - sewerage Capacity would need to be increased: Road safety, turning access onto main road: Pedestrian access to School, Village Hall and Doctors involves crossing the road twice. If this is not addressed car use will increase and the existing car parking problems will worsen.
A2260B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Support affordable housing but this site has road safety issues: turning access onto the busy main road with poor visibility and pedestrian access to school, village hall and Dr's surgery involves crossing the main road twice. If this is not addressed or usage increases there will be a major problem.
A2261B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Site should be housing for families. Back Lane is dangerous and this will increase with electric cars which you can't hear. Cyclists speed on the main road. Parents with buggies and children can't walk side by side on the pavement to the school. Residents park their cars either side of Back Lane and it is in constant use by tractors. The site is universally unpopular with residents.
A2261B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The site is universally unpopular with residents. A small number of houses along the linear line of the village would perhaps be acceptable but not a large area of field. The latter would put unbearable burden on sewerage and other services. Traffic calming would be needed.
A2263B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	As a farmer who travels the local roads with large agricultural vehicles it is becoming increasingly difficult to navigate the roads with the level of local traffic. 50 or more houses will only make matters worse. There are already enough new houses being built locally for local people with young families.
A2263B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	As a farmer who travels the local roads with large agricultural vehicles it is becoming increasingly difficult to navigate the roads with the level of local traffic. 50 or more houses will only make matters worse. There are already enough new houses being built locally for local people with young families.
A2283B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	There are totally inadequate services, water poor, frequent electric cuts, no mains gas, Sewage lack of capacity. Drainage issues where new build will inevitably increase run off. The B4386 through the village is unfit for purpose. More traffic pollution. Insufficient pavement. We were promised improvements in 1994 but nothing has happened.
A2285B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The village is subject to regular flooding and further development will only make this situation worse. The traffic situation is dangerous and some traffic calming is required. We also need safe pedestrian access to village amenities. Recent development and refurbishments have increased the number of large detached houses. There is a dearth of starter and smaller family homes, which is what we need to sustain our village.
A2286B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	The village is subject to regular flooding and further development will only make this situation worse.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2289B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	Agree to this but additional access should be considered. Create new cycleway and footpath along existing path between Brockton Houses and Victoria House. This could be widened along the south side. Many of the Landowners would agree with this. It would shorten the Brockton trip to the shop by 280m. Create new cycle and footpath from Old Post Office to Millfield House, inside the field, leaving the old hedge as a natural barrier between the path and the road.
A2289B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	Out of character looking from the south, especially if it got bigger. Vehicle movements from both sides would cause confusion and danger.
A2290B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	Agree we need growth in the village, but the paved areas between the school and the village hall and from Brockton to the shop are inadequate, in places just 18" wide. There is scope to make a wide usable path behind the playing fields.
A2290B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	If developed this would be out of keeping with the area and swamp the original area.
A2325B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	WBR007&WBR008 are around a mile from the primary school and the secondary school is at Pontesbury. The footpath to the primary school is narrow - in some places too narrow for prams. There is a flooding issue on the road between the site and Worthen which needs to be resolved.
A2325B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	A previous Planning Application has been refused on the site. Reasons still apply.
A2344B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	There is a need for starter homes for young families in this area, there is no certainty in this document, that this will happen. The probability is that larger homes by developers will be built. Worthen has been listed as a hub partly due to the presence of a (limited) bus service and library van, there is no certainty that that will always be the case. If larger houses were built, the likelihood would be that higher income families, usual 2 car owners, would have no use for those services and put those services under greater threat. Young families living on the lower income employment available within the area, would be more likely to take advantages of those services. Area WBR010 is a sloping site. Access from the main road would be difficult. It would be comparable to Folly Junction, where there is a steep slope to the B4386 and which is an accident hotspot. The road below this slope, Millstream, regularly floods causing great distress to the residents, several of whom are elderly. Building on the slope above would inevitably lead to more water run-off causing greater flooding as it would not be absorbed by the soil above. The area is good quality agricultural land, it is within close proximity to the Shropshire Hills AONB. The proposed large scale development on this site would be detrimental to the character of both the village and the AONB. The pavements in this area are narrow. Direct access to the school from this site would lead to crossing the B4386 at the access to the site, as no pavement is available on that side of the road.
A2363B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	believe in regeneration of villages and sustainable growth. Unfortunately there are many issues with the current housing development proposal. It is quite apparent that the proposed development favours the developers more than the community. The amount of houses proposed has increased by 54.5% (from 30 to 55). The village simply cannot sustain such a large proposed community with the current resources at our disposal. Worthen has narrow roads, hardly any pavements, and the sewage system that is almost at capacity. A major issue for all residents in Worthen is safety. The B4386 road is a busy road where there are blind rises and bends running along the site the WBR010 site. We have issues with speeding, near hit and miss incidents and sadly, last year a fatality. The development will cause more opportunities for traffic incidences. The WBR010 site is on quite a steep incline, the east part (Worthen end) being the most problematic. The concern here would be drainage and sewage. There are four properties at the bottom of this hill immediately adjacent to this steep hill. No sewage or drainage pipes would be permitted through these properties which will prevent the latter passing through these properties. Furthermore, Millstream Bank is a private road. Access through this private road is not permitted; for this reason, sewage cannot be connected through to Millstream which leads to the centre of the village. Number 1, 2, 3 and 4 Millstream Bank all have windows facing the site; consequently any building especially double story houses will significantly reduce light and privacy. This issue is compounded due to the site being on such a steep incline. A one-story house will impact these houses and two-storey houses will dwarf them based on the steep incline. Furthermore, 30 houses were proposed on this site WBR010 five years ago in 2015. Planning permission was refused. At appeal the government appeals inspector refused to grant planning permission. In conclusion, nothing has changed and hence building on this site is not acceptable today.
A2389B	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Don't know / no opinion	We have previously flagged opportunities, linking to SFRA recommendations, at some sites. The Tasley Bridgnorth area of growth has potential flood storage improvement works linked to nearby quarries for example.
A2393B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area		This site is ideally located to meet the growing housing needs of the parish through an allocation of land for residential development or an adjustment to the development boundary to incorporate the site. The site benefits from direct access off Back Lane and is not subject to any environmental constraints such as flooding or ecological issues as may be the case on other sites allocated in the village. The site would be easily accessible from Back Lane, and large enough to accommodate approx. 15 high quality dwellings of varying sizes – but predominantly 2 and 3 bedroom properties. Access into the site is more than wide enough for two vehicles to pass, and the site is relatively well screened from view being set back behind existing front frontages and landscape screening. There is an existing woodland area to the west of the site which could be used for ecological gain. The site would contribute to providing a variety of sites across the borough to cater for the wide variety of dwellings needed to foster social and economic growth, including custom build housing as required by the Framework. This site has potential for a moderately sized development in conjunction with adjoining sites. The site is close proximity to the local Londis shop (approx. 100m), 420m from the local village hall and medical practice and a similar distance to Brockton Primary School just beyond the school. This makes it a highly sustainable location that encourages walking to local services. The site lies entirely in flood zone 1 (low risk) and has low risk of surface water flooding. The site is bordered by mature hedgerows and woodland that screen it in the wider landscape. New development would achieve net ecological gain through the creation of new habitats such as new tree planting and attenuation ponds. Allocation of the site for low density, high quality development will create an attractive development that is consistent with the character of the local area. The site is available immediately with a very willing landowner and is being promoted by a local developer SJ Roberts. The site is therefore highly deliverable and would help massively to meet the demand for housing in the village and surrounding rural area. With an emerging emphasis from government on viability of development, the promotion of this site should give the council comfort that the site is deliverable and that there is strong demand for housing in this area. This won't be the case for many rural housing allocations. Whilst the proposed windfall allowance for Worthen and Brockton at this stage is quite low, it would be sensible to allocate this site for low density development providing certainty for all parties. All utilities are available in the lane and can easily be connected. The option agreement with local developer SJ Roberts combined with the strength of the market in this area means the site is likely to be built out within 2 years of obtaining planning consent. Conclusions The site is highly suitable for allocation that should be reconsidered and allocated within the draft plan under the Regulation 18 pre-submission draft local plan consultation. The site is available, deliverable and achievable. We consider the site should be identified for residential development for the following reasons: <ul style="list-style-type: none"> The site is sustainably located within walking distance of Worthen and Brockton's services and facilities; It provides a location with access to public transport; There are no environmental impacts which cannot be satisfactorily mitigated through good design and quality landscaping The site forms a natural extension of development along Back Lane; The site includes woodland that can be used for environmental mitigation and infrastructure; A safe and suitable means of access can be provided into the site without impacting directly upon the nearby B4386; The site has potential to help the Council meet its statutory requirement for housing growth in rural area at a cost that is affordable to all. The site is respectfully presented for inclusion in the emerging Shropshire Local Plan Review. Proposed block plan attached as appendix 1
A2396B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	30 allocated houses here is appropriate to the village size and facilities. House types and sizes should be mixed, i.e. suited to singles, couples and families, and should reflect local needs. A safe outdoor play area for young children should be included as there is currently none in the village of Worthen. The site gives onto the B4386 at a point where there are speeding and flooding issues. Good visibility from the housing onto this road should be ensured. The 30 mph speed limit should be extended, preferably to beyond the blind corner at Little Worthen. The issue of regular flooding on the B4386 opposite Worthen Hall needs to be addressed. There is a strong culture of walking to the facilities and in the lanes around Worthen and Brockton. There is no pavement alongside the B4386 from Worthen Hall around the blind corners to the village centre, nor is there room to provide one. A pedestrian access from any new housing should be provided into Back Lane, where vehicular traffic travels very much more slowly. The speed limit between Worthen Hall and the top of The Bank should be reduced to 20 mph; there has already been one fatality this year. Environmental mitigation to the proposed housing should include the replacement of any lost hedges by appropriate native species, e.g. at the back of the site, and alongside the B4386 if road widening is envisaged. Local hedges are of hawthorn, with blackthorn, hazel, field maple, holly and dogwood. The village and valley are short of wood, so tree planting would be appreciated: standards should be oak, ash, holly, field maple. Plants should be locally sourced and guaranteed disease-free

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2396B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>The proposed development at this very visible site is out of character with the scale of the villages of Worthen and Brockton. It would significantly impact the view from the AONB opposite. A reduced, linear development in keeping with the existing housing alongside the B4386 would have less environmental impact.</p> <p>A major concern of the residents of Worthen is the flooding of the brook that flows across the bottom of the field where housing has been proposed. Any hard landscaping, of roads, houses and their access pavements and parking areas is likely to increase the speed and quantity of water running down the hill into the stream, and hence into the village. Some mitigation may be possible through native tree and hedge planting at the lower edge (back) of the site but this needs expert consideration.</p> <p>This part of the village has also suffered from problems with sewage which need to be put right before any further development should be considered</p>
A2399B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>I do not support the designation of Worthen and Brockton as a Hub, I would prefer to see it remain a cluster and houses built in infill sites. 55 new open market dwellings is excessive and not sustainable in this rural farming area. One has to ask, who are they being built for? Agriculture and associated industry makes up 21% of Shropshire rural economy, so in theory 21% of our workforce needs to live in the rural areas! But they cannot afford to.</p> <p>I live and work on the farm opposite the proposed sites and witness the speeds vehicles are travelling as they pass my house and the farm, which is located in a 30 mph zone. Speeds in excess of 50 mph are no longer a rarity. There has been a huge uplift in traffic and the once rural B4386 is now a main route for all vehicle types including HGVs. I find it is dangerous to exit or enter the farm due to the speed of traffic and dangerous overtaking.</p> <p>We are a busy farm and often working very unsociable hours, I am not quite sure how an urban housing estate, located on the edge of a village, surrounded by working farmland is correct for this part of Worthen. I have to cross the road to access land adjacent to the site with farm machinery and livestock. The track next to the site is used by numerous farmers to farm land surrounding the site.</p> <p>I have spent nearly 40 years improving the soil structure of the farm and working in partnership with associated agencies to create a habitat for endangered British species. We have recently reintroduced a native British water vole to the farm. The Farm is on the Higher Level Stewardship Scheme and I am concerned that any development will result in flooding of our farmland as the drainage pipe discharges water into a pool which then filters to ditches and brooks which have been created and restored to offer a protected habitat for wildlife.</p> <p>I am very concerned about the flooding of the B4386 in this location. Our weather patterns are such that this is a regular occurrence. The flood waters now lap at the edge of our house and we have pulled out many stranded motorists over the years. WBR007 & WBR008 are located at the bottom of a hill and when it rains heavily the track next to the site turns into a river, flooding the road. I am concerned that the hardstanding, roads and pavements that a new development will bring will cause further flooding of the road and potentially the farm buildings at Worthen hall farm.</p> <p>I note that a pedestrian access will be through back lane and a public footpath will still be on the site and it is very apparent that any residents wishing the access services in Worthen or Brockton will walk along this very dangerous road. There is a blind bend coming out of Worthen that must be considered. There is no pavement along the road.</p> <p>Connection to the Sewerage plant, unless it is upgraded, will further overwhelm this system. There are many residents in Worthen who have raw sewerage in their gardens when the system is not working properly another 55 properties is not going to help matter:</p>
A2399B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>The new site WBR010, which has been included in the Draft Local Plan has been allocated 20 dwellings. I like other Worthen residents have personal knowledge of the land allocated and am confident it could provide many more as much as 50.</p> <p>WBR010: a portion only of this site was the subject of a planning application in 2014 (14/00398/OUT) for the construction of 25 dwellings. This was refused at Southern Planning Committee Stage, the parish council objected and indeed when the applicant appealed the decision of Shropshire Council. The Planning Inspector upheld the refusal of this application on the following grounds:</p> <p>The appeal site is deeper than neighbouring residential sites on this side of the road and it projects significantly into the surrounding countryside. Whilst acknowledging that the layout and appearance of the scheme is not before me, I am not satisfied that the size and shape of the site would allow a development that respected the linear character of this part of the village. The proposal for up to 25 dwellings would result in an urbanisation of this area of countryside which would be harmful to its intrinsic character and beauty. Further harm would be caused to the attractive landscape setting of the village. In light of my findings, I conclude that the scheme would not protect, restore, conserve and enhance the natural and built environment. This would result in the scheme being in conflict with Core Strategy Policies CS6 and CS17. There would be significant conflict with the environmental role of sustainability. The relocation of the roadside hedge and landscaping of the site would not mitigate this harm.</p> <p>Road Safety – The condition of the poorly maintained B4386 is a concern, there has been a dramatic increase in the usage, type and excessive speed of traffic in recent years. To exit onto the B4386 when there are speeding cars flying down the hill towards a blind bend will be interesting especially as almost all homes have at least two cars and if they follow the pattern of other residents who seem to prefer having goods delivered these days. The sites put forward will increase road usage in the village considerably.</p> <p>Sewerage - whilst Severn Trent have a duty to connect new dwellings to the already over capacity facilities they do not have a duty to upgrade. There is already a significant sewage problem in this part of the village which backs up towards Brockton and towards Marton.</p> <p>Flooding – The Worthen Brook is subject to flooding. When the brook floods residents are effectively cut off and this site has the potential to exacerbate this problem, neighbouring farmland and our land situated beyond the Church is flooded too now when with have all to frequent wet weather events.</p>
A2414B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>See attached document for A2414 BKL008a FINAL PDF (Plus petition) On behalf of the strongly-held views of our residents, Bedstone and Bucknell Parish Council DISAGREE with the promotion of the site known as BKL008a as part of the draft Shropshire Local Plan, 2016-2038. 2. It is unacceptable for the following reasons:</p> <p>(a) Detrimental effect on the Shropshire Hills AONB. In summary the suggested development of this site negatively effects the AONB by:</p> <p>(A) its proximity and its visibility, thus deliberately not recognizing the AONB (para 2.18); and</p> <p>(B) its failing to enhance the sense of place and local character (policy DP26.1) b) Impossible to justify the building of 20 dwellings in this proposal in addition to the saved SAMDev Plan.</p> <p>(1) It is hard to find justification for building this additional number of dwellings in Bucknell in order to meet the needs of the local communities...(para 5.38). (2) 5 completions in three years 2016-19 Build rate completions over span of Local plan to 2038 of approx. 45 max total could be justified as meeting needs of local communities, (3) Seven approvals in hand indicate 'demand' for something like 35 additional builds over life of plan. (4) However, with the already accepted SAMDev saved plan to build 70 dwellings on the brownfield site BUCK001, the bringing forward of this greenfield site runs counter to both logic (no need for any additional builds) and common sense (avoid using greenfield – use brownfield). c) Even less justification for a further build (of perhaps a further 20 dwellings) on the site.</p> <p>(1) Bearing in mind the comments above at (b), there can be no justification whatsoever that a further build on this site will meet the needs of the local communities...(para 5.38) in addition to the 20 already discussed at 2.(b) above. d) 'Gateway' development will be out of keeping in this site.</p> <p>(1) The suggestion that a 'gateway' feature development should be placed on this greenfield site is completely out of keeping and brings with it design tropes and expectations that seem unlikely to recognise the landscape and historic significance of the town (sic) (para 5.38). the site does not lend itself to the potential benefits, offered by a Gateway, of landscaping and interesting street layout. Most disappointing of all to this proposal, is the fact that this out of character development will serve simply to take away from the landscape that makes Bucknell the attractive village it is.</p> <p>Approaching from the east, the development can be expected to obstruct the natural landscaping, involving traditional fields and views – agreed as at the core of Bucknell's and the AONB's attractiveness. The development will block the Coxall Knoll/Onionhill Wood –Stannage Park/Park Bank Wood – Bucknell Wood panorama. Far from forming a 'gateway' to the village it will present an unattractive, intrusive, inorganic and irrelevant wall. Detrimental effect of village's attractiveness, devaluing effect. 5) Finally, the issues about the proposed development's relationship with the AONB, mentioned earlier in general terms, will be sharply spotlighted as an obvious example of another 'fill another field' development with little or no relationship with the mixed Redlake Meadow development. (e) Traffic and road layout issues. (1) Much is made in Schedule S2.2(i) Development Guidelines in respect of this parcel that...suitable and safe highway access with appropriate visibility onto the B4367 will be demanded (surely a sine qua non?) and there will be provision of a footway, along the site frontage with an appropriate road crossing to link to the wider pedestrian network and bus stop to the north, nevertheless the following should be noted: A) Exit from the site onto the B4367 will create an extraordinarily complicated and dangerous set of junctions and pedestrian-vehicle inter-relationships in the space of approximately 125 metres involving: a) The exit from BKL008a (b) Exit from track opposite the site (c) A new bus stop (d) A new pedestrian crossing (e) Steep slope exit from Ladywell (f) junction with Old Bedstone Road (g) Junction with Dog Kennel Lane. (B) All this on a B road, carrying significant levels of traffic (monitored by the Parish Council) and an increasing number of heavy 8-wheel articulated lorries (C) Additionally, despite a blind bend to the west and because of the straight to the east, the speed limit is often exceeded, as monitored by the Parish Council.(D) No matter the provision of splays, exiting the site to turn eastward will inherently be dangerous, 'crossing over' into the far lane, with 'short-notice' traffic emerging from the east and with traffic from the west 'putting its foot down' as the straight emerges. 2) No matter the traffic management systems that might be applied, it's fair to say that the impact of a minimum of 40 additional vehicles emerging and returning daily from this site – not to mention the growth in delivery vehicles and it is hoped the number of pedestrian movements, many with children's buggies – is not something for which the Parish Council wishes to be responsible. (f) Flooding issues (1) It is stated that provision of ...highway drainage to help address surface water flooding will be made, and that ...The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk may be managed on part of the remaining land to ensure flood and water management measures do not displace water elsewhere. (2) The site already carries an 'Ordinary Watercourse' on its western edge, draining Dog Kennel Lane, the Mynd, Ladywell and B4367 highway surface water, as well as natural run-off from the Mynd above and behind Ladywell and Park Rise, opposite the site. The Watercourse runs immediately adjacent to 9 properties and two sets of garages on Redlake Meadow. Given the now 'new normal' extreme rain events, the Watercourse, which currently 'runs full', will have no capacity to take any additional run-off from the new estate. Indeed, it may be expected that the current Watercourse in some circumstances may overflow – onto the new estate. What provision will be made for such an event? 3) Whilst the draft Local Plan statements, quoted, imply an element of self-management, separate from the existing arrangements, nonetheless the River Redlake has shown itself capable of serious flooding. The Environment Agency maps shows the southerly end of the overall BKL008 site currently to be at Medium risk of flooding, with the adjoining river-facing Redlake Meadow area to be at High risk. (4) The suggestion that the development should take place within reach of the flood plain, immediately adjacent to areas already shown to be at risk, in the river valley, unfortunately shows little regard either for environmental management issues nor, it seems, for the application of common sense. Deliberately to risk the development in this way seems to be both perverse and irresponsible. (g) Building on a greenfield site (1) It is intensely frustrating to have to state again that residents of Bucknell do not want greenfield sites developed before the large capacity brownfield site (BUCK001) has been developed. (SAMDev consultation quotes, see attachment) 3) From this it is quite clear that Bucknell has shown itself to be a constructive partner in the planning policy process. It has accepted the designation of Community Hub, recognising that above average development is implied – although the figures quoted above show such numbers cannot in logic be justified. (4) However, what has always been clear is that residents want the long-standing visual and ecological blight caused by the old Coal and Timber yards to be cleared. There is no appetite for the approach set out in para 5.38: The release of part of this larger greenfield land parcel at BKL008a, adjoining the contemporary Redlake Meadow development, will permit new housing to be delivered quickly when issues affecting development in the River Clun catchment are resolved. 5) By focussing on the 'quick delivery' of housing, plainly the draft plan's authors are in fact failing to meet the needs of the local communities (para 5.38) (strongly expressed as 'brownfield first'), as well as, as already highlighted, failing to recognise key value of the AONB, Shropshire and Bucknell landscape. (6) By popular request, these points have been put to residents in the form of the following Petition, published on the village website and in a (COVID-secure) paper version: Petition raised to OBJECT to proposed development of greenfield site BKL008a on grounds (SEE ATTACHMENT A2414 BKL008a petition pdf) 140 signatures 23% of over 16's. (C) A year ago, a Shropshire Council Housing Needs survey was run under the 'Right Home Right Place' (RHRP) initiative. It was given much publicity: a presentation at the Parish Council, posters and direct mailing to every household. Despite all that effort, a mere 74 responses were received. Nonetheless the Parish was assured that it was a statistically valid response – and better than some communities. D) Accordingly, it is strongly held that, with little publicity and a limited communication and publicity network, to have achieved double the RHRP response must, at the very least, be seen as a very strong, valid and sincere expression by residents of Bucknell that building on a greenfield (BKL008a) should not be promoted above the brownfield site (BUCK001). (7) In addition, the proposal to build on the greenfield site appears to disregard Shropshire Council's own policy and explanation guidance at: (A) Development Policy DP19.5: The re-use of previously developed (brownfield) land is encouraged, and proposals on despoiled, degraded, derelict or unstable land or on land affected by contamination will be supported...(B) para 4.173: The re-use of brownfield land... reduces the need for greenfield development. Therefore, the re-use of brownfield land should be preferred wherever possible, bearing in mind the viability of development and the potential for land to acquire biodiversity value. 3. Finally, it will be hard to understand the purpose of these consultations if Shropshire Council fails once again to take account of, and agree with, the strongly expressed mind of the village that the greenfield site BKL008a should NOT be brought forward as a developable site.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2414B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	<p>See attached document for A2414 BUCK001FINAL.pdf (Plus petition)</p> <p>OVERALL STANCE: On behalf of our residents, Bedstone and Bucknell Parish Council continues in its STRONG SUPPORT for the proposed mixed-use redevelopment of Bucknell's old Coal and Timber yards site identified collectively as BUCK001 (also, confusingly, referred to as BKL011), saved from the SAMDev process and now included within the draft Shropshire Local Plan, 2016-2038.</p> <p>2. ENVIRONMENTAL ISSUES</p> <p>The site's progress to build has been severely hampered by environmental management issues. These have involved sewage treatment mitigation measures, now understood to have been put in place by Severn Trent, along with, most recently, the implications of developing case law in respect of the EU Habitats Directive. It is understood that the usual design, layout or other 'usual planning issues' do not stand in the way of progressing this site. Additionally, it is understood that potential developers/owners have voluntarily put forward undertakings, made innovative suggestions and met Officers' demands in order to provide a range of mitigation measures to meet the various environmental management demands. Despite the constructive attitude of the owners, they have unfortunately been met with what might appear as obfuscation, designed to ensure no progress is made with the development of this site.</p> <p>3. RESIDENTS' VIEWS</p> <p>a. Residents are intensely frustrated and annoyed by the complete lack of progress in developing this site, whose redevelopment has been discussed for upwards of three decades! Residents fail to understand how Shropshire Council, whilst making claims as to the beauty of Shropshire countryside, and especially the adjacent AONB, can allow this site to be such an embarrassing blot on the village-scape. Chief among residents' many complaints are:</p> <p>(1) Unightly blight</p> <p>(a) There can be no getting away from the fact that the buildings making up the most visible part of the site – largely on the old Timber yard – are an unsightly eyesore. Mossed (asbestos) roofs, obviously worn out and collapsing buildings, muddy yards and cracked concrete roadways characterise this site. It is well past its use-by date.</p> <p>(b) Recent unfortunate surface-water flooding has revealed just how water-permeable the building serving as a village shop had become – making it, potentially, no longer fit for purpose.</p> <p>(c) Promoting Bucknell as a potential Community Hub is laughable without action being taken to clear this site. Its very presence undermines statements about Bucknell's future and role as an important element in Shropshire's development.</p> <p>2) Unintended consequence: 'promotion' of greenfield site</p> <p>(a) The longer this site (BUCK001) remains un-redeveloped, the harder it is to resist pressure from greenfield site owners/agents with 'shovel-ready' sites. Were this site to be moving forward, the reality of the rate of housing demand would be becoming clear and the hypothetical 'demand' for a 20/40 greenfield development would be tested against the market reality. The lack of progress invites a sub-optimal solution that really must not be countenanced.</p> <p>(b) So concerned were residents at the promotion of a greenfield site (BKL008a) as part of this consultation, whilst the brownfield site's progress appeared to be stymied at every turn, that a petition was raised to object to the proposed development of greenfield site BKL008a (SEE Attachment A2414 BUCK001 Petition.pdf) In response to this petition, 140 separate, verifiably local, signatures were appended – This was achieved (obviously, in these COVID times) with no door knocking, or clipboard listings in the usual community hubs. Just one list and a posting on the website achieved a signature rate of some 23% of over-16's. year ago, a Shropshire Council Housing Needs survey was run under the 'Right Home Right Place' (RHRP) initiative. It was given much publicity: a presentation at the Parish Council, posters and direct mailing to every household. Despite all that effort, a mere 74 responses were received. Nonetheless the Parish was assured that it was a statistically valid response – and better than some communities. (III) Accordingly, it is strongly held that, with little publicity and a limited communication and publicity network, to have achieved double the RHRP response must, at the very least, be seen as a very strong, valid and sincere expression by residents of Bucknell that building on a greenfield (BKL008a) should not be promoted above the brownfield site (BUCK001).</p> <p>b. On top of these points, residents are annoyed that the years of delays mean that the potential benefits of the redeveloped site are being denied them:</p> <p>(1) A village for all ages</p> <p>(a) Because of there being no movement on redeveloping the site, the potential wider housing market benefits are denied the village – and Shropshire county, too.</p> <p>b) The recent Housing Needs Survey revealed a demand for affordable housing.</p> <p>(I) A small number of affordable houses will be produced under the last proposed Planning Application for the site. That is good news.</p> <p>(II) However, without even a sniff of the redevelopment moving forward, young people will understandably move away and be lost to this part of Shropshire. This will contribute to the village 'just being for old people and in-comers': it will ossify.</p> <p>(c) More widely, as a result of the likely drain away of young people, the consequence will be that the 'organic' opportunities for a flexible housing ecology to develop in the village, with internal movement as families grow and others diminish – along with others moving to the area taking advantage of e.g. rail links – is denied this potentially key growth site in the county – a point highlighted at para 5.35 of the draft document: Bucknell is an important service centre for local communities in the surrounding rural areas of these three Counties.</p> <p>Bucknell's significance is also enhanced by its operational rail station linking with other rural stations in Shropshire and the principal station at Knighton.</p> <p>(d) Adding to this mix of housing, the Bedstone and Bucknell Parish Plan identified an aspiration for the development of a Care home facility. It is understood that Shropshire Council would accept a proposal for such a facility in place of the small Industrial Unit concept put forward many years ago. Not only would the idea contribute to the previously mentioned 'housing ecology' but it would provide employment opportunities, potentially more accessible to a range of skills and in larger numbers than the previous ideas envisaged.</p> <p>(e) Although this is a commercial matter, and in essence not for the Parish Council, there is a thriving garage workshop facility in operation on the site. Its future might well benefit from the increased population. c. In summary, the longer this site is not redeveloped in a co-ordinated way, accommodating the abovementioned elements, the greater the likelihood that these benefits – as well as others, e.g. a replacement Memorial Hall supported by CIL – will be denied to the village and to Shropshire.</p> <p>4. SHROPSHIRE'S BROWNFIELD REDEVELOPMENT PERFORMANCE</p> <p>a. On the evidence of the published Shropshire Brownfield Land Register, Shropshire's brownfield redevelopment performance cannot be rated as anything other than unimpressive. With 110 registered sites, just four redevelopments have been completed (3.6%), amounting to a total of 0.85hectares redeveloped out of a potential of 162-15 hectares – a yield of 0.5% of the potential. It's also has to be noted that the four completed sites are in the north or the east of the county – as indeed are the vast majority of the other registered sites. b. In view of that less than noteworthy performance, it seems strange that the Bucknell site, which is 12th largest in hectares and 9th largest in terms of minimum housing yield (on the basis of 70 dwellings as per the Draft Plan), is not being more actively supported. Active promotion of this site would make a not insignificant contribution to the cleaning up of dirty sites in Shropshire. c. The seemingly passive support given to the site's progress seems to run counter to Development Policy DP19.5 which states: <u>The re-use of previously developed (brownfield) land is encouraged, and proposals on derelict, degraded, derelict or unstable land or on land affected by contamination will be supported, and additionally para A.173 of the Draft Local Plan there is the statement: The re-use of brownfield land reduces the need for greenfield land.</u></p>
A2421B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>To have so many dwellings on a field that floods is very risky and likely to pollute the river, disturb wildlife and affect the doctor's surgery all for the benefit of developers. It will bring pollution and many more cars to the area, that is of outstanding natural beauty. The noise, the pollution and disturbance will affect the well being of locals, only bring more people to a place with no public transport to speak of and no jobs, which means people have to travel to work in their individual cars.</p> <p>We should protect the nature and the environment, not hurt it more.</p> <p>In times of climate change and when the rain fall has increased tremendously even here in Clun, this amount of new developments in the valley, is likely to adversely affect the future generations</p>
A2434B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Agree	<p>In Clun, I am in agreement with the proposals identified within the consultation and I think the correct land allocation has been identified by officers. This is a view shared I think with the Town Council and the majority of the community.</p>
A2434B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>In Bucknell however, I do not agree with and am strongly opposed to the proposal to allocate new greenfield land at the Gothians field adjacent to Redlake Meadow (Bu008) for an additional 20 homes.</p> <p>There exists sufficient land adjacent to the brownfield saved allocated land at the Coalyard/Woodyard site on which to site the additional 20 homes without the need to extend the development boundary of the village to develop the greenfield site next to Redlake Meadow. This is also the view overwhelmingly of the local community when surveyed and the view of the Parish Council.</p> <p>The availability of the land adjacent to the Coalyard/Woodyard site was discussed and agreed at a meeting I called and chaired at the Shirehall in June 2019. The meeting brought together both landowners of the Coalyard and Woodyard sites and their respective agents, representatives of the Parish Council and planning and environmental officers during which it was agreed that the best way forward for the village was for the main saved site to be developed as soon as possible and we resolved any remaining issues (such as bat flight lines) which had, up to that point, held back the current planning application from gaining approval. It also discussed and agreed that a small extension to the site was available for further housing if required. Since that time I have had it confirmed, as recently as a week ago, in verbal discussion with the landowners concerned that an extension to this site remains on the table.</p> <p>It was therefore a considerable surprise to all concerned when the current proposal to include land previously ruled out adjacent to Redlake Meadow was brought forward, completely at odds with the outcomes from the meeting in June 2019.</p> <p>This new proposal to include greenfield land previously rejected during the original SAMDev consultation and strongly opposed by the community also flies in the face of the Council's own policy to prioritise development on brownfield land as opposed to greenfield land and should therefore be rejected.</p>
A2439B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>I am against this proposal/development for the following reasons:</p> <p>1.The main road through the village is already very dangerous for pedestrians and beyond the village the junctions to Aston Pigott and Aston Rogers are extremely hazardous because of the speed and weight of traffic. This problem would be made worse by the substantial increase of traffic on the road caused by this development.</p> <p>In particular, people living in this development wanting to reach the shop, church, school or doctor's surgery by pedestrian access would have to cross the main road in two places, both of which are dangerous. They would also have to use a ridiculously narrow pavement which leaves pedestrians highly exposed. This would lead either to further injury or fatalities, or increased car use for short journeys. It is vital that any development includes substantial increase in safe pedestrian routes around the village.</p> <p>2.Increased urbanisation – a substantial increase in the number of houses in the village will change the character of it. The increased people, cars, buildings and related infrastructure will produce a more urban environment with effects on both the character of the place and the quality of the environment.</p>
A2439B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>I am against this proposal/development for the following reasons: 1. The site includes that next to Millfield House, which was turned down on appeal in 2015 as being out of character with that part of the village and impacting on the view from the AONB as well as being in open countryside. None of these things has changed.</p> <p>2. The proposed site now could hold 50 to 75 dwellings, as a large proportion of the current size would radically change the character of the village, turning into a more urban environment.</p> <p>3. The potential increase in population of a development of this size would cause substantial environmental impact as a result of infrastructure, waste disposal, increased traffic, increased run off in an area that already floods during heavy rain, noise etc.</p> <p>4. The main road through the village is already very dangerous for pedestrians and beyond the village the junctions to Aston Pigott and Aston Rogers are extremely hazardous because of the speed and weight of traffic. This problem would be made worse by the substantial increase of traffic on the road caused by this development.</p>
A2442B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>It is vital that existing businesses on the Woodyard site need to be relocated onto the Coalyard site before the housing development starts. If these businesses are shut down by the housing development the loss of local jobs and services will be very detrimental. As it stands the village needs more employment to justify more housing. For new residents to have to travel significant distances to employment is not sustainable.</p> <p>The extra traffic generated by such travel would also make the roads less safe and increase both local pollution and global warming. The lack of progress on this longstanding project suggests that clearly there is not at present demand for anything like 70 or more new houses in Bucknell, and this scale of development over a short period would "swamp" the village. A clearly phased development should be defined in the Plan, spread over decades, so that new residents can integrate well into the existing community. Also a more imaginative mix of new property should be defined in the plan, with a care home, sheltered housing, some live/work units, some self build units, some shared ownership units, some community led housing development and some amenity facilities for both the new (and existing) residents. Just another spec built housing estate is not good enough.</p> <p>With regard to BKL008a, it's clear that the objections from existing residents in adjoining houses are understandable. They would suffer a significant loss, both of outlook and also of overlooking of their gardens. If a new tree planting strip between the existing and proposed houses was included in the plan, with a new footpath down the centre of the strip leading from the proposed B road footpath to an amenity area on the bank of the river Redlake and also linking through to the existing estate road, this would be a good way of mitigating the situation. It would also provide a pleasant extra walk for all village residents.</p>
A2444B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>Object to development at land East of Redlake Meadow, Bucknell. This development will needlessly extend the limits of the village, already over extended along Chapel Farm Road. Bucknell is an example of Ribbon Development - which should be halted or reversed. In addition to this the old timber and coal yard adjoining the railway station is ripe and crying out for conversion into an attractive collection of homes that would be an asset to Bucknell, whereas building at Redlake Meadow would probably remove any incentive to develop the timber yard.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2459B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>I do not support the designation of Worthen and Brockton as a Hub, I would prefer to see it remain a cluster and houses built in infill sites. 55 new open market dwellings is excessive and not sustainable in this rural farming area. One has to ask, who are they being built for? Agriculture and associated industry makes up 21% of Shropshire's rural economy, so in theory 21% of our workforce needs to live in the rural areas! But they cannot afford to.</p> <p>I live and work on the farm opposite the proposed sites and witness the speeds vehicles are travelling as they pass my house and the farm, which is located in a 30 mph zone. Speeds in excess of 50 mph are no longer a rarity. There has been a huge uplift in traffic and the once rural B4386 is now a main route for all vehicle types including HGVs. I find it is dangerous to exit or enter the farm due to the speed of traffic and dangerous overtaking.</p> <p>We are a busy farm and often working very unsociable hours, I am not quite sure how an urban housing estate, located on the edge of a village, surrounded by working farmland is correct for this part of Worthen. It is expanding the settlement pattern of the village. I do not think development of this type will enhance the entrance to the village, green fields and hedgerows are preferable. If this development does proceed it must be sympathetic to the surrounding countryside and the fact it is essentially located in a workplace must be a consideration. The site also sits opposite a Grade II listed farmhouse.</p> <p>I am very concerned about the flooding of the B4386 in this location. Our weather patterns are such that this is a regular occurrence. The flood waters now lap at the edge of our house and we have pulled out many stranded motorists over the years. WBR007 & WBR008 are located at the bottom of a hill and when it rains heavily the track next to the site turns into a river, flooding the road. I am concerned that the hardstanding, roads and pavements that a new development will bring will cause further flooding of the road and potentially the farm buildings at Worthen hall farm. The site is not only on higher ground but the road drain passes under the farm yard and water is discharged into a pool on the farm. The Cellars at Worthen hall have flooded twice in 12 months due to the excessive water on the B4386.</p> <p>I note that a pedestrian access will be through back lane and a public footpath will still be on the site and it is very apparent that any residents wishing the access services in Worthen or Brockton will a: drive or b: walk along the very dangerous B4386. There is a blind bend coming out of Worthen that must be considered. There is no pavement along the road.</p> <p>Connection to the Sewerage plant, unless it is upgraded, will further overwhelm this system. There are many residents in Worthen who have raw sewerage in their gardens when the system is not working properly another 55 properties is not going to help matters.</p>
A2459B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>As already stated in response to sites WBR007 and WBR008 I am in support of new houses being built in the village but as part of a cluster and not a hub.</p> <p>I was somewhat surprised about the size of the new site WBR010, which has been included in the Draft Local Plan. It has been suggested that this site has "capacity" to provide 20 new dwellings. I own a property next door to this site and I am fully aware of the size of the land allocated and the steepness of the field. I think at least 50 dwellings could be accommodated or 20 executive 5 – 6 bedroomed houses with a high price tag to match.</p> <p>WBR010: a portion only of this site was the subject of a planning application in 2014 (14/00398/OUT) for the construction of 25 dwellings. This was refused at Southern Planning Committee Stage, the parish council objected and indeed when the applicant appealed the decision of Shropshire Council. The Planning Inspector upheld the refusal of this application on the following grounds:</p> <p>The appeal site is deeper than neighbouring residential sites on this side of the road and it projects significantly into the surrounding countryside. Whilst acknowledging that the layout and appearance of the scheme is not before me, I am not satisfied that the size and shape of the site would allow a development that respected the linear character of this part of the village. The proposal for up to 25 dwellings would result in an urbanisation of this area of countryside which would be harmful to its intrinsic character and beauty. Further harm would be caused to the attractive landscape setting of the village. In light of my findings, I conclude that the scheme would not protect, restore, conserve and enhance the natural and built environment. This would result in the scheme being in conflict with Core Strategy Policies CS6 and CS17. There would be significant conflict with the environmental role of sustainability. The relocation of the roadside hedge and landscaping of the site would not mitigate this harm.</p> <p>Road Safety – The condition of the poorly maintained B4386 is a concern, there has been a dramatic increase in the usage, type and excessive speed of traffic in recent years. To exit onto the B4386 when there are speeding cars flying down the hill towards a blind bend will be interesting especially as almost all homes have at least two cars and if they follow the pattern of other residents who seem to prefer having goods delivered these days. The sites put forward will increase road usage in the village considerably.</p> <p>It is my understanding that this site will deliver a new pavement and crossing? Have all landowners agreed to this or will it stop short at the development site?</p> <p>Sewerage - whilst Severn Trent have a duty to connect new dwellings to the already over capacity facilities they do not have a duty to upgrade. There is already a significant sewage problem in this part of the village which backs up towards Brockton and beyond. Sewage enters residential gardens and homes in Brookside and the garden of The Mount which is adjacent to this site (I have cleaned it up personally on many occasions and had to call out Severn Trent when a raw sewage fountain appeared in the layby).</p> <p>Flooding – The Worthen Brook is subject to flooding. When the brook floods residents are effectively cut off and this site has the potential to exacerbate this problem, neighbouring farmland is flooded in this location too. When it floods, the sewerage system backs up and raw sewerage is spilled out in the garden of The Mount.</p> <p>I am further concerned about given the steepness of the site and my experience working for a local builder for five years what potential impact engineering works and piling rigs will have on the stability of my property and indeed others near this site.</p>
A2460B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>Whilst I agree that additional housing is required in this area, the potential number of houses that could be built on the land identified (up to 25) would I think be too many, as it would significantly change the character of the village by increasing the dwellings by 1/3rd. In addition to this, there are currently serious issues with flooding, drainage and sewerage, and a renumber of dwellings would most likely make these matters worse unless significant costly changes and improvements are made to eliminate the current problems, and ensure that any number of new dwellings don't add to the risks associated with flooding, and poor drainage and sewerage systems. There will also be requirements to improve the road system through the village to cope with the additional dwellings and associated traffic, and access to the B4386 from Sites WBR007 & 008 would need substantial planning as traffic coming into the village does not always slow down, and the existing junction is far from safe, and also improved and safer pathways for pedestrians from the sites above and also from the proposed WBR010 sites. Currently part of the pathway through the village is not wide enough for safely pushing pushchairs/buggies and walking children/infants. It would also appear, that there may not be a requirement for any developer to seek planning permission on the type, design and size of property they could build, which I feel is totally wrong as it is important to keep the character and nature of the current village environment. With regard to the consultation process associated with the proposal, I feel it is wrong to conduct it at this time, as due to Covid-19 restrictions, members of the community cannot gather together in a group or planned meeting to hear about the proposal and discuss it in detail. As I mentioned, I feel that additional housing is required, and if it is to be on the Sites WBR007 & 008, it should be limited in number, be of an affordable type for new and young persons/families, be subject to further planning application and approval, and any development would not increase the risks associated with inadequate drainage, flooding and sewerage. It would also have to ensure that there is a safe roadway and pathway through the village.</p>
A2460B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>Whilst I agree that additional housing is required in this area, the potential number of houses that could be built on the land identified (up to 55) would I think be too many, as it would significantly change the character of the village by increasing the dwellings by 1/3rd. It would also have to ensure that there is a safe roadway and pathway through the village.</p>
A2479B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area		<p>Paragraph 1 When undertaking Local Plan Reviews to accommodate the required, ongoing 5 year supply of housing land, a priority 2 rating must be given in the assessment process to eligible sites that do not require access to the A488 via a street(s) in the Conservation Area.</p> <p>Paragraphs 7 and 8 DP24. Conserving and Enhancing the Historic Environment DP24 is a key component of the Local Plan as regards the Bishop's Castle Key Centre. DP24 is highly significant as regards future development in the town as the Conservation Area constitutes a significant portion of the settlement. It is also one of Shropshire's significant heritage assets and thus is defined by DP24 as needing to be "protected, conserved, sympathetically enhanced and restored."</p> <p>A Character Assessment (CA) of the Bishop's Castle Conservation Area (BCCA) has recently been produced jointly by the Bishop's Castle Community Partnership (CP) and the Bishop's Castle Town Council (TC): the former as part of the annual update of their Community Led Plan; and the latter in preparation of the Bishop's Castle Neighbourhood Development Plan.</p> <p>The CA which forms Appendix 1 of the Neighbourhood Development Plan (NDP) (currently in Draft Regulation 14 Stage) identifies and evidences critical issues that need to be addressed if this significant heritage asset is to be "protected, conserved, sympathetically enhanced and restored."</p> <p>The DP24 Policy includes 7 actions required to address the Policy. As regards the BCCA, to realise the 7 actions, the following is required:</p> <ol style="list-style-type: none"> 1. Ensuring that wherever possible, proposals avoid harm or loss of significance to designated or non-designated heritage assets, including their settings. <p>The boundary of the BCCA is that of the original Norman planted town. The current settlement and its infrastructure mirror the original 12th century settlement. Hence the Historic Environment Record lists 267 separate heritage assets, within the BCCA including: 1 Scheduled Monument; 5 Grade II* Listed properties; 100 Grade II Listed premises; and 161 non-designated heritage assets.</p> <p>Through the following 8 centuries the town has prospered and developed but has retained its original form, street pattern and buildings, including the medieval thoroughfares with premises hard up against the carriageway or narrow pavements. The consequence of this in the 21st century is the difficulty of accommodating the demands of modern traffic and parking requirements without "harm or loss of significance to designated or non-designated heritage assets, including their settings."</p> <p>The CA provides evidence of both harm already done to heritage assets within the BCCA and the ongoing dangers that are regularly occurring to assets and their settings because of the conflict between traffic and parking demands and the medieval street pattern that exists within the Conservation Area setting.</p> <p>The traffic conflict is exacerbated by the fact that the A488, which lies immediately to the east of the town provides the only access to the English hinterland and to major centres along the Welsh borders to the south. The rural lanes leading out of Bishop's Castle on the western side access only the rural Welsh hills and the Montgomery Road, the B4385 leads only to Welshpool and Newtown and then to distant towns and their hinterland in north and west Wales. The A488 therefore is by far the major route for both commercial and residential journeys to and from the town. Consequently, all traffic including commercial deliveries to and from premises on the western side of the Conservation Area, must travel through the Conservation Area to access the hinterland either via the A488 or the B4385.</p> <p>To satisfy DP24 1. It is essential that no future development of sites outside the development boundary that would require to use a Conservation Area street(s) to access the A488 either by School House Lane or Brampton Road is permitted.</p> <ol style="list-style-type: none"> 2. Ensuring that proposals which are likely to affect the significance of a designated or non-designated heritage asset, including its setting, are accompanied by a Heritage Assessment. The level of detail in the Heritage Assessment should be proportionate to the asset's significance. <p>The CA includes a detailed analysis of what constitutes the character of the Conservation Area and each of the 9 zones that were surveyed within it. This includes architectural design features and decorative embellishments through the ages.</p> <p>To satisfy DP24 2. The Heritage Assessment should be required to always reference consideration of the CA (NDP Appendix 1) document including the appropriate zone analysis and acknowledge any relevant architectural or setting features that may be appropriate.</p> <ol style="list-style-type: none"> 3. Ensuring that proposals which are likely to result in any loss of, harm to, the significance of a designated heritage asset, including its setting, either directly or indirectly, are determined in line with the National Planning Policy Framework. <p>To satisfy DP24 3. When undertaking Local Plan Reviews to accommodate the required, ongoing 5 year supply of housing land, a priority rating must be given in the assessment process to eligible sites that do not require access to the A488 via a street(s) in the Conservation Area.</p> <ol style="list-style-type: none"> 4. Ensuring the proposals which are likely to result in loss of, or harm to, the significance of a non-designated heritage asset and/or its setting, either directly or indirectly, will only be permitted if it can be clearly demonstrated that the benefits of the proposal outweigh that loss or harm. In making this assessment the following will be taken into account: <ol style="list-style-type: none"> a. The degree of harm or loss of significance to the asset and/or its setting; b. The importance of the asset; and c. Any potential beneficial use. 5. Where such proposals are permitted, measures will be required to: <ol style="list-style-type: none"> a. Mitigate and record the loss of significance to the asset and/or its setting; and b. Advance understanding in a manner proportionate to both the asset's and/or its setting's importance and the level of impact. <p>The CA identifies the collective nature of the BCCA in that the footprint of the settlement today mirrors that of the 12th century settlement and its medieval street pattern. The Conservation Area setting is in itself part of the significance of each of its assets and is inseparable from them.</p> <p>The fact that in this small area there are 267 separate heritage assets, tightly packed together, including a Scheduled Monument, 5 Grade II* Listed properties and 100 Grade II Listed premises as well as 161 non-designated heritage assets confirms that the area as a whole is a unique heritage asset of great significance. Damage to a single asset within it, regardless of whether it has a designated or non-designated status, impacts therefore on the whole setting and as such is of equal importance (Point 4. b.).</p> <p>To satisfy DP24 4. and 5. It is necessary when assessing "loss of or harm to the significance of a non-designated heritage asset and/or its setting" to take account of the fact that in the case of this 12th century settlement and its footprint, the interrelationship between the designated and non-designated assets and between the setting as a whole and a non-designated asset are significant factors in the overall character of the BCCA. Thus, a property's significance is greater than its non-designated status would imply.</p> <p>6. Encouraging development which delivers positive benefits to heritage assets. Support will be given in particular, to proposals which appropriately conserve, manage or enhance the significance of a heritage asset including its setting, especially where these improve the condition of those assets which are recognised as being at risk or in poor</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2492B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>Extension of pathway - The B4386 Lay-by which was originally designated to the shop, next to The Old Post Office is still currently used by citizens to park their cars and use the post box situated in the house wall of the Old Post Office.</p> <p>Both The Mount and The Old Post Office as well as visitors to the surrounding houses utilise the layby for parking for visitors because there have either shared driveways where visitors cannot park or no driveway at all for their property. We also have overspill from customers of the Village shop, Church and Village Hall utilise the layby for parking when events are taking place.</p> <p>By removing this you will move vehicles to parking on the main road and causing more traffic congestion and difficulty for cyclists having to move around the parked cars. There is already an issue with parked cars on the B4386 during school drop off and collection times which cause both hazards for pedestrians, traffic and cyclists.</p> <p>There is currently no safe pavement access for pedestrians to walk throughout the village on the main road. It is narrow and visibility is poor from the top to the bottom of the embankment of the B4386, in particular by the Mount, Old Post Office and school house. There have been several near misses where pedestrians have risked their lives crossing the road and a fatality which I attended on scene too.</p> <p>Pedestrian Crossing - Safe crossings need to be provided by the school or access needs to be implemented via another route from Little Worthen to Brocton via other parts of the village.</p> <p>Speeding - Speeding occurs in Worthen and Brockton, speed enforcement has not rectified the issue and traffic will speed over the brow of the hill next to the Old Post Office. Traffic also does not slow at Little Worthen and speeding occurs until the bend.</p> <p>Access to site need to have enforced speeding and calming measures permanently in place to help prevent collisions and pedestrian fatalities that have occurred already.</p> <p>Flooding - Worthen does have significant flooding on the road. Little Worthen floods at the site entrance and the water run off that occurs from the top of the hill has meant properties at the same level as the Old Post Office and below in Millstream have flooded. Drainage systems are not maintained and run off drainage systems are blocked.</p> <p>Drainage Systems - By increasing the number of houses, drainage systems and run off water will need to be upgraded and directed to suitable areas for both sites.</p> <p>Increase in House Numbers - The number of houses that have been allocated have increased the settled by an additional 55 houses (one third of the village). For a small rural community this will have a huge impact in transport, parking (households will have 2 or more cars, increase in carbon emissions, altered and reduction in biodiversity).</p>
A2492B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S2 Bishop's Castle Place Plan Area	Disagree	<p>Extension of pathway - The B4386 Lay-by which was originally designated to the shop, next to The Old Post Office is still currently used by citizens to park their cars and use the post box situated in the house wall of the Old Post Office.</p> <p>Both The Mount and The Old Post Office as well as visitors to the surrounding houses utilise the layby for parking for visitors because there have either shared driveways where visitors cannot park or no driveway at all for their property. A0001B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>General</p> <p>Dislikes the Part A / Part B Consultation Forms.</p> <p>Welcome the additional 'Regulation 18 Consultation'.</p> <p>Policy S3.1</p> <p>The level of development proposed within Policy S3.1 goes beyond that needed to meet local need.</p> <p>There is no assessment of the housing need of Bridgnorth to inform the development strategy.</p> <p>The housing needs of Bridgnorth beyond 2026 will be met by the current residential/mixed use allocations (BRID001/BRID020b and BRID020a) and any windfall opportunities in the town.</p> <p>The infrastructure of Bridgnorth in terms of roads, parking, power supply, sewage etc will not support the level of development proposed.</p> <p>The level of development proposed will exacerbate air quality hotspots.</p> <p>There is no confidence that sufficient jobs will be created to support the new community particularly when transport links to both local and national industrial and commercial centres are already inadequate. This will make Bridgnorth more of a dormitory town.</p> <p>BRD030</p> <p>BRD030 is too large.</p> <p>The infrastructure of Bridgnorth in terms of roads, parking, power supply, sewerage etc will not support development of BRD030.</p> <p>Development at Stanmore is located between existing housing and an industrial site, whilst this is in Green Belt, BRD030 is in countryside which should also be protected.</p> <p>BRD030 will surround the relocated livestock market, which is an important feature to a rural market town. A livestock market with all its inherent noise, smells, very early traffic and disturbance will not sit comfortably with residential development and therefore lead inevitably to complaints from residents.</p> <p>Placing this level of housing in this position outside the by-pass creates problems for access to the town for both traffic and pedestrians and will add considerable pressure to the roads and junctions in Low Town where they are already at or very near capacity.</p> <p>Other options should be considered. For instance existing school sites should be developed and a new education complex formed outside of the town (perhaps at Stanmore or Tasley).</p>
A0023B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>The proposed development at Tasley breaches the natural, defensible boundary of the A458 to the south of Bridgnorth and allows development to sprawl into the open and unconstrained countryside. While this land is not Green Belt, that is a technicality. The land which is Green Belt, to the east of the town does not perform the same function as the land in question. To the south and west of Bridgnorth one moves into the gateway of the Shropshire Hills and while not in the AONB it is of the same south Shropshire character. The previous proposals to the east of the town, were much more appropriate. Not only was it well contained by existing infrastructure the surrounding landscape is of a much lower character. I further object to this allocation here due to the impact that this will have on the town of Much Wenlock. There is a pre-existing issue with the Gaskell Junction on the Telford/Bridgnorth road and putting development at Tasley will exacerbate the problem. If the development were to be placed on the east of the town at Stanmore, then there would be the much more appropriate infrastructure links to Telford where a large number of people will work, via the A422. Moreover there would be better connections to existing employment hubs at Stanmore and in the West Midlands, such as Stourbridge, Kidderminster, Wolverhampton and even Birmingham.</p>
A0025B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Don't know / no opinion	<p>However, the amount of traffic on the existing infrastructure in the village where I live – Norton, on the A442 between Bridgnorth and Telford – is already extremely high. If the proposals for new-build housing around Bridgnorth go ahead, in addition to plans for increased light industry, the amount of traffic will increase substantially. We will see further heavy traffic from increased local industry, and yet more commuter traffic between Bridgnorth and Telford from the additional housing. The A442 will have to be upgraded substantially. For the village of Norton, the only sensible proposal will be the construction of a bypass to route the traffic around the village. I am submitting this consultation form as a request for such a bypass.</p>
A0025B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Don't know / no opinion	<p>The Pre-Submission Draft of the Shropshire Local Plan contains proposals for substantial increases in housing and 'employment opportunities' around Bridgnorth – over a thousand new homes, and 22.8 Hectares (56.3 Acres) of land for industrial use. The amount of traffic on the A442 between Bridgnorth and Telford is already extremely high. When the proposals for new jobs and new homes go ahead, the amount of traffic will increase substantially. Additional heavy traffic will result from the increase in local industry, and yet more commuter traffic will flow between Bridgnorth and Telford from the additional housing. Over the past ten years there has already been a marked increase in heavy lorries travelling from distribution hubs in the Telford conurbation, down the A442 towards the M5 and the South West. The A442 will need to be upgraded substantially. For the village of Norton, where I live, the only sensible proposal will be the construction of a bypass to route the traffic around the village. I am submitting this consultation form as a request for such a bypass.</p>
A0045B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area		<p>Green Infrastructure Plans are completely insubstantial in comparison to degeneration of environment that a huge development would cause. Tasley development is adjacent to the new Nature Reserve run by SWT at Underdon development would erode beauty & wildlife value of the reserve.</p>
A0045B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Employment sites are empty already in Bridgnorth, proposed further sites may remain empty, building 1800 homes would then mean people need to commute to work, increase pollution & congestion we are in a climate emergency so find it unacceptable.</p>
A0045B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Development Guidelines This paragraph needs to be strengthened. "Development should seek to maximise the energy efficiency of all buildings" - this wording needs strengthening to "Must Seek". Also "strongly encourage zero carbon development and offset carbon emissions" - this wording needs strengthening to "this must be a zero carbon development and offset all carbon emissions". We are in a climate emergency and the council needs to hold the developers to account on this.</p>
A0045B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Increasing Bridgnorth residents by a third is too high, town centre is old & small, swamped by many it will lose its whole character, you are not listening to residents this is unacceptable.</p>
A0045B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>The retail shops would not cover all the needs of the residents. residents may well drive into Bridgnorth for more shops. 1800 houses perhaps = 3,600 more cars coming into Bridgnorth causing huge congestion, pollution & parking issues & greatly reducing the enjoyment of Bridgnorth town centre to existing residents.</p>
A0045B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Paragraph 10 – a new medical surgery will definitely be needed if this development goes ahead. The current Bridgnorth surgery is already very over stretched, and the addition of 1800 more families will not be able to be cared for at all. A new medical surgery needs to be an essential to this development going ahead.</p>
A0045B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Paragraph 16 states that buffering will be provided with native trees, but with 1800 more houses and many more car journeys, along with the noise of the construction on the site, the noise and pollution will greatly increase from the A458 if this development goes ahead, making it intolerable for existing and new residents. You would need a forest to muffle the sound.</p>
A0045B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Paragraph 18 – states that an air quality assessment will take place and recommendations followed. I cannot see that any number of recommendations could take away the extra noise and pollution that this site will bring</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0135B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Sites STC002 and P58a should not be allocated for employment as:</p> <p>The allocation of some 49ha of land for employment purposes in Bridgnorth to create choice and competition in the market (para. S3.1.1) is excessive and not fully evidenced or justified. There is sufficient land elsewhere for employment purposes to serve the existing and proposed community.</p> <p>The proposed Tasley allocation includes some 16ha of employment land, this will be within walking distance of the main residential development proposals for Bridgnorth and can accommodate necessary floorspace to serve the proposed population growth for the town.</p> <p>The current Local Plan includes employment allocations at Tasley which have not been developed (between 2006–2026). These sites are carried forward into the current Local Plan Review. If demand or need for significant employment development existed these sites could have been developed. Some of this land is believed to belong to the same organisation that owns Stanmore Industrial Estate and one of the proposed allocations (STC002 or P58a), meaning that there can be no certainty that the land at Stanmore would be developed any quicker than the sites that are currently allocated at Tasley.</p> <p>There are long-term vacant plots on existing industrial estates in Bridgnorth which show no signs of being taken up. This shows there is no need or demand for additional land at Stanmore.</p> <p>The sites are situated in Green Belt and no very special or exceptional circumstances have been identified.</p> <p>The sites are located in 'Countryside' and unrelated to any significant urban development area. As such they are contrary to draft Policy SP9.</p> <p>Stanmore is divorced from residential areas and workers would have to travel, mostly by private motor vehicles, to access the site. This is contrary to the aims of Policy SP4.1 and the main aim of the NPPF. As such it cannot be considered sustainable development.</p> <p>Stanmore Industrial Estate was established to make use of a former WWII military site, there is no such justification for the present proposals. Furthermore a number of the plots on the current Estate are vacant, and have ben for months/years. There is no need for business operations generated by Bridgnorth residents (existing or future) to locate at Stanmore.</p> <p>Residential allocations proposed are at Tasley, some 3 1/2 miles from Stanmore. It is unsustainable to locate a major employment allocation so far away from the main new housing allocation.</p> <p>Having several sites available for development in Bridgnorth increases choice for developers, but only if all other matters are equal. The land proposed for employment development at Stanmore has significant drawbacks, not least being its current designation as Green Belt and its unsustainable location, and so it is, in any event, in a less favourable situation than other sites that are either currently allocated or proposed for allocation in the Local Plan Review. Further, an over-provision of sites can fragment development opportunities making investment in buildings and infrastructure less attractive and less likely to take place.</p>
A0136B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such.</p> <p>The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan.</p> <p>The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity.</p> <p>The proposal is contrary to National Planning Policy.</p>
A0136B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Agree	<p>Policy DP25.2 indicates that the Green Belt will be protected against inappropriate development (consistent with the NPPF).</p> <p>An industrial estate represents inappropriate development in the Green Belt, as it would harm openness. If the land were subject to a Planning Application for employment uses it would be refused due to conflict with the Green Belt and lack of very special circumstances. The Local Plan Review should not be used to justify inappropriate development of the Green Belt. As there are no very special circumstances and employment development is considered inappropriate in the Green Belt, proposed allocations STC002 and P58a conflict with policy DP25.2.</p>
A0136B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Agree	<p>Policy SP11 (2.e) states development proposals for employment development will be expected to demonstrate the development scheme satisfies the requirements of national and local policies especially relating to the protection of the Green Belt (amongst others). This element of the Policy is supported.</p> <p>However, the proposed removal of land from the Green Belt at Stanmore would not protect the Green Belt and no very special circumstances have been advanced that would justify its removal. As such proposed allocations STC002 and P58a conflict with sub-section 2.e. of Policy SP11, in addition to Policy DP25 and the NPPF.</p>
A0136B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Sites STC002 and P58a should not be allocated for employment as:</p> <p>The allocation of some 49ha of land for employment purposes in Bridgnorth to create choice and competition in the market (para. S3.1.1) is excessive and not fully evidenced or justified. There is sufficient land elsewhere for employment purposes to serve the existing and proposed community.</p> <p>The proposed Tasley allocation includes some 16ha of employment land, this will be within walking distance of the main residential development proposals for Bridgnorth and can accommodate necessary floorspace to serve the proposed population growth for the town.</p> <p>The current Local Plan includes employment allocations at Tasley which have not been developed (between 2006–2026). These sites are carried forward into the current Local Plan Review. If demand or need for significant employment development existed these sites could have been developed. Some of this land is believed to belong to the same organisation that owns Stanmore Industrial Estate and one of the proposed allocations (STC002 or P58a), meaning that there can be no certainty that the land at Stanmore would be developed any quicker than the sites that are currently allocated at Tasley.</p> <p>There are long-term vacant plots on existing industrial estates in Bridgnorth which show no signs of being taken up. This shows there is no need or demand for additional land at Stanmore.</p> <p>The sites are situated in Green Belt and no very special or exceptional circumstances have been identified.</p> <p>The sites are located in 'Countryside' and unrelated to any significant urban development area. As such they are contrary to draft Policy SP9.</p> <p>Stanmore is divorced from residential areas and workers would have to travel, mostly by private motor vehicles, to access the site. This is contrary to the aims of Policy SP4.1 and the main aim of the NPPF. As such it cannot be considered sustainable development.</p> <p>Stanmore Industrial Estate was established to make use of a former WWII military site, there is no such justification for the present proposals. Furthermore a number of the plots on the current Estate are vacant, and have ben for months/years. There is no need for business operations generated by Bridgnorth residents (existing or future) to locate at Stanmore.</p> <p>Residential allocations proposed are at Tasley, some 3 1/2 miles from Stanmore. It is unsustainable to locate a major employment allocation so far away from the main new housing allocation.</p> <p>Having several sites available for development in Bridgnorth increases choice for developers, but only if all other matters are equal. The land proposed for employment development at Stanmore has significant drawbacks, not least being its current designation as Green Belt and its unsustainable location, and so it is, in any event, in a less favourable situation than other sites that are either currently allocated or proposed for allocation in the Local Plan Review. Further, an over-provision of sites can fragment development opportunities making investment in buildings and infrastructure less attractive and less likely to take place.</p>
A0137B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>The land that is proposed for employment use at Stanmore currently lies within the Green Belt and should remain as such.</p> <p>The NPPF indicates Green Belt boundaries should only be revised where exceptional circumstances are fully evidenced and justified. No adequate justification have been put forward within the Pre-Submission Draft of the Shropshire Local Plan.</p> <p>The Green Belt Review does not qualify as "exceptional circumstances" and did not demonstrate or suggest that there was a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity.</p> <p>The proposal is contrary to National Planning Policy.</p>
A0137B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Agree	<p>Policy DP25.2 indicates that the Green Belt will be protected against inappropriate development (consistent with the NPPF).</p> <p>An industrial estate represents inappropriate development in the Green Belt, as it would harm openness. If the land were subject to a Planning Application for employment uses it would be refused due to conflict with the Green Belt and lack of very special circumstances. The Local Plan Review should not be used to justify inappropriate development of the Green Belt. As there are no very special circumstances and employment development is considered inappropriate in the Green Belt, proposed allocations STC002 and P58a conflict with policy DP25.2.</p>
A0137B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Agree	<p>Policy SP11 (2.e) states development proposals for employment development will be expected to demonstrate the development scheme satisfies the requirements of national and local policies especially relating to the protection of the Green Belt (amongst others). This element of the Policy is supported.</p> <p>However, the proposed removal of land from the Green Belt at Stanmore would not protect the Green Belt and no very special circumstances have been advanced that would justify its removal. As such proposed allocations STC002 and P58a conflict with sub-section 2.e. of Policy SP11, in addition to Policy DP25 and the NPPF.</p>
A0137B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>Sites STC002 and P58a should not be allocated for employment as:</p> <p>The allocation of some 49ha of land for employment purposes in Bridgnorth to create choice and competition in the market (para. A0141B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Agree	<p>PC would like SPD to address housing type required to meet need in Bridgnorth Place Plan area & appropriate highway arrangement to accommodate traffic demand from new development</p>
A0142B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>NPPF requirements are not met. No need or special or exceptional circumstances justification to remove from Green Belt or alter Green Belt boundary and land should not be taken out of the Green Belt. The Council's Green Belt Review is not an "exceptional circumstance" and the Review undertaken did not identify a necessity for change to the Green Belt boundaries at Stanmore. Other reasonable options for meeting the identified need for development exist, outside the Green Belt in the near vicinity. The proposal is contrary to National Planning Policy.</p>

A0142B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S3 Bridgnorth Place Plan Area	Disagree	<p>The two sites proposed to be allocated for employment development Stanmore should not be allocated for employment and should be removed from the Plan, because:</p> <ul style="list-style-type: none"> •There is no need for the proposed allocation. The allocation of some 49ha of land for employment purposes in Bridgnorth in order to create choice and competition in the market (para. S3.1.1), is excessive and not fully evidenced and justified. Sufficient land for employment purposes to serve the existing and proposed residential expansion of Bridgnorth without Stanmore. •Stanmore is divorced from existing & proposed main residential areas and thus workforce would need to travel, mostly by private motor vehicles, to access the site. This is contrary to the aims of Draft Local Plan Policy SP4.1. and NPPF & the proposal cannot be considered sustainable development. •Stanmore Industrial Estate was established in order to make use of a former WWII military site. But there is no such justification for the present proposals. Additionally there are vacant plots on Stanmore Industrial Estate, some for months, others years.No current need or desire for business operations generated by Bridgnorth residents to locate at Stanmore. •The proposals for development at Tasley, include 16 ha of employment land within walking distance of the main residential development proposed for Bridgnorth is more than capable of supplying the additional necessary floorspace to serve all Bridgnorth's growth. •The proposed allocations at Stanmore are in 'Countryside' unrelated to any significant urban development area and thus contrary to Policy SP9 of the Draft Local Plan. •The number of long term vacant/undeveloped plots of land on existing, industrial estates in Bridgnorth shows there is no need or demand for additional land allocations such as Stanmore. •No certainty that the land at Stanmore would be developed within a reasonable timescale. Existing allocations for employment development in the Tasley area (some in same land ownership as proposed Stanmore allocation land) have yet been not been taken up. •Having several sites available for development will not necessarily increase choice for developers, will be influenced by sustainability of location and Green Belt designation. Over-provision of sites can fragment development opportunities making investment in buildings and infrastructure less attractive and less likely to take place. <p>Allocation of the land at Stanmore conflicts with National Planning Policy Framework 2019, aim of sub-section 2.e. of Policy SP11 and Policy DP25. Policy says that the Green Belt should be protected against inappropriate development. Development of Industrial Estates is "inappropriate development" in a Green Belt – it harms the openness of the area and conflicts with the aims of the Green Belt and no very special circumstances had been advanced. A Local Plan Review should not be used to justify inappropriate development in the Green Belt.</p>
