

Shropshire Council
Legal and Democratic Services
Shirehall
Abbey Foregate
Shrewsbury
SY2 6ND

Date: Tuesday, 11 July 2023

**Committee:
Cabinet**

Date: Wednesday, 19 July 2023
Time: 10.30 am
Venue: Council Chamber, Shirehall, Shrewsbury, SY2 6ND

You are requested to attend the above meeting. The Agenda is attached

There will be some access to the meeting room for members of the press and public, but this will be limited. If you wish to attend the meeting please email democracy@shropshire.gov.uk to check that a seat will be available for you.

Please click [here](#) to view the livestream of the meeting on the date and time stated on the agenda

The recording of the event will also be made available shortly after the meeting on the Shropshire Council Youtube Channel [Here](#)

AGENDA

1 Apologies for Absence

2 Disclosable Interests

Members are reminded that they must declare their disclosable pecuniary interests and other registrable or non-registrable interests in any matter being considered at the meeting as set out in Appendix B of the Members' Code of Conduct and consider if they should leave the room prior to the item being considered. Further advice can be sought from the Monitoring Officer in advance of the meeting.

3 Minutes (Pages 1 - 6)

To confirm the minutes of the meeting held on 7 June 2023

4 Public Question Time

To receive any questions from members of the public, notice of which has been given in accordance with Procedure Rule 14. Deadline for notification is not later than 5.00 pm on Thursday 13 June 2023

5 Member Question Time

To receive any questions from Members of the Council. Deadline for notification is not later than 5.00 pm on Thursday 13 July 2023

6 Scrutiny Items

7 Aligning our Customer Services and the Drive to Digital (Pages 7 - 58)

Lead Member - Councillor Robert Macey - Portfolio Holder for Culture and Digital

Report of James Walton, Executive Director of Resources

8 Permission to consult on the removal of discretionary areas of School and College transport assistance. (Pages 59 - 82)

Lead Member - Councillor Kirstie Hurst-Knight - Portfolio Holder for Children and Education

Report of Tanya Miles, Executive Director of People

9 Proposed Amendment and/or Extension of Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017 (Pages 83 - 216)

Lead Member - Councillor Richard Marshall - Portfolio Holder for Highways and Regulatory Services

Report of Mark Barrow, Executive Director of Place

10 Recommendation for Pontesbury Neighbourhood Plan to Proceed to Referendum
(Pages 217 - 328)

Lead Member - Councillor Richard Marshall - Portfolio Holder for Highways and Regulatory Services

Report of Mark Barrow, Executive Director of Place

11 Ironbridge Gorge World Heritage Site SPD – Adoption (Pages 329 - 512)

Lead Member - Councillor Richard Marshall - Portfolio Holder for Highways and Regulatory Services

Report of Mark Barrow, Executive Director of Place

12 Local Plan Examination in Public – Response to Inspectors Stage 1 Interim Findings (Pages 513 - 1952)

Lead Member - Councillor Richard Marshall - Portfolio Holder for Highways and Regulatory Services

Report of Mark Barrow, Executive Director of Place

13 Proposed designation of a Conservation Area for West Felton – Confirmation of designation following formal consultation (Pages 1953 - 1992)

Lead Member - Councillor Richard Marshall - Portfolio Holder for Highways and Regulatory Services

Report of Mark Barrow, Executive Director of Place

14 Exclusion of Press and Public

To resolve that, in accordance with the provisions of schedule 12A of the Local Government Act 1972 and Paragraph 10.4 [3] of the Council's Access to Information Rules, the public and press be excluded from the meeting during consideration of the following items

15 Chief Officer Pay Award 2023/24 (Pages 1993 - 2002)

Lead Member - Councillor Lezley Picton - Leader and Portfolio Holder for Policy and Strategy, Improvement and Communications

Report of James Walton, Executive Director of Resources

Cabinet

17 July 2023

CABINET

Minutes of the meeting held on 7 June 2023

**In the Council Chamber, Shirehall, Abbey Foregate, Shrewsbury, SY2 6ND
10.30 am – 12.30 pm**

Responsible Officer: Amanda Holyoak

Email: amanda.holyoak@shropshire.gov.uk

Tel: 01743 257714

Present

Councillor Lezley Picton (Chairman)

Councillors Cecilia Motley, Ian Nellins, Gwilym Butler, Kirstie Hurst-Knight and Robert Macey

1 Apologies for Absence

Apologies for absence were received from Councillors Dean Carroll and Richard Marshall

2 Disclosable Interests

None were declared.

3 Minutes

RESOLVED

That the minutes of the meeting held on 19 April 2023 be confirmed as a correct record.

4 Public Question Time

Public questions were submitted by:

Dr Alison Caffyn - in relation to the recent ruling of the Planning Inspector into the Footbridge Farm intensive poultry planning appeal at Tasley

and

Victoria Moore – in relation to yet to be installed Sutton Grange Shrewsbury Play Park.

The questions and answers provided to them are available from the [webpage for the meeting](#)

5 Member Question Time

There were no questions from members.

6 Scrutiny Items - New Housing Developments Task and Finish Group

Councillor Joyce Barrow presented the report of the Place Overview Committee, setting out the findings and evidence-based recommendations of the New Housing Developments Task and Finish Group. She thanked members and officers who had participated and supported the work and drew attention to the key learning points the group had established.

The report was welcomed by all members and it was hoped that it would be possible for an action plan to be produced quickly, if possible in time for consideration at the first meeting of the Economy and Environment Overview and Scrutiny Committee who would then go on to monitor implementation going forward. Following discussion of the report a member of the council went on to speak of his concerns in relation to amendments to original planning conditions.

The Leader requested that a briefing session for members on building control be arranged as soon as possible, as well as included in the induction programme following the next election.

The Cabinet welcomed the extremely helpful report and all the recommendations within it and thanked all who had contributed to it.

RESOLVED:

To accept the recommendations of the New Housing Developments Task and Finish Group and request that an action plan for delivery of these recommendations be proposed by July 2023.

7 Treasury Management Update Quarter 4 2022/23

The Portfolio Holder for Finance and Corporate Resources presented the report.

RESOLVED:

To note that the Council remains fully compliant with the agreed prudential indicators and the treasury management strategy.

8 Climate Strategy & Action Plan Monitoring Report 2022

The Portfolio Holder for Climate Change, Environment and Transport introduced the report explaining that whilst the level of the reduction in corporate carbon footprint was disappointing, the past three years of carbon monitoring had been influenced significantly by the covid pandemic. There was also a lag between identifying potential actions and projects, the delivery of measurable savings and performance was expected to accelerate significantly in future years.

During discussion members welcomed the carbon literacy training undertaken by senior staff and Cabinet members hoped this could be spread widely to all staff and members as soon as possible, and particularly procurement staff as a priority. The work commissioned

for a detailed analysis of supply chain carbon emissions was also welcomed as well as the continued investment in projects which did not benefit the council's performance directly but would help to reduce emissions from communities and businesses. Measures related to fuel and heating in buildings were also discussed and the need to work effectively with partners and lead the way for the county.

The Leader reported on efforts with local education providers to establish retro-fitting courses and recruitment issues experience on finding anyone to teach these.

The Deputy Leader thanked the support from members on the cross party panel which was much valued alongside the hard work and expertise of the dedicated officer team.

RESOLVED

- 1.1. That Cabinet approves the draft Corporate Carbon Performance Monitoring report 2021-22 (Appendix 1) for publication;
- 1.2. That Cabinet supports:
 - i. Efforts to widen understanding and ownership of the need for urgent climate action and carbon reduction through training and the identification of a staff 'climate change' champion in each service.
 - ii. An Officer report being prepared to explore how the Council's procurement policies can be updated to help accurately quantify and help suppliers to reduce indirect carbon emissions, which now account for around 93% of the Council's corporate carbon footprint.
 - iii. Work to prepare a corporate 'Climate Change Adaptation' strategy during 2023 to identify key climate risks, their potential impact on the delivery of council services, staff and service users and to set out actions and measures to moderate these risks.

9 Performance Monitoring Report Quarter 4 2022/23

The Portfolio Holder for Digital, Data and Insight, introduced the report, the final one before a new set of Key Performance Indicators supporting delivery of the Shropshire Plan were introduced. These were currently being finalised and took on board the feedback from members. Ongoing effectiveness of the new indicators would be kept under review going forward.

Discussion went on to cover a number of areas, including recycling rates, road conditions, numbers killed or seriously injured on roads, homelessness, as well as appropriateness of rag rating and responsibility for performance indicators held in partnership.

It was hoped the new indicators would be shared with members before finalisation.

RESOLVED:

To consider and endorse the corporate performance report.

To consider the emerging issues in this report as set out in paragraph 9.

To review both the appendix and performance portal to identify any performance areas to consider in greater detail at future performance scrutiny meetings.

10 Financial Outturn 2022/23

The Portfolio Holder for Finance and Corporate Resources introduced report, reminding members that when the budget for 2022/23 was set, inflation was predicted at 3%, and was now at a 40 year high, there was no knowledge of the Ukraine War and subsequent unprecedented global turmoil, the surge in fuel prices, the cost of living crisis and a higher pay award than envisaged. These factors were all compounded by extreme pressure in children's services and adult social care.

He also drew attention to the impact of partners not meeting financial responsibilities. He thanked staff for their work in achieving the current overspend in these circumstances and pointed out that if inflation had been as predicted then a surplus would have been achieved at the end of the year. He thanked officers for all the hard work undertaken in achieving the position reached.

Subsequent discussion covered the percentage of intended savings made; impact of interest rates; impact of the overspend on the 2023 – 24 budget, the general reserves balance, the capital receipts programme, the LGA peer review findings and the impact of the Getting Leadership Right programme in moving forward.

The Portfolio Holder said that his aim was for reporting on progress going forward to be as transparent as possible with monthly indicators and financial reports available, rather than having to wait for compilation of end of quarter figures. He also intended those reports be provided for Transformation and Improvement Scrutiny Committees ahead of Cabinet.

RESOLVED:

That Cabinet:

In respect of the revenue budget:

- a) *Note that the outturn is an overspend of £8.499m.*
- b) *Note the consequent level of the General Fund balance is £7.093m.*
- c) *Note the service-related use of £33.192m of Earmarked Reserves & Provisions.*
- d) *Note that the combination of earmarked and un-earmarked (General) reserves is below a level that would be regarded as safe, taking into account local circumstances. The MTFs sets out an agreed plan to restore these balances to safer levels.*

Relating to ringfenced funding:

- e) *Note the performance of the Housing Revenue Account (HRA) – £0.768m (4%) surplus outturn for 2022/23 on £19m turnover, and the resulting level of the HRA reserve of £12.359m. The level of the accumulated surpluses held as a reserve should be reviewed and an appropriate action plan brought forward.*
- f) *Note that the level of school balances has increased by £2.296m, from £8.191m in 2021/22 to £10.487m. The level of accumulated net surpluses in schools'*

balances is considerable, and schools should identify the rationale for holding balances at those levels.

In respect of the capital programme:

- g) *Approve net budget variations of -£4.007m to the 2022/23 capital programme (in Appendix 11) and the re-profiled 2022/23 capital budget of £111.112m.*
- h) *Approve the re-profiled capital budgets of £26.575m for 2023/24, including slippage of £10.747m from 2022/23, £110.787m for 2024/25 and £56.264m for 2025/26 as detailed in Appendix 15.*
- i) *Accept the outturn expenditure set out in Appendices 12 and 13 of £100.365m, representing 90.3% of the revised capital budget for 2022/23.*
- j) *Approve retaining a balance of capital receipts set aside of £17.465m as at 31st March 2023 to generate a one-off Minimum Revenue Provision saving of £0.572m in 2023/24.*

11 Department for Levelling Up, Housing & Communities Technical Consultation on the Proposed Infrastructure Levy - Shropshire Council Response

The Leader explained that the purpose of the item was to consider and agree the Council's response to the Government's current consultation on the introduction of a new Infrastructure Levy as a key mechanism for securing developer contributions towards infrastructure and affordable housing. She thanked staff for the work carried out in developing the response and the views from the cross-party local plan working group had been useful and welcome.

RESOLVED:

To approve the response to Government's Technical Consultation on the Proposed Infrastructure Levy as set out in Appendix 1 to the report.

That authority be given to the Executive Director of Place to agree, in consultation with the Portfolio Holder for Highways and Regulatory Services, any additional minor changes to the Council's response to this consultation ahead of its submission to the Government by the 9th June 2023.

12 River Severn Partnership Demonstrator Projects

The Deputy Leader and Portfolio Holder for Climate Change Environment and Transport introduced the report which was welcomed by all.

RESOLVED:

- 1.1. To approve the Council's role in managing and delivering the Shropshire based demonstrator programme, under the River Severn Partnership, utilising the Council's formal statutory role as Lead Local Flood Risk Management Authority (LLFA).

- 3.2 To approve the Council signing two grant funding agreements for the River Perry and Rea Brook, which exceed £500,000 in grant contribution, thereby enabling transfer of the Defra funds to Shropshire based delivery partners
- 3.3 To delegate to the Executive Director of Place, Section 151 officer and the Portfolio Holder for Climate Change, Environment and Transport to:
 - 3.3.1 proceed with setting arrangements for the delivery and monitoring of benefits associated with the demonstrator programme, in partnership with the Environment Agency.

13 Exclusion of Press and Public

RESOLVED

That in accordance with the provisions of schedule 12 A of the Local Government Act 1972 and Paragraph 10.4 [3] of the Council’s Access to Information Rules, the public and press be excluded from the meeting during the consideration of the following item

14 Exempt Minutes

The exempt minutes of the meeting held on 7 June 2023 were confirmed as a correct record.

Aligning our Customer Services and the Drive to Digital – A Review of Customer Service Opening Hours

Responsible Officer:

James Walton

email: james.walton@shropshire.gov.uk

Tel: 01743 258915

Cabinet Member (Portfolio Holder):

Cllr Robert Macey, Culture & Digital

1. Synopsis

Changes to the opening times of Customer Service Centre’s general call lines will support the Council’s Digital Strategy, modernisation of customer access to services through convenient online routes and will free up adviser time for preventative outbound calling.

2. Executive Summary

As the Council’s online service offer grows, the opening times of the Customer Contact Centre are reduced to help free up staff to focus time helping those most in need through targeted outbound calling and generating service efficiencies.

2.1. The Council’s Customer Service Centre (CSC) handles public contact for over 50 council departments included in which are specialist services such as Adults and Children’s concerns, Homelessness and Local Welfare fund and also many more transactional service requests such as Highways, Waste, Registrars and Planning.

- 2.2. The CSC is currently open 8am to 6pm on Monday to Friday and 9am to 1pm Saturdays, a total of 54 hours per week. Outside of these hours, and over all public holidays, an out of hours service for emergency only issues is now handled in-house via the council's CCTV team.
- 2.3. For some time, Council services have been building and developing their online solutions as a 24/7 alternative to phone calls to request specific services. However, alongside this, the Customer Service Centre has remained open, providing an alternative to online contact methods over an extended day, and for Saturday mornings, providing a service regardless of alternatives and demand. During the pandemic, the focus of the CSC shifted in that it increasingly provided outbound calling, targeting those residents most in need of support.
- 2.4. The Council's online offer continues to develop, this includes both improvements to the functionality of our website and also the development of automatic call agents that may replace the need for a human conversation in some of our more general transactions. It is recommended therefore, that to help find efficiencies, we balance the cost of continuing to provide a full telephony service against the encouragement needed for Shropshire's residents to consider online alternatives to request services and information, that is available online and achieves the same outcome in many cases. The estimated cost to the Council of each telephone call for a Council service is £2.83, compared to £0.15 per online transaction.
- 2.5. A change in opening times would help encourage more residents to transact with the council online, whilst also freeing capacity in the CSC to support more outbound calling targeted to residents most in need and to help early interventions that may prevent greater call on council and health services at a later date. This additional work would be funded by separate Public Health grants.
- 2.6. The proposed changes would affect only the more generalist service requests handled by the CSC. The opening times of the First Point of Contact for Adults and Children's Services, homelessness calls, or calls to the Local Welfare Support Team who deal with more complex, vulnerable and in depth personal and financial needs would not change.
- 2.7. Once agreed, the revised opening times for inbound telephone contact may be used to influence other opening times across wider Council services.
- 2.8. Therefore, following the presentation of a Green Paper to Performance Management Scrutiny Committee on 1 March 2023 in which the proposals and rationale were explained, a public consultation took place to gauge opinion on a number of options to reduce the opening times of the CSC to around 30 hours per week.
- 2.9. This consultation ran between 13 March and 23 April 2023 and was made available to as wide a range of residents as possible using the council's website, paper copies available at numerous libraries across the County, via a customer helpline through which paper copies could be requested and via social media, press coverage and broadcast on Radio Shropshire. In addition, every customer calling the CSC heard a recorded message informing them of the consultation and every customer using Shropshire Local was similarly informed. From this we are confident that over 25,000 residents who contacted us during the consultation period were made directly aware.

- 2.10. A total of 381 consultation replies were received and a full analysis of these is at appendix 3 of this report.
- 2.11. The outcome of the public consultation was inconclusive there being no clear majority for any one option presented however 66% (210) of respondents did support change in some form. 44% (171) of respondents offered their own alternative proposals to those suggested however most of these proposals were around remaining the same or even opening for longer to support workers by opening early and closing late together with weekend opening. It should be noted however that the statistical data on calls to the CSC do not support this with only 3% of overall calls made before 9am, 1.4% of calls made after 5pm and less than 1% of calls made on Saturdays.
- 2.12. Notwithstanding this, the Customer Service Centre will, for a limited period of time, continue to provide a full day service up to 6pm on one night of the week to cater for any potential increased demand from working residents. The intention is to review call data and demand at the end of a three month period and to decide on the need to continue this provision in the light of that information.

3. Recommendations

That Cabinet:-

- 3.1. Agree the need to support the Council's drive to digital services by reducing CSC telephone service opening hours whilst still providing a telephone service for those residents unable to transact online.
- 3.2. Agree the revised opening times of the Customer Service Centre general calls as 9am to 3pm Monday to Friday, but with a trial period of opening of up to 6pm on one of those days in order to consider any change in the level of demand for later opening.
- 3.3. Delegate the implementation of these proposals to the Executive Director of Resources in consultation with the Portfolio Holder for Culture and Digital.

Report

4. Risk Assessment and Opportunities Appraisal

- 4.1. The following risks have been identified with the proposed changes to opening hours:-

Risk	Mitigation plans in place
Residents may perceive this as a loss of service	These changes are proposed with the intention of encouraging people to use online services wherever possible and wherever they are able to, particularly for more transactional-type service requests, to help ensure that a phone service remains available for those residents unable to self-serve this way. To cater for this, the Customer Service Centre will remain open during the most popular times of the day, as evidenced by current user data, and that this is monitored to identify any

	<p>disproportionate impact. The CSC would work closely with Shropshire Local sites, as the Council's community presence, to ensure residents have recourse to help and support to transact with us in person if required.</p>
<p>Initially, calls to CSC may continue at current levels but within the reduced service times leading to increased wait times and call abandonment</p>	<p>The recorded customer greetings that callers hear already play varying messages to remind and promote online services as an alternative depending upon how long a caller waits. These have been, and will continue to be, revisited periodically to ensure that as many people as possible are reporting issues online, leaving telephone contact for those residents unable to access or use online services.</p> <p>To mitigate unacceptably long wait times, especially during known seasonal peaks in calls, the out of hours team will provide support to key service lines during daytime operations</p>
<p>Levels of digital exclusion in Shropshire are high (25%) and some residents may call CSC due to inability to use online services</p>	<p>Research suggests that 1 in 7 unable to use internet in the UK without assistance and in Shropshire this might equate to around 46,400 residents (source: 2021 census). However, this does not appear to be reflected in surveys of those calling the CSC. Data recorded by CSC over five months in 2022/23 asked customers why they were calling. Of 49,121 calls made, only 5% (2,448) of customers said they had called because they had no internet access.</p> <p>Nevertheless, the Customer Service Centre will remain open for 55% of the current opening hours and during the the times when we know most contact is made.</p>
<p>Risk that missed conversations may equate to failure to identify more significant issues at an early stage, particularly for more vulnerable residents</p>	<p>The proposed changes affect only the generalist, more transactional side of Customer Services business handling more service-based requests and queries. This will not affect the first contact for Adults, Children's, Homelessness or Local Welfare Support calls where more in-depth calls that identify individual need are handled.</p> <p>In addition, the proposed change in opening times would free staff resources to support outbound calling to more vulnerable residents that will help to identify potential problems and target support and advice before these become more serious issues</p>
<p>Council's online offer is incomplete for some services</p>	<p>The CSC will remain open and numbers published. The Council's webpages will be amended to promote online transactions first, but contact numbers will remain in case of difficulty.</p> <p>Where there are gaps in our online provision or where online services are missing, numbers will be more prominent.</p> <p>Separately a major initiative is now underway to further improve the council's online offer, particularly for those services that generate the most calls to CSC.</p>
<p>Closing call lines earlier in the day could place additional demand on our out of hours</p>	<p>Retaining staff who are then repurposed to other duties gives us the potential to seek permission to pull this resource back in to handle any unexpected or seasonal variances.</p>

response and adversely affect the Council's ability to respond to emergencies such as floods and seasonal variances such as Elections issues and school admissions	The expectation therefore is that sufficient CSC staff will remain on hand to support the Out of Hours service in the later afternoons, mitigating the risk of the out of hours service lines becoming overwhelmed.
--	---

5. Financial Implications

- 5.1. As part of the medium term financial strategy potential efficiencies of £1.1m were identified from undertaking a review of the customer contact teams across the council, this includes channel shifting more transactions to online where possible to create more streamlined and cost-efficient responses.
- 5.2. The financial advantage of encouraging customers towards online solutions rather than telephone contact are explained in paragraph 2.4 above. The expectation is that the cost of transferring the resulting staff time into making outbound contacts will be met from grants, therefore we do not expect any redundancies within CSC as a result of this change. The level of opening hours recommended would result in a reduction in budgets of approximately £93,000 the final figure is still to be confirmed with finance partners.

6. Climate Change Appraisal

- 6.1. There are no direct implications for climate change as a result of this report and full implications and considerations of climate change as a result of any changes to the approved approach will be reviewed at that time.

7. Background

- 7.1. Since Shropshire Council introduced the strategy of “channel shift” for customer contact (Shropshire Council Customer Strategy 2012/2013) the Customer Service Centre has seen a steady reduction in telephone contact across many services with an increase in customers contacting the CSC either by using online forms, social media or via webchat embedded in the council’s webpages.
- 7.2. There are a number of reports in the public domain that define differing costs per transaction per different channel of customer contact. The cost figures reproduced below are taken from SOCITM’s 2012 report “*The potential for channel shift in local Government*” These figures will doubtlessly have increased over time but are accepted as a benchmark figure.

Contact channel	Face to Face	Telephone	Online Transaction
Cost per transaction	£8.62	£2.83	£0.15

- 7.3. Therefore, the potential cost savings to the council of continuing to build and encourage the use of accessible and convenient online alternatives in place of telephone calls to request services are tangible. We nevertheless recognise the fact that some residents may not be able to transact online, some online offers are in development or not complete and in some cases residents may need to pursue transactions already carried out.
- 7.4. The Covid-19 pandemic has done much to transform the digital landscape in the UK. For example, among 50-70 year olds, three quarters (75%) say they were making video calls more often during lockdown and three in ten (31%) said they were emailing more than they did before the pandemic struck. A survey by Lloyds Bank found that three times more 70-year-olds registered for online banking during lockdown compared to the same time last year.
- 7.5. However, against this, the same research suggests that people in mid to later life are at greater risk of being digitally excluded. Those who are not online are not just older, they are also likely to be in worse health, be on lower incomes and have lower educational attainment. 71% of those offline have no more than a secondary education, and nearly half (47%) are from low-income households.
- (Source: Centre for Ageing Better report: How has Covid 19 changed the landscape of digital inclusion)*
- 7.6. Therefore, the proposal to revise the opening times of the CSC is felt to be a reasonable compromise between these issues: the council's online offer is now wider and more complete than it was but there still needs to be an alternative offer to avoid excluding those residents unable to use online services.
- 7.7. Appendix 1 to this report illustrates the profile of the volume of calls received by CSC against current opening times, plus the number of calls potentially displaced by the different proposals for opening times upon which we consulted.

8. Next Steps

- 8.1. Should cabinet agree the above recommendations, the intention would be to introduce the revised opening hours at the earliest possible opportunity.
- 8.2. HR advice has been sought over the impact of these proposals on the work of the CSC generalist staff and staff themselves have been kept informed at all stages of development of this proposal. Other than a later opening time, there is little or no change to the times of work for most staff, the exception being around cover for Saturday working. Therefore, an appropriate period of consultation will be carried out with any affected staff.

List of Background Papers (This MUST be completed for all reports, but does not include items containing exempt or confidential information)

Local Member:

Changes to customer service centre opening times has the potential for a County wide impact affecting all local members.

Appendices

Appendix 1- Profile of average call volumes to CSC throughout current opening times and the potential displacement of calls with revised opening times.

Appendix 2 – Proposals for revised CSC opening times

Appendix 3 – Analysis of public consultation feedback

Appendix 4 - Equality and Social Inclusion Impact Assessment

Appendix 1

Average daily, weekly and monthly calls to the Customer Service Centre (CSC) and potential effect of shorter opening

Note – in these visuals, the blue bars represent the number of phone calls received during each hourly slot CSC is open. The red divisions illustrate the volumes of calls potentially affected by revised opening times.

Analysis of calls in a typical week would suggest that the majority of calls affected by revised opening hours would be for Waste services (37% of total calls in that week), general enquiries (15% of total calls), Highways issues (14% of total calls) and Registrar’s Services (8% of total calls)

This can vary considerably during expected seasonal peaks for example around elections issues, school admissions and especially during major events such as flooding.

Table 1

Average calls received throughout the day (Period 1 January to 31 August 2022)

The average number of calls over a normal day over the period is 725

Revising CSC opening times to 9am to 5pm would affect around 36 calls

Revising CSC opening times to 9am to 4pm would affect around 92 calls

Revising CSC opening times to 9am to 3pm would affect around 170 calls

Revising CSC opening times to 10am to 4pm would affect around 192 calls

Table 2:

Average number of calls received over a week (Period 1 January to 31 August 2022)

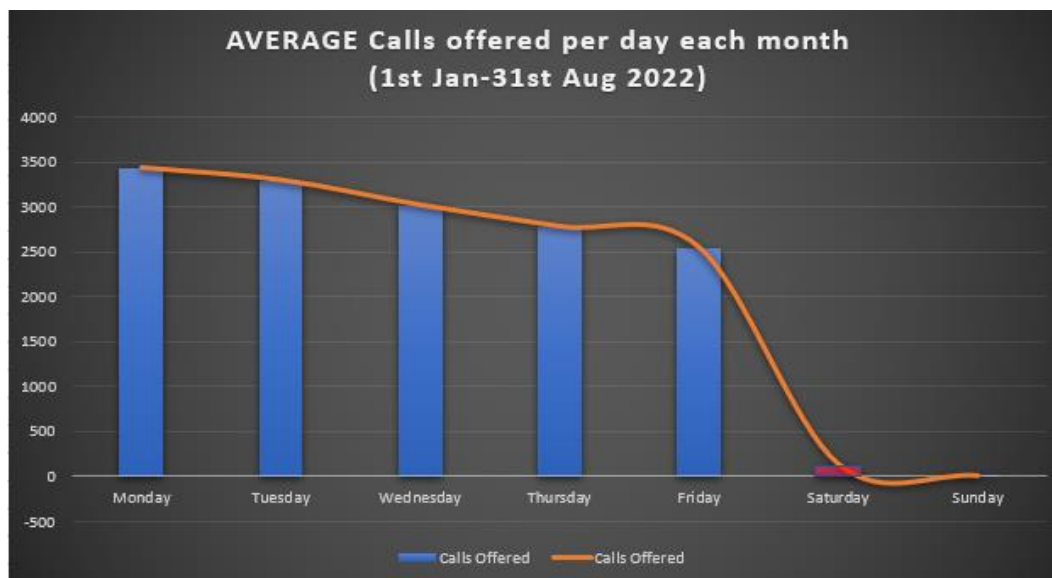

The average number of calls over a normal week in the period is 3486

- Revising CSC opening times to 9am to 5pm would affect around 182 calls
- Revising CSC opening times to 9am to 4pm would affect around 442 calls
- Revising CSC opening times to 9am to 3pm would affect around 810 calls
- Revising CSC opening hours to 10am to 4pm would affect around 923 calls

The graphs above are average figures, there are weeks and months where seasonal peaks occur and numbers will be higher as a result.

Table 3:

Average call profile over a working week for CSC

This graph illustrates the typically busiest days for call volumes across the working week, in particular the very low levels of calls received on Saturday opening times of 9am to 1pm.

There are again seasonal variations that are down to service activities and in particular following bank holiday closures

Appendix 2

Options consulted on: Revised Customer Service Centre opening times

Option 1

Monday to Friday 9am to 3pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

Uniform opening times more easily recognised by residents
Few calls are received before 9am therefore minimal disruption to calls in the morning
These opening times release up to 11 staff for 2 hours Monday to Thursday plus 10 staff for 2 hours on Friday, theoretically up to 108 staff hours to dedicate to preventative outbound calls in the afternoons.

Negatives:

Still relatively high numbers of calls currently received between 3pm and 5pm before they tail off, we would expect there to be a period of disruption for residents during this adjustment where waiting times will be longer.
Does not address the higher call numbers at the start of a week, again a period of adjustment for residents
No outbound calls envisaged prior to 9am

Option 2

Monday to Friday 10am to 4pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

Uniform opening times more easily recognised by residents
Releases up to 11 staff for one hour a day Monday to Thursday and 10 staff for one hour Friday, theoretically up to 54 staff hours to dedicate to preventative outbound calls – (afternoons only)

Negatives:

Disruption to relatively high call numbers between 9am and 10am, risk that these calls may then present at 10am leading to long wait times in the morning. Possible disruption for residents over a period of adjustment.
Outbound calls prior to 10am is possible but success rate and effectiveness is questionable.
Far fewer staff hours available each week to make preventative outbound calls.

Option 3

**Monday and Tuesday 9am to 3.30pm
Wednesday and Thursday 9am to 3pm
Friday 10am to 3pm
Total opening hours per week: 30 (55.5% of current opening times)**

Positives:

Slightly longer opening times Monday and Tuesday attempt to address higher call levels earlier in the week
Releases up to 11 staff for 1.5 hours Monday and Tuesday, 11 staff for 2 hours Wednesday and Thursday and 10 staff for 2 hours on Fridays, theoretically 97 hours a week to dedicate to preventative outbound calls.

Negatives:

Opening times may not be easy for residents to remember

Still some possible disruption to calls attempted after 3/3.30pm meaning a period of adjustment for resident.

Outbound calls prior to 10am on the Friday is possible but success rate and effectiveness is questionable

Option 4

Monday and Tuesday 9am to 5pm

Wednesday to Friday 9am to 3pm

Total opening hours: 34 (63% of current opening hours)

Positives:

Longer opening times on Monday and Tuesday address attempt to higher call volumes at the start of the week.

Minimal disruption to calls in the mornings

Potentially easier opening pattern for residents to remember

Releases up to 11 staff for 2 hours Wednesday and Thursday and up to 10 staff on Friday, theoretically 54 staff hours per week for outbound calls

Negatives:

Still some possible disruption to calls attempted after 3pm Wednesday to Friday

Far fewer staff hours available each week to make outbound preventative calls. Possible bias towards transactional calls over outbound wellbeing calls

Only able to make outbound calls later in the week

Customer Service Centre Opening Hours Report

April 2023

1 Background and Methodology

Shropshire Council proposed changes to the times during which the Customer Service Centre would take generalist calls from customers. This is due to improvements to the council's website enabling the public to make simpler requests for council services at any time of the day or night, regardless of office hours. The council sought feedback on four options based on their analysis of call patterns during the day including offering an opportunity for the public to suggest alternatives if they did not agree with any of the given options. For the full proposals, background information and frequently asked questions provided by Shropshire Council alongside the survey itself, please see the appendix of this report.

The survey of eight questions was produced by Customer Services and the Shropshire Council Feedback and Insight Team and run using Survey Monkey and paper copies printed on request. In the analysis phase, the team considered qualitative questions, and major themes were identified from the feedback. For the presentation of data, percentages in tables the report uses values rounded to the nearest integer.

The report is broken down into various sections:

- Background & Methodology (this section)
- Demographics (Questions 3–4,6–8)
- Survey results (Questions 1–2, 5)
- Conclusions

This engagement report has been designed to be shared with Customer Services and, on approval, published as a public document.

2 Demographics

393 people completed the survey. The vast majority of respondents completed this survey as local residents (85%) with Shropshire Council employees second (13%).

Most respondents found out about the survey through a Shropshire Council email or direct message contact (30%) followed by the Shropshire Council newsroom or website (18%), word of mouth (14%) and the council's own social media (13%).

The fifty respondents who selected “other” were asked to provide specifics. Twenty-nine people said they found out about the survey while on a phone call with customer services.

Theme	No	%
When calling Customer Services (told by employee)	29	58%
When calling - recorded message	8	16%
Social Media / online	5	10%
Word of mouth / friend	3	6%
Nextdoor	2	4%
Other	2	4%
Shropshire Local	1	2%
Totals	50	100%

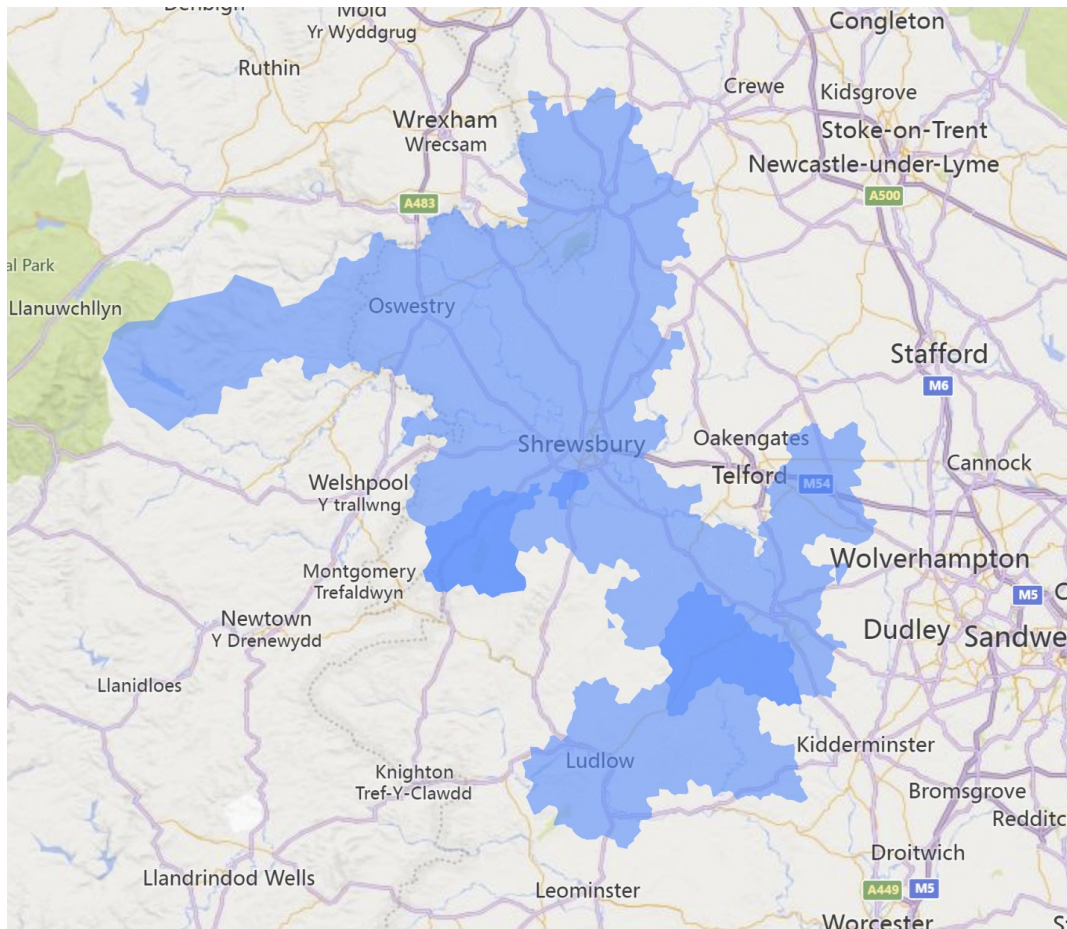

The majority of respondents identified as female (60%).

The majority of respondents (25%) were aged 55 to 64.

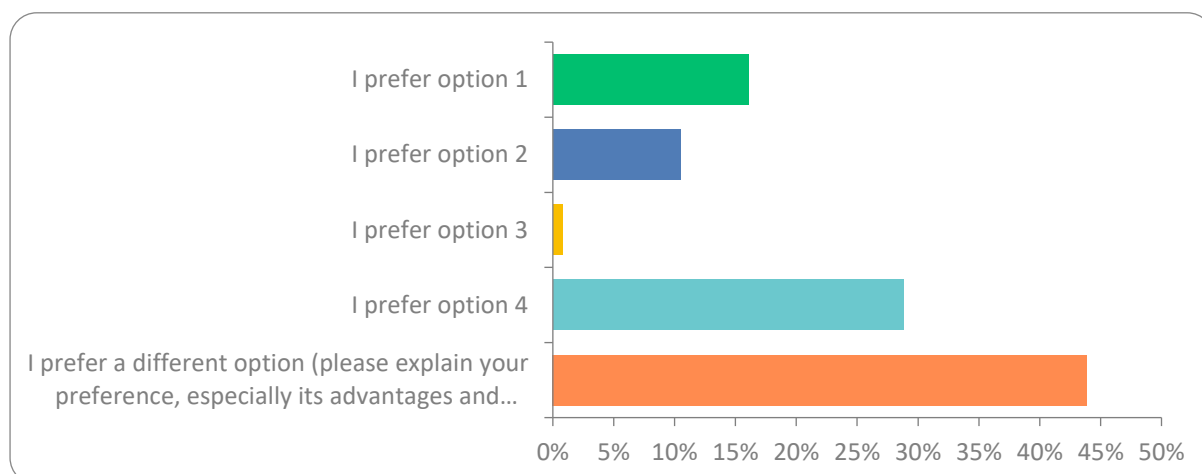

In terms of location, many parts of Shropshire were represented. There were also some responses from further afield including Greater Manchester and Kent.

3 Survey Results

Question1 asked respondents to select which of the given options they preferred. While 29% preferred option 4, far more (172 or 44%) stated they preferred a different option to those provided.

Those who preferred a different option were asked to explain their preference including its advantages and disadvantages. The majority (66%) felt that an option should include weekends and/or early morning/late evening times to accommodate those working full-time.

Theme	No	%
Include weekend / early morning/evening	66	35%
Standard Mon-Fri council hours (e.g., 9am-5pm)	53	28%
Maintain current hours	44	24%
General requests for more hours	12	6%
Other	11	6%
Totals	186	100%

Example comments:

It is of no assistance to me that the service isn't available at least one evening per week until 6pm or a Saturday morning. I work full time (Mon-Fri).

I do not believe Customer Services should be reduced at all. I have spent some considerable time this morning just getting through. The Council provides a service that we pay for. As the efficiency of this council is already compromised, I feel this would be a retrograde step. I understand the need to balance budgets however

Shropshire has an ageing population. Many of our older residents and those more vulnerable, do not use the internet. Please consider them.

I would prefer standard opening hours for Customer Services, including maintaining the Saturday opening hours. Options 3 and 4 in particular are so confusing - people just want to speak to someone at a time to suit them, not work out whether it is a 3pm finish or a 3.30pm finish depending on which day of the week it is! The other thing to bear in mind, is that often (as an ex-employee myself) is that when people are actually put through to the officer, they say that they have "been on hold for 30 minutes". Any reduction in opening hours is therefore a huge retrograde step in my opinion - especially when Council Tax bills are being sent out, or elections are being held.

I prefer a council that I can get hold of in the phone when the information I need is not available online. I also need a council that deals with issues across all towns in the County not just Shrewsbury. In these uncertain times we need more support from our council not less.

It is imperative that the alternative online facilities are easy to use and responded to in a timely manner ideally within 24–48 hours.

In question 2, respondents were then asked to add any further comments. The majority stated that there needed to be provisions for people working typical 9–5 jobs. Others shared concerns about poor or no internet access, that the online services were not of a good enough standard and that they preferred speaking to a person.

Theme	No	%
Consideration for people working Mon - Fri (9am-5pm)	43	22%
Other	24	12%
Many do not have internet access	23	12%
Online services are inadequate/need improvement	23	12%
Speaking on the phone preferred to online	21	11%
Simple hours better/staggered timings will cause confusion	16	8%
Do not cut services	14	7%
More, not less access needed to council services	12	6%
Need clear plan/signposting for emergency/out of hours assistance	11	6%
Reduced hours will lead to reduced quality of service	11	6%
Totals	198	100%

Sample comments:

Whilst I can use emails, our Internet provider has a problem, providing us with a steady Internet. It drops out frequently and hence the emails can go astray, or we can't send them! Our mobile phones have no reception in our house as we live in a dip. We use the landline frequently for this reason and this is the only way we can contact our council.

Online does not provide the same level of service as a person especially for elder residents.

Please think about people that work and people who need a support worker to be able to contact you.

In the other options what would happen on days when there are very high call volumes such as snow, ice, or floods? Would the staffing be able to be flexibly deployed to allow for support of seasonal peaks like these? If not, it could leave vulnerable people without a means of support.

The Customer Care Team should be available at the times currently available without reduction. Current waiting times when trying to get through are far too long at present as it is.

There has not been enough of an upgrade to the digital online provision to justify reducing call centre hours.

Cutting call hours is simply another way of making it even more difficult to get contact with the required department. The current trend towards more email and online use is just another way to delay dealing with your residents and cutting costs.

By having the same time Monday to Friday, it will not confuse the most vulnerable who are more likely to be using this service.

I can't understand why you are trying to change access to a service that is critical.

I seem to have phoned the council recently on two occasions between 3 and 5pm. I have been frustrated to find that the transport contingent had already gone home.

In question 5, respondents were asked to give comments on diversity, equality, or social inclusion that they would like Shropshire Council to think about for customer services. Themes included problems of digital inclusion, the vulnerable, equal access to services across the county, working hours and that some of the options had non-regular timings making them hard to remember for people with learning difficulties and the elderly.

Theme	No	%
Digital inclusion a problem that this will compound	13	29%
Other	12	27%
This will have the greatest impact on the most vulnerable	11	24%
Access to services in some parts of the county are too low	4	9%
Hours outside M-F, 9-5 needed for working parents, people with inflexible jobs, etc.	3	7%
Odd timings are hard to remember for people with learning difficulties and the elderly	2	4%
Totals	45	100%

Sample comments:

Such service changes are always detrimental to elder persons who are not so IT literate.

Please let's have equal money spent across the county, does not seem that way at the moment.

It will negatively affect disabled people, elderly people, and those who live in rural areas with little Internet access.

Changing times based on the days will be difficult for people with learning disabilities to understand and they are unlikely to attempt to call back if their first call during usual opening hours was unsuccessful.

Need a general "contact us" form (not service specific) to cater for those with hearing disabilities who cannot make a phone call. All the proposals discriminate against those in employment.

Please think about using all options for communication for deaf people, email, messages, texting, video calls, use of BSL online signers.

4 Conclusions

The number of respondents who completed the survey was very encouraging. The quality of engagement was excellent. In particular, the open-ended questions produced some clear and valuable findings.

Most respondents (44%) preferred an alternative to the given prescribed options. The themes and sample comments give a good flavour of some of the underlying sentiments which include desires for:

- Recognition of people with inflexible or traditional 9–5 employment unable to use the telephone service during regular business hours.
- An option with standard Mon–Fri, 9–5 hours
- Maintaining current hours until the online services are brought up to a certain level of quality and,
- *More*, not fewer, customer service hours.

Of the prescribed options, option 4 was by far the most popular (29%).

Other comment themes worth paying attention to are:

- Lack of, or inadequate, internet access making using online services difficult
- The preference for speaking to someone
- Whatever the chosen option, a simpler way of thinking about timings to avoid confusion
- Again, a general sense of more, not less access needed to council services and certainly not cutting them.
- Clear plans/signposting for out-of-the-ordinary situations such as emergencies and out-of-hours assistance.
- A fear that reduced hours will lead to a reduction in service quality.

Finally, in terms of Equalities, Social and Health Impact Assessments (ESHIA) it is worth noting that people felt that:

- A reduction in customer services would lead to a compounding of pre-existing digital inclusion issues
- Have the greatest impact on the most vulnerable in society
- Timings might be difficult to remember for those with learning difficulties or the elderly because hours were not uniform across the work week
- Working parents needing hours outside of the traditional 9–5 workday
- Even before any customer service centre reductions, service access in some parts of the county is already too low.

Appendix

Customer Service Centre Opening Hours – Public Consultation

What is this consultation about?

Shropshire Council's Customer Service Centre handles telephone and other forms of contact from our customers for around 50 different Council services. It is currently open from 8am to 6pm Monday to Friday and 9am to 1pm on Saturdays.

Some parts of our Customer Service Centre handle complex issues for Shropshire's residents, things like Adult Social Care, concerns for children, risk of homelessness or financial crisis affecting families and these types of contact from people will always need a skilled adviser and a telephone call to resolve them, but many other calls, to our more "generalist" side of our Customer Service Centre, are for relatively simple things that could be done another way, particularly using online requests.

Since we last looked at these opening hours, the council's website offer has developed considerably meaning that many people are now able to make simpler requests for council services at any time of the day or night, regardless of office hours.

We know also that making such requests online is a far more cost-effective way for us as a council to do things – it costs around £2.83 to handle a phone call but an online transaction might cost just £0.15, so doing more this way is much better for us as a council, especially when finances are difficult.

However we fully recognize that not everyone is able to go online and that sometimes, there is a need to speak to someone anyway for things to be able to progress so this is not a consultation about closing our Customer Service Centre, it is about us trying to balance the hours that we need to be open to help people with these "generalist" calls, with encouraging our customers to do more online so that we are handling service requests as efficiently as possible.

And there is one other advantage to encouraging more of our customers to do business with us online – it frees up time for our skilled advisers to concentrate on important preventative work for Shropshire residents and households that may be in need of additional support.

Throughout the difficulties of the Covid pandemic and its aftermath and now into the cost-of-living crisis, the Customer Service Centre has made tens of thousands of calls to Shropshire's residents to check they are coping, that they are safe and either getting the help they need or know how and where to find it. This is work we would like to do more of and considering the availability of better online services we now seek to reduce the opening times of the Customer Services Centre to free up staff time to concentrate on this important work.

The table below shows how the level of calls to these general service lines over the last four years.

Year ended	April 2018	April 2019	April 2020	April 2021	April 2022
Number of calls	200,462	193,952	177,846	213,026	178,302

What do I need to do?

This document explains different options for new opening times for our generalist services together with the potential advantages and disadvantages of each and we are inviting you to give us your views on these options.

Please note that no formal decision has been made at this stage.

The information we receive through this consultation will be used to inform the decision on our future opening times.

We need you to answer the questions on the consultation form and return it to the office that supplied it.

If you can, you can complete the consultation online by going to shropshire.gov.uk/get-involved and searching for Customer Service Centre opening times consultation.

The potential impact of any changes on our customers has been assessed through completing an Equality, Social Inclusion and Health Impact Assessment. This is something that we complete to show that we have been fair when looking at the needs of customers, especially those who might be affected more by any changes.

You may find the information in our “Frequently Asked Questions” useful; copies are available to go with this consultation document.

What are we proposing?

We are proposing changes to the times during which Customer Service Centre will take generalist calls from customers.

The different options and the advantages and disadvantages of each are laid out below.

Is there a recommendation or a preferred proposal?

Yes, we do have a preferred option, and this is based on what we know about the pattern of phone calls we receive throughout the day together with how much staff time we could free up in return for shorter opening hours so that we can make more outbound calls to people with support needs.

Shropshire Council’s preferred proposal would be for our generalist lines to be open from 9am to 3pm Monday to Friday.

This is based on the fact that these opening times

- are regular and recognisable each day and therefore easier to remember.
- cover the majority of the working day and for the most popular times when we know we receive most of our calls.

- still represent around 55% of our current opening hours meaning we can still help anyone who is not able to do business online
- would free up around 100 hours per week for our advisers to do preventative work for people with support needs.

The survey questionnaire asks for your agreement, comments or otherwise on the different proposals or if you wish, to make an alternative suggestion. The options to consider are listed below.

Option 1

Monday to Friday 9am to 3pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

- Uniform opening times more easily recognised by residents
- Few calls are received before 9am therefore minimal disruption to calls in the morning
- These opening times release up to 11 staff for 2 hours Monday to Thursday plus 10 staff for 2 hours on Friday, theoretically up to 108 staff hours to dedicate to preventative outbound calls in the afternoons.

Negatives:

- Still relatively high numbers of calls currently received between 3pm and 5pm before they tail off, we would expect there to be a period of adjustment for residents during this adjustment where waiting times will be longer.
- Does not address the higher call numbers at the start of a week, again a period of adjustment for residents
- No outbound calls envisaged prior to 9am

Option 2

Monday to Friday 10am to 4pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

- Uniform opening times more easily recognised by residents
- Releases up to 11 staff for one hour a day Monday to Thursday and 10 staff for one hour Friday, theoretically up to 54 staff hours to dedicate to preventative outbound calls – (afternoons only)

Negatives:

- Disruption to relatively high call numbers between 9am and 10am, risk that these calls may then present at 10am leading to long wait times in the morning.
- Possible disruption for residents over a period of adjustment.
- May be possible to make outbound calls prior to 10am but success rate and effectiveness is questionable.

- Far fewer staff hours available each week to make preventative outbound calls.

Option 3

Monday and Tuesday 9am to 3.30pm

Wednesday and Thursday 9am to 3pm

Friday 10am to 3pm

Total opening hours per week: 30 (55.5% of current opening times)

Positives:

- Slightly longer opening times Monday and Tuesday attempt to address higher call levels earlier in the week
- Releases up to 11 staff for 1.5 hours Monday and Tuesday, 11 staff for 2 hours Wednesday and Thursday and 10 staff for 2 hours on Fridays, theoretically 97 hours a week to dedicate to preventative outbound calls.

Negatives:

- Opening times may not be easy for residents to remember
- Still some possible disruption to calls attempted after 3/3.30pm meaning a period of adjustment for resident.
- Outbound calls prior to 10am on the Friday is possible but success rate and effectiveness is questionable

Option 4

Monday and Tuesday 9am to 5pm

Wednesday to Friday 9am to 3pm

Total opening hours: 34 (63% of current opening hours)

Positives:

- Longer opening times on Monday and Tuesday address attempt to higher call volumes at the start of the week.
- Minimal disruption to calls in the mornings
- Potentially easier opening pattern for residents to remember
- Releases up to 11 staff for 2 hours Wednesday and Thursday and up to 10 staff on Friday, theoretically 54 staff hours per week for outbound calls

Negatives:

- Still some possible disruption to calls attempted after 3pm Wednesday to Friday
- Far fewer staff hours available each week to make outbound preventative calls. Possible bias towards transactional calls over outbound wellbeing calls
- Only able to make outbound calls later in the week

Frequently asked questions

These questions and answers may help to give you more information.

What Is Shropshire Council proposing?

We are proposing shorter opening times for part of our Customer Service Centre which would still remain open for a total of at least 30 hours across weekdays. These changes are for our more general service calls and will not affect calls to Adult and Children's Social Care or calls about homelessness or to the Local Welfare Support line. They will affect calls to more transactional services such as Waste, Registrars, Parking, Education etc. where many people could instead do business online via www.shropshire.gov.uk

Why is Shropshire Council doing this?

It is some time since we last reviewed our opening times and since then we have seen changes in the level of calls we receive at different times of the day, also, more council services have now become available online and customer behaviours have changed with many more people choosing to do business online.

We need as many people as possible to do business with us online because the costs are so much lower, this is very important at a time when budgets are difficult, but we also need to continue to offer a telephone service to our residents who are not able to do things this way.

Also, in the aftermath of the Covid 19 pandemic and now also during the cost-of-living crisis, we believe we should be more proactive, reaching out to Shropshire residents who might be in need of help before things reach crisis point for them.

We need to do this without extra resources, so we feel that what we are proposing here is the best compromise between encouraging people to go online, reducing the hours we are open to take calls so that we still provide a telephone service through the busiest times of the day, whilst freeing up existing staff time to make much more proactive outbound contact with our more vulnerable residents.

How much money will this save?

Revising our opening times will reduce the direct cost of staff time required to provide a phone service. We expect the cost reduction here to be around £93,000 but we will be reinvesting the same amount into making outbound calls which can create a much greater preventative return by helping people to stop needing council services in the first place.

What if I am not able to use online services?

The Customer Service Centre will still be open for a good portion of the working day and for the most popular calling times. Anyone who is not able to use the Council's online service offer is still able to contact us.

Will I have enough time for my enquiry?

Some of the enquiries we help with only take a short time, others may take longer. Our advisers will still deal with your enquiry as normal and as they do now.

What if I need to report an urgent issue?

As explained above, these changes to opening times only affect our more transactional service requests and for most of these it is reasonable if the contact centre is not available to wait until the next working day. For those able to go online, council services are available 24 hours.

There are some issues, for example, adults and children's concerns, highways issues requiring immediate response, homelessness, and car park lock-ins, where it is necessary to expect an urgent response. Calls like this will be handled through our out of hours team, but advisers will only deal with genuinely urgent issues through this service.

How many days will you be open for?

We expect to remain open between Monday to Friday but given the very small number of calls we now receive on a Saturday, the fact that most council departments are closed over the weekend, and the cost of maintaining a Saturday service to answer calls, we propose to stop opening the contact centre on a Saturday morning.

What will happen to Customer Services staff?

Changing our opening times for these service request lines will free up staff time as explained above. We will be using this time to have the same staff make outbound calls, being more proactive and reaching out to residents who may need some support.

Decision, review, and monitoring

Decision	Yes	No
Initial (part one) ESHIA Only?	✓	
Proceed to Full ESHIA or HIA (part two) Report?		✓

If completion of an initial or Part One assessment is an appropriate and proportionate action at this stage, please use the boxes above. If a Full or Part Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.

Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality, social inclusion, and health considerations
<p>The Council's policy intention is to free up time to be able to use our existing staff resource, to make higher value and more preventative outbound calls to Shropshire's more vulnerable residents and families.</p> <p>The reason for choosing to make contact by telephone are not immediately clear from the data we hold but there is a suggestion that a sizeable proportion of callers do so through preference. Additionally, not everyone is able to use online services instead, for reasons including lack of assured digital connectivity across this very rural county, lack of confidence and competencies in terms of digital skills, or disinclination to use online services.</p> <p>It is essential to retain a sufficient level of telephone service to cater for those residents unable to access services another way but against this must be balanced the drive to encourage as many people as possible to use more cost-effective online channels particularly where the request is for more transactional council services.</p>

It has been suggested through programmes such as the Good Things Foundation's "*Nobody in the Dark*" that an estimated 1 in 7 of UK citizens might be digitally excluded. In Shropshire, that would suggest around 46,000 residents with either no access to the internet or lacking the skills to use online services and Shropshire Council's own Digital Skills Programme estimates that over 11,000 of these will be aged 65 or over.

The desired outcomes of this consultation are therefore to find a way to reduce the opening times of the CSC to a point where it still remains sufficient to meet the needs of those residents not able to transact online, and still supports the various council services for whom we handle contact, whilst encouraging and supporting people to use online services as an alternative.

Achieving this will free up sufficient staff time for them to make more involved outbound calls to identify and deal early with issues arising for Shropshire's more vulnerable residents.

As such, there will be a likely positive equality impact across the Protected Characteristic groupings as set out in the Equality Act 2010, together with positive impacts for those individuals and households who find themselves in circumstances where they may be considered to be vulnerable and at risk of social exclusion. This particularly includes intersectionality with regard to Age and to Disability, for individuals within these groupings, for example young people who are care leavers and may also have a learning disability, and with regard to the circumstances in which people may find themselves, for example veterans and serving members of the armed forces and their families, and people in low income households.

From the call statistics we monitor, which show the busier days of the week and the busier times of each day, we believe a reasonable opening hours availability would equate to 30 hours per week across a 5 day week, Monday to Friday and this consultation therefore seeks to inform the public and our partners of how we might do this with the minimum of call disruption.

Whilst it means calls to the Customer Service Centre would be affected by revised opening times, the positive effects of working in this different way, especially for individuals and households more susceptible to financial and health inequalities, are expected to outweigh these.

Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations

The Customer Service Centre continually monitors the number of calls we receive for each service across each day. This includes typical wait times across each day and the number of callers that abandon their call.

We are also able to configure the recorded messages and advice on using alternative online services that a caller hears during any wait time and at the end

of a call, our advisers ask “wrap up” questions to find out why a telephone call was preferred.

This will enable us to review demand and our subsequent response, to determine whether impact is being disproportionately felt, as well as identify where improvements can be made to online services according to our callers.

Outbound calls that we are able to make as a result of freeing up staff time through reduced opening hours will be closely scrutinised to show the value of the contact in terms of who has been contacted, any issues identified, the advice, solutions or signposting given in return and the likely outcomes of this more proactive approach.

As now, we will work closely with Shropshire Local as the council’s presence in the community to determine any adverse impact as well as to provide an inclusive alternative to those genuinely unable to carry out transactional requests online.

Associated ESHIAs

There are no earlier associated Equalities Impact Assessments

Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of any other considerations. This includes climate change considerations

Climate change

There are no direct implications for climate change as a result of this proposal and full implications and considerations of climate change as a result of any changes to the approved approach will be reviewed at that time.

Health and well being

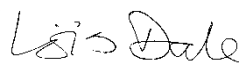

These proposals only affect the opening times for more transactional general service requests, especially as most council services have developed online alternatives to telephoning. These are things like highways issues or waste and planning enquiries.

There would be no change to the availability of the Council’s First Point of Contact service that handles Adult and Children’s concerns calls and the initial contact for Adult Social Care nor to the opening times of the Welfare Support Team that handle calls for homelessness and administer grants from the council’s Local Welfare Fund.

In reducing the opening times for these transactional services, we will release staff time to make proactive contact with Shropshire’s more vulnerable residents who

will be identified from across various council data systems. As was first developed during the Covid pandemic, these calls will help us to identify any emerging needs amongst our most vulnerable residents before these reach any point of crisis or concern. We know from our experience during Covid that these contacts are well received and help identify and mitigate a range of emerging health and wellbeing issues.

B. Detailed Screening Assessment

Aims of the service change and description

Shropshire Council continues to develop its online service offer as a very effective alternative to more traditional contact and one that is not restricted to office hours, being quite literally available all day and every day to suit the user.

It is however essential to retain a sufficient level of telephone service to cater for those residents unable to access services another way but against this must be balanced that drive to encourage as many people as possible to use more cost-effective online channels particularly where the request is for more transactional council services.

We need to do this to increase the efficiency of how people do business with the council but also to enable us to use our existing highly skilled staff resource to make higher value and more preventative outbound calls to Shropshire's more vulnerable residents and families.

Therefore, the desired outcome of this consultation is to find a way to reduce the opening times of the CSC to 30 hours across the week, Monday to Friday, so that it still provides for the needs of those residents not able to transact online, and still supports the various council services for whom we handle contact, whilst encouraging and supporting people to use online services as an always available alternative.

Achieving this must free up sufficient staff time to enable them to make more involved outbound calls to identify and deal early with issues arising for Shropshire's more vulnerable residents.

The general calls section in the Customer Service Centre handles around 200,000 enquiries from residents over a typical year.

Around 160,000 contacts are over the telephone and of these, 45% are from people requesting services from Waste and Recycling, Highways, Registrars and Planning, all of which have an online service available.

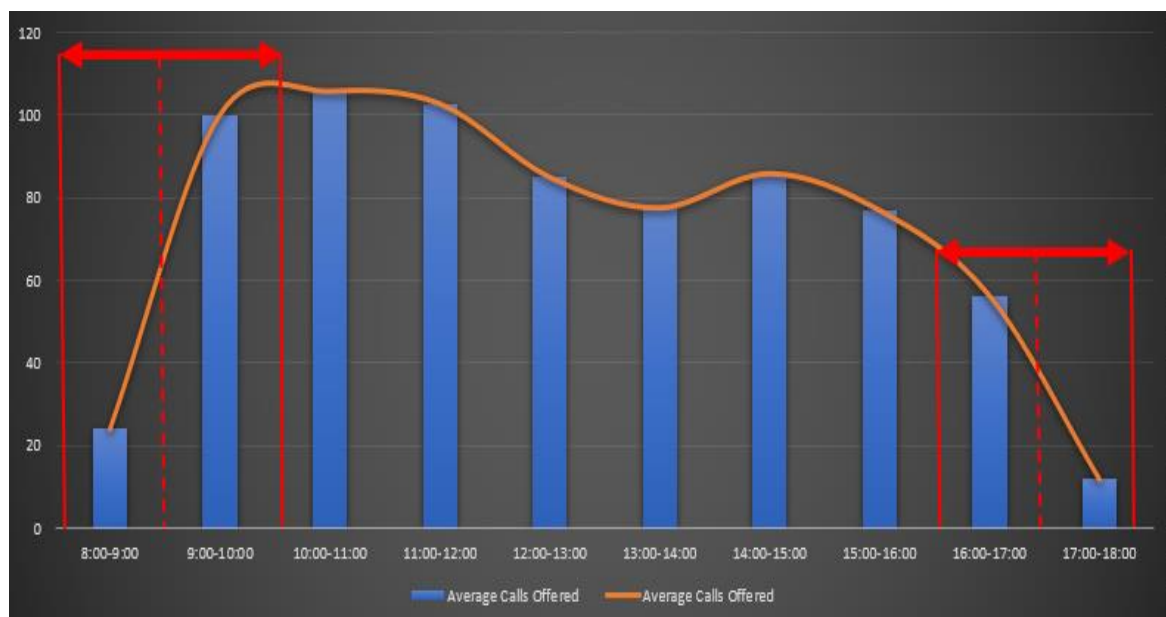

A further 37,000 enquiries are made online, either through E mail, Web Chat or social media.

The level and intensity of these contacts is not uniform and varies throughout a year and indeed throughout a typical day with peaks and troughs in contact within certain months, across different days of a week and across different times of a typical day.

The following graphs illustrate the levels of telephone contact we experience across specific periods and support our suggestions for opening hours including the preferred option that form the basis of the proposals on which we are consulting with the public:

Table 1

Average calls received throughout the day (Period 1 January to 31 August 2022)

The average number of calls over a normal day over this period is 725, the profile shows that calls reach a peak between 10am and 12 noon and remain relatively stable until a sharp drop off from 4pm onwards. The red lines illustrate the volume of calls handled from 8-10am and again from 4-6pm

Revising CSC opening times to 9am to 5pm would affect around 36 calls

Revising CSC opening times to 9am to 4pm would affect around 92 calls

Revising CSC opening times to 9am to 3pm would affect around 170 calls

Revising CSC opening times to 10am to 4pm would affect around 192 calls

Table 2:

Average number of calls received over a week (Period 1 January to 31 August 2022)

This graph extends the first to show the numbers of calls we handle in one week. The total number of calls in the week is 3486. Again, the red lines show the volumes of calls associated with the period 8-10am and 4-6pm.

- Revising CSC opening times to 9am to 5pm would affect around 182 calls
- Revising CSC opening times to 9am to 4pm would affect around 442 calls
- Revising CSC opening times to 9am to 3pm would affect around 810 calls
- Revising CSC opening hours to 10am to 4pm would affect around 923 calls

Table 3:
Average call profile over a working week for CSC

When we compare the volume of calls across a typical week we see some differences in numbers as the week progresses. Whereas the calls throughout the day itself follow a typical pattern as in tables 1 and 2, the actual volume of calls compared day by day show a definite decline in numbers as the week progresses received on each day with calls on Saturday mornings reaching a bare minimum.

Mondays and Tuesdays are clearly busier than the rest of the week showing a “storing up” of customer enquiries over the weekend. We notice this especially after Bank Holidays.

Options for revised opening times

Option 1

Monday to Friday 9am to 3pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

Uniform opening times easily recognised by residents

Few calls received before 9am therefore minimal disruption to calls in the morning

Releases up to 108 staff hours to dedicate to preventative outbound calls – afternoons only

Negatives:

Still relatively high numbers of calls currently received between 3pm and 5pm before they tail off, a period of disruption for residents during adjustment where waiting times will be longer.

Does not address the higher call numbers at the start of a week, again a period of adjustment for residents

No outbound calls envisaged prior to 9am

Option 2

Monday to Friday 10am to 4pm, closed Saturdays. Total opening hours per week: 30 (55.5% of current opening times)

Positives:

Uniform opening times easily recognised by residents

Frees up a maximum of 54 staff hours to dedicate to preventative outbound calls – afternoons only

Negatives:

Disruption to relatively high call numbers between 9am and 10am, risk that these calls may then present at 10am leading to long wait times in the morning. Possible disruption for the resident during period of adjustment.

Releases up to 65 staff hours per week for outbound calls.

Outbound calls prior to 10am is possible but success rate and effectiveness is questionable.

Option 3

Monday and Tuesday 9am to 3.30pm

Wednesday and Thursday 9am to 3pm

Friday 10am to 3pm

Total opening hours per week: 30 (55.5% of current opening times)

Positives:

Slightly longer opening times Monday and Tuesday to address higher call levels earlier in the week

Releases up to 97 staff hours per week for outbound calls

Negatives:

Complex opening times for residents to remember

Still some possible disruption to calls attempted after 3/3.30pm meaning a period of adjustment for resident.

Outbound calls prior to 10am on the Friday is possible but success rate and effectiveness is questionable

Option 4

Monday and Tuesday 9am to 5pm

Wednesday to Friday 9am to 3pm

Total opening hours: 34 (63% of current opening hours)

Positives:

Longer opening times on Monday and Tuesday address the heavier call volumes at the start of the week.

Minimal disruption to calls in the mornings

Potentially easier opening pattern for residents to remember

Releases up to 54 staff hours per week for outbound calls

Negatives:

Still some possible disruption to calls attempted after 3pm Wednesday to Friday

Possible bias towards transactional calls over outbound wellbeing calls

Only able to make outbound calls later in the week

Intended audiences and target groups for the service change

The Customer Service Centre is the point of contact for over 50 Council services and serves a diverse range of users including Shropshire's residents, organisations, local councils and Elected Members

The First Point of Contact service for both Adult and Children's Services and the contact point for homelessness and Local Welfare Fund applications, used by residents and organisations alike, are not affected by these proposals and would retain their normal operating times.

Stakeholders for whom it would be useful to be made aware of the proposals and kept informed of developments include the Shropshire and Telford and Wrekin ICS, Members of Parliament, neighbouring local authorities, the County Councils Network and the Rural Services Network

Evidence used for screening of the service change

These proposed changes reflect the increasing take up of online services, especially in the wake of the Covid pandemic lockdowns but also takes into account also what we know and can assume about digital exclusion in our county as detailed earlier in this assessment.

In arriving at this proposal, we have referred to existing research and information presented to the Health and Wellbeing Board by Shropshire's Social Task force, covering in particular the effects of the current cost of living crisis for Shropshire's residents. Full details can be found here:

<https://shropshire.gov.uk/committee-services/documents/b15906/8.%20Health%20Protection%20update%2011.%20Social%20Action%20Task%20Force%20report%2014th-Jul-2022%2009.30%20Health%20and%20We.pdf?T=9>

Such information is instrumental to the intention to use existing staff resource, time and expertise not only to provide a support line for inbound calls but also to be more proactive in contacting households across Shropshire to identify emerging need before it reaches crisis point and advising on potential solutions available.

Specific consultation and engagement with intended audiences and target groups for the service change

A period of public a public consultation took place to gauge opinion on a number of options to reduce the opening times of the CSC to around 30 hours per week.

This consultation ran between 13 March and 23 April 2023 and was made available to as wide a range of residents as possible using the council's website, paper copies available at numerous libraries across the County, via a customer helpline through which paper copies could be requested and via social media, press coverage and broadcast on Radio Shropshire.

In addition, every customer calling the CSC heard a recorded message informing them of the consultation and every customer using Shropshire Local was similarly informed.

From this we are confident that over 19,000 residents making contact with us were directly made aware.

In addition, we informed all stakeholders and partner organisations across Council Services, Housing and the Voluntary and Community Sector with invitation to comment.

Initial equality impact assessment by grouping (Initial health impact assessment is included below)

Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Protected Characteristic groupings and other groupings in Shropshire	High negative impact <i>Part Two ESIIA required</i>	High positive impact <i>Part One ESIIA required</i>	Medium positive or negative impact <i>Part One ESIIA required</i>	Low positive, negative, or neutral impact (please specify) <i>Part One ESIIA required</i>
<u>Age</u> (please include children, young people, young people leaving care, people of working age, older people. Some people may belong to more than one group e.g., a child or young person for whom there are safeguarding concerns e.g., an older person with disability)			✓	
<u>Disability</u> (please include mental health conditions and syndromes; hidden disabilities including autism and Crohn's disease; physical and sensory disabilities or impairments; learning disabilities; Multiple Sclerosis; cancer; and HIV)			✓	
<u>Gender re-assignment</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				✓
<u>Marriage and Civil Partnership</u> (please include associated aspects: caring responsibility, potential for bullying and harassment)			✓	
<u>Pregnancy and Maternity</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				✓
<u>Race</u> (please include ethnicity, nationality, culture, language, Gypsy, Traveller)				✓
<u>Religion and belief</u> (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Zoroastrianism, and any others)				✓
<u>Sex</u>				✓

(this can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				
Sexual Orientation (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)				✓
Other: Social Inclusion (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health inequalities; refugees and asylum seekers; rural communities; veterans and serving members of the armed forces and their families)			✓	

Initial health and wellbeing impact assessment by category

Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing? For example, would it cause ill health, affecting social inclusion, independence and participation? .			✓	
Will the proposal <i>indirectly impact</i> an individual's ability to improve their own health and wellbeing? For example, will it affect their ability to be physically active, choose healthy food, reduce drinking and smoking?			✓	

.				
<p>Will the policy have a <i>direct impact</i> on the community - social, economic and environmental living conditions that would impact health?</p> <p>For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation?</p> <p>.</p>			✓	
<p>Will there be a likely change in <i>demand</i> for or access to health and social care services?</p> <p>For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services?</p> <p>.</p>			✓	

Identification of likely impact of the service change in terms of other considerations including climate change and economic or societal impacts

These proposals attempt to balance the direct demand on the Council’s Customer Service Centre of service requests for our more transactional services and where workable alternatives exist, with using the skilled resources freed up to be more instrumental in supporting the diverse health and wellbeing needs of our residents.

Whilst it means calls to the Customer Service Centre would be affected by revised opening times, the positive effects of working in this different way, especially for households more susceptible to financial and health inequalities, are expected to outweigh these.

We would work closely with our Data and Information Governance teams to ensure that any personal data accessed to support a more proactive and preventative approach to our residents, was used in accordance with the principles of the General Data Protection Regulations

Guidance Notes

1. Legal Context

It is a legal requirement for local authorities to assess the equality and human rights impact of changes proposed or made to services. It is up to us as an authority to decide what form our equality impact assessment may take. By way of illustration, some local authorities focus more overtly upon human rights; some include safeguarding. It is about what is considered to be needed in a local authority's area, in line with local factors such as demography and strategic objectives as well as with the national legislative imperatives.

Carrying out these impact assessments helps us as a public authority to ensure that, as far as possible, we are taking actions to meet the general equality duty placed on us by the Equality Act 2010, and to thus demonstrate that the three equality aims are integral to our decision making processes.

These are: eliminating discrimination, harassment and victimisation; advancing equality of opportunity; and fostering good relations.

These screening assessments for any proposed service change go to Cabinet as part of the committee report, or occasionally direct to Full Council, unless they are ones to do with Licensing, in which case they go to Strategic Licensing Committee.

Service areas would ordinarily carry out a screening assessment, or Part One equality impact assessment. This enables energies to be focussed on review and monitoring and ongoing evidence collection about the positive or negative impacts of a service change upon groupings in the community, and for any adjustments to be considered and made accordingly.

These screening assessments are recommended to be undertaken at timely points in the development and implementation of the proposed service change.

For example, an ESHIA would be a recommended course of action before a consultation. This would draw upon the evidence available at that time, and identify the target audiences, and assess at that initial stage what the likely impact of the service change could be across the Protected Characteristic groupings and our tenth category of Social Inclusion. This ESHIA would set out intended actions to engage with the groupings, particularly those who are historically less likely to engage in public consultation eg young people, as otherwise we would not know their specific needs.

A second ESHIA would then be carried out after the consultation, to say what the feedback was, to set out changes proposed as a result of the feedback, and to say where responses were low and what the plans are to engage with groupings who did not really respond. This ESHIA would also draw more upon actions to review impacts in order to mitigate the negative and accentuate the positive. Examples of this approach include the Great Outdoors Strategy, and the Economic Growth Strategy 2017-2021

Meeting our Public Sector Equality Duty through carrying out these ESHIAs is very much about using them as an opportunity to demonstrate ongoing engagement

across groupings and to thus visibly show we are taking what is called due regard of the needs of people in protected characteristic groupings

If the screening indicates that there are likely to be significant negative impacts for groupings within the community, the service area would need to carry out a full report, or Part Two assessment. This will enable more evidence to be collected that will help the service area to reach an informed opinion.

In practice, Part Two or Full Screening Assessments have only been recommended twice since 2014, as the ongoing mitigation of negative equality impacts should serve to keep them below the threshold for triggering a Full Screening Assessment. The expectation is that Full Screening Assessments in regard to Health Impacts may occasionally need to be undertaken, but this would be very much the exception rather than the rule.

2. Council Wide and Service Area Policy and Practice on Equality, Social Inclusion and Health

This involves taking an equality and social inclusion approach in planning changes to services, policies, or procedures, including those that may be required by Government.

The decisions that you make when you are planning a service change need to be recorded, to demonstrate that you have thought about the possible equality impacts on communities and to show openness and transparency in your decision-making processes.

This is where Equality, Social Inclusion and Health Impact Assessments (ESHIA) come in. Where you carry out an ESHIA in your service area, this provides an opportunity to show:

- What evidence you have drawn upon to help you to recommend a strategy or policy or a course of action to Cabinet.
- What target groups and audiences you have worked with to date.
- What actions you will take in order to mitigate any likely negative impact upon a group or groupings, and enhance any positive effects for a group or groupings; and
- What actions you are planning to review the impact of your planned service change.

The formal template is there not only to help the service area but also to act as a stand-alone for a member of the public to read. The approach helps to identify whether or not any new or significant changes to services, including policies, procedures, functions, or projects, may have an adverse impact on a particular group of people, and whether the human rights of individuals may be affected.

This assessment encompasses consideration of social inclusion. This is so that we are thinking as carefully and completely as possible about all Shropshire groups and

communities, including people in rural areas and people or households that we may describe as vulnerable.

Examples could be households on low incomes or people for whom there are safeguarding concerns, as well as people in what are described as the nine 'protected characteristics' of groups of people in our population, e.g., Age. Another specific vulnerable grouping is veterans and serving members of the Armed Forces, who face particular challenges with regard to access to Health, to Education, and to Housing.

We demonstrate equal treatment to people who are in these groups and to people who are not, through having what is termed 'due regard' to their needs and views when developing and implementing policy and strategy and when commissioning, procuring, arranging, or delivering services.

When you are not carrying out an ESHIA, you still need to demonstrate and record that you have considered equality in your decision-making processes. It is up to you what format you choose.–You could use a checklist, an explanatory note, or a document setting out our expectations of standards of behaviour, for contractors to read and sign. It may well not be something that is in the public domain like an ESHIA, but you should still be ready for it to be made available.

Both the approaches sit with a manager, and the manager has to make the call, and record the decision made on behalf of the Council. Help and guidance is also available via the Commissioning Support Team, either for data, or for policy advice from the Rurality and Equalities Specialist. Here are some examples to get you thinking.

Carry out an ESHIA:

- If you are building or reconfiguring a building.
- If you are planning to reduce or remove a service.
- If you are consulting on a policy or a strategy.
- If you are bringing in a change to a process or procedure that involves other stakeholders and the wider community as well as particular groupings

For example, there may be a planned change to a leisure facility. This gives you the chance to look at things like flexible changing room provision, which will maximise positive impacts for everyone. A specific grouping that would benefit would be people undergoing gender reassignment

Carry out an equality and social inclusion approach:

- If you are setting out how you expect a contractor to behave with regard to equality, where you are commissioning a service or product from them.
- If you are setting out the standards of behaviour that we expect from people who work with vulnerable groupings, such as taxi drivers that we license.
- If you are planning consultation and engagement activity, where we need to collect equality data in ways that will be proportionate and non-intrusive as well as meaningful for the purposes of the consultation itself.

- If you are looking at services provided by others that help the community, where we need to demonstrate a community leadership approach

For example, you may be involved in commissioning a production to tour schools or appear at a local venue, whether a community hall or somewhere like Theatre Severn. The production company should be made aware of our equality policies and our expectation that they will seek to avoid promotion of potentially negative stereotypes. Specific groupings that could be affected include: Disability, Race, Religion and Belief, and Sexual Orientation. There is positive impact to be gained from positive portrayals and use of appropriate and respectful language in regard to these groupings in particular.

3. Council wide and service area policy and practice on health and wellbeing

This is a relatively new area to record within our overall assessments of impacts, for individual and for communities, and as such we are asking service area leads to consider health and wellbeing impacts, much as they have been doing during 2020-2021, and to look at these in the context of direct and indirect impacts for individuals and for communities. A better understanding across the Council of these impacts will also better enable the Public Health colleagues to prioritise activities to reduce health inequalities in ways that are evidence based and that link effectively with equality impact considerations and climate change mitigation.

Health in All Policies – Health Impact Assessment

Health in All Policies is an upstream approach for health and wellbeing promotion and prevention, and to reduce health inequalities. The Health Impact Assessment (HIA) is the supporting mechanism

- Health Impact Assessment (HIA) is the technical name for a common-sense idea. It is a process that considers the wider effects of local policies, strategies and initiatives and how they, in turn, may affect people's health and wellbeing.
- Health Impact Assessment is a means of assessing both the positive and negative health impacts of a policy. It is also a means of developing good evidence-based policy and strategy using a structured process to review the impact.
- A Health Impact Assessment seeks to determine how to maximise health benefits and reduce health inequalities. It identifies any unintended health consequences. These consequences may support policy and strategy or may lead to suggestions for improvements.
- An agreed framework will set out a clear pathway through which a policy or strategy can be assessed and impacts with outcomes identified. It also sets out the support mechanisms for maximising health benefits.

The embedding of a Health in All Policies approach will support Shropshire Council through evidence-based practice and a whole systems approach, in achieving our corporate and partnership strategic priorities. This will assist the Council and partners in promoting, enabling and sustaining the health and wellbeing of individuals and communities whilst reducing health inequalities.

Individuals

Will the proposal have a *direct impact* on health, mental health and wellbeing?

For example, would it cause ill health, affecting social inclusion, independence and participation?

Will the proposal directly affect an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to be physically active e.g., being able to use a cycle route; to access food more easily; to change lifestyle in ways that are of positive impact for their health.

An example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g., green highways), and changes to public transport that could encourage people away from car usage. and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve lives.

Will the proposal *indirectly impact* an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to access local facilities e.g., to access food more easily, or to access a means of mobility to local services and amenities? (e.g. change to bus route)

Similarly to the above, an example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g. pedestrianisation of town centres), and changes to public transport that could encourage people away from car usage, and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve their health and well being.

Communities

Will the proposal directly or indirectly affect the physical health, mental health, and wellbeing of the wider community?

A *direct impact* could include either the causing of ill health, affecting social inclusion, independence and participation, or the promotion of better health.

An example of this could be that safer walking and cycling routes could help the wider community, as more people across groupings may be encouraged to walk more, and as there will be reductions in emission leading to better air quality.

An *indirect impact* could mean that a service change could indirectly affect living and working conditions and therefore the health and well being of the wider community.

An example of this could be: an increase in the availability of warm homes would improve the quality of the housing offer in Shropshire and reduce the costs for households of having a warm home in Shropshire. Often a health promoting approach also supports our agenda to reduce the level of Carbon Dioxide emissions and to reduce the impact of climate change.

Please record whether at this stage you consider the proposed service change to have a direct or an indirect impact upon communities.

Demand

Will there be a change in demand for or access to health, local authority and social care services?

For example: Primary Care, Hospital Care, Community Services, Mental Health and Social Services?

An example of this could be: a new housing development in an area would affect demand for primary care and local authority facilities and services in that location and surrounding areas. If the housing development does not factor in consideration of availability of green space and safety within the public realm, further down the line there could be an increased demand upon health and social care services as a result of the lack of opportunities for physical recreation, and reluctance of some groupings to venture outside if they do not perceive it to be safe.

For further information on the use of ESHIAs: please contact your head of service or contact Mrs Lois Dale, Rurality and Equalities Specialist and Council policy support on equality, via telephone 01743 258528, or email lois.dale@shropshire.gov.uk.

For further guidance on public health policy considerations: please contact Amanda Cheeseman Development Officer in Public Health, via telephone 01743 253164 or email

amanda.cheeseman@shropshire.gov.uk

Committee and Date

Cabinet

19 July 2023

Item

Public

Permission to consult on the removal of discretionary areas of School and College transport assistance

Responsible Officer:	James Willocks		
email:	James.willocks@shropshire.gov.uk	Tel:	01743 253041
Cabinet Member (Portfolio Holder):	Kirstie Hurst-Knight		

1. Synopsis

The purpose of this report is to seek permission to consult on the removal of all discretionary provision (other than in exceptional circumstances) of home to school transport, this is Nursery and Post 16 SEND and mainstream Post 16 students.

2. Executive Summary

The Council is committed to providing efficient, integrated transport services whilst ensuring that its statutory duties continue to be met. However, the current significant financial pressures mean that the Council must review those transport functions which are discretionary in nature.

There are a number of other projects that are being undertaken to achieve this target in addition to the draft proposals set out within this report. These include a further development of the personal transport budget programme, Independent Travel Training and network reviews.

The Council's Passenger Transport Group have introduced a number of innovative transport solutions to reduce the pressure on the home to school transport budget and

whilst these have and continue to be successful, to realise a significant budget reduction a policy change is needed.

Currently Shropshire Council offer an enhancement to its statutory duty through a post 16/nursery contribution scheme, details of which are provided through the Council's website and accessed by parent's and carers.

Should Cabinet agree to this consultation, the Council would undertake an eight-week consultation during September and October 2023 (to avoid the school holidays) with various stakeholders including elected members, schools and colleges, Parent Advocacy groups, Voluntary & Community Sectors, Town & Parish Councils etc. Following this period, the results of this consultation would be analysed and compiled before returning to Cabinet for a decision on whether to adopt the draft policy.

Any changes would come into effect from 1 September 2024 and will be applicable to new applicants, as with previous practice the removal of provision will be on a phased approach, protecting all those pupils and students entitled within the existing schemes.

3. Recommendations

That Cabinet:-

- 3.1 Authorise the consultation process as set out in section 2 to removal all discretionary areas of home to school travel assistance (other than in exceptional circumstances)
- 3.2 Expect a future report setting out the outcome and recommendations arising from the consultation process.

Report

4. Risk Assessment and Opportunities Appraisal

An ESHIA, part 1 has been completed and attached marked **Appendix A**.

- 4.1 Should the Council propose to withdraw its financial support for discretionary school and college transport it would have a High Negative impact on Protected Characteristic groupings, in particular those for Age, Disability, Pregnancy and Maternity, Sex, and Social Inclusion. It would also potentially be seen as running against the corporate aims of the Council with regard to children and young people and their life chances.

5. Financial Implications

The council currently supports the discretionary areas of transport (i.e. Nursery and Post 16 SEND and mainstream Post 16 students) via £0.647m of funding as highlighted in Table A.

(It should be noted that this figure does not include the proportionate costs of Post 16 students travelling on contracted routes to their local school 6th form.)

Entitlement Category	Number of Pupils/Students	Net Spend 2022/23
Post 16 Mainstream	56	£76,418
Post 16 SEND	104	£543,281
Nursery SEND	6	26,906
Total	166	£646,605

5.1 Mainstream Post 16 Transport

The council's annual spend on mainstream post 16 transport stood at £76,418 for the 22/23 financial year with entitled students numbers at 56.

The Council currently provides a contribution scheme for those entitled mainstream students that qualify for post 16 transport assistance. The contribution levels for this scheme are currently set at £933 for the higher level and £299 for those parents of students who are on a low income.

Those students who face hardship in paying for their travel are also able to access support through 6th form and college bursaries and a number of students are currently accessing this support.

5.2 Special Education Needs and Disabilities (SEND) Post 16 Transport

The council's annual spend on SEND post 16 transport stood at £543,281 for the 22/23 financial year with entitled student numbers at 104. SEND post 16 pupils are also subject to the contribution scheme.

The contribution levels for this scheme are currently set at £933 for the higher level and £299 for those parents of students who are on a low income.

Those students who face hardship in paying for their travel are also able to access support through 6th form and college bursaries and a number of students are currently accessing this support.

5.3 Special Education Needs and Disabilities (SEND) Nursery Transport

The council's annual spend on SEND Nursery transport stood at £26,906 for the 22/23 financial year with entitled pupil numbers at 6. Nursery transport numbers have reduced significantly year on year as provision locally has become more widely available.

The contribution levels for this scheme are currently set at £933 for the higher level and £299 for those parents of students who are on a low income.

5.4 Net Financial Impact to the Council of consultation proposals

In respect of the potential cost reductions to the Council, the transport network would need to be re-designed to realise the financial savings highlighted within the Council's financial plan.

It is anticipated that £0.350m of cost reductions would be achieved through network changes resulting from the withdrawal of these discretionary areas.

6. Climate Change Appraisal

- 6.1. A “no effect” outcome is expected against energy and fuel consumption, renewable energy generation, carbon offsetting and climate change adaptation as it is not anticipated that any additional vehicles will be on the road, existing vehicles/seats will be utilised for eligible, statutory aged pupils.

7. Background

The council currently provides the following support for Mainstream, SEND (Special Educational Needs and Disability) Post 16 students and Nursery SEND pupils.

Shropshire Council applies policy by meeting the statutory obligations that apply to School transport from the Education Act 1996 as amended by section 77 of the Education and Inspections Act 2006 (in particular sections 508A –E and Schedule 35B) coupled with ‘The Department of Education’s Home to School Travel and Transport Guidance’

7.1 Post 16 – Mainstream Sixth Forms and Colleges

- The Council currently provides transport assistance for 56 post 16 students to mainstream school 6th forms or other Further Educational establishments.
- Of the 56 post 16 students receiving transport assistance, 40 students are paying the higher rate of the contribution and 16 students paying the lower rate
- These students are provided with either a bus pass on a public service vehicle or a seat on a school transport contract, this is usually dependent upon which type of Further Education establishment they are attending.
- Transport entitlement is defined as “a student living 3 miles or more from their designated FE establishment”
- We do not normally offer bespoke transport solutions such as minibuses or taxis

7.2 Post 16 – SEND Students

- The Council currently transport 104 Post 16 SEND students to a number of specialist FE establishments. Of the 104 students, 65 are paying the higher rate of contribution and 39 students paying the lower rate

- These students will travel to their FE establishment in either a shared vehicle with other SEND pupils, or a bespoke vehicle as a result of their additional needs or geographical location.
- Before a seat on a vehicle is allocated, if appropriate, the initial offer to parents will be in the form of Independent Travel training, where by the student receives one to one training to give them the confidence and skills to use public transport. This has proven to have much wider benefits to the students and their families than just accessing college transport, through creating independence and establishing life skills.

7.3 Nursery SEND Pupils

- The Council currently transport 6 Nursery aged students, who all attend Severdale Nursery
- These pupils are located county wide, which represents a logistical challenge in order to keep costs to a minimum.
- Before a vehicle is allocated for a pupil, parents are offered travelling expenses at a pre-agreed daily mileage.

8. Additional Information

8.1 We have engaged with a number of other Local Authorities and gained direct comparisons on what travel assistance is offered for these discretionary areas, as shown in Table B.

This research has highlighted that some Local Authorities do not offer Nursery SEND travel assistance.

However, we are unable to identify another Local Authority that currently does not offer Post 16 SEND Travel Assistance. It is important to note that our list of local authorities is not exhaustive, and a number did say that they were considering similar options to ourselves.

- A number of Local Authorities do not provide nursery transport
- Where they do provide Nursery Transport it is in the form of a seat on an existing vehicle and not bespoke (such as a separate taxi).
- Post 16 contribution schemes are applied to those SEND students entitled to assistance (as with our current mainstream post 16 scheme).

Table B

	Post 16 Transport Provided (SEND and mainstream)	Previous Contribution (Full Payer/Proof of Benefit)	2023/24 Contribution (Full Payer/Proof of Benefit)	Historic SEND Contribution	2023/24 SEND Contribution (Full Payer/Proof of Benefit)	Nursery Transport Provided (Y/N)	Independent Travel Training Provided (Y/N)

The council applies both its mandatory and discretionary statutory duties in providing transport to support student attendance at school/colleges and is considering changes to ensure levels of support are sustainable for those students to whom there is a mandatory statutory duty.

There is also the potential that students can be supported for transport cost through college bursaries that are allocated at their discretion, should the council amend the contribution scheme to include these discretionary areas.

Shropshire Council
Equality, Social Inclusion and Health Impact Assessment (ESHIA)
Initial Screening Record 2023

A. Summary Sheet on Accountability and Actions

Name of proposed service change
Permission to consult on the removal of discretionary funding areas of school and college transport assistance

Name of lead officer carrying out the screening
Kelly Kovacs
Fleet and Specialist Transport Manager

Decision, review, and monitoring

Decision	Yes	No
Initial (part one) ESHIA Only?	x	
Proceed to Full ESHIA or HIA (part two) Report?		x

If completion of an initial or Part One assessment is an appropriate and proportionate action at this stage, please use the boxes above. If a Full or Part Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.

Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality, social inclusion, and health considerations
<p>The proposal is for the Council to withdraw its financial support for all discretionary areas of home to school and college transport, from a potential date of September 2024. This relates to the following cohorts: Nursery SEND; Post 16 SEND; and mainstream Post 16 students.</p> <p>To do so would be projected to have a Medium to High Negative impact on Protected Characteristic groupings as set out in the Equality Act 2010, in particular those for Age, Disability, Pregnancy and Maternity, and Sex. There would also be a projected Medium to High Negative impact for those individuals and households that we may consider to be vulnerable by virtue of their circumstances. Whilst these are not defined as Protected Characteristics within equality legislation, it has been a matter of good practice in Shropshire for us to consider their needs as well, within a tenth grouping termed Social Inclusion. This includes low income households, households in rural areas, and young people leaving care.</p>

The impact would be neutral for children and young people on the SEND Register in the age groupings 5-16.

Existing cohorts in receipt of this funding would also not be affected, meaning that the impact upon them at this stage in their lives would be Neutral. However, potentially a child on the SEND Register currently in receipt of support for transport to Nursery could theoretically then proceed through 5-16 funding-assisted schooling and then once again find that the family needed to pay for post 16 SEND transport.

Legal Services have indicated the possibility of judicial review if the Council went out to consultation, given the likely high negative impact for children and young people coming into these categories whom we would class as vulnerable.

Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations

We have engaged with a number of other Local Authorities, who are rural unitary authorities, neighbouring authorities and urban authorities, giving a strong picture of the situation across a range of localities and geographies. We have gained direct comparisons on what travel assistance is offered for these discretionary areas, as shown in Table A below.

It was noted that we are unable to find a local authority that has completely withdrawn discretionary funding for SEND Post 16, so this indicates that it is an area warranting particular consideration.

Further decisions around actions to review and monitor the likely impacts of the service change would need to be informed by results of the proposed consultation and engagement. If these results indicate projected High Negative impacts, this would then necessitate the carrying out of a Part Two ESHIA, which would then involve in depth analysis of likely equality, social inclusion and health and wellbeing impacts and would need to be considered within the decision making processes of the Council through subsequent report to Cabinet

The carrying out of a Part Two ESHIA would take one of four routes:

1. To make changes to satisfy any concerns raised through the specific consultation and engagement process and through further analysis of the evidence to hand;
2. To make changes that will remove or reduce the potential of the service change to adversely affect any of the Protected Characteristic groups and those who may be at risk of social exclusion;
3. To adopt the service change as it stands, with evidence to justify the decision even though it could adversely affect some groups;
4. To find alternative means to achieve the aims of the service change.

This forensic analysis stage enables a service area to assess:

- Which gaps need to be filled right now, to help you to make a decision about the likely impact of the proposed service change?
- Which gaps could be filled within a timeframe that will enable you to monitor potential barriers and any positive or negative impacts on groups and individuals further along into the process?

Associated ESHIAs

The service area carried out a previous equality impact screening assessment in 2019, following which a decision was taken not to proceed further with removal of funding at that time.

Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of any other considerations. This includes climate change considerations and health and well being considerations

Climate Change

A “no effect” outcome is expected against energy and fuel consumption, renewable energy generation, carbon offsetting and climate change adaptation as it is not anticipated that any additional vehicles will be on the road, existing vehicles/seats will be utilised for eligible, statutory aged pupils.

Health and Well Being

The projected action would also potentially be seen as running against the corporate aims of the Council with regard to children and young people and their life chances, and against the aims of the Council with regard to promoting health and well being across groupings. With regard to whether the policy have a *direct impact* on the community - social, economic and environmental living conditions that would impact health, it could be viewed as Medium Negative at this stage, and potentially High Negative, with regard to child development, education, independence and employment opportunities

B. Detailed Screening Assessment

Aims of the service change and description
<p>Shropshire Council is currently reviewing its transport services for children and students and the review of these services is focused on one area: those pupils and students who receive travel assistance and are of non-compulsory school age, by which we mean nursery children and Post 16 students.</p> <p>The number of children and young people who are currently supported in this way is:</p> <ul style="list-style-type: none"> • Post 16 mainstream – 56 • SEND Nursery - 6

- SEND Post 16 - 104

There is a proposal currently being considered to consult on the following:

- The potential removal of all discretionary areas of home to school transport.

Shropshire Council applies both its statutory and discretionary duties in providing transport to support student attendance at school/colleges.

The rationale for this is that Shropshire Council is considering changes to ensure future resources are targeted most appropriately, to ensure support is provided to those students to whom there is a statutory duty and to those students who would be unable to attend education or training without this support.

The Council is committed to providing efficient, integrated services whilst ensuring that its statutory duties are met. Financial pressures mean that Shropshire Council must review the non-statutory functions it provides and consider whether these arrangements are still financially viable whilst protecting its statutory duty.

Intended audiences and target groups for the service change

The intended audience and target groups/stakeholders are:

- Existing students and their families
- The whole community including children as yet unborn/siblings
- All elected members
- Schools and Colleges
- Transport Operators
- Licensed Taxi providers
- Parent Advocacy Groups
- Marches LEP
- West Midlands Combined Authority
- Voluntary and Community Sector
- Town and Parish Councils
- Neighbouring Authorities
- Other rural unitary authorities
- Youth Parliament
- Local Members of Parliament

This list is not intended to be exhaustive and may be updated during the consultation and engagement process.

Evidence used for screening of the service change

We have engaged with a number of other Local Authorities, who are rural unitary authorities, neighbouring authorities and urban authorities, giving a strong picture of the situation across a range of localities and geographies. We have gained direct comparisons on what travel assistance is offered for these discretionary areas, as shown in Table A.

This research has highlighted that some Local Authorities do not offer Nursery SEND travel assistance. However, we are unable to identify another Local Authority that currently does not offer Post 16 SEND Travel Assistance. It is important to note that our list of local authorities is not exhaustive, and a number did say that they were considering similar options to ourselves

Table A

	Post 16 Transport Provided	Previous Contribution (Full Payer/Proof of Benefit)	2023/24 Contribution (Full Payer/Proof of Benefit)	Historic SEND Contribution	2023/24 SEND Contribution (Full Payer/Proof of Benefit)	Nursery Transport Provided (Y/N)	Independent Travel Training Provided (Y/N)
Shropshire	Y	£875 / £142.50	£933/£299	Free	£933/£299	Y	Y

Worcestershire	Y	Variable charges based on zones	Variable charges based on zones	-	Variable charges based on zones	Y	Y
North Yorkshire	Y	£490 / £245	£747.50 / £373.75	-	£747.50 / £373.75	N	Y
Wiltshire	Y	£710 / £210	£900/£300	£499 / £184	£650/£300	N	Y
Devon	Y	£600	£690/Dependent on school	-	Dependent on school	N	Y
Solihull	Y	£705	£750	£645	£750	N	Y

Warwickshire	Y	£836/£209	£870/£217.50	-	£870/£217.50	N	Y
Staffordshire	Y	£494 (low income only)	£746 / £589	£625 / £494	£746 / £589	-	-
Lincolnshire	Y	£570	£570	-	-	-	-
Powys	Y	Free	Free (only provided for those that qualify)	Free	Free (only provided for those that qualify)		

There has been a detailed analysis of the current and historic situation in Shropshire, with for example numbers in the Nursery cohort declining from 45 in 2017 to 17 in 2019 and now 6.

Specific consultation and engagement with intended audiences and target groups for the service change

These policy changes could come into effect from 1 September 2024 and in that scenario would be applicable to new applicants, as with previous practice the removal of provision will be on a phased approach, protecting all those pupils and students entitled within the existing schemes. This will mean that the full effect of these savings will not be realised until the 2026/27 financial year.

A consultation has not been carried out to date, with the focus more on comparator research into other local authority approaches and a detailed analysis of the situation in Shropshire. It would be vital that any consultation carried out be comprehensive and far reaching.

The consultation will need to include efforts to gain as many views as possible from as wide ranging an audience as possible, not only from those who are likely to be affected but also from healthcare and social care and education professionals, who are well placed to provide informed assessments of anticipated future needs in terms of numbers and suitable modes of transport. Links will also need to be drawn with other Council policy, on young people and on health and

well being and Early Help approaches. This will help to mitigate against the risk that any decisions are seen to be made on financial grounds alone.

Initial equality impact assessment by grouping (Initial health impact assessment is included below)

Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Protected Characteristic groupings and other groupings in Shropshire	High negative impact <i>Part Two ESIIA required</i>	High positive impact <i>Part One ESIIA required</i>	Medium positive or negative impact <i>Part One ESIIA required</i>	Low positive, negative, or neutral impact (please specify) <i>Part One ESIIA required</i>
<u>Age</u> (please include children, young people, young people leaving care, people of working age, older people. Some people may belong to more than one group e.g., a child or young person for whom there are safeguarding concerns e.g., an older person with disability)			Medium Negative at this stage: could be viewed as High Negative	
<u>Disability</u> (please include mental health conditions and syndromes; hidden disabilities including autism and Crohn's disease; physical and sensory disabilities or impairments; learning disabilities; Multiple Sclerosis; cancer; and HIV)			Medium Negative at this stage: could be viewed as High Negative	
<u>Gender re-assignment</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				Low Negative
<u>Marriage and Civil Partnership</u> (please include associated aspects: caring responsibility, potential for bullying and harassment)				Low Negative
<u>Pregnancy and Maternity</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Medium Negative at this stage: could be viewed as High Negative	

Race (please include ethnicity, nationality, culture, language, Gypsy, Traveller)				Low Negative
Religion and belief (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Zoroastrianism, and any others)				Low Negative
Sex (this can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Medium Negative at this stage: could be viewed as High Negative	
Sexual Orientation (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)				Low Negative
Other: Social Inclusion (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health inequalities; refugees and asylum seekers; rural communities; veterans and serving members of the armed forces and their families)			Medium Negative at this stage: could be viewed as High Negative	

Initial health and wellbeing impact assessment by category

Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing? For example, would it cause ill health, affecting social			Medium Negative at this stage: could be viewed as High Negative with regard to	

inclusion, independence and participation? .			independence and participation in education and learning	
Will the proposal indirectly impact an individual's ability to improve their own health and wellbeing? For example, will it affect their ability to be physically active, choose healthy food, reduce drinking and smoking?				Low Negative
Will the policy have a direct impact on the community - social, economic and environmental living conditions that would impact health? For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation? .			Medium Negative at this stage: could be viewed as High Negative with regard to child development, education, independence and employment opportunities	
Will there be a likely change in demand for or access to health and social care services? For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services? .				Low Negative

Identification of likely impact of the service change in terms of other considerations including climate change and economic or societal impacts

The service change as proposed may have a likely negative impact on promoting social inclusion. It affects a vulnerable grouping within society and their families in terms of impact upon the income of the households affected, thereby indirectly impacting the choices they are then able to make about work, education, leisure and social mobility during an ongoing cost of living crisis.

Guidance Notes

1. Legal Context

It is a legal requirement for local authorities to assess the equality and human rights impact of changes proposed or made to services. It is up to us as an authority to decide what form our equality impact assessment may take. By way of illustration, some local authorities focus more overtly upon human rights; some include safeguarding.

It is about what is considered to be needed in a local authority's area, in line with local factors such as demography and strategic objectives as well as with the national legislative imperatives.

Carrying out these impact assessments helps us as a public authority to ensure that, as far as possible, we are taking actions to meet the general equality duty placed on us by the Equality Act 2010, and to thus demonstrate that the three equality aims are integral to our decision making processes.

These are: eliminating discrimination, harassment and victimisation; advancing equality of opportunity; and fostering good relations.

These screening assessments for any proposed service change go to Cabinet as part of the committee report, or occasionally direct to Full Council, unless they are ones to do with Licensing, in which case they go to Strategic Licensing Committee.

Service areas would ordinarily carry out a screening assessment, or Part One equality impact assessment. This enables energies to be focussed on review and monitoring and ongoing evidence collection about the positive or negative impacts of a service change upon groupings in the community, and for any adjustments to be considered and made accordingly.

These screening assessments are recommended to be undertaken at timely points in the development and implementation of the proposed service change.

For example, an ESHIA would be a recommended course of action before a consultation. This would draw upon the evidence available at that time, and identify the target audiences, and assess at that initial stage what the likely impact of the service change could be across the Protected Characteristic groupings and our tenth category of Social Inclusion. This ESHIA would set out intended actions to engage with the groupings, particularly those who are historically less likely to engage in public consultation eg young people, as otherwise we would not know their specific needs.

A second ESHIA would then be carried out after the consultation, to say what the feedback was, to set out changes proposed as a result of the feedback, and to say where responses were low and what the plans are to engage with groupings who did not really respond. This ESHIA would also draw more upon actions to review

impacts in order to mitigate the negative and accentuate the positive. Examples of this approach include the Great Outdoors Strategy, and the Economic Growth Strategy 2017-2021

Meeting our Public Sector Equality Duty through carrying out these ESHIAs is very much about using them as an opportunity to demonstrate ongoing engagement across groupings and to thus visibly show we are taking what is called due regard of the needs of people in protected characteristic groupings

If the screening indicates that there are likely to be significant negative impacts for groupings within the community, the service area would need to carry out a full report, or Part Two assessment. This will enable more evidence to be collected that will help the service area to reach an informed opinion.

In practice, Part Two or Full Screening Assessments have only been recommended twice since 2014, as the ongoing mitigation of negative equality impacts should serve to keep them below the threshold for triggering a Full Screening Assessment. The expectation is that Full Screening Assessments in regard to Health Impacts may occasionally need to be undertaken, but this would be very much the exception rather than the rule.

2. Council Wide and Service Area Policy and Practice on Equality, Social Inclusion and Health

This involves taking an equality and social inclusion approach in planning changes to services, policies, or procedures, including those that may be required by Government.

The decisions that you make when you are planning a service change need to be recorded, to demonstrate that you have thought about the possible equality impacts on communities and to show openness and transparency in your decision-making processes.

This is where Equality, Social Inclusion and Health Impact Assessments (ESHIA) come in. Where you carry out an ESHIA in your service area, this provides an opportunity to show:

- What evidence you have drawn upon to help you to recommend a strategy or policy or a course of action to Cabinet.
- What target groups and audiences you have worked with to date.
- What actions you will take in order to mitigate any likely negative impact upon a group or groupings, and enhance any positive effects for a group or groupings; and
- What actions you are planning to review the impact of your planned service change.

The formal template is there not only to help the service area but also to act as a stand-alone for a member of the public to read. The approach helps to identify whether or not any new or significant changes to services, including policies,

procedures, functions, or projects, may have an adverse impact on a particular group of people, and whether the human rights of individuals may be affected.

This assessment encompasses consideration of social inclusion. This is so that we are thinking as carefully and completely as possible about all Shropshire groups and communities, including people in rural areas and people or households that we may describe as vulnerable.

Examples could be households on low incomes or people for whom there are safeguarding concerns, as well as people in what are described as the nine 'protected characteristics' of groups of people in our population, e.g., Age. Another specific vulnerable grouping is veterans and serving members of the Armed Forces, who face particular challenges with regard to access to Health, to Education, and to Housing.

We demonstrate equal treatment to people who are in these groups and to people who are not, through having what is termed 'due regard' to their needs and views when developing and implementing policy and strategy and when commissioning, procuring, arranging, or delivering services.

When you are not carrying out an ESHIA, you still need to demonstrate and record that you have considered equality in your decision-making processes. It is up to you what format you choose.–You could use a checklist, an explanatory note, or a document setting out our expectations of standards of behaviour, for contractors to read and sign. It may well not be something that is in the public domain like an ESHIA, but you should still be ready for it to be made available.

Both the approaches sit with a manager, and the manager has to make the call, and record the decision made on behalf of the Council. Help and guidance is also available via the Commissioning Support Team, either for data, or for policy advice from the Rurality and Equalities Specialist. Here are some examples to get you thinking.

3. Council wide and service area policy and practice on health and wellbeing

This is a relatively new area to record within our overall assessments of impacts, for individual and for communities, and as such we are asking service area leads to consider health and wellbeing impacts, much as they have been doing during 2020-2021, and to look at these in the context of direct and indirect impacts for individuals and for communities. A better understanding across the Council of these impacts will also better enable the Public Health colleagues to prioritise activities to reduce health inequalities in ways that are evidence based and that link effectively with equality impact considerations and climate change mitigation.

Health in All Policies – Health Impact Assessment

Health in All Policies is an upstream approach for health and wellbeing promotion and prevention, and to reduce health inequalities. The Health Impact Assessment (HIA) is the supporting mechanism

- Health Impact Assessment (HIA) is the technical name for a common-sense idea. It is a process that considers the wider effects of local policies, strategies and initiatives and how they, in turn, may affect people's health and wellbeing.
- Health Impact Assessment is a means of assessing both the positive and negative health impacts of a policy. It is also a means of developing good evidence-based policy and strategy using a structured process to review the impact.
- A Health Impact Assessment seeks to determine how to maximise health benefits and reduce health inequalities. It identifies any unintended health consequences. These consequences may support policy and strategy or may lead to suggestions for improvements.
- An agreed framework will set out a clear pathway through which a policy or strategy can be assessed and impacts with outcomes identified. It also sets out the support mechanisms for maximising health benefits.

The embedding of a Health in All Policies approach will support Shropshire Council through evidence-based practice and a whole systems approach, in achieving our corporate and partnership strategic priorities. This will assist the Council and partners in promoting, enabling and sustaining the health and wellbeing of individuals and communities whilst reducing health inequalities.

Individuals

Will the proposal have a *direct impact* on health, mental health and wellbeing?

For example, would it cause ill health, affecting social inclusion, independence and participation?

Will the proposal directly affect an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to be physically active e.g., being able to use a cycle route; to access food more easily; to change lifestyle in ways that are of positive impact for their health.

An example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g., green highways), and changes to public transport that could encourage people away from car usage. and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve lives.

Will the proposal *indirectly impact* an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to access local facilities e.g., to access food more easily, or to access a means of mobility to local services and amenities? (e.g. change to bus route)

Similarly to the above, an example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g. pedestrianisation of town centres), and changes to public transport that could encourage people away from car usage, and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve their health and well being.

Communities

Will the proposal directly or indirectly affect the physical health, mental health, and wellbeing of the wider community?

A *direct impact* could include either the causing of ill health, affecting social inclusion, independence and participation, or the promotion of better health.

An example of this could be that safer walking and cycling routes could help the wider community, as more people across groupings may be encouraged to walk more, and as there will be reductions in emission leading to better air quality.

An *indirect impact* could mean that a service change could indirectly affect living and working conditions and therefore the health and well being of the wider community.

An example of this could be: an increase in the availability of warm homes would improve the quality of the housing offer in Shropshire and reduce the costs for households of having a warm home in Shropshire. Often a health promoting approach also supports our agenda to reduce the level of Carbon Dioxide emissions and to reduce the impact of climate change.

Please record whether at this stage you consider the proposed service change to have a direct or an indirect impact upon communities.

Demand

Will there be a change in demand for or access to health, local authority and social care services?

For example: Primary Care, Hospital Care, Community Services, Mental Health and Social Services?

An example of this could be: a new housing development in an area would affect demand for primary care and local authority facilities and services in that location and surrounding areas. If the housing development does not factor in consideration of availability of green space and safety within the public realm, further down the line

there could be an increased demand upon health and social care services as a result of the lack of opportunities for physical recreation, and reluctance of some groupings to venture outside if they do not perceive it to be safe.

For further information on the use of ESHIAs: please contact your head of service or contact Mrs Lois Dale, Rurality and Equalities Specialist and Council policy support on equality, via telephone 01743 258528, or email lois.dale@shropshire.gov.uk.

Committee and Date

Item

Public

Proposed Amendment and/or Extension of Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017

Responsible Officer:	Mark Barrow		
email:	mark.barrow@shropshire.gov.uk	Tel:	01743 258919
Cabinet Member (Portfolio Holder):	Cllr Richard Marshall		

1. Synopsis

To seek a renewal from 1 August 2023 of the Shrewsbury Town Centre Public Spaces Protection Order for three years with variations to give extra powers to the Police and to the Council to address specific anti-social behaviours.

2. Executive Summary

- 2.1. This report has been prepared in line with The Shropshire Plan. It specifically relates to the Healthy Economy strategic priority and the strategic objective that the Council will develop Shropshire as a safe, strong and vibrant destination to attract people to live in, work in, learn in and visit the county.
- 2.2. The Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017 ('the Order') was originally approved by Cabinet on 21 June 2017 with an effective commencement date of 1 August 2017.
- 2.3. Cabinet approved the renewal of the Order, without any variation, on 6 July 2020 and this took effect from 1 August 2020. This is the existing Order, which will expire on 31 July 2023.
- 2.4. A public consultation to extend/vary the existing Order has been undertaken, which sought comments from statutory consultees as well as other interested parties and the public. Over 65 responses to the consultation were received, all of

which fully support extending the Order with the current provisions. The majority of those who responded were also in favour of varying the Order to include three new provisions, together with the power for the Council to authorise other persons to act under the Order.

- 2.5. The proposed Order now includes the original four prohibitions, specifically:
- urinating/defecating;
 - leaving personal belongings;
 - a wider enabling provision to require a person to stop drinking alcohol and/or hand over alcohol if causing anti-social behaviour; and
 - a wider enabling provision to require a person to leave an area if causing anti-social behaviour.
- 2.6. Together with three new provisions that would enable an authorised officer to tackle additional specific behaviours that are causing nuisance, alarm, harassment or distress under the following circumstances:
- where a person is 'sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area',
 - where a person is within a public toilet; and
 - where a person is using a device intended to amplify sound.
- 2.7. There is also a proposal to extend the definition of an authorised officer under the Order to include 'any person authorised by Shropshire Council'.
- 2.8. West Mercia Police ('the Police'), who are a statutory consultee and currently the main agency responsible for undertaking the day-to-day enforcement of the Order, in partnership with the Council, are in support of extending and varying the Order to include the additional measures; however, they do not consider that the Police should enforce the provision relating to the use of a device intended to amplify sound and that this provision ought to be the responsibility of the Council.
- 2.9. The Police have requested an increase in the level of enforcement by Council Officers and other parties (authorised by the Council) and, as a result, have sought to amend the Memorandum of Understanding (MoU), which was agreed when the Order was originally brought into effect in 2017 between the Council and the Police, for the purposes of enforcing the Order. To facilitate this and to increase the flexibility afforded to the Council to make more efficient use of external resources, it is proposed that the authority to enter into future MoUs is delegated to appropriate Chief Officers with responsibility for functions relevant to the Order.
- 2.10. Initially, in response to the consultation, the Council service with responsibility for the enforcement of statutory noise nuisance at domestic premises, expressed concerns that officers may not be in a position to undertake enforcement action under the revised Order. However, further exploration of these concerns was undertaken, and agreement subsequently reached confirming this is now achievable; nevertheless, limited capacity means enforcement will extend to cases only insofar as they relate to a person using a device to amplify music. The potential for 'other persons' to be authorised by the Council to enforce the Order may also provide an additional resource to support the enforcement of this new and other provisions within the Order. On this basis and given the strong support from the business community for the amplified music provision, it is recommended that the Council includes this provision in the Order.

3. Recommendations

That Cabinet:

- 3.1. accepts the position as set out in the report and agrees that the Council extends, with variations, the Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017, as set out in **Appendix A (“the Order”)**, with an effective commencement date of 1 August 2023.
- 3.2. for the purpose of discharging the Order instructs the Executive Director: Place to publish and cause to be erected notices in accordance with Regulations made under the Anti-Social Behaviour, Crime and Policing Act 2014.
- 3.3. delegates authority to the Executive Director: Place to engage with West Mercia Police and to agree a new Memorandum of Understanding to specify enforcement responsibilities and any other requirements under the Order (as extended) and, where necessary, to amend or create any further Memoranda of Understanding at any time during the period that the Order (as extended) is in force.
- 3.4. delegates authority to the Executive Director: Place and any other Executive Director holding responsibility for functions relevant to the Order (as extended) to engage with any other organisation, not being part of Shropshire Council, where officers of that organisation have been authorised by Shropshire Council to undertake enforcement responsibilities under the Order (as extended), and to define those enforcement responsibilities and any other requirements within an agreed Memorandum of Understanding and, where necessary, to amend or create any further Memoranda of Understanding at any time during the period that the Order (as extended) is in force.

Report

4. Risk Assessment and Opportunities Appraisal

- 4.1. The introduction of the Order was intended to help improve the commercial nature of Shrewsbury town centre (including the evening and night-time economy and visitor experience), whilst ensuring that public spaces are enjoyed by the majority and not spoiled by the actions of the minority, and this remains at the heart of the purpose of the revised Order.
- 4.2. Under the Anti-social Behaviour, Crime and Policing Act 2014 (‘the Act’), where a public spaces protection order is introduced or where a variation is made, a legal challenge over the validity of such an order is possible for a period of up to six weeks. The revised Order will, therefore, be subject to a six-week period in which it may be challenged. When the original Order was introduced in 2017 no such challenge was made.

- 4.3. There have been no formal complaints or representations received by the Council in relation to the implementation or use of the current Order whilst it has been in operation.
- 4.4. In line with the requirements of the Act, a public consultation seeking views from statutory consultees and the public on the proposals to extend and vary the Order was undertaken between 3 April 2023 and 14 May 2023. Included with the consultation papers was a copy of the current Order and the proposed variations.
- 4.5. West Mercia Police and the Office of the Police and Crime Commissioner (OPCC), as statutory consultees, were directly notified of the consultation, together with a wide range of other bodies, including known landowners, community representatives and, through the Shrewsbury Business Improvement District (BID), many local businesses were also encouraged to respond.
- 4.6. The response to the consultation gave a very clear indication that the Order ought to continue and there was overall support to include all the proposed variations. The comments received during the consultation are set out along with the Council's comments at **Appendix B**.
- 4.7. In some cases where the responses provided have not been possible to fully capture within **Appendix B** they are provided separately as follows
- i. Response from Prosecure Ltd at **Appendix C**.
 - ii. Response from Shropshire Council Environmental Protection at **Appendix D**.
 - iii. Response from Resident (no1) at **Appendix E**.
 - iv. Response from Shrewsbury Business Improvement District at **Appendix F**.
 - v. Response from Resident (no2) at **Appendix G**.
- 4.8. In addition West Mercia Police's response to the consultation can be viewed at **Appendix H**.
- 4.9. The Order has been in operation since 2017 and, in accordance with the Council's Better Regulation and Enforcement Policy, it has primarily been used to address low level anti-social behaviour with the primary aim being to modify or change the behaviour of individuals using the lowest level of enforcement intervention. The wording of the Order has been designed to enable authorised officers to intervene in circumstances in an attempt to de-escalate situations and resolve matters, as opposed to criminalising individuals; this remains the case with the proposed variations. A summary setting out how the current Order has been utilised over the period 1 April 2020 to 31 March 2023 is included at **Appendix I**.
- 4.10. Following the introduction of the original Order, town centre incident data (01/04/2020 – 31/03/2023) recorded specifically by Team Shrewsbury partners has continued to be collated and categorised. There are currently 17 different categories to which incidents/reports/behaviours are assigned and this data is shared and reviewed regularly at Team Shrewsbury meetings. In addition, supporting data has been provided by the Police covering 10 incident categories (01/04/2020 – 31/03/2023), OIS data sets (05/02/2022 – 27/02/2023) and information collated via officer observations linked to an ASB Risk Management Plan for the town centre (18/08/2022 – 04/04/2023). Data from Shropshire Council with respect to complaints concerning busking has also been provided. This data does demonstrate a continuing need for both the existing prohibitions and also the

inclusion of the proposed new provisions. A copy of the PSPO evaluation report is included at **Appendix J**.

- 4.11. Prior to the Order being implemented in 2017, and also when the Order was extended in 2020, Equality and Social Inclusion Impact Assessments ('ESIIA') were undertaken in order to assess likely impacts for people within the nine Protected Characteristic groupings as set out in the Equality Act 2010. Consideration was also given to impacts with regard to social inclusion, which is the wider additional category used to help the Council go beyond the equality legislation and to consider impacts for individuals and households with regard to the circumstances in which they may find themselves across their life stages. This category of social inclusion enables consideration of impacts for individuals that may be considered vulnerable, including rough sleepers. Both ESIIAs followed and drew upon formal consultations and as such reflected comments from statutory consultees, other interested parties and from the community. This demonstrates ongoing engagement and enabled a view to be taken at both stocktake moments that the overall equality impact would be low positive across groupings.
- 4.12. An additional Equality, Social Inclusion and Health Impact Assessment ('ESHIA') has now been prepared reflecting the latest consultation and associated data. The Order including the proposed amendments is intended to tackle low level anti-social behaviour where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable. The way that the Order has been used since inception and will continue to be used is as a mechanism to prevent lower-level anti-social behaviour and minimise its impact. As such, it again indicates a low positive impact for groupings in the community. The ESHIA can be viewed at **Appendix K**.
- 4.13. Whilst the Order has the potential to adversely impact on children and vulnerable adults, it is intended to address unacceptable behaviours, which are considered to be anti-social in nature, which it is not unreasonable to address through a revised Order in accordance with statutory provisions. The behaviour of young persons under the age of 18 has been dealt with informally under the original Order, with appropriate contact between the Police and with parents and carers; this position is not expected to change.
- 4.14. An action to mitigate any perceived negative impact of the measures on vulnerable people, including rough sleepers, will be to advise both directly and through groups such as Team Shrewsbury that the Order, including the proposed amendments, is not a mechanism that sets out to punish poverty related issues; it sets out to punish unacceptable behaviours caused by individuals acting inappropriately, irrespective of status or wealth and applies equally to matters also commonly associated with the evening and night-time economy.
- 4.15. There are measures in place to help vulnerable people who are homeless, rough sleeping, or at risk of rough sleeping across the county. This includes support from a variety of agencies, which is currently provided through the RESET multi-agency service, which provides drug and alcohol treatment support. The RESET team provides holistic support including domestic abuse support, adult social care, housing support and mental health treatment. The partners involved are the Council, With You at Shropshire Recovery Partnership, Midlands Partnership

Foundation Trust, Shropshire Domestic Abuse Service, Shrewsbury Ark and Intuitive Thinking Skills. The Police and the wider medical profession also provide support. Further, the Council and Team Shrewsbury promote the Alternative Giving Scheme which operates within the town centre. This allows people to provide donations which are specifically used to assist homeless people.

- 4.16. Cabinet properly had regard to the rights of freedom of expression and freedom of assembly set out in the European Convention on Human Rights and the Human Rights Act 1998 during the process that led to the implementation and subsequent extension of the Order. The fact that no human rights challenges or complaints have been lodged since the introduction of the Order gives a reasonable indication that the previous decisions to implement the Order and the recommendations in this report to continue with the Order is unlikely to be at variance with the Human Rights Act 1998 and is also unlikely to result in any adverse Human Rights Act implications.
- 4.17. The anticipated positive environmental impact associated with the original Order through a reduction in urinating/defecating in the street and the public not leaving their personal belongings in the town centre will be maintained. In addition, providing enforcement arrangements are agreed and resourced, the variation to include a measure to reduce nuisance from amplified sound will also provide a positive impact for local residents and town centre business owners given the experiences shared by some in response to the consultation. Taken together, these are positive impacts in relation to the health and well-being of all residents, visitors and business owners.
- 4.18. The impacts of reducing anti-social behaviour will have a low positive impact on the well-being of those individuals who are blighted by anti-social behaviour and who may suffer frequently from such behaviours. Both existing and proposed amendments will help the authorities to both raise awareness and address anti-social behaviour.

5. Financial Implications

- 5.1. An identified breach of the Order is a criminal offence and a person guilty of an offence is liable on summary conviction to a fine not exceeding Level 3 (maximum £1,000). However, the legislation enables such offences to be dealt with, where appropriate, by way of a Fixed Penalty Notice (FPN), which, if paid, would discharge an individual's liability to conviction for the offence. The amount of the FPN was set by Cabinet at £75, reduced to £50 if paid within 10 days. There are no proposals to amend the financial level of the FPN if the Order is extended/varied.
- 5.2. Whilst the use of FPNs is being utilised by the Council in appropriate cases, none of those issued to date have been paid and, as a result, the Council has had to consider and, where appropriate, resort to instituting legal proceedings. Any costs, including officer time, associated with investigating breaches and bringing legal proceedings in the criminal courts have been met from within the Business and Consumer Protection Service operational budget. This adversely impacts the delivery of Trading Standards related mandatory statutory duties as the officers who take on these cases are based in the Trading Standards Team. Any costs awarded in court proceedings invariably do not cover the Council's expenditure

and even when awarded are rarely received due to the personal circumstances of the individuals who are facing prosecution.

- 5.3. It has also been recognised that enforcement of the Order is currently difficult, with financial and resource pressures on Shropshire Council, West Mercia Police and other partners and, whilst a wider consideration as to who may be authorised by the Council to enforce the provisions has also been proposed, there is currently no agreement to extend these powers to any particular persons. The inclusion of this power will be utilised when appropriate and when the Council is in a position to provide sufficient assurance that it can resource any anticipated outcomes from an increase in the number of enforcement actions. This will include back-office administrative support, additional officer time to review criminal reports and accompanying evidence, administering appropriate sanctions, undertaking investigations for cases requiring formal action and finally costs associated with bringing criminal legal proceedings.
- 5.4. The proposal to vary the current Order will mean that all the current street signs advertising the presence of the Order will need to be replaced to reflect the new provisions. Funding will be sought from external sources including Team Shrewsbury partners and the OPCC; however, there is a risk that this will need to be funded from the Business and Consumer Protection Service budget, which will impact the delivery of other mandatory statutory duties.
- 5.5. The proposal to vary the current Order will also mean that all the existing crime reporting books will need to be replaced to reflect the new provisions. The books are used by authorised officers to record enforcement actions undertaken and to issue, to those persons against whom the action has been undertaken, a notice outlining what has been required of them or what offence they are to be reported for. Whilst funding for new books will be discussed at Team Shrewsbury, there has been no commitment at this time and, hence, it remains highly likely that this will again need to be funded from the Business and Consumer Protection Service budget.
- 5.6. The current estimate of the costs referred to in paragraphs 5.4 and 5.5 above is £1,000.

6. Climate Change Appraisal

6.1. It is acknowledged that the Order is expected to have a 'no effect' outcome on the climate change impacts listed below:

- energy and fuel consumption (buildings and/or travel)
- renewable energy generation;
- carbon offsetting or mitigation; and
- climate change adaptation.

7. Background

7.1. The Anti-social Behaviour, Crime and Policing Act 2014 ('the Act') introduced Public Spaces Protection Orders ('Orders'), which are intended to provide the means of preventing individuals or groups committing anti-social behaviour in a

public space. Section 59 of the Act sets out the test which must be satisfied before a local authority makes an Order... “where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable”.

- 7.2. The power to make an Order rests with local authorities, in consultation with the police and other relevant bodies who may be affected. A local authority can make an Order in respect of any public space within its administrative boundary. The definition of public space is wide and includes any place to which the public or any section of the public has access, on payment or otherwise, as of right or by virtue of express or implied permission.
- 7.3. An Order can be in force for any period up to a maximum of three years after which time the local authority must consider whether to extend the Order.
- 7.4. A challenge to the validity of the Order or aspects of it can be lodged by anyone who lives in, or regularly works in or visits the area in the High Court within six weeks of issue. Further challenge can only be made when an Order is varied by the local authority. Given it is proposed to amend/vary the current Order, the opportunity to challenge the validity of the amended Order will be available for up to six weeks after the proposed amended Order is made.
- 7.5. An order may be applied wherever there is material evidence of anti-social behaviour, for example, in reports to the police, local authorities or partner agencies.
- 7.6. The restrictions and requirements included in an order may be comprehensive or targeted on specific behaviours by particular groups and/or at specified times.
- 7.7. Orders can be enforced by a police officer, a police community support officer, authorised council officers and employees of other delegated organisations. It is proposed that the power for Shropshire Council to authorise any other person be included as a variation, although there is no plan to utilise this provision until such time as resources are identified to address any increase in enforcement. This is linked with corporate work that is being undertaken to explore how funding can be obtained to ensure the Council is meeting its statutory responsibilities around responding to anti-social behaviour issues more widely.
- 7.8. A breach of the Order can be dealt with through the issuing of a Fixed Penalty Notice of up to £100, or a Level 3 fine (max £1,000) on prosecution. When the Order was first introduced the level of FPN was set at £75. There are no changes proposed to the current level of FPN.
- 7.9. In establishing an Order, appropriate signage must be displayed in accordance with the requirements of the Act on entry points to the public area and within the said area. Given variations are being proposed to the Order, new signage will be required.
- 7.10. The area covered by the Order, known as the ‘restricted area’, is identified within the Order by a map, which covers the town centre area within the river loop and a part of Mountfields, which includes Frankwell car park and the adjacent playing fields. There is no proposed change to the restricted area.

- 7.11. The first prohibition relates to urinating and defecating in the public area. Despite public belief prior to the introduction of the Order, neither would amount to a criminal offence and the police in dealing with this behaviour had to rely on gathering evidence to consider an indirect offence, e.g. 'exposure', which would often prove too difficult to pursue.
- 7.12. The second prohibition bans the leaving of personal belongings without reasonable excuse. Inadvertently or accidentally leaving behind personal items would not breach the Order as this could be considered a reasonable excuse. As a result, this prohibition is clearly aimed at those individuals intentionally leaving their possessions in the public area. Leaving behind personal belongings, given the national security risk, is simply unacceptable. Further, there is strong evidence of discarded drug paraphernalia in the town centre which provides an indication as to the possible or likely contents of the possessions being left behind potentially exposing members of the public in particular children to unnecessary risk.
- 7.13. The third prohibition has an impact on behaviours linked to the consumption of alcohol in the public area. Whilst drinking is currently permitted and will remain so, the prohibition allows intervention by an authorised officer where a person's behaviour as a result of continued alcohol consumption is causing nuisance, alarm, harassment or distress to any other person or public disorder. Only if that person fails to stop drinking and/or hand over the alcohol does a criminal breach occur.
- 7.14. The fourth prohibition is a variation to the original Order. This will provide authorised officers with the ability to engage with individuals who are sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises and are causing nuisance, alarm, harassment or distress to any other person or public disorder to move from that area. Only where a person fails to respond positively to an officer's request to move would a criminal breach occur. The Police are in support of this provision. It is aimed at helping to reduce aggressive begging and the menacing of passing public. It will also help town centre businesses gain unimpeded access to their premises, which is a concern that has been raised in a number of responses received during the consultation from town centre businesses. The majority of responses received to the public consultation support the inclusion of this new provision.
- 7.15. The fifth prohibition is also a variation to the original Order. This will provide authorised officers with the ability to engage and require individuals, whilst within a public toilet and where they are considered to be causing nuisance, alarm, harassment or distress to any other person or public disorder, to leave the toilet. Reports of anti-social behaviour by individuals using public toilets including drug related activity have been recorded by Team Shrewsbury. The majority of responses received to the public consultation support the inclusion of this new provision.
- 7.16. The sixth prohibition is also a variation to the original Order. This will provide authorised officers with the ability to require a person to stop using a device intended to amplify sound where that person is causing or likely to cause nuisance, alarm, harassment or distress. This is not an outright ban on sound amplification, but it will require a more considered use of such a device as well as greater concerns for those within the vicinity. As with the other provisions of the amended Order a criminal breach would only occur if that person failed to stop

using the device following a request by an authorised officer. The majority of responses received to the public consultation support the inclusion of this new prohibition.

- 7.17. The seventh and final prohibition again provides an indirect power for officers to intervene where a person's behaviour is causing nuisance, alarm, harassment or distress to any other person. Authorised officers can require a person to stop the behaviour and, if necessary, to leave and not to return within a 48-hour period. Only if that person refuses, without good reason, to leave the area would that person commit an offence. This prohibition provides flexibility and a degree of discretion to the enforcement process to enable the immediate cessation of the offending behaviour without the need to resort to legal action. Removal from the area for a 48-hour period provides a practical and immediate penalty and an incentive to improve future behaviour. It allows for a broad range of anti-social behaviour to be stopped without necessarily criminalising individuals.
- 7.18. The intention behind the Order continues to be to provide a mechanism to allow the police and authorised officers to address behaviours that are causing concern without the Order targeting any particular group of the community and in particular those that may be considered vulnerable or in need of help. The further extension and variation/amendment of the Order does not alter the fact that this Order is about targeting individual/s whose behaviour is causing community nuisance, alarm, harassment or distress and which is built into the specific wording of the Order.

8. Additional Information

- 8.1. Data recorded by Team Shrewsbury, Shropshire Council and the Police have been collated to demonstrate the continuing need for the original provisions of the Order but also to evidence the need for the additional provisions. An evaluation report has been prepared looking at the data for the last three financial years from period of 01/04/2020 – 31/03/2023 and can be seen at **Appendix J**.
- 8.2. In addition, a summary of the actions taken under the provisions of the Order for the period of 01/04/2020 – 31/03/2023 is set out at **Appendix I**. In line with the intentions behind the Order significant use (84 occasions) has been made of the enabling provisions of the Order by the Police to address and stop specific anti-social behaviour, with 35 breaches of the Order identified and reported to the Council for further consideration in line with the Council's Better Regulation and Enforcement Policy.
- 8.3. This data provides the evidence for the continued need for an order to cover the town centre and more specifically all the provisions to be included within the proposed revised Order. This data is also supported by the responses from the public consultation (All responses are included in **Appendices C to H**).
- 8.4. The use of the Order was greatly reduced during the Covid-19 pandemic; however, enforcement recommenced during 2021/2022 (20 occasions) and increased during 2022/2023 (96 occasions) with the trend for this financial year expected to mirror 2022/2023.

9. Conclusions

- 9.1. The Order is a practical tool that enhances the regulatory framework to address low level anti-social behaviour in Shrewsbury town centre and there is evidence to support its ongoing existence for the next three years.

Shropshire Council

Anti Social Behaviour, Crime and Policing Act 2014

Part 4 Section 59

SHREWSBURY TOWN CENTRE PUBLIC SPACES PROTECTION ORDER (No 1) 2017

Shropshire Council in exercise of its powers under section 59 Anti Social Behaviour, Crime and Policing Act 2014 (The Act) being satisfied that the conditions set out in Section 59 of the Act have been met, makes the following Order:

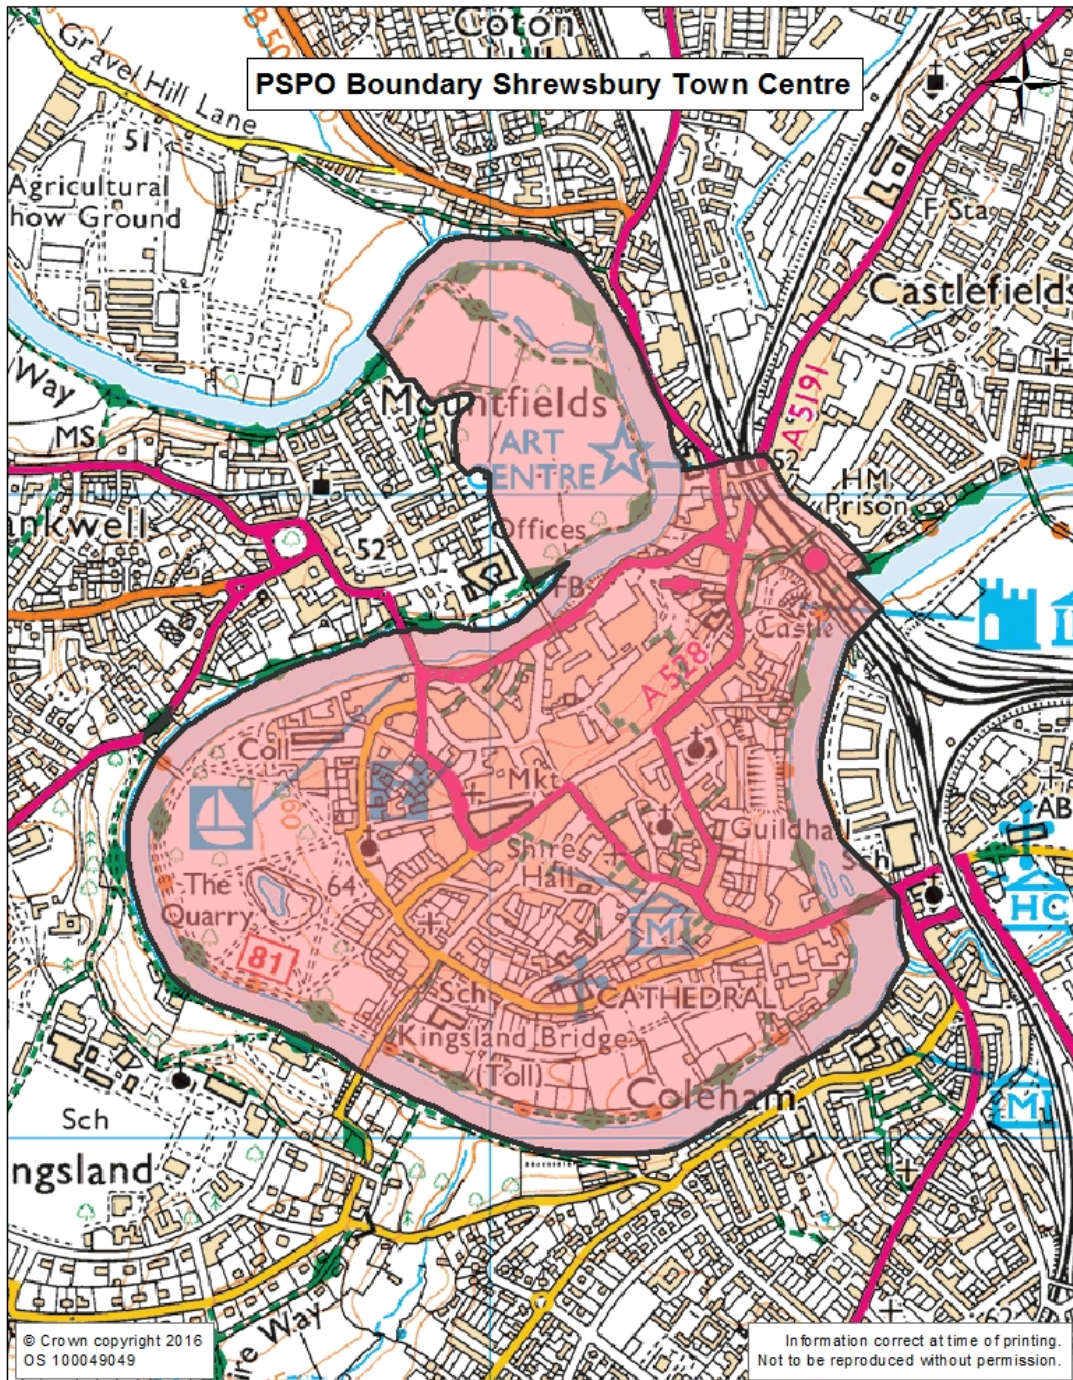

1. The order applies to the public areas shown within the lined area on the plan Appendix 1 attached to this order (the Restricted Area). For the purpose of this order, public area shall include the doorway or alcove of any premises or any other outdoor location to which the public would normally have free access but does not include any area covered by a premises license issued under the Licensing Act 2003.
2. An authorised officer includes a Police Constable, Police Community Support Officer (PCSO), an authorised officer of Shropshire Council or any person authorised by Shropshire Council.
3. PROHIBITIONS
 - a) No person shall urinate or defecate in a public area not being a facility intended for such use.
 - b) No person shall, for any duration of time, leave unattended in a public area any personal effects or belongings or any other material or paraphernalia including anything that may be considered discarded or waste material.
 - c) No person shall refuse to stop drinking alcohol or hand over any containers (sealed or unsealed) which are believed to contain alcohol, when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or is likely to cause nuisance, alarm, harassment or distress to any other person.
 - d) No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.

- e) No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.
 - f) No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.
 - g) No person shall refuse to disperse from a public area and not to return to that public area for 48 hours when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.
4. Any person who without reasonable excuse fails to comply with the requirements of the Order commits an offence and shall be liable, on summary conviction to a fine not exceeding level 3 on the standard scale.
5. This order shall come into force on 1st August 2023 and shall remain in force, unless renewed, for a period of not more than three years or until such time as the Order is no longer considered necessary, whichever is the sooner

Appendix B

**Responses received to consultation on renewal and amendment of the
Shrewsbury Town Centre Public Spaces Protection Order (No. 1) 2017 ('the Order')
Undertaken between 3rd April 2023 and 14th May 2023**

The following questions were posed to consultees:

1. Do you believe the existing order should be extended for three years. Please provide any further information to help justify your response.
2. Do you think the existing PSPO has helped to reduce instances of anti-social behaviour. Please provide any further information to help justify your response.
3. Do you think the existing PSPO should be amended to include any of the proposed new provisions. Please state which, if any, of the 4 provisions should be included and provide any further information to help justify your response.
4. Please state whether you are a resident of Shrewsbury Town centre, a Town centre business owner, an employee in the Town centre or a visitor.

Comments	Source	Response
I am a resident of Shrewsbury and would like Shropshire Council to extend the PSPO. The town is very popular with tourists and locals alike and anti social behaviour make the area very unpleasant at times. I have witnessed "homeless" people spitting, shouting, drinking, walking in the road against traffic and generally being unpleasant. The introduction of the street wardens has been great, a very visible presence and hopefully freeing up PCSO's and Police to monitor areas outside of the town centre. I ask that the council extend the order for as long as possible and continue to improve the town for everyone.	Shrewsbury Resident	Noted
1. Yes, I think the PSPO should be extended and it should be enhanced with greater power. 2. Yes, within it's current limits, it has had some effect, but not nearly enough. It needs to include protection of property and residences caused by nighttime anti-social activities (drug taking, drug dealing, urination, defecation, vomiting, fornicating) all of which take place regularly around my home in the town centre. How is	Town Centre Resident	Many of the behaviours being experienced would be considered ASB and the current order would enable an

<p>it possible that door stewards at various bars and clubs can eject people for these activities within their premises, yet they then carry them out on the streets outside peoples homes? Where is the protection for residents?</p> <p>3. Yes, all provisions should be included and much stronger provisions should be considered. We are sick to death of the state you have allowed the town to get in to. It's an embarrassment to tell people where we live.</p> <p>4. Town Centre resident</p> <p>5. Get a police station back in the town centre!</p>		<p>authorised officer to require removal from the restricted area.</p>
<p>1. I agree that the existing order should be extended for 3 years. I have been a resident in the town centre since 2014 and there has been a significant increase in antisocial behaviour over that time - public drunkenness, verbal abuse, groups of intimidating drinkers gathering on pride hill in particular the seating outside Tesco express and any attempt to reduce this is to be supported.</p> <p>2. I think the existing PSPO has helped to reduce instances of antisocial behaviour.</p> <p>3. Yes (to all provisions) - this will allow greater flexibility and increase numbers available to enforce the order; As a user of the Natwest bank the use of their entrance by homeless people is intimidating, a nuisance and leaves trash and rubbish; the centre has a shortage of toilets and it must be v intimidating for women in particular to have to negotiate with people to gain entrance; the playing of loud music while drinking is becoming an increasing nuisance;</p>	<p>Town Centre Resident</p>	<p>Noted</p>
<p>I am writing to ask that the order be continued and enforced. I am a town centre resident who struggles to live among the constant harassment inflicted by the behaviour of rough sleepers. They intimidate and frighten people who are visiting the town to shop or use the restaurants and bars. They often sit in prominent positions near cashpoints and will confront people for money. They seem to have free access to alcohol and will get through several bottles and cans all through the day, the more they drink, the more abusive the behaviour and language becomes At the end of day they move on leaving vast amounts of litter and urine trails which are really visual against the new surface stones on Pride Hill. The rough sleepers congregate each day waiting for the drugs delivery, money and packets exchange hands all in broad daylight on the seating benches at the fop of Pride Hill, the order could help to disperse groups who are dealing.</p> <p>I welcome the reference to the banning of playing music through speakers, We are often subjected to an all day rave situation, the vocalists have earplugs in and microphones and are unaware of the velocity of sound being produced. We have no option but to vacate our home sometimes as it is impossible to listen to the radio, or read, or have a conversation whilst these often 4 or 5 hour performances take place, all unauthorised and often making a great deal of cash.</p>	<p>Town Centre resident</p>	<p>Drug dealing is a police matter but many of the other matters described including those associated with consumption of alcohol could be tackled by an authorised officer under the PSPO.</p> <p>The new provisions will also help address some of your concerns including those of amplified performances, political speeches where devices are being used.</p>

<p>Could you add no amplified performance to the order as this would also help enforce/moderate the growing number of political and or religious fanatics who will preach at high decibels through large amplified speakers. I have no wish to ban busking as we have some great artists who entertain and are a benefit as long as they stick to acoustic/non amplified performance everyone could enjoy the town.</p>		
<p>Hello. Please renew the Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017. The matter of anti social behaviour by rough sleepers in Shrewsbury town centre has to be addressed , as it is having such a negative impact on the town.</p>	Member of public	Noted
<p>Full response - see Appendix C Summary 1. Yes to include Prosecure specifically 2. N/A 3.Yes</p>	Prosecure 2000 Ltd - Shrewsbury Town Rangers	Noted
<p>As the owner of a business and commercial building on High Street with a recessed porch, for many years we have been a victim of problems caused by rough sleepers, drunks, drug addicts using our porch when the shop is closed. Many times we have been unable to open first thing as we need to wait for a rough sleeper to leave. On one occasion when we could not open until 9.20 on a Saturday morning as the group of four would not leave, we then had the threat of "I will come back and burn your shop down". Recently a member of staff was told "I will smash your face in and bite your nose off" simply for walking past the rough sleeper. This was reported to The Police but even with CCTV near our shop the person was not found. Many times we have found evidence of drug use, and frequent evidence of our porch and the Golden Cross passage being used as a toilet. There is often rubbish left in our porch/pavement associated with someone sleeping rough. A few years ago two brothers were frequently sleeping in our doorway, we were told they were not homeless and were taking drugs in our porch. Finally they moved on but are still seen in town begging and we suspect dealing drugs.</p> <p>Several businesses have installed grilles and shutters which moves the problem more to our porch. In the 1990s we asked about having a shutter to close off our porch. As we own a listed building we were told we would never be allowed to spoil our characterful listed building.</p> <p>Recently we have asked again about installing a shutter, we need to spend thousands of pounds on a conservation architect to produce plans for a solution which might be acceptable on a listed building, but have been told it will be very difficult to find a solution that will not spoil our special shop front. Looking at other buildings I have found that there is no listed building approval shown online for recently installed shutters. Again those who do not follow the rules are being rewarded, but as we want to follow the rules are being put in a difficult situation.</p>	Town Centre Business Owner	<p>The PSPO is intended to give the police powers to remove those causing the type of ASB from the town centre. The additional powers will seek to enhance the provisions available to authorised officers.</p> <p>Drug related matters is the sole responsibility of the police.</p>

A customer who lives in Dogpole was abused by a rough sleeper, only to return home to find excrement smeared on their walls.

We know of one business owner being assaulted by someone he suspected was dealing drugs outside his business when asked not to loiter in their doorway. A shop assistant was followed in the dark to her car after work and threatened after she said she would call the police if I see you deal drugs outside her place of work. She did not report this and changed jobs.

Many, many time I have been asked for change by those who I have also witnessed exchanging small parcels and cash sometimes right by a CCTV camera or are drinking alcohol in a zone where drinking alcohol is banned. This no drinking alcohol zone does not seem to be enforced, the signs are still there.

We have heard so many comments from customers about those who are drunk, drugged and/or begging which is harming those of us who want customers in the town and preventing reasonable people enjoying their visit.

A friend of mine came to the town and tried to find my shop. We worked out his route and there were a group of undesirables in the porch of the old House of Fraser (before it was boarded up) they were shouting and arguing so they family crossed over and went up Grope Lane then headed to the Abbey via Dogpole. He missed seeing my shop as his route was changed to avoid his family walking past a unpleasant situation.

During our 72 years trading on High Street recently the negative issues caused by a few is harming trade and we hear so many customers with a negative view of what is happening to the town. We have heard so many disabled people who cannot visit the town at a weekend due to the road closures and little understanding of the need to provide easy access for those who are disabled.

Rather than hound out the disabled at weekends please start to hound out those who are bringing the town down dealing drugs, drinking and abusing those who visit and work in the town. The drug issues also results in increase in theft. When working in our Manchester shop I was the victim of an out of their mind drug user who said "I need some money you've got to give me some money out of the till" The manner and attitude of this incident contributed in me having a breakdown. When my grandad was working in retail was shot in an armed raid, he did not recover and died

4 years later. Due to the ever increasing number of issues recently things have built up to where my health is starting to be affected, I have started to plan an exit to protect my health. My years of dedicated hard work to continue to build one of the town's special long established business means that I could afford to give up and retire early before my health issues become too much. Why should a few people be allowed to cause so many problems and force people of out town.

<p>These are the sort of reasons why we need to clamp down on any unsuitable behaviour in the town before it becomes acceptable and a no go area for most people. Please help make the town better for us all. Attached a few examples of the problems we have endured for far too long. (Images provided see below)</p> 		
<ol style="list-style-type: none"> 1. Yes it should be extended but needs to be strongly enforced as to date it does not seem to be, as the town is full of these people/so called rough sleepers and their belongings in empty shop doorways and some beggars which I believe is in contradiction of local bye-laws, but again little evidence of any enforcement action being taken. 2. No, the town is full of these people/rough sleepers/beggars and their belongings in empty shop doorways. 3. Yes include all the proposed amendments and add one about vomiting. 4. Resident of Shrewsbury but not the town centre. 	<p>Shrewsbury Resident</p>	<p>Enforcement is primarily undertaken by the police but with the new measures there is opportunity to explore other options. Noted the concern over perceived lack of enforcement.</p>
<p>Full Response – see Appendix D Summary</p> <ol style="list-style-type: none"> 1. Yes 2. N/A 3. a. No – if it is then EH staff not to be included; b. no comment; c. no comment; d. yes – EH staff will only advise on this provision with expectation that authorised officers will enforce (not EH officers). 	<p>Health, Environmental Protection and Healthy Place. Shropshire Council</p>	<p>Noted – the wish that EH officers are not to be authorised officers under the PSPO is noted as is the wish that EH officers will only advise noise issues under the PSPO.</p>
<ol style="list-style-type: none"> 1. Yes -The bigger groups can be problematic, we've had people arguing and attacking each other outside our store on quite a few occasions. 2. Yes - Not sure what the answer is but as previously mentioned some of our customers can find the bigger groups disconcerting. 3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'. 	<p>Town Centre Business Owner</p>	<p>Noted</p>

<p>1. Yes - Constant disorder outside of our office and under the OMH. Constant mess (empty cans, bottles and needles) in the town centre. Anti-social and sometimes threatening behaviour.</p> <p>2. Don't know - The police seem powerful and just stand by instead of seeking order</p> <p>3. All provisions to be included.</p> <p>Town centre should extend to Longden Coleham if it doesn't already. I feel unsafe walking through especially in the evenings.</p>	Town Centre Worker	Noted – there are no plans at this time to extend the restricted area. It is recognised that enforcement could move the problems out of the restricted area and this will need to be a consideration for the future.
<p>1. Yes - We think people should not be allowed to drink on the street or drink recklessly in the town centre as it makes employees feel unsafe, also those under the influence of drink or drugs should be removed immediately from centre and outside the centre as it makes a very unpleasant atmosphere.</p> <p>2. No - Although security has increased they often aren't watching the centre entrances to stop people under the influence from entering the centre and police are rarely around on the street, even when they are they don't move along the people causing disturbances outside the shops.</p> <p>3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour - Should have the right to remove anyone causing disturbances in any public area</p>	Town Centre Worker	Provisions are available for alcohol to be removed and persons to be removed from the restricted area.
<p>1. Yes - Feel unsafe in town centre due to drug addicts behaviour</p> <p>2. No - Still a huge problem with aggressive behaviour from drug addicts in town centre</p> <p>3. All 4 provisions - People lying around town ,drinking ,smoking cannabis, shouting abuse</p>	Town Centre Worker	Enforcement associated with drugs is a police matter.
<p>1. Yes - Due to the location of the practice it's is difficult to avoid the town center. I have worked here for 9 years and lately it is worse than it has ever been. The lack of regard for others is quite worrying and very can be very intimidating. I have witnessed assaults, verbal and physical, between the same group of people, I have been in a shop whereby a member of one of these groups created a scene so another could run out with a bottle of alcohol. I have had youths block a path purposefully in front of me and give me verbal abuse when I've asked to get passed. I can honestly say that if I didn't come into the town center for work I would not come in at all at the moment. My parents in law used to catch the bus in for charity shops and coffee but now they stay well clear. It's sad to see the town like this.</p> <p>2. Don't Know.</p> <p>3. All 4 provisions</p>	Town centre worker	Noted.
<p>1. Yes - I feel that the town needs this added protection - however I have noticed that the issues are now presenting out of the town centre - e.g Asda, outside of the quarry.</p> <p>2. Yes</p>	Town Centre Business Owner	Noted. It is a concern that enforcement can move problems outside of the restricted area.

3. To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour ; To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour		
1. Yes - My business is on Princess Street; the anti social behaviour is severely escalating at the moment. It is effecting business and residents daily, and we feel not enough action is being taken 2. Don't know - To my mind the action isn't severe enough; these people need to be removed from the streets. 3. All four provisions	Town centre business owner	Noted the concern over perceived lack of enforcement.
1. Yes 2. Yes 3. All four - I have seen people sitting in laneway which is intimidating and blocking entrance	Town centre business owner	Noted
1. Yes - Too many homeless drinking, causing a mess and rowdy behaviour at the top of pride hill 2. No - Needs to be enforced 3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour; To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'.	Town centre resident	Noted the concern over perceived lack of enforcement.
1. Yes - we need to offer the genuinely homeless people somewhere to store their few possessions and not confiscate them from doorways 2. No - there are a lot of new faces on the streets, the "regulars" seem to get the brunt of the powers that be though 3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour - can the amplifiers clause be extended to buskers who make it difficult to operate the businesses they are outside?	Town centre business owner	Noted
1. Yes - young people are constantly causing mayhem it is not just rough sleepers. big groups should be asked to disperse within the shopping centre. push bikes, scooters and electric bikes should be banned from the centre. there is not enough security to stop them. just ban them at the entrance. 2. Yes - presence is clearly decent but there seems to be an increase in the amount of rough sleepers and drunk / using individuals. Drug deals are happening on the street, as heard over radio 3. All four provisions - Things are working we just need more of it. Social media discussion about the town is very negative and first and foremost visitors complain about these issues.	Town centre business owner	Noted – however the reference to drugs is solely a police enforcement matter.

<p>1. Yes 2. Yes 3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour; To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour.</p>	Town centre business Owner	Noted
<p>1. Yes - There's more issues in the town centre than ever before with anti-social behaviour. So it's vital that the order is extended. 2. Yes - Even though there is still issues, we can actively see that there is systems in place to sort issues out. With lack of police resources anything we can have in the area will help. Shrewsbury seems to be a pull to certain types of people and with the town becoming more attractive for the night life we are certainly seeing an increase in anti-social behaviour. 3.All 4 provisions</p>	Town centre business owner	Noted
<p>1. Yes - Anti social behaviour seems to be on the increase - especially due to the increasing number of 'vagrants' drug users and rough sleepers and the trouble they cause 2. Yes - Drinking on the street has reduced 3. All 4 provisions - to stop the groups of 'homeless' people who are a constant presence in the town centre</p>	Town centre business owner	Noted
<p>1. Yes - you need to get rid or shelter the homeless who are drunk daily and cause disruption in the town centre. Hanging around on the seats outside TUI/Tesco drinking all day, fighting, abusive, on drugs 2. Yes - They need to be able to get rid or arrest the drunks in town causing problems 3. All four provisions.</p>	Town centre worker	Noted
<p>1. Yes - It's really unfortunate that our shop premises and street (roushill bank) get regularly urinated on, and we'd really appreciate some action that helps to stop this. Perhaps warning signs would help. I think also taking more care of the street through regular street cleaning from the council, which we currently don't receive, or perhaps commissioning a mural might help it feel more like the main streets in town. At the moment it seems as though because it's a side street, it gets treated as fair ground for anti social behaviour. Since painting our front porch tiles we've seen less people urinating directly on our premises so I do believe beautifying the street would deter people from treating it badly. There are some great businesses down roushill bank and I think it's only fair that it gets treated equally to other parts of town. 2. Don't know 3. All 4 provisions</p>	Town centre business owner	Provisions exist to address the urination concerns if caught in the act. The PSPO applies to all public areas within the restricted area.

<p>1. Yes - Town has become unacceptable with the amount of drink/drugs being consumed daily</p> <p>2. No - It has removed them from the doorways but not the problem areas ie Tesco Express</p> <p>3. All 4 provisions</p>	Town centre business owner	Noted
<p>1. Yes - Can you consider adding the Coleham parade of shops to this area of enforcement as when people are moved from the centre they move into Coleham area</p> <p>2. Yes</p> <p>3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely.</p>	Town centre business owner	Noted – there are no plans at this time to extend the restricted area. It is recognised that enforcement could move the problems out of the restricted area and this will need to be a consideration for the future.
<p>1. Yes - From a business perspective its important that Shrewsbury continues to be attractive and safe for shoppers and tourists alike</p> <p>2. No - There does seem to be a continuing problem (particularly on Pridehill) with antisocial behaviour</p> <p>3. To extend the persons able to enforce the PSPO to ‘any person authorised by Shropshire Council’; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour, To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour</p>	Town centre worker	Noted
<p>1. Yes</p> <p>2. Yes</p> <p>3. To extend the persons able to enforce the PSPO to ‘any person authorised by Shropshire Council’</p>	Town centre worker	Noted
<p>1. Yes - The scheme has had a very positive impact on the student experience in the town centre</p> <p>2. Yes - Able to use the radios to alert incidents that can be dealt with promptly</p> <p>3. All 4 provisions - Keeping the town centre free from anxiety raising behaviours will support the local community</p>	Town centre business owner	Noted
<p>1. Yes - Constant presence of people begging outside shop. Bad language and often aggressive behaviour</p> <p>2. No - The problems have persisted for more than three years and have not improved.</p> <p>3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour</p>	Town centre business owner	Noted
<p>1. Yes - The amplified music and number of drunk/ loud people has increased over the past 3 years and the level of rubbish on the high street is disgusting</p> <p>2. Don’t Know</p>	Town centre resident	Noted

3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour.		
<p>1. Yes - We regularly have homeless people sleeping in the entrance ways and other areas within the vicinity of our building. Some urinate, leave drug paraphernalia and rubbish behind and also there belongings i.e. sleeping bags. It is nice to know that we have the support of the local rangers and police to help move these people on as it is not a nice thing for our customers, residents and tenants to have to see or deal with.</p> <p>2. Initially yes, however with the increase in homelessness, this is getting increasingly difficult. The number of 'gangs' of homeless people seems to have increased and can be very intimidating to the public. We understand the resources to support these people are over stretched but allowing them back into the town centre without a PSPO in place will drive the tourists and local people away, especially in an evening. The high street and independent businesses are already finding times hard, this would not do anything to help, in fact it would do the opposite.</p> <p>3. All 4 provisions - We have had instances of people using drugs in our toilet facilities, so having people authorised to remove them within the town centre has to be a positive. As previously stated, out entranceways and stairways have been used by homeless people in the past and if they don't move on their own accord it is useful to know we can reach out to someone with authority who can force them to vacate</p>	Town centre business owner	Noted
<p>1. Yes - Well it would be nice if something actually HAPPENED rather than tick boxes and consultations and grand talk. The town is a semi ghetto past 5 pm</p> <p>2. No - Walk through the town between 5.00 pm and 10 pm and you'll see</p> <p>3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour - see both sides of this. Music is okay I guess (if you like what they are playing) and you could say that it adds to the vibe in the town. Amplified music that interrupts everyone is a step too far however</p>	Town centre business owner	Noted the concern over perceived lack of enforcement.
<p>1. Yes</p> <p>2. Yes</p> <p>3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour - I would like to see enforcement carried out only by police. I am opposed to the extension of enforcement to other people or organisations (option A) as this would reduce public accountability.</p>	Town centre business owner	Noted
<p>1. Yes</p> <p>2. Yes</p> <p>3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour</p>	Town centre worker	Noted

<p>1. Yes - There is still a homelessness problem in Shrewsbury town centre, even with the order in place. It would only get worse if it was not extended</p> <p>2. Don't know - I can't remember what it was like prior to 2017. However there is still a problem so it hasn't solved it entirely</p> <p>3. All 4 provisions - The main problem is homeless people in doorways who can sometimes be quite vocal. I have had visitors comment on how it makes them not want to visit the town. The proposed extensions may not deal with this directly unless there are more people able to move them on, and a suitable place for them to move to.</p>	Town centre business owner	Noted
<p>1. Yes - Sick and tired finding homeless people sleeping in my doorway , & abusive behaviour, our high street is a mess</p> <p>2. No - Don't feel anything has changed. beggars are moved on by security in Telford shopping centre not in Shrewsbury, beggars come into Shrewsbury from other towns , doorways are used as toilets the mess left behind is unacceptable</p> <p>3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour</p>	Town centre business owner	Noted
<p>1. Yes</p> <p>2. Yes</p> <p>3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour.</p>	Town centre business owner	Noted
<p>1. Yes - Also speeding traffic in town centre residential streets</p> <p>2. Yes</p> <p>3. All 4 provisions</p>	Town centre business owner	Speeding motor vehicles is a police matter
<p>1. Yes - It is scary when visiting the town sometimes</p> <p>2. Yes</p> <p>3. All 4 provisions</p>	Visitor	Noted
<p>1. Yes - Without this the centre will become more of a hub for drunk, and/or unruly behaviour</p> <p>2. Yes - is very common for loud, and/or drunk and offensive behaviour and loud music on the main street. I believe the order allows officials to disperse these problem people</p>	Town centre resident	Noted

<p>3. All 4 provisions - The biggest problem for me when trying to work in my office on Butcher Row is very loud music which is amplified. This happens on a regular basis, and whilst the type of music is mixed, amplified music is not fitting for the historic streets of Shrewsbury and impacts productivity as well as creating a nuisance. Note normal unamplified busking is great!</p>		
<p>1. Yes - While walking my dog in town I often walk around St Alkmund's church around 3pm. I regularly see people/drug users around the side of the church and people are frequently waiting with their cash out ready for a dealer. I don't always feel safe.</p> <p>2. Yes - ASB on Pride Hill is probably better than it would be otherwise, although drinkers still seem to congregate for a chat at the top near Tesco in the morning</p> <p>3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour - I have no objection to people using an amplifier for busking and think music adds a pleasant ambience to Pride Hill so I wouldn't want to stop this.</p>	Town centre business owner	Noted. Drug enforcement is a matter for the police.
<p>1. Yes - Hello. As a business in Shrewsbury we get to hear feedback from our customers on the town (why they are visiting, why they dont visit as often etc..). The overall feedback is that they do not find Shrewsbury to be as pleasant as it used to be. One of the main factors is the drinking / homeless on pride hill. They are often fighting, drinking midday and making a mess. We have a shop down Roushill bank often there is a smell of urination overnight, and in some cases human defecation. I think the top priority is banning drinking on Pride Hill. Roushill bank needs keeping cleaner, cigarette butts, chewing gum; it almost needs a weekly pressure washing.</p> <p>2. No - Needs more enforcement</p> <p>3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour</p>	Town centre business owner	The PSPO covers all of the restricted areas and not specifically Pride Hill. The order already enables officer to remove alcohol and require people to leave the restricted area. I note the concern over perceived lack of enforcement.
<p>1. Yes</p> <p>2. Don't know</p> <p>3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour - Noise in town centre offices can be quite bad when amplifiers are used by buskers. Many buildings are old and only have single panes</p>	Town centre worker	Noted
<p>1. Yes - These are needed in town</p> <p>2. Yes</p>	Town centre worker	Noted

<p>3. All 4 provisions</p> <p>1. Yes - Regularly have homeless sleeping in the shop doorway overnight. They urinate over the shop entrance and leave syringes. Have had a curved window smashed at a cost of £8,000 to replace, another window kicked & cracked, and a drunk intruder smashed through the front door during the night. ALSO: walking up Pride Hill at 5.30pm - 6pm is like The Wild West outside Tesco Express. Sat on the benches around Tesco are drunks and druggies and the language and noise is really unsettling. A lot of customers talk about this new unsettling behaviour and how it puts them off shopping in Shrewsbury</p> <p>2. Don't know - there is a new and rougher group of homeless coming into Shrewsbury. It is known as a easy place to meet up. Really need to react to the nasty and threatening behaviour before it stops more shoppers from coming into town. Some customers say they go to Meole or even drive to Ludlow to avoid the anti social & druggie vibe in town</p> <p>3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour;</p>	<p>Town centre worker</p>	<p>Drug related enforcement is a matter for the police. I note the concern over perceived lack of enforcement.</p>
<p>1. Yes - we have drug paraphernalia frequently on our fire exit steps/bin.. human toileting also , frequently witness anti social behavior in the square, cannabis is smoked right outside the shop front access... and groups of unsavory people also use the two benches to sit and get drunk on.. puts off customers coming in to store ..and it can feel quite unsafe too</p> <p>2. its sporadic, seems better for a couple of days and then they are back - tourist information point and family visitor centre is in the square, and today two rough sleepers have been in square under market hall all day.. they go and pee and poo in alleyways ..they shout and get aggressive, i know for a fact it puts people off from visiting. Many people stay in my shop whilst things go on outside.. not wanting to be anywhere near the behavior that can take place .</p> <p>3. All 4 provisions.</p>	<p>Town centre worker</p>	<p>Such incidents require a police response.</p>
<p>1. I strongly believe the existing order should be extended & also improved for the next 3 years. I believe more could be done to prevent antisocial behaviour to our town.</p> <p>2. I believe the town rangers have had a positive impact on the amount of crime & antisocial behaviour on Pride Hill, however I have on several occasions had to call 101 to report an incident because the rangers do not seem to be present during evenings, which is when the majority of the incidents occur. I do not believe they hold enough power to enforce to rules.</p> <p>3. Yes. "To extend the persons able to enforce the PSPO" I agree to this proposal & believe we require extra persons outside of the hours already covered. "To include a wider enabling provision to require a person to</p>	<p>Town Centre Resident</p>	<p>Noted. The role of the ranger is a matter for further discussion in the event that the PSPO powers are extended. There will need to be consideration given to the health and safety of non-police personnel tackling some of the</p>

<p>stop sitting or lying within the area if causing anti-social behaviour" If this is to include the public benches outside of Tesco then yes. There is no space for the public to enjoy the outdoor space, as the benches are usually full of intoxicated individuals, who create needless mess and leave rubbish, broken glass bottles, unfortunately there is regular vomit around the benches & I have witnessed frequent urination from this particular group around the entrance to my home. The planters with trees and flowers are often vandalised too. "To include a wider enabling provision to require a person to stop using a sound amplifier" Whilst I have no objection to busking in the town & I do enjoy quite a few of the performers we get in Shrewsbury, I do not enjoy hearing the religious & political speakers who visit. They are frequently tormenting & engaging in arguments with the public which results in the police being called to diffuse the situation.</p> <p>4. I am a resident of Shrewsbury Town Centre & I also have run a business within the town (although I have recently sold this business)</p> <p>As a resident in a busy town centre I understand this is not the country side & some disturbance is the be expected. However, as a female I feel intimidated and refuse to leave my home alone when this group of individuals are occupying the area directly outside my home, be this day or night.</p> <p>I have been approached, intimidated & shouted at by an individual(s) who regularly is in the area. I have reported urinating on a local postbox outside my home to the police, only to be told there is nothing further to be done as I have no video or photographic evidence. I am tired of stepping over broken glass, cans, food waste & vomit to go and buy produce from the local town centre shops.</p>		<p>behaviours described and at the times mentioned</p>
<p>1. Yes 2. Yes 3. All 4 provisions</p>	<p>Town centre business owner</p>	<p>Noted</p>
<p>1. Yes - There needs to be a BLANKET BAN on open alcohol containers on Pride Hill, The Square and Shoplatch. Too many Homeless basically 'partying' and causing disruption and being anti-social and leaving litter behind. This is not good to encourage shoppers and tourism</p> <p>2. No - Still very disorderly especially on Pride Hill. Current restrictions do not go far enough, or are not enforced properly. Blanket ban on open alcohol containers required.</p> <p>3. All 4 provisions</p>	<p>Town centre business owner</p>	<p>The PSPO empowers police officers to tackle such behaviour and remove alcohol and people from the restricted area. I note the concern over perceived lack of enforcement.</p>
<p>1. Yes - As a town centre business that is open 6 days a week, we are seeing more anti social behaviour in the town each day. Shouting, drinking, drug use, rubbish, empty bottles, used needles, sick and urination</p> <p>2. No - We are seeing a increase in anti social behaviour in the town centre each day. It is something that most of our customers comment on, especially tourists</p>	<p>Town centre business owner</p>	<p>Noted</p>

3. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour;		
1. Yes 2. No 3. All 4 provisions	Town centre worker	Noted
1. Yes - The order needs renewing so that the local authorities can continue to manage the ever growing homeless population in the town centre 2. Yes 3. All 4 provisions	Town centre worker	Noted
1. Yes 2. Yes 3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'; To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour; To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour.	Town centre worker	Noted
1. Yes - Music, homeless and anti social behaviour on Pride Hill us a daily issue. 2. Yes - I see people being removed by the police 3. To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council' - I wholeheartedly support any procedure to stamp out antisocial behaviour.	Town centre resident	Noted
1. Yes - The Homeless people in the local area are a threat to my team and my business. I have had staff quit as they have been threatened or harassed 2. Don't know - They are still there. Shouting and opening doing drugs 3. All 4 provisions	Town centre business owner	Noted. Threatening behaviour is a matter for the police.
1. Yes - I walk to tescos every day and there are drunk and disorderly people that reside outside every day. We have a one year old baby and I need to take a wide route round them because they are often intimidating. There are also loud amplified buskers throughout the summer in the street which are often so loud it makes it difficult to have a conversation. I like non-amplified buskers so am not proposing removing these 2. Don't know 3. All 4 provisions	Town centre resident	Noted
1. Yes - It is for the benefit and safety of the public 2. Yes - We see fewer anti social bahaviour and feel a lot safer as a result	Town centre worker	Noted

<p>3. All 4 provisions</p> <p>1. Yes - We have a huge issue with anti social activity in Princess Street. On a regular basis there are rough sleepers on the footprint of the House of Frazer building opposite our shop frontage. They do not just urinate, they leave faeces, needles and their other waste behind. The area is filthy dirty. It does not get cleaned and there is a mess inside shutters of the doorway which has gathered there for months. Drug users and people behaving in an anti social manner gather in this area also and it is both intimidating to people going about thief daily comings and goings as well as disgusting to hear foul language, shouting and bawling with no regard for others. As a business owner and a person proud of our county town I along with others are totally bewildered at the lack of help and authority to deal with the problem.</p> <p>2. No - The enforcement officers move those involved but this doesn't solve the issue. It merely moves them on for maybe 24 hours but invariably they return. Yes we need to have this law renewed but we need to have more done and actual police officers who have the power to do more to stop the problems happening</p> <p>3. All 4 provisions</p>	Town centre business owner	Note the concern over perceived lack of enforcement and the lack of police officers.
<p>Full response - see Appendix E</p> <p>Summary</p> <p>1. Yes</p> <p>2. No</p> <p>3. All of them although concerns that they do not go far enough</p>	Town centre resident	Note the concern over lack of enforcement and the wish for stronger measures
<p>Full Response - see Appendix F</p> <p>Summary</p> <p>1. Yes</p> <p>2. N/A</p> <p>3. All of them</p>	BID	Repeat of many of the comments received and listed in this document
<p>1. Yes, due to the lockdown and Covid, there are many places and shops that had to be closed down which provides the perfect opportunity and place to the homeless and drug user members of the town to use urinate, there and use them as their sleeping places.</p> <p>We see more and more of them disturbing this quiet area, and we feel that we are in danger, and not just our properties, but our health as well.</p> <p>2. In my opinion, there could be more use of them, I go out to town every day between 5 and 7 pm and haven't been seeing them too often. If I do see them, they are normally having a conversation of the member of the homeless group, but no results, they are either don't leave or come back after a few minutes</p> <p>3. All of them</p>	Town centre resident	Noted.

<p>Full response - see Appendix G</p> <p>Summary</p> <ol style="list-style-type: none"> 1. Yes 2. Slightly 3. All of them 	<p>Town centre resident</p>	<p>Noted</p>
<p>I write in support of the proposed extension of the above Order and would also ask, if consideration relating to the period of excluding individuals from within the Town Centre should be increased from the current 48 hours to a longer period of exclusion for certain offences?</p> <p>I would like to bring to your attention the following anti-social behaviour that we as one of the leading tourist and as the oldest historic building in the Town Centre of Shrewsbury, that is open six days a week, receiving over 75,000 visitors each year, experience on a daily and weekly basis.</p> <p>The anti-social behaviour we experience within the churchyard during daytime and at night is:</p> <ul style="list-style-type: none"> • Drug dealing and taking along the north side of the church • Urinating and defecating in various areas around the church • Alcohol misuse and drunkenness in doorways to the church, creating access and exiting issues for staff and volunteers • Rough sleeping on the lower roof of the former vestry <p>We also experience those who are under the influence of drugs and alcohol, entering the church and causing a nuisance to both our volunteers, staff and members of the public, during the opening times of the building and during evening events undertaken by hirers.</p> <p>We are very appreciative of the engagement that the church has received from the PCSO team, with a reassurance of presence that has been welcomed by our volunteers, and the PCSO team should be enabled with such powers and authority to undertake their roles within these proposals.</p> <p>Currently St Mary's supports a team of over 35 volunteers who reside within the Town Centre, the wider Shrewsbury area and within the county. The church also supports two full time members of and one part time member of staff, along with a coffee shop operation that employs two individuals.</p>	<p>The Churches Conservation Trust</p>	<p>There are no plans to increase the exclusion timings at this time.</p> <p>Other comments noted.</p>

Subject: Comments: Renewal of Shrewsbury town centre PSPO

You don't often get email from prosecure2000@gmail.com. [Learn why this is important](#)

Renewal of Shrewsbury Town Centre PSPO

Prosecure2000 Ltd wishes to make comments in relation to the proposed changes to the Shrewsbury Town Centre PSPO legislation. Prosecure2000 Ltd is the service provider for the Shrewsbury Town Rangers, Quarry Park Security Teams and the Shrewsbury Taxi Marshals. All of the team works closely with Shropshire Council, Shrewsbury Town Council, Shrewsbury Business Improvement District and West Mercia Police.

We believe that the Shrewsbury Town Centre PSPO is a valuable tool in maintaining public order within the Town Centre. We fully support its continuation as well as proposed amendments as we believe that it is a tool that will greatly assist in reducing demands on the police, reducing any public disorder as well as increasing public confidence in Shrewsbury as a safe place to visit both during the day and at night.

In particular we would like to make the following specific comments:

Authorised Officer Amendments

We would like to take this opportunity to suggest that Prosecure2000 is authorised by Shropshire Council to issue PSPO notices, this will be undertaken by our assigned staff members for the above roles. Our staff members have already undertaken extensive training courses to undertake these roles by Shropshire Council, Shrewsbury Town Council, West Mercia Police as well as our own internal training department in such areas as Taxi licensing and licensing legislation, contextual Safeguarding, County lines awareness, ACT & SIA-CT Training, SCan, VAWG, and Joint Emergency services interoperability awareness training. Our staff routinely make detailed notes for inclusion in daily reports that are consolidated into our weekly reports that are processed by Team Shrewsbury Partners. Staff would be willing to undertake any specific training. Additionally, Prosecure2000 is an Approved SafeContractor Company and ICO registered.

All of our staff are certified and licensed by the Security industry authority and have many years of operational experience.

We would not see that our inclusion as an authorised officer would result in a spike in tickets issued. We would like to point out that the use of such powers would only be considered as a last resort having exhausted all other avenues of intervention.

Proposed Additions to the PSPO in relation to Public Conveniences & Sitting on the floor

At this time the teams actively work with a number of agencies such as the Police, the ARK, the RESET team, Youth Services, STC, SC and the BID and they have built up over their current operational period a working relationship with all aspects of persons frequenting the town centre.

Currently the teams encounter ASB, crime matters and homeless issues such as:

- street drinking
- begging
- persons sitting/lying in shop doorways
- Urinating & defecating in the open space
- Frequenting toilets for the purpose of alcohol and drug taking.

The teams can generally reason with these people but at times a more concise method is required such as the issuing of a PSPO notice, which at this time requires the attendance of an officer from West Mercia Police to achieve this conclusion.

Proposed Additions to the PSPO in relation to Amplified Busking

Of late the Town Rangers have undertaken first point of contact triage and report of Buskers to Shropshire Council Public Protection. This means that Public Protection Officers can attend to more crucial activity. We believe that the references to amplified busking will make the town centre more harmonious and a certainly less stressful environment to shop premises who often have to witness this kind of activity for prolonged periods.

Conclusion

It is without question that the resources of West Mercia Police & Shropshire Council as the principal agents of the PSPO are stretched to the maximum and availability of its officers to issue a PSPO notice can be a matter of call for service demand with the operational triage of their services dictated by operational priorities. This leads to their inability to attend to issue a PSPO notice or their arrival on scene being somewhat delayed, thus exacerbating the public disorder in the town.

We believe widening its remit and expanding the authorised officer definition will mean that partners can work more collaboratively and speedily to address matters before they get out of hand. The two-edged approach of the PSPO in first giving authority for officers to ask people to discontinue with the added approach that should they fail the PSPO Notice is issued regularly works as the stick to create order.

We have provided information to the Town Council and BID which backs and enforces the need for the PSPO and its expansion, but we are advised that this is being co-ordinated as part of the collective pool of evidence in support of the Order.

We only reiterate Prosecure2000's wish to become an active partner in its promotion and enforcement and we would be happy to work with partners to maximise its delivery and benefit to the town.

Kind Regards

Subject: PSPO Consultation response from Health, Environmental Protection and Healthy Place

Dear Mr Tunnadine,

I am writing to you as manager of the Trading Standards and Parking Enforcement service responsible for receiving representations to the consultation "Renewal of the Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017"

I have the following comments to each of the questions posed:

1. Do you believe the existing order should be extended for three years. Please provide any further information to help justify your response.

I support the extension to the order as, subject to the comments I make below, it allows those with the powers to enforce the provisions to intervene in certain situations where it would be more difficult to do so otherwise. The Environmental Protection service includes Officers who investigate whether noise from premises, or from equipment such as amplifiers in the street, amounts to a Statutory Nuisance as defined in Section 79 of the Environmental protection Act 1990. It is however a high threshold for noise to be classed as a nuisance in law meaning that these powers sometimes can't be used to deal with, for example, buskers who are both loud (maybe using amplified equipment) and persistently using a particular location.

The Statutory Nuisance provisions also can't be used where the effect of the noise is on the ability of a shop or other company to carry out its lawful business rather than interfering with a person's enjoyment of their home. There may therefore be examples where buskers behaving in this way could be moved on by an Officer in Uniform who is appropriately trained to deal with such potentially confrontational situations using the PSPO powers.

2. Do you think the existing PSPO has helped to reduce instances of anti-social behaviour. Please provide any further information to help justify your response.

No comment

3. Do you think the existing PSPO should be amended to include any of the proposed new provisions. Please state which, if any, of the 4 provisions should be included and provide any further information to help justify your response.

Firstly, "To extend the persons able to enforce the PSPO to 'any person authorised by Shropshire Council'."

I do not support this provision in so far as it relates to any of the functions in my area. When the PSPO was originally enacted, and then extended, it was accepted that it was not appropriate for Officers in the Council to enforce the provisions and it seems to me that there are two reasons why this was the case. Environmental Health officers are trained to investigate whether businesses and individuals are complying with various regulations relating to the health of people or the environment. If there are contraventions found they can attempt to get compliance by using informal advice and guidance type approaches in line with the Council's Better Regulation and Enforcement policy. If those approaches fail and it is appropriate they are able to gather evidence and if necessary instigate proceedings at court to prosecute the person in order to achieve compliance. This does not extend to powers of arrest and does not generally involve requiring people to behave in certain ways immediately. When carrying out investigations, they can apply to a Justice of the Peace for a warrant to enter premises but in the circumstances of executing such a warrant would always have the police with them. In short they are not trained or expected to be in confrontational situations where people could potentially react aggressively to being told to change their behaviour forthwith. There are Council Officers who do have to deal with such situations, such as the Civil Enforcement Officers who enforce parking provisions, and they have body worn cameras as part of the control measures in place to protect them, as of course do the Police.

The second reason is that Shropshire Council is currently under enormous financial pressure and working to concentrate on Statutory Duties where they align with The Shropshire Plan – such as the Statutory Nuisance provisions mentioned above. The resourcing situation is now worse than it was when the PSPO was originally enacted, and the Environmental Protection service, for instance, has single points of failure with statutory functions identified in recent internal audits and does not have any capacity at all to take on additional discretionary work such as enforcing any of the provisions of the PSPO.

If the persons able to enforce the PSPO was extended to "any person authorised by Shropshire Council", then for these reasons that could not include any Officers in Health, Environmental Protection and Healthy Place.

Secondly "To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour i.e. - 'No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'"

No comment as this sort of behaviour does not fall within my service remit.

Thirdly "To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely - 'No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'"

No Comment as this sort of behaviour does not fall within my service remit.

Fourthly “To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour namely - “No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.”

I support this provision as it will allow intervention where loud noise from e.g. busking is affecting residents or businesses but existing powers are difficult or impossible to use. Officers in Environmental Protection (as well as others such as the Town Centre Rangers) could approach buskers in such circumstances and explain that this provision was in place and if they felt that the noise levels were unreasonable could then advise the person that they should cease using the amplifier. If the busker refused then a person authorised to do so, such as a member of the Police if available, could be called to enforce that this happens.

Kind regards,

Katie Morris

I am putting my comments on Enforcement right at the top of my response because is the absolutely pivotal issue on antisocial behaviour.

ENFORCEMENT

First, a word about the Rangers. These guys are a great asset to the community and most welcome and appreciated. They are not the complete answer.

On enforcement:

- Much of the disorderly behaviour that is described in the current Order, and in the proposed amendments, occurs out of the Council's working hours – ie after about 1600 hours, and at weekends. The Council provides no enforcement service during these 'down' hours. Apart from the Police, there is no-one upon whom we can call. I consider that the Council is derelict in its duty here, and is in effect abusing the call centre operated by West Mercia Constabulary.
- As far as we have been able to ascertain, the Council makes no use at all of CCTV despite the presence of cameras around the town centre.
- **If the Council is serious about dealing with these antisocial behaviours, they MUST provide a robust responsive service at the end of a phone during the hours of 0700 – midnight 365 days a year.**
- I am sick of being told why the council can't sort out the problems. I am sick of being told that I have to gather all the evidence. I used the awful noise app religiously and even that has now been withdrawn. It is not possible to email or otherwise transfer photos or videos through the Council's firewall. I have offered every possible facility to the Council, the Police and the Rangers.

On drafting:

- I find the drafting almost apologist. Are the listed activities banned, or are they only banned if you happen to get caught? I have read S59, though there may be other provisions of which I am unaware, and I do not see any requirement for people to desist when asked. I want them not to do these things in the first place, with the attention of an 'officer' as a back-up. They could spend a fortnight in the lavatories before anyone asked them to move on. So **TAKE OUT THE STUFF ABOUT WHEN REQUESTED TO DO SO** and make disobedience to an officer a separate offence at the end of the Order.

An omission from the Council's proposal:

- Pride Hill has had numerous visits from a person who behaves in what I regard as an intimidating manner towards other people. He shouts very loudly for hours on end, he rampages around. The police have had to deal with him on several occasions. I do not see anything in this Order that addresses such behaviour. The Council can, no doubt, follow this up through the Partnership and consider whether a further amendment is needed for intimidation and prolonged noise, or whether this is adequately addressed by other legislation.

MY RESPONSES TO YOUR SPECIFIC QUESTIONS BEGIN ON PAGE 2.

Shrewsbury Town Centre Public Spaces Protection Order (No 1) 2017

Shropshire Council consultation on the renewal of this Order for a further three years.

RESPONSE TO CONSULTATION – 4 pages

We welcome comments to address the following questions:

1. Do you believe the existing order should be extended for three years. Please provide any further information to help justify your response.

Yes, without any hesitation, the Order should be extended.

Behaviours in the Town Centre have been appalling during the lifetime of the current Order. Much remains to be done to eliminate these behaviours.

Better behaviour can be instilled and promoted by the continuation of this order, and a realisation that 'you can't do that there here'.

2. Do you think the existing PSPO has helped to reduce instances of anti-social behaviour. Please provide any further information to help justify your response.

Probably it has not done very much at all..... **BECAUSE IT IS NOT ENFORCED**. I have asked, for example, about the alcohol provision and been told 'oh, well, we don't think that's enforceable'. It must be clear to everyone that it is enforceable and it is enforced.

3. Do you think the existing PSPO should be amended to include any of the proposed new provisions. Please state which, if any, of the 4 provisions should be included and provide any further information to help justify your response.

First I shall review and comment upon the existing Prohibitions set out in Para 3 of the current Order.

- a) **No person shall urinate or defecate etc.** It is not uncommon for people to do this. Only last week my neighbour saw someone urinating against the Royal Mail post box adjacent to our front door. How do we get evidence of this? To whom can we report it?
- b) **No person shall leave unattended etc.** This happens – often it is cardboard provided by the Ark for the rough sleepers. But it is not a major problem – though occasionally a shop will leave its refuse out for collection for up to a week if the collection fails.....
- c) **No person shall refuse to stop drinking alcohol etc.** **This is far too weak and is a major issue for enforcement** – please see my comments above under that separate heading. Groups of people routinely sit on Pride Hill consuming alcohol for hours on end. It is not acceptable. It must be reworded to say **'No person shall consume alcohol etc'**.
- d) **No person shall refuse to disperse etc.** This is also an issue for enforcement – please see my comments below under that separate heading. I should like to know how often this provision has been used, and by which authorised person, over the last 3 years. If necessary, I will FOI this information.

The council is proposing the following amendments:

Shrewsbury Town Centre Public Spaces Protection Order (No 1) 2017

Shropshire Council consultation on the renewal of this Order for a further three years.

RESPONSE TO CONSULTATION – 4 pages

COUNCIL PROPOSAL	MY COMMENT
<p>1. To extend the persons able to enforce the PSPO to ‘any person authorised by Shropshire Council’.</p>	<p>Is it your intention that Para 2 of the current Order is amended to read:</p> <p>“an authorised officer includes a Police Constable, a Police Community Support Officer, and any other person authorised by Shropshire Council.”</p> <p>If so, what persons does the Council propose to authorise? And what will be their availability?</p> <p>I agree with this proposal, subject to my comment here, and also above under my heading of Enforcement.</p>
<p>2. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour i.e. -‘No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’</p>	<p>Pride Hill has had a lot of rough sleeping in the past, but not over the last few months. I am not aware that rough sleepers caused access problems for occupiers of premises, though I have seen cleaning activities carried out by those occupiers after a prolonged stay by people lying or sitting there.</p> <p>Pride Hill does get a lot of nuisance from groups of people sitting on the benches for prolonged periods, usually consuming alcohol and waiting for delivery of their various substances. These groups are often noisy and leave a lot of mess (food and drink, including alcoholic drinks) when they finally move on. They are not often lying on footpaths. Does this provision cover them sitting on the benches? If not, then it needs to be amended. There is almost daily open drug-dealing on Pride Hill but the Council’s interest seems minimal.</p> <p>I agree with this proposal, subject to:</p> <ul style="list-style-type: none"> • The matter of people sitting on the benches, as above; and • My comment above under my heading of Enforcement

Shrewsbury Town Centre Public Spaces Protection Order (No 1) 2017

Shropshire Council consultation on the renewal of this Order for a further three years.

RESPONSE TO CONSULTATION – 4 pages

COUNCIL PROPOSAL	MY COMMENT
<p>3. To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely - ‘No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’</p>	<p>Fortunately I do not have occasion to visit public toilets in Shrewsbury.</p> <p>I have, however, had several conversations with the excellent staff cleaning public toilets in Bridgnorth and heard first-hand of the difficulties that they encounter.</p> <p>I do not think this proposal has sufficient strength. It should start by emphasising that a person should spend only such time in a public toilet as is necessary for the purpose of using the lavatory and washing their hands, and should leave the facilities in a clean and tidy condition.</p> <p>Were I to use a public lavatory I would be very intimidated indeed if it were packed with some of the people I see in this area. It must therefore also include your proposed amendment (corrected to read ‘that that officer’).</p> <p>I agree with your proposal subject to my suggested amendments.</p>
<p>CONTINUED ON NEXT PAGE</p>	

Shrewsbury Town Centre Public Spaces Protection Order (No 1) 2017

Shropshire Council consultation on the renewal of this Order for a further three years.

RESPONSE TO CONSULTATION – 4 pages

COUNCIL PROPOSAL	MY COMMENT
<p>4. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour namely - ‘No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’</p>	<p>This is absolutely not strong enough and I do not agree with this weak wording.</p> <p>Conversion of town centre premises to residential use is rightly increasing.</p> <p>It is essential that the council imposes an OUTRIGHT BAN on the use of amplifiers in the town centre, or at least in those areas of the town centre which you can prescribe as having residential occupants.</p> <p>Use of an amplifier by definition causes nuisance, alarm, harassment and distress to me, and many others, as residents. The sounds produced are attenuated and distorted by the buildings and are usually very audible within my premises with the windows closed and often with the TV on.</p> <p>Apart from ‘musicians’ – I use the term loosely - we are also visited by people promoting religious or political messages and using amplifiers. I do not welcome any such message, whether it be flat earth, moon is cream cheese or any other such. I do not want them in my home. This causes me distress. Importantly, there have been occasions where the messages have resulted in assaults and fights and needed the police to sort them out.</p> <p>If Shrewsbury needs a Speakers’ Corner, then the Council should establish one in an appropriate place.</p> <p>The council, and our Councillor Mr Nat Green, are well aware of the complete MISERY that amplified sound causes to the residents of Pride Hill, and doubtlessly of other similar areas and I do not need to go into more detail here.</p>

4. Please state whether you are a resident of Shrewsbury Town centre, a Town centre business owner, an employee in the Town centre or a visitor.

I am a town centre resident.

Shrewsbury PSPO Consultation

Shrewsbury BID Response

May 2023

Anti-social behaviour and low level crime in Shrewsbury Town Centre has escalated in the last 3 years to a point where it is having to have a serious impact on the atmosphere and economic vitality of the town centre.

An escalation in crime and ASB affects businesses all over the town centre, not only in the immediate vicinity of particular incidents. Clear feedback from businesses is that it is negatively impacting upon the economic potential of our Shrewsbury and often creates an unwelcoming trading environment that discourages repeat visits, and reduces dwell time and footfall.

Shrewsbury BID is therefore strongly supportive of the renewal of the town centre PSPO for a further three years. Additionally we fully support all new measures proposed with the aim of reducing anti-social behaviour in the town centre.

We have received 52 responses to the request for feedback regarding the PSPO consultation which have been directly shared with Shropshire Council.

A main theme of the responses is a concern around an escalation of activity within certain groups, and how this is leading to people feeling unsafe in the town centre both during the day and at night. The responses also highlighted a level of frustration that there are not more tools or resources available to effectively combat these issues. Without exception all responses were supportive of the renewal of the PSPO.

The Shrewsbury BID team are increasingly receiving feedback from businesses regarding feelings of safety in the day to day. We regularly receive reports of threats, verbal abuse, drug dealing and taking, urination and defecation, shouting and general disturbances.

It seems clear that additional powers and resources are required to help tackle these issues, alongside the drug and mental health support that is available from partners in the town. We believe by increasing the number of individuals or organisations authorised to issue PCRs, the PSPO would act as a stronger deterrent.

The Shrewsbury Rangers, Taxi Marshall's and Quarry Security are recent additions to the security infrastructure of Shrewsbury, working 7 days a week in the town centre to help reduce crime and ASB. These teams work closely with the police and other local partners and have been hugely welcomed by businesses in the town. Shrewsbury BID members recently rated the Rangers project as the 2nd most valuable project (of over 25) that the BID delivers. We believe extending PSPO powers to authorised individuals within these teams will increase the overall effectiveness of the PSPO by increasing the actual and perceived authority of these teams.

Whilst Busking generally has a positive impact on the vitality of the town centre, we are aware of increasing use of loud amplification which can dominate the street scene, impact on the operation of businesses (e.g. workspace) and can make people feel uncomfortable or avoid particular areas of the town. We therefore support the addition of a provision within the PSPO for an authorised officer to request that amplification not be used. We think the PSPO as a deterrent in this case will be effective in stopping unacceptably loud busking.

The Shrewsbury BID Board met on 20th April 2023 and agreed their strong support for the PSPO renewal and all of the proposed new measures within it. At this meeting it was also suggested that Shropshire Council's own Civil Enforcement Officers, who are already authorised officers of the council could also be trained in identifying PSPO offences, communicating acceptable behaviour to individuals, and where necessary issuing PCR's.

We have also received representation from a number of businesses in Coleham and would support the expansion of the PSPO to encompass the high footfall pedestrianised area on the Coleham side of Greyfriars Bridge.

Without a PSPO provision in place in the town centre, Shrewsbury runs the risk of allowing unacceptable behaviour to continue to escalate which could lead to long term damage to vitality, viability and reputation of Shrewsbury.

A selection of quotes from members of the business community:

'The Homeless people in the local area are a threat to my team and my business. I have had staff quit as they have been threatened or harassed.'

'we have drug paraphernalia frequently on our fire exit steps/bin.. human toileting also , frequently witness anti social behavior in the square, cannabis is smoked right outside the shop front access... and groups of unsavory people also use the two benches to sit and get drunk on.. puts off customers coming in to store ..and it can feel quite unsafe too.'

'There needs to be a BLANKET BAN on open alcohol containers on Pride Hill, The Square and Shoplatch. Too many Homeless basically 'partying' and causing disruption and being anti-social and leaving litter behind. This is not good to encourage shoppers and tourism.'

'As a town centre business that is open 6 days a week, we are seeing more anti social behaviour in the town each day. Shouting, drinking, drug use, rubbish, empty bottles, used needles, sick and urination.'

'The order needs renewing so that the local authorities can continue to manage the ever growing homeless population in the town centre.'

'Regularly have homeless sleeping in the shop doorway overnight. They urinate over the shop entrance and leave syringes. Have had a curved window smashed at a cost of £8,000 to replace, another window kicked & cracked, and a drunk intruder smashed through the front door during the night. ALSO: walking up Pride Hill at 5.30pm - 6pm is like The Wild West outside Tesco Express. Sat on the benches around Tesco are drunks and druggies and the language and noise is really unsettling. A lot of customers talk about this new unsettling behaviour and how it puts them off shopping in Shrewsbury.'

'As a business in Shrewsbury we get to hear feedback from our customers on the town (why they are visiting, why they dont visit as often etc..). The overall feedback is that they do not find Shrewsbury to be as pleasant as it used to be. One of the main factors is the drinking / homeless on pride hill. They are often fighting, drinking midday and making a mess. We have a shop down Roushill bank often there is a smell of urination overnight, and in some cases human defecation. I think the top priority is banning drinking on Pride Hill. Roushill bank needs keeping cleaner, cigeratte butts, chewing gum; it almost needs a weekly pressure washing.'

'My business is on Princess Street; the anti social behaviour is severely escalating at the moment. It is effecting business and residents daily, and we feel not enough action is being taken.'

'The amplified music and number of drunk/ loud people has increased over the past 3 years and the level of rubbish on the high street is disgusting!'

'There's more issues in the town centre than ever before with anti-social behaviour. So it's vital that the order is extended.'

'The bigger groups can be problematic, we've had people arguing and attacking each other outside our store on quite a few occasions.'

'We think people should not be allowed to drink on the street or drink recklessly in the town centre as it makes employees feel unsafe, also those under the influence of drink or drugs should be removed immediatly from centre and outside the centre as it makes a very unpleasant atmosphere.'

Summary of responses received by Shrewsbury BID (and already shared with Shropshire Council)

Resident's Comment on Proposed Extension of Public Spaces Protection Order
May 2023

Council Contribution	Comment
<p>The Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017 ('the Order'), which is attached, was originally approved by Shropshire Council on 21 June 2017 with an effective commencement date of 1 August 2017. The Order implemented four prohibitions relating to anti-social behaviours in a public space (shown by the map accompanying the Order), specifically:</p>	
<p>(a) urinating/defecating;</p>	<p>Obviously neither of these should be tolerated in built-up areas. Enforcement should be strict.</p>
<p>(b) leaving personal belongings;</p>	<p>I am less concerned about this sort of problem than with (a). Littering is different and should be more strongly enforced than leaving possessions.</p>
<p>(c) a wider enabling provision to require a person to stop drinking alcohol and/or hand over alcohol if causing anti-social behaviour; and</p>	<p>Should continue. There should be additional similar ASBO provisions, particularly to disrupt suspected trading in recreational drugs, or their use in the town centre. See also comments under (2) and (3) on Council provisions allowing too many get-outs.</p>
<p>(d) a wider enabling provision to require a person to leave an area and not to return for 48 hours if causing anti-social behaviour.</p>	<p>I would have thought repeat offences should attract longer enforcement, measured in weeks and perhaps months.</p>
<p>All Public Spaces Protection Orders expire at the end of three years unless extended by the Local Authority (maximum period of up to 3 years). The Order was extended for a further three years in August 2020 and we're now seeking views and comments on extending the Order for a further 3 years (from August 2023) and/or whether to make any amendments to the existing order.</p>

--	---	-----------------------------------

Council Contribution	Comment
The following amendments/additions are proposed:	
(1) To extend the persons able to enforce the PSPO to ‘any person authorised by Shropshire Council’.	Sensible addition that will help enforcement. However this is only effective if there is greater coverage, in both time and area, by authorised persons.
(2) To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour i.e. - ‘No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’	The Council seems excessively keen on wording that provides a potential get-out for the person behaving anti-socially, by allowing them to dispute details, delay the officer from enforcement, potentially causing the officer to give up enforcement. No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area (31 words defining wrong activity) shall refuse to move when required to do so by an authorised officer, (13 words on stopping the activity) provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder. (32 words weakening the definition of wrongful activity).
(3) To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely - ‘No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’	A further example of the Council seeming excessively keen on wording that provides a potential get-out. It should be enough that public toilet use be limited to its obvious intended functions, and in a timely fashion.
(4) To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour namely - ‘No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’	Definitely in favour of this provision. Otherwise there is ongoing distress to local residents – and those town centre visitors with quiet enjoyment in mind. There should also be very strong provision against unlicensed street trading, including breaking the excuse of giving away merchandise and then (not really separately) receiving a donation.

--	---	-----------------------------------

Council Contribution	Comment
We welcome comments to address the following questions:	
1. Do you believe the existing order should be extended for three years. Please provide any further information to help justify your response.	Yes. It is obvious from the deterioration in the town centre (and Particularly in Pride Hill) of quiet enjoyment and other pleasantness
2. Do you think the existing PSPO has helped to reduce instances of anti-social behaviour. Please provide any further information to help justify your response.	Slightly, but not as much as might be hoped for. On this weak enforcement looks to have been a major deficiency. On enforcement, there would be benefit from installation and use of CCTV (with audio recording); also with radio-communications between enforcement officers , staff monitoring CCTV and the local police.
3. Do you think the existing PSPO should be amended to include any of the proposed new provisions. Please state which, if any, of the 4 provisions should be included and provide any further information to help justify your response.	Yes. All of them. (1) For better enforcement. Also suggest greater staffing by authorised persons, with sufficient coverage from around 0700 to 2330 every day - including festival days. (2) Wider provision against sitting or lying; also any other disruptive mode of presence, such as shouting. Also against preaching, lecturing, etc except for severely limited specific timed licencing – with suggested overall limitation to 2 timed slots of 15 minutes each (say between 10am and 3pm) on each on 2 specified days per week, shared between all interested persons and organisations. (3) It should be enough that public toilet use be limited to its obvious intended functions, and in a timely fashion. This for proper availability to those with legitimate need when in the town. (4) Definitely no sound amplification, beyond that specifically licencing by the Council, just on festival days.
4. Please state whether you are a resident of Shrewsbury Town centre, a Town centre business owner, an employee in the Town centre or a visitor.	I am a resident, near the junction of Pride Hill and St Marys Street

<END>

--	---	-----------------------------------

This page is intentionally left blank

Shropshire Police and the Shrewsbury Safer Neighbourhood Team in particular very much support the renewal of the Shrewsbury town centre Public Space Protection Order and would like to see additional conditions and increased enforcement.

Since its inception in 2017 the PSPO has proven itself to be a vital tool to deal with antisocial behaviour in the town centre, with 330 notices (as of 4 May 2023) issued by police, either to make a requirement to prevent ASB, or to report someone for contravening the PSPO's prohibitions.

To support the renewal of the existing terms, the breakdown of the instances where officers have made requirements and/or reported individuals for offences is set out below.

Requirement	Issued
Leave any restricted area for 48 hours	232
Cease drinking alcohol	24
Hand over any alcohol	8
Grand Total	264

Offence	Issued
Left personal effects unattended	42
Returned to restricted area within 48 hrs when asked not to return	21
Refused to leave restricted area for 48 hours when asked to leave	18
Urinating / defecating in public where no facility available	9
Refused to hand over any alcohol	3
Refused to Stop Drinking Alcohol	3
Grand Total	96

(A number of the 330 PCRs issued document both requirements and offences, hence the disparity in the totals).

The ASB the PSPO addresses is relatively low-level but, as seen from the number of calls police receive about it, causes significant distress to members of the public using the town centre, and to town centre businesses alike. People often report that they find the behaviour of an antisocial minority in the town centre intimidating. The sight of intoxicated people slumped on the pavement or in shop doorways in the historic centre of town also gives a negative impression to visitors.

Since the end of the pandemic there has been a marked increase in reports of ASB in the town centre, with reports of people drinking to excess in the street, using drugs, begging and behaving in a disorderly manner. This is reflected by the number of PCRs issued by police (see graph below).

There are few other powers available to police to deal with this behaviour other than using the PSPO. For example, dispersal powers under Section 34 of the Anti-Social Behaviour, Crime and Policing Act 2014 can only be authorised for a maximum of 48 hours. The Vagrancy Act is antiquated and no longer fit for purpose. Criminal Behaviour Orders are only available on conviction for offences and require a great deal of supporting evidence to be gathered. Offences of drunk and disorderly or public order offences are often not made out.

The PSPO's terms, and its proposed amendments, allow officers to make requirements to change behaviour before it becomes criminal, a proportionate response.

To that end, police would like to see a further condition added to the PSPO, namely:

No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.

The general prohibition 3(d) of the PSPO needs to be supplemented by the above, to set out specifically a type of behaviour which is considered to be antisocial and unacceptable.

Police have had a large number of calls from the public and businesses about this behaviour, and we have witnessed it ourselves on our patrols, as evidenced below.

The first table at the end of this report has been produced from calls made to West Mercia Police from members of the public, usually the shop owners, who have reported people lying on the street and within their doorways. This data may be an underestimate because a log may not always have been created by the police control room call-taker.

The second table at the end of this report is a summary of what has been seen by police officers and PCSOs while on patrol in the town centre. Since February 2023 the town centre SNT has been making a specific note of the numbers of people in order to respond to the PSPO consultation. Before February 2023 the numbers were those recorded in the course of updating the town centre ASB risk management plan.

From 05/02/2022 to 27/02/2023 91 people were reported by members of the public as sitting or lying on the ground in the town centre causing nuisance.

Between 18/08/2022 and 04/04/2023 police recorded 180 people sitting or lying on the floor in an antisocial way suitable for recording on an ASB RMP.

There are plenty of benches available throughout the town centre for people who want to sit or lie down and this is far preferable to having people obstructing pavements, shop doorways and fire escapes etc.

There is a concern that this additional condition would disproportionately affect rough sleepers. However, compared to the number of people sitting or lying and blocking shop doorways and so on, the number of rough sleepers in Shrewsbury is thankfully very small. As of the last Homeless Outreach Street Triage meeting on 24 April 2023, there were only eight people recorded as sleeping rough in Shrewsbury town centre. There is a great deal of support in place for these individuals, from The Ark, to 70 Castle Foregate, to the £1.4m Shropshire Council has secured to fund their Reset Project.

The police would also like to see an expansion in those who are authorised to issue PCRs, to include the Town Rangers employed by the Business Improvement District, and the Quarry Park security staff employed by Shrewsbury Town Council. These are SIA approved security professionals tasked to deal with the low-level ASB the PSPO is designed to address and it is appropriate that they have these powers. BID funded town rangers use these powers successfully in other towns, Weymouth in Devon being one example.

When the PSPO was introduced, a memorandum of understanding was agreed between the then Police Command Team for Shropshire and Shropshire Council whereby police officers and PCSOs would be responsible for issuing the PCRs and Shropshire Council would be the prosecuting agency.

Police would like to revisit the MOU such that Shropshire Council enforcement officers share responsibility for issuing PCRs with the police, Town Rangers and Quarry Security. The MOU was agreed in the expectation that issuing a PCR would result in confrontation with the person being dealt with, something which would be more appropriate for the police to deal with. However we have found that in the vast majority of cases, issuing a PCR doesn't result in confrontation. Issuing a PCR therefore doesn't present any more risk to a council civil enforcement officer than issuing a parking ticket for example. We believe that in many circumstances the police may not be the most appropriate agency to deal with breaches of the PSPO. This would especially be the case should the proposed additional condition in relation to sound amplification is accepted as noise nuisance has always been dealt with by Shropshire Council Environmental Protection.

Police also feel that the resources Shropshire Council put into prosecuting breaches of the PSPO needs to be increased. This will be especially important if the number of individuals empowered to issue PCRs increases. We understand that the number of prosecutions for

breaches of the PSPO since 2017 is in single figures. There is a risk that the effectiveness of the PSPO will be undermined if those who breach it do not face any consequences for their antisocial behaviour.

Police also support the additional provisions in relation to public toilets requested by Shrewsbury Town Council, and in relation to amplified sound requested by the Business Improvement District. These partners are best placed to evidence the requirement for these additions.

Calls to police from members of the public reporting people sitting or lying on the floor in the town centre causing nuisance.

TOTAL NUMBER OF PEOPLE (between 18/08/2022 and 04/04/2023)		180	

This page is intentionally left blank

1st April 2020 to 31st March 2021

1 requirement reported
2 offences (returning to the restricted area) reported.

All these incidents related to one individual who was issued with a warning and there have been no further breaches by this individual.

1st April 2021 to 31st March 2022

8 requirements reported.
12 offences reported of which:

- 8 for leaving personal effects unattended
- 1 for returning to the restricted area
- 2 for urinating in a public place
- 1 for refusing to leave the restricted area

Of the 12 offences:

- 5 were issued with a written warning.
- 7 resulted in NFA (no further action) - unable to serve a warning notice (x4); lack of evidence (x2); matter deemed not to be an offence (x1).

1st April 2022 to 31st March 2023

21 offences reported of which:

- 5 for urinating in a public place,
- 4 for refusing to leave the restricted area,
- 2 for leaving personal effects unattended,
- 6 for returning to the restricted area,
- 3 for refusing to stop drinking when asked,
- 1 for failing to hand over alcohol when asked.

75 requirements reported.

Of the 21 offences:

- 2 written warnings were issued.
- 11 were closed due to lack of police evidence.
- 2 were closed as defendant relocated away from Shropshire (untraceable).
- 3 NFA - to administrative error (x2), not in public place (x1).
- 2 FPNs issued (not paid – ongoing investigation).
- 1 ongoing (enquiries being made).

PUBLIC SPACES PROTECTION ORDER: SHREWSBURY TOWN CENTRE**EVALUATION REPORT: 01.04.2020 – 31.03.2023**OVERVIEW

A Public Spaces Protection Order has been enforced in Shrewsbury Town Centre since 1st August 2017. Shropshire Council are currently seeking views and comments on extending the Order for a further 3 years from August 2023, and/or whether to make any amendments to the existing PSPO. The consultation period runs from 03/04/2023 – 14/05/2023.

The following report provides an analysis of data collated by Shrewsbury Town Council via the multi-agency operational group 'Team Shrewsbury', in relation to the conditions outlined within the PSPO. Data recorded during the 3-year period 1st April 2020 – 31st March 2023 has been reviewed in order to evaluate the impact of the PSPO on reporting trends.

Previous reports have also incorporated relevant data recorded by Shropshire Council and West Mercia Police. Due to department restructures and system changes, comparable data in line with the reporting categories below is unavailable for the review period. However, supporting data will be outlined throughout the report where available.

Data analysis is in line with the geographical boundary covered by the Public Spaces Protection Order.

REPORTING CATEGORIES

Following a review of the existing datasets collated by Shropshire Council and partner agencies in relation to crime and anti-social behaviour, the following reporting categories were established in order to monitor the impact of the order. The categories were introduced as of 1st October 2016 and are aligned with the behaviours the PSPO aims to prohibit. Other categories relevant to wider ASB issues have continued to be recorded by a number of agencies; however, the categories detailed below have been developed to reflect the most problematic issues encountered within the town centre.

Alcohol Litter	Dog Fouling	Excrement/Urinating
Alcohol Related Incidents	Dog Control	Fly tipping/Littering
Aggressive Begging	Damage/Arson	Personal Items Left
Begging	Drug Litter	Graffiti
Nuisance Busking	Drug Misuse	Suspicious Behaviour
Congregation	Drug Dealing	

DATA CONSTRAINTS – LIMITATIONS OF THE REPORT

It is important to note that COVID lockdown restrictions in place during 2020 will have had a significant impact on reporting levels. This limits the ability to accurately report 3-year trends specific to individual incident types.

In relation to Team Shrewsbury data, an increase in resources during 2022 will also have had an impact on trends, resulting in a higher number of incident reports. The multi-agency group successfully secured Home Office funding in order to employ a number of Town Rangers and Taxi Marshalls, who work alongside Quarry Park security.

There have been significant changes to West Mercia’s command and control system during the review period, as well as the software used to extract data. As a result, Police data is unavailable for the period March – June 2020. Data provided from July 2020 onwards will not be directly comparable with information provided to compile previous reports. Of note, West Mercia incident data is provided via keyword searches on all incidents reported in Shrewsbury Town Centre. The keywords are taken from the initial detail of the report made to the Police rather than the entire incident log, which may result in under-reporting.

As of October 2021, ASB incidents are no longer recorded by Shropshire Council. Environmental Health officers continue to deal with noise complaints and breaches of statutory noise nuisance, therefore noise caused by buskers is the only data available relevant to the conditions of the PSPO.

ANALYSIS OF DATA - PSPO CONDITIONS

- a) **No person shall urinate or defecate in a public area not being a facility intended for such use.**

INCIDENT TYPE: URINATING/DEFACATING	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Team Shrewsbury	57	113	103
West Mercia Police	n/a	2	0

- b) **No person shall, for any duration of time, leave unattended in a public area any personal effects or belongings or any other material or paraphernalia including anything that may be considered discarded or waste material.**

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Personal Belongings	18	31	13
Alcohol Litter	115	81	120
Drug Litter	76	124	272
Fly Tipping/Littering	51	128	299
Total	260	364	704

Supporting Data: West Mercia Police

KEYWORD SEARCH – INCIDENT REPORT	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Belongings	n/a	10	12
Litter/Rubbish/Vomit	n/a	11	13

Total	n/a	21	25
--------------	------------	-----------	-----------

- c) **No person shall refuse to stop drinking alcohol or hand over any containers (sealed or unsealed) which are believed to contain alcohol, when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or is likely to cause nuisance, alarm, harassment or distress to any other person.**

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Alcohol Related Incidents	32	78	362
Alcohol Litter	115	81	120
Total	147	159	482

Supporting Data: West Mercia Police

KEYWORD SEARCH – INCIDENT REPORT	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Alcohol/Drinking/Drunk	n/a	267	250

- d) **No person shall refuse to disperse from a public area and not to return to that public area for 48 hours when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.**

All reporting categories can be considered relevant to this particular condition. However, it should be recognised that certain issues such as drug misuse, drug dealing, littering and dog fouling will potentially be dealt with via more appropriate and effective primary legislation.

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023	TOTAL	3 YR % CHANGE

KEY FINDINGS

The graph below identifies the top 5 incident types generating the highest number of reports during the review period.

In comparison to the previous 3 years, congregation and fly tipping/littering have replaced damage/arson and alcohol litter within the top 5 incident types.

As outlined previously, several factors limit the accuracy of 3-year trends, however some headline figures are provided below.

- **Begging** has recorded the greatest increase since 2020/21; however, numbers recorded remain significantly lower in comparison to other incident types.
- **Congregation** recorded a significant increase during the review period, and also recorded the highest number of incidents in both 2021/22 and 2022/23.
- **Personal Items Left** is the only incident type to record a decrease since 2020/21. During the review period Team Shrewsbury added an additional category to the dataset; 'Personal Items – Removed' however these figures have not been included within the report due to data quality issues and a lack of comparable figures.

PROPOSED ADDITIONAL CONDITIONS

The following additions to the current PSPO have been proposed in order to tackle ongoing issues linked to Anti-Social Behaviour in Shrewsbury Town Centre:

1. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour i.e. - 'No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'
2. To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely - 'No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'
3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour namely - "No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'

OFFICIAL

Datasets covering the previous 12-month period (01 April 2022 – 31 March 2023) have been reviewed to assist in identifying current levels of anti-social behaviour linked to the issues outlined above, and in order to establish a baseline moving forward.

Keywords have been used to extract relevant incidents from the data collected by Team Shrewsbury:

- 197 incident reports contained the word ‘toilet’ in the location field; this represents 8% of all reports. The highest number of incidents referred to drug related issues. See below for a breakdown per month.

- In relation to busking incidents, only 1 report contained the word ‘amplifier’ within the incident detail (January 2023). However, 26 nuisance busking incidents were recorded in total during 2022/23; and of note, no reports had been logged the 2 years previous. 18 reports were also recorded by Shropshire Council in relation to busking, and 2 were logged by West Mercia Police. Of the 18 reports to Shropshire Council, 11 referred to the use of an amplifier/amplified sound.

Team Shrewsbury have added an additional reporting category to capture individuals sitting or lying within an area, and data will be recorded from 1st April 2023.

Keyword searches conducted on incident reports recorded by West Mercia Police indicate potential data that could be considered in order to monitor the proposed additional categories. However, further incident detail would be required in order to establish whether reports refer to anti-social behaviour, and specifically relate to the conditions detailed within the PSPO. See below for keyword search findings for the period 1st April 2022 – 31st March 2023.

Keyword	Apr-22	May-22	Jun-22	Jul-22	Aug-22	Sep-22	Oct-22	Nov-22	Dec-22	Jan-23	Feb-23	Mar-23	Totals

Sleeping	3	2	1	2	1	2	7	5	3	1	0	3	30
Slumped	0	0	2	0	1	0	0	0	0	0	1	0	4

A more detailed search of OIS incidents covering the period 05/02/2022 – 27/02/2023 identified 91 individuals lying/sitting in the street or in doorways, causing nuisance. 32 reports were made by members of the public, and particularly businesses in the town centre.

In addition, during the period 18/08/2022 – 04/04/2023, 180 individuals were identified sitting or lying on the floor. This information has been collated via officer observations linked to an ASB Risk Management Plan for the town centre. Of note, incidents have been more routinely recorded as of February 2023 and figures will be more accurate moving forward.

If the recommended conditions are added to the PSPO, it is important that West Mercia Police clearly define the most appropriate datasets in order to monitor relevant incidents causing ASB. This data will need to be shared with Shropshire Council on a monthly basis in a consistent format for monitoring purposes, and to assist in evaluating the impact of the PSPO.

CONCLUSION

All incident types have continued to generate reports during the last 3 years. However, it is noted that aggressive begging, nuisance busking, dog control and begging have recorded significantly lower levels in comparison to the remaining categories. Of note, incidents of aggressive begging and nuisance busking were only recorded during 2022/23.

Regarding the proposed additions to the PSPO, further incident detail is required in order to effectively capture ASB caused by a sound amplifier. In terms of enforcement, Shropshire Council Environmental Protection officers investigate whether noise amounts to a Statutory Nuisance as defined in Section 79 of the Environmental Protection Act 1990. However, there is a high threshold for noise to be classed as a nuisance in law, and therefore may not be the most appropriate powers to deal with noise caused by buskers.

Moving forward, if the proposed additional conditions are added to the existing PSPO, robust datasets will need to be established in order to monitor relevant incident levels and the impact of the Order in Shrewsbury Town Centre. As issues are likely to be displaced, it will also be important to monitor emerging hotspot locations outside the existing boundary of the PSPO.

Shropshire Council
Equality, Social Inclusion and Health Impact Assessment (ESHIA)
Stage One Screening Record 2023

A. Summary Sheet on Accountability and Actions

Name of proposed service change
Amendment and/or Extension of Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017

Name of lead officer carrying out the screening
Grant TUNNADINE

Decision, review, and monitoring

Decision	Yes	No
Initial (stage one) ESHIA Only?	YES	
Proceed to Full ESHIA or HIA (part two) Report?		NO

If completion of an initial or Stage One assessment is an appropriate and proportionate action at this stage, please use the boxes above. If a Full or Stage Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.

Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality, social inclusion, and health considerations
<p>The Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017 (the Order) has been in operation since August 2017. It was determined in the original ESHIA at the time and also when renewed in August 2020 that the Order was considered to have an overall 'Low Positive Impact' for the community.</p> <p>This further extension, with some amendments, is again expected to deliver a 'Low Positive Impact'. This is because the Order, including the proposed amendments, is intended to tackle low level ASB where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable. The manner in which the Order has been used since its inception and will continue to be used is as a mechanism to stop lower level ASB.</p> <p>Under the provisions of the Anti-Social Behaviour, Crime and Policing Act 2014 any PSPO cannot last for more than three years unless it is extended by the local authority. This legislation is intended to benefit the community as a whole by reducing ASB and providing a mechanism to resolve issues quickly and efficiently</p>

and will therefore also be of benefit to Protected Groupings within the community, as set out in the Equality Act 2010.

This Order along with other initiatives now form part of the toolkit available to the police and the Local Authority to tackle the challenges within the restricted area and not renewing the Order will remove what has been a mechanism to address ASB which clearly benefits the majority of the community. The new amendments proposed within the revised PSPO add to the types of ASB the Order seeks to deter whilst also allowing the Local Authority to consider authorising further persons to enforce the Order.

An action to mitigate any perceived negative impact of the measures on vulnerable people, including rough sleepers, will be to advise both directly and through groups like Team Shrewsbury that the Order including the proposed amendments is not a mechanism that sets out to punish poverty related issues - it sets out to punish unacceptable behaviours caused by individuals acting inappropriately irrespective of status / wealth and applies equally to matters also commonly associated with the night time economy.

There are measures in place to help vulnerable people who are homeless, rough sleeping, or at risk of rough sleeping across the county. This includes support from a variety of agencies, which is currently provided through the RESET multi-agency service, which provides drug and alcohol treatment support. The RESET team provides holistic support including domestic abuse support, adult social care, housing support and mental health treatment. The partners involved are the Council, With You at Shropshire Recovery Partnership, Midlands Partnership Foundation Trust, Shropshire Domestic Abuse Service, Shrewsbury Ark and Intuitive Thinking Skills. The Police and the wider medical profession also provide support. Further, the Council and Team Shrewsbury promote the Alternative Giving Scheme which operates within the town centre. This allows people to provide donations which are specifically used to assist homeless people.

Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations

Evidence of the issues affecting the town centre have continued to be gathered by the police and Team Shrewsbury partners and this is used to identify the range and frequency of the issues being experienced within the restricted area. The Team Shrewsbury data is collated by Shrewsbury Town Council and along with Police and Council data on the use of the Order is made available for Team Shrewsbury. Representatives are able to review data and suggest any other issues for consideration that would benefit the community and other groups.

Further, provision for obtaining and recording data to cover the proposed amendments to the Order are being put in place for both Team Shrewsbury and the Police to enable the wider monitoring to take place.

A PSPO can only be put in place for a maximum period of three years after which it must be reviewed if it is proposed to extend the order. Also, if necessary throughout its existence the PSPO can be varied/amended to remove specific elements where the evidence demonstrates that the prohibitions/requirements have been sufficiently effective or indeed to include new prohibitions/requirements

to tackle emerging problems. Team Shrewsbury through the monitoring of the data collated and the data relating to the Order's use are able to address whether any variations or extending the Order is considered appropriate. Extending or varying the order will need to be undertaken in accordance with legislative requirements and be undertaken by the Local Authority having demonstrated the evidential need and having undertaken the appropriate consultation.

Further, the Act permits prohibitions or requirements to be included by variation/amendment provided they are reasonable to impose in order to:

- (a) to prevent the detrimental effect from continuing, occurring or recurring; or
- (b) to reduce that detrimental effect or to reduce the risk of its continuance, occurrence or recurrence.

The Trading Standards and Parking Enforcement Team will continue to work with the police where enforcement is required and will monitor and assess any offences reported by the police or any other person authorised by the Council to act under the Order. Shropshire Council is the only body able to prosecute a case in the Court where a breach of the Order is identified. Any such case will be assessed in line with the Council's Better Regulation and Enforcement Policy which can be found on the Shropshire Council website at:

[better-regulation-and-enforcement-policy.pdf \(shropshire.gov.uk\)](#)

This will ensure that any enforcement action undertaken in respect to the PSPO is consistent and in line with that of any other enforcement process undertaken by the Council. An application under this section must be made within the period of six weeks beginning with the date on which the order or variation is made.

Under the Anti-Social Behaviour, Crime and Policing Act 2014 a legal challenge over the validity of the Order is possible within the period of six weeks beginning with the date on which the order or a variation is made; no such challenge was received when the Order was introduced in 2017 and in the six years the Order has been operating there have been no complaints or representations received by the Council in relation to the implementation or use of the Order whilst it has been in operation. Given it is proposed to amend/vary the current Order the opportunity to challenge the validity of the amended Order will be available for up to six weeks after the proposed amended Order is made.

The Trading Standards and Parking Enforcement Team will continue to consider and address any complaint or representation made to the Local Authority in respect to the Order irrespective of when received. This will also include any feedback from the local members covering the geographical area for the Order along with the respective Portfolio holder, local MP and the Police and Crime Commissioner and this will help us to consider the ongoing impact on the local community as these are key engagement channels for the community, alongside direct feedback to the service area.

It is anticipated that they will, therefore, be able to help to feedback on the effectiveness and continued need or otherwise of the PSPO, along with ongoing liaison with the Town Council and local businesses and residents.

Associated ESHIAs

When the Order was first implemented an ESIIA was produced, which can be viewed with the other papers that were presented as part of the Cabinet Report via the link below:

[Agenda for Cabinet on Wednesday, 21st June, 2017, 12.30 pm — Shropshire Council](#)

When the Order was renewed in 2020 a further updated ESIIA was produced, which can be viewed with the other papers presented as part of the Cabinet Report via the link below:

[Agenda for Cabinet on Monday, 15th June, 2020, 1.00 pm — Shropshire Council](#)

Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of any other considerations. This includes climate change considerations

Climate change

There are no anticipated impacts on climate change.

Health and well being

The impacts of reducing ASB will have a low positive impact on the well-being of those individuals who are blighted by ASB and who may suffer frequently from such behaviours. Both existing and proposed amendments will help the authorities both raise awareness and address ASB.

Economic and societal/wide economy

Local businesses and the BID are represented on Team Shrewsbury and are encouraged to report examples of ASB to Team Shrewsbury to better inform the understanding of the ASB related matters that are affecting businesses and their customers within the restricted area. The existing and proposed amendments have been welcomed by local businesses who suffer from ASB and who have genuine concerns of the impact it has on the town centre and the attraction of visitors and customers.

Scrutiny at Part One screening stage

B. Detailed Screening Assessment

Aims of the service change and description
<p>The local authority is seeking to extend and vary/amend the Public Spaces Protection Order (PSPO) which has been in force since the 1st August 2017.</p> <p>The Shrewsbury Town Centre Public Spaces Protection Order (No.1) 2017 ('the Order') was implemented in accordance with the Anti-Social Behaviour, Crime and Policing Act 2014 to address concerns, which sets out a range of provisions to help target antisocial behaviours (ASB) that have a detrimental impact on the lives of those within a community. In proposing to extend the Order there are also a number of proposed changes to be made, which will widen the behaviours the Order is seeking to address.</p> <p>The Order was originally implemented to aid the police and local authority engage with individuals or groups who were committing anti-social behaviour in a public space where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable. In considering whether the Order should be extended for a further</p>

three years, evidence collated since the renewal of the Order in August 2020 clearly shows a continuing need, but there is also evidence to support the need to include some new provisions.

It has also been recognised that enforcement of the Order is currently very challenging, with financial and resource pressures on Shropshire Council, West Mercia Police and other partners and, whilst a wider consideration as to who can be authorised by the Council to enforce the provisions has also been proposed, there is no plan to utilise this provision until such time as resources are identified to address any increase in enforcement. This is linked with corporate work that is being undertaken to explore how funding can be obtained to ensure the Council is meeting its statutory responsibilities around responding to anti-social behaviour issues more widely.

Whilst local authorities are responsible for making, varying and extending a PSPO, they must do so in consultation with the Police, the Police and Crime Commissioner (PCC) and other relevant bodies who may be affected. A PSPO can be created to cover any public space within the local authority's administrative boundary, and this will include any place to which the public or any section of the public has access, on payment or otherwise, as of right or by virtue of express or implied permission. The area covered by a PSPO is referred to as the restricted area and a map of the restricted area covering the central town centre part of Shrewsbury forms part of the Order. No changes are proposed to the restricted area.

A PSPO can be in force for any period up to a maximum of three years after which the Local Authority must consider whether or not to extend/vary/discharge the PSPO. A breach of a PSPO can be dealt with through the issuing of a Fixed Penalty Notice (FPN) which is current set at £75, or a level 3 fine (max £1000) on prosecution. There are no changes proposed to the current level of FPN.

Tackling ASB was and remains a Shropshire Council priority and will often be linked with other core council services around social care, vulnerable adults, safeguarding and hate crime, highways and public health. The continuation of a PSPO as a measure to help reduce ASB, goes some way to help achieve the Council's corporate aims.

The intention behind the Order continues to provide a mechanism to allow the police and authorised officers to address behaviours that are causing concern without the Order targeting any particular group of the community and in particular those that may be considered vulnerable or in need of help. The further extension and variation/amendment of the Order does not alter the fact that this Order is about targeting individual/s whose behaviour is causing community alarm, distress etc and which is built into the specific wording of the Order.

The original provisions of the Order are:

- a) No person shall urinate or defecate in a public area not being a facility intended for such use.

- b) No person shall, for any duration of time, leave unattended in a public area any personal effects or belongings or any other material or paraphernalia including anything that may be considered discarded or waste material.
- c) No person shall refuse to stop drinking alcohol or hand over any containers (sealed or unsealed) which are believed to contain alcohol, when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or is likely to cause nuisance, alarm, harassment or distress to any other person.
- d) No person shall refuse to disperse from a public area and not to return to that public area for 48 hours when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.

There are no proposals to change these 4 provisions and any future order will include these provisions as currently drafted. Whilst the original prohibitions of the order will remain unaltered, it is proposed to include three additional provisions:

- e) No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.
- f) No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.
- g) No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.

The new provisions have been drafted following the same principles that were used in drafting the original Order, which was to enable authorised officers to intervene and where possible stop ASB without necessarily criminalising individuals. In considering all seven of the above provisions, (a) to (e), only two behaviours are actually being criminalised outright (see (a) and (b) above) with the other prohibitions simply providing an ability for authorities to respond effectively to concerns by stopping unacceptable individual behaviour and where necessary to remove the cause. Only where a reasonable request from an authorised officer is refused would that individual commit a criminal offence under the Order (see (c), (d), (e), (f) and (g) above).

It should also be noted that the revised Order does not stop any activity of the activities in (c) to (g), where that activity is being undertaken in an appropriate manner and therefore does not criminalise specific activities (although some activities may already be a criminal act by virtue of other legislation) other than

urinating/ defecating and leaving belongings in a public place for which there are strong arguments to prohibit outright.

In extending and varying the Order, appropriate signage will need to be updated to include the new provisions and displayed on all entry points to the restricted area and within the said area in accordance with the requirements of the Act and regulations made under it. Further, the Order which has been available to view on the Council's website following its implementation on the 1st August 2017 will also need to be updated with the new provisions.

Intended audiences and target groups for the service change

The intended audiences and target groups are considered to be:

- Residents and visitors of the town centre.
- Local businesses operating within the town centre.
- Shrewsbury Town Council.
- Shropshire Council (Environmental Maintenance, Public Health, Housing Options, Highways, Safeguarding, Social Care).
- Chief inspector of West Mercia Police.
- Police and Crime Commissioner.
- Shrewsbury MP
- Shrewsbury BID
- Shrewsbury Town Centre Residents Association
- The Ark
- Team Shrewsbury
- Accommodation providers (Shropshire Housing Alliance, Parish rooms)
- Shropshire Fire and Rescue Service.
- Shropshire Tourist Board (Visit Shrewsbury)
- The Marches Local Enterprise Partnership
- Shropshire Community Health Trust
- South Staffs and Shropshire Healthcare NHS Foundation Trust
- The Shrewsbury and Telford Hospital NHS Trust
- Shropshire Clinical Commissioning Group (CCG)
- Voluntary Groups (see below)

This list is not intended to be exhaustive or in order of priority. The following Voluntary Groups and organisations were also included in a general notification of the consultation:

Evidence used for screening of the service change

The evidence used to inform the proposal to extend and vary/amend the Order includes data in the form of an evaluation report covering the period of 01.04.2020 – 31.03.2023 of incidents recorded by Team Shrewsbury and police data along with a summary of the enforcement actions undertaken under the Order for the period 01.04.2020 – 31.03.2023.

An extract of the data from these reports is produced below:

ANALYSIS OF DATA - PSPO CONDITIONS

- a) **No person shall urinate or defecate in a public area not being a facility intended for such use.**

INCIDENT TYPE: URINATING/DEFACATING	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Team Shrewsbury	57	113	103
West Mercia Police	n/a	2	0

- b) **No person shall, for any duration of time, leave unattended in a public area any personal effects or belongings or any other material or paraphernalia including anything that may be considered discarded or waste material.**

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Personal Belongings	18	31	13
Alcohol Litter	115	81	120
Drug Litter	76	124	272
Fly Tipping/Littering	51	128	299
Total	260	364	704

Supporting Data: West Mercia Police

KEYWORD SEARCH – INCIDENT REPORT	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023

Belongings	n/a	10	12
Litter/Rubbish/Vomit	n/a	11	13
Total	n/a	21	25

- c) **No person shall refuse to stop drinking alcohol or hand over any containers (sealed or unsealed) which are believed to contain alcohol, when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or is likely to cause nuisance, alarm, harassment or distress to any other person.**

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Alcohol Related Incidents	32	78	362
Alcohol Litter	115	81	120
Total	147	159	482

Supporting Data: West Mercia Police

KEYWORD SEARCH – INCIDENT REPORT	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023
Alcohol/Drinking/Drunk	n/a	267	250

- d) **No person shall refuse to disperse from a public area and not to return to that public area for 48 hours when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person.**

All reporting categories can be considered relevant to this particular condition. However, it should be recognised that certain issues such as drug misuse, drug dealing, littering and dog fouling will potentially be dealt with via more appropriate and effective primary legislation.

INCIDENT TYPE	01/04/2020 – 31/03/2021	01/04/2021 – 31/03/2022	01/04/2022 – 31/03/2023	TOTAL	3 YR % CHANGE

KEY FINDINGS

The graph below identifies the top 5 incident types generating the highest number of reports during the review period.

In comparison to the previous 3 years, congregation and fly tipping/littering have replaced damage/arsen and alcohol litter within the top 5 incident types.

As outlined previously, several factors limit the accuracy of 3-year trends, however some headline figures are provided below.

- **Begging** has recorded the greatest increase since 2020/21; however, numbers recorded remain significantly lower in comparison to other incident types.
- **Congregation** recorded a significant increase during the review period, and also recorded the highest number of incidents in both 2021/22 and 2022/23.
- **Personal Items Left** is the only incident type to record a decrease since 2020/21. During the review period Team Shrewsbury added an additional category to the dataset; 'Personal Items – Removed' however these figures have not been included within the report due to data quality issues and a lack of comparable figures.

PROPOSED ADDITIONAL CONDITIONS

The following additions to the current PSPO have been proposed in order to tackle ongoing issues linked to Anti-Social Behaviour in Shrewsbury Town Centre:

1. To include a wider enabling provision to require a person to stop sitting or lying within the area if causing anti-social behaviour i.e. - 'No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.'
2. To include a wider enabling provision to require a person to leave a public toilet if causing antisocial behaviour namely - 'No person shall refuse to leave a public toilet when required to do so by an authorised officer, provided that officer has reason to believe that that

person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’

3. To include a wider enabling provision to require a person to stop using a sound amplifier if causing anti-social behaviour namely - “No person shall refuse to stop using a device intended to amplify sound when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.’

Datasets covering the previous 12-month period (01 April 2022 – 31 March 2023) have been reviewed to assist in identifying current levels of anti-social behaviour linked to the issues outlined above, and in order to establish a baseline moving forward.

Keywords have been used to extract relevant incidents from the data collected by Team Shrewsbury:

- 197 incident reports contained the word ‘toilet’ in the location field; this represents 8% of all reports. The highest number of incidents referred to drug related issues. See below for a breakdown per month.

- In relation to busking incidents, only 1 report contained the word ‘amplifier’ within the incident detail (January 2023). However, 26 nuisance busking incidents were recorded in total during 2022/23; and of note, no reports had been logged the 2 years previous. 18 reports were also recorded by Shropshire Council in relation to busking, and 2 were logged by West Mercia Police. Of the 18 reports to Shropshire Council, 11 referred to the use of an amplifier/amplified sound.

Team Shrewsbury have added an additional reporting category to capture individuals sitting or lying within an area, and data will be recorded from 1st April 2023.

Keyword searches conducted on incident reports recorded by West Mercia Police indicate potential data that could be considered in order to monitor the proposed additional categories. However, further incident detail would be required in order to establish whether reports refer to anti-social behaviour, and specifically relate to the conditions detailed within the PSPO. See below for keyword search findings for the period 1st April 2022 – 31st March 2023.

Keyword	Apr-22	May-22	Jun-22	Jul-22	Aug-22	Sep-22	Oct-22	Nov-22	Dec-22	Jan-23	Feb-23	Mar-23	Totals

A more detailed search of OIS incidents covering the period 05/02/2022 – 27/02/2023 identified 91 individuals lying/sitting in the street or in doorways, causing nuisance. 32 reports were made by members of the public, and particularly businesses in the town centre.

In addition, during the period 18/08/2022 – 04/04/2023, 180 individuals were identified sitting or lying on the floor. This information has been collated via officer observations linked to an ASB Risk Management Plan for the town centre. Of note, incidents have been more routinely recorded as of February 2023 and figures will be more accurate moving forward.

In addition to this data, the enforcement actions undertaken under the Order are as follows:

1st April 2020 to 31st March 2021

1 requirement reported
2 offences (returning to the restricted area) reported.

All these incidents related to one individual who was issued with a warning and there have been no further breaches by this individual.

1st April 2021 to 31st March 2022

8 requirements reported.
12 offences reported of which:

- 8 for leaving personal effects unattended
- 1 for returning to the restricted area
- 2 for urinating in a public place
- 1 for refusing to leave the restricted area

Of the 12 offences:

- 5 were issued with a written warning.
- 7 resulted in NFA (no further action) - unable to serve a warning notice (x4); lack of evidence (x2); matter deemed not to be an offence (x1).

1st April 2022 to 31st March 2023

21 offences reported of which:

- 5 for urinating in a public place,
- 4 for refusing to leave the restricted area,
- 2 for leaving personal effects unattended,
- 6 for returning to the restricted area,
- 3 for refusing to stop drinking when asked,
- 1 for failing to hand over alcohol when asked.

75 requirements reported.

Of the 21 offences:

- 2 written warnings were issued.
- 11 were closed due to lack of police evidence.
- 2 were closed as defendant relocated away from Shropshire (untraceable).
- 3 NFA - to administrative error (x2), not in public place (x1).
- 2 FPNs issued (not paid – ongoing investigation).
- 1 ongoing (enquiries being made).

Specific consultation and engagement with intended audiences and target groups for the service change

A public consultation was undertaken between the 3 April 2023 and 14 May 2023. The consultation was placed on the Council's website and a copy of the Order included for consultees information along with a description of the proposed additional requirements and the power to authorise other persons. The consultation posed a number of questions to consultees as follows:

1. Do you believe the existing order should be extended for three years. Please provide any further information to help justify your response.
2. Do you think the existing PSPO has helped to reduce instances of anti-social behaviour. Please provide any further information to help justify your response.
3. Do you think the existing PSPO should be amended to include any of the proposed new provisions. Please state which, if any, of the 4 provisions should be included and provide any further information to help justify your response.
4. Please state whether you are a resident of Shrewsbury Town centre, a Town centre business owner, an employee in the Town centre or a visitor.

A number of consultees were informed directly via email of the consultation and the voluntary sector was informed via a news update sent by the Councils Feedback and Insight Team with a reminder sent out via the VCSA social media account on the 24 April 2023.

In response to the consultation a number of responses were received, a summary of which has been included below:

Summary of Comments (excluding Police Comments)

Respondents in favour of renewing the PSPO: **65 (100%)**

Respondents who believe the PSPO has been effective/ineffective/Not commented:
27 (41%) / 20 (31%) / 18 (28%)

Summary of those in favour of the following additional measures:

To extend the persons able to enforce the PSPO to ‘any person authorised by Shropshire Council’:
45 (69%)

Provision to require a person to stop sitting or lying within the area if causing anti-social behaviour: **48 (74%)**

Provision to require a person to leave a public toilet if causing anti-social behaviour:
44 (68%)

Provision to require a person to stop using a sound amplifier if causing anti-social behaviour
46 (71%)

Source of respondents

	<u>Town Centre Residents</u>	<u>Town Centre Business Owners</u>	<u>Town centre worker</u>	<u>Shrewsbury Resident</u>	<u>Visitor</u>	<u>Other</u>	<u>Total</u>
<u>Number of Respondents (%)</u>	12 (18%)	29 (45%)	16 (25%)	2 (3%)	1 (2%)	5 (7%)	65 (100%)

In addition to the above the police have provided an in depth response to the consultation as follows:

POLICE RESPONSE

Shropshire Police and the Shrewsbury Safer Neighbourhood Team in particular very much support the renewal of the Shrewsbury town centre Public Space Protection Order and would like to see additional conditions and increased enforcement.

Since its inception in 2017 the PSPO has proven itself to be a vital tool to deal with antisocial behaviour in the town centre, with 330 notices (as of 4 May 2023) issued by police, either to make a requirement to prevent ASB, or to report someone for contravening the PSPO's prohibitions.

To support the renewal of the existing terms, the breakdown of the instances where officers have made requirements and/or reported individuals for offences is set out below.

Requirement	Issued
Leave any restricted area for 48 hours	232
Cease drinking alcohol	24
Hand over any alcohol	8
Grand Total	264

Offence	Issued
Left personal effects unattended	42
Returned to restricted area within 48 hrs when asked not to return	21
Refused to leave restricted area for 48 hours when asked to leave	18
Urinating / defecating in public where no facility available	9
Refused to hand over any alcohol	3
Refused to Stop Drinking Alcohol	3
Grand Total	96

(A number of the 330 PCRs issued document both requirements and offences, hence the disparity in the totals).

The ASB the PSPO addresses is relatively low-level but, as seen from the number of calls police receive about it, causes significant distress to members of the public using the town centre, and to town centre businesses alike. People often report that they find the behaviour of an antisocial minority in the town centre intimidating. The sight of intoxicated people slumped on the pavement or in shop doorways in the historic centre of town also gives a negative impression to visitors.

Since the end of the pandemic there has been a marked increase in reports of ASB in the town centre, with reports of people drinking to excess in the street, using drugs, begging and behaving in a disorderly manner. This is reflected by the number of PCRs issued by police (see graph below).

There are few other powers available to police to deal with this behaviour other than using the PSPO. For example, dispersal powers under Section 34 of the Anti-Social Behaviour, Crime and Policing Act 2014 can only be authorised for a maximum of 48 hours. The Vagrancy Act is antiquated and no longer fit for purpose. Criminal Behaviour Orders are only available on conviction for offences and require a great deal of supporting evidence to be gathered. Offences of drunk and disorderly or public order offences are often not made out.

The PSPO's terms, and its proposed amendments, allow officers to make requirements to change behaviour before it becomes criminal, a proportionate response.

To that end, police would like to see a further condition added to the PSPO, namely:

No person, who is sitting or lying on any footpath or pedestrian area or in any fire escape, stairway or other entrance or exit to any premises within the protected area, shall refuse to move when required to do so by an authorised officer, provided that officer has reason to believe that that person is causing or likely to cause nuisance, alarm, harassment or distress to any other person or in order to prevent public disorder.

The general prohibition 3(d) of the PSPO needs to be supplemented by the above, to set out specifically a type of behaviour which is considered to be antisocial and unacceptable.

Police have had a large number of calls from the public and businesses about this behaviour, and we have witnessed it ourselves on our patrols, as evidenced below.

The first table at the end of this report has been produced from calls made to West Mercia Police from members of the public, usually the shop owners, who have reported people lying on the street and within their doorways. This data may be an underestimate because a log may not always have been created by the police control room call-taker.

The second table at the end of this report is a summary of what has been seen by police officers and PCSOs while on patrol in the town centre. Since February 2023 the town centre SNT has been making a specific note of the numbers of people in order to respond to the PSPO consultation. Before February 2023 the numbers were those recorded in the course of updating the town centre ASB risk management plan.

From 05/02/2022 to 27/02/2023 91 people were reported by members of the public as sitting or lying on the ground in the town centre causing nuisance.

Between 18/08/2022 and 04/04/2023 police recorded 180 people sitting or lying on the floor in an antisocial way suitable for recording on an ASB RMP.

There are plenty of benches available throughout the town centre for people who want to sit or lie down and this is far preferable to having people obstructing pavements, shop doorways and fire escapes etc.

There is a concern that this additional condition would disproportionately affect rough sleepers. However, compared to the number of people sitting or lying and blocking shop doorways and so on, the number of rough sleepers in Shrewsbury is thankfully very small. As of the last Homeless Outreach Street Triage meeting on 24 April 2023, there were only eight people recorded as sleeping rough in Shrewsbury town centre. There is a great deal of support in place for these individuals, from The Ark, to 70 Castle Foregate, to the £1.4m Shropshire Council has secured to fund their Reset Project.

The police would also like to see an expansion in those who are authorised to issue PCRs, to include the Town Rangers employed by the Business Improvement District, and the Quarry Park security staff employed by Shrewsbury Town Council. These are SIA approved security professionals tasked to deal with the low-level ASB the PSPO is designed to address and it is appropriate that they have these powers. BID funded town rangers use these powers successfully in other towns, Weymouth in Devon being one example.

When the PSPO was introduced, a memorandum of understanding was agreed between the then Police Command Team for Shropshire and Shropshire Council whereby police officers and PCSOs would be responsible for issuing the PCRs and Shropshire Council would be the prosecuting agency.

Police would like to revisit the MOU such that Shropshire Council enforcement officers share responsibility for issuing PCRs with the police, Town Rangers and Quarry Security. The MOU was agreed in the expectation that issuing a PCR would result in confrontation with the person being dealt with, something which would be more appropriate for the police to deal with. However we have found that in the vast majority of cases, issuing a PCR doesn't result in confrontation. Issuing a PCR therefore doesn't present any more risk to a council civil enforcement officer than issuing a parking ticket for example. We believe that in many circumstances the police may not be the most appropriate agency to deal with breaches of the PSPO. This would especially be the case should the proposed additional condition in relation to sound amplification is accepted as noise nuisance has always been dealt with by Shropshire Council Environmental Protection.

Police also feel that the resources Shropshire Council put into prosecuting breaches of the PSPO needs to be increased. This will be especially important if the number of individuals empowered to issue PCRs increases. We understand that the number of prosecutions for breaches of the PSPO since 2017 is in single figures. There is a risk that the effectiveness of the PSPO will be undermined if those who breach it do not face any consequences for their antisocial behaviour.

Police also support the additional provisions in relation to public toilets requested by Shrewsbury Town Council, and in relation to amplified sound requested by the Business Improvement District. These partners are best placed to evidence the requirement for these additions.

Calls to police from members of the public reporting people sitting or lying on the floor in the town centre causing nuisance.

Incident Reference	Incident Date	Location	Incident Details	Number of People
00135_I_05022022	05/02/2022	DARWIN SHOPPING CENTRE, GRAPE TREE, PRIDE HILL, SHREWSBURY, SHROPSHIRE, SY1 1PL	MALE ROUGH SLEEPING IN FRONT OF THE MAIN ENTRANCE, WE ARE ABOUT TO OPEN - WE HAVE SPOKEN TO HIM AND HE IS REFUSING TO MOVE, NOT SURE WHO IT IS - THEY ARE WRAPPED UP IN THEIR SLEEPING BAG	1

TOTAL NUMBER OF PEOPLE (between 18/08/2022 and 04/04/2023)		180	
--	--	-----	--

The consultation, whilst enabling the Council to engage with the community and any interested parties, has also helped inform whether the Order is still targeting the correct types of actions/behaviours and whether there are any concerns with extending it for a further three years. It is clear from the responses received that there is a strong appetite to extend the Order but also to include additional provisions and an amendment that will allow Shropshire Council to authorise 'other persons' to act under the Order. It should be noted that the power to authorise other persons is just that and at this time there are no plans to use this power to authorise any other person specifically, but this will help to future proof the Order so that when resources and circumstances permit the council may do so.

It was also apparent from the consultation which was heavily influenced by town centre businesses (45%) and workers (25%) that whilst it was unclear whether the current Order was effective there were comments expressing a wish for more enforcement. This is an issue which could be addressed through increased persons authorised to enforce the Order going forwards where resources within Shropshire Council are available to deal with the increase of actions that may result.

Initial equality impact assessment by grouping (Initial health impact assessment is included below)

Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Protected Characteristic groupings and other groupings in Shropshire	High negative impact <i>Part Two ESIIA required</i>	High positive impact <i>Part One ESIIA required</i>	Medium positive or negative impact <i>Part One ESIIA required</i>	Low positive, negative, or neutral impact (please specify) <i>Part One ESIIA required</i>

<u>Disability</u> (please include mental health conditions and syndromes; hidden disabilities including autism and Crohn's disease; physical and sensory disabilities or impairments; learning disabilities;				Low positive

Multiple Sclerosis; cancer; and HIV)				
<u>Gender re-assignment</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				Low positive
<u>Marriage and Civil Partnership</u> (please include associated aspects: caring responsibility, potential for bullying and harassment)				Low positive
<u>Pregnancy and Maternity</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				Low positive
<u>Race</u> (please include ethnicity, nationality, culture, language, Gypsy, Traveller)				Low positive
<u>Religion and belief</u> (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Zoroastrianism, and any others)				Low positive
<u>Sex</u> (this can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				Low positive
<u>Sexual Orientation</u> (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)				Low positive
<u>Other: Social Inclusion</u> (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health inequalities; refugees and asylum seekers; rural communities; veterans and serving members of the armed forces and their families)				Low positive

Initial health and wellbeing impact assessment by category

Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
<p>Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing?</p> <p>For example, would it cause ill health, affecting social inclusion, independence and participation?</p> <p>.</p>				Low positive
<p>Will the proposal <i>indirectly impact</i> an individual's ability to improve their own health and wellbeing?</p> <p>For example, will it affect their ability to be physically active, choose healthy food, reduce drinking and smoking?</p> <p>.</p>				Low positive
<p>Will the policy have a <i>direct impact</i> on the community - social, economic and environmental living conditions that would impact health?</p> <p>For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation?</p> <p>.</p>				Low positive
<p>Will there be a likely change in <i>demand</i> for or access to health and social care services?</p> <p>For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services?</p> <p>.</p>				neutral impact

Identification of likely impact of the service change in terms of other considerations including climate change and economic or societal impacts

The Order has the potential to adversely impact on human rights. However, Cabinet properly had regard to the rights of freedom of expression and freedom of assembly set out in the European Convention on Human Rights and the Human Rights Act 1998 during the process that led to the implementation and then the renewal of the Order. The fact that no human rights challenge or complaints has been lodged since the introduction of the Order's operation in 2017, gives a reasonable indication that the original decision to implement the Order and to extend it in 2020 would support the belief that the recommendation in this report to extend and vary the existing Order is unlikely to be at variance with the Human Rights Act 1998 and is also unlikely to result in any adverse Human Rights Act implications.

The anticipated positive environmental impact associated with the new Order through a reduction in urinating/defecating in the street, the public not leaving their personal belongings in the town centre and authorities being able to deal with ASB in an effective manner will be sustained.

Guidance Notes

1. Legal Context

It is a legal requirement for local authorities to assess the equality and human rights impact of changes proposed or made to services. It is up to us as an authority to decide what form our equality impact assessment may take. By way of illustration, some local authorities focus more overtly upon human rights; some include safeguarding. It is about what is considered to be needed in a local authority's area, in line with local factors such as demography and strategic objectives as well as with the national legislative imperatives.

Carrying out these impact assessments helps us as a public authority to ensure that, as far as possible, we are taking actions to meet the general equality duty placed on us by the Equality Act 2010, and to thus demonstrate that the three equality aims are integral to our decision making processes. These are: eliminating discrimination, harassment and victimisation; advancing equality of opportunity; and fostering good relations.

These screening assessments for any proposed service change go to Cabinet as part of the committee report, or occasionally direct to Full Council, unless they are ones to do with Licensing, in which case they go to Strategic Licensing Committee.

Service areas would ordinarily carry out a screening assessment, or Stage One equality impact assessment. This enables energies to be focussed on review and

monitoring and ongoing evidence collection about the positive or negative impacts of a service change upon groupings in the community, and for any adjustments to be considered and made accordingly.

These screening assessments are recommended to be undertaken at timely points in the development and implementation of the proposed service change.

For example, an ESHIA would be a recommended course of action before a consultation. This would draw upon the evidence available at that time, and identify the target audiences, and assess at that initial stage what the likely impact of the service change could be across the Protected Characteristic groupings and our tenth category of Social Inclusion. This ESHIA would set out intended actions to engage with the groupings, particularly those who are historically less likely to engage in public consultation eg young people, as otherwise we would not know their specific needs.

A second ESHIA would then be carried out after the consultation, to say what the feedback was, to set out changes proposed as a result of the feedback, and to say where responses were low and what the plans are to engage with groupings who did not really respond. This ESHIA would also draw more upon actions to review impacts in order to mitigate the negative and accentuate the positive. Examples of this approach include the Great Outdoors Strategy, and the Economic Growth Strategy 2017-2021

Meeting our Public Sector Equality Duty through carrying out these ESHIAs is very much about using them as an opportunity to demonstrate ongoing engagement across groupings and to thus visibly show we are taking what is called due regard of the needs of people in protected characteristic groupings

If the screening indicates that there are likely to be significant negative impacts for groupings within the community, the service area would need to carry out a full report, or Stage Two assessment. This will enable more evidence to be collected that will help the service area to reach an informed opinion.

In practice, Stage Two or Full Screening Assessments have only been recommended twice since 2014, as the ongoing mitigation of negative equality impacts should serve to keep them below the threshold for triggering a Full Screening Assessment. The expectation is that Full Screening Assessments in regard to Health Impacts may occasionally need to be undertaken, but this would be very much the exception rather than the rule.

2. Council Wide and Service Area Policy and Practice on Equality, Social Inclusion and Health

This involves taking an equality and social inclusion approach in planning changes to services, policies, or procedures, including those that may be required by Government.

The decisions that you make when you are planning a service change need to be recorded, to demonstrate that you have thought about the possible equality impacts

on communities and to show openness and transparency in your decision-making processes.

This is where Equality, Social Inclusion and Health Impact Assessments (ESHIA) come in. Where you carry out an ESHIA in your service area, this provides an opportunity to show:

- What evidence you have drawn upon to help you to recommend a strategy or policy or a course of action to Cabinet.
- What target groups and audiences you have worked with to date.
- What actions you will take in order to mitigate any likely negative impact upon a group or groupings, and enhance any positive effects for a group or groupings; and
- What actions you are planning to review the impact of your planned service change.

The formal template is there not only to help the service area but also to act as a stand-alone for a member of the public to read. The approach helps to identify whether or not any new or significant changes to services, including policies, procedures, functions, or projects, may have an adverse impact on a particular group of people, and whether the human rights of individuals may be affected.

This assessment encompasses consideration of social inclusion. This is so that we are thinking as carefully and completely as possible about all Shropshire groups and communities, including people in rural areas and people or households that we may describe as vulnerable.

Examples could be households on low incomes or people for whom there are safeguarding concerns, as well as people in what are described as the nine 'protected characteristics' of groups of people in our population, e.g., Age. Another specific vulnerable grouping is veterans and serving members of the Armed Forces, who face particular challenges with regard to access to Health, to Education, and to Housing.

We demonstrate equal treatment to people who are in these groups and to people who are not, through having what is termed 'due regard' to their needs and views when developing and implementing policy and strategy and when commissioning, procuring, arranging, or delivering services.

When you are not carrying out an ESHIA, you still need to demonstrate and record that you have considered equality in your decision-making processes. It is up to you what format you choose.-You could use a checklist, an explanatory note, or a document setting out our expectations of standards of behaviour, for contractors to read and sign. It may well not be something that is in the public domain like an ESHIA, but you should still be ready for it to be made available.

Both the approaches sit with a manager, and the manager has to make the call, and record the decision made on behalf of the Council.

Carry out an ESHIA:

- If you are building or reconfiguring a building.
- If you are planning to reduce or remove a service.
- If you are consulting on a policy or a strategy.
- If you are bringing in a change to a process or procedure that involves other stakeholders and the wider community as well as particular groupings

Carry out an equality and social inclusion approach:

- If you are setting out how you expect a contractor to behave with regard to equality, where you are commissioning a service or product from them.
- If you are setting out the standards of behaviour that we expect from people who work with vulnerable groupings, such as taxi drivers that we license.
- If you are planning consultation and engagement activity, where we need to collect equality data in ways that will be proportionate and non-intrusive as well as meaningful for the purposes of the consultation itself.
- If you are looking at services provided by others that help the community, where we need to demonstrate a community leadership approach

3. Council wide and service area policy and practice on health and wellbeing

This is a relatively new area to record within our overall assessments of impacts, for individual and for communities, and as such we are asking service area leads to consider health and wellbeing impacts, much as they have been doing during 2020-2021 and 2021-2022, and to look at these in the context of direct and indirect impacts for individuals and for communities. A better understanding across the Council of these impacts will also better enable Public Health colleagues to prioritise activities to reduce health inequalities in ways that are evidence based and that link effectively with equality impact considerations and climate change mitigation.

Health in All Policies – Health Impact Assessment

Health in All Policies is an upstream approach for health and wellbeing promotion and prevention, and to reduce health inequalities. The Health Impact Assessment (HIA) is the supporting mechanism

Health Impact Assessment (HIA) is the technical name for a common-sense idea. It is a process that considers the wider effects of local policies, strategies and initiatives and how they, in turn, may affect people's health and wellbeing.

- Health Impact Assessment is a means of assessing both the positive and negative health impacts of a policy. It is also a means of developing good evidence-based policy and strategy using a structured process to review the impact.
- A Health Impact Assessment seeks to determine how to maximise health benefits and reduce health inequalities. It identifies any unintended health consequences. These consequences may support policy and strategy or may lead to suggestions for improvements.

- An agreed framework will set out a clear pathway through which a policy or strategy can be assessed and impacts with outcomes identified. It also sets out the support mechanisms for maximising health benefits.

The embedding of a Health in All Policies approach will support Shropshire Council through evidence-based practice and a whole systems approach, in achieving our corporate and partnership strategic priorities. This will assist the Council and partners in promoting, enabling and sustaining the health and wellbeing of individuals and communities whilst reducing health inequalities.

Individuals

Will the proposal have a *direct impact* on health, mental health and wellbeing?

For example, would it cause ill health, affecting social inclusion, independence and participation?

Will the proposal directly affect an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to be physically active e.g., being able to use a cycle route; to access food more easily; to change lifestyle in ways that are of positive impact for their health.

An example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g., green highways), and changes to public transport that could encourage people away from car usage. and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve lives.

Will the proposal *indirectly impact* an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to access local facilities e.g., to access food more easily, or to access a means of mobility to local services and amenities? (e.g. change to bus route)

Similarly to the above, an example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g. pedestrianisation of town centres), and changes to public transport that could encourage people away from car usage, and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve their health and well being.

Communities

Will the proposal directly or indirectly affect the physical health, mental health, and wellbeing of the wider community?

A *direct impact* could include either the causing of ill health, affecting social inclusion, independence and participation, or the promotion of better health.

An example of this could be that safer walking and cycling routes could help the wider community, as more people across groupings may be encouraged to walk more, and as there will be reductions in emission leading to better air quality.

An *indirect impact* could mean that a service change could indirectly affect living and working conditions and therefore the health and well being of the wider community.

An example of this could be: an increase in the availability of warm homes would improve the quality of the housing offer in Shropshire and reduce the costs for households of having a warm home in Shropshire. Often a health promoting approach also supports our agenda to reduce the level of Carbon Dioxide emissions and to reduce the impact of climate change.

Please record whether at this stage you consider the proposed service change to have a direct or an indirect impact upon communities.

Demand

Will there be a change in demand for or access to health, local authority and social care services?

For example: Primary Care, Hospital Care, Community Services, Mental Health and Social Services?

An example of this could be: a new housing development in an area would affect demand for primary care and local authority facilities and services in that location and surrounding areas. If the housing development does not factor in consideration of availability of green space and safety within the public realm, further down the line there could be an increased demand upon health and social care services as a result of the lack of opportunities for physical recreation, and reluctance of some groupings to venture outside if they do not perceive it to be safe.

Public

Recommendation for Pontesbury Neighbourhood Plan to Proceed to Referendum

Responsible Officer:	Mark Barrow		
email:	mark.barrow@shropshire.gov.uk	Tel:	01743 258919
Cabinet Member (Portfolio Holder):	Cllr Richard Marshall, Portfolio Holder for Highways and Regulatory Services		

1. Synopsis

This report seeks Cabinet approval to proceed to local referendum on the Pontesbury Neighbourhood Development Plan.

2. Executive Summary

- 2.1. The purpose of this report is to seek Cabinet approval for the Pontesbury Neighbourhood Development Plan (the Plan) to proceed to referendum to determine whether the Plan should become part of the statutory Development Plan for the neighbourhood area, and therefore be used in the determination of planning applications in the neighbourhood.
- 2.2. The Shropshire Plan recognises the importance of a creating a Healthy Environment with a strategy objective to '*maintain, protect and enhance our outstanding natural and historic environment, promoting positive behaviours and greater biodiversity and environmental sustainability.*' The Pontesbury Neighbourhood Development Plan contains policies which strive to encourage

development to achieve these objectives alongside those contained the wider Development Plan for the Shropshire.

- 2.3. The Pontesbury Neighbourhood Development Plan (also referred to as the Neighbourhood Plan) has been produced in accordance with the Neighbourhood Planning (General) Regulations 2012 (referred to in this report as ‘the regulations’). The plan has been prepared by the Pontesbury Neighbourhood Plan Steering Group, with Pontesbury Parish Council acting as the local ‘Qualifying Body’. Work on the plan began in 2016 and has included several consultation stages. Pontesbury Parish Council submitted the draft version of the plan to Shropshire Council in October 2022, after which Shropshire Council undertook further statutory consultation and appointed an independent person to conduct the examination into the plan.
- 2.4. The purpose of the independent examination process is to ensure Neighbourhood Development Plans meet a set of nationally prescribed ‘Basic Conditions’, and to recommend if the Plan should proceed to a local referendum. The examination into the Pontesbury Neighbourhood Plan concluded in May 2023. The Examiner’s Report is attached to this Report as Appendix 1.
- 2.5. The Examiner has recommended the Plan can proceed to local referendum, subject to a number of modifications being made. It is now Shropshire Council’s role to consider the outcome of the Examiner’s report, including the proposed modifications, and to agree if the plan can proceed to referendum.
- 2.6. The schedule of modifications is shown in Appendix 2. This schedule has followed consideration of the Examiner’s conclusions and proposed modifications. Appendix 3 of this report sets out the proposed final ‘referendum’ version of the Pontesbury Neighbourhood Development Plan. It is therefore recommended that the ‘referendum’ version of the Plan proceed to referendum.
- 2.7. If agreed, the referendum will take place on a date to be arranged, but, must be between 31st August 2023 and 12th October 2023. Should the Plan gain public support at the referendum, Shropshire Council’s Full Council will be asked to formally ‘make’ (adopt) the Pontesbury Neighbourhood Development Plan to form part of the Statutory Development Plan for Shropshire.

3. Recommendations

Cabinet agrees:

- 3.1. The Pontesbury Neighbourhood Development Plan meets the ‘Basic Conditions’ and all the other legal requirements as summarised in the Independent Examiner’s Report, subject to the modifications proposed in the Schedule of Modifications (Appendix 2)
- 3.2. The required modifications be agreed, and that the final ‘referendum’ version of the Pontesbury Neighbourhood Development Plan (June 2023) (Appendix 3) proceed to local referendum.
- 3.3. The referendum area be that as defined as the designated area to which the Neighbourhood Development Plan relates, i.e. the Pontesbury parish boundary.

- 3.4. The Executive Director of Place be authorised to exercise all the relevant powers and duties and undertake necessary arrangements for the Pontesbury Neighbourhood Development Plan final referendum version (June 2023) (Appendix 3) to now proceed to referendum and for the referendum to take place asking the question ‘whether the voter wants Shropshire Council to use this neighbourhood plan for the Pontesbury neighbourhood plan area to help it decide planning applications in this neighbourhood area’.

Report

4. Risk Assessment and Opportunities Appraisal

- 4.1. Having received a draft Neighbourhood Plan from a qualifying body (normally a Parish or Town Council), it is the responsibility of the Local Planning Authority (LPA), under regulation 16 of the Neighbourhood Planning (General) Regulations 2012, to publicise and to seek representations on the Plan. It is also the responsibility of the Local Planning Authority under paragraph 7 of Schedule 4B to the Town and Country Planning Act 1990 (TCPA 1990) to appoint an independent person to assess the Plan. In following these requirements Shropshire Council published and consulted on the submission version of the Pontesbury Neighbourhood Development Plan for six weeks between 28th October 2022 to 09th December 2022 and appointed Tony Burton to examine the Plan in January 2023. As required Mr Burton’s appointment was agreed by Pontesbury Parish Council.
- 4.2. Only a draft Neighbourhood Plan that meets the basic conditions can be put to a referendum and be ‘made’ (adopted) by the Local Authority. The basic conditions, as set out in paragraph 8(2) of Schedule 4B of the TCPA 1990 that are applied to Neighbourhood Development Plans by section 38A of the Planning and Compulsory Purchase Act 2004 are:
- Having regard to national policies and advice contained in guidance issues by the Secretary of State it is appropriate to make the Neighbourhood Plan;
 - The making of the Neighbourhood Plan contributes to the achievement of sustainable development;
 - The making of the Neighbourhood Plan is in general conformity with the strategic policies contained in the development plan for the area of the authority (or any part of that area);
 - The making of the Neighbourhood Plan does not breach, and is otherwise compatible, with retained EU obligations;
 - Prescribed conditions are met (in relation to the Neighbourhood Plan) and prescribed matters have been completed with in connection with the proposal for the neighbourhood plan.
- 4.3. In assessing the Plan, the examiner has three options:
- a) That the Plan proceeds to referendum as submitted;
 - b) That the Plan is modified by the LPA to meet ‘basic conditions’ and then the modified version proceeds to referendum; or

c) That the Plan does not proceed to referendum

The Neighbourhood Development Plan examination is therefore a particularly focussed process, unlike that of an examination applied to Local Plans prepared by Local Planning Authorities. This leaves little in the way of opportunity to actively make change to improve the plan at this stage, unless these changes (or modifications) are to ensure the Plan meets one or more of the basic conditions.

- 4.4. The Examiner's Report is included as Appendix 1 to this report. It is the role of Shropshire Council to consider the overall conclusions and the proposed modifications in the Examiner's Report. Whilst the Examiner's Report is not binding on the Authority, it is considered there is a risk of a legal challenge if the Local Authorities conclusions were to differ significantly from that of the Examiner's without appropriate rationale. However, it is considered there will be occasions where it may be necessary for the Local Authority to propose different modification to that proposed by the Examiner or indeed to disagree with the need for a modification.
- 4.5. In this instance, the Examiner's Report into the Pontesbury Neighbourhood Development Plan has concluded that it be modified by the Local Planning Authority to meet the basic conditions. It should be this modified version of the Plan which should proceed to referendum. The Schedule of Modifications attached as Appendix 2 to this report show how the Local Planning Authority has considered each of the proposed modifications proposed by the Examiner.
- 4.6. Officers have considered in detail the recommendations of the Examiner, supported by further discussions with Pontesbury Parish Council. In summary, it is proposed that all of the recommended changes to the Plan are incorporated into the final 'referendum' version. It is this version which is before Cabinet and included as Appendix 3. For clarity, it is considered that these changes are necessary in order for the Plan to meet its 'basic conditions'. The changes involve partial amendments to wording of the policies and in some cases replacement with a suggested alternative, with one policy removal recommended. It is not considered that these changes taken as a whole fundamentally impact on the wider objectives of the Plan.
- 4.7. The Examiner's report recommends that the Referendum Area be restricted to the Neighbourhood Plan Area, i.e. the Parish boundary, as the Plan does not have a substantial, direct and demonstratable impact beyond the Neighbourhood Area. Assuming the Cabinet approve the Plan to proceed to referendum, the Councils Electoral Services will administer this process in line with Neighbourhood Plan Regulations, which specifies that this should take place no more than 56 days from publication of the decision statement. Taking into account the necessary notice periods it is considered the referendum will take place between 31st August 2023 to 01st October 2023. It is considered there is little risk to the Council if this process follows the regulations closely.

5. Financial Implications

- 5.1. The Localism Act and Regulations provide that the following costs would fall to Shropshire Council: delivering a supporting role particularly in the latter stages of the Plan's development; appointing an Examiner for the Plan; conducting an Examination and holding a Referendum. Current provisions allow an application

for these additions cost to be met, and a reimbursement of the costs will therefore be sought from Central Government. From previous experience of organising and managing Neighbourhood Planning referendums, it is considered that the likely cost of this process will be met in full by the reimbursement. It is considered likely the robustness of the Neighbourhood Plan Policies will be tested over time by independent Planning Inspectors on Planning Appeals made under Section 78 of the TCPA 1990. Members are advised that the liability for the future appeal costs rests with Shropshire Council as Local Planning Authority and as such the usability of such plans and their impact on local decision making will need to be carefully monitored. However, it should be noted that in seeking approval to proceed to referendum on this Plan, there is agreement that the content of the Neighbourhood Development Plan is in broad conformity with the policies of Shropshire's adopted Local Plan. It is therefore considered that there is very limited risk to Shropshire Council and additional financial liability as a result of this report and recommendations.

6. Climate Change Appraisal

- 6.1. **Energy and fuel consumption:** The recommendations propose that Cabinet agree to proceed to referendum with the Pontesbury Neighbourhood Development Plan. If successful at referendum, and the Plan is subsequently adopted by the Council, it will become part of the statutory Development Plan for the area and will be used in the determination of planning applications. Policy GRE4 of the Plan includes measures to require development proposals to be designed to meet a high level of sustainability and energy efficiency.
- 6.2. **Renewable energy generation:** Policy GRE4 of the Plan supports the use of renewable energy schemes and policy GRE5 provides a positive criteria to support community renewable energy schemes.
- 6.3. **Carbon offsetting or mitigation:** The referendum version of the Plan includes a carbon reduction objective and is in general conformity with the current adopted Local Plan and emerging Local Plan Review which includes a positive policy framework for maximising carbon sequestration.
- 6.4. **Climate Change adaptation:** Whilst not specifically identified within the Neighbourhood Development Plan, the Plan is in general conformity with the current adopted Local Plan and the emerging Local Plan Review, which includes a positive policy framework for mitigating and adapting to the impacts of climate change.

7. Background

- 7.1. Shropshire Council support Neighbourhood Development Plans being brought forward under the Localism Act and the 2012 Neighbourhood Planning Regulations, indeed the Council is legally obliged to do so. The Government's National Planning Policy Framework (NPPF) supports the principle of Neighbourhood Plans and their status as part of the Development plan. The NPPF states "Neighbourhood plans should support the delivery of strategic policies contained in the local plans or spatial development strategies; and should shape and direct development that is outside of these strategic policies". It is also made

clear that Neighbourhood Development Plans should not promote less development than set out in the strategic policies for the area or undermine those strategic policies.

- 7.2. Neighbourhood Development Plans must follow a defined regulatory process in both their preparation and adoption. This includes the formal designation of the area (Regulation 6 stage), the consultation on a draft version of the Plan (Regulation 14 stage), submission to the Local Planning Authority (Regulation 15 stage), and consultation and examination of the Final Draft version of the Plan (Regulation 16 stage).
- 7.3. Pontesbury Parish Council formally requested that the parish of Pontesbury be designated as a Neighbourhood Area in June 2016 and following a period of consultation this was formally agreed by Shropshire Council in March 2017. A Neighbourhood Plan Steering Group was established locally to undertake the preparation of the Plan. This group included representatives from the Parish Council and other local volunteers. It is acknowledged that from an early point in this process the Steering Group provided positive opportunities for the local community to have their say in the vision and objectives of the Plan through a range of means, including public meetings, information on the website and Community questionnaires throughout the process.
- 7.4. Between 01st March and 12 April 2022 Pontesbury Parish Council undertook a statutory six-week consultation into the pre-submission version of the Neighbourhood Development Plan (Regulation 14 stage). This draft version of the Plan responded to the survey evidence and contained a number of draft Development Management policies.
- 7.5. In October 2022 Pontesbury Parish Council submitted the Neighbourhood Development Plan to Shropshire Council (Regulation 15 stage), along with the required Consultation Statement and Basic Conditions Statements. In meeting our statutory requirement, Shropshire Council proceeded to carry out the Regulation 16 stage consultation between 28th October and 09th December 2022 with statutory consultees and other locally interested individuals and organisations. In January 2023 Tony Burton was appointed to examine the Plan. As required by the Regulations, the appointment was agreed by Pontesbury Parish Council.
- 7.6. Mr Burton's examination of the Pontesbury Neighbourhood Development Plan was carried out by written representations only. As well as the Plan documents, Mr Burton also considered the representations made to the Regulation 16 stage consultation. The conclusions of this consultation were subsequently considered in the Examiner's final report. Officers have liaised with Pontesbury Parish Council on the updated version of the Plan, which takes account of the conclusions of the Examiner's Report, and they are satisfied this version of the Plan should now proceed to referendum.
- 7.7. If cabinet agree for the Pontesbury Neighbourhood Development Plan to proceed to referendum, the question will be:

Do you want Shropshire Council to use the Pontesbury Neighbourhood Plan to help it decide planning applications in the neighbourhood area?

7.8. The Plan will need to gain the support of over 50% of those who cast a vote to be able to move forward to be 'made' (adopted) by Shropshire Council. If this is the case the decision to 'make' the Plan will need to be taken to Full Council. A date for the referendum will be formalised after 19th July 2023 assuming the recommendations are agreed.

8. Additional Information

8.1. The appendices to this report provide information on the Examiner's report into the Neighbourhood Plan, the proposed modifications, and the final 'referendum' version of the Plan which incorporates all the required modifications.

9. Conclusions

9.1. Further to the outcomes of the Examiner's report into the Pontesbury Neighbourhood Development Plan, it is recommended that all the necessary modifications are agreed and that the final version of the Plan proceed to local referendum.

List of Background Papers (This MUST be completed for all reports, but does not include items containing exempt or confidential information)

Cabinet Report 01st March 2017 – application by Pontesbury Parish Council to be considered as a Neighbourhood Plan Area.

Local Member:

Cllr Nick Hignett and Cllr Roger Evans

Appendices

Appendix 1 – Examiner's Report

Appendix 2 – Schedule of Modifications

Appendix 3 – Final 'referendum' version of Pontesbury Neighbourhood Plan

This page is intentionally left blank

	Section	Necessary Modification	Optional Modification	Agreed (Y/N)
M1	3. Compliance on Basic Conditions	Provide access to a large scale map enabling the detailed boundary of the neighbourhood area to be viewed		Y
OM1	5. General Comments		Address the detailed issues relating to the Plan's presentation and evidence base identified in section 5	Y
M2	7. Policy COM1	Be consistent in using "community facilities and services" throughout the Plan, including headings, titles, policies and the supporting text		Y
M3	7. Policy COM1	Amend Policy COM1 to: <ul style="list-style-type: none"> • Replace "Amenities" with "Facilities and Services in the title • Replace "amenities" with "facilities and services" in two instances • Insert "or service" after "facility" in the seventh line • Insert "and services" after "facilities" in the fifth and penultimate lines • Delete the first line • Replace "or" with "and" at the end of the fourth line 		Y
M4	7. Policy COM1	Amend Table 1 and the supporting text to: <ul style="list-style-type: none"> • Replace "Amenities" with Facilities and Service" in the title and heading • Delete "Malehurst Industrial Estate" • Use correct names for the identified facilities and services in all instances • Reference that Table 1 provides examples of the community facilities and services addressed in Policy COM1 which can be found within the neighbourhood area/parish 		Y
OM2	7. Policy COM1		Provide addresses for all the facilities and services included in Table 1 and identify them on a map(s)	N It is not considered appropriate for this level of detail in a development plan

M5	7. Policy LAN1	Amend Policy LAN1 to: <ul style="list-style-type: none"> • Replace “if it meets the requirements of SP10 in the revised Local Plan (managing Development in the Countryside and” with “which” • Delete “as expressed in the Landscape Character Statement” • Insert “(Figure 4)” after “boundary” • Insert a reference in brackets after “Statement” • Replace “Neighbourhood Plan” with “neighbourhood” 		Y
OM3	7. Policy LAN1		Provide supporting text in paragraph 16.3 – 16.11 which more clearly explains the evidence and justification for the Policy	Y
M6	7. Pontesbury Parish Neighbourhood Plan 2016-2038

As well as Pontesbury and Pontesford, the Neighbourhood Plan area includes these settlements:

Cruckton, Cruckmeole and Arscott

Lea Cross and Shorthill

Polemere near Edge and Hinton

Looking towards Habberley

Plealey

Asterley and Farley

1. Introduction

1.1 *"Cherish the past, adorn the present, build for the future."*

Insufficient attention to these words of wisdom from Clough Williams-Ellis, the eminent 20th century architect and champion of landscape planning has contributed to a mixed reception to recent development in our parish and widespread wariness regarding future building.

1.2 The Pontesbury Neighbourhood Plan shares his passionate belief that successful and welcome development will promote beauty, happiness and sustainability. Cherishing the past means respecting the built and natural landscape and integrating new builds into it. Good planning strengthens a sense of identity and community. Development that adorns the present will enhance our beautiful parish so that people continue to be happy living in and visiting Pontesbury.

1.3 At the heart of our Neighbourhood Plan is the desire to make future development contribute positively to the beauty of our surroundings and so help our wellbeing. Our watchword is BIMBY [Beauty In My Back Yard] not NIMBY. The beauty of our Parish is to be found not just in a breath taking vista of an unspoilt landscape from the summit of Earls Hill but displayed in a profusion of wild flowers, well maintained hedgerows, noble oak trees or a well-proportioned, finely detailed building as is well seen in throughout the Parish. (See page 6)

1.4 *But "What is this life, if full of care, we have no time to stand and stare?" [William Davies]*

In a busy world we need to ensure that there is enough beauty to encourage us to slow down, stand and stare. There must be ample well maintained cycle ways and footpaths to facilitate a leisurely enjoyment of our surroundings. Development is not just about the actual appearance of a building, or a change of land use, but also its impact on our surroundings. As we build more homes, we must also provide well-maintained cycle ways and footpaths to reduce our reliance on cars, and to facilitate a leisurely enjoyment of our surroundings.

1.5 Clough Williams-Ellis's 3rd exhortation - to build for the future - is even more important today. We must build sustainably so that we hand to future generations not just a lower carbon footprint but also enhanced beauty, with our distinctive local character intact. By devising policies which emphasise high quality design, safeguard local services, enhance rural surroundings and promote the local economy we believe the Pontesbury Neighbourhood Plan will contribute significantly to beauty, happiness and a sustainable future. Everyone needs nature, beauty, history and space, but nature needs help, beauty needs protecting, Pontesbury's history needs to be respected and space needs to be protected.

1.6 In return for welcoming development, we expect these needs to be met.

It often takes the views of outsiders to make us appreciate fully what is on our doorstep.

Bill Bryson, an American in love with rural England, reminds us that our much-envied countryside has taken many generations of hard work to build up, and that the least we can do is to look after it and pass it on to future generations. Derry Brabbs, the landscape author and photographer, describes the Central Welsh Marches including Pontesbury Parish "a national treasure" to be protected for the enjoyment of future generations.

2. The Stages

2.1 This Neighbourhood Plan has been formulated on the basis of the public's response to the parish's consultations and early questionnaires held prior to July 2020. The Regulation 14 consultation took place between 1st March and 12th April 2022 where a number of consultation responses were received.

2.2 This stage of the planning process was a statutory consultation exercise which needed to be undertaken prior to submission to the Local Planning Authority. Comments received during this further period of consultation have assisted in producing a final version (Regulation 15) for submission to Shropshire Council along with supporting information. Shropshire Council, as the Local Planning Authority (following submission) will then carry out one final check to ensure the plan and its accompanying information comply with the relevant legal requirements. If satisfied, the Local Planning Authority will place it on their website for a final further six week consultation (Regulation 16), before passing it on to an Independent Examiner who will issue a report on whether or not the Neighbourhood Plan should proceed to a final referendum.

2.3 The Plan at its current stage offers a vision for the future and sets out clear objectives and policies based on previous comments received regarding the Neighbourhood Area. The policies within this Plan will also be subjected to scrutiny by the statutory agencies including;

The Environment Agency;
Natural England; and
Historic England

2.4 These will then be assessed by the agencies through a screening exercise relating to the submitted environmental screening assessments including the Strategic Environmental Assessment (SEA) and the Habitats Regulations Assessment (HRA). If passed by examination, and then supported through referendum, the policies will then have to be taken into account by applicants, developers and the Local Planning Authority when considering development in the Neighbourhood Area. Thus giving much greater weight to the views of the Parish in the decision-making process.

3. How to comment

3.1 The Plan and accompanying Environmental and Habitats Regulations Assessments Reports can be inspected on the Parish Website: <https://www.pontesburyneighbourhoodplan.org.uk> or be emailed to residents and other interested parties on request to clerk@pontesburypc.org.uk

3.2 Paper copies of the plan can be viewed at Pontesbury Pavilion, Pontesbury, SY5 ORF. A paper copy can be made available on request.

3.3 The plan and accompanying documents can also be viewed on the Shropshire Council website: <https://shropshire.gov.uk/planning-policy/neighbourhood-and-community-led-plans/emerging-neighbourhood-plans>

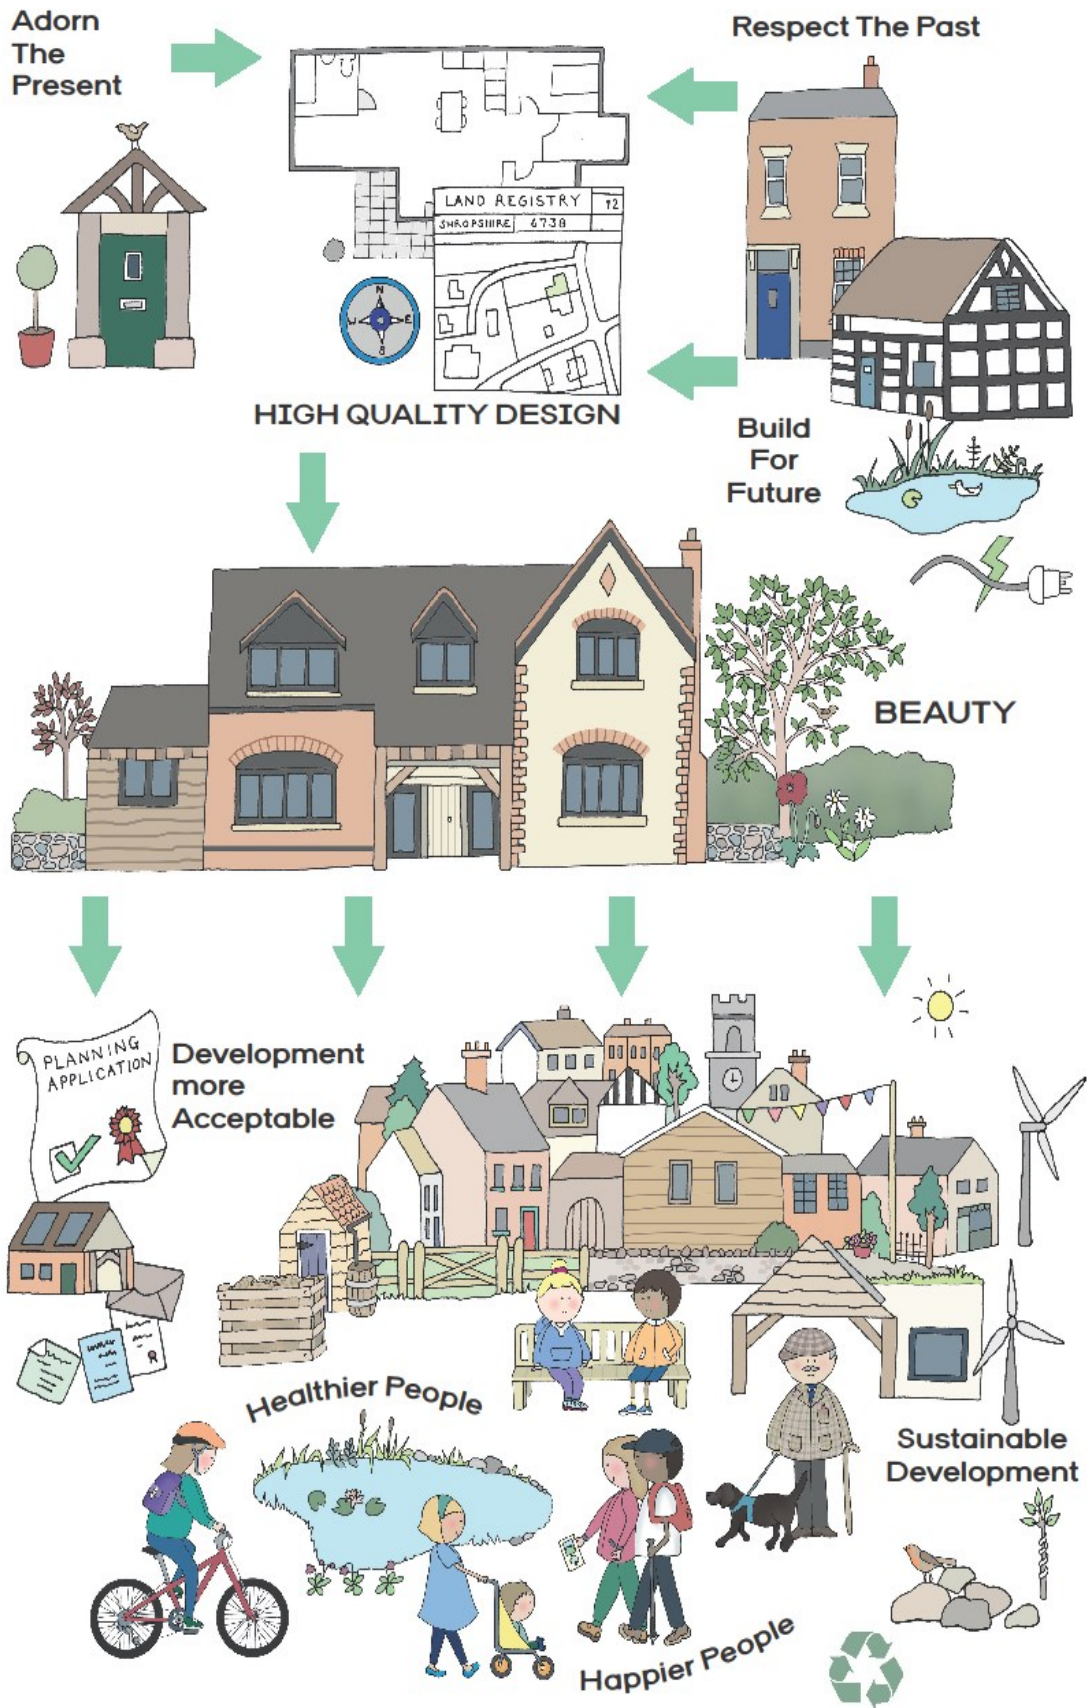

Fig 1. The Importance of Good Design

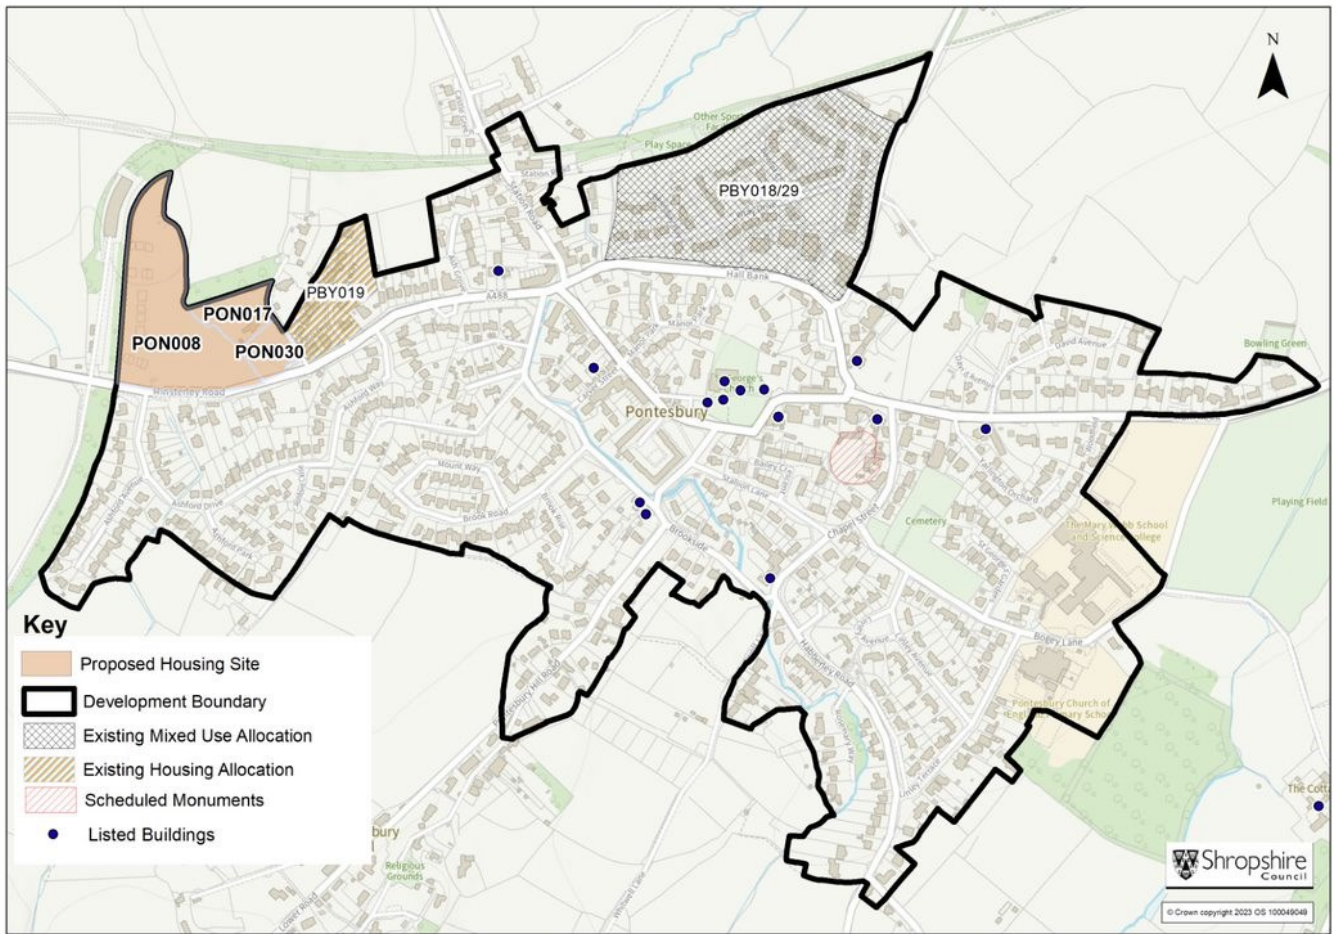

Fig 2. Pontesbury Parish Neighbourhood Plan Area

3. Pontesbury Parish in the Present

3.1 Pontesbury is a large parish in the Rea valley between the Shropshire plain to the north-east and the Shropshire Hills Area of Outstanding Natural Beauty to the south-west. Its eastern edge is a mile from the A5 Shrewsbury bypass, and the busy A488 links the main settlement of Pontesbury with Shrewsbury town centre, seven miles away. Most visitors get their first view of the parish from this road. It also provides most people with their main contact and view of our Parish as they travel through the area.

3.2 The population has grown considerably since the last census in 2011 when it numbered 3,227, with a low population density of one person per hectare. Nearly one quarter of the population is aged over 65: this is significantly higher than county and national averages. It is a relatively prosperous population with low levels of deprivation and 78% of houses owner occupied at the 2011 census.

3.3 In appearance Pontesbury is very rural. The much-loved twin peaks of Pontesford and Earl's Hill dominate the valleys of pastures, cornfields and woods below. This countryside enfolds each village and hamlet. Farming dominates the landscape, with other commercial and industrial activity being largely small scale and unobtrusive. To date, tourism has been low key, having a very limited impact on the landscape.

3.4 Pontesbury village is the commercial and social hub for the parish's population. The estimated population in 2016 was 1,897. For its size, it has an excellent range of services, supporting both villagers and the population of outlying settlements. The village has pre-school nursery, primary and secondary schools, three pubs, a post office, shops, chemist, GP surgery and dentist, library, and eating places. The busy A488 passes through the centre of the village, with a one-way system circling round St George's parish church. Relatively new housing dominates the village centre but there are reminders of its long history near the church and the picturesque ford. The large Hall Bank development, completed in 2021, has significantly increasing the population and is integrating well by providing better shopping, parking and community facilities.

3.5 There are smaller settlements outside of Pontesbury: Habberley, Cruckton, Plealey, Hinton, Arcscott, Asterley, Lea Cross and Cruckmeole. Many are the remnants of past mining communities; hamlets and villages which lack pavements or street lighting but enjoy enviable peace and tranquillity.

3.6 Two outstanding heritage assets of the parish are Earls Hill Nature Reserve, in the care of Shropshire Wildlife Trust, and the conservation area of Plealey, which contains the finest group of historic buildings in the parish, including some exemplary restoration projects and beautiful architectural details. Pontesford has several reminders of the coal and lead industries, including an engine house and smelt works. The distinctive squatter settlement along Pontesbury Hill Road is partly a result of this Victorian industrial activity.

3.7 Although Pontesbury village is mainly a commuter and retirement settlement with fairly easy access to Shrewsbury and Telford, it contains a surprising number of small businesses with nearly 1/5 of the workforce being self-employed. 50% of people use a car to travel to work. The main employers are the four schools and the Malehurst Industrial estate.

3.8 Leisure facilities include Arscott golf course, Pontesbury play area, and public halls at Cruckmeole, Habberley and Pontesbury which host a variety of social and cultural activities. There is a need for more youth facilities. Residents and visitors make good use of the public footpaths and popular cycle routes, with easy access to them from each settlement – an important consideration for future health and well-being.

3.9 As one of the main gateways to the Shropshire Hills AONB, Pontesbury is attracting an increasing number of tourists. Earls Hill is a popular destination.

3.10 For planning purposes, outside of Pontesbury village, the rest of the parish is classified as open countryside, which means that development is strictly controlled. This policy plays a crucial part in safeguarding the rural nature of the area. Maintaining the tranquillity of this countryside is a primary concern for most residents and the main attraction for visitors.

3.11 Consultation has been carried out between December 2018 and February 2019 on the Shropshire Council Local Plan Review until 2038. The review includes a slight modification to the development boundary for the parish and a suggested further 42 dwellings to be built (over and above permissions granted to date). Work has started on the preferred site in Pontesbury village for nearly all of the 42 dwellings and the others are envisaged to be provided by windfall sites. The review does not include preferred sites anywhere else in the parish.

3.12 The Climate Emergency Action Group is working hard to guide our community into a greener future with greater biodiversity, cleaner air, more opportunities for active travel and a lower carbon footprint.

4. Character and appearance of Pontesbury Village

4.1 This sets out the character, appearance and historic interest which together with the back drop of hills make up the distinctive identity of the village which future development should conserve and enhance.

4.2 Screened by hills and woods, and lacking tall buildings, Pontesbury lies unobtrusively on the gentle southern slopes of the Rea Valley. It is a popular residential village with a wide range of services and a gateway to the Shropshire Hills Area of Natural Beauty.

4.3 The rural feel of the village is sustained by abundant hedges, trees, grass verges and the wooded slopes of Pontesford and Earl's Hill. In past centuries Pontesbury was an important local centre for defensive, strategic, religious and industrial reasons, and these have left their mark. The Iron Age hillfort on the summit of Earl's Hill overlooks the whole village.

4.4 The winding 'ring road' formed by Hall Bank, Chapel Street and Brookside probably follows the alignment of the Saxon village defences, which, in turn, were replaced by the Norman motte.

4.5 Industrial activity in the late 18th and 19th Centuries based on coal, lead and stone quarrying have left their mark on house buildings, boundary walls, non-conformist chapels and the large squatter settlement on Pontesbury Hill Road with its haphazard layout.

4.6 Today Pontesbury is quite densely settled, much changed from the much smaller, loosely knit settlement of the 1950's which had wide open spaces and generously-sized house plots. The infilling of these spaces has significantly changed the village character. Within the historic core and spine (along A488), and extending to Station Road and Pontesbury Hill Road, there has been small-scale piecemeal development which has largely retained the unplanned, informal and varied character of the village. Future development should respect this character and not damage it.

4.7 Since the 1950s, most development has taken place in former fields, including Mount Way, Brook Road, Ashford Drive and Linley Avenue, where larger scale development has resulted in the more formal, planned layout typical of that time, with curving roads, crescents and cul-de-sacs but less variety than along the older core and spine.

4.8 Although attractive, these estates lack local distinctiveness and are very similar to those found in suburbs throughout England.

4.9 A special part of the character of the village is the area around the ford with the brook, footbridge, old buildings including the Plough Inn (the only known mediaeval survival), and the old road. Little has changed here since an Appeal Inspector in the 1980s found it 'distinctly attractive', an area where significant development would represent a serious loss to village amenity and character. In view of recent developments, the conclusion of the inspector is even more important today in maintaining the character of the village and its tangible reminders of its long history and former agricultural importance.

4.10 Development in the village since 1950 has resulted in a considerable reduction in views of the church tower and Pontesbury/Earl's Hill, and there has been much less use of traditional local building

materials such as timber, stone and local clay brick. Future building should preserve vernacular styles and materials.

4.11 Consultations with local residents have identified the essential features of Pontesbury's built environment:

4.11.1 Building styles. These include a few timber framed buildings, attempts at 'Georgian' symmetry, Victorian buildings with contrasting brickwork, Arts and Crafts villas and modern highly glazed houses. Generally building styles have been conservative with very few examples of ambitious architecture.

4.11.2 Window variety. Styles include traditional and modern casements, mullions, dormers, sashes, bays and fanlights. Shapes include square, rectangular, circular and round-headed. Glazing is small or large panes, plate glass with glazing bars - thick or thin, straight or curved. Frames are made of wood, metal or uPVC.

4.11.3 Materials. Stone, mainly in the form of rubble stone and often covered by render – was until the late 19th century the most common building material. Today brick in different colours, texture and bonding is the dominant material. Timber framing - once commonplace – is rare on new buildings apart from porches. Roofs were once handmade from local clays (with a lesser use of slate) but largely replaced in more recent developments by machine-made synthetic tiles.

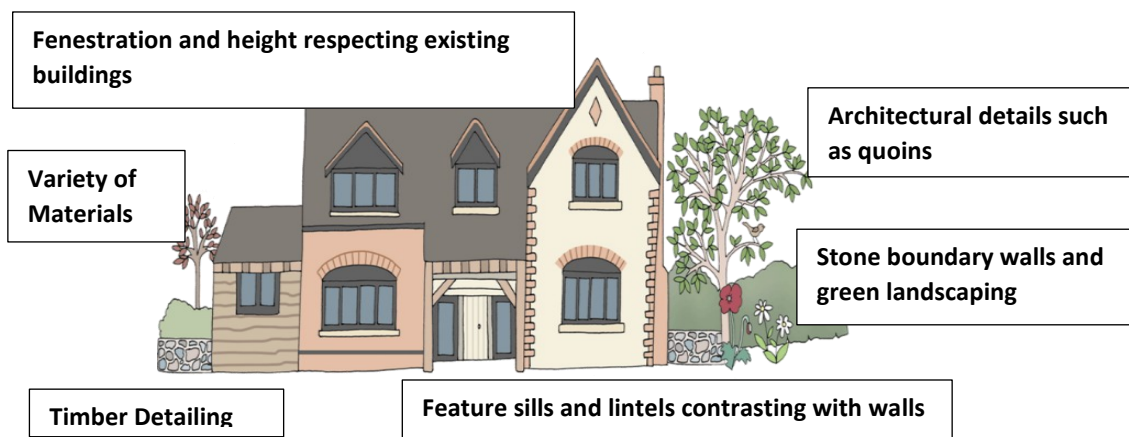

4.11.4 Architectural details. These include vertical or horizontal strips of wood in gables, prominent brick details under eaves of front elevation, date and name stone inserts, patterned ridge tiles, decorative chimney stacks, decorative lintels and contrasting cills. Bricks were often used for heads of windows and doorways to provide architectural interest on otherwise simple stone buildings. In contrast, many recent buildings lack interesting details.

4.11.5 Boundaries. These vary from hedges, stone, brick, iron railings, wooden panels and fences. Hedges are an important feature of the parish and help to maintain local character.

4.11.6 Layout. Side streets and lanes curve away from the main road and there are no long straight streets. Peripheral houses are set back from the road by front gardens but many houses in the historic core are close to the road. The composite illustration on the cover and the drawings of the architectural features (Page 29) convey the character and architectural variety of the village.

4.12 In summary, the built environment is small-scale, partly vernacular and varied. There is a notable absence of buildings over two storeys high, relatively little terraced housing and until recently facades of uninterrupted red brick.

4.13 The house below is an example of how to contribute to local character and beauty.

5. Landscape character of the Parish

5.1 An understanding of the character of Pontesbury Parish can be gained by comparison with other areas. It lacks the dramatic mountains, craggy peaks, high hills or large stretches of water found in the Lake District. Unlike the Fens it does not have extensive areas of flat land, which, unbroken by hedges, permits wide views. Absent are the long, straight wide roads of Mid Northumberland. Fields are small and irregular in comparison with the large fields of East Anglia or the planned, regular pattern of fields established by Enclosure Acts to be seen in parts of East Leicestershire.

5.2 The shallow valley of the Rea Brook permits views of several miles but narrow winding, sometimes sunken, lanes beneath high hedges, an abundance of hedgerow trees and woods means that it is an intimate, often hidden landscape where from many viewpoints there is barely an isolated building or settlement to be seen. Gently rolling lowlands characterise much of the parish. By contrast more dramatic scenery is to be seen to the immediate east and south of Pontesbury village with steep sided volcanic hills, a wooded gorge and more extensive woodlands. There the landscape is highly sensitive to development, forming either the setting or being part of the Shropshire Hills AONB.

5.3 Most of the parish is officially classified as principal settled farmland with land used predominantly for mixed farming. There is a centuries old pattern of relatively small irregular hedged fields where the rate of hedge loss and field enlargement has been considerably less than many parts of England. There is a clustered settlement pattern of at least eight small villages and hamlets such as Cruckton, Habberley, Plealey, Lea Cross, Cruckmeole, Asterley, Hinton and Arscott. These are linked by narrow lanes with a significant number of dispersed farmsteads and wayside cottages.

5.4 Each village/hamlet is clearly separate from other settlements, nestling unobtrusively in the landscape but all having soft boundary between settlement and countryside.

5.5 Flat waterside meadows along the Rea Brook which meanders from west to east through the centre of the parish are subject to flooding and so tend to be lacking in buildings but provide important seasonal cattle grazing with linear tree cover giving some shelter.

5.6 In the extreme south of the parish beyond Habberley, the farmlands provide a more intricate landscape, characterised by a network of winding lanes, scattered farmsteads, smaller irregular fields, more ancient woodlands and some steep slopes.

5.7 The parish is large but the population is small and the elements which make up the landscape are likewise small – hills, woods, fields, roads, buildings, rivers and other areas of water, settlements. Small scale, mainly unplanned, understated, unobtrusive, unspoilt and tranquil – here lies its character, attractiveness and beauty which the Neighbourhood Plan seeks to protect and enhance.

5.8 **Examples of Landscape Character**

5.9 A country lane typical of small scale elements making up our landscape. Note the high hedges hiding the landscape:

5.10 Note trees, hills, hedges, woods, hedgerow trees, farmland and unobtrusive settlements:

5.11 Unspoilt and tranquil wildlife havens:

6. Vision Statement

6.1 This Vision Statement describes how we would like the parish to look by 2038:

Pontesbury Parish Neighbourhood Plan Vision Statement

1. It is 2038 and Pontesbury parish still retains its largely rural character whilst having enhanced the range of services and facilities offered to all age groups. It has safeguarded the much loved rural environment, partly by only a modest population increase, with new development mainly confined to Pontesbury village. Adequate low-cost/affordable housing has met the needs of young people wishing to remain in the parish.
2. Employment opportunities have been created, mainly in the service sector. The attractive landscape of woodlands, hedges, hills and undulating countryside including the AONB has encouraged more visitors, who have provided diversification opportunities for farmers. Increased tree planting and mini-dam projects have reduced flooding risks. Pontesbury Parish has assisted Shropshire Council in their target of being carbon neutral by 2030.
3. The availability of high-speed broadband throughout the parish has aided businesses and helped more people to work from home, contributing to a reduction in commuter traffic along the A488. The hub building with its ultra-fast broadband offers support and development opportunities for new local business.
4. Measures have been taken to alleviate traffic problems including more parking spaces and speed restrictions in residential areas throughout the Parish. Public and community transport initiatives have been implemented. All new houses built in the parish have electric car charging points.
5. Improved leisure facilities have been developed, partly by better use of green spaces and by opening up more waymarked footpaths to allow more residents and visitors to enjoy the attractive rural landscape. The village halls and community hub continue to be well used, providing vital social meeting places and activities for all ages which help to sustain the community spirit and reduce social isolation of elderly/disabled residents. Pontesbury continues to be a Dementia Friendly village. The community hub plays a strong role in providing information and support for local residents.
6. For its size, Pontesbury continues to have a wide range of services which have been sustained by the increased population and growing number of tourists. The rural landscape is still largely maintained by active farming, and is accessible for leisure use.

7. Pontesbury Neighbourhood Plan Objectives

7.1 The following objectives were drawn up from the 2018 Consultation, made available for approval at a drop-in session on 2 July 2019 and refined in light of the responses to the 2020 Questionnaire.

A. Protecting and developing Community Facilities and Services

1. To enhance facilities and services for a vibrant community

B. Landscape and Local Character

1. To conserve the character and beauty of the rural landscape of the parish
2. To conserve the historic heritage of the parish
3. To safeguard amenity views
4. Maintain gaps between settlements
5. Conserve the character of the land adjacent to the A488

C. Provision of adequate and well-designed housing

1. Housing in Pontesbury village which respects variety of styles and materials and existing character.
2. Provision of small sized homes and affordable homes

D. Movement and Transport

1. To support safe, accessible network of roads, cycle ways and footpaths to promote healthier lifestyles and access to the countryside and improve active travel between homes and amenities
2. To improve car parking in Pontesbury

E. Employment and business Opportunities

1. To support small scale economic development including farm diversification which brings landscape benefits

F. Green Environment

1. To protect Local green spaces
2. To protect and enhance natural habitats and wildlife and increase biodiversity
3. To reduce pollution
4. Carbon reduction

8. Why are we preparing a Neighbourhood Plan?

8.1 Neighbourhood Plans form part of the Statutory Development Plan for the area. They are prepared by Parish Councils to promote, guide and control local development and importantly, are used to help determine local planning applications. For the first time, local authorities can have a direct input into the planning process and have an influence on shaping the future of their community based on the views expressed through surveys of the local population and businesses.

8.2 Not all Parish Councils choose to produce a neighbourhood plan. However, in 2016 Pontesbury Parish Council decided that this was an important right to exercise, seeking to ensure the future sustainable development of the settlement by providing detailed planning policies for their area. The move was considered both sensible and appropriate, which will allow flexibility for controlling future development in the Neighbourhood Area.

8.3 Pontesbury Parish Council made the application to Shropshire Council in August the same year under the provisions of the Town and Country Planning Act 1990. Shropshire Council consulted on the proposed area for a period of 4 weeks between September and October 2016. Due to concerns expressed locally, a re-consultation took place for a further four weeks between November and December 2016. Only one response was received to these consultations but this did not object to the principle of using the proposed Neighbourhood Plan Area and therefore did not require further consideration in defining the Neighbourhood Planning area.

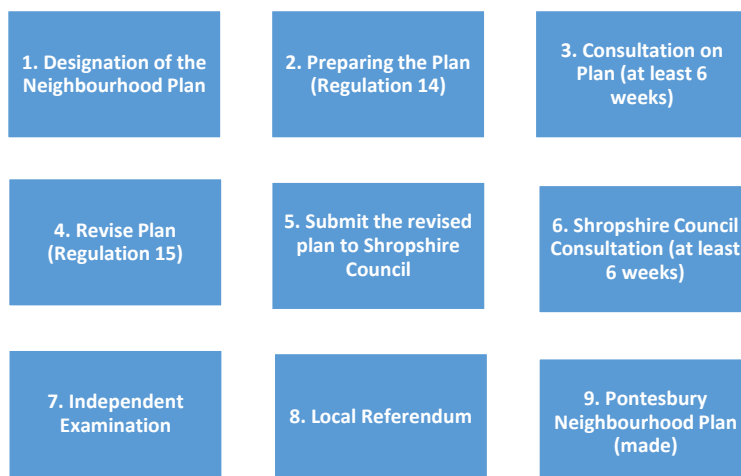

8.4 In response, at Cabinet it was agreed that the Pontesbury Parish Plan Area was an appropriate basis for the development of a Neighbourhood Development Plan and notified the Parish Council accordingly. A formal notice confirmed that the Neighbourhood Plan area was acceptable and was published on 1st March 2017.

8.5 The Parish Council has been preparing this draft Neighbourhood Plan since June 2021. Following consultation with residents and stakeholders, the Neighbourhood Plan will be subjected to external examination before it can proceed to a final referendum of all eligible parishioners. Thereafter, its policies will reflect the aspirations of the majority of the people of Pontesbury who have all had an opportunity to play a part in shaping the future of their Parish.

9. Process of preparing a Neighbourhood Plan

9.1 Neighbourhood Plans have to be prepared in a manner that is appropriate to the procedure set out by the Government. The table below briefly describes these processes:

The Neighbourhood Plan Process

9.2 In accordance with Regulation 14, a six week consultation of the Neighbourhood Planning Regulations 2012 was carried out with Pontesbury Parish residents, businesses and consultative bodies. The point of this consultation period was to give people the opportunity to provide feedback on the first draft of the plan.

9.3 However, the Shropshire Local Plan is currently under review and is about to undergo Independent Examination. This will likely result in changes through required modifications by the Inspector. In this instance, the Parish will consider the implications of these likely changes, as well as considering the representations received during the 6 week Regulation 14 consultation stage. As a result of the Local Plan Examination the Neighbourhood Plan may need to be amended so that it complies with any relevant modifications to Shropshire Council's Local Plan.

9.4 Following both the consultation and required changes, the Neighbourhood Plan was revised to account for updated plans and responses from consultees. In preparation of the Regulation 15 submission, the screening process of both a Strategic Environmental Assessment (SEA) and a Habitat Regulation Assessment (HRA) have been completed concluding that policies within the Neighbourhood Plan do not have a significant effect on the natural environment or a European Site, and thus demonstrating that environmental implications have been considered as part of the preparation process. In addition, both a Basic Condition Statement and Consultation Statement have also been submitted to Shropshire Council.

9.5 At an early stage a decision was taken not to designate particular sites for development and therefore policies were not likely to have significant environmental impacts. The screening statements for both the strategic Environmental Assessment and the Habitat Regulation Assessment concluded that none of the proposed policies within the draft Neighbourhood Plan had the potential to have a significant impact on the natural environment or any European site and therefore could be screened out of the SEA and HRA processes and appropriate assessments were not required.

10. National and Local Planning Policy

10.1 One of the requirements of a Neighbourhood Plan is to account for both National and Local Planning Policy. If the Plan does not comply with both it will fail the basic conditions which are required to be met. This is tested through an independent examination before the neighbourhood plan can proceed to referendum.

10.2 **National Planning Policy.** National Planning Policy is mostly contained within the National Planning Policy Framework (NPPF). This states that the Pontesbury Neighbourhood Plan should “*support the delivery of strategic policies contained in local plans or spatial development strategies*” in this case the Shropshire Local Plan. The Neighbourhood Plan will need to “*shape and direct development that is outside of these strategic policies*”.

10.3 Para 14 of the NPPF considers that “*situations where the presumption (at paragraph 11d) applies to applications involving the provision of housing, the adverse impact of allowing development that conflicts with the neighbourhood plan is likely to significantly and demonstrably outweigh the benefits*” provided the following criteria apply:

10.3.1 the neighbourhood plan became part of the development plan two years or less before the date on which the decision is made;

10.3.2 the neighbourhood plan contains policies and allocations to meet its identified housing requirement;

10.3.3 the local planning authority has at least a three year supply of deliverable housing sites (against its five year housing supply requirement, including the appropriate buffer as set out in paragraph 73); and

10.3.4 the local planning authority’s housing delivery was at least 45% of that required over the previous three years.

10.4 Para 21 considers that “*Strategic policies should not extend to detailed matters that are more appropriately dealt with through neighbourhood plans or other non-strategic policies*”. This means that some policies that are specific to the neighbourhood area are better placed within neighbourhood plans, this could include improvement to local transport networks or control of land within the area.

10.5 The role of Neighbourhood Plans is further expanded in Para 29 stating that “*Neighbourhood planning gives communities the power to develop a shared vision for their area. Neighbourhood plans can shape, direct and help to deliver sustainable development, by influencing local planning decisions as part of the statutory development plan. Neighbourhood plans should not promote less development than set out in the strategic policies for the area, or undermine those strategic policies*”.

10.6 Para 30 continues “*Once a neighbourhood plan has been brought into force, the policies it contains take precedence over existing non-strategic policies in a local plan covering the neighbourhood area, where they are in conflict; unless they are superseded by strategic or non-strategic policies that are adopted subsequently*”.

10.7 When considering the achievement of well-designed places para 125 states that “*Neighbourhood Plans can play an important role in identifying the special qualities of each area and explaining how this should be reflected in development*”.

10.8 **Shropshire Council Policy.** Shropshire Council’s strategic planning policy is contained in the adopted Shropshire Core Strategy (adopted 24th February 2011) and the Site Allocations & Management of Development (SAMDev) (adopted 17th December 2015).

10.9 The current Shropshire Development Plan is now out of date and therefore the existing Core Strategy and SAMDev policies are under review. Shropshire have now reached the examination stage. An appropriate and sensible approach from this point is to proceed with the Neighbourhood Plan on the basis of the emerging strategy and policies and work closely with Shropshire Council during the preparation of both documents. The Parish Council recognises that it will need to consider implications arising from the examination of the Local Plan and that they may need to pause the Neighbourhood Plan process to take these into account.

10.10 The Core Strategy sets out Shropshire Council's vision, strategic objectives and the broad strategy to guide future development and growth in Shropshire during the period up to 2026. Shropshire's SAMDev sets out proposals for the use of land and policies to guide future development in order to help deliver the vision and objectives of the Shropshire Core Strategy.

10.11 The purpose of the Shropshire Local Plan Review (2016-2038) is to update elements of the current Development Plan and to make sure that Shropshire can respond flexibly to changing circumstances in line with the NPPF. The Review includes consideration of housing numbers (including the objectively assessed need), employment land requirements, and the distribution of development and review of Green Belt boundaries as part of the consideration of strategic options to deliver new development.

10.12 However, at the time of preparing this Neighbourhood Plan the relevant Shropshire Development plan is the Core Strategy and the SAMDev.

10.13 **Emerging Shropshire Local Plan.** The Emerging Shropshire Local Plan in Policy SP2 Strategic Approach considers that the production of Neighbourhood Plans will be supported and can identify development opportunities which will complement proposals in the Local Plan. The policy also considers that where appropriate Neighbourhood Plans can also identify additional Community Clusters.

10.14 Policy SP3 supports the prioritisation of active travel through the creation and enhancement of walking and cycling links within and between new developments and new developments to existing neighbourhoods and community facilities.

10.15 Policy SP6 looks to ensure the health and well-being of individuals, communities and place. This will be achieved by ensuring the quality of life and delivery of community well-being, through the use of land' type of development; the safeguarding, maintenance and improvement of community facilities and services; and by ensuring that the form, design, location and layout of new development enhances community well-being.

10.16 Policy SP7 in relation to housing development, will support development of housing in addition to the allocations set out in policies S1-S20 (S12 Minsterley and Pontesbury), there will be positive consideration of other sustainable housing development where this does not conflict with the policies of the Local Plan. The policy reiterates that additional housing development which would support the reuse of disused land or premises within settlement development boundaries as shown on the Shropshire's policies map will be supported.

10.17 Policy SP8 considers that community hubs are significant rural service centres and the focus for development in the rural area. As such appropriate development will need to positively respond to design criteria and policies identified within relevant Neighbourhood Plans and Community Led Plans.

10.18 Within the rural area, the Shropshire Plan identifies Community Hubs and Community Clusters as the focus for new development within the rural area (Policy SP10 Managing Development in the Countryside).

10.19 The Shropshire Local Plan also looks to manage and support town centres (Policy DP9), aiming to maintain and enhance the vitality and viability of Shropshire's network of Town Centres and High Streets in

line with national policy. The policy goes onto support the provision of neighbourhood based local shopping and other community facilities will be supported where this will help consolidate and improve existing provision.

10.20 Policy DP14 Green Infrastructure expands on Shropshire's vision to improve and expand the green infrastructure network as an integral part of open space provision. All new development will need to ensure that they enhance existing green infrastructure assets and extends the green infrastructure network in accordance with the Shropshire Green Infrastructure Strategy, whilst also regarding Neighbourhood Plans and other relevant local strategies.

10.21 DP28 looks to improve communications and transport network in the borough, looking to widen travel and transport choices and improve connectivity and accessibility.

10.22 It is considered that local travel options play an essential role in influencing travel behaviour including footways cycle ways (including the National Cycle Network), public rights of ways, bridleways and the canal network especially within or close to settlements.

10.23 Policy S12 is particular relevant considering the development strategy for Minsterley and Pontesbury Community Hubs. The policy states that both Minsterley and Pontesbury will act as community hubs and will receive development to support their function as Community Hubs which provide services and facilities to serve the needs of the broader Place Plan area. The residential development guidelines for the Pontesbury Community Hub is around 175 dwellings.

10.24 New residential development will be delivered through the saved SAMDev residential and mixed-use allocations and the Local Plan residential site allocations. These allocations will be complemented by appropriate small-scale windfall residential development within the development boundaries for Pontesbury shown on the Policies Map where it is consistent with Community Hub Policy SP8 and other relevant policies of this Local Plan.

10.25 New small-scale windfall employment development within Pontesbury, where it is again consistent with Community Hub Policy SP8 and other relevant policies of this Local Plan.

10.26 Development proposals will be expected to positively respond to policies and guidelines identified within relevant community-led plans and any masterplans that are adopted by Shropshire Council.

10.27 Mitigation measures will be required to remove any adverse effect from increased recreational pressure arising from development in Pontesbury on the integrity of the Stiperstones and Hollies SAC in accordance with Policies DP12, DP14 and DP15. Mitigation measures for recreational impacts are identified in the Local Plan Habitats Regulation Assessment (HRA) and supporting documents.

11. Consultation and Engagement

11.1 The Pontesbury Neighbourhood Plan is a community led plan that derives from the vision and objectives of people who live within the neighbourhood area. From the outset the Parish were determined that residents be kept informed and have an opportunity to inform the content of the plan. Communication and consultation in a variety of forms have played a major part in developing the Pontesbury Neighbourhood Plan.

11.2 Following the approval of the designated area, the Steering Group issued and analysed an initial short questionnaire at a variety of venues with nearly 400 responses in 2019 which then enabled them to draw up a draft version of a Vision for Pontesbury. Following this the draft objectives for achieving this vision was published.

11.3 In the spring of 2020, The Steering Group pooled all of this information and put them in the form of a questionnaire. This was distributed to each household to gauge the community's approval and thoughts on the work completed to that point. A total of 1, 400 forms were sent out to households within the parish.

11.4 The survey was intended to be a household one, where the views of everyone in that household were combined into one response but extra forms could be obtained if requested or obtained or views submitted online. With the online system, the answers were not 'locked in' until the respondents clicked 'Submit' at the very end of the survey. A 'Back' button allowed returns to earlier sections in the questionnaire if the respondent felt the need to make changes.

11.5 The online survey also offered a 'Restart' button to allow the respondent to discard all previous answer to begin the questionnaire again.

11.6 The deadline to complete the survey was 31st July 2020 but it stayed open until the beginning of September whilst paper submissions were being processed and to encourage further responses, if respondents missed the deadline.

11.7 A total of 38 questions were included with the survey covering a number of key themes, the first two questions were a quick analysis on the draft vision statement, published by the Parish before covering the following themes:

- 11.7.1 Rural Landscape and Open Spaces
- 11.7.2 Protecting / Developing Community Amenities
- 11.7.3 Provision of Adequate Housing
- 11.7.4 Movement and Transport around the Parish
- 11.7.5 Employment and Business Opportunities

11.8 The final five questions looked to explore the age range of the members of each responding household and where in the Parish these were located. In order not to duplicate this information the survey asked if the response was the only one for their household and if not, the survey asked respondents not to fill this part in twice.

11.9 **Summary.** Out of a total of 330 responses received, 125 were submitted online and 205 responses were transcribed and added to the online responses into specialist software for analysis. The overall response rate was 24%.

11.10 Of the survey forms distributed:
5 came back as undeliverable;
1 form came back entirely empty; and
3 of the Freepost envelopes contained other documents (e.g. Council Tax Application) instead of a completed survey form.

11.11 The Regulation 14 draft Pontesbury Neighbourhood Plan was submitted to a wide range of consultees and all households within the parish as detailed in the Consultation Statement. The consultation ran from 1st March 2022 to 12th April 2022 and over 140 responses were received and numerous amendments made to the draft plan. Further information on all consultations undertaken during the preparation of the Neighbourhood Plan may be seen at www.pontesburyneighbourhoodplan.org.uk

12. Technical Evidence

12.1 A great deal of additional technical evidence has been collated by the Parish Council in preparing this first draft of the Neighbourhood Plan. This has been drawn from Shropshire Council sources; in particular, information compiled during the preparation of the emerging Local Plan Review and contributing to its extensive evidence base

13. Strategic Environment Assessment

13.1 The content of a Neighbourhood Plan will be informed by a wide range of evidence. Strategic Environmental Assessments (SEA) where required, can provide a key component of the evidence base.

13.2 SEA's are required by the Environmental Assessment of Plans and Programmes Regulations 2004 and the Habitats Regulations (Conservation of Habitats and Species Regulations 2017)¹. SEA's are more likely to be necessary if both of the following two elements apply:

13.2.1 A Neighbourhood Plan allocates sites for development (for housing, employment etc.) and;

13.2.2 The neighbourhood area contains sensitive environmental assets (e.g. a Site of Special Scientific Interest (SSSI) or an Area of Outstanding Natural Beauty (AONB)) that may be affected by the policies and proposals in the Neighbourhood Plan.

13.3 In light of the above, it is very unlikely that a Neighbourhood Plan would require an SEA if the plan is not allocating land for development for development is more likely to generate physical changes which lead to significant effects.

13.4 Another element of the Basic Conditions relates to Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora, often referred to as the Habitats Directive. Under the Habitats Regulations which implement the Directive, an assessment referred to as an appropriate assessment must be undertaken if the plan in question is likely to have a significant effect on a European protected wildlife site.

13.5 For the SEA to be an effective process which adds significant value to plan making, it is vital that a Neighbourhood Plan is screened at the appropriate time.

13.6 The Neighbourhood Plan should be screened as soon as there is sufficient information available to consider whether the proposed content of the plan or its likely intent are likely to lead to significant effects. A draft Screening Report has been prepared and is published for consultation alongside the draft Neighbourhood Plan.

13.7 The screening report, should be sent to the three statutory consultees for SEA these include: the Environment Agency, Historic England and Natural England². There is no timescale set out in the SEA Regulations for this consultation period; a period of five weeks is generally considered to be a suitable timeframe given other consultation provisions within the SEA Regulations.

13.8 The NP policies were devised to reflect the views of the Parish. They will be taken into account when decisions are made about new development through the planning process. All policies in the National Planning Policy Framework, Shropshire Local Plan and Neighbourhood Plans will be considered when Shropshire Planning Authority decides whether to approve an application.

¹ These regulations will continue to apply unless new legislation is introduced to withdraw or amend them.

² As set out by Regulation 4 of the SEA Regulations. The role of the statutory consultees within SEA is to bring their individual environmental expertise to the assessment process. Note: statutory consultees are not required to respond to screening requests. Limited resources mean they may need to prioritise the plans they engage with in detail based on an assessment of risk.

14. **Policies**

14.1 In order to meet the Objectives above, the following Policies have been developed:

A. Community Facilities and Services

COM1 Community Facilities and Services

B. Landscape and Local Character

LAN1 Landscape Character

LAN2 Conservation of the Parish's Historic Heritage

LAN3 Safeguard Amenity Views

LAN4 Avoid Coalescence of Settlements

LAN5 Conserve Character of the Land adjacent to the A488

C. Housing and Design

HOU1 Housing Design in Pontesbury Village

HOU2 Meeting Housing Needs in Pontesbury Village

D. Movement and Transport

MOV1 Public Rights of Way and Links

MOV2 Parking

E. Employment and Business

EMP1 Small-Scale Employment and Farm Diversification

F. Green Environment

GRE1 Local Green Spaces

GRE2 Protection and Enhancement of Biodiversity

GRE3 Pollution

GRE4 Carbon Reduction

GRE5 Community Renewables

15. Community Facilities and Services

15.1 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Community Facilities and Services:

Objective A1: To enhance facilities and services for a vibrant community.

15.2 In pursuit of this objective, the Parish Council has developed the following Community Facilities and Services Policy:

Policy COM1 (Community Facilities and Services):	
1.	Proposals for the enhancement or protection of community facilities and services will be supported.
2.	Changes of use or redevelopment of community facilities and services will be supported where: <ul style="list-style-type: none"> - The proposed use will provide equal or greater benefits to the community, and - Any replacement facilities and services are built in sites which are accessible by public transport, walking and cycling, and have adequate car parking, or - Evidence is provided to demonstrate that the facility or service is no longer required.
3.	Proposals for new community facilities and services in appropriate locations will be supported, particularly if they contribute to the health and wellbeing of the public.

Table 1. Community Facilities and Services in Pontesbury Parish

This table provides examples of the community facilities and services in Policy COM1 which can be found within the neighbourhood area / parish:

Community Facilities and Services in Pontesbury Parish		
Public Hall (Memorial Hall)	Parish pubs ³	GP Surgery
Pavilion Community Hub & Library, including Police office	Connections: Shops and Tea Room	Restaurants and take-away food facilities ⁴
Primary and Secondary Schools	Hair dressers	Dentist
Pontesford Hill Car Park	Cliffdale Nursing Home	Severn Farm Machinery
The Co-operative shop	Hignett’s Shop, Pontesbury	Wynstay Farmers
Post office	Pharmacy	Earl’s View Fishery, Cruckton
Parish Churches ⁵	Childcare Nursery	Plealey Fishing Pools

³ The Nag’s Head, The Plough Inn, The Horseshoes Inn, Mytton Arms

⁴ Village Fish and Chip Shop, Zenna Chinese, Fairwood Chinese, Lea Cross Tandoori, Balti Spice

⁵ St George’s Church, Pontesbury Congregational Church, Pontesbury Methodist Church, Pontesbury Baptist Church, St Mary’s Church, Habberley

Cruckton Hall School (Fitzroy Academy)	Dr Brown's Hill Farm Project, Pontesbury	Garage and vehicle repair - Plough Garage
Cruckton Village Hall, Cruckmeole	Polemere Nature Reserve	Budget Skips and Recycling Yard, Cruckmeole
Arscott Golf Course	Storage Master, Pontesbury	Lower Mill Kennels, Pontesford
Longmynd Travel, Lea Cross	Allcare Nursing, Pontesbury	

15.3 Evidence and justification

15.4 In all consultations with the public in relation to both the Neighbourhood Plan and the Local Plan, there was significant concern that community facilities should be retained in order to keep the Parish a viable and active community. The majority of respondents to the Neighbourhood Plan Questionnaire use at least one of the parish amenities throughout the year, with well over three quarters of respondents using shops at least weekly, and over 50% of respondents made suggestions about new facilities and amenities that they would like to see in the parish. The vast majority of NP Questionnaire respondents support the concept of encouraging new businesses and amenities to be developed and also support the idea of more small campsites and B+B facilities, and proposals to encourage visitors to use local facilities and services.

15.5 The Local Plan recognises the importance of community facilities in the rural area and stresses that it is especially important that these facilities are protected. The Neighbourhood Plan seeks to build on this approach by identifying and seeking to protect the relevant facilities in the Parish.

15.6 Changes to the Permitted Development Rights laws concern 'Change of Use' from one class of use to another, including from Business to Residential, subject to various restrictions and requirements⁶, and not in Conservation Areas or Listed Buildings, albeit that there are limitations to the size of properties which can be converted without Planning Permission. The Parish Council seeks to preserve and enhance all amenities in the Parish and will work closely with SCC and potential developers to achieve this goal.

15.6 This policy conforms to:

Local Plan policies: Policy SP1 The Shropshire Test; SP10 Managing Development in the Countryside; SP12 Shropshire Economic Growth Strategy; SP13.7 Delivering Sustainable Growth and Enterprise; DP9.8 and DP9.9 Managing and Supporting Town Centres; DP10 Tourism, Culture and Leisure; DP14 Green Infrastructure; DP15 Open Space and Recreation.

NPPF paragraphs: 7, 9, 16, 20, 28, 70, 84d, 187.

⁶ Prior Approval required from SCC concerning: Transport and Highways Impacts; Contamination and Flooding Risks; Impact of Noise on potential occupiers. There is a 150m² limitation on the size of the property, and all rooms in the new residence must have natural light.

https://www.planningportal.co.uk/info/200130/common_projects/9/change_of_use/2

16. Landscape and Local Character

16.1 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Landscape and Local Character:

Objective B1. To conserve the character and beauty of the rural landscape of the parish

16.2 In pursuit of this objective, the Parish Council has developed the following Landscape and Local Character Policy:

Policy LAN1 (Landscape Character):

1. Development in the parish outside the Pontesbury village development boundary (Figure 4) will be supported which maintains or where possible enhances the landscape character of the parish.
2. Development proposals likely to have a significant impact on the rural character of the neighbourhood area should demonstrate how this has been taken to account by the proposal.

16.3 Evidence and justification

16.4 In the 2018 Questionnaire, the most popular response (137) to what people liked about living in Pontesbury Parish was the “open countryside” with a significant number specifying “views to the hills”.

16.5 In the 2020 Consultation 86% of the respondents agreed with the draft vision statement which “safeguarded the much loved rural environment”.

16.6 The Landscape Character statement (Parts 4 and 5 of the Plan) is based on Shropshire Council’s “Landscape Assessment” which describes most of the parish as “Principal Settled Farmland”

16.7 Comparison of historic Ordnance Survey maps of the 1950’s with the present landscape reveals a relatively high rate of hedge and field boundary retention.

16.8 Gillespie’s Landscape and Visual Sensitivity Assessment undertaken as part of Shropshire’s Local Plan Review included Pontesbury village and looks at landscape character and visual amenity identifying how sensitive each is to change by development, in particular housing and employment.
<https://www.shropshire.gov.uk/media/11388/pontesbury-lvss.pdf>

16.9 Shropshire Revised Local Plan SP10 (Managing Development in the Countryside) requires development to “maintain or enhance countryside vitality and character.”

16.10 NPPF’s environmental objective as part of sustainable development requires development to protect and enhance our natural, built and historic environment.

16.11 The policy will assist in passing on an enhanced heritage to future generations rather than a depleted one.

16.12 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Landscape and Local Character:

Objective B2: To conserve the historic heritage of the parish.

16.13 In pursuit of this objective, the Parish Council has developed the following Landscape and Local Character Policy:

Policy LAN2 (Conservation of the Parish’s historic heritage):

Development will be supported which:

- a. involves the residential conversion with minimum alteration or rebuilding of heritage assets in accessible locations close to services and facilities

- b. involves development in or adjacent to Cruckton village which respects the historic environment associated with Cruckton Hall, including:
 - the existing Home Farm boundary walls, trees and road alignment
 - the linear shape of the village and pattern of the footpaths and, where appropriate, uses designs which draw inspiration from the six County Council small holdings set up after the break-up of the Cruckton Hall Estate

16.14 Evidence and justification

16.15 The 2018 consultation revealed that the most popular response to the enjoyment of life in the parish was the countryside and rural feel. Over 150 respondents wished to protect and maintain the existing countryside to which heritage assets make a strong contribution with historic farmhouses, farmsteads, agricultural features and the remains of rural industries figuring prominently in the list of hundreds of heritage assets in the parish. (116 designated and 382 non designated).

16.16 Outside the smelt works and engine house in Pontesford there are few prominent or obvious visual reminders of mid Victorian times when Bagshaw’s Directory noted a ‘great proportion of the labouring classes’ in our parish were employed in lead, coal and quarrying industries. Remaining industrial features are therefore important visual reminders of this very different but significant part of the history of Pontesbury Parish.

16.17 The character of Cruckton village is heavily influenced by the historic contribution of the Cruckton Hall Estate with evidence of its influence contained in its sale catalogue of 1929.

16.18 Revised Local Plan DP23 ‘Conserving and enhancing the Historic Environment’ section 6 supports proposals which appropriately conserve or enhance the significance of heritage assets.

16.19 Revised Local Plan SP10 ‘Development in the Countryside’ supports residential conversions in suitable sites and the sustainable reuse of buildings with heritage significance.

16.20 NPPF section 16 relating to the historic environment states that historic assets are an ‘irreplaceable resource and should be conserved in a manner appropriate to that significance so that they can be enjoyed for their contribution to the quality of life of existing and future generations.’

16.21 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Landscape and Local character:

Objective B3: To safeguard amenity views

16.22 In pursuit of this objective, the Parish Council has developed the following Landscape and Local character Policy:

Policy LAN3 (Safeguard amenity views):

1. Development will be supported which respects the following highly valued amenity views by demonstrating how the key features of the view have been safeguarded so that the view can continue to be enjoyed. The views and their key features are identified in Annex A.

View 1	Plealey Village
View 2	Cruckton Terrace
View 3	Arscott Golf Course
View 4	Field beyond Pontesford Hill car park
View 5	Grove Lane, Pontesbury
View 6	Pontesbury Hill Road

16.23 Evidence and justification

16.24 Each view has been supported by local people living close to the designated view. Views have been chosen not just for their intrinsic value but because they are easy of access (near a road) or in the case of view 3 a few minutes easy level walking, and shown at Appendix A. These criteria ensure that each view is enjoyed by significant numbers of people whether as a backdrop to everyday life or as part of a recreational walk.

16.24.1 Safeguarding view 1 provides an extra layer of protection for the setting of Plealey Conservation Area.

16.24.2 View 2 is one of the several outstanding views along the elevated Cruckton Terrace identified in the Parish Handbook as a Top 10 place to visit in the Parish.

16.24.3 View 3 is a low level panoramic view, ideal compensation for those who do not wish to make the steep climb to the top of Earl's Hill which has a truly outstanding view of the whole parish which already enjoys three levels of protection.

16.24.4 View 4 provides an immediate and striking view of the beauty of the AONB on exiting the popular car park at Pontesford Hill.

16.24.5 View 5 provides an excellent view into the Shropshire Hills AONB on a popular route from Pontesbury Village to the AONB.

16.24.6 View 6, Pontesbury Hill, is one of the views recommended for protection in the Shropshire Landscape and Visual Sensitivity Assessment.

16.25 The art historian Kenneth Clark wrote that excepting love, nothing else unites people of all kinds than their pleasure in a good view.

16.26 The draft Revised Local Plan states in DP17 – Landscape and Visual Amenity - that development should safeguard visual amenity in Shropshire.

16.27 GLVIA3 defines visual amenity as “The overall pleasantness of the views people enjoy of their surroundings which provide an attractive setting for people as they go about everyday activities whether at work, play or travelling through an area.

16.28 NPPF2021 paragraph 130(F) “Planning policies should ensure that development is sympathetic to landscape setting” and paragraph 130(F) planning policies should promote “health and well-being”.

16.29 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Landscape and local character:

Objective B4: To maintain gaps between settlements

16.30 In pursuit of this objective, the Parish Council has developed the following Landscape and local character Policy:

Policy LAN4 (Avoiding coalescence of settlements):

1. Development proposals should protect the separate identity of and contribute to maintaining the gaps between the settlements of Cruckmeole and Hanwood and Pontesbury and Minsterley (Appendix B).

16.31 Evidence and justification

16.32 Community consultation regarding preferred development sites for the current Shropshire local Plan revealed a desire to keep Cruckmeole physically separate from Hanwood and this was acknowledged when the proposed development site at the western edge of Hanwood was reduced in size to allow a larger gap between the site and houses in Cruckmeole. Regulation 14 consultation responses strongly supported this separation.

16.33 Pontesbury and Minsterley villages are in separate parishes with the latter having a visual distinctiveness in terms of large industrial buildings compared to the more residential ambience of Pontesbury.

16.34 NPPF Paragraph 185C - development should contribute to local character and distinctiveness.

16.35 Shropshire revised Local Plan SP10 'Managing Development in the Countryside'

16.36 The policy will help to maintain the individual settlement identities and geographical separateness. Maps showing the gaps between settlements are shown in Appendix B.

16.37 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Landscape and local character:

Objective B5: To conserve the character of the land adjacent to the A488

16.38 In pursuit of this objective, the Parish Council has developed the following Landscape and local character Policy:

Policy LAN5 (Conserve character of the land adjacent to the A488):

1. Development along the A488 between Cruckmeole and Pontesford should maintain or enhance the landscape character of the land bordering the road, respecting the sporadic distributions of buildings.

16.39 Evidence and justification

16.40 In the 2020 questionnaire 97% of the respondents wanted protection for views towards the Area of Outstanding Natural Beauty.

16.41 In the 2018 questionnaire the most popular response [137] to what people most liked about living in Pontesbury Parish was "the open countryside", with a significant number specifying "views to the hills".

16.42 There are three strands to the character of the land adjacent to the A488.

The A488 runs through the centre of the parish with views of, and close proximity to, Shropshire Hills AONB to which the road provides an attractive approach.

The area adjacent to the A488 is characterised by hedges, hedgerow trees, ample green verges and very sporadic settlements.

It is part of the wider landscape of the Rea Valley defined as principal settled farmlands as outlined in the Landscape Character of the Parish statement. This policy aims to prevent significant damage to these characteristics.

16.43 NPPF Paragraph 8C "protect natural / built environment"

16.44 Shropshire revised Local Plan SP10 Managing Development in the countryside "to maintain or enhance countryside character"

16.45 For most residents and visitors the perception of Pontesbury Parish as an unspoilt rural environment of treed hedgerows, woods, rolling farmland and a backdrop of hills is gained from travelling along its main traffic artery, the A488.

16.46 The current gaps between buildings permit several opportunities to see the iconic view of the Parish towards Pontesford and Earls Hills.

16.47 The policy is designed to prevent uncharacteristic ribbon development.

Fig 3. Architectural Details in Pontesbury

17. Housing and Design

17.1 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Housing and Design:

Objective C1: New housing in Pontesbury village respects variety of styles and materials.

17.2 In pursuit of this objective, the Parish Council has developed the following Housing and Design Policy:

Policy HOU1 (Housing design in Pontesbury village):

1. New development within the boundary of Pontesbury village (Figure 4) will be supported which demonstrates high quality design by maintaining and enhancing the character/appearance, beauty and historic interest of the village.
2. Important design aspects which require a sympathetic response include:-
 - General village characteristics in terms of layout and greenery.
 - Maintaining views of church tower and hills
 - Inclusion of some of the existing architectural details, especially window design, doorways and chimneys.
 - Variety of materials in treatment of boundaries and buildings without creating an over fussy appearance. A predominance of brick is acceptable with building variety being achieved through colour, texture and bonding. Village distinctiveness is strengthened by use of stone in boundary walling: and
 - Maintaining a village feel by breaking down larger scale development into distinct areas and including a focal point, such as a green, where appropriate.

17.3 Evidence and justification

17.4 The 2020 Questionnaire Q12 showed significant majority support for a variety of house design in keeping with local / nearby properties. A frequent comment to recent housing applications in the Parish has been a perceived lack of respect for the character of neighbouring buildings.

17.5 The revised Local Plan stresses the importance of development maintaining and enhancing the character, appearance and historic interests of a local area and this policy is designed to provide these local details. The Living with Beauty report of the 'Building Better' Commission 2020 stresses that new development should be designed to fit in with the texture of a place and that it should be an improvement of that place.

17.6 This conforms with NPPF section 12 paragraphs 125/129 which states that beautiful and sustainable buildings are fundamental to the planning process, should be visually attractive as a result of good architecture, layout and appropriate landscaping.

17.7 The policy conforms with Shropshire Local Plan SP5 [High Quality Design], SP6 Health and well-being.

17.8 The policy will strengthen the distinctiveness of settlements, a sense of belonging and help to redress the recent loss of local character in Pontesbury village.

17.9 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Housing and Design:

Objective C2: To enable the provision of small sized homes and affordable homes

17.10 In pursuit of this objective, the Parish Council has developed the following Housing and Design Policy:

Policy HOU2 (Meeting housing needs in Pontesbury village):

1. Small infill developments of four homes or fewer within Pontesbury village development boundary (Figure 4) will be supported if one or more homes are suited to the needs of younger or older generations subject to clear local evidence of housing need.

Pontesbury Development Boundary (Fig.4)

17.11 Evidence and justification

17.12 The January 2020 Right House Right Place report commissioned by Shropshire Council for Pontesbury village noted that 41% of those contemplating moving wanted to downsize to a bungalow or detached house, with 2 bedrooms being the most popular choice. 12 people wanted a starter home or self-build and 15 required an affordable home to buy (regarding the latter the NP believes that the various affordable schemes in the revised local plan will meet this need.)

17.13 The 2020 questionnaire recorded a similar need for small bungalows with 227 indicating it was their preferred type.

17.14 The 2 surveys reflect a higher percentage of residents over the age of 65 compared with Shropshire and national figures.

17.15 NPPF paragraph 50 states "plan for a mix of housing based on needs of different groups."

17.16 Shropshire revised local plan DP states "a mix of dwellings to meet the identified needs of local communities".

17.17 Revised Local Plan DP3 – D7 deal with different schemes for affordable houses including an increased percentage of affordable homes for new developments in Pontesbury.

17.18 In view of the limited space for development within Pontesbury, the small remaining quota of houses to be built by 2038 and DPI covering sites of five or more houses the above policy is both complementary and appropriate. The policy will enable more local people to remain in the Parish and homes for the elderly especially bungalows will allow more people to remain in their own homes. As the Revised Local Plan makes extensive provision to expand the number of affordable homes, the Neighbourhood Plan regards this as adequate provision for future affordable homes.

18. Movement and Transport

18.1 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Movement and Transport:

Objective D1: To support a safe, accessible network of roads, cycle ways and footpaths to promote healthier lifestyles, access to the countryside and improve active travel between homes and amenities.

18.2 In pursuit of this objective, the Parish Council has developed the following Movement and Transport policy:

Policy MOV1 (Public Rights of Way and links):

Developments that seek to enhance / improve Public Rights of Way (PROW), including pedestrian and cycle links will be supported. This includes proposals that:

- protect and maintain the existing PROW to provide easy, accessible traffic-free routes for non-motorised users, including mobility scooters, throughout the local area and to improve active travel links between homes, services and amenities.
- upgrade of pathways to allow access to the countryside for everyone, including people with reduced mobility.
- provide access points for all forms of active traveller to an existing PROW or area of public access (including the Council owned stretch of dismantled railway north of Pontesbury (Fig 5) or the Thieves Lane Bridleway east of Cruckton (Fig 6).

18.3 Evidence and justification

18.4 Transport plays an important role in supporting economic growth and enhancing a community where people want to live, work and play. It is also essential in achieving sustainable development and ensuring safe accessibility at various levels for all individuals. The Neighbourhood Plan Survey reiterated respondents support for good public transport to serve the needs of the people travelling to and from work without a reliance on private transportation. New and ongoing challenges such as global warming have highlighted the opportunities that transport modes can have in helping the parish seek a carbon neutral approach, as well as showing us the importance of our surrounding area and ways of travel between our communities. Protection and maintenance of our existing Public Rights of Way (PROW) enhances access to the local countryside, which is agreed as key to improving wellbeing and supporting mental health. For clarity, PROW as used in MOV1 include footpaths, bridleways and restricted byways.

18.5 The importance of the interconnectivity in our neighbourhoods and continued access to the open countryside are regarded as high priority by the community of Pontesbury with 95% of respondents using PROW on a frequent or occasional basis. The Neighbourhood Plan aims to protect the existing network of PROW and take opportunities to enhance existing provision by creating new links where possible, in order to promote outdoor activities and provide outlets to improve physical and mental health.

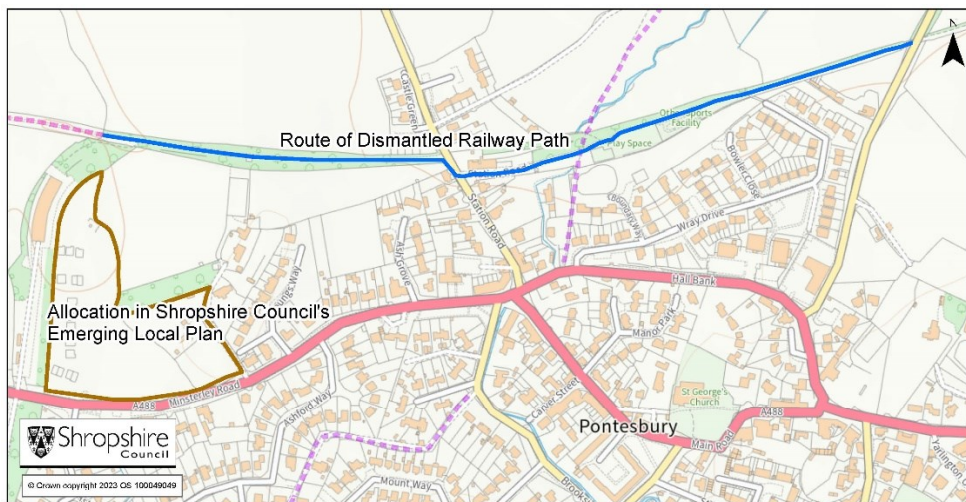

Fig 5. Route of dismantled railway and proposed development area

Fig 6. Route of Thieves Lane Bridleway

18.6 Respondents to the survey were keen to see PROW kept open and in good condition (96%) with most (95%) agreeing that well marked routes were important. Some comment was made to request improvements in safety and the possibilities for mobility scooters, whilst overall use of PROW was for pleasure and exercise through walking, running and cycling. In line with government guidelines on usage of PROW, we have included mobility scooters in the policy.

18.7 Whilst Pontesbury village is well supported with convenience and specialist stores, primary health care and a secondary school, it remains a rural parish, with outer areas reliant on transport to access these facilities. However, the reduction of public transport provision in the rural area has resulted in residents being more dependent on private vehicle transport. The 2011 Census showed that Pontesbury has on average 1.6 cars per household, 0.2 higher than the 2018 National average. Traffic regeneration by new developments must be mitigated by improved links to the public transport network, which will minimise the additional carbon footprint generated by the introduction of the new housing.

18.8 This policy conforms to the following policies and objectives:

Policy SP1 The Shropshire Test; SP3 Climate Change; SP4 Sustainable Development; SP6 Health and Wellbeing; DP28 Communications and Transport
 NPPF Paragraphs 8b, 88, 92, 98, 100, 104, 105, 106, 112

18.9 The Pontesbury Parish Neighbourhood Plan has the following Objective relating to Movement and Transport:

Objective D2: To improve car parking in Pontesbury

Policy MOV2 (Parking):

1. Development proposals that do not result in the loss of off-street public car parking will be supported. Proposals which involve loss of existing parking will be considered if equivalent alternative parking is provided.
2. Retail, commercial or business developments that provide appropriate parking facilities that avoid or minimise 'on street' parking will also be supported.
3. Development which maximises off-street parking whilst bearing in mind the needs of high quality design will be supported.

18.10 In pursuit of this objective, the Parish Council has developed the following Movement and Transport policy:

18.11 Evidence and Justification

18.12 Provision of parking spaces can be beneficial to communities, helping to reduce traffic obstructions, increase road safety and provide convenience for householders, businesses and visitors in the area. In response to the Neighbourhood Plan Questionnaire, many considered car parking to be a major issue in the Neighbourhood with inconsiderate on-street parking regarded as a very serious negative factor in many areas of the parish. Increased traffic on the A488 highlights the inconvenience and potentially dangerous nature of an increase in on-street parking.

18.13 In addition, problems caused by parking near schools were universally considered to be an issue and that a robust approach to parking enforcement would make a significant contribution to the quality of life in the Neighbourhood Area. Whilst there are no county standards for off street parking facilities on new builds, the NPPF states that if setting local parking standards for residential and non-residential development, policies should take into account:

- The accessibility of the development;
- The type, mix and use of development;
- The availability of and opportunities for public transport;
- Local car ownership levels; and
- The need to ensure an adequate provision of spaces for charging plug-in and other ultra-low emission vehicles.

18.14 All new developments must consider each of the above points and due to the level of car ownership in the area, limited availability of public transport and the identified desire to increase local sustainability, must seek to maximise off-street parking and electric charging opportunities wherever possible. However, the visual impact of many cars can conflict with the requirement for high quality design. Road layout and planting should therefore be considered.

18.15 This policy conforms to the following policies and objectives:

Policy SP1 The Shropshire Test and SP6 Health and Wellbeing. NPPF Paragraphs 104, 107, 108, 110

FARM DIVERSIFICATION

19. Employment and Business

19.1 The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to Employment and Business:

Objective E1: To encourage small scale economic development including farm diversification which brings landscape benefits.

19.2 In pursuit of this objective, the Parish Council has developed the following Economic Development Policy:

Policy EMP1 (Small scale employment and farm diversification):

Subject to respecting the character of Pontesbury village and the landscape character and historic heritage of the rest of the parish and an acceptable impact in terms of traffic changes and the amenity of residential properties, the following will be supported:

1. The development of new, small scale businesses which are well screened and sit unobtrusively in the landscape. New industrial activity will be supported within the existing Malehurst Industrial Estate or in the area adjoining it.
2. The diversification of farm and rural businesses which can demonstrate environmental improvement including biodiversity with particular reference to hedges, hedgerow trees and ponds, maintain the tranquillity of their surroundings and where appropriate improve the provision or condition of footpaths.
3. Tourist accommodation in the form of glamping, camping and touring caravans on sites in or adjacent to settlements and which do not have significant adverse impacts. Multiple sites in close proximity should demonstrate that they do not have significant adverse impacts.
4. Proposals to promote or provide facilities for home working and businesses operating from home.
5. The sustainable re use of redundant or disused buildings of sufficient character to warrant retention in accessible locations to be used for high quality tourist accommodation or small scale economic development.
6. Redevelopment, alteration or extension of historic farmsteads and agricultural buildings within the Parish should be sensitive to their distinctive character, materials and form.
7. Development for new small scale businesses that are well adapted to the impacts of climate change and include renewable energy schemes.

19.3 Evidence and justification

19.4 With the exception of schools which have a large number of staff in large buildings, the characteristic business is small scale employing few staff. Over 90% of the responses in the 2020 questionnaire relating to those who run their own businesses within the parish employ only one or two people. The list of over 100 businesses in the parish handbook contains very few which employ more than a handful of people.

19.5 The 2011 census and 2020 questionnaire indicate nearly one fifth of Pontesbury's population is self-employed, significantly above England's national average.

19.6 Hedges and hedgerow trees not only provide shelter for livestock, support for wildlife and reduce soil erosion they also make an important contribution to the landscape character of the parish but like most

areas of England, they have suffered from a reduction in the agricultural workforce leading to many gaps and poor maintenance especially a lack of traditional layering.

19.7 The 2018 consultation revealed a high level of satisfaction with the existing character of the parish – aside from ‘traffic’ the most disliked feature was ‘nothing’ with ‘peace’ one of its most valued attributes.

19.8 The 2020 questionnaire revealed that 74% wished to encourage more tourism; 94% wanted an improvement in the footpath network; 94% supported the conversion of buildings for an alternative use.

19.9 There was minority support for allocating additional employment land with Malehurst gaining most mentions.

19.10 Farm diversification schemes are potentially a significant way of maintaining viable farms which are important for the local economy and our much loved landscapes which are largely the result of many centuries of farming activity with farmers continuing to be the main custodians of our countryside.

19.11 SP10 and DP11 of the draft revised Local Plan relating to countryside and tourism support small scale, well screened development which respects local character.

19.12 The revised 2021 NPPF states that planning policies should support a prosperous rural economy by the growth of all types of businesses through conversion of existing buildings, well designed new buildings and diversification of farming and land use business. Planning policies should enable rural tourism and leisure activities which respect the character of the countryside.

19.13 The Shropshire Farmsteads Characterisation Project mapped and characterised historic farmsteads, outfarms, field barns and small holdings across the county. The project provides an understanding of the historic character of the county’s farmsteads, how they have changed over time and how they relate to the landscape. The Shropshire Farmsteads Characterisation Project informs planning policy, and any is a tool to be used to secure a sustainable use and conserve the character of the historic farmsteads.

(<https://www.shropshire.gov.uk/environment/landscape/historic-landscape-characterisation/historic-farmstead-characterisation/>)

19.14 Small scale renewable energy schemes will help minimise any reduction to the existing acreage of farmland in line with several responses to Regulation 14 regarding possible loss of farmland as well as maintaining balance between the needs of agriculture, green energy and landscape conservation.

20. Green Environment Policy

The Pontesbury Parish Neighbourhood Plan has developed the following Objective relating to the Green Environment:

Objective F1: To protect Local Green spaces

20.1 In pursuit of this objective, the Parish Council has developed the following Green Environment Policy:

Policy GRE1 (Local Green Spaces):

The following areas are designated as Local Green Spaces.

LGS1	Pontesbury School Green and Jubilee Garden
LGS2	Mary Webb School Playing Field
LGS3	Pontesbury Play area
LGS4	Pontesbury Sports Association Field
LGS5	Hall Bank Village Green, Pontesbury
LGS6	Pontesbury Cemetery
LGS7	Church Close Green, Cruckton
LGS8	Cruckton Hall Sports Field (Fitzroy Academy)

20.2 Evidence and justification

20.3 The designated areas were put forward by respondents to the 2020 Questionnaire with the following results:

Pontesbury Play Area was widely used according to the 2018 Consultation

The Sports Association Field is the only area in the village for football and cricket.

The designated green spaces contribute to the character of Pontesbury and Cruckton.

20.4 The 2021 revised NPPF paragraph 101 allows communities to identify and protect Local Green Spaces. Paragraph 102 of the NPPF sets states Local Green Space Designation should only be used where the green space is which are:

In reasonably close proximity to the community each one serves

Demonstrably special and hold a particular local significance

Local in character and is not an extensive tract of land

20.5 Maps of the designated Local Green Spaces are shown at Appendix C.

20.6 The table at Fig 7 (below) describes how the Local Green Space criteria have been met:

Name of Green Space	Size and Location	Special value and significance	Ownership
LGS1 Pontesbury School Green and Jubilee Garden	Centre of the village 1,260m ² and 540m ²	Informal meeting place, close views of landmark church tower and proximity to war memorial. Close to shops and bus stop.	Part Parish Council, part Shropshire Council, part Sevenside Housing
LGS2 Mary Webb School Playing Fields	Edge of village 41,200m ²	Provides essential space for secondary school sporting activity	Shropshire Council
LGS3 Pontesbury Play Area	Centre of village Station Road play area 9,000m ²	Children's play area equipment and BMX track	Parish Council on long term lease from Shropshire Council
LGS4 Pontesbury Sports Association Field	Edge of village 8.22 acres/33,260 m ²	Football, cricket, netball and bowling facilities	Parish Council on long term lease from Shropshire Council
LGS5 Hall Bank Village Green, Pontesbury	Centre of village 1,400m ²	Adjacent to main shop, community hub, surgery, nursery and essential green space for new development of 86 houses	Pontesbury Parish Council
LGS6 Pontesbury Cemetery	Centre of village 7,800m ²	Away from main road it has long provided a much valued and relatively peaceful green space for quiet contemplation	St Georges Church
LGS7 Church Close Green, Cruckton	Centre of Cruckton village 6,100m ²	Site of Roman villa, informal play area, part wildlife habitat	Shropshire Council
LGS8 Cruckton Hall Sports Field (Fitzroy Academy)	Within Cruckton village 6,000m ²	Cruckton Hall School playing field, no other sports field in village.	Private

Fig 7. Pontesbury Parish Green Spaces

20.7 The Pontesbury Parish Neighbourhood Plan has the following Objective relating to the Green Environment:

Objective F2: To protect and enhance natural habitats and wildlife and increase biodiversity

20.8 In pursuit of this objective, the Parish Council has developed the following Green Environment Policy

Policy GRE2 (Protection and Enhancement of Biodiversity)

Proposed development that protects and enhances local wildlife species and habitat and contributes to on-site net gain will be supported. This includes:

1. Preserving or creating wildlife habitats, including trees and hedgerows on their boundaries,
2. Establishing and maximising wildlife corridors linking up to local green infrastructure assets through the use of native planting,
3. Retaining ancient, veteran and mature trees and hedgerows as well as trees that have amenity value. Where trees must be lost they should be replaced at a positive ratio with a preference for native trees/fruit or nut trees,
4. Provide features in areas of open space which increase and enhance natural habitats and native wildlife,
5. Where on-site net gain for biodiversity is not feasible, delivery will be guided through Local Nature Recovery Strategies (LNRSs) and Nature Recovery Networks (NRNs) when available.
6. Sustainable Urban Drainage Systems (SUDS), using natural features such as drainage ditches and ponds.

20.9 Evidence and justification

20.10 In recent years there has been a radical change in attitude to the need for biodiversity net gain at both national and local planning level. As a society it is now accepted that we need to conserve and enhance our biodiversity in the face of a global biodiversity crisis.

20.11 Nationally the UK government is committed to building Nature Recovery Networks to “help us deal with three of the biggest challenges we face: biodiversity loss, climate change and well-being.” (www.gov.uk/nature-recover-network)

20.12 The National Planning Policy Framework (NPPF) further backs the protection that planning should act as a way of minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and enhance natural habitats including wild flower areas, bird and bat boxes and fruit/nut trees.

20.13 The NPPF also considers that plans should “promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species, and pursue opportunities for securing net gain for biodiversity.”

20.14 Although natural diversity is present in the rural landscape around Pontesbury and the Parish villages, and there is some connectivity of hedgerows and trees to larger areas of woodland and open green space, this diversity is under threat from many pressures and the general neglect of our natural assets over

many years. Species numbers among both local and national flora and fauna have been falling for decades. These declines are well documented, for example The Natural History Museum's latest analysis reveals that the UK has just 53% of its biodiversity remaining, and is one of the most nature depleted countries in the world.

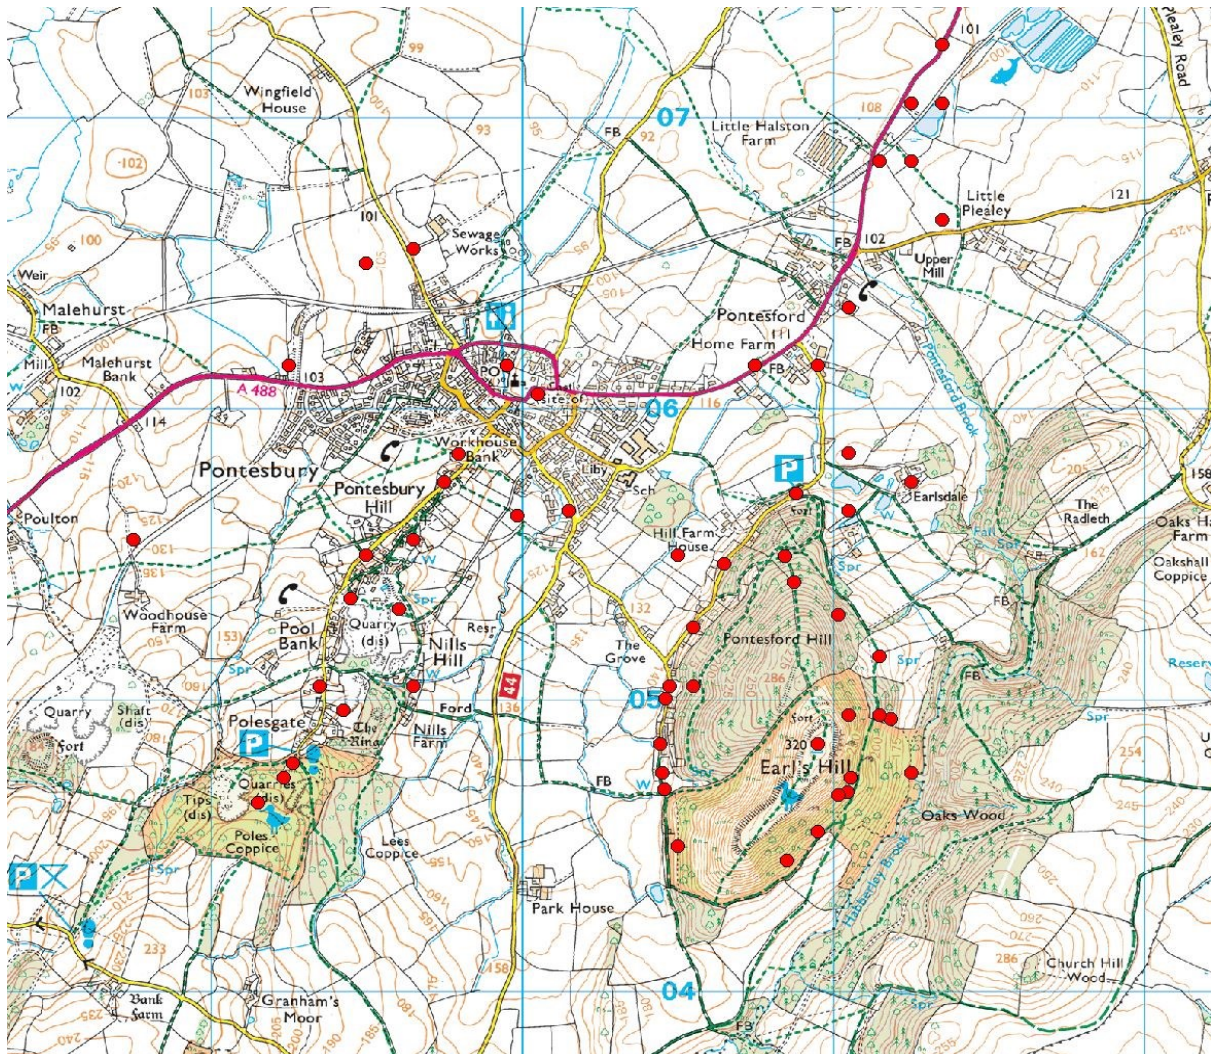

Fig 8. Protected Species Sites

20.15 The Map at Fig 8 is produced by Shropshire Council showing sites of protected species in the Pontesbury area. Shropshire Council also produces lists of sightings of these species, available on the SC website.

20.16 The importance of protecting our biodiversity was also reflected within the Neighbourhood Plan consultation questionnaire, with several respondents supporting the protection and enhancement of biodiversity in the parish, including working with local farmers to this end.

20.17 Additionally Shropshire Council aims to ensure that all development delivers at least a 10% net gain for biodiversity, as well as avoiding harm to Shropshire's natural assets, which need to be conserved, enhanced and restored.

20.18 This policy conforms to the following policies and objectives:

Policy SP1 The Shropshire Test; SP4 Sustainable Development; SP6 Health and Well-being; DP12 The Natural Environment; DP14 Green Infrastructure and DP16 Landscaping of New Developments. NPPF Paragraphs 8,15,153,174 and 179.

20.19 The Pontesbury Parish Neighbourhood Plan has the following Objective relating to the Green Environment:

Objective F3: To reduce Pollution

20.20 In pursuit of this objective, the Parish Council has developed the following Pollution Policy

Policy GRE3 (Pollution)

Development proposals should minimise pollution by:

1. Being sited to minimise the impact of pollution from traffic on future occupants including from the A488.
2. Increasing opportunities for walking and cycling.
3. Supporting changes of land or building use which encourage local food production for local consumption.
4. Minimising light pollution particularly for development sites outside or on the edge of the existing settlement.

20.21 Evidence and Justification

20.22 Pontesbury is a quiet village in a scenic rural area, but any increase in traffic along the A488 which runs directly through the village will contribute to a significant increase in air pollution. A number of respondents to the Neighbourhood Plan questionnaire considered that the traffic on the A488 is already a huge problem and additional developments along the main road without proper assessment will only increase vehicle movement and air pollution in and through the village.

20.23 One the impacts of national lockdown due to Covid-19 was the remarkable reduction in air pollution as traffic was at a very low level. One respondent in the questionnaire considered that air pollution had noticeably improved during lockdown. The aspiration of this policy is that air pollution in our parish should not be allowed to worsen through development, to protect our health and well-being and that of the planet, as pollution from cars running on fossil fuels contributes significantly to global heating / climate change. Hence the consideration of the impacts of the existing highway as well as promoting alternative modes of travel.

20.24 Minimising light pollution helps maintain the rural nature of the parish and lessens the impact on nocturnal fauna.

20.25 This policy conforms to the following policies and objectives:

Policy SP1 The Shropshire Test; SP3 Climate Change, SP6 Health and well-being and DP18 Pollution and Public Amenity

NPPF Paragraphs 8, 174 and 185

20.26 The Pontesbury Parish Neighbourhood Plan has the following Objective relating to the Green Environment:

Objective F4: Carbon reduction

20.27 In pursuit of this objective, the Parish Council has developed the following Green Environment Policy

Policy GRE4 (Carbon Reduction)

1. Development proposals which support the transition to net zero will be supported, including where appropriate the following measures:
 - a. Energy efficiency standards that exceed national technical standards,
 - b. The use of low carbon heat sources e.g. air/ground heat pumps and solar PV,
 - c. Generate a proportion of its energy on-site from renewable and low carbon energy sources .

20.28 Evidence and Justification

20.29 The effect of climate change means temperature rises around the world leading to more extreme weather and further danger to the population. However, unless further action is taken, the planet could still warm by more than 2degC by the end of this century. If nothing is done, scientists think global warming could exceed 4degC, leading to devastating heat-waves, millions losing their homes to rising sea levels and irreversible loss of plant and animal species.

20.30 The UK government puts a “statutory duty on local planning authorities to include policies in their local plan designed to tackle climate change,” and that there is the “expectation that neighbourhood plans will contribute to the achievement of sustainable development.” (www.gov.uk/guidance/climate-change)

Policy GRE5 (Community Renewables)

1. The installation of community renewable energy generation will be supported where the following criteria are met:
 - a. Biodiversity improvements/habitat enhancement are planned in from the start of the project
 - b. Generation facilities will result in a significant reduction in community carbon emissions over their lifetime;
 - c. Developments of renewable energy generation facilities are led by and meet the needs of the local community;
 - d. The business case for each facility is sound, and is reasonably required to meet community objectives; and
 - e. Each facility is installed in such a way that land can be used and subsequently returned to its existing use over time, as more efficient technologies are developed.
2. Where appropriate selection of suitable locations for such facilities is based on choosing sites:
 - a. Of low ecological value and wildlife impact;
 - b. Where land requirement can be minimised by adopting less space intensive technologies;
 - c. Where the land can be shared by renewable energy facilities and some agricultural use as appropriate;
 - d. Where the noise, smell and visual appearance of the installations are minimised such that they do not cause unacceptable nuisance; and where on-site compensatory measures can be taken to reduce any residual impact.

20.31 Evidence and Justification

20.32 The document 'Neighbourhood planning in a climate emergency' (Centre for Sustainable Energy and TCPA, February 2020), notes that rural communities often have greater potential for renewable energy, and that 'a requirement for 10% of energy to be provided from renewable energy isn't that ambitious anymore'.

20.33 Public consultation also reflected the change toward becoming carbon neutral in the village with 84.6% of responses in 2020 wanting houses to be carbon neutral and 82.6% wanting charging points with new housing.

20.34 On a local level Shropshire Council also declared a climate emergency in 2019, with climate change representing a major challenge to people's way of life, and alongside this is to ensure that development meets today's needs for future generations. In 2008 the Climate Change Act required the country to reduce its greenhouse gas emissions by at least 80% by 2050.

20.35 In June 2019, the Government announced that the UK will 'eradicate its net contribution to climate change by 2050' by legislating for net zero emissions. As part of this, all buildings need to be net zero carbon by 2050. However, the Committee on Climate Change has reported that by 2030, current plans would at best deliver around half of the required reduction in emissions, 100-170 MtCO₂e per year short of what is required by the carbon budgets. A 36% reduction in UK emissions is required from 2016 to 2030, with approximately a 20% cut in emissions (89 MtCO₂e) required from the buildings sector as a whole. The Committee has made clear that this will require "stronger new build standards for energy efficiency and low carbon heat".

20.36 The Government document 'Community Energy' provides guidance for community energy projects. It states 'community energy covers aspects of collective action to reduce, purchase, manage and generate energy'. The document provides examples of community energy projects, including Community owned renewable electricity installations such as solar photovoltaic (PV) panels, wind turbines or hydroelectric generation. (www.gov.uk/guidance/community-energy) .

20.37 These policies conforms to the following policies and objectives:

Policy SP1 The Shropshire Test; SP3 Climate Change, SP6 Health and Well-Being and DP11 Reducing Carbon Emissions.

NPPF Paragraphs 8c, 152, 153, 154, 155.

21. Monitoring and Review

21.1 It is expected that Shropshire Council, as the Planning Authority, will continue to monitor progress relating to the number of dwellings and number of affordable homes delivered during the Plan period, as part of the wider monitoring responsibilities for the Council area set out in their Annual Monitoring Report.

21.2 The Plan covers the period until 2038. For long term success it is essential that developments in the Plan area are reviewed against the Plan's Objectives and Policies.

21.3 Pontesbury Parish Council will monitor the delivery of its policies and work to ensure that benefits to the communities within the Parish are achieved.

21.4 Each agenda for the Parish Council meetings will include a 'Pontesbury Neighbourhood Plan' which will ensure that the item is continually reviewed and reported upon during the Plans lifecycle.

21.5 On the anniversary of the adoption of the Plan, the Parish Council will assess the impact of the Plan during the previous year and discuss the implementation of the Plan for the forthcoming year, taking into consideration any significant changes that may have come about as a result of the plans adoption. Any matters or problems will be raised by the Parish Council and brought to the attention of the Borough Council, this will then be used as part of their contribution to the Annual Monitoring Report produced by Shropshire Council.

21.6 In 2027, 2032 and 2037, there will be thorough five year reviews of progress by a recruited community-based steering group. The purpose of these more comprehensive reviews will be to hold the Parish Council to account by assessing how / whether the 'Objectives' are being achieved. Continued confidence in the Plan for the next Plan period will depend upon ensuring that all current and relevant information is taken into account. Each five year review will be assessed along with the combined Annual Monitoring Reports, and their results will inform any decision on the need for a 'Full Formal Review'. If there is a need for a Full Formal Review, up-to-date data on Housing Needs Survey, Parish Profile, Census results etc. will be used.

21.7 In 2038, a community-based Steering Group will be re-informed to undertake a Full Formal Review to decide on the need for a subsequent 15 year Plan, and to oversee the development of this new Plan if required. This should coincide with work at Shropshire Council.

21.8 In conjunction, Shropshire Council will undertake its statutory role and continue to monitor Neighbourhood Plans as part of its monitoring framework.

21.9 The Parish Council may be best placed to monitor the progress of certain elements of the Neighbourhood Plan; the division of responsibility will be agreed with Shropshire Council. This might mean that Shropshire Council leads on monitoring the strategic delivery of housing while the Parish Council monitors local delivery. Monitoring arrangements are to be recorded in a Memorandum of Understanding⁷ between the two authorities.

21.10 The Parish Council's monitoring could take the form of a spreadsheet listing all planning applications and decisions made on them. It should be possible to see the extent to which the Neighbourhood Plan has been successful in influencing planning and development decisions by recording which policies are being used in decision making and the outcomes. Hence, we should be able to access how well policies are providing the expected outcomes. Findings from this should be shared with other interested parties to inform future Plans.

⁷ An agreement between two or more parties outlined in a formal document. It is not legally binding but signals the willingness of the parties to move forward with a contract.

Amenity View Points

1. The following map locates the amenity views and the following photographs illustrate their extent .

View 1 (Grid ref 424068) Plealey

From the start of the footpath next to Red Barn.

Key features – foreground pasture, distant views of woods and Pontesford Hill, hedgerows and trees in the viewpoint field.

View 2 (Grid ref 436098) Cruckton Terrace

From the first gateway South east of Terrace Farm.

Key features – distant hills of Earls Hill/Stiperstones, Rea Brook water meadows and foreground trees.

View 3 Arscott Golf Course (Grid ref 433084)

From 20 metres before the stile on the footpath at the SW exit from the golf course.

Key features – foreground hedge, panoramic view of both Pontesford and Breidden Hills, contrasting view of hills and gently undulating farmland.

View 4 Near Pontesford Hill Car park (Grid ref 410057)

From near start of footpath exiting back of car park in the SE direction.

Key features – lake, hedgerow trees in the foreground, distant woods and pastureland.

View 5 Grove Lane (Grid ref 402054)

From the first gateway above Whitecroft on the west side of the lane.

Key features – pasture land, wooded slopes and hill fort ramparts.

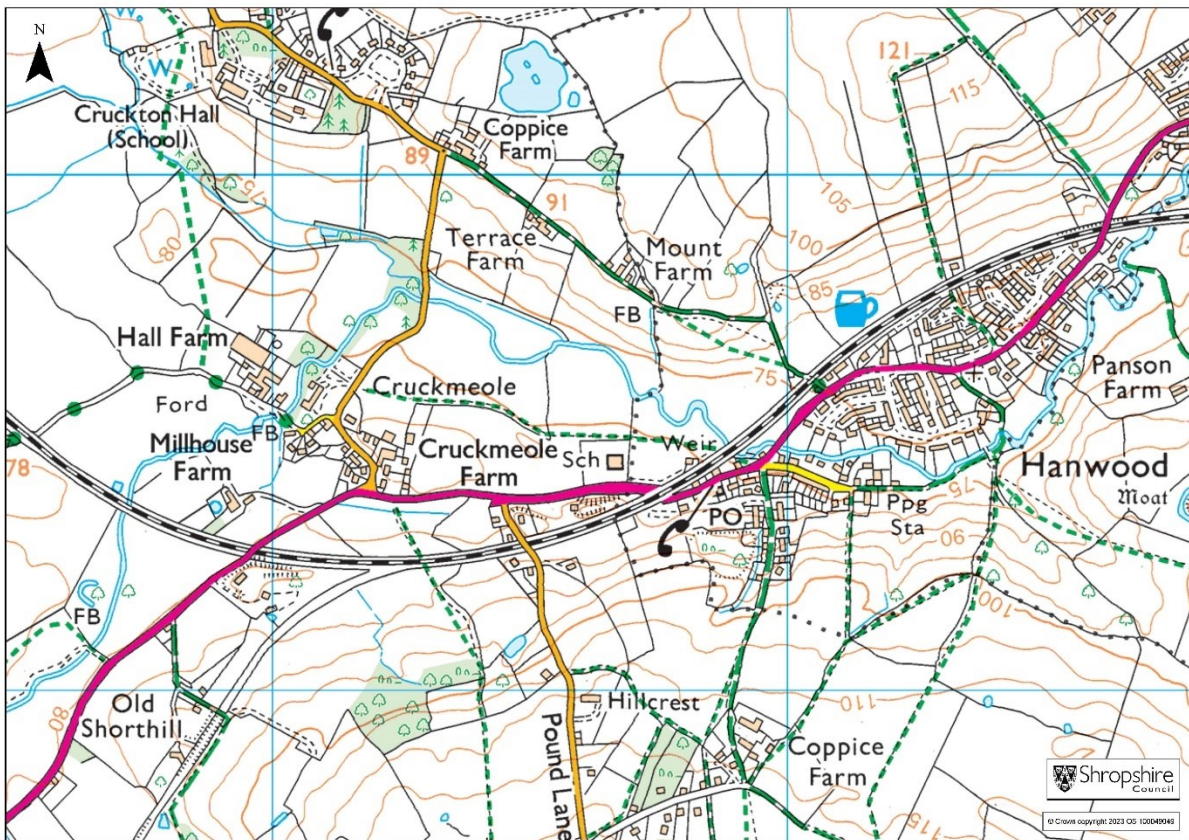

View 6 Pontesbury Hill Road (Grid ref 397058)

From the large hedgerow gap almost opposite Langafel House.

Key features – open countryside, hedgerow trees and distant hills.

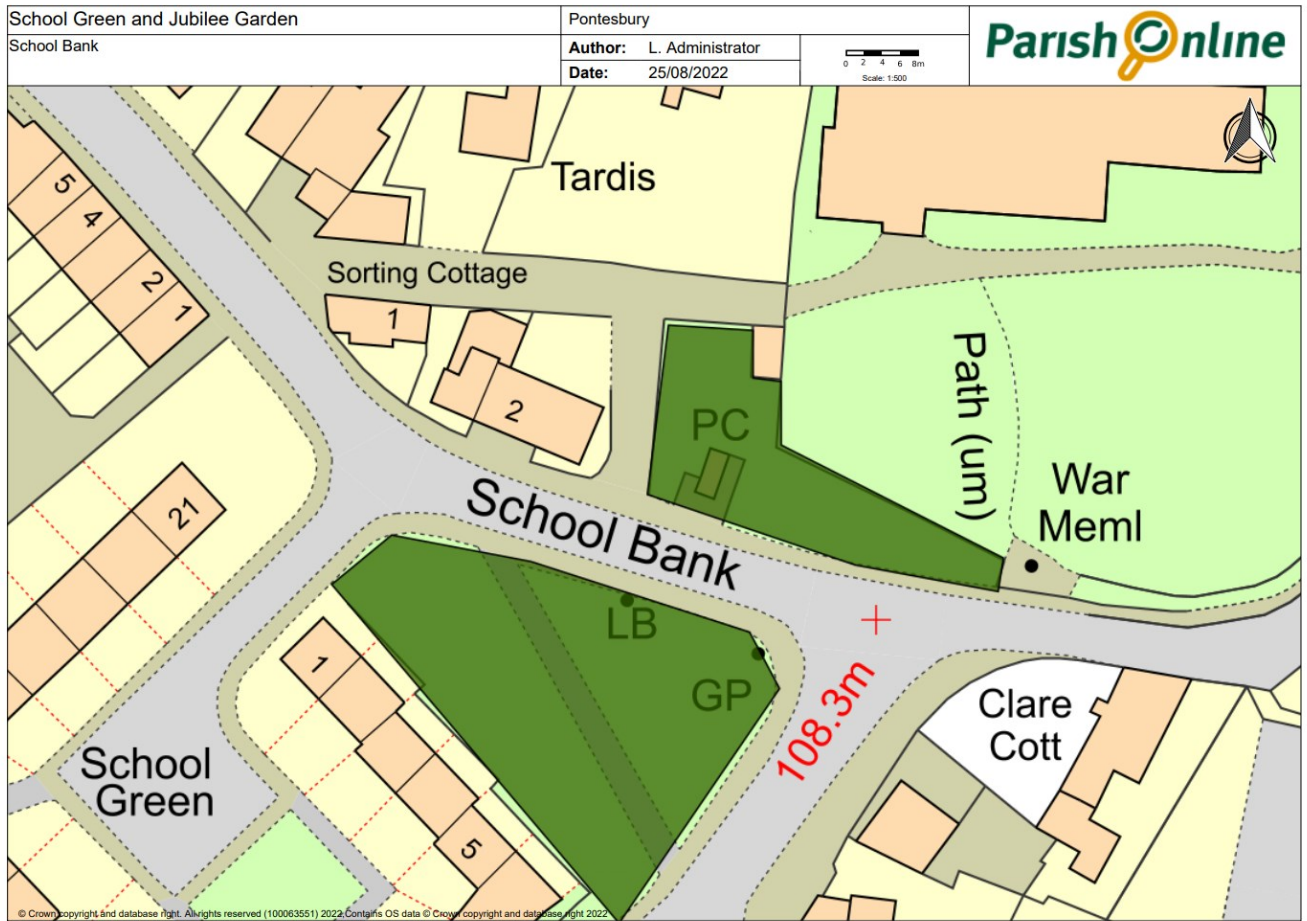

Separate Settlement Identity

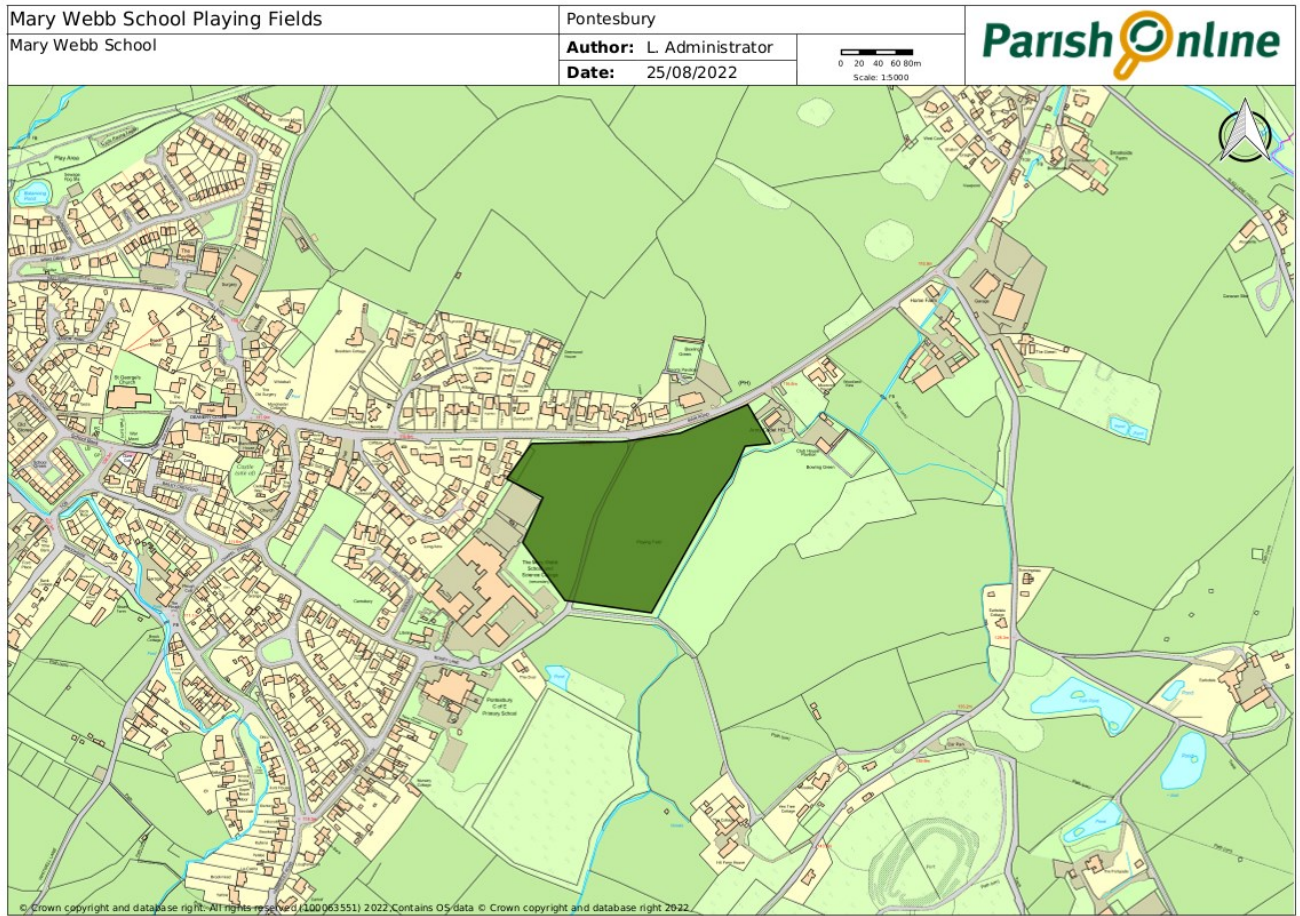

Pontesbury Parish Local Green Spaces

1. The following maps show the Local Green Spaces as described in Policy GRE1. Areas of greenspace do not include any highways within the identified greenspace on maps LGS2 and LGS7.

1.1 LGS1 Pontesbury School Green and Jubilee Garden

1.2 LGS2 Mary Webb School Playing Fields

1.3 LGS3 Pontesbury Play Area

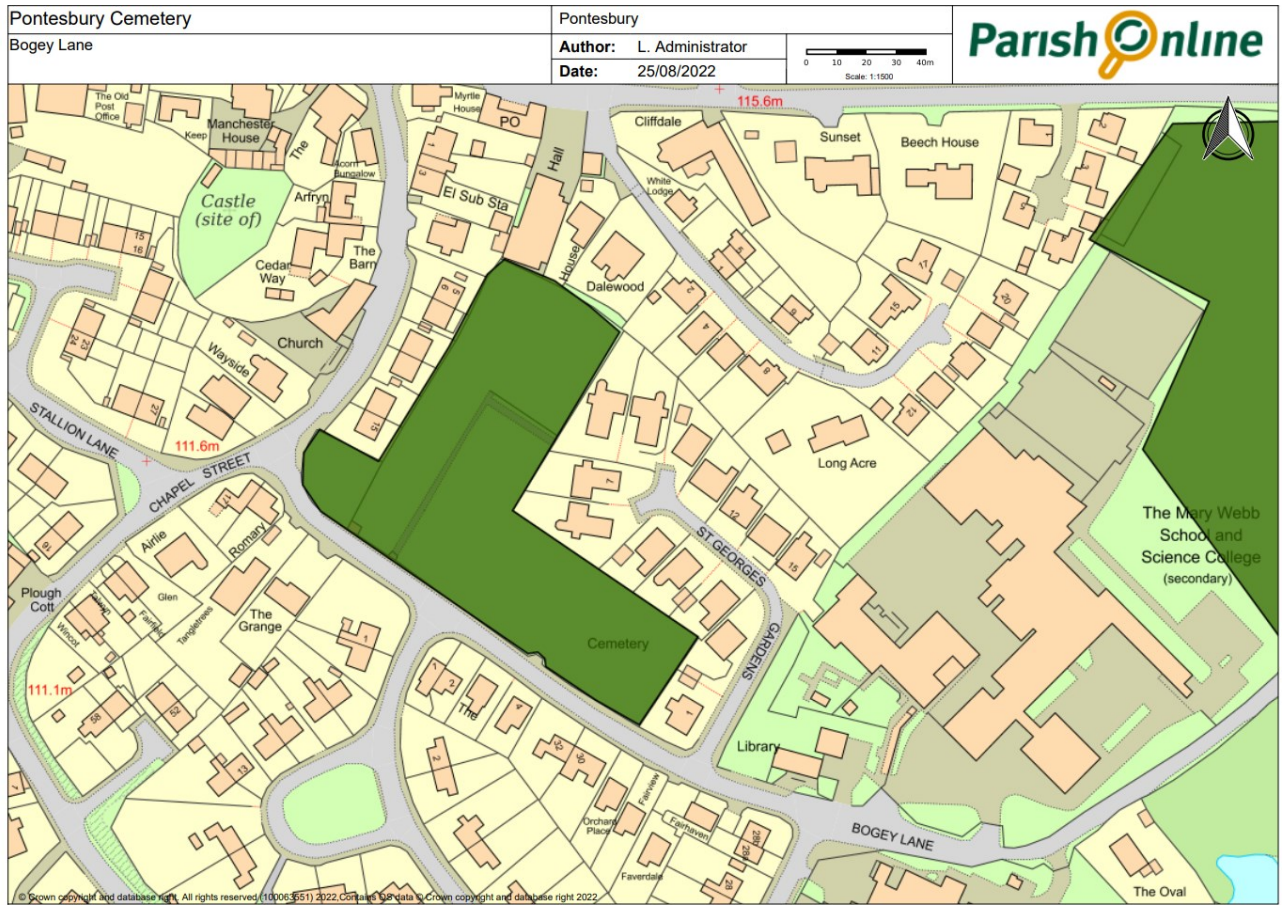

1.4 LGS4 Pontesbury Sports Association Playing Fields

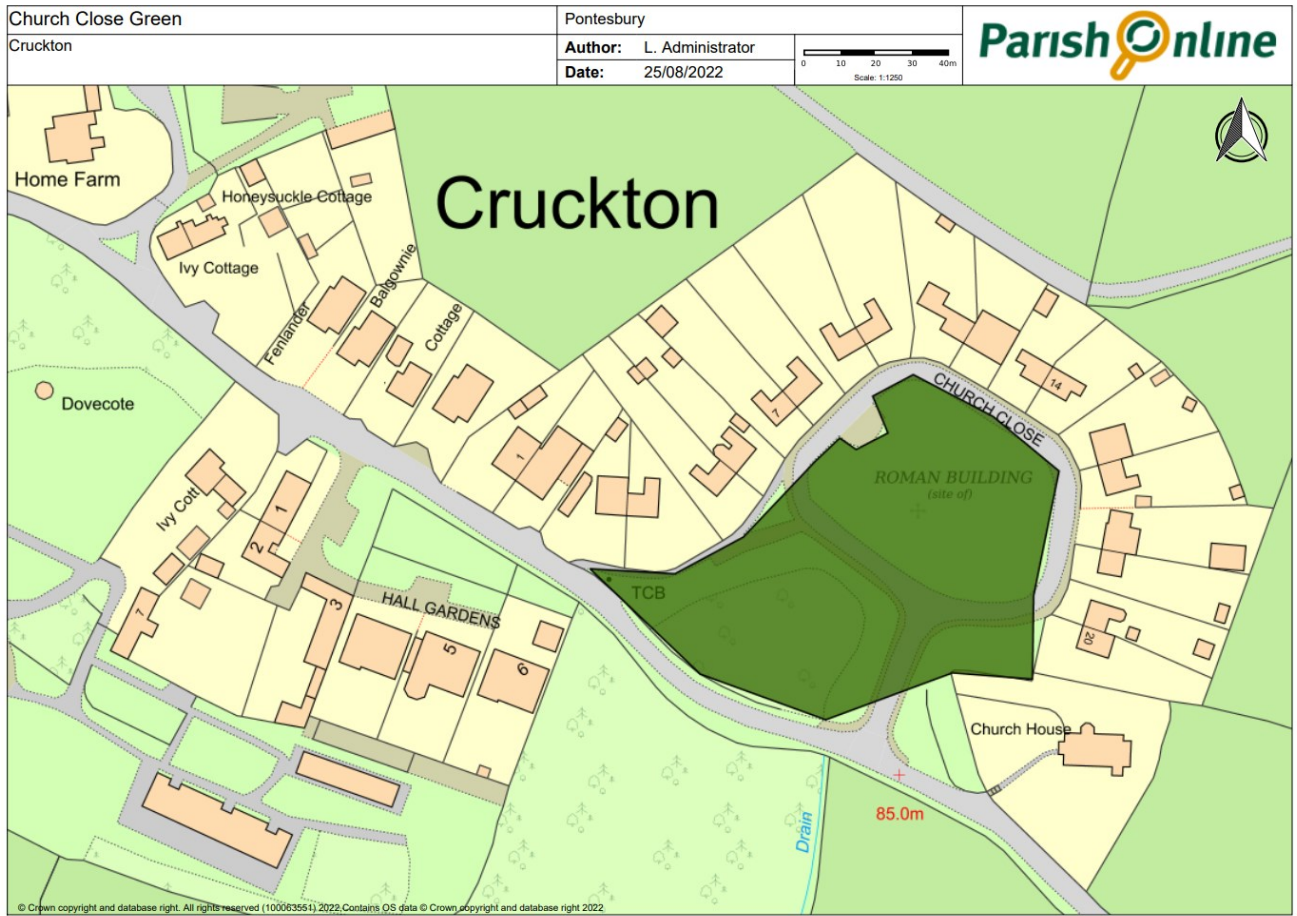

1.5 LSG5 Hall Bank Village Green, Pontesbury.

1.6 LSG6 Pontesbury Cemetery

1.7 LGS7 Church Close Green, Cruckton

1.8 LGS8 Cruckton Hall Playing Field (Fitzroy Academy)

8.	Recommendation and Referendum Area	36

1. Executive Summary

1. I was appointed by Shropshire Council with the support of Pontesbury Parish Council to carry out the independent examination of the Pontesbury Neighbourhood Plan.

2. I undertook the examination by reviewing the submitted Plan, associated documents and written representations, and by making an unaccompanied visit to the Neighbourhood Area.

3. I consider the Plan to be an adequate expression of the community's views and ambitions for Pontesbury. It is based on an effective programme of public consultation which has informed a Vision to 2038. This is to be achieved through a set of 16 objectives structured into five themes and 16 planning policies largely dealing with matters distinct to the locality. The Plan is supported by a Consultation Statement and Basic Conditions Statement and Strategic Environmental Assessment and Habitats Regulations Assessment screening reports. There is supporting evidence provided and there is evidence of community support and the involvement of the local planning authority.

4. I have considered the eight separate representations made on the submitted Plan. These are addressed in this report as appropriate.

5. Subject to the recommended modifications set out in this report I conclude that the Pontesbury Neighbourhood Plan meets all the necessary legal requirements, including satisfying the Basic Conditions. I make a number of additional optional recommendations.

6. I recommend that the modified Plan should proceed to Referendum and that this should be held within the Neighbourhood Area of Pontesbury.

2. Introduction

7. This report sets out the findings of my independent examination of the Pontesbury Neighbourhood Plan. The Plan was submitted to Shropshire Council by Pontesbury Parish Council as the Qualifying Body.

8. I was appointed as the independent examiner of the Pontesbury Neighbourhood Plan by Shropshire Council with the agreement of Pontesbury Parish Council.

9. I am independent of Pontesbury Parish Council and Shropshire Council. I do not have any interest in any land that may be affected by the Plan. I possess the appropriate qualifications and experience to undertake this role.

10. My role is to examine the Neighbourhood Plan and recommend whether it should proceed to referendum. A recommendation to proceed is predicated on the Plan meeting all legal requirements as submitted or in a modified form, and on the Plan addressing the required modifications recommended in this report.

11. As part of this process I must consider whether the submitted Plan meets the Basic Conditions as set out in paragraph 8(2) of Schedule 4B of the Town and Country Planning Act 1990 (as amended). To comply with the Basic Conditions, the Plan must:

- have regard to national policies and advice contained in guidance issued by the Secretary of State; and
- contribute to the achievement of sustainable development; and
- be in general conformity with the strategic policies of the development plan in the area; and
- be compatible with European Union (EU) and European Convention on Human Rights (ECHR) obligations, including the Conservation of Habitats and Species Regulations 2017.

12. An additional Basic Condition was introduced by Regulations 32 and 33 of the Neighbourhood Planning (General) Regulations 2012 (as amended) in 2018 that the making of the neighbourhood development plan does not breach the requirements of Chapter 8 of Part 6 of the Conservation of Habitats and Species Regulations 2017. I am also required to make a number of other checks under paragraph 8(1) of Schedule 4B of the Town and Country Planning Act 1990.

13. In undertaking this examination I have considered the following documents as the most significant in arriving at my recommendations:

- the submitted Pontesbury Neighbourhood Plan
- the Basic Conditions Statement
- the Consultation Statement
- the Strategic Environmental and Habitats Regulations Assessment screening reports
- the relevant parts of the development plan comprising the Shropshire Core Strategy (2006-2026) and Shropshire Site Allocations and Management of Development (SAMDev) Plan (2006-2026)
- representations made on the submitted neighbourhood plan
- relevant material held on the Pontesbury Parish Council and Shropshire Council websites
- National Planning Policy Framework (2021)
- Planning Practice Guidance
- relevant Ministerial Statements

14. The Plan was initiated under an earlier version of the National Planning Policy Framework than that used for my examination but the consultation on the submitted Plan took place after the most recent NPPF's publication in July 2021 and this is addressed by the Basic Conditions Statement.

15. No representations were received requesting a public hearing and having considered the documents provided and the representations on the submitted Plan I was satisfied that

the examination could be undertaken by written representations without the need for a hearing.

16. I carried out an unaccompanied visit to the Neighbourhood Area on a weekday during March. I visited the main locations addressed in the Plan, including the Local Green Spaces, Amenity Views, settlement gaps, and a majority of the community amenities. I also visited Pontesbury, Cruckton Hall and Malehurst Industrial Estate along with a selection of routes through the surrounding countryside and part of Earl's Hill Nature Reserve.

17. Throughout this report my recommended modifications are bulleted. Where modifications to policies are recommended they are highlighted in **bold** print with new wording in "speech marks". Existing wording is in "*italics*". Other modifications, including to the supporting text, are also recommended and these are not in bold. The recommended modifications are numbered from M1 and are necessary for the Plan to meet the Basic Conditions. A number of modifications are not essential for the Plan to meet the Basic Conditions and these are indicated by [square brackets]. These optional modifications are numbered from OM1. Some changes will also be needed to the supporting text and documents consequential to the modifications. These should be agreed between Shropshire Council and Pontesbury Parish Council.

18. Producing the Pontesbury Neighbourhood Plan has clearly involved significant effort over many years led by the Steering Group. The process began in 2016 and is informed by significant community involvement. There is evidence of collaboration with Shropshire Council and continuing this will be important in ensuring implementation of the Plan. The commitment of all those who have worked so hard over such a long period of time to prepare the Plan is to be commended and I would like to thank all those at Pontesbury Parish Council and Shropshire Council who have supported this examination process.

3. Compliance with matters other than the Basic Conditions

19. I am required to check compliance of the Plan with a number of matters.

Qualifying body

20. The neighbourhood plan has been prepared by a suitable Qualifying Body – Pontesbury Parish Council – which being a parish council is the only organisation capable of producing a neighbourhood plan for the area.

Neighbourhood Area

21. I am satisfied that the Plan relates to the development and use of land for a designated neighbourhood area which was designated by Shropshire Council on 1 March 2017.

22. The boundary of the neighbourhood area is shown in Figure 2. This is a relatively crude map presented at a small scale from which it is not possible to determine the exact boundary of the designated area. As a minimum a link to a larger scale map depicting the boundary online is needed.

- M1 – Provide access to a large scale map enabling the detailed boundary of the neighbourhood area to be viewed.

Land use issues

23. I am satisfied that the Plan's policies relate to relevant land use planning issues.

Plan period

24. The period of the neighbourhood plan runs from 2016 to 2038. The period is shown on the Plan cover and is consistent with the Vision.

Excluded development

25. I am satisfied that the neighbourhood plan makes no provisions for excluded development (such as national infrastructure, minerals extraction or waste).

4. Consultation

26. I have reviewed the Consultation Statement and relevant information provided on the Pontesbury Neighbourhood Plan website. It provides a clear record of the consultation process that has been undertaken since the prospect of a neighbourhood plan was first raised in 2016. This was guided by a Steering Group including both parish councillors and other members of the local community.

27. A number of different engagement methods have been used, including a dedicated website in addition to information carried on the parish council website, public meetings, drop-in events, social media, questionnaires, banners, noticeboards, local press and attendance at the local agricultural show, church fete and Gardeners' show. The parish newsletter is delivered to almost every household and has been used as a means to provide regular information.

28. Participation levels have been good, including nearly 400 responses to an initial questionnaire. A more detail questionnaire was sent to every household and resulted in 330 responses – a 24% response rate. There is evidence that the responses have actively shaped the Plan. Shropshire Council has been involved from the beginning and engaged with the emerging Plan before formal consultation on the draft.

29. The Plan was subject to Regulation 14 consultation between 1 March and 26 April 2022. A summary plan was provided to every household via the parish newsletter and a drop-in session was held. The Plan received over 130 responses from 60 respondents and an additional 10 statutory consultees. There is evidence of the consultation including the required statutory and other consultees. Physical copies of the Plan were made available.

30. A summary of the main issues raised is provided in the Consultation Statement and there is evidence of changes being made to the Plan.

31. Eight separate representations have been made on the submitted Plan from statutory bodies and consultees. All the representations have been considered as part of the examination and are addressed as appropriate in this report.

32. I am satisfied with the evidence of the public consultation undertaken in preparing the Plan. The Plan has been subject to appropriate public consultation at different stages in its development. Participation rates have been good and appropriate opportunities to shape the Plan as it has developed have been provided.

5. General comments on the Plan's presentation

Vision and Objectives

33. The Plan includes a Vision Statement for Pontesbury in 2038. This presents a positive ambition for change and reflects the feedback received through consultation. It is consistent with the objectives and policies in the Plan. The overall approach focuses on retaining the area's character while improving employment opportunities, leisure and community infrastructure. Adequate affordable housing is provided to meet emerging needs. The Vision is consistent with sustainable development and this is complemented by the Plan's objectives.

Other issues

34. The Plan is clearly structured and has a broadly consistent format. The Policies are clearly identified by boxes and generally supported by evidence although there are issues which I address in relation to individual policies. The evidence base is intended to be available on the neighbourhood plan website but this is incomplete and many of the documents referenced lack bibliographic details or links which means the origin of some evidence is unclear.

35. The Plan includes a number of maps which relate to specific policies. These use a variety of base maps and there are instances in relation to individual policies where they do not provide the necessary clarity due to the scale or quality of the base map. In these cases an enlarged version and/or link to one online would be helpful and there are instances where the base map itself is not adequate. I address this in my assessment of relevant policies. It would be helpful if all maps had a scale bar.

36. The Plan's policies are not presented using a consistent approach. In some all paragraphs are numbered, including where there is only a single paragraph (e.g. Policy LAN5) but others are not numbered (e.g. Policy GRE1) or only sub-points are numbered (e.g. Policy EMP1). There is inconsistent use of bullets and letters. It would aid clarity of the Plan to adopt a consistent approach. It is unclear why the title of every policy is in brackets and punctuated with a colon. In some instances where I recommend changes to the title of

policies consideration will need to be given to the drafting of the Plan's objectives where this matches the title of a policy.

37. The titles of the main sections are not always consistent with those used in the Contents (including capitalisation) (e.g. sections 7 and 20). None of the titles of the Figures is consistent with those used in the Contents and a majority have incorrect page numbers. The Figure on page 11 is referenced in the text but is not numbered or identified in the Contents. There are also inconsistencies in the titles of the Appendices and those used in the Contents.

38. Some sections of the supporting text are written in relation to a draft Plan (e.g. paragraphs 2.2-3.3). This text will need to be updated if the Plan proceeds to Referendum and then being made. The Plan will also need to reflect the most up to date version of the National Planning Policy Framework (e.g. paragraph 10.3) and Local Plan (currently at Examination). It is also clear that the Plan process has not been paused in relation to the Local Plan review (paragraph 10.9).

- OM1 – [Address the detailed issues relating to the Plan's presentation and evidence base identified in this section]

6. Compliance with the Basic Conditions

National planning policy

39. The Plan is required to “*have regard*” to national planning policies and advice. This is addressed in the Basic Conditions Statement which relates each of the Plan’s policies and objectives to the National Planning Policy Framework (NPPF).

40. The Basic Conditions Statement includes a table that relates each of the Plan’s objectives policies to relevant goals of the NPPF and an assertion that this demonstrates the Plan “*has regard to relevant policies*”. Each Policy is then related to relevant paragraphs in the NPPF and a short commentary provided. No instances of conflict are identified and the conclusion is that the assessment shows how each policy “*conforms specifically to the NPPF*”.

41. I address some issues with regard to national planning policy in my consideration of individual policies and recommend some modifications. These include areas where the drafting of the Plan’s policies needs to be amended in order to meet the NPPF’s principles regarding the clarity of policies, the need for policies to be positively worded and to serve a clear purpose and the need to avoid duplication. I also address the requirement expressed in national planning policy and Planning Practice Guidance that “*A policy in a neighbourhood plan should be clear and unambiguous. It should be drafted with sufficient clarity that a decision maker can apply it consistently and with confidence when determining planning applications. It should be concise, precise and supported by appropriate evidence. It should be distinct to reflect and respond to the unique characteristics and planning context of the specific neighbourhood area for which it has been prepared.*” (NPPG Paragraph: 041 Reference ID: 41-041-20140306). The Plan’s policies do not always meet these requirements and a number of recommended modifications are made as a result.

42. Generally, I agree with the Basic Conditions Statement and conclude that the Plan has regard to national planning policy and guidance but there are exceptions as set out in my comments below. These include the need for some policies to be more clearly expressed and/or evidenced, for policies to be positively worded and avoid being overly

restrictive, for policies to serve a clear purpose and for duplication with other planning policies or the NPPF to be avoided.

43. I am satisfied that the Plan meets this Basic Condition other than where identified in my detailed comments and recommended modifications to the Plan policies.

Sustainable development

44. The Plan must *“contribute to the achievement of sustainable development”*. This is addressed in the Basic Conditions Statement by relating relevant Plan objectives and policies to each of the three pillars of sustainable development in the NPPF. A short commentary is provided. The assessment omits Policy MOV2 relating to parking but this does not raise any unusual issues. I share the overall assessment that the Plan contributes to the different dimensions of sustainable development and that the Plan meets this Basic Condition.

Development plan

45. The Plan must be *“in general conformity with the strategic policies of the development plan”*. The Basic Conditions Statement addresses this by relating each of the Plan’s policies to relevant policies in the emerging Local Plan. This is on the basis that the *“current development plan is now out of date”*. While it is desirable for the Plan to address an emerging Local Plan, the Basic Condition relates to the development plan currently in force. On request I was provided with a comparable assessment with the current development plan and this raises no issues around general conformity.

46. Shropshire Council has raised no questions about the Plan’s general conformity with the strategic policies of the development plan and on request I was informed *“the Council does consider the submitted Neighbourhood Plan is in general conformity with the current and emerging Development Plan for the area”*.

47. I am satisfied the Plan meets this Basic Condition other than where identified in my detailed comments and recommended modifications to the Plan policies.

Strategic Environmental Assessment

48. The Plan must be informed by a Strategic Environmental Assessment if it is likely to have significant environmental effects. A screening assessment was published in August 2022 which concluded that *“none of the proposed policies within the draft Pontesbury Neighbourhood Development Plan has the potential to have a significant effect on the natural environment. The draft Pontesbury Neighbourhood Development Plan can be ‘screened out’ of the Strategic Environment Assessment process”*. Unusually there was no separate consultation with the statutory conservation bodies on the screening although they were consulted on the submitted Plan. Natural England’s view is that *“there are unlikely to be significant environmental effects”* from the Plan. Historic England offered no comments beyond its support at the earlier stage of public consultation on the Plan and the Environment Agency has made no response and has expressed no objections to the Plan. Given these views I am satisfied the consultation with the statutory conservation bodies has been adequate.

49. I am satisfied by the screening assessment and conclude that the Plan meets this Basic Condition.

Habitats Regulations Assessment

50. The Plan must be informed by a Habitats Regulations Assessment if it is likely to lead to significant negative effects on protected European sites. A screening assessment was published in August 2022. No relevant sites lie within 20km of the neighbourhood area. The assessment concludes that *“there is no likely significant effect on any European Site as a result of the policies”* and the Plan is *“screened out”*. Natural England states that the Plan would not be likely to result in a significant effect on any European Site, either alone or in combination and therefore no further assessment work is required.

51. I am satisfied with the screening assessment and conclude that the Plan meets this Basic Condition.

Other European obligations

52. The Plan must be compatible with European Union (EU) and European Convention on Human Rights (ECHR) obligations. The Basic Conditions Statement states this is the case.

53. No contrary evidence to the Plan meeting this Basic Condition has been presented and there is evidence of changes being made to the Plan during its preparation. I conclude that there has been adequate opportunity for those with an interest in the Plan to make their views known and representations have been handled in an appropriate manner with changes made to the Plan.

54. I conclude that the Plan meets this Basic Condition.

7. Detailed comments on the Plan policies

55. This section of the report reviews and makes recommendations on each of the Plan's policies to ensure that they meet the Basic Conditions. I make comments on all policies in order to provide clarity on whether each meets the Basic Conditions. Some of the supporting text and headings and supporting Maps and documents will need to be amended to take account of the recommended modifications.

Community Amenities

56. **Policy COM1** – This supports enhancement and protects against loss of an identified set of community amenities and supports proposals for new facilities in appropriate locations.

57. The Policy is supported by Table 1 which lists 33 "*community amenities*" ranging from a named industrial estate and car park to a general category of hair dressers. There is evidence of public support for the approach in consultation on the Plan.

58. The Policy relates variously to "*amenities*", "*facilities*" and "*services*" and there is a lack of any clear definition of its scope. This extends to the variety of amenities included in Table 1 and the lack of evidence for how these were identified. The draft Shropshire Local Plan Policy SP6 and SP10 identify "*community facilities and services*" as including "*local shops, meeting places, sports venues, open space, cultural buildings, public houses and places of worship*". This is consistent with Policy CS8 in the current Core Strategy which identifies community facilities and services as including "*schools, pubs, village shops, post offices, village halls, community centres, cultural and youth facilities, police and emergency services, health care, highways, pedestrian and cycling facilities, public transport and environmental infrastructure such as open space and green infrastructure, sport and recreational provision*". I recommend consistent use of "*facilities and services*" rather than "*amenities*" to provide a consistent approach in the development plan.

59. There is merit in the Plan providing more local detail on what comprises community facilities and services in the neighbourhood area. The lack of an additional evidence base

means, however, that this should not extend beyond the scope of that already identified in the current and emerging Local Plan. It is, additionally, not appropriate to directly reference specific facilities and services in the Policy and Table 1 should serve to provide relevant examples.

60. Malehurst Industrial Estate does not fall into the category of a community facility or service and should not be included. I note that Rea Valley Business Park is not included but that Table 1 identifies specific businesses within it and consider this to be the appropriate approach. There is also a lack of clarity over the location or identity of some of the services identified in Table 1 – e.g. “*Wynstay Farmers*” is intended to relate to “*Wynstay Stores*” – and I recommend that addresses are provided and, ideally, the locations are shown on a map. On request I was provided with an appropriate map and locational details.

61. As drafted the Policy would support replacement facilities or services on a different site which do not provide equal or greater benefits to the community which is not the intention.

62. The last part of the Policy overlaps significantly with emerging Local Plan Policy SP6 but given it is enabling in its approach and the Local Plan has yet to be adopted I am satisfied it does not duplicate existing policy.

63. Policy COM1 does not meet the Basic Conditions.

- M2 – Be consistent in using “community facilities and services” throughout the Plan, including headings, titles, policies and the supporting text

- **M3 – Amend Policy COM1 to:**
 - **Replace “*Amenities*” with “*Facilities and Services*” in the title**
 - **Replace “*amenities*” with “*facilities and services*” in two instances**
 - **Insert “or service” after “*facility*” in the seventh line**
 - **Insert “and services” after “*facilities*” in the fifth and penultimate lines**
 - **Delete the first line**

- **Replace “or” with “and” at the end of the fourth line**
- M4 – Amend Table 1 and the supporting text to:
 - Replace “*Amenities*” with “Facilities and Services” in the title and heading
 - Delete “*Malehurst Industrial Estate*”
 - Use correct names for the identified facilities and services in all instances
 - Reference that Table 1 provides examples of the community facilities and services addressed by Policy COM1 which can be found within the neighbourhood area/parish
- OM2 – [Provide addresses for all the facilities and services included in Table 1 and identify them on a map(s)]

Landscape and Local Character

64. **Policy LAN1** – This supports development outside the Pontesbury village development boundary which maintains or enhances landscape character and requires development proposals likely to have a significant impact on landscape character to demonstrate how this has been addressed.

65. The Policy references a “*Landscape Character Statement*” which in turn draws on Shropshire Council’s landscape character assessment but which is neither included in the Plan nor linked to a reference. On request I was informed this was a reference to Parts 4 and 5 of the Plan which describes the built and landscape character of the area in relatively general terms. I recommend that the reference is deleted from the Policy and addressed in the supporting text.

66. The “*development boundary*” is identified in Figure 4 and for clarity this should be included in the Policy. Figure 4 shows the boundary proposed in the emerging Local Plan. This has been extended to include sites allocated for development. Given the importance of neighbourhood plans aligning with emerging Local Plans I consider this to be a pragmatic approach as the amendment is not a matter of major debate at the Local Plan Examination.

Should the Plan proceed then the development boundary in Figure 4 should align with the most recent version in the emerging (or by then adopted) Local Plan.

67. The Policy duplicates emerging Local Plan policy by referencing Policy SP10. This is not consistent with national planning policy that development plan policies should “*serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area*” (paragraph 16, NPPF). The second part of the policy references the “*Plan area*” when it is the “*neighbourhood area*” that is designated by Shropshire Council.

68. The supporting text is written in an abbreviated form and the purpose of paragraph 16.8 which simply names an unreferenced document is unclear.

69. Policy LAN1 does not meet the Basic Conditions.

- **M5 – Amend Policy LAN1 to:**
 - **Replace “*if it meets the requirements of SP10 in the revised Local Plan (Managing Development in the Countryside and*” with “*which*”**
 - **Delete “*as expressed in the Landscape Character Statement*”**
 - **Insert “(Figure 4)” after “*boundary*”**
 - **Insert a reference in brackets after “*Statement*”**
 - **Replace “*Neighbourhood Plan*” with “*neighbourhood*”**
- **OM3 – [Provide supporting text in paragraph 16.3-16.11 which more clearly explains the evidence and justification for the Policy]**

70. **Policy LAN2** – This supports development which addresses a range of policy criteria related to heritage considerations.

71. The structure of the Policy is inconsistent with, for example, Policy LAN1. The numbered paragraphs in Policy LAN2 identify different criteria and in Policy LAN1 identify different arms of the Policy. The drafting of the criteria needs to be amended to relate them to the opening line. There is also inconsistent use of bold text.

72. The first and last part of the Policy duplicates national, existing development plan and future development plan policy, including Section 16, NPPF; Local Plan Policies CS17 and MD13 and emerging Local Plan Policy DP23. There is further duplication in the reference to Policy SP10.

73. The reference to “*isolated spots*” lacks clarity and would more appropriately address accessibility.

74. Policy LAN2 does not meet the Basic Conditions.

- **M6 – Replace Policy LAN2 with:**

“Development will be supported which:

- a. **involves the residential conversion with minimum alteration or rebuilding of heritage assets in accessible locations close to services and facilities**

- b. **involves development in or adjacent to Cruckton village which respects the historic environment associated with Cruckton Hall, including:**

- **the existing Home Farm boundary walls, trees and road alignment**
- **the linear shape of the village and pattern of footpaths**

and, where appropriate, uses designs which draw inspiration from the six County Council small holdings set up after the break-up of the Cruckton Hall Estate.”

75. **Policy LAN3** – This supports development which conserves and enhances the two Conservation Areas.

76. The Policy duplicates national and development plan policy in respect of designated heritage assets, including paragraph 199ff, NPPF; Local Plan policies CS6 and MD13 and emerging Local Plan Policy DP23. It does not “*serve a clear purpose*” (paragraph 16, NPPF) and should be deleted. There is no additional local information not already addressed in existing planning policy as existing policy requires consideration of the Conservation Area character appraisals.

77. Policy LAN3 does not meet the Basic Conditions.

- **M7 – Delete Policy LAN3**

78. **Policy LAN4** – This identifies six highly valued amenity views within which development which safeguards key features will be supported.

79. The Policy is supported by Appendix A comprising a map locating each view with a red dot and a summary of each view which locates it by Grid Reference and description, lists relevant key features and provides a panoramic photograph.

80. The Policy is positively worded and consistent with emerging Local Plan Policy DP17. There is evidence of community support for the approach.

81. The neighbourhood area benefits from many fine views and the Policy focuses on those with particularly easy access. There will be other views which can be addressed by reference to the Local Plan if development proposals come forward which impact on them.

82. I visited each of the identified views and share the assessment that they are significant and that relevant “*key features*” are identified. There is a lack of clarity as to the field of view from each location given these are identified only by dots and the direction of the view is only described in View 4. I recommend that this is addressed by indicating the general direction of each view and on request I was provided with this information.

83. There is an error in referencing View 5 as being on “*Glove Lane*” instead of “*Grove Lane*” in Appendix 5 and a misspelling of Breidden Hills in View 3. For View 3 it is unclear from which direction the reference to its location being “*20m before the stile*” refers.

84. Policy LAN4 does not meet the Basic Conditions.

- **M8 – Amend Policy LAN4 to replace “are identified on map at” with “and their key features are identified in”**
- M9 – In Annex A:
 - Replace the first line with “The following map locates the amenity views and the following photographs illustrate their extent.”
 - For each view indicate the ordinal point which most closely associates with the centre of the panoramic photograph

85. **Policy LAN5** – This does not support development resulting in the coalescence of settlements in two locations.

86. The Policy is supported by maps in Appendix B identifying specific shaded areas “where settlements would encroach on one another if the settlements were to increase in size”. The base maps are out of date with a significant area of new development west of Hanwood not shown despite being referenced in the supporting text. There is no information provided on how the shaded areas have been identified and on request I was not provided with any substantial further evidence for the shaded areas defining where development would result in coalescence. I do not consider the approach to be sufficiently robust to support identifying specific locations where development will not be supported. As a consequence I recommend deleting the areas shaded in Appendix B.

87. The Policy takes an inconsistent approach to defining its objective. Avoiding encroachment, ensuring separate settlement identity, maintaining gaps, avoiding coalescence, and keeping physical separation are all referenced and while there is a consistent general intent these can each be interpreted differently. On request I was informed the policy is intended to avoid coalescence

88. There is evidence of support for the approach through public consultation. Given Minsterley’s location outside the neighbourhood area I sought clarification as to the views of Minsterley Parish Council and was informed it is supportive.

89. The Policy is negatively worded in stating what “*will not be supported*” and lacks robust evidence justifying such an approach in specific locations. I recommend modifying the Policy to provide more general support for avoiding coalescence.

90. Policy LAN5 does not meet the Basic Conditions.

- **M10 – Replace Policy LAN5 with:**

- **“Policy LAN5 Avoiding coalescence of settlements**

- **Development proposals should protect the separate identity of and contribute to maintaining the gaps between the settlements of Cruckmeole and Hanwood and Pontesbury and Minsterley (Appendix B).”**

- M11 – Amend Appendix B to:

- Remove the brown shaded areas
 - Provide up to date base maps
 - Delete the three lines of text at the bottom of age B-1

91. **Policy LAN6** – This supports development along the A488 which is consistent with Local Plan policies for development in the countryside and maintains or enhances landscape character.

92. There is evidence of strong community support for the protection of the countryside and views, including along the road and the overall intention of the Policy is to avoid ribbon development.

93. The reference to Policy SP10 in the emerging Local Plan serves no clear purpose by repeating other planning policy and the Examination into the revised Local Plan has not been completed.

94. Policy LAN6 does not meet the Basic Conditions.

- **M12 – Amend Policy LAN6 to delete “Proposed” and replace from “will” to “enhances” with “should maintain or enhance”**

Housing and Design

95. **Policy HOU1** – This identifies a range of design considerations to be addressed by new development in Pontesbury Village, including the Character of Pontesbury village statement.

96. The Policy is positively worded and there is evidence of community support for high quality design.

97. The Policy is limited to development in Pontesbury village despite the general title. This should be clarified by referencing the map showing the development boundary to provide necessary certainty to applicants.

98. The Policy references the “*Character of Pontesbury Village statement*”. No further information on this statement, its contents or where it can be located is provided. It is not available in the evidence base provided online. On request I was informed this was a reference to Parts 4 and 5 of the Plan which describes the built and landscape character of the area in relatively general terms and look beyond Pontesbury village. I recommend that the reference is deleted from the Policy and the analysis from elsewhere in the Plan is addressed in the supporting text.

99. I recommend some minor rewording of the detailed considerations to address syntax issues and confirm that all considerations apply. The final consideration relating to the naming of new developments is not a planning consideration.

100. Policy HOU1 does not meet the Basic Conditions.

- **M13 – Amend Policy HOU1 to:**
 - **Insert “in Pontesbury village” at the end of the title**

- **Replace “*New development in Pontesbury Village*” with “New development within the boundary of Pontesbury Village (Figure 4)”**
- **Delete “*as expressed in the Character of Pontesbury Village statement*”**
- **Replace the penultimate bullet with “Maintaining a village feel by breaking down larger scale development into distinct areas and including a focal point, such as a green, where appropriate”**
- **Insert “; and” at the end of the penultimate bullet**
- **Delete the final bullet**

101. **Policy HOU2** – This supports infill development in Pontesbury village which meets identified housing needs on sites for two to four homes.

102. The Policy is positively worded and enabling. There is some evidence of unmet housing needs although the Plan notes that the emerging Local Plan is expected to provide sufficient affordable homes. The Policy seeks to complement emerging Local Plan Policy DP1 addressing housing mix on sites of five or more dwellings. It is logical that the Policy should apply to all sites of four or fewer homes, including single dwellings, and this is appropriate given its positive drafting as it will not be unduly restrictive. The Policy should reference “homes” or “dwellings” as not all provision will be in the form of “houses”.

103. The Policy title is misleading in referencing affordable homes and failing to reference the Policy only applies to building within Pontesbury village. The need for development to be in conformity with other relevant planning policies duplicates existing policy and serves no clear purpose.

104. Policy HOU2 does not meet the Basic Conditions.

- **M14 – Amend Policy HOU2 to:**
 - **Change the title to “Meeting housing needs in Pontesbury village”**
 - **Replace “*between two and four houses*” with “four homes or fewer”**
 - **Insert “(Figure 4)” after “*boundary*”**
 - **Replace “*houses*” with “homes”**

- **Delete “and in conformity with other relevant policies”**

Movement and Transport

105. **Policy MOV1** – This supports development enhancing the Public Rights of Way network, including providing access in two specific locations.

106. The Policy is positively worded and enabling. The title does not relate well to the content of the Policy.

107. The relationship between the first and second parts of the Policy is unclear and the latter considerations should be bulleted or lettered to ensure consistency with other Plan policies. This requires some minor redrafting.

108. Two locations are specifically identified where access points would be desirable. These are identified in Figures 5 and 6 but neither Figure is clearly presented. It is not possible accurately to identify the location of either the dismantled bridleway or the relevant stretch of Thieves Lane (which extends well beyond the map). The broad indication of an “*Area of Development*” in both Figures serves no helpful purpose given its general nature and relevant development may come forward in other locations. On request I was provided with more suitable Figures. It is overly restrictive to state that such links “*must*” be provided.

109. Paragraph 18.5 relating to car parking does not belong in this section of the Plan.

110. Policy MOV1 does not meet the Basic Conditions.

- **M15 – Amend Policy MOV1 to:**
 - **Change the title to “Public Rights of Way and links”**
 - **Add “This includes proposals that:” after the first sentence and replace subsequent numbered points with bullets or letters**

- In first bullet replace *“Development should promote the protection and maintenance of”* with *“protect and maintain”*; delete *“but”*; and put commas before and after *“including mobility scooters”*
 - In second bullet replace *“Upgrading of”* with *“upgrade”*
 - In third bullet replace *“Developments in proximity of”* with *“provide access points for all forms of active traveller to”* and delete *“must include access points for all forums of active traveller to the right of way”*
 - In third bullet replace *“(e.g.”* with *“, including”*
- M16 - Replace Figures 5 and 6 with maps enabling the locations to be accurately identified
 - M17 – Delete or move paragraph 18.5

111. **Policy MOV2** – This supports development not increasing pressure for on-street parking and providing for electric vehicle charging in line with the Local Plan.

112. The Policy is supported by some evidence of community support but there is no evidence provided as to the parking issues faced by the neighbourhood area. The Policy is positively drafted and enabling. The second sentence could be more clearly drafted. The requirement that new development *“must”* maximise off-street parking is unduly restrictive and there is a lack of evidence supporting a need for off-street parking. The third part of the Policy serves no clear purpose as it duplicates Local Plan policy requirements.

113. Policy MOV2 does not meet the Basic Conditions.

- **M18 – Amend Policy MOV2 to:**
 - **Replace the second sentence of section 1 with “Proposals which involve loss of existing parking will be considered if equivalent alternative parking is provided.”**
 - **Delete section 3**

- **Replace section 4 with “Development which maximises off-street parking whilst bearing in mind the needs of high quality design will be supported.”**

Employment and Business

114. **Policy EMP1** – This provides a range of policy considerations for the development of small scale employment and farm diversification.

115. The Policy addresses a wide range of different types of employment related development which are characteristic of the area. The approach is positively worded and enabling and there is evidence of broad support from public consultation. The overall approach is to require all such development to respect local character and there are instances where this is duplicated in the detailed policy considerations.

116. On request I was informed of the support of the landowner for an expansion of Malehurst Industrial Estate and provided with a map showing the potential area. This is helpful context but the lack of evidence for how the boundary of the potential expansion area has been defined and its omission from the submitted Plan and the opportunities for consultation mean it is not appropriate to be included.

117. The purpose of the illustration on page 41 (incorrectly referenced as page 36 in the Policy) is unclear. It includes references to generic approaches to environmental enhancement that does not add clarity to the Policy.

118. There is no evidence supporting a threshold of 10 pitches above which support for glamping, camping or touring caravans will not be provided. It is therefore appropriate only to reference the impact of such activity without defining a threshold. The second part of this policy relating to multiple sites is negatively worded.

119. There is support for the reuse of redundant or disused buildings “*of sufficient character*” without any definition as to how this might be determined. Given the intention is to retain the buildings it is appropriate to reference buildings of a character worthy of retention.

120. In the absence of any further detail or reference the Shropshire Farmsteads Characterisation Project should be addressed in the supporting text and a reference and, ideally, link provided.

121. It is unclear whether the reference in the final section to being adapted to climate change refers to proposals for new small scale businesses or their accompanying renewable energy schemes. The latter are also a climate change mitigation and not adaptation measure.

122. Policy EMP1 does not meet the Basic Conditions.

- **M19 – Amend Policy EMP1 to:**
 - **In section 2 delete the second sentence**
 - **In section 3 replace “*exceed 10 pitches*” with “*significant adverse impacts*” and “*will not be supported*” with “*should demonstrate that they do not have significant adverse impacts*”**
 - **In section 5 insert “to warrant retention” after “*character*”**
 - **In section 6 delete the second sentence and include details of the Shropshire Farmsteads Characterisation Project in the supporting text**
 - **Replace section 7 with “Development for new small scale business that are well adapted to the impacts of climate change and include renewable energy schemes”**

Green Environment

123. **Policy GRE1** – This designates eight Local Green Spaces.

124. The Policy is supported by Figure 7 summarising each of the proposed Local Green Spaces and Appendix C providing a large scale map defining their boundaries. The locations have been identified through community engagement on the Plan. On request I was informed that the landowners have been consulted and no objections have been raised.

125. The assessment of each of the proposed Local Green Spaces in terms of the criteria provided in paragraph 102 (incorrectly referenced as paragraph 101 in the Plan) of the National Planning Policy Framework is at a basic level and barely sufficient to support the Policy. I visited each of the proposed Local Green Spaces during my visit and made my own assessment which broadly agrees with that provided in Figure 7. There have been some changes since the assessment was completed, including the closure of Cruckton Hall School and the opening of Fitzroy Academy on the same site at LGS8. With LGS7 there would be logic in extending the area to the south east to include the green space west of Church House which is contiguous and performs the same function as the area proposed but I was informed it had not been possible to contact the owner and so the site was omitted. This could be addressed in a future review of the Plan.

126. The detailed boundaries are not accurately presented in the polygons provided in Appendix C and this needs to be improved to provide a more precise alignment. It would also be preferable for all the maps to be provided at the same scale. Other recommended changes are:

- LGS2 – remove the area of the road running N/S through the area from the area of Local Green Space and extend the area in the south west to remove the arbitrary boundary and include the additional area bounded by the red line

- LGS4 – reference the area of woodland in Figure 7

- LGS7 – remove the roads from the area of Local Green Space

127. There is some inconsistency in the names used in the Policy, Figure 7 and Appendix C for LGS1, LGS2, LGS4, LGS5 and LGS8. Appendix C does not include the LGS identification number for each of the locations.

128. To be afforded a level of protection consistent with them being Green Belt, Local Green Spaces need only be designated by the Plan. This follows a Court of Appeal case relating to a Local Green Space policy in a neighbourhood plan (Lochailort Investments Limited v. Mendip District Council and Norton St Philip Parish Council, [2020] EWCA Civ 1259) which means it is inappropriate without clear justification to include any wording that sets out how development proposals should be managed. The reference to how parking proposals on LGS2 will be considered is similarly not appropriate as any such proposals will be considered in accordance with Policy GRE1 and other development plan policies.

129. The purpose of the map of open space availability in Appendix D is unclear. It is poorly presented and incorrectly referenced in paragraph 20.7.

130. Policy GRE1 does not meet the Basic Conditions.

- **M20 – Amend Policy GRE1 to:**
 - **Delete “*where new development is ruled out except in very special circumstances*”**
 - **Use consistent names throughout the Plan, including a reference to Fitzroy Academy in relation to LGS8**
- **M21 – Amend the supporting text and evidence to:**
 - Be more precise in depicting the precise boundary of each Local Green Space on the maps
 - Amend the boundary of LGS2 and LGS8 as indicated
 - Update references to LGS4 and LGS8 as indicated
 - Identify each map in Appendix C with the relevant LGS reference number

- Delete paragraph 20.5
- Delete Appendix D and paragraph 20.7

131. **Policy GRE2** – This supports development which benefits biodiversity and identifies a range of policy considerations.

132. The Policy is supported by some evidence as to the significance of the area for biodiversity although Figure 8 only shows protected species sites already addressed in Local Plan policy.

133. The Policy is not worded positively with development only being “*considered*”.

134. The Policy expects development to demonstrate 10% net gain for biodiversity. This anticipates implementation of measures on biodiversity net gain only recently introduced into law but not yet in force and with important details on how it will apply to different levels and types of development still being finalised. The issue is also addressed in emerging Local Plan Policy DP12. It is not appropriate to limit consideration of sites suitable for contributing to net gain to the parish council which is not a decision making body.

135. There is no evidence supporting a need for replacing trees at a 2:1 as opposed to any other ratio. No link is provided to the local Nature Recovery Network. Examples such as bat boxes should be provided in the supporting text.

136. Policy GRE2 does not meet the Basic Conditions.

- **M22 – Amend Policy GRE2 to:**
 - **Replace the first two sentences with “Proposed development that protects and enhances local wildlife species and habitat and contributes to on-site net gain will be supported.”**
 - **In section 3 replace “ratio of 2:1” with “a positive ratio”**
 - **In section 4 move the examples to the supporting text**

- In section 5 delete *“specified by the Parish Council”* and provide a reference/link to the Local Recovery Network
- In section 6 delete *“Implement”*

137. **Policy GRE3** – This supports development which minimises pollution and contributes to a low carbon economy.

138. The Policy addresses a range of considerations and is not consistent in the way it addresses both general pollution and the desire to support a transition to a zero-carbon economy. *“Minimising light pollution”* is one example that has little bearing on carbon ambitions. Ambitions for a zero carbon economy also goes beyond the scope of current policy and is distinct from the national net zero policy objective. There are also overlaps with Policy GRE4 focused on carbon reduction and to provide necessary clarity I recommend that Policy GRE3 addresses pollution considerations more generally.

139. On the detailed policy drafting there is a lack of clarity as to what is an *“acceptable place”* in relation to the A488.

140. Policy GRE3 does not meet the Basic Conditions.

- **M23 – Amend Policy GRE3 to:**
 - Replace the first two lines with **“Development proposals should minimise pollution by:”**
 - In section 1 deleting *“in an acceptable place in relation to the A488”* and adding **“, including from the A488”** at the end

141. **Policy GRE4** – The Policy provides a range of policy considerations relating to carbon reduction and renewable energy production.

142. The overall approach conflates different issues with the two of the three sections relating to renewable energy. I recommend this issue is considered as a separate Policy.

143. The first part of the carbon reduction policy overlaps with other provisions, including Building Regulations. These address the thermal efficiency of building materials and compliance with construction and other standards. National planning policy is that “*any local requirements for the sustainability of buildings should reflect the Government’s policy for national technical standards*” (NPPF, paragraph 154) and the Plan can support but not require development to deliver higher voluntary standards. The second part includes a superfluous reference to avoiding fossil fuels. The third part includes a confused reference to setting out a minimum percentage of energy provision from on-site renewables and low carbon sources. Such a percentage would need to be set out in planning policy and not determined during development management.

144. Policy GRE4 does not meet the Basic Conditions.

145. The approach to community renewables is positive and enabling. The Policy would be supported by further definition of community renewables, such as by referencing the Government guidance (<https://www.gov.uk/guidance/community-energy>).

- **M24 – Amend Policy GRE4 to:**
 - **Replace the first four lines with “Development proposals which support the transition to net zero will be supported, including where appropriate the following measures:”**
 - **Replace section a. with “Energy efficiency standards that exceed national technical standards”**
 - **End section b. at “PV” and delete remainder**
 - **End section c. at “sources” and delete remainder**
- **M25 – Insert a new Policy “GRE5 Community Renewables” comprising the second two parts of Policy GRE4 in the submitted Plan**
- OM4 – [Provide further information on the definition of community renewables in the supporting text]

8. Recommendation and Referendum Area

146. I am satisfied the Pontesbury Neighbourhood Plan meets the Basic Conditions and other requirements subject to the modifications recommended in this report and that it can proceed to a referendum. I have received no information to suggest other than that I recommend the referendum area matches that of the Neighbourhood Area.

Committee and Date

Item

Cabinet 19th July 2023

Public

Ironbridge Gorge World Heritage Site Supplementary Planning Document - Adoption

Responsible Officer:	Mark Barrow		
email:	mark.barrow@shropshire.gov.uk	Tel:	01743 258919
Cabinet Member (Portfolio Holder):	Richard Marshall, Portfolio Holder for Highways and Regulatory Services		

1. Synopsis

- 1.1. Report seeking approval to adopt the Ironbridge Gorge World Heritage Site Supplementary Planning Document, to provide guidance on application of Local Plan policies and form a material consideration in the planning application process.

2. Executive Summary

- 2.1. The Shropshire Plan includes the strategic objective: *“maintain, protect, and enhance our outstanding natural and historic environment...”* and specifies that one mechanism for achieving this objective is *“providing high quality advice that promotes excellent management, care, and enhancement of Shropshire’s rich and highly varied natural and historic environment.”*
- 2.2. Provision of guidance on the application of Local Plan policies within the Ironbridge Gorge World Heritage Site (Ironbridge Gorge WHS) and its setting within a Supplementary Planning Document (SPD) and use of this SPD as a material consideration in the planning application process are ways in which the Council can provide high quality advice on the historic environment.
- 2.3. World Heritage Sites (WHS’s) are internationally important heritage assets that receive the highest level of heritage protection in the planning process. Their inscription (or designation) is carried out by the United Nations Educational, Scientific and Cultural Organisation (UNESCO). There are currently 20 WHS’s in England.

- 2.4. The Ironbridge Gorge WHS covers 550ha, of which 131ha (around 23%) falls within Shropshire Council's administrative area. The remainder is in Telford & Wrekin Council's administrative area. The Ironbridge Gorge WHS was inscribed in 1986 in recognition of its international importance as set out in its statement of Outstanding Universal Value (OUV).
- 2.5. An SPD adds further detail and guidance on the implementation of policies in the Council's Local Plan and can form a material consideration in planning decisions – but importantly does not itself form part of the Local Plan.
- 2.6. The Ironbridge Gorge WHS SPD is intended to provide guidance on the application of policies within adopted and emerging Local Plan's in Shropshire and Telford & Wrekin respectively. It is aimed at those considering development proposals and preparing planning applications within the Ironbridge Gorge WHS and its setting, providing guidance on how they can conserve and enhance the Ironbridge Gorge WHS. It would also be used by Shropshire Council and Telford and Wrekin Council in the determination of planning applications within the WHS and its setting.
- 2.7. SPD's are generally prepared in 3 stages: drafting; public consultation; review and adoption. The Ironbridge Gorge WHS SPD is at the third stage in this process.
- Shropshire Council worked jointly with Telford and Wrekin Council to prepare a draft Ironbridge Gorge WHS SPD.
 - Following approval by respective Cabinet's, the two Council's undertook a joint public consultation on the draft Ironbridge Gorge WHS SPD between the 9th January 2023 and the 20th February 2023. This consultation was consistent with Shropshire Council's Statement of Community Involvement. A total of 26 responses were received from local residents, interested individuals, interest groups, organisations, and statutory consultees. A summary of the consultation and responses received is provided as Appendix 1 of this report.
 - Officers from Shropshire Council and Telford & Wrekin Council have reviewed these responses and where appropriate identified amendments to the draft Ironbridge Gorge WHS SPD. This final draft Ironbridge Gorge WHS SPD is provided as Appendix 2 of this report.
- 2.8. The purpose of this report in accordance with the Town and Country Planning (Local Planning) (England) Regulations (2012) (as amended) is to seek approval to adopt the Ironbridge Gorge WHS SPD (Appendix 2) to provide guidance on application of Local Plan policies and form a material consideration in the planning application process.
- 2.9. Once adopted, the SPD would form part of a suite of documents, including the Local Plan and WHS Management Plan, that set out how the WHS can be protected and positively managed.
- 2.10. The SPD would also contribute to the achievement of the Shropshire Plan, particularly the Healthy Environment priority, by contributing to the maintenance, protection and enhancement of our outstanding natural and historic environment.
- 2.11. Telford and Wrekin Council's Cabinet on 13th July 2023 will, have considered a report seeking approval to adopt the Ironbridge Gorge WHS SPD within their administrative area. Adoption of the Ironbridge Gorge WHS SPD as a material consideration in the

planning application process within the Telford & Wrekin Council administrative area is subject to this decision. A verbal briefing of the decision by Telford & Wrekin Council's Cabinet regarding the adoption of the Ironbridge Gorge WHS SPD can be provided to Cabinet on the 19th July 2023.

3. Recommendations

- 3.1. In accordance with the Town and Country Planning (Local Planning) (England) Regulations (2012) (as amended), approve the adoption of the Ironbridge Gorge World Heritage Site Supplementary Planning Document (Appendix 2) to provide guidance on application of Local Plan policies and form a material consideration in the planning application process.

Report

4. Risk Assessment and Opportunities Appraisal

- 4.1. The Town and Country Planning (Local Planning) (England) Regulations (2012) (as amended) set out the requirements for SPD's which must be complied with. It is considered that the Ironbridge Gorge WHS SPD and the process undertaken in its preparation is consistent with these requirements.
- 4.2. Shropshire Council's Statement of Community Involvement specifies the requirements for preparing and consulting upon SPD's in Shropshire and should be complied with. It is also considered that the Ironbridge Gorge WHS SPD and the process undertaken in its preparation is consistent with these requirements.
- 4.3. There are a number of potential risks to the OUV of the Ironbridge Gorge WHS that the SPD will help address. These include:
- *Development proposals that are poorly designed risking the character of the area* – the SPD will provide guidance tailored to the WHS for residents and businesses intending to submit planning applications.
 - *Increased risk of flooding events and the need to balance the protection of property and life with the heritage of the area* – the SPD will help provide planning guidance for particular issues such as property level flood defences.
 - *The need to conserve and maintain heritage assets whilst encouraging sustainable, low carbon development* – guidance in the SPD will help support appropriate 'climate ready' development such as renewable energy and electric vehicle infrastructure.
 - *Minimising potentially negative impacts, associated with a successful visitor economy* – the SPD will provide planning guidance on infrastructure and commercial developments.
- 4.4. UNESCO have removed WHS status from sites where they feel the OUV is threatened or has been harmed. Not bringing forward the SPD could adversely impact the heritage significance of the Ironbridge Gorge area and risk its status as a WHS. In preparing an SPD, the Council are taking a proactive approach, in partnership with Telford and Wrekin Council, to plan positively for the WHS and ensure that the risks are minimised.

- 4.5. A further Stage One screening Equality, Social Inclusion and Health Impact Assessment (ESHIA) has been completed for the final draft Ironbridge Gorge WHS SPD following the period of public consultation. This is provided at Appendix 3.
- 4.6. It is anticipated that the equality impacts will be neutral to low positive across the nine Protected Characteristic groupings defined by the Equality Act 2010. There is potential for positive equality impact for the groupings of Age, Disability, Pregnancy and Maternity, and Sex, in terms of mental well-being opportunities arising for people in these groupings to feel safer on their journeys for education, work or leisure. This is particularly so for families with young children, wheelchair users, and older people who may consider themselves to be vulnerable and less likely to venture out without clear signage and lighting, and pavements that can be navigated safely by them and their carers.
- 4.7. An additional grouping for whom there may be positive impacts are people with less visible disabilities or conditions, including people with neurodiverse conditions, and for people with visual impairments. For example, a cluttered space can cause overstimulation for some people with autism, and many autistic people need space around them, which means that narrow passageways can cause stress. Additionally, sensitive use of appropriate lighting such as minimal use of fluorescent lighting, as well as clear signage, will be anticipated to provide further benefits for people with neurodiverse conditions and for others including those with visual impairments.
- 4.8. Both the adopted Local Plan and the draft Shropshire Local Plan include a series of indicators that are utilised to monitor effects. It is considered that these indicators will assist with understanding the effects of the Ironbridge Gorge WHS SPD upon people in the nine Protected Characteristic groupings as defined by the Equality Act 2010, with additional recognition of the intersectionality between groupings and for people in a range of household circumstances, considered in our tenth grouping around social inclusion. This then includes people in rural households, people in low income households, and those that we may consider to be vulnerable.
- 4.9. The Council will draw upon the learning from pedestrianisation efforts in market towns in Shropshire, which are building upon Covid-19 measures that led to improved physical access around towns by people in Protected Characteristic groupings and those we may describe as vulnerable. The Council will also draw upon strategic policy around public transport infrastructure including Active Travel, and best alignment with economic growth strategy development and with implementation of cultural and leisure strategy actions. These strategies all very much include efforts to promote social inclusion and in so doing achieve equality of opportunity for people in Protected Characteristic groupings to safely access economic, leisure and cultural opportunities in market towns.
- 4.10. From a health and well-being perspective, it is anticipated that the SPD will encourage the submission of well-designed development and infrastructure schemes that protect the OUV of the WHS whilst also encouraging the use of public transport and active travel. This can be maximised through efforts to ensure that there are accessible routes within, to and around the WHS which will be perceived as safe by pedestrians and cyclists, e.g: use of lighting, as well as clear signage, and that green infrastructure is maintained and enhanced whenever possible. There are additional positive impacts in terms of the recognised positive mental well-being that may accrue from employment, leisure, and cultural opportunities.

5. Financial Implications

- 5.1. The value of the Ironbridge Gorge WHS designation has helped the area maintain a strong visitor economy, promoted Shropshire as a place to visit, live, work, and invest and has helped secure investment into ground stabilisation works and conservation projects in the WHS area.
- 5.2. The Ironbridge Gorge WHS SPD would assist the Council in continuing to make the most effective use of its resources and support the efficient delivery of the development management process.
- 5.3. The cost of the adoption and implementation of the SPD will be met from existing resources and budgets.

6. Climate Change Appraisal

- 6.1. The Ironbridge Gorge WHS SPD seeks to promote sustainable development that conserves and enhances the OUV of the Ironbridge Gorge WHS (which include the woodlands and geological resources of the gorge).
- 6.2. The Ironbridge Gorge WHS SPD includes guidance on renewable energy, energy efficiency, and resilience and adaptation measures that seek to balance development with the need to reduce the impacts of climate change. It is therefore considered that the SPD is expected to have a positive outcome on the climate change impacts listed:
 - Energy and fuel consumption (buildings and/or travel) though the provision of guidance on appropriate alterations to existing buildings within the Ironbridge Gorge WHS to improve thermal and energy efficiency and guidance on the design of new buildings within the Ironbridge Gorge WHS.
 - Renewable energy generation though the provision of guidance on appropriate renewable energy technologies to integrate into existing buildings within the Ironbridge Gorge WHS.
 - Carbon offsetting or mitigation including through the aforementioned guidance on energy efficiency and appropriate renewable technologies of existing buildings, the design of new buildings within the Ironbridge Gorge WHS, and the contribution to the positive management of woodland and other habitats within the Ironbridge Gorge.
 - Climate change adaptation including through the provision of guidance on flood risk management for new and existing buildings within the Ironbridge Gorge WHS.

7. Background

World Heritage Sites

- 7.1. WHS's are internationally important heritage assets that are inscribed (or designated) by UNESCO due to their OUV. OUV means '*cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations of all humanity. As such, the permanent protection of this heritage is of the highest importance to the international community as a whole.*' (National Planning Practice Guidance on the Historic Environment).

The Ironbridge Gorge World Heritage Site

- 7.2. The Ironbridge Gorge WHS was inscribed by UNESCO in 1986. It covers 550ha, of which 131ha (around 23%) falls within Shropshire Council's administrative area. The remainder is in Telford & Wrekin Council's administrative area.
- 7.3. The Ironbridge Gorge WHS Management Plan includes a brief summary of its OUV which states: *'The Ironbridge Gorge provided the raw materials that revolutionised industrial processes and offers a powerful insight into the origins of the Industrial Revolution. It contains extensive evidence and remains of that period when the area was the focus of international attention from artists, engineers, and writers. The site contains substantial remains of mines, pit mounds, spoil heaps, foundries, factories, workshops, warehouses, iron masters' and workers' housing, public buildings, infrastructure, and transport systems, together with traditional landscape and forests of the Severn Gorge. In addition, there also remain extensive collections of artefacts and archives relating to the individuals, processes and products that made the area so important.'*
- 7.4. The Ironbridge Gorge WHS is also a Conservation Area (cross-boundary between Shropshire and Telford and Wrekin Council administrative areas) and enjoys additional protection under that designation. It also contains a significant number of other designated heritage assets - not least the Iron Bridge itself which is one of 7 Scheduled Monuments. It also contains 375 listed buildings, many buildings of local interest, and 10 internationally significant museums.

Planning context

- 7.5. The National Planning Policy Framework (NPPF) considers WHS's to be designated heritage assets of the highest significance. Any harm to or loss of significance to a WHS should require convincing justification. Substantial harm or loss should be wholly exceptional. This applies equally to development in the setting of a WHS which is likely to affect its OUV. NPPF defines 'setting' as *'the surroundings in which a heritage asset is experienced'*.
- 7.6. The Council has the power to introduce SPD's under the Town and Country Planning (Local Planning) (England) Regulations (2012) (as amended). There are 3 stages in the preparation of an SPD:
1. Drafting.
 2. Public consultation on a draft document.
 3. Adoption by a Local Authority once responses to the public consultation have been reviewed and any amendments arising from it have been made.
- 7.7. Stage 1: Shropshire Council worked jointly with Telford & Wrekin Council to prepare a Draft Ironbridge Gorge SPD. The Shropshire Local Plan Member Group (including the relevant Local Members) provided oversight and comment on the SPD in the final stages of drafting.
- 7.8. Stage 2: Following approval by respective Cabinet's, the two Council's undertook a joint public consultation on the draft Ironbridge Gorge WHS SPD between the 9th January 2023 and the 20th February 2023. This consultation was consistent with Shropshire Council's Statement of Community Involvement. A total of 26 responses were received from local residents, interested individuals, interest groups, organisations, and statutory consultees. A summary of the consultation and responses received is provided as Appendix 1 of this report.

- 7.9. Stage 3: Officers from Shropshire Council and Telford & Wrekin Council have reviewed these responses and where appropriate identified amendments to the draft Ironbridge Gorge WHS SPD. The consultation responses received and proposed approach to these responses including appropriate amendments were discussed with the Shropshire Local Plan Member Group (including the relevant Local Members), which provided oversight and comment on the SPD. This final draft Ironbridge Gorge WHS SPD is provided as Appendix 2 of this report.
- 7.10. The purpose of this report in accordance with the Town and Country Planning (Local Planning) (England) Regulations (2012) (as amended) is to seek approval to adopt the Ironbridge Gorge WHS SPD (Appendix 2) to provide guidance on application of Local Plan policies and form a material consideration in the planning application process.
- 7.11. SPD's provide guidance and information to support the implementation of a policy/policies in the adopted Local Plan. However, they must be consistent with policies of the adopted Local Plan, cannot introduce new policy, and do not form part of the Local Plan. An SPD can be a material consideration in the development management process.
- 7.12. The adopted Local Plan for Shropshire consists of the Shropshire Core Strategy (2011), the Site Allocations and Management of Development (SAMDev) Plan (2015) and any adopted formal Neighbourhood Plans. Planning applications should be determined in accordance with the adopted Local Plan unless material considerations indicate otherwise.
- 7.13. This adopted Local Plan provides a robust set of planning policies for conserving the OUV of the Ironbridge Gorge WHS, the most relevant of which include: Core Strategy policies CS3: Market Towns and Other Key Centres, CS6: Sustainable Design and Development Principles, CS16: Tourism, Culture and Leisure, and CS17: Environmental Networks; and SAMDev Plan policies S4: Broseley, MD2: Sustainable Design, MD12: Natural Environment, and MD13: Historic Environment.
- 7.14. The Ironbridge Gorge WHS SPD would provide guidance and information to support the implementation of these policies, particularly policies CS6 of the Core Strategy (Sustainable Design and Development Principles) and MD13 (Historic Environment) of SAMDev Plan.
- 7.15. The Council is at an advanced stage of a Local Plan Review (with a draft Local Plan currently the subject of examination). It is therefore important to consider the updated policies that are relevant to the Ironbridge Gorge WHS. These include the following: SP1: The Shropshire Test, SP5: High Quality Design, SP14: Strategic Corridors, DP23: Conserving and Enhancing the Historic Environment, S4: Broseley Place Plan Area and S20: Former Ironbridge Power Station Strategic Settlement.
- 7.16. The Ironbridge Gorge WHS SPD would provide guidance and information to support the implementation of these policies, particularly policy DP23.
- 7.17. Once adopted, the SPD would form part of a suite of documents, including the Local Plan and WHS Management Plan, that set out how the WHS can be protected and positively managed.

The Shropshire Plan

- 7.18. The Shropshire Plan includes the strategic objective: “*maintain, protect, and enhance our outstanding natural and historic environment...*” and specifies that one mechanism for achieving this objective is “*providing high quality advice that promotes excellent management, care, and enhancement of Shropshire’s rich and highly varied natural and historic environment.*”
- 7.19. Provision of guidance on the application of Local Plan policies within the Ironbridge Gorge WHS and its setting within a SPD and use of this SPD as a material consideration in the planning application process are ways in which the Council can provide high quality advice on the historic environment.

8. Additional Information

How the SPD would be used

- 8.1. The aim of the Ironbridge Gorge WHS SPD is to provide guidance and information to support the implementation of policies in the adopted Local Plan and in the future the draft Shropshire Local Plan.
- 8.2. It will provide residents, businesses, and other organisations with information on how relevant planning proposals within the WHS and its setting can conserve and enhance the OUV of the Ironbridge Gorge WHS when they are considering preparing a planning application. This includes planning applications relating to:
- Alterations, extensions, and refurbishment of existing residential and commercial properties.
 - Change of use from one development type to another.
 - New residential and employment development proposals.
 - Applications relating to renewable energy.
- 8.3. Once adopted, the SPD would be used by Shropshire Council when determining planning applications within the WHS and its setting within the Council’s administrative area. Assuming it is also adopted by Telford and Wrekin Council, it would be used for the same purpose in their administrative area.

9. Conclusions

- 9.1. An SPD for the Ironbridge Gorge WHS would provide guidance and information to support the implementation of policies in the adopted Local Plan and in the future the draft Shropshire Local Plan, which will in turn strengthen the way the planning system conserves and enhances this internationally designated area’s historic significance.
- 9.2. Provision of guidance on the application of Local Plan policies within the Ironbridge Gorge WHS and its setting within a SPD and use of this SPD as a material consideration in the planning application process are ways in which the Council can provide high quality advice on the historic environment, thereby contributing to the achievement of the objectives of the Shropshire Plan.
- 9.3. The SPD would provide clear and consistent advice across both Shropshire and Telford and Wrekin’s administrative areas. It would assist residents and businesses in the submission of relevant planning applications, and both Councils when determining relevant planning applications. This will add to the positive management of the Ironbridge Gorge WHS and provide greater surety on outcomes for planning applicants and local communities.

Ironbridge Gorge World Heritage Site Supplementary Planning Document Consultation Statement

July 2023

Introduction

The Ironbridge Gorge World Heritage Site (referred to as the 'IGWHS' or the 'Site' throughout this document) is an extraordinarily important place, and was designated in 1986, as one of the United Kingdom's first World Heritage Sites by the United Nations, Educational, Scientific and Cultural Organisation (UNESCO). This was in recognition of its leading role in the Industrial Revolution and the unique landscape that provided the raw materials.

The overarching aim of this SPD is to provide guidance for the application of policies within Telford & Wrekin and Shropshire Council's current and emerging Local Plans in order to support the protection and enhancement of the Outstanding Universal Value of the IGWHS, support the prevention of loss through deterioration and disappearance of its heritage value, and provide a consistent set of guidelines to help businesses and residents play their part in maintaining what makes the IGWHS so universally special.

Purpose of this Consultation Statement

This Consultation Statement has been prepared in accordance with Regulation 12(a) of the Town and Country Planning (Local Planning) (England) Regulations 2012.

It sets out the following for the public consultation on the draft SPD:

- The persons the local planning authority consulted when preparing the supplementary planning document
- A summary of the main issues raised by those persons
- How those issues have been addressed in the supplementary planning document

Public Consultation

Telford & Wrekin and Shropshire Council consulted on a draft Supplementary Planning Document which aims to protect and conserve the Outstanding Universal Value of the Ironbridge Gorge World Heritage Site (IGWHS). The consultation took place for a total of 6 weeks between **Monday 9th January and Monday 20th February 2023**. A number of methods were used to seek responses as follows:

- **Emails and Letters:** information was sent out to hundreds of individuals and organisations on the Telford & Wrekin Council and Shropshire Council database, including specific and general consultation bodies and councillors. A copy of the letter sent out to consultees for both Councils is shown in **Appendix 2**.
- **Website:** the IGWHS SPD was published on both Telford & Wrekin Councils website (https://www.telford.gov.uk/info/20451/development_plans/128/supplementary_planning_documents_spds/2) and Shropshire Councils website (<https://www.shropshire.gov.uk/get-involved/draft-ironbridge-gorge-world-heritage-site-supplementary-planning-document/>) as well as being held on the Ironbridge Gorge World Heritage Site website (<https://www.ironbridgegorgewhs.co.uk/site/index.php>)
- **Physical copies:** the SPD was also made available physical at several locations within the WHS boundary.
- **Press Release:** on the day of the consultation starting, both Telford & Wrekin Council and Shropshire Council published a joint press release on their respective websites, this was then also covered on Shropshire Live.

Public Drop In Sessions

In addition to the above six public drop in sessions were held throughout the IGWHS to allow the public to view the document and learn more about the document with experts from Telford & Wrekin and Shropshire Councils available to speak to.

Each session was held over a 3 hour period and were held at the following locations:

- **Jackfield Village Hall**
- **Furnace Kitchen, Coalbrookdale**
- **Coalport Village Hall**
- **Anstice Ballroom, Madeley**
- **Buildwas Village Hall**
- **Tontine Hotel, Ironbridge**

The locations of these drop in sessions were advertised on posters at each of the venues, as well being detailed on both Council's websites as well as the Ironbridge Gorge World Heritage Site website.

Materials taken to each of the public drop in sessions were as follows:

- Presentation detailing information included within the SPD (on a timer and repeat)
- Map Graphics including:
 - IGWHS Boundary.
 - IGWHS Boundary with additional boundaries of both Telford & Wrekin and Shropshire Councils administrative areas, detailing what parts of the IGWHS fall within each Councils administrative area.
 - Severn Gorge Conservation Area Boundary.
 - Locations of Listed Building and Scheduled Monuments within the IGWHS.
- Contact details and response forms (box to submit comments) for those looking to formally comment.
- Physical Copies of the IGWHS SPD for people to read.
- Fliers advertising how to respond to the consultation online.
- Information Boards:
 - Summary of why we were undertaking the public drop in sessions.
 - How to respond to the consultation.
 - Main Topics covered within the SPD.

In total approximately 131 people attended the six drop in sessions, outlined below are the subjects raised during those sessions:

- The purpose of the SPD?
- What the split of the WHS was between Shropshire and Telford & Wrekin Council administrative areas?
- Did the Councils work together on creating the document?
- What alterations and other works people can undertake on their homes within the IGWHS? (particularly windows / uPVC options and renewable energy / electric vehicle charging points)
- How does the SPD impact current development?
- Can the SPD provide further protection for woodland?
- What does the SPD say about setting?
- How can the SPD impact the effects of tourism, particular short term lets?
- What the SPD addresses with regard to design?

- What is happening with the Severn Gorge Conservation Area Boundary?
- How does the SPD tackle electric vehicle charging and methods of renewable energy (particularly solar)?

Timeline of Events during the Public Consultation

Set out below is a timeline of events leading up to the start of the public consultation through to its conclusion.

Date	Action Taken
13 th Dec	Cabinet was held for Shropshire Council
14 th Dec	Cabinet was held for Telford & Wrekin Council The SPD document was approved for consultation at both Council cabinet meetings. As such, officers scheduled a meeting for early in the new year to prepare consultation material.
3 rd January	Officers of both Telford & Wrekin Council and Shropshire Council undertook internal discussions regarding the approach to consultation to inform a joint discussion the following day.
4 th January	The overarching approach to the consultation was discussed and agreed by officers from Telford & Wrekin and Shropshire Council.
5 th and 6 th January	The more detailed requirements of the consultation were finalised, including specific content of webpages and dates for drop-in events.
9 th January	Consultation Began Consultation went live. Telford & Wrekin and Shropshire Councils were notified that the primary consultation response email address was experiencing an error. Telford & Wrekin and Shropshire Councils published a notification of this issue on their websites and as an interim measure advised respondents to submit any consultation responses using either Council's Planning Policy Email Address. This notification also confirmed that the document and supporting information was still available to view. Shropshire Live covered the consultation from the Press Releases issued on both Council websites.
10 th January	Issue experienced by the primary contact email address was resolved. Both Telford & Wrekin and Shropshire Council's websites amended in response. Telford & Wrekin and Shropshire Council's ensured that all notification correspondence had been issued.
12 th January	Telford & Wrekin and Shropshire Council officer meeting held to discuss the start of the consultation, as well materials required for the forthcoming public drop in sessions.
13 th January	Officers prepared materials for the first public drop in session. Officers commenced liaison with flooding services regarding the Jackfield event to ensure that it was safe and appropriate to undertake the event given ongoing weather conditions.
16 th January	Jackfield Village Hall contacted to confirm the drop in session was to go ahead as weather conditions and associated flooding were no longer considered an issue. Liaised with the Council's communication teams to confirm the drop in session was to go ahead and discuss how best to advertise the public drop in session(s).

17 th January	Telford & Wrekin and Shropshire Council officers prepared the majority of materials for the first public drop in session including display boards, fliers, materials such as pens etc.
18 th January	Drop in session materials were circulated amongst the Telford & Wrekin and Shropshire Council officer group to finalise.
19 th January	Finalised materials for drop in session. Officers from both Telford & Wrekin and Shropshire Council travelled to the first venue and undertook the session.
20 th January	Materials taken back to Council offices and physical copies taken to Madeley for the public to view.
23 rd January	Comments received to date were summarised in a consultation response summary document.
	Held second public drop in session.
24 th January	Notes on the second session prepared. Telford & Wrekin and Shropshire Council officers met to review drop-in sessions thus far and agree arrangements for subsequent sessions.
2 nd February	Third session took place.
8 th February	Notes on the third session prepared. Telford & Wrekin and Shropshire Council officers met to review drop-in sessions thus far and agree arrangements for subsequent sessions.
	Fourth session took place.
13 th February	Fifth session took place.
15 th February	Final officers meeting to discuss the public drop in sessions was held and attendees for final event was confirmed.
16 th February	Final session took place.
20 th February	Consultation ended

Consultation Responses

As mentioned, in total approximately 131 people attended the 6 public drop in sessions, in addition a total of 29 formal responses were received from local residents, interested individuals, interest groups, organisations, and statutory consultees. These statutory consultees, included:

- **Historic England**
- **ICOMOS UK**
- **The Environment Agency**

A summary of these responses and a joint response from Telford & Wrekin Council and Shropshire Council is shown in Appendix 1.

Conclusion

The production of the Ironbridge Gorge World Heritage Site Supplementary Planning Document has involved extensive preparation up to and during the public consultation. This consultation has directly influenced the final draft of the document which will now proceed to Cabinet at both Telford & Wrekin Council and Shropshire Council, with a recommendation that it be adopted to provide guidance on application of Local Plan policies and form a material consideration in the planning application process. It is therefore concluded that the process has complied with the relevant Government Regulations.

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
001	No Comment	General Comments	Canals and waterways contribute to the health and wellbeing of communities and economies. They also represent historic, natural and cultural assets. Based on information available the substantive is no comment needed.	Noted.
002	Observations	General Comments	Figure 7 of the draft SPD indicates that the boundary of the Severn Gorge Conservation Area does not include areas within Shropshire, however para 5.65 suggests that it does and that the areas within Shropshire are shaded pink. There is no reference to Broseley Conservation Area, such a reference/statement should be included. The geology and potential for further landslips needs to be recognised. Welcome the document but it does not appear to effectively integrate the two administrative areas.	Figure 7 will be updated to appropriately reflect the reference to the shaded pink area (as seen in Figure 6). The 'box' following paragraph 3.5 of the draft IGWHS SPD includes an explanation of the relationship between Broseley and the IGWHS. For clarity a reference to the Broseley Conservation Area will be integrated into the relevant paragraph. Annex 2 Guidance for Development in the IGWHS includes a specific section on the geology, geomorphology and topography of the IGWHS and the implications for ground instability. Telford & Wrekin Council and Shropshire Council have worked collaboratively and proactively on the preparation of the draft IGWHS SPD and it is considered it appropriately reflects the current and emerging planning context and the characteristics of the two Local Planning Authorities and the extent and components of the IGWHS within each Planning Authority.
Page 344 003	Observations	Part 3: Description of the World Heritage Site Para 3.8	Para 3.8 - The setting of the IGWHS is ruined by excessive fossil fuel traffic. Para 3.4 - Ignores sustainable / active travel routes NCR45 and NCR55. No plan to improve, maintain or promote them. Para 3.4 - The area North of the Iron Bridge suffers greatly from excessive motorcycle parking sometimes to the extent of preventing easy pedestrian movement. Reference to T&W Sustainable Transport Action Plan Consultation. Reference to Shropshire Council Climate Action - Transport Document. Reference to the WHC-15/20.GA/INF.13. The draft SPD fails to protect or enhance the IGWHS's Outstanding Universal Value.	Comment on Para 3.8 noted. However impacts on the setting of the WHS are taken into account throughout the document. More specifically guidance for development affecting the setting is covered within Annex 2 under section 10.6. Para 3.4 provides a description of the boundary of the WHS, considered relevant settlements, proportion of land falling with both Council areas, and its historic assets. The draft IGWHS SPD also includes specific guidance on electric vehicle charging point provision - both domestic and within public car parks. The draft IGWHS also provides guidance on the maintenance and enhancement of highway infrastructure and recognises the role of park and ride opportunities and public transport. Specific reference will be included to Climate Change Action Plans within the Policy Documents section and a specific reference will be added to active travel within Annex 2 of the document. The IGWHS Draft SPD identifies the opportunity to develop multi-disciplinary Local Authority working groups to coordinate issues such as highway improvements and public transport provision.
004	Observations	General Comments	It is important to have sustainable means for visitors travelling to the site. Thought needs to be given to mitigating the environmental effects of future residents of the Former Ironbridge Power Station travelling to and from the IGWHS - increasing demand for transport. Bringing the railway back into use is a large part of the answer. Consider there is a good case for government assistance under the 'restore your railway' initiative. A light rail demonstration is ongoing and it would be a missed opportunity not to explore the potential for re-opening the railway line.	The draft IGWHS SPD includes specific guidance relating to the setting of the IGWHS. The draft IGWHS also provides guidance on the maintenance and enhancement of highway infrastructure and recognises the role of park and ride opportunities and public transport. The Former Ironbridge Power Station site is not located within the IGWHS, however proposed site guidelines for this site within the draft Shropshire Local Plan include provision of appropriate pedestrian and cycle links to and through the site; provision of necessary highway improvements to the local and strategic road network. The provision of rail services to the site is also being actively investigated.

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
005	Support	General Comments Page 120	'Highways' include PRoW in the vicinity. Support maintenance and repair of surfaces in a way that is in-keeping with the heritage and character of the area. May be paths within the IGWHS with unrecorded or under recorded rights. These are arguably heritage assets (considering the significance of horse power in historic industry) and determining their correct status may improve the infrastructure and accessibility for vulnerable road users, including equestrians, and mitigate pressure on the road network by providing more sustainable travel and leisure options.	The draft IGWHS provides guidance on the maintenance and enhancement of highway infrastructure and recognises the role of park and ride opportunities and public transport. However, a specific reference will be added to active travel within Annex 2 of the document.
006	No comment	General Comments	No comment. Welcome inclusion in any following communications regarding the SPD and associated consultations.	Noted.
007	No comment	General Comments	No comment. More detailed comments can be provided when plans are further developed. General overview of the role of Severn Trent Water provided with regard to wastewater, surface water, sustainable drainage, blue/green infrastructure, water quality and resources, and water supply.	Noted.
Page 345	Observations	Paragraphs 10.32 and 10.53	Consider that there should be a presumption in favour of provision of solar panels on south facing roofs that face roads (such as the respondents property adjoining Church Hill) where the dwelling is not listed. This is because there would be no visual impact on the built environment and there is urgent need for climate action. Need to ensure that the built environment of the Coalbrookdale Works site (now with UNESCO) accurately reflects the WHS in terms of layout (i.e. terraces, smaller houses with gardens and some larger houses) and materials (i.e. bricks, tiles, fenestration, water goods etc). The current proposal is not reflective of the WHS.	Telford & Wrekin Council and Shropshire Council recognise the importance of ensuring an appropriate balance between conserving the IGWHS and facilitating appropriate forms of renewable energy within the IGWHS. The draft IGWHS SPD provides specific guidance on this matter. However, it would not be appropriate to provide a presumption in favour of solar panels on roofs that are facing main roads as this is generally not considered to strike an appropriate balance between conserving the IGWHS and facilitating appropriate forms of renewable energy. Implementation of renewable energy sources will be assessed on a case by case basis. The draft IGWHS SPD provides guidance to inform the design, layout and use of materials for development within the IGWHS. The Coalbrookdale Works Site is currently the subject of a Planning Application and the appropriateness of the proposed design, layout and materials are therefore a matter for this process.

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
009	Additions	General Comments	<p>Explanation of the role of the Woodland Trust, summary of the importance of woodland, and statistics on tree cover in Shropshire.</p> <p>Consider woodland creation should be a major priority for an SPD - particularly in the context of the amount of tree cover in Shropshire.</p> <p>Recognise non-native trees have a role in meeting near-term targets and responding to specific concerns like air pollution, but priority should be locally sourced native species to reduce import of pests/disease and maximise wider flora/fauna benefits. This also has social and economic benefits.</p> <p>Trees have an important role in addressing the climate and nature crises (which should be jointly addressed).</p> <p>Encouraged by recognition within the draft SPD of trees contribution to biodiversity and biodiversity net gain (BNG), however this should go further establishing specific biodiversity net gain targets and seeking to grasp opportunities afforded by Local Nature Recovery Strategies (LNR's).</p> <p>Consider the SPD should be expanded on the following issues:</p> <ul style="list-style-type: none"> - Protection of valued habitats including ancient woods and veteran trees from loss and damage (encourage an inventory, establish minimum buffers, policy protection and give weight to LNR's). - Going beyond minimum requirements for BNG and be an example of best practice (20% BNG requirement, consider funding sources to meet BNG targets and require BNG to be maintained for 50 rather than 30 years). - Giving strong weight to LNRs required by the Environmental Act (2021) for development site allocation at a local level (essential to avoid impact on ancient woodland and sensitive natural assets as allocations are more likely to be developed and can prioritise green infrastructure investment). - Setting standards for high quality green infrastructure for development (everyone should be able to see a tree from their home, be no more than 300m from the nearest natural green space with safe/accessible routes to it and have a small wood of at least 2ha within 4km of their home). 	<p>Noted. The key purpose of the draft IGWHS SPD is to provide additional guidance on the application of relevant policies within the existing and emerging Development Plans for both Telford & Wrekin and Shropshire Council, in order to further protect and enhance the Outstanding Universal Value (OUV) of the IGWHS.</p> <p>Importantly, SPD's cannot create new policy, rather they provide guidance to assist in the implementation of policies within adopted / emerging Development Plans.</p> <p>Given the above, it is considered that the SPD provides an appropriate level of guidance on trees and woodland, recognising the focus of the document is providing guidance on relevant policies relating to the protection and enhancement of the OUV of the IGWHS. The document cannot introduce new policy requirements, including relating to woodland.</p>
010	Objections	Annex 2	<p>The draft IGWHS is a very depressing and negative document.</p> <p>Much emphasis was given to the Outstanding Universal Value of the area, which is not universally important.</p> <p>The document restricts the ability to introduce measures to respond to the changing climate, despite being the birthplace of climate change. The importance of responding to climate change outweighs any visual impact.</p> <p>The two most obvious options are installation of solar panels and conversion to electric vehicles (EVs), but the guidance is overly restrictive and inconsistent on these matters.</p> <p>With regard to solar panels, requirements for them to be in locations that are not visible and yet still non-reflective is logically inconsistent and rule out all of Ironbridge. Also consider that this is contrary to permitted development rights and potentially legally challengeable.</p> <p>With regard to EV charging, guidance would rule out 70% of houses in Ironbridge. It is also inconsistent with the approach at the Bothy on Dale End Park.</p>	<p>Noted. The draft IGWHS SPD provides guidance on how solar panels and EV charging points can be provided within the IGWHS in a way that is complementary to the fact that it is a WHS and that there is a need to protect and enhance its Outstanding Universal Value (OUV).</p> <p>The IGWHS was designated by UNESCO. The designation is a recognition that the cultural significance of the Ironbridge Gorge is so exceptional that it transcends national boundaries and is of common importance for present and future generations of all humanity - as such it constitutes outstanding universal value. It is the UK's government role to ensure the OUV is not compromised.</p> <p>It is considered that the guidance appropriately supplements local policy and is consistent with national guidance, policy and legislation.</p>

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
011	Concerns	Description of the WHS. Paragraph 3.3	Concerned about woodland ride management policies currently being pursued by the Severn Gorge Countryside Trust which is generic and fails to recognise the distinctiveness of different woodland walks. The SPD rightly draws attention to the relationship between heritage assets and settings, but the distinction drawn between them however is not clear cut. For example, whilst the Sabbath Walks contain certain archaeological features which could be considered heritage assets, consider that the walk itself should be considered a heritage asset and subject to heritage or environmental designation. The same principle applies to other such woodland walks. This should be recognised within the draft IGWHS SPD.	The importance of woodland walks to the WHS will be strengthened in the context of their role as part of the public realm and the setting of the WHS.
012	No comment	General Comments	The IGWHS contains surface and shallow depth coal mining features which may pose risk to public safety and surface stability. There are also coal resources present in the area, although this should not be taken to imply that mineral extraction would be economically viable, technically feasible or environmentally acceptable. Relevant bodies will have appropriate policies on mineral safeguarding. In this context, indicated surface coal resource should be given relevant consideration. Have no specific comments to make on the draft IGWHS SPD.	Noted.
Page 347	Observations	Chapter 4 Paragraph 4.17	Concerned about plans to fell large numbers of trees along the Sabbath Walks in Dale Coppice, Coalbrookdale. Any such plans need to be scrutinised in accordance with the principles outlined in this SPD. Specifically, the tangible and intangible assets of the woodland walk (in terms of landscapes and traditions) need to be balanced with woodland management regimes currently in use. Proposals for the Sabbath Walks seem to contradict the principle of reinforcing "the cultural importance of the special areas" within paragraph 5.89 of the draft IGWHS SPD. Sabbath Walks is an important community and historic asset. Hopeful the draft IGWHS SPD has the power to emphasise the importance of woodland (particularly the Sabbath Walks) in terms of the significance of setting within the attributes defining Outstanding Universal Value.	The importance of woodland walks to the WHS will be strengthened in the context of their role as part of the public realm and the setting of the WHS.
014	Observations	General Comments	The draft IGWHS SPD is a very well researched and presented document. However, it seems to be aimed at planners rather than residents of the WHS that want to make alterations to their property. Are residents expected to read all the information within the draft IGWHS SPD and do they realise that it is intended to be used as a material consideration on relevant planning applications within the WHS? Consider an subsequent A4 leaflet should be prepared highlighting key points and sent to all properties in the IGWHS. This way, every household will have some guidance as to what is acceptable. Concerned about the current Shropshire Homes Planning Application and its implications for the IGWHS and compliance with the draft IGWHS SPD. ICOMOS have indicated the current proposal would harm the WHS and if UNESCO consider the WHS is not being appropriately protected this status can be reviewed and removed. The draft IGWHS contains strong guidance on alterations to existing buildings but guidance is weak in the context of new development - this is reflected in current schemes where design has not been reflective of the WHS and uPVC allowed. Success of the draft IGWHS and protection of the Outstanding Universal Value of the IGWHS is dependent on residents engaging in the planning process rather than simply making changes / effective enforcement.	It is acknowledged that the issues addressed within the draft IGWHS SPD are often complex, but this is unfortunately unavoidable and comprehensive and accurate guidance cannot be provided without some technical content. The draft IGWHS SPD seeks to provide guidance for both decision makers and the local community. Telford & Wrekin Council and Shropshire Council consider that an appropriate balance is struck so that it is suitable for both audiences. However, the suggestion of a short summary is welcome and it is considered that the webpage hosting the document provides an ideal opportunity for such text. Comments on current and past Planning Applications are noted, but such applications are subject to consideration through the Planning Application process, which of course includes appropriate public consultation. The intention of this draft SPD is to provide further guidance on the application of relevant policies within adopted / emerging Local Plans within the IGWHS.

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
015	Observations	General Comments	<p>Paragraphs 10.27-10.29 suggest the AGA site lacks authenticity / integrity and paragraph 28 states it is difficult to understand the original site and its early development, without any suggestions for how this can be improved.</p> <p>The AGA site has been used for industrial purposes since first developed, whilst current buildings are not the original buildings they are industrial in nature and use, represent relatively recent representations of past uses of the site, and where in existence when the WHS was designated.</p> <p>Any change to the AGA site would radically change the “feel” of that part of Coalbrookdale and have a massive impact on views across the valley from Church Road in Coalbrookdale, Paradise and Bentall Woods.</p> <p>Consider the draft IGWHS SPD is predisposed to being opposed to the buildings on the AGA site. The Council seeks to preserve the “feel” of the IGWHS through detailed requirements for works to existing buildings (e.g. how residents can change windows that need replacing/modernising). The same sentiment should apply to the buildings on the AGA site, they are part of the story of the IGWHS. Buildings that are being conserved in the IGWHS do not all date from the eighteenth century.</p>	<p>Noted.</p> <p>This is a matter for the Planning Application process.</p> <p>The intention of the draft IGWHS is to provide guidance to all on the application of adopted / emerging Development Plan policies within the IGWHS.</p> <p>New development within the WHS is considered under section 10.3 of Annex 2 which looks to protect and enhance the natural built and historic environment as set out within the National Planning Policy Framework.</p>
Page 348	Observations	Chapters 2 and 5. Paragraphs 2.11 and Chapter 5: Planning Context box following paragraph 5.19	<p>Paragraph 2.11 which explains the origins of the Gorge is incorrect. The correct explanation appears later in the document within paragraph 10.7. Paragraph 2.11 should be updated to correctly explain the origins of the Gorge.</p> <p>Paragraph 2.11 also states that limestone is Carboniferous, however it should read Silurian. However, it would be correct to use Carboniferous for the ironstone and clay subsequently referenced in this paragraph. This should also be corrected.</p> <p>In the Planning Context box following paragraph 5.19 bullet ‘iii’ references Local Wildlife Sites, however there is no mention of Local Geological Sites of which there a number within the Gorge. This should be appropriately corrected.</p>	<p>Details will be checked to check accuracy of the text.</p> <p>Paragraph 5.19 is a quote of policy and therefore cannot be changed.</p>

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
017	Observations	General Comments	<p>Consider that the document is likely comprehensive, but concerned with the manner information is presented and the fact that it focuses on the restrictions that apply within the IGWHS. This is likely to appear excessive/oppressive to the general public.</p> <ul style="list-style-type: none"> -Recognise that the WHS is also a Conservation Area, but the distinction is difficult to follow and not explained. Specifically, the implications of WHS status and lack of associated statutory powers are not explained, and neither is the basis for these designations - special architectural or historic interest for the basis for Conservation Area status whilst Outstanding Universal Value is the basis for the WHS. -Little attempt to explain the manner in which development may harm the Conservation Area or WHS. -Various references to designated and non-designated heritage assets, but the fact that the WHS and Conservation Areas are both designated assets is not clear. -The document assumes the stance of maintaining heritage assets in their current form, providing no explanation of what 'character' and 'appearance' are and how they differ. Nor does it explain how development might affect them to a degree that is regarded as harmful. -The document is unclear what 'character' is to be preserved, nor does it explain how 'character' has changed over time: from the birth of the industrial revolution, to changes to technology/competition from other areas that led to depressed economic circumstances, to the period of great depression, to subsequent gentrification, to the implications of the new town corporation and more recently to its role as a tourist destination. -The area has undergone change and as such businesses are uncharacteristic of the site they are situated in. -The draft SPD needs to clearly state the aims of the Council rather than simply protecting the character of the area. -The draft SPD duplicates other existing guidance. 	<p>Noted.</p> <p>It is acknowledged that the issues addressed within the draft IGWHS SPD are often complex, but this is unfortunately unavoidable and comprehensive and accurate guidance cannot be provided without some technical content. However, the draft IGWHS SPD seeks to provide guidance for both decision makers and the local community. Telford & Wrekin Council and Shropshire Council consider that an appropriate balance is struck so that it is suitable for both audiences.</p> <p>It is considered that there is a clear explanation of the extent and purpose of the WHS and similarly the location and extent of other heritage assets (including the Conservation Area) within the draft IGWHS SPD. Specifically, Chapters 2, 3 and 4 explain the extent and purpose of the WHS designation and Chapter 6 addresses the extent and purpose of other heritage designations within the WHS, including the conservation area, listed buildings, scheduled monuments and non-designated heritage assets.</p> <p>The draft IGWHS SPD also provides extensive information on the Outstanding Universal Value (OUV) of the WHS (including criteria for its inscription, conditions of authenticity, conditions of integrity and the attributes of the IGWHS) in this way it establishes the context for protecting and enhancing the OUV of the IGWHS.</p> <p>Chapters 7 and 8 provide extensive guidance on the decision making process and process of submitting Planning Applications within the WHS. Annex 2 of the draft IGWHS SPD then provides extensive guidance on the considerations within the WHS to ensure that development protects and enhances rather than detracts from the OUV of the WHS. In doing so, it explains how the wrong development can negatively affect OUV.</p>
018	Observations	General Comments Continued	<ul style="list-style-type: none"> -There is recognition that the majority of the WHS is privately owned and as such is reliant on private investment for present character to be maintained. But the draft IGWHS does not encourage such investment. Indeed, the restrictive requirements are likely to discourage investment. -Unlikely to be great objection to the principle of protecting the appearance of the WHS (and its character if this is established) but the Council need to establish how they can assist - reference is made to Pre-apps but this is viewed as an additional layer of bureaucracy. -The aim of protecting character and appearance within the draft IGWHS SPD implies residents are seeking to cause harm. The Council should be seeking local support. 	<p>Telford & Wrekin Council and Shropshire Council offer pre-application services in order to assist with understanding what forms of development may or may not be appropriate, including within the IGWHS. This is not additional bureaucracy but in actuality can save considerable time and effort during any subsequent Planning Application process and importantly is considered to lead to better outcomes with regard to development proposals. In terms of duplication, it is recognised that there are a number of documents related to the WHS and inevitable that there will be some duplication. The aim of the SPD is to provide supplementary guidance on the application of policies within the adopted and emerging Local Plans for Telford & Wrekin Council and Shropshire Council.</p>

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
019	Observations	Introduction Paragraphs 2.5 and 10	<p>Stated aims of the draft IGWHS SPD include protecting and conserving historic buildings and encouraging inward investment.</p> <p>The Council and community have to rely on owners to do the work and bear the costs. Those who own historic buildings need encouragement and more help to do the right thing as costs are very high.</p> <p>Adding large quantities of guidance/charging for advice will only deter property owners from doing the right thing.</p> <p>The Council do not offer sufficient support to property owners, with advice/site visits only available if paid for through a Planning Application.</p> <p>Consider the limitations on energy efficiency and renewable energy technologies in Annex 2 are too prescriptive. This needs to recognise the climate emergency.</p>	<p>Noted.</p> <p>The draft IGWHS SPD provides guidance on how solar panels and EV charging points can be provided within the IGWHS in a way that is complementary to the fact that it is a WHS and that there is a need to protect and enhance its Outstanding Universal Value (OUV). It is considered that the guidance appropriately supplements local policy and is consistent with national guidance, policy and legislation.</p> <p>The nature of historic buildings is that works to them often is more costly than to a newer property and that where such buildings are within a WHS works need to be responsive to the OUV of the area.</p> <p>Both Telford & Wrekin Council and Shropshire Council have declared climate emergencies and it is appropriate that this is referenced within the draft IGWHS SPD.</p> <p>Telford & Wrekin Council and Shropshire Council offer pre-application services in order to assist with understanding what forms of development may or may not be appropriate (see Chapter 8), including within the IGWHS. This can save considerable time and effort during any subsequent Planning Application process and importantly is considered to lead to better outcomes with regard to development proposals.</p>
020	Objections	General Comments	<p>The draft IGWHS SPD (specific reference to paragraphs 10.70 and 10.81) recognises the WHS is subject to flooding and land movement and the links between these factors and climate change. There are also numerous other references to climate change (specific reference to paragraphs 10.155-10.156, the box after para 10.159, and 10.160-10.162). The draft IGWHS also (specific reference to paragraph 2.17-2.19) recognises "The requirement to conserve natural, tangible and intangible cultural heritage is now going to require engagement with climate change in order to meet the most basic of these objectives."</p> <p>Section 14 of the National Planning Policy Framework (NPPF) addresses meeting the challenge of climate change and flooding and at paragraph 152 explains the role of the planning system in supporting the transition to a low carbon economy.</p> <p>The draft IGWHS SPD is a great opportunity to translate this issues into planning decision making within the IGWHS and also to identify actions to address climate change that fall within the planning context.</p> <p>Strongly object to the draft IGWHS SPD on behalf of the residents of the WHS, of Telford & Wrekin and of Shropshire on the grounds that it does not use the planning system to set out practical actions within the WHS to reduce local carbon emissions to the atmosphere that are contributing to the changing climate, for example promoting the retrofitting of solar panels on to existing roofs and fitting panels onto new roofs in a wider set of circumstances that is set out in paras 10.53 and 10.54.</p> <p>Also object to the draft IGWHS SPD on the grounds that it does not meet the requirements of section 14 of the NPPF.</p> <p>Recognise concerns about visual amenity, but a climate emergency has been declared and all need to contribute to reducing carbon emissions (local residents are keen to contribute).</p> <p>The draft WHS SPD could do more to shape the WHS in ways that contribute to radical reductions in greenhouse gas emissions. The draft IGWHS SPD would be improved if climate change had a much greater prominence in Section 7 and in Section 10 (Annex 2).</p> <p>The Climate Action Team should be more involved in the preparation of this draft SPD.</p> <p>The draft IGWHS SPD provides an opportunity to recognise links between the natural environment and industrial processes that occurred within the WHS.</p> <p>The draft IGWHS SPD should be strengthened regarding the natural environment.</p>	<p>Officers from both Telford & Wrekin and Shropshire Council's climate change team have had input into the draft IGWHS SPD.</p> <p>Importantly, SPD's cannot create new policy, rather they provide guidance to assist in the implementation of policies within adopted / emerging Development Plans.</p> <p>Both Telford & Wrekin Council and Shropshire Council have declared climate emergencies and it is appropriate that this is referenced within the draft IGWHS SPD.</p> <p>Reference to natural heritage to the north of the IGWHS will be included within a relevant part of the document. Specific references to the sites mentioned will be reviewed.</p>

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
021	Objections	General Comments Continued	<p>With regard to the text box on page 15 of the document:</p> <ul style="list-style-type: none"> -There are references the natural heritage to the south of the gorge but not the north (for example woodlands in Coalbrookdale and Lloyds Coppice), this too should be recognised. -Benthall Edge woodland is referenced as a SSSI, but the actual SSSI is named Tick Wood and Benthall Edge SSSI. Furthermore it is described as being in Benthall Parish, but a small part is in the Gorge Parish. This should be corrected. -Lincoln Hill SSSI which is a nationally important geological site and provided huge quantities of limestone for use in the blast furnaces is not referenced within the draft SPD and should be. -There is no reference to Blist Hill pit mound that is part of the Madeley Pit mounds Local Nature Reserve, this should be included. -There is reference to Local Nature Reserves (LNRs), but this should name the specific LNRs. <p>Would welcome further information on how responses will be considered, whether there will be further consultation and process of adoption. Request to be notified upon adoption.</p>	See above.
Page 351	Observations	Section 4	<p>The Outstanding Universal Values suggest there is variety in the WHS, but falls short of expressing the diversity of materials and design that exists within the Gorge. The historic buildings follow many design styles and use many different materials, e.g. colours and types of bricks and brickwork and have many different levels of decoration.</p> <p>More recent new builds have consisted of groups of similar designs with unrealistic/plastic features which detract from the WHS. There needs to be more diversity of design and material with each property unique - if this is not achievable then new design should respond to the Victorian arts and crafts principles of function and beauty which represents the majority of the historic estate.</p>	Noted. The intention of the draft IGWHS SPD is to provide guidance to all on the application of adopted / emerging Development Plan policies within the IGWHS. The draft document includes a section regarding new development within the IGWHS.
023	Observations	General Comments	<p>The document in general seems sound with clear and rational guidance.</p> <p>The SPD advice is helpful regarding new planning applications, but anxious about Telford & Wrekin Council's ability to monitor compliance (and enforce if necessary) given resources and pressures on Councils.</p> <p>With regard to renewable energy, with ground source heat pumps being less effective than first thought, it is possible more work on this may be needed at a later stage. Since one might consider the Gorge to have been the Silicon Valley of its day, the possibility of newer (as yet unknown) solutions to the cost of energy should be welcomed into the Gorge to carry on innovation and development, subject to the conditions set out.</p> <p>Issues around transport into and around the Gorge and the resultant pollution needs serious consideration.</p> <p>In the reference to Jackfield and the tileworks the spelling of Craven Dunnill should be corrected.</p> <p>Concerned about the Shropshire Homes application on the AGA site. The underlying archaeology of the water course/lower pools there remains important, although it has not been visible for a very long time (now only in old maps). Historic England's lack of concern about ICOMOS' view on this Planning Application is disappointing and we do not want to lost WHS status (like Liverpool).</p>	<p>Reference to Telford & Wrekin resources is noted.</p> <p>The draft IGWHS SPD provides guidance on how energy efficiency renewable energy and EV charging points can be provided within the IGWHS in a way that is complementary to the fact that it is a WHS and that there is a need to protect and enhance its Outstanding Universal Value (OUV). It is considered that the guidance appropriately supplements local policy and is consistent with national guidance, policy and legislation.</p> <p>The draft IGWHS also provides guidance on the maintenance and enhancement of highway infrastructure and recognises the role of park and ride opportunities and public transport.</p> <p>The spelling of Craven Dunnill within the document will be corrected.</p> <p>With regard to the AGA site, this is a matter for the Planning Application process.</p> <p>The intention of the draft IGWHS is to provide guidance to all on the application of adopted / emerging Development Plan policies within the IGWHS. The guidance includes a section regarding new development within the IGWHS.</p>
024	Observations	General Comments	Should consider including Broseley within the WHS boundary. This may be beneficial for the Conservation of the character of the town, and in turn its economy. It is a key part of the Outstanding Universal Value of the WHS, but unusually not within its boundary.	Noted. However, it is not thought necessary to revisit the boundary of the IGWHS at this time nor is this within the scope of the draft SPD.
025	Observations	General Comments	Make slight changes to format of text and a run over factual lines.	Factual text has been reviewed and edited as well as making minor changes to the text where there was a grammatical error.
026	Observations	General Comments	Page 64 Planning Fees, the planning portal does not offer the reduced fee for applications for works that would normally be permitted development.	Links are provided in the document and it concluded that this is not an issue that can be covered within the SPD.

Draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) - Summary of Consultation Responses

Consultation on the draft IGWHS SPD commenced on the 9th January and concluded on 20th February. This schedule provides a summary of the consultation responses received and Telford & Wrekin and Shropshire Council's response.

Respondee Reference	Nature of Comment	Part of the Document	Summary of Response	Telford & Wrekin & Shropshire Council Response
027	Observations	General Comments	Should we not be saying visible concrete walls as highways do use concrete but then face with brick or stone ie Madeley road.	Agreed and amendments made to the document.

Schedule: Historic England Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
16.1	Figure 1	Aware the mapping for the World Heritage Site (WHS) is currently being checked as part of the production of the draft IGWHS SPD, which is welcomed. Historic England will be pleased to continue to assist this process.	This is beyond the scope of the draft IGWHS SPD. It is understood that Historic England require the extent of the WHS to be illustrated on a more detailed base map rather than the extent of the WHS being reviewed.
16.2	Paragraphs 2.2 and 5.78	Welcome inclusion of text explaining the potential impact of change that would affect the Outstanding Universal Value (OUV), Authenticity or Integrity of the property as it is important that the implications of maintaining WHS status are understood when decisions are being taken.	Noted.
16.3	Paragraph 2.23	Paragraph 2.23 relates to the 2017 Management Plan. It would be useful if this paragraph also referenced any emerging Management Plan review, the review process, or any Management Plan document that will be valid for the life of the draft IGWHS SPD.	Noted. Paragraph 2.23 will be updated to reflect the fact that there will be updates to the Management Plan in the future.
16.4	Paragraph 2.6 and throughout	The draft WHS SPD should reflect latest guidance produced by UNESCO and the Advisory Bodies to the World Heritage Committee on assessing impacts in a WHS context. It should also ensure all references and advice relate to the newest published guidance.	The document will be reviewed and appropriate updates integrated.
16.5	Paragraph 2.6	The Operational Guidelines for the Implementation of the World Heritage Convention are published by UNESCO's World Heritage Committee. This appears to be the first place they are mentioned therefore we would recommend naming the document in full.	See above.
16.6	Paragraph 2.7	Consider amending 'preserved' with 'protected'. The National Planning Policy Framework uses the term 'protect' and it would be useful if the draft IGWHS SPD reflected this throughout.	Within paragraph 2.7 of the draft IGWHS SPD, the word preserved will be replaced with the word protected. The rest of the draft IGWHS SPD will also be reviewed and further references to the word preserved will be replaced with the word protected.
16.7	Chapter 3	Welcome amendments to 'setting' and the references to HE GPA 3 within the draft IGWHS SPD. A link as a footnote may be helpful.	Noted. A Link to HE GPA3 will be included as a footnote within Chapter 3 of the document.
16.8	Paragraphs 3.11-3.12	With the introduction of the National Planning Policy Framework in 2012 and subsequent Planning Practice Guidance, the Circular document was cancelled and has no formal status in the planning process. If referred in the final version of the draft IGWHS SPD its status should be made clear with an indication that it remains published only for reference purposes. A definition of the setting of a WHS can be found in the Operational Guidelines or the UNESCO 2022 Guidance and Toolkit which would represent a more up to date reference.	Noted. Paragraphs 3.11 and 3.12 will be updated to reference the definition of the setting of a WHS from the Operational Guidelines or the UNESCO 2022 Guidance and Toolkit.
16.9	Paragraph 3.18	Paragraph 3.18 is useful but it needs to be clear within the document that a consideration of setting and an assessment on how that relates to the OUV of the WHS/significance of assets, needs to be included within any Design and Access Statement/Heritage Statement.	Noted. Paragraph 3.19 explains that Proposals likely to affect the IGWHS or its setting must be accompanied by a proportionate Heritage Statement / Heritage Impact Assessment which clearly identifies the potential impact of the development on the WHS's significance.
16.10	Paragraph 3.19	Recommend paragraph 3.19 is amended from '...or its setting' to 'within its setting', to make clear it is the contribution the setting makes to OUV and significance that is important, not the setting itself. This comment relates to all areas within the document where this wording is found.	Noted. The wording of paragraph 3.19 of the draft IGWHS SPD will be amended from '...or its setting' to 'within its setting'. Similar wording within the draft IGWHS SPD will be similarly amended.
16.11	Chapter 4	Would be useful to add a link in Chapter 4 to Historic England's Good Practice Advice Note 2: Managing significance in decision-taking, available at https://historicengland.org.uk/images-books/publications/gpa2-managing-significance-in-decision-taking/gpa2/ which provides further explanation on the concept of significance and how to assess it.	Noted. Chapter 4 will be updated to include an appropriate referenced to Historic England's Good Practice Advice Note 2.
16.12	Chapter 5	It is useful to set out the role of the SPD, its purpose as a material planning consideration and which parts of the NPPF are relevant, as well as the role of both Local Plans.	Noted. Chapter 2 contains a comprehensive explanation of the role of the draft IGWHS SPD, whilst Chapter 5 explains the relationship to and most relevant components of national and local planning documents.
16.13	Paragraph 5.8	Additional detail around what is meant in this paragraph should be provided.	Paragraph 5.8 of the draft IGWHS SPD contains an extract of Paragraph 207 of the National Planning Policy Framework (NPPF). Any additional explanation of this paragraph would be best contained within the NPPF itself.
16.14	Paragraph 5.10	Paragraph 5.10 should include clarification that reference to paragraph 27 is to paragraph 27 of the PPG. Paragraph 27 of the PPG should either be included in the draft IGWHS SPD or a link to it provided in the footnote to ensure the appropriate reference can be located.	Noted. Paragraph 5.10 is listed under the heading PPG and explains that it relates to the PPG. However for further clarity the paragraph will be amended to reference Paragraph 27 of the PPG. A link to the relevant PPG will be included within a footnote of Chapter 5 of the draft IGWHS SPD.

Pages 353

Schedule: Historic England Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
16.15	Paragraph 5.12	Additional detail on how to assess the impacts of proposals on the WHS will be required, to ensure that the most up to date and appropriate information, prepared by a qualified professional, is provided at the appropriate time in the decision-making process.	Paragraph 5.12 of the draft IGWHS SPD forms part of the summary of relevant PPG. Chapters 7 and 8 of the draft IGWHS SPD provide details on how to assess the impacts of proposals on the WHS and what will be required, to ensure that the most up to date and appropriate information, prepared by a qualified professional, is provided at the appropriate time in the decision-making process. No additional references are considered necessary.
16.16	Paragraph 5.13	Reference to UNESCO 2022 guidelines should be included within paragraph 5.13.	Noted. A reference to the UNESCO 2022 guidelines will be included within paragraph 5.13 of the draft IGWHS SPD.
16.16	Paragraph 5.21	Amend Scheduled Ancient Monuments to Scheduled Monuments.	Telford & Wrekin Council and Shropshire Council acknowledge that reference to Scheduled Monuments now excludes the word Ancient. However, paragraph 5.21 quotes the names of policies within the adopted Telford & Wrekin Local Plan (2018), as such it cannot be updated.
16.18	Section 5.4/5.5	Useful to have such a thorough section on relevant Local Plan policies, which is supported. May be useful to include a sentence explaining these are the key policies development proposals will be decided against and it is essential any future proposals accord with them, alongside the guidance on how to do this, which is set out in the SPD.	Noted. Paragraphs 5.17, 5.27 and 5.33 of the draft IGWHS SPD explain that referenced policies are those of greatest relevance within the IGWHS. Appropriate amendments will be made to these paragraphs to recognise that it is essential any future proposals within the IGWHS and its setting accord with them, alongside the guidance on how to do this, which is set out in the SPD.
16.19	Paragraph 5.39	Useful to note the WHS Management Plan is a material planning consideration.	Noted.
16.20	Paragraph 5.77	Would be useful if the title of this section also included the term 'Committee' to reflect the contents of paragraph 5.77.	Noted. The sub-title before paragraph 5.77 will be updated to include the term Committee.
Page 354 16.21	Paragraph 5.79, 5.82, 5.86	Support the inclusion of this clause. Has the role of DCMS as State Party been explained earlier in the document? The role of DCMS should be clearly set out within the draft IGWHS SPD. Consider re-ordering the paragraphs so that the role of DCMS is fully understood earlier on rather than details appearing about how DCMS operates and procedure, before their role is established. Paragraph 5.79 should be clear that all liaison is to go to DCMS. They will then in turn liaise with the World Heritage Centre. Also, relevant to paragraph 5.86.	The section under sub-heading 5.8 'Stakeholders' will be re-ordered to establish the role of DCMS when the organisation is first referenced. Paragraphs 5.79 and 5.86 will be updated to clarify that all liaison with Historic England is to be copied to DCMS, that in turn will liaise with the World Heritage Centre.
16.22	Section 6	Support inclusion of paragraph 6.11.	Noted.
16.23	Section 6.4 Non designated heritage	Consider it is important to reinforce the wording around non-designated heritage and its contribution to the OUV within section 6.4 of the draft IGWHS SPD. Whilst the assets themselves may be non-designated (still worthy of protection) they are critical elements of the industrial landscape and overall OUV of the WHS and need protecting for the contribution they make to WHS status.	Noted. Paragraph 6.4 will be appropriately updated to recognise that non-designated heritage assets within the WHS of course contribute to the WHS and as such need to be protected.
16.24	Paragraph 6.26	The meaning of 'plans' in paragraph 6.26 needs to be clarified. Any additional heritage assessment/findings should be added to the Historic Environment Record (HER) as a minimum.	Noted. This paragraph will be amended to make it clear that the reference is to plan/maps rather than plan/future document.
16.25	Paragraph 6.30	Support inclusion of permitted development right details within the draft IGWHS SPD and note these relate to the Telford and Wrekin Council area. Are there any similar restrictions within the Shropshire Council area? Is this relevant? If no restrictions exist, it may be useful to detail this.	The Article 4 direction is located within the Telford & Wrekin Council administrative area. There is no similar direction in Shropshire Council's administrative area, reflecting the nature of this component of the WHS. It is considered that this is sufficiently clear within paragraph 6.30.
16.26	Figure 11	Very useful to include photograph imagery setting out good practice examples to aid prospective developers. Do you have additional detail on how these alterations have been achieved and what materials they have used, to aid clarity?	Extensive further guidance on how to appropriately undertake alterations, extensions and refurbishments of existing buildings is provided within Annex 2 of the draft IGWHS SPD and no change is deemed necessary.

Schedule: Historic England Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
16.27	Paragraph 7.28	<p>Would be useful to include additional detail on how this can be achieved and what a positive Heritage Statement looks like. Throughout the document there is some additional detail about HS/HIA yet it would be useful to have it all in one place in a clear way. For example, what a statement of significance is and the need for one does not appear until later in the document. Additionally, there is further detail in the Annexes in Section 10 but difficult to tell overall what is required to be submitted as different aspects are discussed in different areas of the document. This section should also refer to the UNESCO 2022 guidelines.</p> <p>As an additional point the wording relating to HE/HIA is very focussed on the impacts to significance, and whilst important, in the context of the draft IGWHS SPD consider that wording should be incorporated to ensure that it is impacts to the OUV that is addressed.</p>	<p>The guidance on Heritage Statements will be reviewed and appropriately clarified.</p>
16.28	Paragraph 7.32	<p>Where is the HER information for Telford and Wrekin? This should be clear in the draft IGWHS SPD.</p>	<p>The Shropshire Historic Environment Record covers both Shropshire Council and Telford & Wrekin Council administrative areas. This is clearly explained within the topic box following paragraph 6.27 of the draft IGWHS SPD.</p>
16.29	Paragraph 7.44	<p>Unclear what is meant in the first sentence re ‘no spectrum of degree of harm’.</p>	<p>Legal decisions have established that where less than substantial harm to a heritage asset is established there is no consideration of where on the spectrum (high or low end) such harm exists, it is simply less than substantial harm.</p>
16.30	Paragraph 7.61	<p>This should refer to UNESCO 2022 guidelines (as it should in any reference throughout the document).</p>	<p>Noted. An appropriate reference to the UNESCO 2022 guidelines will be added to paragraph 7.61 of the draft IGWHS SPD.</p>
16.31	Paragraph 8.8	<p>Recommend re-phrasing this sentence, as it is not clear.</p>	<p>This sentence includes a typo which will be corrected to ensure clarity.</p>
16.32	Paragraph 8.22	<p>Welcome inclusion of Historic England in the list set out within this paragraph.</p>	<p>Noted.</p>
16.33	Paragraph 8.23	<p>Support the inclusion of paragraph 8.23.</p>	<p>Noted.</p>
16.34	Section 10	<p>Support reference to Historic England guidance throughout this section, for example, Historic England advice on heritage assets and flooding.</p>	<p>Noted.</p>
16.35	Section 10: Guidance for new development	<p>The text box on page 88 containing guidance for new development, in parts read like new policy. It should be clear the guidance points follow from Local Plan policies.</p> <p>For example, ‘proposals should avoid loss of green space’ should be linked to where this is in policy and for the draft IGWHS SPD to then give guidance on how this can be achieved.</p> <p>Also, it should be clear these are examples of what should be included/avoided and not an exhaustive list.</p>	<p>This section is intended to provide detail/guidance on policy within the adopted Local Plans. The text box will be amended to clarify the fact that they are not policies but guidance.</p>
16.36	Section 10	<p>Would information in Section 10 (Annex 2) be better suited for inclusion in the main body of the SPD? These are key areas of information which planning applications will need to adhere to. Should it be linked to the section on Local Plan policies. See previous comments raised in June 2022.</p>	<p>Annex 2 will be integrated into the document as an extra chapter after Chapter 9.</p>
16.37	General comment	<p>There are a few areas within the draft IGWHS SPD where the numbering is out of order and will need revising.</p>	<p>Noted. This will be reviewed.</p>
16.38	General comment	<p>Within the document there is a need to reference the Technical Review Process and the Reports that are prepared as part of this process, in relation to individual applications. These reports can be considered a material consideration in the planning process and help to inform appropriate development.</p>	<p>Noted. An appropriate reference to the Technical Review Process and the Reports that are prepared as part of this process, in relation to individual applications will be included within the draft IGWHS SPD.</p>

Schedule: ICOMOS Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
21.1	General Comments	ICOMOS-UK is an independent charity with a UK-wide and international mission to promote and support best practice in the conservation, care and understanding of the historic environment. ICOMOS (International) has a special responsibility to UNESCO as an official adviser on cultural World Heritage Sites and ICOMOS-UK plays an essential role in advising on aspects of World Heritage and Sites for nomination across the UK.	Noted. For clarity the role of ICOMOS will be emphasised in the section under sub-heading 5.8 'Stakeholders' of the draft IGWHS SPD.
21.2	General Comments	The SPD offers an excellent opportunity to translate the obligations under the World Heritage Convention into clearly understandable guidance which will carry considerable weight as a material consideration in decision making in the planning process.	Noted.
21.3	General Comments	The SPD should offer clarity on the nature of development likely to be appropriate within the WHS and its setting thereby providing an invaluable reference document for developers, householders, utility companies and others. It should also provide a framework for planners and local councillors to assist them in making planning decisions that protect and enhance the IGWHS and its attributes of OUV.	Noted. This is the intention of Chapter 10: Annex 2, which is considered to effectively draw out the key considerations for the various types of development that may be considered within the IGWHS.
21.4	General Comments	Importantly the SPD should explain simply and comprehensively the spatial implications of the international designation and any planning considerations it brings in addition to those related to national and local designations.	Noted. It is considered that the draft IGWHS SPD effectively achieves this expectation.
21.5	General Comments	The SPD is a comprehensive draft with numerous pertinent and helpful elements. Subsequent comments are overarching points relating to focus, organisation and content designed to help increase the clarity, coherence and ease of use of the SPD.	Noted.
Page 356	General Comments	<i>International and National Obligations</i> It would be helpful to include a summary explanation of the international obligations and how these are met both through adhering to requirements on the Operational Guidelines for the Implementation of the World Heritage Convention (2021) and undertaking Heritage Impact Assessments (HIA) in line with the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022).	The guidance on Heritage Impact Assessments will be reviewed. The fact that Heritage Impact Assessments should be proportionate and particularly for major development should be based on the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022) or other best practice will be included.
	General Comments	<i>International and National Obligations</i> A clear and simple explanation is needed at the start of the document on how national and local planning policy, heritage designations such as Conservation Areas, Listed Buildings, Scheduled Monuments and Natural Designation contribute to the protection of the OUV. Currently the detail provided on these other aspects and designations tends to overwhelm what should be the prime focus of the document – the WHS and its OUV. Although key to its protection, current long explanations of these other designations distract from gaining clarity on the implications of WHS inscription. They might be better separated out and included after the section on the overarching WHS or included as annexes to avoid the draft IGWHS SPD losing focus and becoming simply an historic environment SPD. Heritage assets and other aspects of the IGWHS and its setting should be linked back to the OUV and the attributes of OUV.	The guidance on Heritage Impact Assessments will be reviewed and the role of OUV in undertaking such assessments within the IGWHS explained.
21.8	General Comments	Paragraph 172 of the Operational Guidelines for the Implementation of the World Heritage Convention (2021) invites the State Party to inform the World Heritage Committee of an <i>'intention to undertake or to authorise in an area protected under the Convention major restorations or new constructions which may affect the Outstanding Universal Value of the property. Notice should be given as soon as possible (for instance, before drafting basic documents for specific projects) and before making any decisions that would be difficult to reverse, so that the Committee may assist in seeking appropriate solutions to ensure that the Outstanding Universal Value of the property is fully preserved.'</i> This responsibility should be included in the SPD with clarity on the role of the local planning authority in passing on this information to Historic England/DCMS. A flow chart outlining responsibilities and timing would be helpful.	Noted. The section under sub-heading 5.8 'Stakeholders' will be amended to clarify the role and responsibility of ICOMOS to notify the World Heritage Committee and the need for Local Planning Authorities to pass relevant information to Historic England/DCMS.

Schedule: ICOMOS Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
21.9	General Comments	<i>OUV, including integrity and authenticity and attributes of OUV</i> It would be helpful to bring together all elements relating to the WHS including a concise description of the site, its Statement of OUV, including integrity and authenticity, as well as its attributes that convey OUV at the start of the document.	Telford & Wrekin and Shropshire Council consider that these matters are appropriately addressed within Section 4 of the document. This is a logical location for this information.
21.10	General Comments	<i>OUV, including integrity and authenticity and attributes of OUV</i> The concepts of authenticity and integrity would benefit from being explained more simply and clearly related to the attributes of OUV to allow users of the draft IGWHS SPD to understand and engage with them and grasp their relevance to their particular development. This can be challenging as exemplified at paragraphs 4.19 and 4.24.	Reference will be included to the definitions within the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022).
21.11	General Comments	<i>Guidance for Development in the IGWHS</i> The draft IGWHS SPD needs to make clear the nature of the IGWHS's OUV and its spatial implications. It would be very helpful to elaborate on these and the kinds of development that might be appropriate and the kinds that might challenge them. As this is possibly the most important element of the SPD, it appears counterintuitive that currently this is placed in Chapter 10: Annex 2 - Guidance for Development in the IGWHS. It would seem more appropriate that this formed the focus of the document or at least a summary were provided earlier. The table outlining the attributes of OUV at paragraph 4.19 would provide a useful starting point. Additional columns could be added summarising how and what kinds of development might have a harmful impact on each attribute, an additional column could outline enhancements and a third, show the type of assessment required from developers to ascertain these impacts. Chapter 10 Annex 2 - Guidance for Development in the IGWHS does partially achieve this but bringing it together in relation to the attributes of OUV early in the document would help to increase focus and clarity around this additional level of international designation and its implications. Adding an additional column listing which national designations are relevant would not only tie these protections together, but provide a useful gap analysis exercise pointing out where additional assessment and consideration is required to protect the attributes of OUV. This may be particularly helpful for attributes i,j,k,l and m which include intangible and landscape aspects not neatly or comprehensively covered by national designations.	Annex 2 will be integrated into the document as an extra chapter after Chapter 9. It is important to note that the SPD is not policy, rather it provides supplementary guidance on the application of policies within the adopted / emerging Development Plans for Telford & Wrekin and Shropshire Councils. Furthermore there is a risk that if the document seeks to define forms of development that are inappropriate, it implies that anything not discussed is appropriate. Finally, such a list may cause the document to become obsolete.
21.12	General Comments	Further work on establishing where development in the setting would be likely to impact on OUV and the type of development that would be inappropriate and how to assess this would be useful.	It is important to note that the SPD is not policy, rather it provides supplementary guidance on the application of policies within the adopted / emerging Development Plans for Telford & Wrekin and Shropshire Councils. Furthermore there is a risk that if the document seeks to define forms of development that are inappropriate, it implies that anything not discussed is appropriate. Finally, such a list may cause the document to become obsolete.
21.13	General Comments	A flow diagram of whom to consult when considering development in the IGWHS and its setting would be helpful for developers.	A high level flow diagram on the planning application process within the IGWHS will be included. This is then expanded upon within the text of the document.
21.14	General Comments	<i>Relationship of SPD to the Management Plan</i> Much of the detailed description of the site and the more detailed discussion of setting and other issues may be better suited to inclusion in the evolving update of the IGWHS Management Plan. It would be helpful to discuss this with the Coordinator and Steering Group to ensure that relevant information is not missed out, but also not repeated if covered elsewhere. The relationship of the draft IGWHS SPD to the Management Plan and its policies should be clarified in both documents.	It is appreciated that there is duplication and that this is perhaps inevitable and ultimately necessary.

Schedule: ICOMOS Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
21.15	General Comments	<p><i>Heritage Impact Assessments</i> Consistency over when a Heritage Impact Assessment based on the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022) would be required is needed throughout the document. It should be emphasised that this assessment focuses assessment on impacts on the attributes of OUV.</p>	<p>The guidance on Heritage Impact Assessments will be reviewed. The fact that Heritage Impact Assessments should be proportionate and particularly for major development should be based on the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022) or other best practice will be included.</p>

Schedule: Environment Agency Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
26.1	Hydrogeology IGWHS	<p>The IGWHS is predominantly located on the bedrock of the Halesowen Formation (mudstone, siltstone and sandstone), designated a Secondary A aquifer by the Environment Agency. Secondary A Aquifers comprise permeable layers that can support local water supplies, and may form an important source of base flow to rivers. Superficial Alluvium deposits are also indicated to be present within the IGWHS. These are associated with the River Severn, which flows through the centre of the IGWHS. These Alluvium deposits are designated as a Secondary A Aquifer and are likely to be in hydraulic continuity with surface water features in the area. Some lower permeability Glacial Till deposits are also indicated to be present towards the north of the IGWHS area.</p> <p>There are no groundwater Source Protection Zones designated within the area covered by the IGWHS.</p> <p>There are numerous surface waters features within the area, which drain to the River Severn.</p> <p>In considering the guidance for development within the Ironbridge Gorge World Heritage Site recommend that land quality and groundwater quality issues should be considered in conjunction with surface water impacts so as to protect and enhance controlled waters.</p>	<p>Noted. Flood guidance will be reviewed and appropriate references to land quality and groundwater quality issues/considerations (in the context of the IGWHS) included.</p>
Page 359 26.2	Hydrogeology IGWHS	<p>The draft IGWHS SPD appropriately highlights that the former industrial use of land within the IGWHS is likely to have left residual substances within the ground. These are likely to be mobilised during development presenting a risk to controlled waters (Chapter 10, Annex 2).</p> <p>Recommend that policies relevant to redevelopment within the IGWHS should provide specific references to the hydrogeological environment and to issues such as groundwater and surface water protection (quality and quantity), contaminated land assessment (and clean-up where needed) and indeed the legislative drivers underpinning all this, such as Environmental Permitting Regulations and Water Framework Directive.</p> <p>Recommend that reference is also made to the publication 'The Environment Agency's Approach to Groundwater Protection' (2018). This document sets out a framework for our regulation and management of this precious resource.</p>	<p>Noted. However the referenced document on groundwater protection requires a subscription or payment to access and therefore it is not considered appropriate to reference within the draft IGWHS SPD.</p>
26.3	Renewable and Low Carbon Energy	<p>Certain proposals for renewable and low carbon energy generation may require an environmental permit under the Environmental Permitting (England & Wales) Regulations 2016, unless an exemption applies.</p> <p>for such proposals, we recommend that the applicant contacts the National Permitting Service on telephone 03708 506 506 for further advice and any pre-permit discussions.</p>	<p>Noted.</p>
26.4	Sustainable Drainage Systems	<p>Due to the potential legacy of contaminated land in the IGWHS from historic mining and heavy industry there is a risk of causing contamination to groundwater and/or surface water if SuDS are not properly designed. The presence of contaminated land needs to be considered when designing SuDS features.</p> <p>National guidance such as the CIRIA SuDS Manual C753 provides guidance for the application of SuDS on contaminated land.</p>	<p>Noted.</p>
26.5	Ground Source Heat Pumps	<p>Both closed and open loop systems can result in changes in groundwater flow and quality – this can also happen during drilling and installation and mobilise contaminants if installed inappropriately on contaminated sites.</p> <p>Discharge of water to ground or surface water with a significantly changed temperature may also cause pollution.</p> <p>Recommend following the advice and good practice guidance available via: Ground Source Heat Pump Association.</p> <p>It should be noted that Open loop systems are regulated by the Environment Agency under the Environmental Permitting Regulations (EPR). The following link may be of use:</p> <p>Open-loop heat pump systems: permits, consents and licences - GOV.UK (www.gov.uk)</p>	<p>Noted. The ground source heat pump text will be reviewed and appropriately updated to ensure consistency with guidance.</p> <p>The guidance on the Ground Source Heat Pump Association website is a paid resource for non-member and therefore it is not considered appropriate to reference within the draft IGWHS SPD.</p>

Schedule: Environment Agency Response

Respondee Reference	Part of the Document	Summary of Comments	Telford & Wrekin & Shropshire Council Response
26.6	Flood Risk	<p>The descriptions of the nature of flooding in the Ironbridge Gorge and the understanding of the responsibilities of the relevant risk management authorities is suitably conveyed.</p> <p>A key element of the National Planning Policy Framework is for development to reduce flood risk overall where possible, demonstrating that the measures go beyond managing flood risk from the development alone.</p> <p>The Environment Agency also puts preference on natural flood management and will pursue naturalisation of watercourses through culvert and weir removal where appropriate.</p> <p>Suggest adding the aims of flood risk reduction and naturalisation of watercourses through new development to the 'Flood Risk – Key Guidance Points' (Annex 2).</p>	Noted.

Appendix 2

Telford & Wrekin Email to all consultees

Email Subject: Draft Ironbridge Gorge World Heritage Site Supplementary Planning Document – Consultation

Dear Sir/Madam

**Draft Ironbridge Gorge World Heritage Site Supplementary Planning Document
Public Consultation 9th January to 20th February 2023**

Dear Sir/Madam,

Telford & Wrekin Council and Shropshire Council have launched a public consultation on the draft Ironbridge Gorge World Heritage Site (IGWHS) Supplementary Planning Document (SPD) which aims to further protect and conserve the Ironbridge Gorge UNESCO World Heritage Site

The site is spread over 550 hectares and is internationally recognised as the birth place of the industrial revolution as well as home to a thriving community of residents and businesses.

The document has been created to provide guidance and information to support the implementation of policies within the adopted and future Local Plan's for both Council areas. The document also outlines how the site will be protected and managed and includes guidance for local residents and businesses on matters such as adapting to climate change, where planning permission is required.

Telford & Wrekin Council and Shropshire Council are inviting comments on the draft IGWHS SPD. **The consultation will run for a period of 6 weeks, starting from 9th January until 5pm on 20th February 2023.**

The IGWHS SPD can be viewed online and comments submitted via a response form available at: www.ironbridgegorgewhs.co.uk/spd.

There will also be a number of informal public drop in sessions which will be hosted across the WHS on the following dates:

- Thursday 19th January – 5pm to 8pm – Jackfield Village Hall
- Thursday 26th January – 5pm to 8pm - The Furnace Kitchen, Coalbrookdale
- Thursday 2nd February – 5pm to 8pm - Coalport Village Hall
- Wednesday 8th February – 5pm to 8pm - The Anstice Ballroom, Madeley
- Monday 13th February – 5pm to 8pm – Buildwas, Village Hall.
- Thursday 16th February – 5pm to 8pm – The Tontine, Ironbridge

Following the public consultation period, responses received will be analysed and reviewed and any amendments will be made to the IGWHS SPD. The final document will then be considered by both Telford & Wrekin Council and Shropshire Council Cabinets for adoption. It will then be used to determine any planning applications for development within the IGWHS.

Please note you are receiving this letter because you have previously requested to be included on Telford & Wrekin Council's Planning Policy Consultee Database; to be notified with regard

to planning policy consultations and published documents. If you no longer wish to be contacted about planning policy issues, please let the Strategic Planning Team know by Telephone on 01952 384241 or emailing: DevelopmentPlans@telford.gov.uk

Yours faithfully

Shropshire Council Consultation Notification

Dear Sir/Madam,

Draft Ironbridge Gorge World Heritage Site Supplementary Planning Document – Consultation

You are receiving this email because you have previously requested to be included on Shropshire Council's Planning Policy Consultee Database or responded to the 'Regulation 19' Pre-Submission Consultation. If you no longer wish to be contacted about planning policy issues, please let us know by emailing: planningpolicy@shropshire.gov.uk with **Remove** in the subject field.

Telford & Wrekin and Shropshire Council are both consulting on a new draft of a supplementary planning document (SPD) which aims to protect and conserve the Ironbridge Gorge World Heritage Site (IGWHS). The consultation takes place between 9 January 2023 and 20 February 2023.

The key purpose of this SPD is to provide additional guidance to existing and emerging Development Plan policies for both Telford & Wrekin and Shropshire Council's protecting and enhancing the Outstanding Universal Value of the Ironbridge Gorge World Heritage Site. This SPD is therefore intended to be used as a material consideration on relevant planning applications within the WHS and, where appropriate, within its' setting.

The Supplementary Planning Document clarifies why the protection of the Outstanding Universal Value is of such importance and it will form part of a suite of documents including the aforementioned Development Plans and the World Heritage Site Management Plan that set out how the area will be protected and managed.

To view the draft SPD and to find out more information on how to get involved please go the following dedicated consultation page [Ironbridge Gorge World Heritage Site - Ironbridge Gorge WHS](#)

Have Your Say

The dedicated consultation website provides information on how to have your say, including where to send your comments. It also provides information on a number of public drop in sessions. The drop in sessions will be held at the following locations and times:

- Thursday 19 January 2023 – 5pm to 8pm – Jackfield, Village Hall
- Thursday 26 January 2023 – 5pm to 8pm – Coalbrookdale, Furnace Kitchen
- Thursday 2 February 2023 – 5pm to 8pm – Coalport, Village Hall
- Wednesday 8 February 2023 – 5pm to 8pm – Madeley, Anstice Ballroom
- Monday 13 February – 5pm to 8pm – Buildwas, Village Hall.
- Thursday 16 February 2023 – 5pm to 8pm – Ironbridge, Tontine Hotel.

Kind regards,

2 Introduction

2 Introduction

2.1 Purpose of the Supplementary Planning Document

2.1 The Ironbridge Gorge World Heritage Site (referred to as the 'IGWHS' or the 'Site' throughout this document) is an extraordinarily important place, and was designated in 1986, as one of the United Kingdom's first World Heritage Sites by the United Nations, Educational, Scientific and Cultural Organisation (UNESCO). This was in recognition of its leading role in the Industrial Revolution and the unique landscape that provided the raw materials.

Figure 1: Ironbridge Gorge World Heritage Site

2.2 Under the terms of the UNESCO Convention Concerning the Protection of the World Cultural and Natural Heritage (1972), which was ratified by the UK in 1984, the UK Government is formally responsible for the management of the IGWHS and it is an international obligation to ensure that its **Outstanding Universal Value (OUV), Authenticity and Integrity** are not compromised. UNESCO actively monitors World Heritage Sites (WHS) through reactive and periodic monitoring, to ensure they are being managed appropriately and are not being put in danger. If UNESCO feel that a WHS is not being protected to an appropriate standard, a review of the WHS's status will take place, if UNESCO consider that the Outstanding Universal Value, Authenticity and Integrity has been seriously impacted the status of the WHS will be removed.

2.3 In addition, adopted in 2003⁽¹⁾ the convention for the international community's first binding multilateral instrument intended to safeguard and raise the profile of intangible cultural heritage. Intangible cultural heritage ("ICH") refers to the practices, representations, expressions,

knowledge and know-how, transmitted from generation to generation within communities, created and transformed continuously by them, depending on the environment and their interaction with nature and history. Although not yet ratified by the UK local authorities can still abide by it for a more inclusive and full understanding of our heritage.

What is Outstanding Universal Value

“Outstanding Universal Value means cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations of all humanity. As such, the permanent protection of this heritage is of the highest importance to the international community as a whole”.

Paragraph 49 of the Operational Guidelines for the Implementation of the World Heritage Convention WHC .21/01 31st July 2021

2.4 Therefore, the overarching aim of this SPD is to provide guidance for protecting and enhancing the Outstanding Universal Value of the IGWHS, preventing loss through deterioration and disappearance of its heritage value, whilst providing a consistent set of guidelines to help businesses and residents play their part in maintaining what makes the IGWHS so universally special.

2.5 To achieve this the SPD will set out how the planning system will seek to fulfil the responsibilities and opportunities that arise from WHS status. This includes helping to:

- **Protect;**
- **Conserve;**
- **Present and transmit to future generations the importance of the IGWHS; and**
- **Encourage investment and development to secure a healthy economy and support regeneration, whilst not compromising the Outstanding Universal Value of the IGWHS.**

2.6 The intention is to implement the Operational Guidelines set out by ICOMOS and UNESCO ensuring that the important historic buildings and significant landscape are properly protected and conserved, as well as ensuring appropriate application of the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022), to ensure that new development integrates harmoniously with the IGWHS. The Outstanding Universal Value of the IGWHS has proven potential to inspire new development, to attract investment and visitors, as well as be a source of local civic pride: this SPD therefore seeks to protect and capitalise on that potential. Further explanation of Outstanding Universal Value can be found in **Chapter 3. Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value.**

2.2 Aims and Objectives of the SPD

2.7 The Ironbridge Gorge World Heritage Site has a long history as the birthplace of the industrial revolution. Its rich landscape character, special architectural, historical and archaeological significance, and social heritage need to be protected and enhanced. The protection of the historic nature of the IGWHS is a priority for both Telford & Wrekin Council and Shropshire Council.

2 Introduction

2.8 The aim of this SPD is to ensure the high standards of both preservation and conservation are maintained, whilst providing further guidance for protecting and enhancing the Outstanding Universal Value of the IGWHS, encouraging development which secures and supports sustainable regeneration.

2.9 Through the adoption and implementation of this SPD, Telford & Wrekin Council and Shropshire Council will look to achieve the following objectives:

- Safeguarding the historic nature and setting of the IGWHS and protecting its Outstanding Universal Value;
- Enhancing existing and proposed development to the benefit of the IGWHS whilst maintaining its Outstanding Universal Value;
- Allowing planners and developers to fully understand the impact of the IGWHS and its international value; and
- Raising design standards to achieve the best possible implementation of new development whilst achieving appropriate alterations to existing developments.

2.3 Why is the Outstanding Universal Value of the Ironbridge Gorge so Important?

2.10 World Heritage Sites are sites, places, monuments or buildings of “**Outstanding Universal Value**” to the international community, including its current and future generations. The protection of a World Heritage Site is the responsibility of national governments. Being a signature to the convention is a commitment by the government to identify, protect, preserve and conserve their World Heritage Sites for future generations.

2.11 The Site lies within the southern end of the East Shropshire coalfield within a gorge formed by melting water beneath a glacier that occurred during the ice age. The coalfield is exceptionally rich in mineral sources and, along with deposits of coal, the land area has significant deposits of both Carboniferous and Silurian limestone, iron ore, and clays suitable for making brick, roofing tiles, decorative tiles, pottery, and tobacco pipes.

2.12 The Industrial Revolution, a worldwide phenomenon, began in 18th century England before spreading to other nations. This transition including the change from an agrarian (related to cultivated land) and handicraft economy to one dominated by industry and machine manufacturing including iron production⁽²⁾ resulting in far-reaching changes in human history, and which is embodied in the remarkable and integral role of the IGWHS.

2.13 The Site spreads over 550ha with roughly three quarters sitting within the administrative boundary of Telford & Wrekin Council, and roughly a quarter within the Shropshire Council administrative boundary. Section 2 of the SPD provides a spatial portrait of the area.

At the time of inception and as written in 1985⁽³⁾, the IGWHS was described as having five major areas of interest.:

- **"Coalbrookdale:** *This is where in 1709 the Quaker Abraham Darby I developed the coke iron production technique which began the great 18th century steel revolution.⁽⁴⁾ In the 19th century the Coalbrookdale foundries were highly prosperous, exporting their production as far as New Zealand and the Hawaiian Islands. There still remains a high concentration of 18th and 19th century dwellings, warehouses, churches and chapels in the town. The Great Warehouse contains an iron museum.*
- **Ironbridge:** *The locality, where mining and metallurgical (the scientific study of structures and uses of metals) activity began in the 17th century, drawing the areas name from the Iron Bridge erected in 1779 and which also serves to designate the entire region of the Severn Gorges. At the furthest eastern end of the locality there still exist the remains of two 18th century blast furnaces, the Bedlam furnaces, which were built in 1757.*
- **Hay Brook Valley:** *Downstream from Madeley in the low valley of this small tributary of the Severn River, a large open-air museum (Blists Hill Victorian Town) covers 20 hectares. Extraction galleries, shafts with their head-frames, and blast furnaces have been preserved near the Shropshire Canal, which was linked to the Severn River via a gigantic inclined plane known as the Hay Inclined Plane, fitted with ramps.*
- **Jackfield:** *This small town located on the south bank of the Severn made its living from coal mining, clay production and navigation. It was the valley's port of registry (with 87 barges in operation in 1756).*
- **Coalport:** *This town is located at the eastern end of the IGWHS on the north bank of the Severn, which is spanned by the Coalport Bridge. The high point of this town is the porcelain manufacturing plant founded by John Rose at the end of the 18th century and which closed down in 1926. Today it is a porcelain museum (Coalport China Museum) presenting not only the valley's other porcelain manufacturers, such as Caughly, but also other producers of ceramics in Ironbridge Gorge (tileries, pipe factories, etc.). Furthermore, Maws Craft Centre is situated in what remains of the former tile factory of Maw & Co which closed down in 1970."*

The site is an extraordinary concentration of mining, foundries, factories, workshops and warehouses which coexist with an old network of lanes, paths, roads, ramps, canals and railways as well as the substantial remains of traditional landscape and housing. The site is both unique and symbolises an era of exceptional innovation where artists, engineers and writers from all areas of the world decided to focus their attention.

2.14 Following the areas inscription in 1986, it is considered that there are now six major areas of interest including Madeley:

3 Advisory Body Evaluation (ICOMOS) 1986 <https://whc.unesco.org/en/list/197/documents/>

4 In 1850 Bessemer's process was the first inexpensive industrial process for the mass production of steel from molten pig iron, allowing steel to become cheaper and easier to mass produce. This led from Abraham Darby's initial innovation, which improved the efficiency of cast iron production.

2 Introduction

2.15 *Madeley is the earliest settlement within the IGWHS which includes a two-bay medieval hall and some 16th and 17th century timber-framed houses. Madeley's strategic location led to its inclusion in plans for Dawley New Town in 1963, however the subsequent development of the central shopping centre together with the Parkway Bypass in the late 1960's, severed the settlement from the north and interrupted the medieval street pattern.*

Figure 2: Ironbridge Gorge

2.4 Success of the World Heritage Site

2.16 Today, the site is a living, working community with a population of approximately 4,000 people as well as being a world-renowned place to visit. It is also an historic landscape that is interpreted and made accessible through the work of a number of organisations, in particular, the Ironbridge Gorge Museum Trust (established in 1967 to preserve and interpret the remains of the Industrial Revolution within the Ironbridge Gorge) and the Severn Gorge Countryside Trust (established in 1991 to manage the woodland, grassland and associated historic structures in the Gorge).

2.5 Managing Change and Addressing Climate Change

2.17 Conserving our heritage is not just about preserving places in a point of time. One of the biggest challenges is achieving a balance of conserving our heritage whilst adapting to new technologies that arise to support adaptation to climate change. In today's climate, it is becoming ever more evident that shifts in our weather patterns and the need to tackle climate change threatens the resilience of our historic settings. Both Telford & Wrekin Council and Shropshire Council declared a climate emergency, committing to seeking to achieve carbon neutrality by 2030.

2.18 The changes in our climate have greatly increased in both frequency and severity of weather events which can lead to the degradation of heritage assets. The impacts of the 2020 floods in the town of Ironbridge clearly demonstrate that more needs to be done to protect

our heritage assets, including implementing all possible measures to alleviate flood issues in the gorge and beyond, with historic buildings implementing measures to reduce the impacts of flood risk.

2.19 Heritage assets require additional Government support to enable them to play their full part in reaching net zero targets. The obligation for assistance stems from the UNESCO 'Convention on World Cultural and Natural Heritage'⁽⁵⁾ and its Operational Guidelines. These set out the key duties and obligations of national governments, as State Party signatories, to do all that they can to ensure the conservation, preservation, protection, presentation, and transmission to future generations of World Heritage properties situated on their territories. The requirement to conserve natural, tangible and intangible cultural heritage is now going to require engagement with climate change in order to meet the most basic of these objectives.

2.20 Moreover, whilst generally associated with adverse impacts on heritage significance, change – including that delivered through new development – can have positive effects on heritage value and significance. This could manifest itself in stripping away poorly designed additions to historic buildings, changing land management regimes or simply drawing attention to the value, character and significance of under-appreciated assets rather than letting them degrade through neglect or to be affected by criminal activities such as vandalism.

2.21 Over one million people every year visit the iconic Iron Bridge and the surrounding area. With this comes challenges including management of flows of both pedestrians and motor vehicles. Services such as the Park and Ride lessen the pressure on the small roads of Ironbridge Gorge, however the frequency of motor vehicles can dominate the area during the peak summer period.

2.22 Having effective planning policies in place through Local Development Plans for Telford & Wrekin and Shropshire Council's respective areas and supplementary planning guidance within this SPD, allows change to be carefully managed and where possible avoids adverse impacts whilst ensuring opportunities for positive improvements that will safeguard our heritage assets for future generations.

2.23 A Management Plan (2017) for the IGWHS has also been prepared and formally adopted by both Telford & Wrekin and Shropshire Council's. Both Councils are committed to ensuring the regular review of this Management Plan. As such, the current and any future Management Plan form a material consideration in the planning process within both administrative areas.

2 Introduction

Role of the SPD in Decision Making

The key purpose of this SPD is to provide additional guidance to existing and emerging Development Plan policies for protecting and enhancing the Outstanding Universal Value of the IGWHS.

This SPD is therefore intended to be used as a material consideration on relevant planning applications within the WHS and, where appropriate, within its' setting.

Whilst the SPD is a joint document prepared by Telford & Wrekin Borough Council and Shropshire Council, this does not change the primacy of the respective development plan policies being the starting point for decision making within each administrative area.

Guidance within this SPD

Specific guidance for householder and local businesses applications within this SPD includes that relating to;

- Alterations/extensions to existing buildings;
- Refurbishment of existing buildings;
- Making use of redundant buildings;
- Proposals for a change of use of an existing building; and
- Proposals for new development

Details can be found in **Annex 2: Guidance for Development in the Ironbridge Gorge World Heritage Site**.

Guidance on the process for submitting a planning application can be found in **Chapter 7: Submitting a Planning Application in the World Heritage Site**.

2.24 Prior to the introduction of this SPD, there have been a number of documents that function as guidance and policy direction within the IGWHS, further explanation on what these documents achieve is covered in '**Chapter 4. Planning Context**'.

3 Description of the World Heritage Site

3 Description of the World Heritage Site

3 Description of the World Heritage Site

3.1 Boundary

3.1 The Ironbridge Gorge World Heritage Site covers an area of 5.5km (550ha) and is located partly in Telford, and partly Shropshire, approximately 50km north-west of Birmingham. Beyond the bridge itself, the IGWHS is comprised of five communities - Coalbrookdale, Ironbridge, Coalport, Jackfield and parts of the community of Madeley. Within Shropshire the WHS extends into the Broseley Town Council area as well as Barrow and Sutton Maddock parishes.

3.2 The site lies predominantly within the boundary of Telford and Wrekin Council (approximately 76%) with a smaller portion (approximately 24%) within the Shropshire Council boundary. The IGWHS is also a designated Conservation Area (Severn Gorge Conservation Area) and there are over 375 listed buildings of which two are Grade 1 and eighteen are Grade 2*. In addition, there are 7 Scheduled Monuments as well as numerous sites designated for the protection of habitats and species.

3.3 The site incorporates a 5km length of the steep-sided, mineral-rich Severn Valley from a point immediately west of Ironbridge downstream to Coalport, together with two smaller river valleys extending northwards to Coalbrookdale and Madeley. The boundaries of the IGWHS end at the north section of Coalbrookdale.

3.4 To the north of the WHS vast areas of woodland cover the valley and is visually prominent through the WHS. Areas such as Lloyd Coppice grips the sides of the gorge with all 40 hectares of these woods classified as ancient semi-natural woodland, whilst the extensive woodland in Coalbrookdale around Lincoln Hill offers panoramic views from a point known as the Rotunda.

3.5 Other settlements such as parts of Madeley (in Telford & Wrekin) and the town of Broseley (in Shropshire), that fall outside of the immediate boundary of the IGWHS, have contextual importance to the IGWHS with a history of early industrialisation from the 16th century and earlier and are dynamically connected to the area as a whole.

3.6 As described, the WHS straddles the boundary of the two administrative area of Telford & Wrekin and Shropshire. Joint working on conserving the Outstanding Universal Value of the WHS is therefore the responsibility of both authorities, along with a number of other partner organisations who together form the Ironbridge Gorge WHS Steering Group (IGWHSSG). The

3 Description of the World Heritage Site

IGWHSSG supports the preparation and implementation of the Ironbridge Gorge World Heritage Site Management Plan. The 2017 Management Plan has been formally adopted by both local authorities and is a material consideration in the planning process.

Buildwas Parish borders the WHS to the west. The village of Buildwas is a small but vibrant settlement which has a thriving community and a strong relationship to Ironbridge. The well-preserved standing and archaeological remains of Buildwas Abbey, a Scheduled Monument, founded in 1135 as a Cistercian monastery, can be found in a bend in the River Severn to the south-east of Buildwas and about 2 miles west of Ironbridge the abbey was an important centre of learning up to the 14th century.

The steep southern side of the Ironbridge gorge is heavily wooded in places and some of this woodland extends on to the more level ground southwards towards Broseley. Much of this is Ancient Woodland whose loss and deterioration is prevented by policies in the National Planning Policy Framework. Part of the Benthall Edge woodland in Barrow parish (and beyond) is part of the Tick Wood and Benthall Edge Site of Special Scientific Interest. These important woodlands are complemented by several locally designated Wildlife Sites in the Shropshire part of the WHS which are important for their ash, oak and elm woodland, and grassland and meadow plants and animals. The River Severn is also a Local Wildlife Site.

The town of Broseley is situated within half a mile of the WHS and two of the Ironbridge Gorge Museums are located in Broseley Parish. The Ironbridge links Broseley with Coalbrookdale and Madeley. The town shares much of its history with Ironbridge through the mining and transport of coal and clay, iron making, pottery and clay pipe manufacture. The plans for the construction of the Iron Bridge (as it was known at the time) were drawn up in Broseley and Abraham Darby I who developed the process of smelting iron using coking coal, is buried there. The railways, mines, ironworks, brickworks, kilns, houses and fine buildings associated with the town testify to its integral role in the activities taking place in Ironbridge itself during the Industrial Revolution. Much of this built environment is protected through the extensive Broseley Conservation Area designation, the boundary of which extends southwards from the edge of the WHS.

The village of Jackfield on the River Severn is unique in that it is located on the boundary of Telford/Shropshire, sitting within both the Broseley and Gorge parish areas. The settlement grew as a river port for Broseley and Benthall which lie high above it on the rim of the gorge. A very early wooden wagon way (built in 1605) took coal from the lord of the manor's mines to the river here. Jackfield became important for its pottery drinking mugs in the 18th century and later, in the 19th and 20th centuries, high quality encaustic tiles. Some small-scale manufacture of these continues today to replace Jackfield-made tiles in conservation work such as the London Underground.

3.2 Character Areas and Key Settlements

3.7 The five key settlements have been identified (as shown in the Severn Gorge Conservation Appraisal) in being Madeley, Coalford and Jackfield, Coalport, Coalbrookdale and Ironbridge, all of which fall within the Telford & Wrekin Council boundary, with the exception of Jackfield which is part within the Telford & Wrekin boundary and part within the Shropshire boundary.

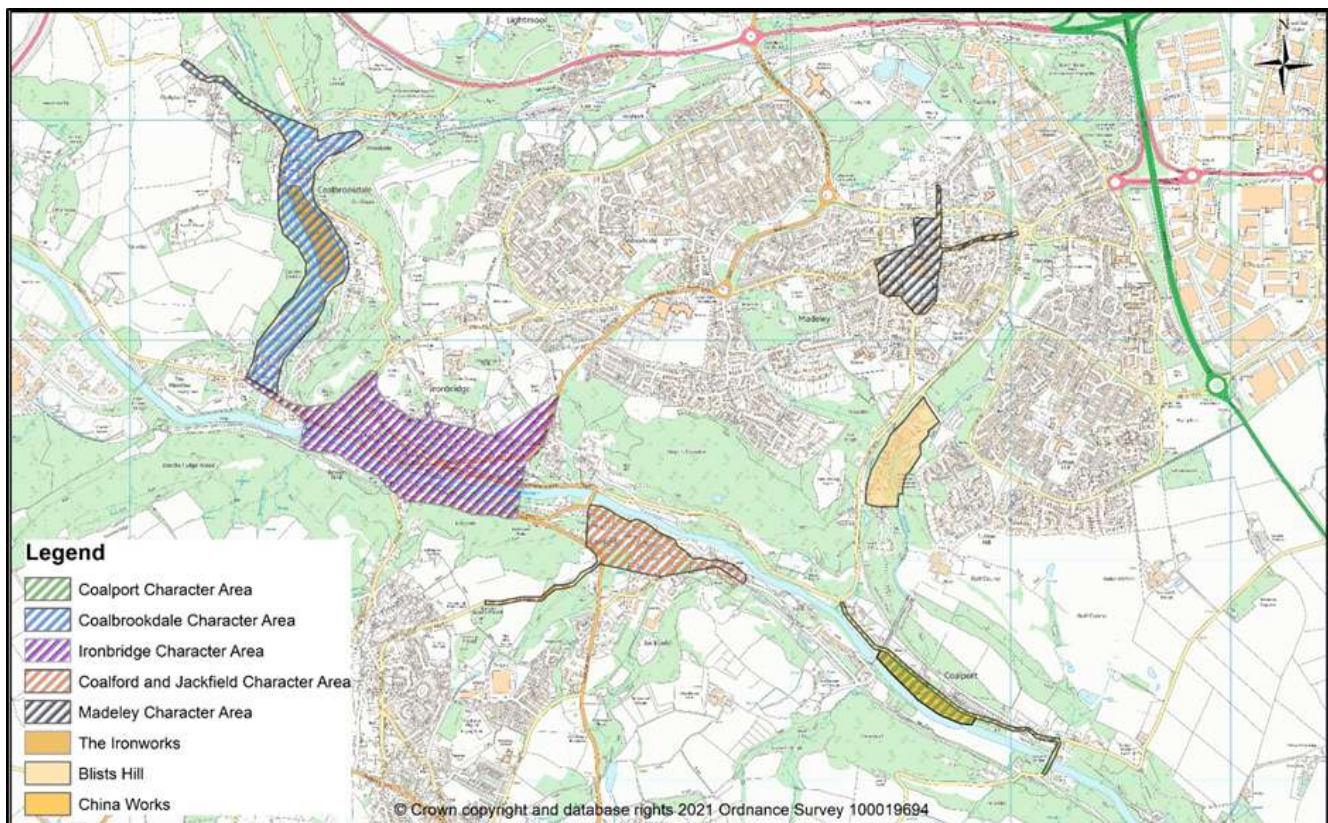

3 Description of the World Heritage Site

Within these settlements there are areas of further character identification which all have their own special characteristics, which are especially considered to be worth conserving. These include:

- **Madeley:** High Street; Court Street; Church Street (east), Church Street (west) and Russell Road
- **Coalford and Jackfield:** Area adjacent River Severn, The Knowle and Church Road
- **Coalport and Blists Hill:** China Works, Coalport Bridge, High Street and Blists Hill
- **Coalbrookdale:** Wellington Road, Darby Road, Woodside, The Ironworks, Dale Road and Dale End
- **Ironbridge:** Market Square and High Street, The Wharfage, Bower Yard & Ladywood, Hodge Bower and Madeley Wood

3.8 In Figure 3 is a map showing each of the character areas (outlined for ease of reference), further analysis of the character areas is contained within the Severn Gorge Conservation Area Appraisal which gives an overview of each of the character areas listed above and how they make their relative area particularly important to the nature of the IGWHS and its Outstanding Universal Value.

Figure 3: Character Areas in the World Heritage Site

3 Description of the World Heritage Site

3.3 Setting

Defining Setting

3.9 The concept of the 'setting' of the IGWHS is an important one and is the physical and cultural contextual surroundings in which the heritage asset resides.

3.10 The NPPF defines the setting of a heritage asset as:

The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the assets and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral.

3.11 Setting is not itself a heritage asset or heritage designation (although land comprising a setting may itself be subject to other heritage or environmental designations). The importance of setting lies in what it contributes to the significance of the heritage asset or to the ability to appreciate that significance.

3.12 The Guidance and Toolkit for Impact Assessments in a World Heritage Context (published by UNESCO in 2022) provides a description of setting:

- ***'[Wider setting] is the immediate and extended environment that is part of, or contributes to, its significance and distinctive character. It may relate to the property's topography, natural and built environment, and other elements such as infrastructure, land use patterns, spatial organisation and visual relationships.'***

3.13 Within the Guidelines in relation to the effective management of a property, it states:

- ***'[The wider setting] may include related ecological and hydrological connectivity, social and cultural practices, economic processes and other intangible dimensions of heritage such as perceptions and associations. The wider setting might also play an essential role in protecting the authenticity and integrity of the property, and its management is related to its role in supporting the Outstanding Universal Value.'***

3.14 This clearly states that the consideration of setting can cover a wide range of impacts which not only relate to the physical, such as views and noise, but can also include social or economic impacts. In addition, the management of the wider setting is a crucial aspect of supporting the Outstanding Universal Value.

3.15 In order to fully understand how the Outstanding Universal Value of the IGWHS may be affected through development or management proposals outside of its boundary, it is important to understand what the setting may comprise for the IGWHS:

- i. The physical location and surroundings of the various character areas within the IGWHS, generally: steep slopes with dense woodland or open agricultural fields around Ironbridge.
- ii. Infrastructure such as roads and local services that connect with or run through the IGWHS that may impact on its Outstanding Universal Value.
- iii. Residential areas such as the majority of Madeley and Woodside which sit above and between the IGWHS and the majority of Boscley which sits south of the IGWHS.

3 Description of the World Heritage Site

3.16 As is recognised within the NPPF definition of setting (provided above), not all parts of setting will contribute to the significance of the IGWHS in equal measure and indeed some parts of the setting may have a negative contribution.

Considering Impacts

3.17 As described above and covered in both National and International guidance the overall impact on the Outstanding Universal Value of the IGWHS arising from development that results in changes to its setting should be taken into account in the decision-making process. The IGWHS does not have a defined 'Buffer Zone', making the consideration of effects upon its setting in the planning process of particular importance.

3.18 Proposals likely to affect the IGWHS within its setting must be accompanied by a proportionate Heritage Statement / Heritage Impact Assessment which clearly identifies the potential impact of the development on the WHS's significance. Further guidance on the purpose and scope of these documents is provided within Chapters 6 and 7 of this SPD.

3.19 Historic England's Good Practice Advice in Planning Note 3 (Second Edition)⁽⁶⁾ provides guidance on managing change within the settings of heritage assets. The guidance has been written for local planning authorities and those proposing change that may affect the setting of heritage assets, including World Heritage Sites.

3.4 Main Access Routes into the IGWHS

3.20 The following areas are considered the main access points into the IGWHS.

3.21 Madeley (partly located within the IGWHS) provides a focus for local shopping and community services. It lies north of, and outside, the steeply sloping sides of the Gorge itself and provides two main access points into the Gorge via Madeley Road and Coalport Road.

3.22 In addition to the small market town at Madeley, a second settlement 2km west is Coalbrookdale. This settlement encapsulates the integration between the Site's industrial heritage and the community that developed to support it, with the impressive landscape providing a backdrop for this historic association. The steep topography has greatly influenced the pattern of development and the resultant tiers of terraces and larger detached houses that are set amongst the wooded valley sides, provide two main access routes towards Ironbridge via Dale Road, Dale End and Church Road.

3.23 To the west of Market Square the Wharfage consists of a mix of former warehouses, pubs and some Victorian villas. At its eastern end the attractive three storey streetscape is enhanced by the stepped elevation as the alignment of the street turns slightly and the buildings rise up Tontine Hill towards the northern end of the bridge. This picturesque setting of the Wharfage alongside the River Severn provides a very attractive streetscape along its entire length.

3.24 The area south of the bridge was fully integrated with Ironbridge as a whole (more so than other areas of the Site) when the bridge was open to traffic, although the Toll House remains on the southern end of the bridge. The blue brick Railway Hotel and adjacent Station Master's House stand as a testament to the Station that closed in 1963. They look out over a flat area

3 Description of the World Heritage Site

of what is now car parking and what was originally railway tracks and sidings set above a substantial retaining wall. From the south this leads directly into the centre of Ironbridge into Market Square.

3.25 To the east of the centre is the area of Coalport which lies on the north side of the River Severn. The village was planned as a canal-river interchange and a complete “new town” by William Reynolds, who between 1788 and 1796 built warehouses, workshops, factories and workers’ accommodation in Coalport. There are two main access points into Coalport which are from the north via Brockton and the south via Broseley.

3.5 Views

3.26 Many views within, across and around the gorge are characterised by contrasting effects of industrial or urban buildings alongside heavily wooded slopes that define Ironbridge Gorge. Pockets of green spaces, such as gardens, allotments and recreational spaces are also visible but are frequently seen against a wooded backdrop.

Figure 4: Aerial View of Ironbridge

3 Description of the World Heritage Site

Figure 5: Aerial View of Ironbridge

3.27 Many of the streets themselves, narrow in appearance in comparison to other road networks, are closed in by high boundary walls and buildings or trees, resulting in very few open views out of the area. Whilst travelling across the gorge glimpses of longer and wider views are revealed. Panoramic views can be achieved from the upper slopes and partial, surprise views can be seen from higher elevated roads.

3.28 The degree of enclosure of the public realm spaces means that when there are open views along, and across, the valleys they are of greater significance, and it is therefore a priority for the viewpoints themselves to be maintained and carefully managed to retain or enhance significant features.

3.29 The views up and downstream from the bridges in the area are particularly important as they help visitors understand the overall shape of the valley and the importance of the river in the history of the gorge. Where vegetation becomes overgrown on riverbanks, this should be managed, so that views of important sites are not obscured.

3.30 Significant changes of view are obtained along the Wharfage, as the urban fabric of Ironbridge unfolds and as the view of the iconic bridge emerges. The fabric of the buildings on the north side of the Wharfage is often obscured by trees, dependent on the time of year and whether they are in leaf or not. The presence of so much greenery between the river and the Wharfage does not reflect the harder nature of the historic landscape that delivered from its industrial past and is part of more recent change.

3.31 Other important views are obtained when descending to the Gorge through the settlement of Coalbrookdale. This is characterised by a series of glances across the valley.

3 Description of the World Heritage Site

3.32 As has been described and as shown in Annex 1, the views within the IGWHS range from wide open views to more enclosed scopes across the gorge, each one of these however is considered integral to the protection of the IGWHS and must therefore be maintained to preserve the Outstanding Universal Value of the IGWHS.

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

4.1 The IGWHS is quite clearly an incredibly important area that has a number of globally unique attributes that demonstrates the Outstanding Universal Value that must be protected by all parties, whether by national bodies, local governments, businesses or residents that reside with the WHS boundary. Each have and will continue to have an important and integral role to play in the area's preservation and conservation so it can continue to be a special place for future generations.

4.2 A shared understanding of the importance of the IGWHS is therefore a key requirement for effective management of the IGWHS. The terminology used to describe the site and its importance as a WHS, often creates confusion as to what the IGWHS is made up of and in turn how to preserve and conserve the sites international significance. Historic England's Good Practice Advice Note 2 ⁽⁷⁾ on managing significance in decision-taking provides further explanation on the concept of significance and how to assess it.

4.3 The purpose of this section is to clearly outline the terminology associated with the Outstanding Universal Value of the IGWHS, allowing readers to work more effectively to ensure the continued preservation and conservation of the IGWHS.

4.1 Outstanding Universal Value

4.4 The basis of any nomination for a World Heritage Site is that they must display Outstanding Universal Value.

4.5 The concept of Outstanding Universal Value, together with the conditions for its authenticity and integrity, underpins the World Heritage Convention. Each site in the list has a Statement of Outstanding Universal Value which summarises the justification for the inscription of the property on the World Heritage List, and serves as a baseline for the universally recognised and accepted heritage/conservation values of that place.

4.6 In order for a WHS to be considered to be of Outstanding Universal Value, a number of requirements had to be met:

- Meeting one or more of the ten World Heritage Criteria;
- Meeting the conditions of integrity; and
- Meeting the conditions of authenticity.

4.7 By understanding the different aspects of Outstanding Universal Value, it is possible to understand how change can impact the Outstanding Universal Value of the IGWHS.

4.8 The UNESCO Operational Guidelines ⁽⁸⁾ identifies the need for an appropriate management system specifying how the Outstanding Universal Value of a property should be preserved, ensuring the effective protection for present and future generations. The common elements of this document include the following:

7 Historic England's Good Practice Advice Note 2: Managing significance in decision-taking: <https://historicengland.org.uk/images-books/publications/gpa2/gpa2-managing-significance-in-decision-taking/gpa2/>

8 Operational Guidelines for the Implementation of the World Heritage Convention 31st July 2021 <https://whc.unesco.org/en/guidelines/>

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

- A thorough shared understanding of the property, including its universal, national and local values and its socio-ecological context by all stakeholders, especially local communities;
- A respect for diversity, equity, gender equality and human rights and the use of inclusive and participatory planning and stakeholder consultation processes;
- A cycle of planning, implementation, monitoring, evaluation and feedback;
- An assessment of the vulnerabilities of the property to social, economic, environmental and other pressures and changes, including disasters and climate change, as well as the monitoring of the impacts of trends and proposed interventions;
- The allocation of necessary resources;
- Capacity building; and
- An accountable, transparent description of how the management system functions.

4.9 The World Heritage Committee, the main body in charge of the implementation of the Convention, has also developed precise criteria for the inscription of properties on the World Heritage List. This is included with the UNESCO Operational Guidelines which is regularly updated.

4.2 Criteria of Inscribing

4.10 WHS's are designated for a number of reasons. For cultural sites (of which the IGWHS falls within) the following criteria apply:

- i. To represent a masterpiece of human creative genius;
- ii. To exhibit an important interchange of human values, over a span of time or within a cultural area of the world, on developments in architecture or technology, monumental arts, town-planning or landscape design;
- iii. To bear a unique or at least exceptional testimony to a cultural tradition or to a civilization which is living, or which has disappeared;
- iv. To be an outstanding example of a type of building, architectural or technological ensemble or landscape which illustrates (a) significant stage(s) in human history;
- v. To be an outstanding example of a traditional human settlement, land-use, or sea-use which is representative of a culture (or cultures), or human interaction with the environment especially when it has become vulnerable under the impact of irreversible change;
- vi. To be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance. (The Committee considers that this criterion should preferably be used in conjunction with other criteria)

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

Note: as the IGWHS falls under a cultural site, the other four criteria (listed under the World Heritage Criteria) relating to natural sites is not covered.

4.11 The inscription of the IGWHS meets four of the criteria, these are listed below.

- i. The Coalbrookdale blast furnace perpetuates in situ the creative effort of Abraham Darby I who discovered coke iron in 1709. It is a masterpiece of man's creative genius in the same way as Ironbridge, which is the first known metal bridge. It was built in 1779 by Abraham Darby III from the drawings of the architect Thomas Farnolls Pritchard.
- ii. The Coalbrookdale blast furnace and Ironbridge exerted great influence on the development of techniques and architecture.
- iii. Ironbridge Gorge provides a fascinating summary of the development of an industrial region in modern times. Mining centres, transformation industries, manufacturing plants, workers' quarters, and transport networks are sufficiently well preserved to make up a coherent ensemble whose educational potential is considerable
- iv. Ironbridge Gorge, which opens its doors to over 1 million visitors yearly, is a world-renowned symbol of 18th century Industrial Revolution.

4.3 Understanding the heritage values of the IGWHS

4.12 It is important to consider that all heritage assets are important within the IGWHS, regardless of whether these are designated or not. Different aspects of heritage can have different value from one person to the next. Considering how these aspects of heritage combine and relate with each other help to provide an understanding of their significance in the Outstanding Universal Value of the IGWHS.

4.13 The significance of heritage is defined within the NPPF as the value of a heritage asset to this and future generations because of its historic interest. Significance derives not only from a heritage asset's physical presence, but also from its setting. For WHS's, the cultural value described within each site's Statement of Outstanding Universal Value forms part of its significance.

4.14 The NPPF definition further states that in the planning context heritage interest may be:

- Archaeological;
- Architectural;
- Artistic; or
- Historic.

4.15 These can be interpreted as follows⁽⁹⁾:

- **Archaeological interest:** As defined in the Glossary to the National Planning Policy Framework, there will be archaeological interest in a heritage asset if it holds, or potentially holds, evidence of past human activity worthy of expert investigation at some point.
- **Architectural and artistic interest:** These are interests in the design and general aesthetics of a place. They can arise from conscious design or fortuitously from the way the heritage asset has evolved. More specifically, architectural interest is an interest in the art or science

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

of the design, construction, craftsmanship and decoration of buildings and structures of all types. Artistic interest is an interest in other human creative skill, like sculpture.

- **Historic interest:** An interest in past lives and events (including pre-historic). Heritage assets can illustrate or be associated with them. Heritage assets with historic interest not only provide a material record of our nation's history, but can also provide meaning for communities derived from their collective experience of a place and can symbolise wider values of cultural identity such as faith, folklore, crafts etc.

4.16 Establishing heritage value is a key stage in the process when considering impacts on the IGWHS. Attributes of the IGWHS (covered more widely below) also provide a useful checklist to ensure that heritage value is considered.

4.4 Attributes defining Outstanding Universal Value

4.17 Attributes are the specific qualities that convey a WHS's Outstanding Universal Value. Attributes can include both tangible and intangible elements and help to articulate the Outstanding Universal Value and help the decision-making process. The table below demonstrates what may be considered tangible or intangible attributes.

4.18 For cultural heritage places, attributes can be buildings or other built structures and their forms, minerals, design, uses and functions but also urban layouts, agricultural processes, religious ceremonies, building techniques, visual relationships and spiritual connections.

Attributes defining the Outstanding Universal Value

Tangible Attributes	Intangible Attributes
<ul style="list-style-type: none"> ● Buildings ● Monuments ● Landscapes ● Natural Features 	<ul style="list-style-type: none"> ● Traditions ● Language ● Literature ● Art

4.19 Attributes should assist in the assessment of impact of proposed changes within or affecting the setting of the designated WHS.

4.20 Attributes are described as having 'authenticity' and 'integrity'. This means that they relate clearly and coherently to their original form and therefore demonstrate aspects of the Sites Outstanding Universal Value. They can also include relationships and links between features and with their wider context or environment.

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

4.21 The attributes for the IGWHS reflect the values they convey and will be the focus of protection and management, they display and measure the integrity of the wholeness and intactness of cultural heritage and credibly express the cultural value of the IGWHS's authenticity. These are summarised in the table below:

Attributes	Descriptive Summary
(a) A 5km length of steep sided, mineral rich Severn Valley	The landscape is rich in evidence of the heroic period when it was the focus of international attention, blessed with mineral riches as well as timber, and many remains of the mines and quarries.
(b) Two small river valleys leading from the Gorge to Coalbrookdale and Madeley	The sluices and pools along tributary streams, which were the source of power for bellows, hammers and mills, can still be recognised.
(c) Smelting iron with coke	Perfected by Abraham Darby I the WHS includes 3 groups of blast furnaces at Coalbrookdale, Bedlam and Blists Hill. This led to a revolution in the making of iron.
(d) A high concentration of 18 th and 19 th century dwellings, warehouses and public buildings	There are still warehouses and wharves along the banks of the River Severn, which carried much of the trade of the Gorge. The IGWHS contains a wealth of monuments associated with production, blasts furnaces, factories and engineering works.
(e) Substantial mining remains	<p>The outstanding monument of the mining industry in the Ironbridge Gorge is the Tar Tunnel, important as a geological curiosity and as evidence of the skills of 18th century minors.</p> <p>There remain at least seven locations in the WHS where mine entries can be seen and accessed and there are some 400 recorded mine entries in the IGWHS as a whole.</p>
(f) Collections and artefacts	The entire and multi themed collections of the Ironbridge Gorge Museum Trust, which includes those on display in its 10 museums together with its extensive Library and archive, are all Designated of national importance by Arts Council England.
(g) The Iron Bridge	The Iron Bridge is the only substantial iron road bridge to survive from the 18 th century. It was universally accepted at the time of its construction that it was the first of its kind. The

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

	impact made by the Iron Bridge in continental Europe is shown by a small wrought iron replica bridge of 1791.
(h) Workers' housing	The landscape of the Gorge also reflects the achievements of talented men and women who are no longer individually remembered, but whose skills in sinking mines, moulding iron castings, painting china and sailing barges were the foundation of the area's prosperity and fame.
(i) Infrastructure and transport	Monuments of transport systems are further evidence of the confidence and scientific understanding of those who lived in the Gorge in the 18 th century, the Iron Bridge, Hay Inclined Plane, and the numerous traces of the primitive railways.
(j) Traditional landscapes and woodland of the Severn Gorge	The historic landscape also shows clear evidence of the philanthropic nature as well as entrepreneurial skills of the early industrialist in the area.
(k) Inspiration for artists, engineers, architects and writers	The world has recognised the significance of the Ironbridge Gorge since the 18 th century when artists, engineers and writers from many countries were drawn to the area to admire innovations in ironworking, mining, and in structural and mechanical engineering.
(l) The historic landscape as an accessible, interpreted open air museum, educational facility and international symbol of the Industrial Revolution	The Ironbridge Gorge was one of the areas of the United Kingdom that experienced profound economic and social changes between 1709 and 1820. The people of the Gorge pioneered new means of mining coal, of working iron, of building bridges, of applying the power of steam, of building railed ways and carrying canals over inhospitable territory. Its landscape reflects both the pains and the triumphs of human experience and is part of the world's heritage from which all can learn.
(m) The sequence of industrial development evident in the landscape that tells a complete story of industrial innovation and development	<p>The landscape reflects the ambition and imagination of the entrepreneurs and engineers of the past.</p> <p>The industrial monuments of the Ironbridge Gorge are associated with people whose names are internationally known such as the Darby Family, Richard Reynolds, John</p>

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

	Wilkinson, Thomas Telford, Rev John Fletcher and the ninth Earl Dundonald. Some of their homes still stand, as do some of the structures for which they were responsible.
--	---

4.5 Conditions of Authenticity

4.22 In addition, to meeting criteria for inscription, WHS's also have to meet the conditions of authenticity. The key consideration in this is the attributes that comprise the Outstanding Universal Value are well understood in terms of their history, meaning and development.

4.23 The ability to understand the value that is attributed to a site's heritage depends on the sources of information and their credibility or truthfulness. The knowledge and understanding of these sources of information and the accumulation of their meaning over time, are the requisite bases for assessing all aspects of authenticity.

4.24 Paragraph 82 of the Operational Guidelines states that '*Depending on the type of cultural heritage, and its cultural context, properties may be understood to meet the conditions of authenticity, if their cultural values are truthfully and credibly expressed through a variety of attributes including:*

- *Form and design;*
- *Materials and substance;*
- *Use and function;*
- *Traditions, techniques and management systems;*
- *Location and setting*
- *Language, and other forms of intangible heritage;*
- *Spirit and feeling; and*
- *Other internal and external factors.'*

4.25 Attributes such as spirit and feeling do not lend themselves easily to practical applications for the conditions of authenticity, but nevertheless are important indicators of character and sense of place, for example, in communities maintaining tradition and cultural continuity.

4.26 Further information is also provided within Chapter 3 of UNESCO's Guidance and Toolkit for Impact Assessments in a World Heritage Context⁽¹⁰⁾.

4.6 Conditions of Integrity

4.27 The third requirement (in addition to the WHS's inscription and conditions of authenticity) in order for a WHS to have Outstanding Universal Value, is to satisfy the conditions of integrity. Integrity is a measure of wholeness and intactness of a WHS and its attributes. This is explained further overleaf.

- **Wholeness: All the necessary attributes are within the property or site**
 - An application that has an impact on the wholeness of the IGWHS would remove a feature or features that are considered to be integral to the Outstanding Universal

4 Outstanding Universal Value, Integrity, Authenticity and Attributes of Outstanding Universal Value

Value. The loss of a Wynd or a former factory building or the narrow lanes of development within some of the communities could have this level of impact.

- **Intactness: All the necessary attributes are still present – none are lost or have been significantly damaged or have decayed**
 - The guidance within this document is intended to protect the attributes of the Outstanding Universal Value and all the cultural and environmental characteristics of the IGWHS.

4.28 The conditions of integrity are particularly relevant to cultural sites, as it is important that these sites are representative of a certain way of life, having sufficient dimensions and containing all significant features and elements to respect their integrity.

4.29 Examining the conditions of integrity, therefore requires assessing the extent to which the site:

- Includes all elements necessary to express its Outstanding Universal Value;
- Is of adequate size to ensure the complete representation of the features and processes which convey the sites significance; and
- Suffers from adverse effects of development and/or neglect.

4.30 This means that the physical fabric and/or its significant features should be in good condition, and the impact of deterioration processes controlled. A significant proportion of the elements necessary to convey the totality of the value conveyed by the Site should be included. Relationships and dynamic functions present in cultural landscapes, historic towns or other living properties essential in their distinctive character should also be maintained.

4.31 The guidance within this document is intended to protect the attributes of the Outstanding Universal Value and all the cultural and environmental characteristics of the IGWHS.

4.32 The figure below shows how all of the above relates with each other and how each can affect the Outstanding Universal Value of the IGWHS.

5 Planning Context

5 Planning Context

5.1 World Heritage status does not in itself provide any controls over development. In England the protection of World Heritage Sites is provided by a combination of individual designations and the spatial planning system. The planning framework for the IGWHS is set out below.

5.1 National Planning Policy Framework

5.2 The National Planning Policy Framework (NPPF) sets out the Government's planning policies for England and how these should be applied. It provides a framework within which locally prepared plans for housing and other development can be produced (Para 1 NPPF).

5.3 The NPPF is a material consideration when planning decisions are being made. Planning law requires that applications for planning permission must be determined in accordance with policies in development plans unless other material considerations indicate otherwise⁽¹¹⁾.

5.4 In paragraph 189 the NPPF states:

- ***“Heritage assets range from sites and buildings of local historic value to those of the highest significance, such as World Heritage Sites which are internationally recognised to be of Outstanding Universal Value⁽¹²⁾. These assets are an irreplaceable resource, and should be conserved in a manner appropriate to their significance, so that they can be enjoyed for their contribution to the quality of life or existing and future generations⁽¹³⁾”.***

5.5 Paragraph 190 goes on to consider that *“Plans should set out a positive strategy for the conservation and enjoyment of the historic environment”*.

5.6 Paragraph 200 states that *“Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification”*.

5.7 Paragraphs 201 and 202 consider when consent should be refused for developments which cause substantial or less than substantial harm. Exceptions include consideration of the nature of the asset, viable use, conservation by grant-funding or whether the harm or loss is outweighed.

5.8 Paragraph 206 further considers *“Local planning authorities should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to the asset (or which better reveal its significance) should be treated favourably”*.

5.9 However, Paragraph 207 states *“Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as substantial harm under paragraph 201 or less than substantial*

11 Section 38(6) of the Planning and Compulsory Purchase Act 2004 and Section 70(2) of the Town and Country Planning Act 1990

12 Some World Heritage Sites inscribed by UNESCO are of natural significance rather than cultural significance; some are inscribed for both their natural and cultural significance.

13 The policies set out in this chapter relate, as applicable, to the heritage conservation regimes for which local planning authorities are responsible under the Planning (Listed Buildings and Conservation Areas) Act 1990, as well as to plan-making and decision-making.

5 Planning Context

harm under paragraph 202, as appropriate, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole”.

5.10 Regarding mineral extraction (in relation to World Heritage Sites) Paragraph 211 states when “*considering proposals for mineral extraction, mineral planning authorities should:*

- a. ***as far as is practical, provide for the maintenance of landbanks of non-energy minerals from outside National Parks, the Broads, Areas of Outstanding Natural Beauty and World Heritage Sites, scheduled monuments and conservation areas”.***

5.2 National Planning Practice Guidance (PPG)

5.11 The PPG sets out the importance of World Heritage Sites, setting out how they are protected and managed in England. Paragraph 27 of the PPG sets out how the importance of World Heritage Sites is reflected in the NPPF which clearly defines them as a designated heritage asset.

5.12 Moreover, Paragraph 33 considers how the setting of a WHS is protected through the protection of specific views and viewpoints, both from and to the site.

5.13 The PPG also highlights what approach should be taken to assessing the impact of development on WHS’s. Paragraph 35 states that in the event that a proposal affects a WHS’s Outstanding Universal Value, integrity or authenticity through its development, there is a requirement to submit the relevant information to enable an assessment of the potential impacts on the Outstanding Universal Value. This may include the following:

- Visual Impact Assessments;
- Archaeological Data; and/or
- Historical Information.

5.14 In some cases, within the IGWHS, this will form part of an Environment Statement, with useful approaches to completing this set out in the:

- International Council on Monuments and Site’s Heritage Impact Assessment guidelines;
- UNESCO’s Guidance and Toolkit of Impact Assessments in a World Heritage Context; and
- Historic England’s guidance on the Setting of Heritage Assets setting and views; which gives general advice on understanding setting, and how it may contribute to the significance of heritage assets and allow that significance to be appreciated, as well advice on how views contribute to setting

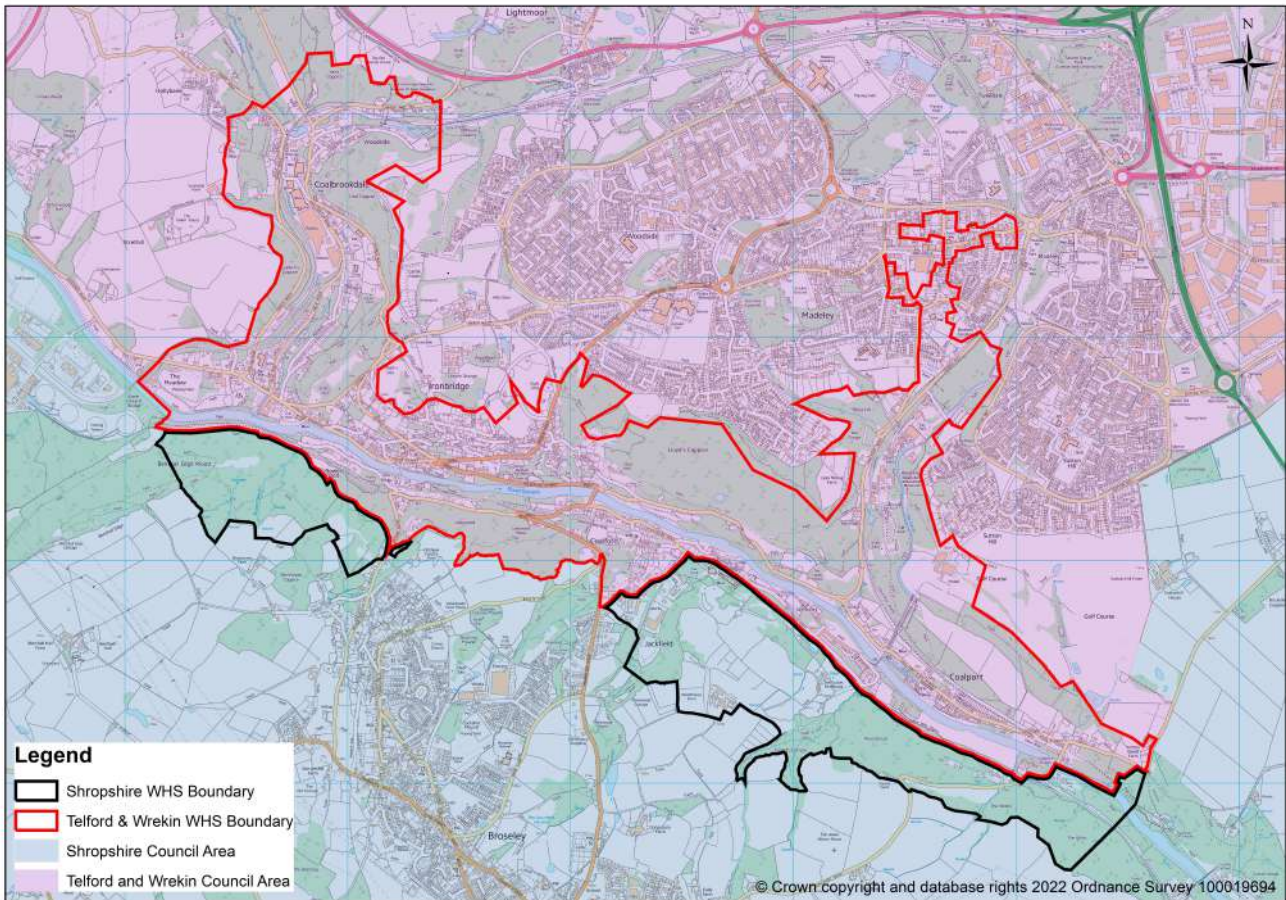

5.3 Local Policy

5.15 Planning policy that looks to protect and enhance the Ironbridge Gorge World Heritage Site is covered in both the Telford & Wrekin and Shropshire Council’s adopted Local Plans and is the starting point for taking planning decisions on Planning Applications in these respective areas.

5.16 The majority of the IGWHS falls within Telford & Wrekin Council’s administrative area (approximately 415ha, 76%) with a smaller area within Shropshire Council’s administrative area (approximately 135ha, 24%). this is identified in Figure 6 below.

5 Planning Context

Figure 6: Council Boundaries for the Ironbridge Gorge World Heritage Site

5.17 The following sections provide a summary of the Local Development Plans⁽¹⁴⁾ within Telford & Wrekin Council and Shropshire Council administrative areas.

5.4 Telford & Wrekin Council

Telford & Wrekin Local Plan (2018)

5.18 The Telford and Wrekin Local Plan 2011 – 2031 was adopted in January 2018 and forms the development plan for the borough. Chapter 9, the Built Environment and Heritage, sets out the importance of the historic environment and emphasises its benefits to the local quality of life. All the policies within this section, BE1 to BE10 are considered key in the decision making process for developments within the IGWHS and it is essential that any future proposals accord with them.

5.19 Of particular relevance is section 9.2 Historic Environment, with a dedicated policy for the IGWHS (BE3), this is shown below.

14 Other Neighbourhood Plans have been 'made' within both the Telford & Wrekin and Shropshire Council administrative areas. This summary focuses upon those of greatest relevance to the IGWHS.

5.20 As the Site is also an area of special archaeological interest the policy also sets out how proposed development will be particularly scrutinised for potential impacts on the archaeology of sites and monuments. Moreover, Policy BE3 is considered integral to protecting and enhancing the IGWHS's Outstanding Universal Value the full policy is shown overleaf:

5 Planning Context

The Council will protect and enhance the Outstanding Universal Value of the Ironbridge Gorge World Heritage Site.

Any harm or loss to the World Heritage Site must be clearly justified.

The Council will only support proposals likely to cause substantial harm to the World Heritage Site where it has been clearly demonstrated that there would be substantial public benefits associated with the proposal, or in all the following circumstances:

- The asset cannot be sustained in its current use;
- The asset prevents all reasonable use of the site; and
- The harm or loss is outweighed by the benefit of bringing the site back into use.

In these wholly exceptional circumstances where harm can be clearly and convincingly justified and the development would result in the partial or total loss of a heritage asset and/or its setting within the World Heritage Site, the Council will require the developer to record and analyse the asset, including an archaeological excavation where relevant, in accordance with a scheme to be agreed beforehand and to be deposited on the Council's Historic Environment Record.

In determining any application for development, and in undertaking its overall responsibilities, the Council will give significant weight to the international value of the Severn Gorge area as a World Heritage Site.

The Ironbridge Gorge World Heritage Site is an area of special archaeological interest within which all archaeological sites of significance will be afforded the same protection as that given to nationally important monuments. Proposed development will be particularly scrutinised for its potential effect on the archaeology of sites and monuments.

The Council will not support proposals in, or adjacent to, the World Heritage Site that adversely affect the following key features:

- i. The existing topographical character and landscape quality, including the stability of the slopes and riverbanks;
- ii. The setting of the World Heritage Site including the existing skylines and views to, and from, the Gorge;
- iii. The area's natural diversity and ecology, including amongst others, Sites of Special Scientific Interest and Local Wildlife Sites; or
- iv. The area's distinctive archaeological resource.

In addition to these features, development within the World Heritage Site will need to take account of flood risk and drainage and will be required to demonstrate that the site is stable, and that the development can address gas migration.

The Council will only support engineering works or development along the riverside, or within the course of the river, if it can be demonstrated that the natural, historic or archaeological character of the River Severn is preserved or enhanced by the proposal and that there is no adverse impact on the hydrology, ecology or archaeology of the river and associated deposits upstream or downstream.

5.21 The criteria for protecting key features as outlined within Policy BE3, derives from the existing WHS Management Plan.

5.22 The other policies that are considered relevant to the IGWHS are:

- Listed Buildings (BE4);
- Conservation Areas (BE5);
- Buildings of Local Interest (BE6); and
- Archaeology and Scheduled Ancient Monuments (BE8).

5.23 Also, of importance to the IGWHS is section 9.3 of the Local Plan which deals with unstable and contaminated land, which is a particular issue in the gorge. This includes:

- Land Stability (Policy BE9); and
- Land Contamination (Policy BE10).

Telford & Wrekin Local Plan Review

5.24 In October 2020, Telford & Wrekin Council undertook the first period of consultation (Issues and Options) for the review of the Telford & Wrekin Local Plan. This consultation ended in January 2021. The Local Plan Review will consider changes in national policy, local circumstances and wider global issues such as climate change. The Local Plan Review will include a robust policy position giving protection to the IGWHS.

Madeley Neighbourhood Plan

5.25 The Madeley Neighbourhood Plan (NP) was made in March 2015, and forms part of the Local Development Plan for Telford & Wrekin and is used to help determine planning applications.

5.26 Objective 8 of the Neighbourhood Plan looks to protect and enhance the historic environment, including archaeological remains and non-designated buildings and sites of heritage value, for the benefits of residents and visitors alike, and Objective 9 looks to maintain and enhance local character and areas of historic importance by ensuring high quality design of buildings and public realm. Additionally, Objective 17 looks to promote Madeley as a tourism hub for the IGWHS.

5.27 Policy LC5 states that new development throughout the Plan Area should protect physical assets of the historic environment (buildings, sites or areas together with their settings) and enhance or reinforce those characteristics, qualities and features that contribute to the local distinctiveness of the Plan Area's landscape and townscape.

5 Planning Context

5.5 Shropshire Council

Shropshire Local Development Plan

5.28 Approximately 24% of the IGWHS falls within Shropshire Councils administrative area. The current development plan for Shropshire comprises the Core Strategy (adopted in 2011) and the Site Allocation and Management of Development (SAMDev) Plan (adopted in 2015). Together these documents contain a number of policies which are considered key in the decision making process for developments within the IGWHS and it is essential that any future proposals accord with them.

5.29 Within the Core Strategy:

- Policy CS3: Market Towns and Other Key Centres;
- Policy CS6: Sustainable Design and Development;
- Policy CS16: Tourism, Culture and Leisure; and
- Policy CS17: Environmental Networks.

5.30 The above policies are further supplemented by development management policies contained within the SAMDev Plan, these include:

- Policy S4: Broseley;
- Policy MD12: Natural Environment; and
- Policy MD13: Historic Environment.

5.31 SAMDev Plan Policy MD13: Historic Environment is particularly important in the context of the IGWHS, it states:

In accordance with Policies CS6 and CS17 and through applying the guidance in the Historic Environment SPD, Shropshire's heritage assets will be protected, conserved, sympathetically enhanced and restored by:

1. Ensuring that wherever possible, proposals avoid harm or loss of significance to designated or non-designated heritage assets, including their settings.
2. Ensuring that proposals which are likely to affect the significance of a designated or non-designated heritage asset, including its setting, are accompanied by a Heritage Assessment, including a qualitative visual assessment where appropriate.
3. Ensuring that proposals which are likely to have an adverse effect on the significance of a non-designated heritage asset, including its setting, will only be permitted if it can be clearly demonstrated that the public benefits of the proposal outweigh the adverse effect. In making this assessment, the degree of harm or loss of significance to the asset including its setting, the importance of the asset and any potential beneficial use will be taken into account. Where such proposals are permitted, measures to mitigate and record the loss of significance to the asset including its setting and to advance understanding in a manner proportionate to the asset's importance and the level of impact, will be required.
4. Encouraging development which delivers positive benefits to heritage assets, as identified within the Place Plans. Support will be given in particular to proposals which appropriately conserve, manage or enhance the significance of a heritage asset including its setting, especially where these improve the condition of those assets which are recognised as being at risk or in poor condition.

Shropshire Local Plan Review

5.32 Shropshire Council is at an advanced stage of their Local Plan Review, the Council submitted the Local Plan to the Secretary of State in September 2021 and are now undergoing Examination.

5.33 The draft Shropshire Local Plan (2016-2038) identifies a vision and framework for the future development of Shropshire to 2038; addresses needs and opportunities in relation to housing, the local economy, community facilities and infrastructure; and seeks to safeguard the environment, enable adaptation to climate change and helps to secure high-quality and accessible design.

5.34 Due to the significant progress undertaken by Shropshire Council on their Local Plan it is important to consider the updated policies that relate to the IGWHS. These include:

- **SP1 The Shropshire Test:** This includes raising design standards and enhancing the area's character and historic environment.
- **SP5 High Quality Design:** This policy is intended to ensure new development will deliver high quality design, taking account of the need to maintain and enhance the character, appearance and historic interests of settlements, street scenes, groups of buildings and

5 Planning Context

the landscape. Whilst not specific to the IGWHS, the policy nevertheless does apply within that part of the WHS, and its setting situated within Shropshire.

- **SP14 Strategic Corridors:** The Shropshire Economic Growth Strategy seeks to deliver a 'step change' in the capacity and productivity of the local economy. The strategic approach in Policy SP2 seeks to deliver significant development and infrastructure investment within the 'strategic corridors' served by the principal rail network and strategic and principal road networks in Shropshire. The Eastern Belt 'strategic corridor' includes opportunities in and around Ironbridge through the redevelopment of the former Power Station site.

5.35 The draft Shropshire Local Plan also includes development management policies that are relevant to the IGWHS and the setting of the IGWHS, the most directly relevant being Policy DP23 Conserving and Enhancing the Historic Environment. This is shown below.

Shropshire's heritage assets will be protected, conserved, sympathetically enhanced and restored, by:

1. Ensuring that wherever possible, proposals avoid harm or loss of significance to designated or non-designated heritage assets, including their settings.
2. Ensuring that proposals which are likely to affect the significance of a designated or non-designated heritage asset, including its setting, are accompanied by a Heritage Assessment. The level of detail in the Heritage Assessment should be proportionate to the asset's significance.
3. Ensuring that proposals which are likely to result in any loss of, harm to, the significance of a designated heritage asset, including its setting, either directly or indirectly, are determined in line with the National Planning Policy Framework.
4. Ensuring that proposals which are likely to result in loss of, or harm to, the significance of a non-designated heritage asset and/or its setting, either directly or indirectly, will only be permitted if it can be clearly demonstrated that on balance, the benefits of the proposal outweigh that loss or harm. In making this assessment the following will be taken into account:
 - a. The degree of harm or loss of significance to the asset and/or its setting; and
 - b. The importance of the asset; and
 - c. Any potential beneficial use.
5. Where such proposals are permitted, measures will be required to:
 - a. Mitigate and record the loss of significance to the asset and/or its setting; and
 - b. Advance understanding in a manner proportionate to both the assets and/or its setting importance and the level of impact.
6. Encouraging development which delivers positive benefits to heritage assets. Support will be given in particular to proposals which appropriately conserve, manage or enhance the significance of a heritage asset including its setting, especially where these improve the condition of those assets which are recognised as being at risk or in poor condition.
7. Ensuring that development proposals affecting designated or non-designated heritage assets are determined in line with more detailed supplementary planning documents, where applicable.

5.36 In addition, the draft plan includes a range of settlement policies, this includes:

- **S4 Broseley Place Plan Area:** This is the development strategy for the Broseley which is identified as a key centre and lies partly within the IGWHS boundary.
- **S20 Strategic Settlement: Former Ironbridge Power Station:** This outlines the requirements for redevelopment of the Former Ironbridge Power Station Site. It includes recognition that there is a need for the high-quality design and layout of development on the site which reflects and respects the sites heritage, heritage assets on the site and heritage assets within the wider area, including the IGWHS.

Broseley Neighbourhood Plan

5.37 The Broseley Neighbourhood Plan is at a very advanced stage. It has been subject to a series of consultations, examination by an independent examiner and a local referendum was recently undertaken during which a significant proportion (in excess of 89% of valid votes) supported the use of the Neighbourhood Plan for decision making on planning applications in the neighbourhood area. Subject to approval by Shropshire Council's full Council, the Neighbourhood Plan will now become part of Shropshire's Local Development Plan.

5.38 Objective 5.9a) of the Neighbourhood Plan considers the tourism impact of the Ironbridge Gorge and its associated museum sites. It states that the plan will consider how Broseley can be promoted as a base for tourists wishing to explore the surrounding area.

5.39 Policy GR5 looks to protect footways and bridleways through green spaces and where possible enhance. The Neighbourhood Plan aims to improve links between Broseley and IGWHS.

5 Planning Context

5.6 Local Guidance

5.40 In addition to national and local planning policy, there is also a range of local planning guidance that is relevant to the IGWHS. The most directly relevant is the IGWHS Management Plan, which has been formally adopted by both Telford & Wrekin and Shropshire local planning authorities and is a material consideration in the planning process.

IGWHS Management Plan

5.41 Protecting and strengthening the qualities of IGWHS and its rich material evidence of Britain's rise as the world's first industrial nation is one of the key principles which under-pins the IGWHS Management Plan.

5.42 The IGWHS Management Plan (2017) recognises that if the IGWHS is to survive as a living community, it will need to continue to change and adapt in the spirit of innovation, which made the area famous and which must be allowed to continue to flourish.

5.43 The IGWHS Management Plan was produced in order to oversee the sustainable use of the cultural assets of the Ironbridge Gorge, the conservation of its buildings, monuments and the landscape and to ensure the protection of the Outstanding Universal Value of the IGWHS, as well as deliver on obligations to UNESCO.

5.7 Other Local Guidance

5.44 There is also a range of other planning guidance (including other Supplementary Planning Documents) relevant to the Telford & Wrekin and Shropshire Council administrative areas respectively, the most directly relevant to the IGWHS has been outlined for context:

Telford & Wrekin Council

Residents Guide

5.45 In July 2020, Telford and Wrekin Council produced a guide for residents of the IGWHS within the Telford & Wrekin administrative area, which provides information to help residents make informed choices and decisions when considering making changes to or carrying out works to both the dwelling house, and the land that surrounds the property. The Residents Guide sets out what all residents of the IGWHS need to be aware of, so that we can work together to maintain and enhance the Outstanding Universal Value of the IGWHS.

5.46 The Residents Guide provides background information on the IGWHS, explaining the need for additional measures required to protect the built and natural environment of an area with this status and provides advice on relevant considerations when residents propose to make alterations to their properties or land.

5.47 This is not part of the development plan but provides useful information and guidance for submitting planning applications in the IGWHS and when you need planning permission.

5.48 Essential information also included in the guide:

- *What is planning permission required for?*
- *What is a Listed Building and when is Listed Building Consent required?*
- *Archaeological matters.*

- *Ecological considerations.*
- *Tree Preservation Orders and Trees in Conservation Areas.*
- *Access and Parking.*
- *Land stability and flooding – planning considerations and why.*

Supplementary Planning Documents

5.49 The SPD's listed below are all considered to have some relevance to the IGWHS within the Telford & Wrekin Council administrative area, (although some may not be directly related to the IGWHS as a whole, it is considered that particular planning applications to which they are relevant, whether this be related to Shop Fronts, supported and specialist housing or telecommunications development may impact the Outstanding Universal Value of the IGWHS).

Telford & Wrekin Council Shop Fronts and Signage Design Guidance in Conservation Areas

5.50 Telford & Wrekin has attractive Conservation Areas, each with their own distinctive character and history. Over time the character and quality of traditional shopping streets across the borough had gradually been eroded by poor, careless and unsympathetic alterations to shop fronts and the Design Guide was intended to address and halt those undesirable changes.

5.51 Widespread use of relatively cheap materials and standardised shop front designs leads to a loss of local distinctiveness. Inappropriate shops fronts and large attention-grabbing signs dominate the street scene and have a negative impact on historically important buildings as well as whole shopping areas.

5.52 The Design Guide enables developers to plan for shop front solutions appropriate to various settings.

Homes for All: Providing accessible, supported and specialist housing in Telford and Wrekin

5.53 In March 2020 Telford & Wrekin Council adopted its Supported and Specialist Accommodation Strategy for their administrative area. This provides an evidence base around supported, specialist and accessible housing needs in the borough.

5.54 Further to this work the Supplementary Planning Document (SPD) 'Homes for All: Providing accessible, supported and specialist housing in Telford and Wrekin' was published to support the delivery of a broader range of accommodation in Telford & Wrekin Council's administrative area including housing for older people, residents with care needs and vulnerable young people. The SPD set out Telford & Wrekin Council's long-term vision to ensure that all new homes are accessible, adaptable and well designed, enabling people to live independently and comfortably.

5 Planning Context

Telecommunications Development

5.55 Telecommunications installations in environmentally sensitive areas are sometimes requested by mobile phone operators in order to provide their network coverage. The Council will require telecommunications development in Conservation Areas or on or near Listed Buildings, the site and setting of Scheduled Monuments (and other nationally important archaeological remains), and the Ironbridge World Heritage Site to be particularly sympathetic in terms of its design and appearance and this may require innovative solutions from the operators.

Conservation Area Guidance

Severn Gorge Conservation Area Appraisal

5.56 The Severn Gorge Conservation Area Appraisal was published in 2016. The purpose of the appraisal is to convey a statement of the special architectural and historic character and appearance of the components of the Severn Gorge Conservation Area within the Telford & Wrekin administrative area. It is provided to inform the management of the area and, in particular, the formulation of policies, the determination of applications for development and proposal for enhancement.

5.57 The appraisal provides:

- a statement of the special architectural and historic interest of the Severn Gorge Conservation Area; and
- information on the management of the area including the policy background;

5.58 This in order to assist any evaluation or determination of applications for development or proposals for change and enhancement within the Conservation Area.

Severn Gorge Conservation Area Management Plan (CAMP)

5.59 The Conservation Area Management Plan was published in January 2017 and applies to the components of the Severn Gorge Conservation Area within the Telford & Wrekin Council administrative area. It is for local residents and businesses, the local planning authority, major landowners; and for anyone who can play a role in conserving the Severn Gorge.

5.60 All of the Severn Gorge Conservation Area lies within the IGWHS boundary.

5.61 The CAMP is one of a suite of documents produced by organisations undertaking the largest roles in the conservation and management of the Gorge. The document has a distinct purpose in identifying the very special qualities of the Gorge and setting out how this can best be protected and managed.

5.62 A particular focus of the document is on the historic built environment and the purpose of the conservation area as ***“an area of special architectural or historic interest where the character or appearance of which is desirable to preserve or enhance”***.

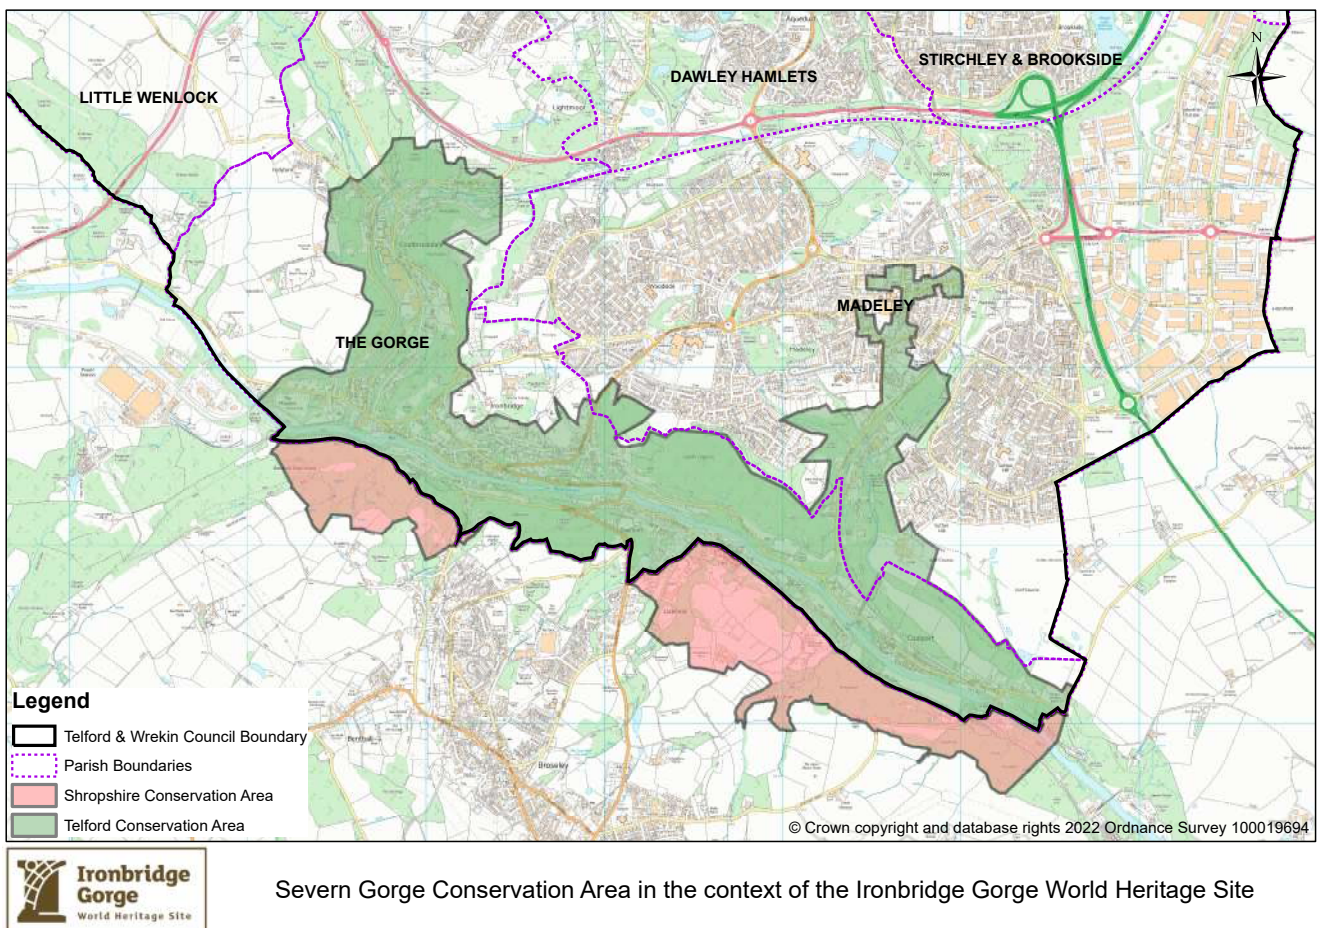

5.63 The report sets out in sequence a brief summary of an understanding of the site and its setting, followed by a resume of the significance of the site and its component elements. The CAMP recognised the need for the development of a Supplementary Planning Document to provide additional planning guidance within the IGWHS area.

5.64 The report set out Threats and Opportunities in connection with the site, including:

- Conservation of the historic fabric;
- Traffic and parking issues;
- Land stability;
- Tourism and visitor management;
- Natural environment including River Severn and its banks; and
- Community resilience.

5.65 The essence of the report is contained in the section called – Recommendations for Management. These arise from the Threats and Opportunities section and seek to address the challenges that the conservation area faces, as well as to capitalise on any missed opportunities where possible.

Figure 7: Severn Gorge Conservation Area

5.66 Please note: the Severn Gorge Conservation Area boundary includes areas within both Telford & Wrekin and Shropshire Council's administrative areas. The figure shows the extent of each area.

5 Planning Context

Shropshire Council

Housing Strategy

5.67 Shropshire Council's Housing Strategy sets out our vision for housing for the next five years:

- That all homes are well designed decent homes of high quality, which will protect Shropshire's unique urban and rural environments and ensure it is a great place to live, and
- That all Shropshire residents have access to the 'right home in the right place' to support and promote their health and wellbeing throughout their lives.

5.68 It also identifies six key objectives, these are:

1. To meet the overall current and future housing needs of Shropshire's growing population by addressing the housing needs of particular groups within communities.
2. To ensure people whose housing needs are not met through the local open market housing can access housing that meets their needs.
3. Work to reduce and prevent households from becoming homeless, and where this is not possible ensuring they have safe, secure and appropriate accommodation until they are able to resettle.
4. To ensure people can access a mix of housing options within Shropshire's urban and rural landscape that best meets their needs in terms of tenure, safety, size, type, design and location of housing.
5. To minimise the environmental impact of existing housing stock and future housing development in the interest of climate change. To work with policy makers, developers and private and social landlords to maximise resource efficiencies and to ensure optimum use of sustainable construction techniques.
6. To support the drive for economic growth by ensuring that there is enough housing supply to enable businesses to attract and retain the local workforce that they need.

5.69 The strategy will be supported by a detailed action plan outlining short-, medium- and long-term actions.

Right Home, Right Place

5.70 Right Home, Right Place is a Shropshire Council-led initiative to identify hidden housing needs across the county and ensure local people have access to the right housing in their area.

5.71 The Right Home Right Place process involves a comprehensive Housing Needs Survey on a Parish basis. The survey process seeks to involve all households within a community to better understand needs. Once all the surveys have been completed and returned, Shropshire Council's team compile and analyse the data and prepares a detailed report.

5.72 These surveys are invaluable, helping Shropshire Council and the relevant Town or Parish Council to understand the different demographics and housing needs in the Parish.

5.73 Further information on Right Home, Right Place is available at:

- <https://www.righthomerightplace.co.uk/>

Type and Affordability of Housing SPD

5.74 The Type and Affordability of Housing SPD is relevant to all types of residential development, providing detailed guidance to assist in implementing a number of Core Strategy policies.

5.75 The SPD helps to provide a mix of good quality, sustainable housing development of the right size, type, tenure and affordability to meet the housing requirements of all sections of the community.

5.76 Shropshire Council has committed to update this SPD so that it provides guidance on the application of relevant policies in the draft Shropshire Local Plan.

Climate Action Plans

Telford & Wrekin

5.77 In 2020 the Council published the 'Becoming Carbon Neutral Action Plan' which was then updated in 2021. The action plan was brought in to begin the conversation around what the Council needed to do to limit the impact of climate change and to meet the Council's commitment to being carbon neutral by 2030.

5.78 Work to deliver on the action plan is well underway, joining forces with businesses, Parish & Town Councils, community groups, schools, universities and others to form the Telford & Wrekin Climate Change Partnership.

Shropshire

5.79 In 2020 the Council published a new Corporate Climate Change Strategy and Action Plan. The documents online outline a strategy to reduce the Council's corporate carbon footprint and promote adaptation measures to increase the resilience of Council services.

5.80 Preparation of the strategy has drawn both community engagement and in-house expertise, initially through the Council's quarterly Sustainability Forum and latterly via the Shropshire Climate Action Partnership and the Council's 'Climate Officers Group'.

5.81 The strategy summarises the best available information about the Council's current direct and indirect carbon emissions, and identifies the scale of reductions and residual offsetting which will be required to reach Shropshire's objective of net-zero performance by 2030.

5.82 The action plan element of the document reflects the findings of a community engagement workshop held in February 2020, and identifies a range of potential actions and a pipeline of specific projects to help deliver progress.

5.8 Stakeholders

5.83 The IGWHS has a number of stakeholders that have an important role in managing the Site. Some of the key stakeholders, including details of their role are set out below:

5 Planning Context

Role of UNESCO World Heritage Centre Committee⁽¹⁵⁾ (WHCC)

5.84 THE UNESCO World Heritage Committee Operational Guidelines request that the WHC be informed at an early stage where proposals are identified as having potentially adverse impacts on the Outstanding Universal Value of a WHS.

5.85 The importance of the WHC should not be understated and if the IGWHS is considered to be in danger of losing the attributes of its Outstanding Universal Value, the consequences can be deletion from the World Heritage List, a penalty previously used in the UK.

5.86 Planning authorities must therefore consult with Historic England (HE) at the earliest opportunity – ideally at pre-application stage – to enable liaison with the Department for Culture, Media and Sport (DCMS) and the World Heritage Centre.

5.87 The Department for Culture Media and Sport supports culture, arts, media, sport, tourism and civil societies across every part of England. In relation to the WHS, they are responsible for ensuring that the historic environment of England is properly protected and conserved for the benefit of present and future generations.

5.88 The World Heritage Centre Committee may refer an application to its designated advisory bodies for comment. In the context of this WHS which is inscribed as a Cultural Site, the advisory bodies are:

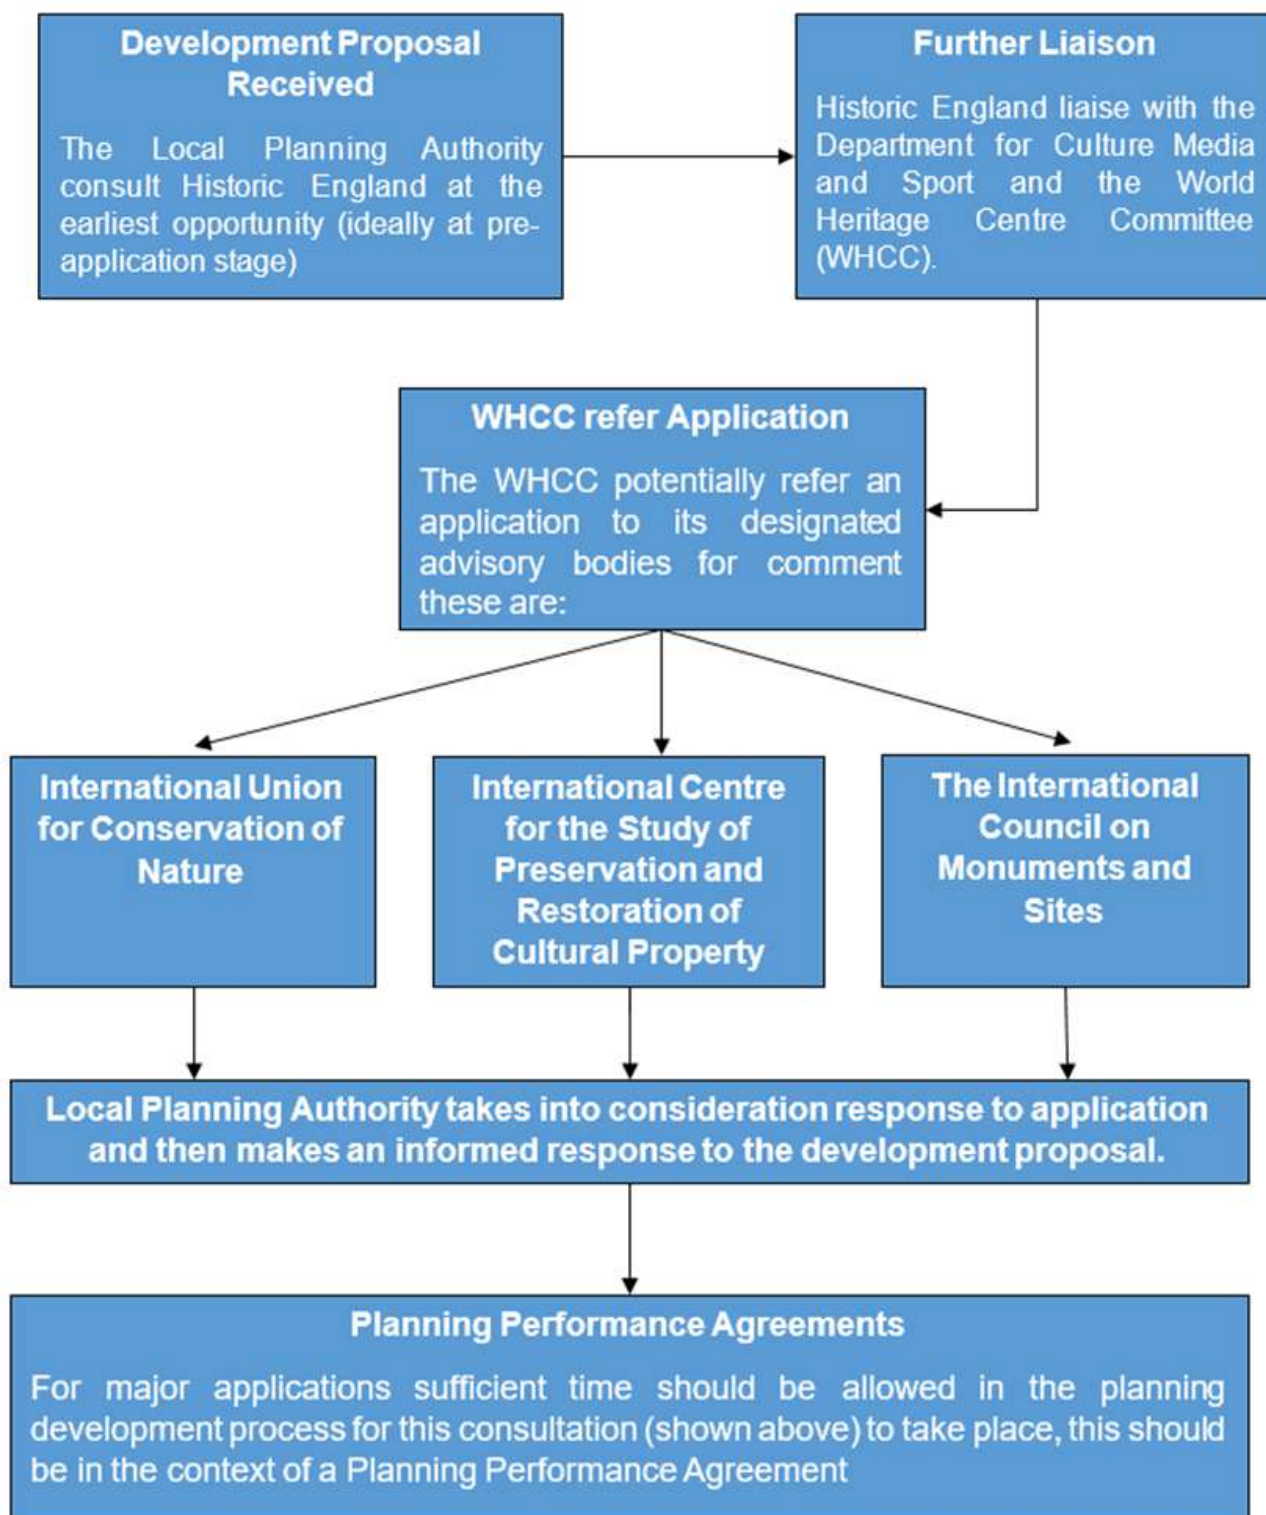

- ***IUCN: The International Union for Conservation of Nature***
- ***ICOMOS: The International Council on Monuments and Sites⁽¹⁶⁾; and***
- ***ICCROM: The International Centre for the Study of the Preservation and Restoration of Cultural Property.***

5.89 ICOMOS International (International Council on Monuments and Sites), has a special role as official advisor to UNESCO on cultural WHS's. ICOMOS International's role is to advise on aspects of World Heritage and sites for nomination across the world. The body are an independent charity with a UK-wide and international mission to promote and support best practice in the conservation, care and understanding of the historic environment.

5.90 For major applications sufficient time should be allowed in the planning development process for this consultation to take place, which should be within the context of a Planning Performance Agreement (PPA), this is used as a project tool which LPA's and applicants can use to agree timescales, actions and resources for handling particular applications. This should cover the pre-application and application stages and may extend through to the post application stage.

¹⁵ UNESCO WHC <https://whc.unesco.org/en/>

¹⁶ ICOMOS UK <https://icomos-uk.org/>

Role of Historic England (HE)

5.91 Historic England, the public body charged with conserving and managing England’s historic environment, plays a key role in the planning process where applications have the potential to have adverse effects on designated heritage assets. Further information on their role can be found at <https://historicengland.org.uk/>

5 Planning Context

In relation to World Heritage Sites

5.92 HE provides advice to UK Government on its obligations relating to world heritage. These are set out under the 1972 World Heritage Convention and focus on protection of WHS's in the United Kingdom.

5.93 HE works closely with DCMS, which acts as the UK 'State Party' to the Convention. This works helps DCMS to meet its international obligations to identify, protect, preserve, promote and transmit the Outstanding Universal Value of WHS's in England for the benefit of this and future generations.

5.94 In keeping with UNESCO's request, the relevant planning authority will, therefore, consult with HE at the earliest opportunity – ideally at pre-application stage – to enable liaison with DCMS and the World Heritage Centre.

5.95 Where the local planning authority is minded to grant permission for a development to which HE has objected, the Secretary of State for Communities and Local Government must be consulted to provide the option for the decision to be called-in for their determination under Section 77 of the Town and Country Planning Act 1990, as amended.

Role of Local Stakeholders

5.96 The IGWHS Steering Group represent the key stakeholders for the IGWHS. Established in 1995 the IGWHS Steering Group is a strategic body comprising senior professional and community representatives, whose purpose is to:

- Ensure effective collaboration and partnership between national, regional, local organisations and local communities to deliver a common vision.
- Ensure the IGWHS is managed in line with the high standards required by its WHS status, balancing the needs of all stakeholders and local people.
- Help coordinate a consistent, holistic approach by all parties to ensure a strong relationship between the protection of the IGWHS and its economic vitality.
- Provide a forum where concerns and proposals from interested groups and expert parties can be discussed and appropriate actions can be agreed.

5 Planning Context

5.97 The following key organisations are represented on the Steering Group:

Local Stakeholder	Role
Telford & Wrekin Council	Managing development for land falling within the Council boundary
Shropshire Council	Managing development for land falling within the Council boundary
Historic England	The public body that helps people care for, enjoy and celebrate England's spectacular historic environment.
English Heritage Trust	Registered charity managing over 400 properties that make up the 'National Heritage Collection'
The Environment Agency	Responsible for managing the risk of flooding from main rivers, reservoirs, estuaries and the sea
Ironbridge Gorge Museum Trust	Established in 1968 to preserve and interpret the birthplace of the Industrial Revolution in the Ironbridge Gorge
Parishes and Town Councils within the IGWHS	Includes Broseley Town Council, Gorge Parish and Madeley Town Council. They provide communities with a democratic voice and a structure for taking community action
Severn Gorge Countryside Trust	Works to balance the conservation and enhancement of landscape, wildlife and public access, and reinforce the cultural importance of the special areas
Marches Local Enterprise Partnership	Driving accelerated economic growth across the region. A partnership of business, education and the local authorities of Herefordshire, Shropshire and Telford & Wrekin

6 Conservation, Heritage and Planning Controls

6 Conservation, Heritage and Planning Controls

6 Conservation, Heritage and Planning Controls

6.1 In addition to planning policy contained within the Local Development Plan (including Neighbourhood Plans) and guidance within supporting documents such as this SPD, there are a number of other conservation, heritage and planning controls that help protect the WHS and Severn Gorge Conservation Area.

6.2 These enable both Telford & Wrekin Council and Shropshire Council to protect and conserve the IGWHS and are key legislative tools made available to the Council through the international convention.

6.1 Conservation Area Status

6.3 A Conservation Area is an “*area of special architectural or historic interest the character or appearance of which it is desirable to preserve or enhance*” as set out in the Planning (Listed Buildings and Conservation Areas) Act 1990 (Section 69).

6.4 When dealing with planning applications in Conservation Areas the local authority is required to ensure that “*special attention shall be paid to the desirability of preserving or enhancing the character or appearance of that area*” (Section 72). In addition, a local authority has a duty “*from time to time to formulate and publish proposals for the preservation and enhancement of any parts of their area which are conservation areas*” (Section 71). The Town & Country Planning Act prevents the demolition of buildings in Conservation Areas without consent and allows for repairs notices for vacant buildings.

6.5 Whether or not planning permission is needed for work such as alteration, demolition or extension to an existing building is a complex matter. The local planning department should always be consulted to find out if permission is needed.

6.6 The Severn Gorge Conservation Area was a relatively early designation, in 1971 (which was enlarged in 1980). In 2004 (and later refreshed in 2016), Telford and Wrekin commissioned a Conservation Area Appraisal for the components within their administrative area, which set out to: demonstrate the areas special character and appearance, explain the value of the area to the local community, to form the basis for sound decision making, and assist in developing proposals for protection and enhancement.

6.2 Listed Buildings

6.7 Listed Buildings are selected to mark and celebrate their special architectural and historic interest and are considered to be of national importance. This also brings these buildings under the consideration of the planning system, so that they can be protected for future generations. The older a building is, and the fewer the surviving examples of its kind, the more likely it is to be listed.

6.8 The general principles are that all buildings built before 1700 which survive in anything like their original condition are likely to be listed, as are most buildings built between 1700 and 1850. Careful selection is required for buildings from the period after 1945 and a building less than 30 years old is not normally considered to be of special architectural or historic interest.

6 Conservation, Heritage and Planning Controls

6.9 There are two main routes to listing: one being a public nomination and the second using HE's strategic programme of listing priorities. In both cases HE makes a recommendation to the Secretary of State for DCMS based on principles of selection for listed buildings and they make the final decision as to whether a site should be listed or not.

6.10 Once listed, buildings are split into three categories these are as follows:

- Grade I – for buildings of exceptional interest
- Grade II* - particularly important buildings of more than special interest
- Grade II – buildings that are of special interest, warranting every effort to preserve them

Figure 8: The Wharfage, Grade II Listed Building

6.11 The Gorge parish within the IGWHS, has a total of 215 listed buildings recorded in the National Heritage List for England. Of these two are listed at Grade I, 13 are at Grade II*, and the others are at Grade II.

6.12 Alterations and other works to listed buildings often require Listed Building Consent. Some alterations require both planning permission and Listed Building Consent. The 1990 Act states “*no person shall execute or cause to be executed any works for the demolition of a listed building or for its alterations or extension in any manner which would affect its character as a building of special architectural or historic interest, unless the works are authorised*”. Unauthorised work to a listed building is a criminal offence.

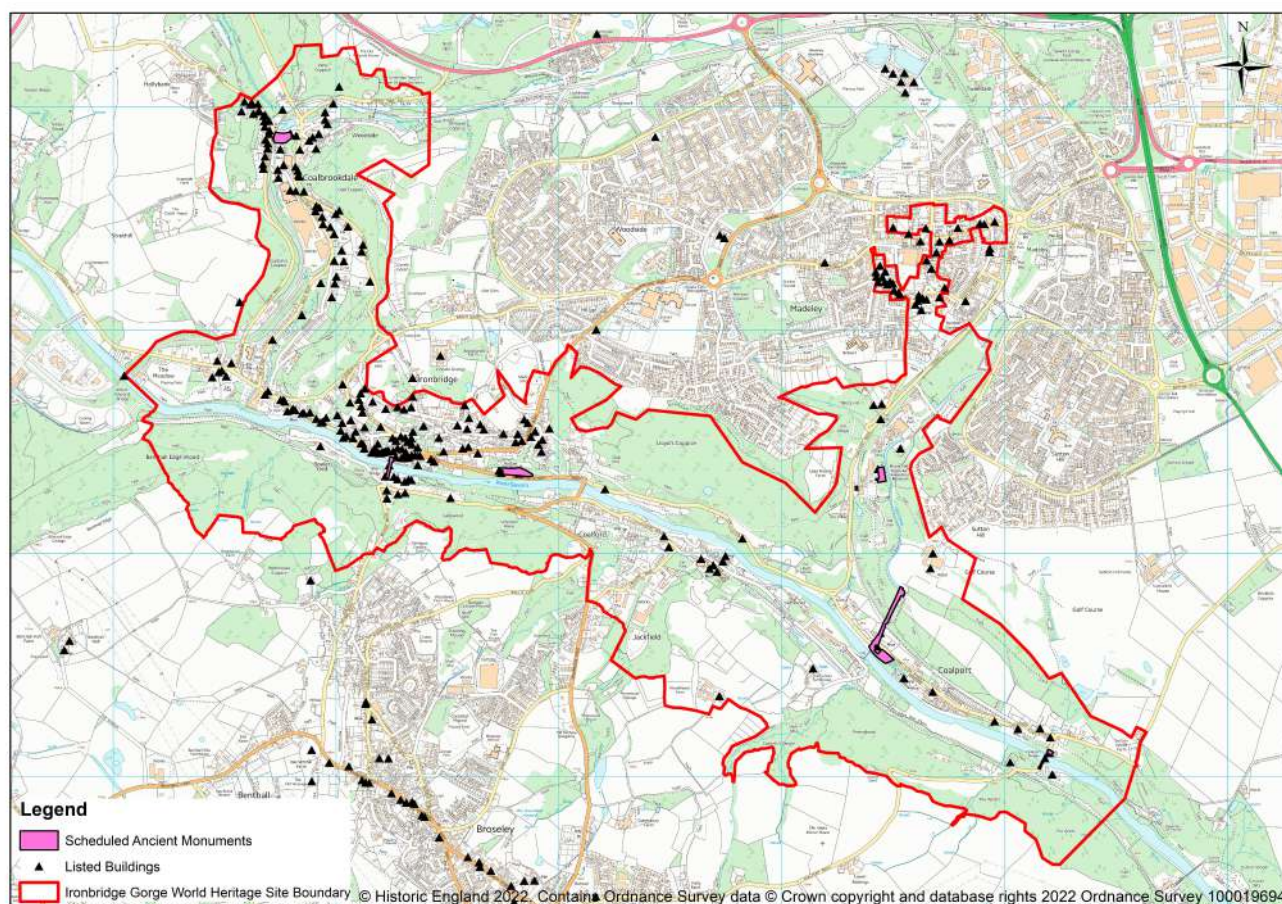

6.13 When considering works to a Listed Building the Council has duty to “*have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses*”.

6 Conservation, Heritage and Planning Controls

6.14 If a listed building falls into serious disrepair, the Council has powers to ensure that urgent repairs are undertaken, and in certain cases has the power to acquire the buildings and find a new owner who will repair it.

6.15 Listed places of worship generally have separate controls under a scheme known as “*ecclesiastical exemption*”.

Figure 9: Listed Buildings and Scheduled Monuments in Ironbridge

6.3 Scheduled Monuments

6.16 A Scheduled Monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979.

6.17 The designation cannot be applied to an ecclesiastical building in ecclesiastical use or to a building in use as a dwelling, unless the person living there is employed as a caretaker of the site. Buildings in use for non-residential purposes may be scheduled.

6.18 The Schedule of Monuments has almost 200,000 entries (2019) and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance. The Schedule can be viewed online on the National Heritage List for England and physically inspected at the HE Archive in Swindon. Scheduled Monuments may also appear on the Shropshire Historic Environment Record.

6 Conservation, Heritage and Planning Controls

6.19 Once a monument is scheduled any works to it, and flooding and tipping operations that might affect it, (with few exceptions), require scheduled monument consent from the Secretary of State (not the local planning authority). HE manages the process of scheduled monument consent on behalf of the Secretary of State. Metal detecting on a Scheduled Monument is also illegal without a licence from HE.

6.20 For historical reasons, a few buildings are both scheduled and listed. In such a case the scheduled monument statutory regime applies, and the listed building regime does not. The Secretary of State will review dually designated heritage assets over time with a view to producing a single, rationalised designation for each asset.

6.21 The Iron Bridge itself is a Scheduled Monument and has been since 1934 when it was closed to vehicular traffic. The total area includes a 5-metre boundary around the archaeological features which are considered to be essential for the Ironbridge's support and preservation.

6.22 In total 7 scheduled monuments are located within the IGWHS boundary:

- The Iron Bridge
- Darby Ironworks, Coalbrookdale (furnaces, foreheaths and blowing house areas);
- Bedlam Furnaces;
- Blists Hill Iron Furnaces;
- Lilleshall Beam Blowing Engines;
- Coalport Inclined Plane; and
- Coalport Bridge.

6.4 Non-designated Heritage Assets and Buildings of Local Interest

6.23 Non-designated Heritage Assets are buildings, monuments, archaeological sites, places, areas or landscapes identified by plan-making bodies as having a degree of heritage significance meriting consideration in planning decisions, but which do not meet the criteria for designated heritage assets.

6.24 However, while the assets themselves may be non-designated, this does not mean they are not important to conserve and protect the IGWHS. Non-designated heritage assets are considered critical elements of the industrial landscape and overall Outstanding Universal Value of the IGWHS and need protecting for the contribution they make to the WHS status.

6.25 There are a number of processes through which Non-designated Heritage Assets may be identified, including the Local Plan and Neighbourhood Plan-making processes and conservation area appraisals and reviews. Irrespective of how they are identified, it is important that the decisions to identify them as Non-designated Heritage Assets are based on sound evidence.

6.26 Plan-making bodies should make clear and up to date information on Non-designated Heritage Assets accessible to the public to provide greater clarity and certainty for developers and decision makers. This includes information on the criteria used to select them and information about the location of existing assets.

6 Conservation, Heritage and Planning Controls

6.27 In some cases, local planning authorities may also identify Non-designated Heritage Assets as part of the decision-making process on planning applications, for example, following archaeological investigations. It is helpful if plans/maps mark areas with potential for the discovery of Non-designated Heritage Assets with archaeological interest. The Shropshire Historic Environment Record will be a useful indicator of archaeological potential in the area.

6.28 Telford & Wrekin Council has a Register of Buildings of Local Interest. For inclusion on the register buildings need to meet a number of criteria to demonstrate that they are 'heritage assets' and that they have demonstrable 'local interest'. A high number of these are located within the WHS. Exclusion from the list, however, does not mean that the building or site does not classify as a 'Non-designated Heritage Asset', or that it does not make a contribution to the Outstanding Universal Value of the WHS.

Shropshire Historic Environment Record (HER)

The Shropshire Historic Environment Record, which is maintained by Shropshire Council but also accounts for Telford & Wrekin Council for the whole of the IGWHS (and indeed the remainder of both local authorities' administrative areas) provides a useful starting point for identifying Non-designated Heritage Assets. The NPPF requires that the Historic Environment Record should be consulted when preparing development proposals within the IGWHS.

The system is the primary source of trusted information, about the historic environment in the county including information on:

- Archaeological sites, finds and features historic buildings, structures, and Landscapes.

Further information on the Historic Environment Record can be found on the Shropshire Council website:

<https://shropshire.gov.uk/environment/historic-environment/historic-environment-record/>

6.5 Permitted Development Rights

6.29 Permitted Development Rights allow for certain works to proceed without a requirement to submit a planning application. These rights are set out in the Town and Country Planning (General Permitted Development) (England) Order 2015, as amended (GDPO 2015).

6 Conservation, Heritage and Planning Controls

PD Rights in the IGWHS

World Heritage Sites have been classed as an Article 2(3) land, these are protected areas where special quality has been recognised and as such specific limits have been placed on the applicable permitted developments rights which mean most works and alterations will require full planning permission.

6.30 Limitations and/or Conditions in relation to Article 2(3) land, and in some cases specifically World Heritage Sites, have been placed on the permitted development rights which are applicable in most other locations. These controls broadly relate to:

- Development within the curtilage of a dwelling house;
- Changes of use;
- Temporary buildings and uses;
- Non-domestic extensions, alterations etc.;
- Road related development;
- Renewable energy;
- Power related (i.e., electricity and gas distribution) development;
- Communications; and
- Development by the Crown or for national security purposes.

Figure 10: Swan Hotel on the Wharfage Front

6 Conservation, Heritage and Planning Controls

6.6 Article 4 Direction

6.31 Although permitted development is still allowed in the IGWHS, an Article 4 Direction restricts the scope of Permitted Development Rights within the Telford & Wrekin Council area, either in relation to a particular area or site, or a particular type of development anywhere in the authority's area. Where an Article 4 direction is in effect, a planning application may be required for development that would otherwise have been permitted development. Article 4 directions are used to control works that could threaten the character of an area of acknowledged importance.

6.32 In the case of the IGWHS the Article 4 Direction, this ensures proposals are of high quality and reflect the importance of the IGWHS and its Outstanding Universal Value.

6.33 The current Article 4 Direction for the IGWHS within Telford & Wrekin's administrative area can be found on the Telford & Wrekin Council website at:

https://www.telford.gov.uk/info/20170/planning_applications_and_advice_appeals_enforcement_and_guidance/2244/article_4_direction

7 Making Planning Decisions in the IGWHS

7 Making Planning Decisions in the IGWHS

7 Making Planning Decisions in the IGWHS

7.1 Achieving appropriate decisions on planning applications is crucial in keeping the Outstanding Universal Value of the IGWHS intact. It is acknowledged that it can be complicated to decipher what forms of development are appropriate within the IGWHS. The exceptional historic and natural character of the IGWHS reflected in the specific qualities and attributes comprising the Outstanding Universal Value, makes it essential to ensure acceptable development takes place within the site.

7.2 When a planning application is made for development within the IGWHS there are a number of considerations which must be taken into account in deciding to grant permission or not.

7.3 This section sets out what development or change is considered to negatively affect the Outstanding Universal Value of the IGWHS, delving into the conditions of authenticity, integrity and the impact on the attributes which contribute to the Outstanding Universal Value, this is so applications can avoid these elements. This is intended to assist owners, applicants and agents in formulating planning applications that will be more likely to be supported by both Telford & Wrekin Council and Shropshire Council.

7.4 Understanding Outstanding Universal Value is central to protecting the special character and appearance of a WHS, with the conditions of authenticity and integrity being met by the attributes of properties conveying the Outstanding Universal Value.

7.1 Authenticity

7.5 Authenticity is a key concept that informs the preservation, curation, management and presentation of the historic environment, the key condition is that the types of attributes which comprise the Outstanding Universal Value are well understood in terms of their history, meaning and development.

7.6 Authenticity lies in whatever most truthfully reflects and embodies the values attached to the place, and can therefore relate to the design, function, or the fabric of the building. Design values may be affected over time suffering from harm or loss resulting from disaster or physical decay, or through ill-considered alteration or accretion. The design value may also be recoverable through repair or restoration.

7.7 Therefore, the decision as to which value should prevail if all cannot be fully sustained always requires a comprehensive understanding of the range and relative importance of the heritage values involved and what is necessary (and possible) to sustain each of them. Retaining the authenticity of a place is not always achieved by retaining as much of the existing fabric as is technically possible.

7.8 The desire to retain authenticity tends to suggest that any deliberate change to a significant place should be distinguishable, that is, its extent should be apparent through inspection. The degree of distinction that is appropriate must take account of the aesthetic values of the place. In repair and restoration, a subtle difference between new and existing, comparable to that often adopted in the presentation of damaged paintings, is more likely to retain the coherence of the whole than jarring contrast.

7 Making Planning Decisions in the IGWHS

7.9 This does not limit, the consideration to original form and structure, but instead can include subsequent modifications and additions over the course of time, which in themselves possess artistic or historical values.

7.10 The figure below shows the ongoing evolution of a uniform terrace of cottages. Although not 'original', such alterations may have heritage value in their own right.

Figure 11

7.11 Any accompanying **Heritage Statement**⁽¹⁷⁾ or **Design and Access Statement**⁽¹⁸⁾ submitted with a development proposal will have to take into account the changes to a building and identify which changes have historical or aesthetic merit, alongside an explanation for how and why this has been decided. *Any changes that are of historic or aesthetic merit will need to be retained.*

7.2 Integrity

7.12 Integrity can apply to a structural system, a design concept, the way materials or plants are used, the character of a place, artistic creation, or functionality. Decisions about recovering any aspect of integrity that has been compromised must, like authenticity, depend upon a comprehensive understanding of the values of the place, particularly the values of what might be lost in the process.

7.13 Every place is unique in its combination of heritage values, so, while it is technically possible to relocate some structures, their significance tends to be diminished by separation from their historic location.

7.14 The implication of integrity is covered within the **Venice Charter: International Charter for the Conservation and Restoration of Monuments and Sites**⁽¹⁹⁾ and was introduced in 1964.

7.15 The following articles are taken from the Venice Charter and their impact on making planning decisions in the IGWHS are considered further.

17 Guidance on HIAs for Cultural World Heritage

Properties https://www.iccom.org/sites/default/files/2018-07/icomos_guidance_on_heritage_impact_assessments_for_cultural_world_heritage_properties.pdf

18 What is a Design and Access Statement https://www.planningportal.co.uk/info/2004674/what_is_a_design_and_access_statement

19 Venice Charter https://www.icomos.org/charters/venice_e.pdf

7 Making Planning Decisions in the IGWHS

Article 7

7.16 *“A monument is inseparable from the history to which it bears witness and from the setting in which it occurs. The moving of all or part of a monument cannot be allowed except where it is justified by national or international interests of paramount importance.”*

The Venice Charter (as it is commonly called today) collates internationally accepted standards of conservation practice relating to architecture and sites. The document sets out principles of conservation based on the concept of authenticity and the importance of maintaining the historical and physical context of a site or building. The Charter was considered a major step towards better conservation of traditional buildings and places and has since become the founding document of ICOMOS.

7.17 The monument in this sense is both the Ironbridge Gorge as a whole and also all the human interventions that have made the environment as we see it today. This means Article 7 covers the following:

- industrial buildings;
- domestic buildings;
- commercial buildings;
- public buildings;
- transport infrastructures;
- agricultural buildings; and
- archaeological remains of human developments.

Figure 12: Monuments within the IGWHS

7.18 In addition to the above, the ecological impacts, as a result of the industrial period coming to an end in Ironbridge, are also considered a key part of the IGWHS and its development over time. Ecological impacts must therefore be considered on an equal footing as any built heritage asset.

7 Making Planning Decisions in the IGWHS

Figure 13: Viaduct at Coalbrookdale

Article 8

7.19 *“Items of sculpture, painting or decoration, which form an integral part of a monument, may only be removed from it if this is the sole means of ensuring their preservation.”*

7.20 This will relate to the exterior of unlisted buildings as well as the interiors of Listed Buildings. This means that ornaments and decorations, can and should, be retained where it is integral to the heritage significance of the building.

7.21 An example of this would be a loss of exterior brickwork through rendering which may cause a building to look misplaced or impact on the character and appearance of the surrounding area.

7.22 The Article 4 Direction within the IGWHS is there to protect such features on the exterior of domestic unlisted buildings, restricting the scope of permitted development rights.

Article 14

7.23 *“The sites of monuments must be the object of special care in order to safeguard their integrity and ensure that they are cleared and presented in a seemly manner”.*

7.24 This relates to structures like the Wynds, the Old Blast Furnaces and Adits and other below or above ground archaeological features, which should be carefully managed to ensure their continued protection.

7 Making Planning Decisions in the IGWHS

Figure 14: Bedlam Furnaces

7.3 Screening for Components of Outstanding Universal Value – Understanding Risk

7.25 The responsibilities involved in understanding risk and how harm may be caused is considered firstly through screening for components of Outstanding Universal Value and then assessing their impacts.

7.26 At the beginning of the planning process the applicant or agent will need to make an assessment of whether a proposed development can impact the attributes of Outstanding Universal Value in the IGWHS, and whether the proposal will impact both the authenticity and integrity of the IGWHS. This should be done through:

- **A Design and Access Statement** for all Listed Building Consent applications and applications within the WHS for new dwellings or other buildings of over 100 square metres floor space; and
- **A Heritage Statement / Heritage Impact Assessment** for all applications within the WHS; and
- Where both are required, they can be combined into one document.

7.27 These documents need to be drawn up prior to proposals being settled upon. These document/s will then be used to steer development proposals in order to limit the impacts on the Outstanding Universal Value, alongside the special historic and architectural interest of any listed buildings and the character and appearance of the conservation area.

7.28 Within the relevant statements it will be necessary to explain how the proposals will preserve, conserve and enhance the building or site involved and how the development will protect the Outstanding Universal Value of the IGWHS. HE provides further guidance regarding best practice relating to Heritage Statements⁽²⁰⁾, with further guidance from ICOMOS on heritage impact assessments for cultural world heritage properties.

7 Making Planning Decisions in the IGWHS

7.29 Understanding the location of these types of heritage assets, including their boundary and setting, will help in the design process for proposals so that any impact can be mitigated by design.

7.30 Mapping services such as both Telford and Wrekin⁽²¹⁾ and Shropshire Council's⁽²²⁾ interactive policies maps, can be used to help identify the location of the proposal in relation to the WHS and other historic assets (*please note, not all historic assets are identified on these mapping systems, and it is important to consider other sources of information, including the Shropshire Historic Environment Record*).

7.4 Identifying Risks

7.31 It is vital to identify and understand the risks that a proposal may have on the Outstanding Universal Value as well as the character and appearance of the surrounding area. To grasp the potential risks to the two elements (authenticity and integrity), it will be necessary to:

- Develop an understanding of the building or site and how it relates to the IGWHS;
- Understand how the construction materials relate to the IGWHS;
- Determine how authentic the building is in terms of design and materials; and
- Determine how a site contributes to the historic landscape; and
- Set out how the development of the building or site, overtime, reflect the Outstanding Universal Value of the IGWHS.

7.32 It is important to check the Shropshire Historic Environment Record for archaeological features and remains that may be within the site or building. The whole area has a very rich heritage in the terms of archaeology and proposed developments that damage or remove remains above or below the ground would need to demonstrate national or international benefits that outweigh the harm to the IGWHS to make them supportable.

The Shropshire Historic Environment Record can be found at:

- <https://shropshire.gov.uk/environment/historic-environment/>.

The Shropshire archives can be found at: <https://www.shropshirearchives.org.uk/>

7.5 Assessing Impacts

7.33 When considering appropriate forms and design of development on potential development sites within the IGWHS, it is important to understand the relationship between the site and the IGWHS (both in terms of how the IGWHS sets the context for the potential development site and the impact that any proposed development could have on the IGWHS). It is not uncommon that when considering such sites, the focus is placed on the consideration of site specific heritage assets or specific heritage assets in proximity to the site (for example impact on listed buildings or scheduled monuments). Whilst it is important to fully consider the impacts on such heritage assets, it is equally important to consider the relationship with and potential impact on the IGWHS.

7 Making Planning Decisions in the IGWHS

7.34 The most important functions of a Heritage Impact Assessment are to determine firstly which heritage assets are affected by a planning proposal, and secondly the nature of any effects. The heritage assets likely to be affected by proposals in or near the IGWHS comprise:

- The significance, in terms of its Outstanding Universal Value, of the IGWHS and any contribution to these made by the WHS's setting; and
- Conservation Areas, Listed Buildings and Scheduled Monuments within the IGWHS and the contribution to their significance made by their respective settings; and
- Any non-designated heritage assets within the IGWHS, including those with archaeological interest and any contribution to their significance.

7.35 Effects can be adverse, neutral or positive. The nature of an effect in the IGWHS can be understood with reference to authenticity and the scale and implication of an effect can be understood by assessing the impact on integrity.

7.36 The authenticity and integrity of the IGWHS both contribute to the attributes within the Site. Whilst the inscription is fixed and cannot be changed, both authenticity and integrity are vulnerable to change which could impact the Outstanding Universal Value of the IGWHS.

7.37 Heritage Impact Assessments should be carried out by a suitably qualified professional and submitted at the planning application stage in order to inform the consideration of the proposal. The assessment should be proportionate to the significance of the asset(s) likely to be affected. The greater the importance of the asset, the more detail will be needed. It should be noted that World Heritage Sites are classed as being assets of the highest significance so proposals likely to affect the IGWHS within its setting made must be accompanied by a detailed assessment which clearly identifies the potential impact of the development on the WHS's significance and its Outstanding Universal Value.

7.38 As a minimum, a search of the Shropshire Historic Environment Record will provide a starting point for identifying whether a development proposal is likely to affect any heritage assets, including the IGWHS and its setting.

Positive Outcomes

7.39 Development proposals within the IGWHS should positively contribute to its significance. Indeed, there are a number of opportunities to achieve a positive outcome through the development process that carefully considers the Outstanding Universal Value of the IGWHS.

7.40 The Design and Access Statement and / or Heritage Statement provide the mechanisms for demonstrating the impact of a development proposal on the IGWHS and any other relevant heritage assets.

7.41 Overall positive outcomes include:

- Reuse of a redundant building which retains external and internal original features;
- Use of correct repair techniques; and / or
- The repair and reinstatement of architectural features.

7.42 New builds or extensions must show that the proposals reflect the established historic buildings in the terms of scale, massing, material and details. Examples of both poor and suitable detailing, massing and materials are shown below.

7 Making Planning Decisions in the IGWHS

7.6 Harm to Heritage Significance

7.43 There are three levels of harm to the significance of designated heritage assets. These are, in order of significance:

- Less than substantial harm
- Substantial harm
- Total loss

Less Than Substantial Harm to Heritage Significance

7.44 Less than substantial harm covers a broad range of harm / alterations or change, and there is no spectrum of degree of harm. The more important a heritage asset is, the greater the weight to be attached to its preservation or the preservation of its setting, irrespective of whether the harm caused is substantial or less than substantial.

7.45 Paragraph 202 of the NPPF considers that where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including optimising its viable use.

7.46 The NPPF itself does not define what public benefits are for this purpose. However, the historic environment section of the PPG considers that public benefit refers to anything which delivers the economic, social or environmental objectives of sustainable development described in paragraph 8 of the NPPF. The conservation of a heritage asset is itself a public benefit.

7.47 The PPG makes clear that the public benefits must flow from the development and must be of a nature or scale that would benefit the public at large but these benefits do not always have to be visible or accessible to the public or to all sections of the public to be genuine public benefits.

7.48 However, judgement of less than substantial harm is different when considering Designated or Non-designated Heritage Assets. Paragraph 203 of the NPPF states that the effect of an application on the significance of a Non-designated Heritage Asset should be taken into account in determining an application. A balanced judgment will therefore be required having regard to the exact scale of any harm or loss and more importantly the significance of the heritage asset. Within the IGWHS, however, there are many Non-designated Heritage Assets which also contribute to its Outstanding Universal Value. These will therefore be considered under paragraph 202 as part of the WHS designated Heritage Asset.

Substantial Harm to or Total Loss of Heritage Significance

7.49 Substantial harm to or total loss of assets of the highest significance should be wholly exceptional. These heritage assets include:

- Scheduled monuments,
- Protected wreck sites,
- Registered battlefields,
- Grade I and II* listed buildings,
- Grade I and II* registered parks and gardens, and
- World Heritage Sites.

7 Making Planning Decisions in the IGWHS

7.50 The NPPF states that, if a development would result in substantial harm or loss, planning consent should be refused unless it can be demonstrated that the impacts are necessary to achieve substantial public benefits that outweigh that harm or loss.

7.51 In relation to WHS's, their recognition as internationally important assets means that where harm can be identified, very significant weight must be given to its conservation, regardless of the degree of harm envisioned.

7.52 Substantial harm or total loss could consequently result from alteration or destruction, or from development within the setting. It is the degree of harm to the asset's significance rather than the scale of the development that is to be assessed.

7.53 Substantial harm is therefore a high test in planning terms, and as such it is unlikely that an application that will cause substantial harm to a heritage asset that contributes to the Outstanding Universal Value of the IGWHS would be supported unless it was considered to be of major national importance or international importance.

7.7 Opportunities in the Planning Application Process to Protect or Enhance the IGWHS

7.54 The planning process is central to the protection and conservation of the IGWHS. The policies within Local Development Plans provide the starting point for decision making on any planning applications. Supporting guidance (such as this SPD) provide an opportunity to provide further detail and guidance on the application of these policies. As such, they provide an opportunity to positively influence development proposals to secure positive outcomes for the IGWHS.

7.55 Similarly, the planning application decision making process provides a further opportunity to positively influence proposals and secure positive outcomes for the IGWHS.

7.56 Opportunities to influence planning applications starts from the very beginning of the planning application process, with efforts in retaining the Outstanding Universal Value of the WHS starting at the pre-application stage continuing through to submission and an eventual decision. It should be noted that given the complexity of the IGWHS it will always be necessary to obtain specialist advice when preparing planning applications and use of pre-application services is encouraged.

7.57 There are, in reality, very few sites for appropriate development within the IGWHS itself.

7.58 Any such sites should achieve the highest quality of design. Standard design and materials are unlikely to be supported and any application should follow the design guide for each character area.

7.59 The density and layout of larger schemes can be as important as the materials and detailed design of buildings, and the design and management of infrastructure. As an example, poor highway decisions can damage the historic road layouts and the use of inappropriate modern highway materials, and the proliferation of signs can cause significant damage to the Outstanding Universal Value of the IGWHS. Council highway officers will be encouraged to consider the proposals from the perspective of protecting the character of the area allowing flexibility on road layouts within new development sites so that the historic pattern of development is maintained and respected.

7 Making Planning Decisions in the IGWHS

7.60 Applications must present a clear message on the importance of the IGWHS and its consideration in the planning application process. In submitting an application further detail is therefore required and it is required that a full application (following an initial pre-application) be submitted ensuring sufficient detail has been provided, helping inform planning officers to an eventual decision.

7.61 Without providing sufficient detail it is difficult for planning officers to assess the impacts on heritage significance and the Outstanding Universal Value in order to reach an informed conclusion and therefore the inclusion of Heritage Impact Assessments in accordance with ICOMOS and UNESCO guidance through the 'Guidance and toolkit for Impact Assessments in a World Heritage Context' alongside the required Design & Access Statements are a must.

8 Submitting a Planning Application in the IGWHS

8 Submitting a Planning Application in the IGWHS

8 Submitting a Planning Application in the IGWHS

8.1 The table below summarises the process of submitting a planning application, and is applicable in both the Telford & Wrekin and Shropshire Council administrative areas. Each stage is then considered further within this chapter.

Initial Evidence Gathering Draw up a Heritage Statement	
<p>Stage 1: Pre-Application Advice</p> <p>To help speed up and enhance the subsequent planning application process.</p>	
Receive Pre-Application Advice back from the Council	
<p>Stage 2: Submit an Application</p> <p>Submissions should include a completed planning application form, all relevant supporting documents and the appropriate planning fee.</p>	<p>Planning Performance Agreement (PPA)</p> <p>Provides an agreed framework for the process considering a major development proposal.</p>
<p>Validation Process</p> <p>The planning application submission documents are checked for compliance as well as whether the correct fees have been found.</p>	
<p>Consultation Process</p> <p>Council consult with statutory consultees and members of the public, seeking feedback on the application.</p>	
<p>Stage 3: Determination of the development proposal</p> <p>The planning application is determined either via delegation or full Council, this is where the application will either be approved or refused. Prior to the release of a decision, there may be a need to complete a Section 106 Legal Agreement (or other such agreements).</p>	
<p>Stage 4: Discharge of Conditions</p> <p>Some applications will have conditions or obligations places on the planning permission. Where this is the case, they will need to be discharged at appropriate stages in the development process (for instance prior to commencement, during development, prior to occupation, etc). Further information is detailed later in this chapter.</p>	

8 Submitting a Planning Application in the IGWHS

Initial Evidence Gathering

8.2 When starting on a potential project it is critical that a full understanding of the building or site is gained by gathering the right information first.

8.3 This will entail:

1. Drawing up a Heritage Statement

8.4 For 'major' planning applications and in some cases where other key attributes of the IGWHS would be affected, the Heritage Statement will be expected to take the form of a Heritage Impact Assessment in accordance with the UNESCO Guidance and Toolkit for Impact Assessments in a World Heritage Context (2022).⁽²³⁾

8.5 A 'major' application within the IGWHS will be one for 10 or more houses, a building or buildings where the floor space would be over 1,000 square metres, or any development having an area of 1 ha or more.

8.6 For other applications, the Heritage Statement should usually adopt the following three step process.

Identify Heritage Assets

8.7 The first stage of producing a Heritage Statement is to identify all heritage assets that might be affected by the development. This will require a check on the Shropshire Historic Environment Record to identify any existing records of Heritage Assets on the development site and within its vicinity.

8.8 Further details of how to contact the Shropshire Historic Environment Record are available here:

- <https://shropshire.gov.uk/environment/historic-environment/historic-environment-record/>

Statement of Significance

8.9 The next step is to set out the significance of the heritage assets identified. This may reference existing documents identified in Section 4 above such as the Severn Gorge Conservation Area Appraisal and Management Plan, list descriptions, information from the Historic Environment Record, and any available historic maps and archive materials, all in conjunction with on-site analysis. This will help to establish the capacity for change of the site or building.

8.10 A Statement of Significance for an existing building will explain the development of the building and its architectural, historic, archaeological and aesthetic values, including how they contribute to the Outstanding Universal Value of the WHS. Although interesting it is not necessary, usually, to give a detailed history of the area of the occupants to the building, although occasionally that will help to explain its development. It should centre on the appearance, materials, layout and detailing and how that has changed over time.

8 Submitting a Planning Application in the IGWHS

8.11 For a vacant site the Statement of Significance will look at the history of the site and its past uses and examine its importance to the character and appearance of the area, the settings of nearby heritage assets and the Outstanding Universal Value of the WHS as it currently exists.

8.12 This Statement of Significance should be carried out prior to drawing up any proposals. It should help inform the proposals so areas that changes are restricted to areas that have less significance and cause the least impact on heritage significance.

Heritage Impact Assessment

8.13 A Heritage Impact Assessment explain how the heritage significance including the Outstanding Universal Value of the WHS would be impacted by the proposals. Where any potential harm to significance is identified, it should explain why the change is required, what other solutions have been considered, and how the proposals have been designed to minimise negative impacts and/or achieve enhancement. Given the density of industrial archaeological remains within the IGWHS, it is likely that archaeological mitigation will be required in many instances.

8.14 This section may be supported by further information and documents such as Structural Engineers Reports, Timer Surveys or Flood Resilience Assessments to demonstrate the need for change.

8.15 Historic England guidance sets out further details on how and what to include in a heritage statement. This can be found at:

- <https://historicengland.org.uk/images-books/publications/statements-heritage-significance-advice-note-12/>

8.16 For proposals that would affect the setting of the IGWHS or the setting of individual heritage assets within its boundary, the following Historic England guidance should be used:

- <https://historicengland.org.uk/images-books/publications/gpa3-setting-of-heritage-assets/heag180-gpa3-setting-heritage-assets/>

2. Additional Surveys and Information

8.17 Further surveys relating to ecology, land stability, contaminated land, flood risks, highways and trees may be required to support a planning application, and these will generally be identified as part of any Pre-Application Advice. But it would be prudent to carry out some of these surveys at any earlier stage before starting to develop proposals in order to fully understand the constraints involved. See Chapter 10 of this document for further guidance.

3. Seeking Pre-Application Advice

8.18 Both Telford & Wrekin Council and Shropshire Council run a pre-application service. Seeking pre-application advice in advance of making a Listed Building Consent or Planning Application will help speed up the process after the application is made because any issues that may be encountered can be dealt with prior to application.

8.19 There is a variety of pre-application advice available from Telford & Wrekin Council these are:

8 Submitting a Planning Application in the IGWHS

1. **Verbal advice** – providing free planning advice on principles of householder development only which is made available through an appointment basis at our Wellington Offices.
2. **Householder permitted development confirmation** – providing written confirmation whether planning permission is or is not required for any development.
3. **Pre-application written advice** – consulting internal technical specialists, Parish/Town Councils and Councillors, providing a detailed written response to the proposed development and the requirements for any application.
4. **Pre-application workshops** – providing a workshop that includes the technical specialists, to engage with the developer, highlighting issues and identifying solutions. This is followed by a detailed written response to the proposed development and the requirements for any application. This is made available to all scales of development.

8.20 There are fees payable for some of the above services and it is advisable to check the correct fee structure at the time of apply by checking Telford & Wrekin Council's website.

8.21 Shropshire Council also provide pre-application advice through submission of an advice form which can be found on the Shropshire Council website. The benefits of using this pre-application advice service includes:

- An understanding of how national and local guidance and policies will be applied to your development;
- Potential for reducing the time your professional advisors spend in working up the proposals;
- An indication of those proposals that are completely unacceptable, so saving you the cost of pursuing a formal application;
- Written confirmation of the advice given to you at the pre-application stage;
- Advice that is consistent, reliable, up-to-date and tailored to the specific development; and
- Comprehensive information on what you need in order for your application to be validated and considered by the authority

8.22 The submission of a pre-application advice form is not mandatory. However, if an application is submitted which requires significant change where pre-application advice hasn't been sought or followed, then it's likely that decisions will be taken without further opportunity to amend schemes. This is likely to incur further costs to you through submitting additional applications.

4. Submitting a Planning Application

8.23 When submitting a Planning Application or Listed Building Consent Application the easiest way is through the planning portal at

- <https://www.planningportal.co.uk/>

8.24 There are a number of documents that you will need to supply. These are broken down into two elements, National and local requirements. These can be found at:

- Telford & Wrekin Council: https://www.telford.gov.uk/info/20170/planning_applications_and_guidance/585/what_you_need_to_get_planning_permission
- Shropshire Council: <https://shropshire.gov.uk/planning/applications/submission-requirements/>

8 Submitting a Planning Application in the IGWHS

8.25 If you fail to provide any of these documents and the related fees it will slow the validation process. It should be remembered that until the application is validated, and checked for completeness, the determination timescale will not start for the application.

8.26 The process by which the local planning authority considers the application will be assisted by the application providing detailed and clear information.

8.27 There are a number of outside bodies that may be also consulted regarding the suitability of the proposals. This is not an exhaustive list but may include:

- Historic England;
- The Environment Agency;
- National Amenity Societies, i.e.
 - Georgian Group
 - Vernacular Buildings Group etc.
- Biodiversity Groups and Trusts including Natural England;
- Parish Councils of the various communities and neighbours; and
- Highways

8.28 It should be noted that any works proposed that are within a Scheduled Monument then consent from HE will be required.

5. Planning Performance Agreements

8.29 The Local Government website states that

8.30 *'As a general principle the agreement should be as simple as possible, consistent with a proportionate approach to the scale of the proposal and complexity of the issues raised. It will usually be agreed in the spirit of a memorandum of understanding rather than as a legally binding contract. The common elements of a PPA are:*

1. *That the agreement is drawn up prior to the submission of a planning application.*
2. *That the Local Planning Authority and the prospective applicant are signatories to this voluntary agreement.*
3. *The agreement includes one or more agreed milestones to define the process of considering the development proposed, including an agreed date by which an application will be determined by the Local Planning Authority*
 - *The agreed determination date supersedes the 13- or 16-week statutory time limit*
 - *The agreed determination date also supersedes the 26-week planning guarantee'*

8.31 Further information can be found about these agreements at:

- <https://www.local.gov.uk/sites/default/files/documents/good-practice-advice-and--fcb.pdf>.

Planning Conditions and Obligations

8.32 Some applications have conditions and/or obligations placed on the permission;

8 Submitting a Planning Application in the IGWHS

1. Conditions can be pre-commencement which means before you can start the work you must provide certain information which the planning officer needs to discharge in a formal letter i.e., building recording or archaeological investigations. Other conditions may be prior to installation so you can start work but not install certain items before supplying the information to the local planning authority and getting formal approval from them in writing i.e., windows, doors etc.
2. Other conditions may relate to opening hours, when contractors may work on site, travel or delivery plans etc.
3. There may be a requirement for a Section 106 agreement which will set out the financial obligations resulting from a development

8.33 It is very important to read the decision notice to make certain that you and the contractors are aware of all conditions and comply with them. It can be a criminal offence not to comply with conditions relating to a Listed Building Consent.

Post Determination

8.34 There may be significant work to carryout post determination, including the discharge of conditions as detailed above, and this should be factored into a development's timescale.

Enforcement

8.35 The Planning Enforcement Teams carry out monitoring of permissions to make certain they are carried out in accordance with the plans and also investigate works carried out without consent.

8.36 Sometimes an injunction to stop work is granted by the Council due to works not being according to plan or the works does not have permission. If work continues after the injunction, it becomes a criminal offence. It is a criminal offence, under the Listed Building Consent regime, to carry out works to a listed building or a relevant building within its curtilage without consent.

8.37 Deciding if a building or structure is "curtilage listed" can be difficult and it is essential to contact the Built Heritage Team to discuss this.

8.38 Enforcement will also monitor any biodiversity and wildlife conditions. It is a criminal offence to disturb or destroy certain flora and fauna. If this occurs, it will be reported to the police who will carry out an investigation.

Planning Fees

8.39 In most cases, when submitting a planning application, you will need to pay a planning fee. The cost depends on the type of application and what is proposed. When applying for permission the application fee should be paid at the time the application is submitted. For Telford & Wrekin Council the planning fee list is available on their website at:

- https://www.telford.gov.uk/info/20170/planning_applications_and_guidance/583/planning_application_fees

8.40 For Shropshire Council the planning fees can be found on their website at:

- <https://shropshire.gov.uk/planning-applications/submit-an-application/>

8 Submitting a Planning Application in the IGWHS

8.41 If you are unsure however what the fee should be you can calculate your fee using the Planning Portal's Calculator at:

- <https://www.planningportal.co.uk/app/fee-calculator?region=1>

8.42 Or you can contact either of the Planning Teams of which are detailed below:

Development Management Team	Planning Services
Telford & Wrekin Council	Shropshire Council
PO BOX 457	PO BOX 4826
Wellington Civic Offices	Shrewsbury
Telford	SY1 2BQ
TF2 2FH	Telephone: 0384 678 9004
Telephone: 01952 380380	Email: customer.service@shropshire.gov.uk
Email: planning.control@telford.gov.uk	

8.43 There are a number of concessions which if valid will allow you to submit an application without payment. These concessions have been drawn from the Planning Portal – Application Fees⁽²⁴⁾ and are shown in the table below:

8 Submitting a Planning Application in the IGWHS

Concessions
Exemptions from payment
<p>An application solely for the alteration or extension of an existing dwelling house; or works in the curtilage of an existing dwelling house (other than the erection of a dwelling house) for the purpose of providing:</p> <ul style="list-style-type: none"> ● Means of access to or within it for a disabled person who is resident in it, or is proposing to take up residence in it; or ● Facilities designed to secure that person's greater safety, health or comfort.
<p>An application solely for the carrying out of the operations for the purpose of providing a means of access for disabled persons to or within a building or premises to which members of the public are admitted.</p>
Listed Building Consent
Planning permission for relevant demolition in a Conservation Area
Works to trees covered by a Tree Preservation Order or in a Conservation Area Hedgerow Removal
<p>If the application is the first revision of an application for development of the same character or description on the same site by the same applicant:</p> <ul style="list-style-type: none"> ● For a withdrawn application: Within 12 months of the date the application was received ● For a determination application: Within 12 months of the date the application was granted, refused or an appeal dismissed ● For an application where an appeal was made on the grounds of non-determination: Within 12 months of the period when the giving of notice of a decision on the earlier valid application expired
<p>If the application is for a lawful development certificate, for existing use, where an application for planning permission for the same development would be exempt from the need to pay a planning fee under any other planning fee regulation</p>
<p>If the application is for consent to display an advertisement following either a withdrawal of an earlier application (before notice of decision was issued) or where the application is made following refusal of consent for display of an advertisement, and where the application is made by or on behalf of the same person</p>
<p>If the application is for consent to display an advertisement which results from a direction under Regulation 7 of the 2007 Regulations, dis-applying deemed consent under Regulation 6 to the advertisement in question</p>
<p>If the application relates to a condition or conditions on an application for Listed Building Consent or planning permission for relevant demolition in a Conservation Area.</p>
<p>If the application is for a Certificate of Lawfulness of Proposed Works to a listed building</p>

8 Submitting a Planning Application in the IGWHS

If an application for planning permission for planning permission (for which a fee is payable) being made by the same applicant on the same date for the same site, buildings or land as the prior approval application (for larger home extensions, additional storeys on a home, or change of uses)

- **Note: Not all concessions are valid for all application types. Upon receipt of your application, the relevant local authority will check the fee is correct and if the concession is applicable.**
- **Additional Note: For further information on reductions in payments and fees for cross boundary applications, please refer to the Planning Portal – Application Fees.**

9 Guidance for Development in the IGWHS

9 Guidance for Development in the IGWHS

9 Guidance for Development in the IGWHS

9.1 This Chapter provides guidance for development within the IGWHS in terms of its impact on the Outstanding Universal Value of the IGWHS. The starting point for decision makers remains the relevant adopted development plan policies of the Telford & Wrekin and Shropshire Local Plans respectively, but this SPD provides guidance to support the implementation of these policies.

9.2 For the avoidance of doubt, the key guidance points provided at the end of each sub-section do not introduce new policy, rather they seek to provide guidance to support the implementation of relevant policies within the adopted Local Plans for Telford & Wrekin and Shropshire respectively, on the issues addressed within the sub-section. However, in supplementing these policies, the key guidance should not be considered an exhaustive list as to what is considered acceptable or unacceptable. Key policies that should be considered when submitting a development proposal are covered within Chapter 5 'Planning Context' of this SPD.

9.3 Other material considerations within the Telford & Wrekin Council administrative area include the Severn Gorge Conservation Area Management Plan and the IGWHS Residents Guide.

9.4 Many of the works described below may require planning permission or listed building consent. The Residents Guide provides further advice on this for the area covered by Telford & Wrekin Council:

- https://www.telford.gov.uk/downloads/file/15198/world_heritage_site_whs_residents_guide

9.5 Advice can also be sought from the Local Planning Authority if you are unsure if permission is required.

9.6 The guidance covered within this chapter includes the following:

- 10.1 Ground Instability;
- 10.2 Contaminated Land;
- 10.3 New Development in the IGWHS;
- 10.4 Guidance for alterations to existing buildings in the IGWHS;
- 10.5 Guidance for the Maintenance and Development of Infrastructure; and
- 10.6 Guidance for Development Affecting the Setting of the IGWHS

9.7 At the core of considerations and decisions relating to changes to buildings and sites with the IGWHS is the preservation of its Outstanding Universal Value through considerations of authenticity and integrity and the retention of the historic built environment.

9.1 Ground Instability

9.8 The IGWHS's geology, geomorphology and topography creates its beauty and also the ideal conditions that kick-started the industrial revolution. Melting water from beneath a glacier carved the steep sided gorge and cut down into layers of Coal, Limestone, and Ironstone which constitute the perfect ingredients for making high quality iron.

9 Guidance for Development in the IGWHS

NOTE - Ground Instability Assessments

Due to the significant potential for localised ground instability problems within the Ironbridge Gorge, it is strongly advised that a professional Geotechnical Engineer is consulted to discuss any planning proposals. In the first instance a ground conditions focused Desk Study Report should be prepared for the proposed development site. This report will compile sufficient information to determine the likelihood of 'instability' being present or being triggered as a direct result of the proposed development. Instability issues, if identified, might be the result of a number of complexes interacting factors which would influence the type, depth, layout and cost of a required ground investigation and ultimately the necessary stabilisation works.

The first stage Desk Study should be completed at the earliest opportunity PRIOR to the development layout being agreed and prior to the submission of a planning application. It is advisable that the findings of the initial Desk study are shared with the Councils Development Management Team at the earliest opportunity and works should not be progressed until the Council has provided technical feedback to the developer. The Council cannot be held responsible for works which are carried out which are inappropriate to their setting, and we strongly recommend taking pre-application advice on proposals in the first instance before commissioning a Desk Study report.

9.9 During the industrial revolution and in the period that followed, the landscape of the IGWHS changed dramatically as a direct result of mining and the deposition of unwanted mining 'spoil' within the IGWHS. These changes have had a largely negative effect on an already naturally unstable gorge with waste spoils loading the banks and mining altering the groundwater flow.

Figure 15: Work to address land instability between Jackfield Tile Museum and Boat Inn

9.10 The continued and increasingly significant, effects of climate change are likely to bring more extreme weather events such as prolonged heavy rain and flooding which will only increase the potential for land slippage to occur more frequently.

9 Guidance for Development in the IGWHS

9.11 Telford & Wrekin Council have carried out extensive research into the issues that cause land movement within the Gorge. The Council have prepared a set of drawings and figures for the public which hold key information relating to stability in the Gorge. Of note are drawings A, B and C, the latter being a guide to the Planning Zones and potential stability risk to development. The guidance can be found at:

- https://www.telford.gov.uk/info/20423/land_stability_flooding_and_drainage/460/land_instability.

9.12 Although presented for public information, it is strongly recommended that these documents are interpreted by a professional in the context of any planning application submission.

9.13 Over time, any building whether in the IGWHS or not, may experience some movement and defects. This may appear as small cracks in buildings, retaining walls, boundary walls or movement within gardens.

9.14 When noticed it will be appropriate to contact a suitably qualified engineer who can provide expert advice regarding the necessary steps to take. Sometimes this movement may be the result of shrinkage or swelling of clays in relation to trees, however, occasionally, it is a result of slope stability. If remedial stabilisation works are advised by the consulting expert, then it is likely that Planning Permission and / or listed building consent will be required.

9.15 Prior to making an application for permission or consent it is important to seek the advice of Telford & Wrekin Council or Shropshire Council officers respectively. Applications that impact on the Outstanding Universal Value in a negative way are unlikely to gain consent. Any stabilisation works will need to be designed to respect the Outstanding Universal Value of the IGWHS and mitigate any negative impact that may occur due to the works.

9.16 If significant excavation works or piling are required, for example, then an archaeological watching brief may be required during excavation works. If such works impact on the archaeology of the IGWHS then it would be important to appoint a suitably qualified Archaeological specialist to assist with planning mitigation prior to finalising plans.

Works relating to Ground Instability / Structural Stability - Key Guidance Points

Proposals should consider...

- **Minor works** – before embarking on works to improve structural stability, check with Planning and/or the Building Control Departments of the relevant Local Authority (Telford & Wrekin Council or Shropshire Council) as permissions may be required.
- **Significant works or where excavations are required** – These will be supported where it can be shown that the design reflects the necessary protections for the Outstanding Universal Value of the IGWHS. Full proposed intended ground investigation works, and follow-on professional calculations plus detailed design drawings would be expected in the proposed design pack for these works.
- **Large scale reforming of land**– These works will have to be shown to support the protection of the overall site and be designed in a way to mitigate any damage to the Outstanding Universal Value of the IGWHS. Full proposed intended ground investigation works, and follow-on professional calculations plus detailed design drawings would be expected in the proposed design pack for these works.

9 Guidance for Development in the IGWHS

9.2 Contaminated Land

9.17 The term 'land contamination' covers a wide range of situations where land is contaminated in some way. All over the UK, there are thousands of sites that have been contaminated by previous uses, and more often this is associated with industrial processes or activities that have now ceased, but where waste products or remaining residues present a hazard to the general environment.

9.18 The IGWHS has been the home of ever-changing industry since at least the 17th Century and these factories, ironworks and furnaces (amongst other industries) will have left residual substances in the ground. These sites may present a hazard to human health or the environment, but there is a growing need to reclaim and redevelop this land.

9.19 Telford & Wrekin Council have guidance available relating to this issue and on how to address the problems relating to contaminated land. Basic advice can be found at:

- www.telford.gov.uk/info/20358/pollution/105/contaminated_land

9.20 Shropshire Council also provides guidance on contamination land. This guidance can be found at:

- <https://shropshire.gov.uk/environmental-health/environmental-protection-and-prevention/contaminated-land/>

9.21 Contaminated land assessments should be carried out by a suitably qualified specialist.

9.22 Sites within the boundary of the IGWHS that are contaminated may not have potential for development due to ground instability or other constraints (e.g. flooding). On sites potentially suitable for development:

- It will be important that any works required to rectify contamination is also designed to work with the Outstanding Universal Value of the IGWHS site and to include mitigation within the proposals to address any issues that might damage the Outstanding Universal Value.
- Any works carried out to understand and address potential contaminated land issues should be carried out in cognisance of the multiple guidance documents including those prepared by the Environment Agency.
- In addition, any person or developer assessing land for potential contamination should be fully aware of the legislation as defined in Part IIA of the Environmental Protection Act 1990.

Contaminated Land - Key Guidance Points

Proposals should consider...

- Where a site incorporates contaminated land, the works to rectify the issues must be designed to protect the Outstanding Universal Value of the IGWHS. Involving planning, conservation and/or ecology officers of the relevant Local Authority (Telford and Wrekin Council or Shropshire Council) at an early stage of the design process will help to achieve the best outcome for the planning application, the development site and the IGWHS.

9 Guidance for Development in the IGWHS

9.3 New Development in the IGWHS

9.23 Telford & Wrekin Local Plan policy SP4 has a presumption in favour of sustainable development but with a caveat that it must reflect the NPPF historic environment policies. Shropshire Council's adopted SAMDev Plan policy MD13 states that Shropshire's heritage assets will be protected, conserved, sympathetically enhanced and restored.

9.24 These policies set a hierarchy to historic sites with Paragraph 189 of the NPPF stating:

9.25 *'Heritage assets range from sites and buildings of local historic value to those of the highest significance, such as World Heritage Sites which are internationally recognised to be of Outstanding Universal Value. These assets are an irreplaceable resource, and should be conserved in a manner appropriate to their significance, so that they can be enjoyed for their contribution to the quality of life of existing and future generations'*.

9.26 Protection and enhancement of the natural, built and historic environment are at the heart of the objectives of sustainable development as set out in the NPPF, which recognises that great weight should be given to the conservation of heritage assets **"irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance"** and that **"the more important the asset, the greater the weight should be"** (Paragraph 199). World Heritage Sites are recognised as being of the highest significance and this should be reflected in the amount of weight attributed to it. Development within the IGWHS must be of the highest quality and the NPPF is clear that any development should be careful to reflect the character and not detract from the significance of the IGWHS and its Outstanding Universal Value.

9.27 The National Planning Policy Framework can be viewed at:

- <https://www.gov.uk/government/publications/national-planning-policy-framework--2>

3.1 Previously Developed Land

9.28 Most parts of the IGWHS make a positive contribution to the Outstanding Universal Value of the IGWHS, but there are some that might actually detract from its significance. This is especially the case with "Previously Developed Land", where more recent development has obscured the historic character of the site or its contribution to the Outstanding Universal Value, and there is therefore an opportunity for enhancement through redevelopment.

9.29 To ascertain what has significance and how the loss of any building or structure or redevelopment will impact the Outstanding Universal Value of the IGWHS, it is necessary to carry out a Heritage Impact Assessment in accordance with ICOMOS guidelines which will feed into the Heritage Statement.

9 Guidance for Development in the IGWHS

Previously Developed Land - Key Guidance Points

Proposals should consider...

Where applications for developing vacant, previously developed sites are made within the IGWHS, Design and Access Statements and Heritage Statements will be required (which can be combined into one document). For Major applications a Heritage Impact Assessment in accordance with the Toolkit for Impact Assessments in a World Heritage Context (2022) will be required. It should set out the historic development of the land, its current character and contribution to the Outstanding Universal Value of the IGWHS, and how the proposed development would impact on the Outstanding Universal Value of the IGWHS. This is in order:

1. To identify whether the proposed site was always vacant and if the land had been previously built on, what was the building or structure and its use;
2. To understand how the vacant site stood within the historic environment in the past and present and how it currently contributes to the Outstanding Universal Value of the IGWHS;
3. To justify why the land should be developed now;
4. To demonstrate that the development will preserve and/or enhance the Outstanding Universal Value of the IGWHS; and
5. To investigate the likelihood of potential archaeology on the site and how this could be mitigated.

3.2 New Buildings on previously undeveloped land

9.30 Many of the existing green spaces within the IGWHS may contribute to the landscape value of the IGWHS, which is one of its key attributes, and others may contribute to the setting of existing heritage assets or contain significant industrial or below ground archaeological features. In certain locations, new development may therefore be inappropriate in principle. It is therefore important to have pre-application discussions regarding any proposals for new residential or commercial developments at an early stage.

9.31 All the character areas within the IGWHS have distinct characteristics that contribute to the overall Outstanding Universal Value. It is important that these are taken into account when new residential or commercial developments are being designed.

9.32 Key considerations for new developments:

- Ensure the siting of a new building or buildings in the proposed location would be appropriate in terms of the Outstanding Universal Value of the IGWHS. The loss of key landscape features, harm to important views or the setting of nearby heritage assets will not be supported.
- Investigate any issues of ground instability or contamination at an early stage as this may affect the feasibility or viability of the development.
- The density, pattern, scale and layout of development should be carefully considered taking into account the particular characteristics of the specific character area. For example, are existing properties predominately terraced or detached? Do they have spacious gardens or are they set close to the road?

9 Guidance for Development in the IGWHS

- Materials, form and detail should be consistent with the character area, including roof forms, heights, scale and footprints as well as architectural detailing.
- Boundary treatments such as railings and walls should be consistent with the local characteristics.
- Areas of hard surfacing including roads should pick up on local historic precedents.
- Contemporary building styles will not be supported in the IGWHS other than in very exceptional 'landmark' locations. The introduction of non-traditional forms or materials can be harmful to the Outstanding Universal Value due to the jarring visual impact on the street scene which typically has a consistent and harmonious historic character
- Any new buildings should be delivered to the highest environmental standards in terms of using appropriate sustainable or locally sourced materials, thermal insulation, and provision of heating and power services within the building.
- In areas at risk of flooding, resilience measures to help reduce the risk of property level flooding should be incorporated into the building design.

9.33 When designing new development reference should be made to information in this SPD (alongside the Severn Gorge Conservation Area Management Plan and the Conservation Area Appraisal in the Telford & Wrekin Council administrative area, which sets out the distinctive features of the relevant character areas of the IGWHS: Ironbridge, Coalbrookdale, Jackfield, Coalport and Madeley).

9 Guidance for Development in the IGWHS

New Development - Key Guidance Points

All applications for new residential or commercial development within the IGWHS will require Design and Access and Heritage Statements (which can be combined into one document) and Major applications will require a Heritage Impact Assessment in accordance with the Toolkit for Impact Assessments in a World Heritage Context (2022). It should set out the historic development of the land, its current character and contribution to the Outstanding Universal Value of the IGWHS, and how the proposed development would impact on the Outstanding Universal Value of the IGWHS.

Proposals should consider...

- Whether the existing site contributes to the Outstanding Universal Value of the IGWHS in terms of its landscape character, views, archaeological value or contribution to the setting of individual heritage assets.
- Justifying why the land should be developed now.
- How new development reflects the immediate surrounding characteristics and relates to the character areas identified in the Severn Gorge Conservation Area Appraisal in terms of density, layout, form, materiality and design.
- Appropriate materials and designs for outbuildings, boundary treatments and hard landscaping.
- Investigating potential archaeological interest on the site and consider how this could be mitigated.
- Investigating ecological implications and consider how this could be mitigated.
- Use of sustainable materials and high standards of energy efficiency.

Proposals should avoid...

- Loss of green spaces or sites that contribute to the Outstanding Universal Value of the IGWHS.
- Subdivision of historic plots.
- Modern contemporary designs that do not cohere with the overall visual character of the IGWHS and immediate locality.

9 Guidance for Development in the IGWHS

Figure 17: Buildings of sympathetic materials and forms with a variety of heights and orientations complement the local historic environment and reflect its piecemeal development over time

Figure 18: Building set in line with existing buildings with brick boundary wall to edge of street. Using a good brick match for adjacent historic building, sympathetic roof pitch, chimney stacks, sash windows, six panel door with door case, boundary wall and iron gate.

9.4 Guidance for Alterations to Existing Buildings in the IGWHS

9.34 Many alterations to buildings within the IGWHS require Planning Permission (and in the case of Listed Buildings, will also require Listed Building Consent). As documented within this SPD, any such Planning Application should be accompanied by an appropriate Heritage

9 Guidance for Development in the IGWHS

Statement and any such Listed Building Consent Application should be accompanied by an appropriate Design and Access Statement and appropriate Heritage Statement (where both are required, they can be integrated into one document).

9.35 Furthermore, within the Telford & Wrekin Council administrative area an Article 4 direction has been introduced. The Article 4 Direction removes certain Permitted Development Rights for alterations to dwelling houses and as such Planning Permission will be required for these works. It is strongly advised that before commencing any development within the IGWHS within the Telford & Wrekin Council area, residents check the most up to date version of the Article 4 direction on the Telford & Wrekin Council website, as planning permission may be required prior to development taking place.

- https://www.telford.gov.uk/info/20170/planning_applications_and_advice_appeals_enforcement_and_guidance/2244/article_4_direction

9.36 For some buildings within the IGWHS, some or all of the Permitted Development Rights which usually apply may have been removed as a condition of a past Planning Permission. Where this is the case, Planning Permission will be required for these works.

9.37 For alterations to existing buildings within the IGWHS that do not require Planning Permission, it remains important to carefully consider how potential works and any resultant alterations impact on and relate to the character and architectural design of the existing building and the character and appearance of the IGWHS itself.

9.38 This is because small scale alterations that normally do not require planning permission can lead to the loss of key features of historic or architectural value, or poor-quality extensions and curtilage structures. Together these could cause incremental erosion of the authenticity and integrity of the Outstanding Universal Value of the IGWHS, and its character and appearance leading to significant harm in the long term.

4.1 Thermal and Energy Efficiency of Buildings

9.39 The ability of residents and businesses to improve the energy efficiency of existing buildings is an important means of tackling climate change and reducing running costs of a building as a way of ensuring its long-term use as a home or business.

9.40 Improving the thermal and energy efficiency of a building to reduce necessary loss of energy should be the first step. This will help reduce the running costs of a building and should be considered in conjunction with any proposals for renewable energy installations (see Section 4.2).

Historic buildings (listed buildings, buildings of local interest, traditionally constructed buildings)

9.41 The energy and carbon performance of many historic buildings can be improved, but it is important to take a holistic approach and strike the right balance to avoid harm to heritage significance. Within the IGWHS it is key to maintain the Outstanding Universal Value, which includes retaining the authenticity of architectural detail and historic fabric, and the integrity of the character and appearance of the area.

9 Guidance for Development in the IGWHS

9.42 Historic buildings are not designed to perform as sealed units as modern buildings are, and the fabric of older buildings needs to be able to ‘breathe’. So, it will not always be possible, or advisable, to use standard solutions.

9.43 It is important to take a ‘whole building approach’ that understands the particular circumstances of an individual building, taking into account the environmental conditions, built fabric, energy-usage, services and systems, usage, and avoidance of waste, as well as heritage significance. For example, retaining existing material and making only essential repairs rather than embarking on wholesale replacement avoids unnecessary use of new materials and the energy expended in their manufacture. Research has also shown that in many cases energy losses from buildings are greater from appliances and heating systems than from the actual building fabric, and that the easiest way to make energy savings is to change behaviours.

9.44 Often thermal improvements can be made simply by ensuring that a building is well-maintained. Any sources of damp, such as leaking gutters and downpipes, inappropriate cementitious renders and mortars, high ground levels against external walls, a lack of ground drainage etc. will lead to a build-up of moisture in the walls lowering internal temperatures. Fixing rainwater goods, replacing cementitious pointing with lime, reducing ground levels and installing French drains can all lead in turn to thermal improvements. Windows and doors can be overhauled to ensure they fit correctly, and they can usually be fitted with draught-proof strips without significant intervention to historic fabric.

Wall and Roof Insulation

9.45 When considering wall and roof installation on historic buildings it is important to consider that:

- For historic buildings external wall insulation will rarely be acceptable due to the impact on historic fabric, architectural detail and character, which could seriously harm the Outstanding Universal Value.
- Internal wall insulation can be considered for unlisted buildings and does not need planning permission. However, it is still important to use breathable materials on traditionally constructed buildings to avoid long-term damage to their fabric.
- For listed buildings internal insulation of walls can be considered on a case-by-case basis and will always need Listed Building Consent. Where historic lime plaster survives it should be retained, but if the historic plaster has already been lost, it may be acceptable to insert insulation, provided there would be no loss of or harm to significant internal features such as skirting boards, cornices and architraves. But it is still essential to protect the breathability of the building for its long-term survival, and breathable materials should be used.
- Many buildings have existing lofts enabling the insertion of insulation without impacting on historic fabric or character. Again, it is important to consider breathability, and that Listed Building Consent may be required if there is physical attachment to the historic structure.

Windows and Doors

9.46 When considering alterations to windows and doors on historic buildings it is important to consider that:

- **Double-glazing** is often considered a quick fix to improve energy efficiency, but research has shown that as little as 5% of energy losses from domestic buildings is through windows or doors. More energy is lost through walls and roofs and by inefficient services or use of

9 Guidance for Development in the IGWHS

appliances. Particularly where windows are relatively small compared to the area of walling, very little benefit may result from double-glazing.

- **Historic windows and doors** are often key features of significance to historic buildings and make a particularly positive contribution to the Outstanding Universal Value of the IGWHS. Wherever original historic windows or doors survive they should be retained. This applies on all elevations of a listed building, and across the IGWHS where windows or doors are visible from public spaces and replacement would need planning permission under the Article 4 Direction.
- **Existing windows and doors** can be overhauled, and draft-stripping can usually be applied to eliminate drafts.
- **Additional insulation** can be provided by installing secondary glazing or internal shutters. For listed buildings, Listed Building Consent may be required if there would be any impact on features such as internal panelling or architraves, but bespoke solutions can usually be accommodated.
- **Where historic windows or doors have already been lost**, there is often an opportunity to upgrade to double-glazing whilst also enhancing the appearance of a building and the IGWHS by adopting appropriate traditional designs in painted timber. Usually 'slim-line' double-glazed units will be required, especially where the design includes glazing bars, which would need to be too bulky and deep to accommodate standard units.

Floors

9.47 When considering alterations or repairs to floors in historic buildings it is important to consider that:

- Many of the older buildings in the IGWHS have timber floorboards over unheated cellars or under crofts which can result in draughty floors making living spaces particularly uncomfortable. Solutions as simple as carpeting over exposed floorboards can make a significant difference. Underfloor heating can also be considered. These internal works do not require planning permission, but advice should be sought for listed buildings as there could be impacts on the historic fabric and structure and Listed Building Consent may be required.

Services

9.48 When considering alterations and upgrades to services in historic buildings it is necessary to consider that:

- Many of the energy inefficiencies of any building are down to elderly and inefficient heating systems or the management of the use of appliances and spaces within the building. Addressing these issues does not usually require planning permission, although relocation of boilers may need Listed Building Consent if any significant historic fabric may be affected, or if new flues or extraction units are required.
- Consideration may be given to microgeneration, such as installation of solar generation, biomass, air source or ground source heat pumps, and this is addressed below under the subheading Renewable Energy.

9.49 Other sources of information on how to improve energy efficiency of historic buildings include Historic England and the Society for the Protection of Ancient Buildings (SPAB).

9 Guidance for Development in the IGWHS

- <https://historicengland.org.uk/advice/technical-advice/energy-efficiency-and-historic-buildings/>
- <https://www.spab.org.uk/advice/energy-efficiency-and-old-buildings-principles-and-priorities>

Non-historic buildings

9.50 The IGWHS contains many post-war buildings which were not designed to be ‘breathable’ and so can accommodate standard methods and materials for thermal insulation and will not be expected to have traditional window or door designs. However, where permission is required for external alterations under the Article 4 Direction, or where Permitted Development Rights have been removed as a condition of planning permission, care must be taken to respect both the character and architectural design of the existing building and its contribution to the character and appearance of the area as a whole.

Thermal / Energy Efficiency of Buildings within the IGWHS – Key Guidance Points

Proposals should consider...

- Opportunities to improve the thermal efficiency of buildings through improvements appropriate to the building.
- Regular maintenance of historic buildings to reduce issues that can lead to, for example, reduced temperatures caused by issues such as damp.
- Improvements such as carpeting ground floors where cellars or under crofts are present in a property, fitting appropriate draft proof strips and appropriate loft insulation.
- For glazing improvements to historic buildings, the use of good quality secondary glazing or internal shutters where retention of historic windows makes a positive contribution towards the Outstanding Universal Value of the IGWHS.
- Seek early advice on proposals that require Listed Building Consent or Planning Permission.
- How to ensure the breathability of historic buildings as part of any proposals to improve thermal insulation.

Proposals should avoid...

- Any loss of historic building features when making thermal improvements to a building.
- The use of materials and solutions that would not be in keeping with the age and type of the building.
- The use of impervious materials

4.2 Renewable Energy

9.51 In addition to improving the thermal and energy efficiency of a building the next step in reducing running costs and addressing climate change is to consider whether there are suitable options for generating renewable energy.

9.52 Set out below are the different forms of renewable energy generation and guidance on where they could be appropriately located as part of any development proposals.

9 Guidance for Development in the IGWHS

Solar

9.53 Solar energy is popular with homeowners. Solar panels / tiles / water heating could be considered appropriate within the IGWHS in the following circumstances:

- **Non-reflective panels on roofs** - provided that they are not visible from the public highway, public realm and do not impact on landscape views. This could, for example, include the roof of a single storey extension that is ordinarily hidden from public view.
- **Sympathetic incorporation into an existing roof scape** - through the use of solar tiles where it is in keeping with the characteristics of the local area and the local vernacular.
- **Products that can be used to provide hot water** - that appear like slate and some that can also be used on flat roofs and do not have a highly reflective surface. These solar materials may be something that could be considered on a case-by-case basis, although this would not be supported on a roof seen from the public realm.
- **Concealed non-reflective solar panels** – this could include innovative options such as, where possible, behind boundary brick walls, but only where they cannot be seen from the public realm.

Figure 19: Slate Solar Tiles for Pitched Roofs

9.54 The installation of solar panels can be visually intrusive, interrupting the characteristic tiled roofscapes of the IGWHS and introducing incongruous reflective surfaces, to the detriment of building character and landscape views. Where the fittings would be visible from the public realm, they will not be supported.

Biomass

9.55 Biomass is produced from organic materials, either directly from plants or indirectly from industrial, commercial, domestic or agricultural products.

9.56 Producing energy from biomass has both environmental and economic advantages. It provides low carbon energy and can also contribute to waste management by harnessing energy from products that are often disposed of at landfill sites.

9.57 There are two main ways of using biomass to heat a domestic property these include:

- **Standalone stoves** providing space heating for a room these can be fitted with a back boiler to provide water heating; and
- **Boilers** connected to central heating and hot water systems.

9 Guidance for Development in the IGWHS

9.58 Small scale biomass systems could require additional storage areas for fuel or to house the boiler.

9.59 Biomass installations can be considered within the IGWHS where:

- There is existing space within a property, and installation does not result in damage to the property or loss of any historic features,
- There are suitably located outbuildings suitable for housing an appropriately sized biomass boiler system and / or associated storage.
- A new building can be designed to be in keeping with existing buildings – refer to guidance on new buildings.
- New flues for ventilation can be sensitively located and designed.

Figure 20: Biomass Boiler System

Air Source Heat Pumps

9.60 This sort of renewable energy system is becoming more popular. However, it requires a large pump box to be fixed to the outside of the building. There two main types of air source heat pumps:

- **Air to air heat pumps:** which absorb heat from the outside air and then transfer it directly into your home via a fan system to heat a room; and
- **Air to water heat pumps:** which absorb heat from the outside air and then transfer it via your central heating system to provide hot water heating, radiator, or underfloor heating in an indoor space.

9.61 Air source heat pumps can be considered in the IGWHS where:

- The pump box would be located on a wall that is not ordinarily visible from the highway or public realm. Siting on front elevations would be unlikely to be supported due to the visual impact, but siting at ground floor level on rear elevations or tucked into discreet corners can usually be supported.
- Where more prominent locations are unavoidable, the pump is housed or screened by a structure that is sensitive to the historic character of the area.
- They are positioned to minimise noise from the operation of the pump.
- For a listed building there would be no damage to external and internal historic fabric or architectural detail.

9 Guidance for Development in the IGWHS

Ground Source Heat Pumps

9.62 Ground source heat pumps require a large area in which to install the pipe loops. Excavation is required either horizontally, where large areas are required to accomplish the necessary heat exchange, or vertically where there may be issues of ground instability.

9.63 Ground source heat pumps can be considered where:

- The proposal is supported by a Ground Instability Assessment (see section 1 of this Annex) early in the planning process.
- They would be located in areas where ground conditions and land stability are potentially more suitable.
- Below ground archaeology and biodiversity have been considered and any impacts can be mitigated.

9.64

Figure 21: Ground Source Heat Pump systems

Further guidance on the permits, consents and licences on open loop heat pump systems, which are regulated by the Environment Agency and can be found on GOV.UK: <https://www.gov.uk/guidance/open-loop-heat-pump-systems-permits-consents-and-licences>

Wind Energy

9.65 This form of renewable energy would be impossible to locate within or in the setting of the IGWHS without having a severe negative impact on the Outstanding Universal Value of the IGWHS due to the likely height needed to provide power, the stand-off areas and infrastructure necessary to take the electricity to the grid.

9 Guidance for Development in the IGWHS

Building Insulation and Renewable Energy - Key Guidance Points

Proposals should consider...

- Locating solar generation in areas that have minimal visual impact on the surrounding area such as rear of properties, use of innovative solar tiles and concealed ground level provision.
- Whether biomass energy production on a small scale is appropriate where the necessary infrastructure and associated storage can be located within a suitable existing building or a well-designed new building that is in keeping with the surrounding area.
- Whether air source heat pumps can be situated in inconspicuous areas and where the infrastructure will not damage the internal historic fabric of the building or be visible from the public realm.
- Whether ground source heat pumps can be situated where the necessary excavations will not damage the land stability, biodiversity, archaeology or any aspect of the Outstanding Universal Value of the IGWHS or historic fabric of a building within the IGWHS.

Proposals should avoid...

- Use of standard solar/PV panels in publicly visible locations or where they would harm the special interest of a listed building.
- The use of biomass where it would lead to unacceptable changes to the property as part of installation, or inappropriately designed or located additional storage units.
- Siting air source heat pumps in highly visible locations.
- Ground source heat pumps in areas of known ground instability.
- Wind generation schemes, as turbines will not be supported within or on the edge of the IGWHS due to visual impacts.

4.3 Electric Vehicle Charging Points

9.66 The UK's electric vehicle (EV) charging infrastructure is continually growing and changing shape to meet the needs of the growing number of EV drivers. Within the IGWHS there are opportunities for charging points to serve homes and workplaces, as well as public charging points in car parks.

9.67 Where a building or site is not listed or a scheduled monument, there are certain permitted development rights for EV charging points, and planning permission is not required to install fittings of a certain size and height, subject to their location⁽²⁵⁾.

9.68 Any charge points fixed to a Listed Building or any of its outbuildings or boundary walls will need Listed Building Consent.

9.69 EV charging points are essentially modern in design and can appear incongruous in the context of historic buildings and street scenes, to the detriment of the Outstanding Universal Value of the IGWHS, so careful siting is required.

9.70 Design considerations for EV charging points in the IGWHS include:

9 Guidance for Development in the IGWHS

- Charge points in a domestic setting should be sited in discreet locations such as within a garage or outbuilding or to the rear of a property where the parking arrangements permit.
- Where this is not possible, consider screening the modern fittings, or locating them on the inner face of boundary walls out of view.
- Running cables outside the curtilage of a property and across public highways or footpaths to reach a vehicle will not be supported due to issues of obstruction and the potential for trip hazards.
- In commercial, business or public car park locations the size, type and design of charging infrastructure should be such that it minimises the visual impact on the surrounding area. Consider more recessive colours for fittings as well as less prominent areas.
- For commercial or businesses locations and in public car parks, there may be opportunities to install additional passive infrastructure such as ducting to allow additional EV charge points to be more easily installed in the future and minimise future disruption.

Electric Vehicle Charging Infrastructure – Key Guidance Points

Proposals should consider...

- The size, location and design of the charging outlet as per the above criteria.
- In the case of commercial / business / public car park proposals consider opportunities to install passive infrastructure to facilitate additional points in the future.

Proposals should avoid...

- The need to run charging cables across public highway or footpaths.
- The installation of infrastructure at public locations that would create a negative visual impact.

4.4 Designing for Flood Risk

9.71 Flooding is an ever-growing problem in the Ironbridge Gorge, with climate change set to increase the number of extreme weather events affecting the area.

Historic Setting

9.72 The rivers and watercourses in the Gorge are key to the setting of the World Heritage Site, at the heart of which is a long, linear settlement along the River Severn and up into the Coalbrookdale valley. Historically, the River Severn provided a transport route for goods and people and the Coal Brook was a key power supply used to drive mill wheels and industrial processes. As a result, flooding has been a threat to the communities close in the Gorge for centuries.

9 Guidance for Development in the IGWHS

Figure 22: Ladywood before and during a flood event

9.73 This history also means that the watercourses in the Gorge have been heavily modified and changed over time, and there are a number of historic structures in and along them, including culverts, mill wheels, leats, sluices and wharfs, which can affect flood risk.

Main Flood Sources in the World Heritage Site

9.74 River Severn - This is flooding from the river, usually following rainfall in Wales. There is normally good warning that flooding from the Severn is expected, and the Environment Agency are responsible for managing the flood risk from the River Severn. Flood depths can be quite deep, and the groundwater will rise to the same level as the river along the whole river corridor.

9.75 Coal Brook - The brook is a designated Rapid Response Catchment (flash flooding area), and flooding is caused by heavy rainfall over Coalbrookdale itself and its catchment. This means that there could be little or no warning before it floods. The flood risk from the Coal Brook is very different to the flood risk from the River Severn, due to the speed at which it can happen. The Environment Agency are responsible for managing the flood risk from the Coal Brook.

9.76 Surface Water Runoff - The hillsides in the Gorge are steep and rain falling on them will quickly run downhill. Sealed surfaces such as driveways can speed up runoff and roads can channel water. Runoff down the hillsides can also cause erosion and flooding can occur if flow routes are obstructed by buildings or structures. Telford & Wrekin Council and Shropshire Council for their respective administrative areas are responsible for managing the flood risk from surface water and the public highway.

9.77 Public Sewers - The sewerage system serving the IGWHS is historic and largely combined, and therefore during heavy rain, is at risk of flooding. The sewers can also flood when they block, usually as a result of misuse. More severe rainfall as a result of climate change also increases the chances of the sewers being overwhelmed. Severn Trent Water are responsible for managing the flood risk from public sewers.

9.78 Land Quality - Ground movement in the area is not new and has occurred since the Gorge was formed, as explained earlier in this chapter. A potential landslide however may lead to a partial or total blockage of the river. In the event that this occurs, an emergency plan prepared by Telford & Wrekin covered within 'Land instability in the Gorge'⁽²⁶⁾ will be implemented to minimise the risk to the public.

9 Guidance for Development in the IGWHS

9.79 Groundwater Quality - Groundwater flooding usually occurs in low lying areas during periods of sustained heavy rainfall. During these periods, rain infiltrates into the underlying rocks and strata, raising the water table above the level of the surrounding ground. There can be substantial time-lags between the persistent or heavy rainfall events and flooding resulting from the emergence of ground water. This is due to the relatively slow rate at which water percolates into and moves through permeable strata.

Flooding Impacts

9.80 The landform of the Gorge means that both the River Severn and the Coal Brook have very little floodplain.

9.81 Once the rivers flood, not only does flooding affect a number of homes, businesses and historic sites throughout the IGWHS, but they can also cut off several key roads across the River Severn and in and out of the Gorge, including access for emergency vehicles to some areas.

9.82 Some properties that are not at risk of flooding may also still be cut off to vehicular and even pedestrian access.

9.83 The economic cost to homeowners, businesses and tourism and the mental health impacts of flooding are also well documented, as well as the draw on time and resource for homeowners defending their properties and Emergency Services responding to floods.

9.84 In the last three years (2020 to 2022) two museums in the IGWHS have been affected by severe flooding along with a large number of residences and businesses.

9.85 Flood insurance can also be a problem in the Gorge. Both residential dwellings and businesses find it very difficult to access flood insurance, however there are some steps that can be taken to help reduce some of the impact on both new and existing properties. All new development should be directed away from areas of flooding and designed to reduce flood risk.

Protecting Properties from Flooding

9.86 While some areas of the Gorge benefit from strategic flood defences, these only offer limited protection. A number of properties also have their own flood defence systems such as Property Flood Resilience. Property Flood Resilience includes both resistance measures to keep water out and recovery measures to speed up the drying out and recovery process (see next section on Managing Flood Water Inside Buildings).

9.87 There are also, a number of modifications that may be built into new buildings or added to old ones to manage flooding. Specialist advice should always be taken to identify the best options for a building given the type(s) of flood risk to which it is most at risk, taking into account both the needs of the people who will be using it, and the need to consider the Outstanding Universal Value of the IGWHS.

9.88 A large amount of guidance exists about Property Flood Resilience, and considerations for properties within the World Heritage Site are set out below:

9.89 **Flood Warnings** - The amount of warning available before a flood will influence the best methods to manage flooding; Barriers that need to be manually installed for example are unlikely to be suitable for flash flooding such as the Coal Brook but may be suitable for river flooding

9 Guidance for Development in the IGWHS

from the River Severn. Flood warnings for the River Severn are available via the Environment Agency's Floodline service and Telford & Wrekin Council have a flood warning system for the Coal Brook.

9.90 Environment Agency

- <https://www.gov.uk/sign-up-for-flood-warnings>

- https://www.telford.gov.uk/info/20474/streets_and_roads/247/flooding_and_drainage/2

FLOOD ALERT

FLOOD WARNING

**SEVERE FLOOD
WARNING**

9.92 Keeping Water Out of a Property (Flood Resistance) - Resistance measures can include walls, doors and barriers. These can be permanent or temporary and the types of materials used will need to be considered on balance, taking into account the surrounding character and appearance, the height of flood protection they can offer, and their suitability to the type of flooding being experienced.

9.93 Temporary features are also dependent on the person installing them knowing when they will need to do so and being physically present at the time of a flood event.

9.94 For some historic properties, with e.g., timber construction or minimal foundations, or where features of particular heritage significance would be compromised, it may be better to allow the property to flood but minimise the damage and reduce the amount of time it takes to make a building habitable again.

9.95 Design considerations for installing flood resistance measures within the IGWHS:

- The ideal solutions for the IGWHS will minimise visual impacts or impacts on historic fabric outside of a flood event and should be used wherever practicable.
- Consider temporary non-fixed barriers first, i.e., without permanent attachments and which require installation just prior to a flood, these can fit into some door jams, gate posts, windows etc. depending on the structure;
- If this is not possible temporary fixed barriers which involve permanent fixings on a structure but still require installation before a flood;
- Permanent flood proof air bricks are not always suitable for historic buildings, but if in discreet locations and coloured to match the existing wall may be acceptable.
- Flood gates and doors are increasingly available in 'heritage' design options which may be acceptable within the IGWHS. However, where this would necessitate the removal of historic door joinery or gates, this would harm the authenticity of the IGWHS and so would need to be soundly justified.

9 Guidance for Development in the IGWHS

- Permanent walls can be considered in exceptional circumstances where alternative means of protection are impossible, but will nevertheless need to be designed to reflect the historic character of the area in order to minimise impacts on the Outstanding Universal Value of the IGWHS.
- Temporary seals for air bricks and/or non-return valves on toilets and drains are solutions that can easily be used and do not require any Planning Permission or Listed Building Consent.

Figure 23: New housing set above undercroft to allow for flooding

9.96 Managing Flood Water Inside Buildings -It's not usually possible to prevent flood water from entering a property entirely. Water will find pathways through the ground and along service lines such as sewers and ducts. Most flood defences (both strategic and property level) still need to manage water that gets around barriers.

9.97 Using the right materials is one way to help to reduce flood damage. A number of historic properties already have adaptations that help minimise this such as tiled floors and lime plaster which is able to get wet and then dry out again.

9.98 Things like removable carpets/rugs and hoists to suspend furniture above the ground have also historically been used to minimise the damage caused by flooding inside a property.

9.99 More modern installations such as kitchens and electric fitting can also be designed or adapted. New kitchens can be built out of flood resistant materials or to be modular so they can be removed, and electric sockets can be raised to prevent water damage.

9.100 Installation of pumps - Most flooding to properties along the River Severn occurs where water floods up through floors as well as through doorways. As such, any system trying to keep water out or just to manage water levels within a building is likely to require flood pumps. Flood pumps will need to be located at the lowest point possible and digging sumps within a

9 Guidance for Development in the IGWHS

Listed Building may require Listed Building Consent. The electric supply feeding pumps should also be considered, as the pumps will cut out if the electricity shorts. This could be the ring main within the house or the exterior supply.

Planning Permission and Listed Building Consent

9.101 Flood resilience measures that alter the fabric or appearance of a building may require Planning Permission and / or Listed Building Consent. This would include features like flood doors, alterations to boundary walls, permanent barrier fixings and sumps. The relevant Local Planning Authority (either Telford & Wrekin Council or Shropshire Council) can provide advice on what would or would not require Planning Permission and the information that would be required with any such Planning Application (e.g., Heritage Impact Assessment, Elevation Plans etc.) – this may be via a pre-application service.

9.102 Depending on the alterations required such Planning Applications would be dealt with on a case-by-case basis. It should be noted that any alteration that causes damage or results in a removal of any feature that was considered to impact the Outstanding Universal Value of the IGWHS and or the significance of a Heritage Asset would be unlikely to be supported.

9.103 It is therefore imperative to have a clear understanding of the building, through the completion of a Heritage Impact Assessment, so that the design of any flood risk defence mitigates against any damage to the Outstanding Universal Value of the IGWHS and the significance of relevant Heritage Assets.

Opportunities for Historic Buildings

9.104 Historic England have been involved in several flood resilience trials in the context of heritage assets. They publish guidance for flooding and historic buildings, which can be found here:

- <https://historicengland.org.uk/advice/technical-advice/flooding-and-historic-buildings/>

9.105 There are also increasing numbers of heritage specific property flood resilience measures available, and although still relatively small, this market is growing. Some options are more expensive than others, but the increasing number of heritage styles and materials available means that there is now more opportunity to “shop around”.

Historic Buildings after Flood Events

9.106 In the event a historic building is flooded the following is advised:

- **Clean up any damage sensitively** - Don't remove wet plaster or joinery indiscriminately, it may well recover once the building has dried out. Once debris has been cleared away clean all surfaces with detergent or disinfectant if necessary.
- **Dry the building out slowly** -Natural ventilation is ideal to ensure no rapid change in humidity that might damage historic fabric. If necessary, use extraction fans, low heating levels and dehumidifiers. Some timber fittings, such as door linings or floorboards may need to be selectively removed to hasten drying or prevent buckling. If any fabric needs to be removed, make sure it is recorded first so it can later be reproduced.
- **Avoid unnecessary repairs or alterations** -Lime plaster and timber are natural materials that are breathable and will usually survive if left to dry out naturally. Salt deposits may appear during drying but can be brushed or vacuumed off. Check if any repointing is required

9 Guidance for Development in the IGWHS

and use lime mortars. The use of these materials will also assist in the drying process allowing properties to become habitable sooner following a flood event.

- **Make sure insurers and contractors are aware if your building is listed** - Standard responses to flood damage include tanking, modern gypsum plaster, cement rich mortars and water-repellent products. These measures can all lead to damage to the building in the long run through hindering the natural breathable properties of the historic fabric. Remember your building spends more time above than under water!
- **Check if you need Listed Building Consent or Planning Permission to make any alterations** - Even in the event of flood damage, any change to the materials or architectural details of a Listed Building are likely to need consent, and within the IGWHS certain external works may need Planning Permission too. The relevant Planning Department (at Telford & Wrekin Council or Shropshire Council as appropriate) can provide advice.

Flood Risk - Key Guidance Points

Proposals should consider...

- Risk of flooding from all sources and how this flooding occurs.
- Directing new development away from areas of flood risk.
- Ensuring that new development does not increase flood risk.
- The type, age and setting of an existing or proposed property.
- Other flood risk factors such as flood warnings, property access, electricity supply, and the availability of insurance when designing new properties or altering existing properties.
- Getting specialist advice on how water may be entering your property and what options could reduce this.
- Ensuring that any development in flood risk areas is resilient to flooding.
- The best materials to use, considering both heritage of the property and risk of flooding.
- Different properties individually – no two properties, settings or flood risks are the same and different users will have different needs.
- Following specific guidance on addressing flood damage to a historic building and take advice where required.
- The use of temporary flood barriers throughout the duration of a flood event.

Proposals should avoid...

- Permanent barriers that have a visual and material impact on the Outstanding Universal Value of the IGWHS will be discouraged.

4.5 Alterations, Extensions and Refurbishment

9.107 The alterations, extensions and refurbishments that take place on existing buildings within the boundary of IGWHS can over time have a significant cumulative impact on the character and appearance of the area and its Outstanding Universal Value. If these are designed in a sympathetic way, reflecting the intactness and authenticity of the building, then the works will support and strengthen the Outstanding Universal Value of the IGWHS rather than damage it incrementally.

9 Guidance for Development in the IGWHS

9.108 Telford & Wrekin Council commissioned a detailed Conservation Area Management Plan in 2016 which lays out in detail advice regarding alterations, extensions and refurbishments to existing historic built structures within their administrative area. This guidance should be read in conjunction with the Conservation Area Management Plan which also applies to the Telford & Wrekin administrative area.

9.109 The built environment that makes up the IGWHS includes the six key character areas:

- **Coalbrookdale;**
- **Ironbridge;**
- **Coalford;**
- **Jackfield;**
- **Coalport; and**
- **Madeley.**

9.110 Each of these key areas have their own unique historical development with a variety of building types and materials, differing from one to the next.

9.111 When proposing alterations, extensions and refurbishment it is important to follow a general set of principles that are applicable throughout the IGWHS as a whole and are set out below. These rules are intended to protect the Outstanding Universal Value of the IGWHS and have been categorised by type of works in the sections below.

Extensions and Outbuildings

9.112 Extensions and new outbuildings - including garages, sheds, home offices, bin stores etc - should be carefully located where they would not impact on the Outstanding Universal Value of the IGWHS and should be subordinate in scale to the principal buildings and not disrupt the historic street scene. Usually this means siting new work to the rear of a property. New outbuildings to the fore of a historic building, or as a front extension, will disrupt the authentic historic character of the area and host building and will usually be strongly resisted. Due to the nature of the Gorge, additional care may need to be taken to site and design outbuildings to the rear or side of a building where this could still be a prominent location within the street scene.

9.113 New work should be consistent in terms of form and scale with the historic context. Height, width and depth of floor plan and roof forms should be carefully considered, and the shape and size of window and door openings reflect historic precedents.

Walling Materials

9.114 The local material palette should also be maintained, which consists of a wide variety of brick types, and some buff-coloured sandstone. The type, colour and texture should be appropriate to the specific character area. Consideration should be given to the brick bond or coursing of stonework to fit in with the local environment. Developments should avoid the use of overtly modern or inappropriate materials, such as imported non-local stone, render, concrete, timber or other modern cladding materials as this would negatively impact the character and appearance of the area and the Outstanding Universal Value. Due to the nature of the Gorge, additional care may be needed to be taken to site and design outbuildings to the rear or side of a building where this could be a prominent location within the street scene.

9 Guidance for Development in the IGWHS

9.115 Existing historic elevations and walls should be retained and repaired with any eroded or damaged masonry made up to match. Point new and re-point existing brickwork where required with lime mortar and ensure that the type of pointing reflects the original, e.g., flush or recessed pointing, the grain, texture and colour, and the width of joints.

Figure 24: The fine lime pointed joints of ashlar stonework should not be removed. Repointing in hard cementitious mortar is both damaging to the visual character and causes harm to historic fabric

Roof Works

9.116 Roof forms, whether new roofs or alterations to existing roofs, should sit within the existing roof scape of the building, be subordinate in scale to the original building, and reflect the host building's roof pitch, enhancing the grain of the surrounding roof scape. Tile materials, dimensions, textures and colours should all be consistent with those of the host building, and not introduce new materials or designs that could negatively impact the surrounding area and the Outstanding Universal Value of the IGWHS. Interlocking concrete and artificial slate is not suitable on historic buildings or on new buildings within the IGWHS, and modern flat roofing systems should only be used in locations where there is no public visibility or impact on the special historic or architectural interest of a listed building.

9.117 Thought should be given to the finer detail such as ridge tiles, roof verges and eaves, to be consistent with the host building or local street scene. Bargeboards and fascia boards are rare within the historic street scene of the IGWHS and should only be used where there is a clear historic precedent.

9.118 Where re-roofing or repairing an historic property, the materials will be expected to reproduce the historic character. Every effort should be made to salvage the existing tiles for re-use, particularly where it may be difficult to source replacement decorative tiles such as fish-scale, ridge or polychromatic tiles.

9.119 Where a historic property has previously been re-roofed in a non-historic material, such as concrete tiles or modern pantiles, reinstatement of the traditional historic materials will be supported.

9.120 Dormer windows should only be introduced where there is a historic precedent for their use, and then they should accurately reproduce historic detail.

9 Guidance for Development in the IGWHS

9.121 Roof lights can interrupt the uninterrupted tiled roof scape that is so characteristic of the IGWHS. The use of roof lights will therefore be resisted unless it can be justified and is in a discrete unobtrusive location. Where this is the case, flush-type 'conservation' roof lights of metal construction should be used, with glazing bars appropriate for larger openings.

Porches

9.122 It will not always be appropriate to introduce a porch to the historic frontage of a building where it would harm the design of the original or incorporate them into new designs where there is no precedent in the local street scene. Where appropriate, care should be taken to reference the status, period and style of the building. Shallow pitches, sheet materials or felt coverings are not typical to the area.

Figure 25: Historic front doors often have simple door-cases or canopies, but some examples of ornate carved Victorian porches can be found. New porches should generally be confined to simple canopies drawing on the historic.

9 Guidance for Development in the IGWHS

Rainwater Goods

9.123 Existing lead and cast-iron rainwater goods including hoppers, should be retained and gutters fixed using traditional gutter brackets. If the original is unusable, then matching rainwater goods should be used and new brackets forged to match.

9.124 Cast iron or cast aluminium (with hammered paint finish) should be used for new rainwater goods and external plumbing.

9.125 When painting rainwater goods an appropriate recessive colour should be used, unless lead downpipes are being used.

Chimneys

9.126 Chimney stacks are a key feature of the historic roof scape. Removal of existing historic chimney stacks and/or chimney pots will usually be resisted, particularly where they are visible from the public realm, or are of significance to a listed building. Incorporating traditionally detailed brick chimneys into new schemes should be considered, this has been achieved successfully in recent residential schemes, such as at Reynolds Wharf, Coalport.

9.127 Pastiche or fake dummy chimneys made of inappropriate materials will be discouraged.

Painting and rendering

9.128 Historic finishes should be retained and maintained. Painting previously unpainted surfaces such as brick elevations will not be supported. Similarly, rendering of previously un-rendered walls will also not be supported. Where unsympathetic painting or rendering of historically exposed masonry has been carried out, reversal will be encouraged. However, any proposed removal of existing paint decoration from masonry must be carefully considered, tested and carried out by a specialist experienced in conservation work. Failure to do this could result in serious damage to the brick or stone surface if the wrong method of paint removal is used.

9.129 Appropriate traditional colours are recommended for re-decorating existing painted surfaces for joinery including doors and windows, it is important to note that untreated or stained timber was very rarely used historically. Paint was used as a protective treatment throughout the 18th to 19th centuries when the majority of the buildings in the IGWHS date from.

Colour Palette

9.130 It is important to use appropriate paint colours for external joinery, ironwork, and renders. The use of certain modern colours can have a significantly harmful impact on the overall character of views and street scenes, and affect the authenticity of the IGWHS.

9.131 Where historic features survive it is best to choose colours appropriate to their age, and in all circumstances avoid modern bright colours, including bright whites which have no historic precedents. Buildings within the IGWHS mainly date from the Georgian through to the Edwardian eras. Considerations for external painting in the IGWHS are as follows:

- In the Georgian era windows and doors were mainly painted in dark green, off-white or dark brown. Some higher status buildings had doors painted in dark reds or blues.

9 Guidance for Development in the IGWHS

- In the later Victorian and Edwardian eras there was an increase in the production of commercially available paints and changing technologies made a wider range of colours available. But chocolate brown and olive green remained popular for both doors and windows, whilst dark red and dark blues became more widespread for doors.
- Bright white did not become available until the mid-20th century.
- Even on one building there would have been a hierarchy of colours. For example, outbuildings and secondary doors would have kept to the darker hard-wearing colours.
- Historic rendered elevations were often designed to replicate stone and were not necessarily painted. Where painted, the colour was a yellow-brown colour to imitate stone. So darker stone shades are more appropriate than whites or creams.
- Window and door lintels and sills were also not designed to be painted but left as exposed stone or brickwork.
- Iron railings and gates were painted in blue, green or lead grey in the Georgian period, and green, dark blue, red and chocolate brown in the Victorian period. Black became standard only from the early 20th century.
- Shopfronts within the IGWHS mainly date from the later Victorian era using mainly restrained darker shades: burgundy red, black, brown from dark rust to chocolate, greens from a yew tree green to olive and dark blue. The fascia would have a more diverse colour pattern, but the selection of colours would still reflect the main shopfront colour. Gilding was used as a highlight and fascia signs were either gilded or hand painted.
- Colours used for internal schemes of decoration differed from those used on the exterior of buildings.
- Stained wood was rarely used for external joinery, which had painted finishes as a protection against rot.
- True gloss paint, as we know it, did not arrive until the Edwardian period so it is more authentic to use satin or eggshell finishes.
- Industrial buildings kept to cheap hard-wearing colours, ranging from dark to mid brown and black.

Windows and Doors

9.132 The proportions, detailing, materials and finishes of doors and windows make an important contribution to the character and authenticity of individual buildings and the contribution they make to the wider street scene and Outstanding Universal Value of the IGWHS.

9.133 A wide range of historic window and door joinery survives within the IGWHS, varying according to the status of a building and its age, as well as the character area. There are examples of casement windows, with the 'ladder' style particularly distinctive of the area, sash windows particularly in higher status dwellings, and cast-iron window frames, often in more industrial buildings. (These are discussed in detail in the Severn Gorge Conservation Area Appraisal and Management Plan).

9 Guidance for Development in the IGWHS

Figure 26: Historic windows in the IGWHS should be retained and used to guide the design and materials of new: vertical sliding sashes, cast iron window, ladder style casement

9.134 Proposals relating to doors, door cases and windows should consider:

- Original timber doors and windows should be repaired and retained where possible with exact timber replacements where appropriate;
- Cast iron windows should be repaired and retained;
- Historic glass in existing single-glazed windows should be retained;
- When considering upgrading the thermal value of an existing window this should be carried out by draught stripping and/or secondary glazing (subject to suitability);
- Where windows have been replaced inappropriately and are due for replacement the subsequent window should look to revert back to the original intended design, materials and finish;
- Double glazing may be supported where there is no loss of significant historic joinery and there is an enhancement to the overall character of the area, but these will be expected to closely replicate historic designs;
- Fixing glass should be carried out with a simple traditional pitted struck bed. Timber beading should be avoided as this is not a traditional detail;
- Enlargement of window openings or creation of new, particularly on front elevations, will likely be resisted;
- In new work extensions and new builds, solid to window ratios should be maintained so that the new will blend in with the old;
- Door and window styles and materials should reflect the architectural character or age of the host building for old and new buildings;
- Inauthentic materials such as upvc, composite or aluminium will be resisted;
- Applied glazing bars or glazing bars set within double glazing will be resisted in existing and new buildings, and the section/profile of the historic frames and glazing bars should be closely reproduced;
- Fanlights and patterned glazing within doors are not appropriate and will be resisted in existing and new buildings; and
- The use of stained timber should be avoided in favour of traditional painted finishes in existing and new buildings.

9 Guidance for Development in the IGWHS

Boundaries and walls

9.135 The character of boundaries throughout the IGWHS makes a significant contribution to its character and Outstanding Universal Value. Particularly adjacent to streets and lanes and in front of buildings, they are to the fore of key views and provide the most immediate impact on the street scene.

9.136 Due to the nature of the gorge, retaining walls in brick and stone are prominent features in the landscape and combine with brick boundary walls and the narrow lanes to create distinctive street views. Locally produced ironwork adds particularly important detail, reflecting the local industries of the IGWHS as well as historic architectural fashions.

9.137 When considering proposals for boundaries it is important to consider:

- Existing historic boundary treatments should be retained and repaired with matching materials. Salvage and re-use existing materials as far as possible. Broken cast iron, for example, can be repaired and damaged items should not be automatically replaced.
- Maintain use of painted ironwork for railings, whilst avoiding the use of overtly modern or inappropriate boundary treatments i.e., timber fencing etc.
- Post and rail fencing with hedges may be appropriate on the more rural edges of the IGWHS, but close-boarded fencing will not be supported.
- Scale and design of boundary treatment should be appropriate to the surrounding area and use of the site.

9 Guidance for Development in the IGWHS

Figure 27: Traditional boundary treatments in stone and brick, sometimes with iron rails and gates, are key characteristics in the street scene

Hard Surfaces

9.138 Road surfaces, courtyards, paths, parking areas and other hard surfaces all contribute to the overall character of the IGWHS. The loss of surviving historic paving or use of inappropriate materials can have a serious impact on the authenticity and integrity of the IGWHS.

9.139 When considering proposals for boundaries it is important to consider:

- Retaining and repairing any historic brick pavers, garden paths or steps or stone flags where these are of significance to the Outstanding Universal Value of the IGWHS.
- For new work, reproduce historic detail appropriate to the location and character area of the IGWHS.
- Avoid large expanses of hard surfacing to the fore of properties where gardens and historic boundaries are of significance to the Outstanding Universal Value of the IGWHS.
- Avoid use of concrete or tarmac surfacing.
- Drives and parking areas should use informal surfaces such as gravel or bound gravel, or historically derived brick pavers.
- Use materials and colours that are appropriate to the historic environment, e.g., avoid 'Cotswold gravel' or granite setts where there is no historic precedent.

9 Guidance for Development in the IGWHS

- Avoid painted road markings, e.g., for parking bays and demarcate with alternative brick treatments.
- Avoid signage, but, if necessary, consider design and location.

Figure 28: Use of sandstone setts, stone flags and brick pavers for new hard surfaces

Figure 29: Bound gravel paths and post and rail fencing preserve the more rural character of areas such as Coalport

Commercial Properties

9.140 Generally, the principles set out above apply equally to properties in retail or commercial use as to domestic properties.

9.141 Telford & Wrekin Council also has a guide detailing the principles of design for old and new shopfronts within conservation areas which should be used for proposals in the IGWHS:

- https://www.telford.gov.uk/downloads/file/1429/shop_fronts_and_signage_design_guidance_in_conservation_areas

9 Guidance for Development in the IGWHS

Alterations, Extensions and Refurbishments – Key Guidance Points

In summary of the guidance set out within the section, the following broad principles should be followed for alterations, extensions and refurbishments.

Proposals should consider...

- Retain and repair all historic fabric where possible.
- Make alterations to historic buildings only if they are in sympathy with the host building, replicating its architectural style and materials.
- Use appropriate traditional materials, including lime mortar for pointing masonry.
- Avoid alterations to front elevations unless restoring lost historic detail.
- Installation of roof lights may be acceptable where not generally visible and where using conservation flush fitting types.
- Consider the detail of roofs, walls, window and door surrounds and chimneys, not just the materials.
- Carry out boundary treatments using traditional materials including cast iron railings, brick and stone walls or post and rail fences.
- Build garages, outbuildings and garden structures reflecting the character of the host building i.e., brick walling with a pitched tiled roof.
- Site outbuildings or extensions to the rear or in discreet locations.
- Any extension should be subservient to the original building and the design should not compete with either the host or adjacent buildings.
- Use windows, doors, dormers and boundary treatments that reflect the host buildings original design and materials, as well as the location's predominant styles.
- Use of historically appropriate paint colours and avoidance of non-historic surface treatments.

Proposals should avoid...

- Using upvc, composite or aluminium windows and doors or upvc rainwater goods, as they should instead utilise traditional and sympathetic materials.
- Using roof lights on elevations that can be viewed.
- Using double glazing where original windows exist as this will likely be resisted as it can lead to the loss of historic fabric. Secondary glazing would be preferred.
- Using Interlocking concrete, artificial slate or other modern materials for replacement roofs.
- Using flat roofs for garages, outbuildings and garden structures, unless the building is well hidden.
- Creating areas of hardstanding that dominate the site and propose unsuitable materials or result in the loss of original boundary features.

Discussion with a specialist conservation officer should always be sought prior to any works taking place through the appropriate pre-application enquiry route.

9 Guidance for Development in the IGWHS

4.6 Redundant Buildings, Change of Use and Buildings at Risk

9.142 It is important to stop the accumulation of redundant buildings within the IGWHS. To reduce the risk to the IGWHS Outstanding Universal Value it is important that a viable economic community is supported to ensure that the local population can afford to remain within the IGWHS. A redundant building is at considerable risk of rapid deterioration through decay and vandalism, it is also a visible sign of neglect and decline.

9.143 Vacancy and the uncertainty of future uses threaten the Outstanding Universal Value of the IGWHS. Potential problems do not just relate to those buildings that are no longer in use now but to the significance of the IGWHS as a whole.

9.144 Over the centuries the IGWHS has seen incredible changes from the beginning of the industrial revolution to the post-industrial revolution. This has left many industrial buildings without the original use they were designed for. The production of goods has reduced over the years and the local economy is now much more directed to services, leisure and tourism, with just a small but significant remnant engaged in production.

9.145 Key industrial buildings and sites such as the Darby Furnace, Iron Bridge, Bedlam Furnace, Coalport China Works, Coalbrookdale Iron Works and Craven Dunnill tile works at Jackfield have been adopted by the Ironbridge Gorge Museum Trust or English Heritage and the guardianship, care and protection of these are generally well managed.

9.146 Buildings which are more susceptible to vacancy include places of worship, institutions, schools, large residential properties and commercial buildings.

9.147 These larger scale properties can often remain redundant for very long periods owing to difficulties in finding a use that is appropriate for the historic property and at the same time viable.

9 Guidance for Development in the IGWHS

Figure 30: Redundant Buildings

9.148 Any applications being made for conversion of buildings or redevelopment of sites must have a detailed Heritage Statement and Heritage Impact Assessment appropriate to the significance of the site and should provide a robust justification for the degree of alteration or development. It will be generally expected that there will be no net harm on heritage significances, balancing the benefits of bringing a building or site back into use with identified impacts on all relevant heritage assets, including the IGWHS.

9.149 The sub-division of plots can have a dramatic effect on the character and appearance of designated and non-designated heritage and the Outstanding Universal Value of the IGWHS and will not be supported if the significance of a Heritage Asset or the Outstanding Universal Value of the IGWHS is damaged by the proposals.

9 Guidance for Development in the IGWHS

Redundant buildings, Buildings at Risk, Change of Use – Key Guidance Points

As a general guide, for buildings of any scale or significance proposals should consider:

Proposals should consider...

- Principal structural walls should be retained and repaired with appropriate materials.
- Principal roof trusses and framing elements should be retained and similarly repaired.
- Original roof coverings should be retained (or, in the case of sheet materials replaced with an appropriate alternative, perhaps offering higher insulation standards).
- Original architectural features, fixtures and fittings should be retained.
- Original glazing opening patterns and lights should be retained and repaired where possible.
- Where possible (and consistent with a changed use) material evidence of the buildings original use should be kept – be it industrial, agricultural, civic, or religious.
- There must be a net gain for biodiversity and habitats will not be damaged by conversion or redevelopment of a site.

Proposals should avoid...

- Alterations to the external appearance of the building.
- The introduction of new doors or windows, including roof lights.
- Harmful subdivision of buildings or curtilages.
- Insensitive signage inappropriate to the historic use of the building.

4.7 Museums, Monuments and the Visitor Economy

9.150 Much of the industrial heritage within IGWHS is held by the Museum Trust and it is essential that Telford & Wrekin and Shropshire Councils work closely, through the IGWHS coordinator's role, to help facilitate the maintenance and repair of the existing building stock and to assist and encourage a formal maintenance regime that will encourage volunteering and trade craft learning within the IGWHS.

9.151 Monuments found within the IGWHS are numerous and are now covered within the NPPF chapter 16 which instructs Local Planning Authorities to be less favourable in regards proposals that do not protect and retain monuments set within designated heritage assets.

9.152 It is essential that encouragement is given for conservation management plans to be drawn up for all monuments within the IGWHS and that regular surveys setting out planned maintenance programmes are developed and carried out by major building holders. Maintenance of the civic, religious and former industrial buildings is important to protect the fabric of the Outstanding Universal Value of the IGWHS and to set an example for other property owners within the IGWHS.

9.153 The visitor and service economy are vital to maintaining the viability of the communities within the IGWHS and will allow sufficient income to be generated, to be reinvested in the Outstanding Universal Value of the IGWHS.

9 Guidance for Development in the IGWHS

9.154 As the Gorge is such a complex site to manage, the more well-designed statistical analysis of visitor and residential populations that can be undertaken the better. This would help inform and gain a greater understanding of the dynamics of the population and would be beneficial in balancing the residents' requirements with those of the visitors. Monitoring the demographics of the area, number of residents, householders or rentals etc. could provide useful markers.

9.155 The need to achieve a balance between essential services and community facilities for residents (school, pubs, food shopping, financial and other services, local health facilities, places of worship, community halls etc.) and the provision of tourist-oriented services (cafes, restaurants, gift shops, accommodation etc.) remains an on-going challenge.

Museums, Monuments and Visitor Economy – Key Guidance Points

Proposals should consider...

- Having an up-to-date Conservation Management Plans for all key monuments.
- Making sure that regular condition surveys and planned maintenance programmes are in place.
- That tourist accommodation proposals will be supported where no damage to the Outstanding Universal Value of the IGWHS will take place.
- That retention of local services will be encouraged, and any loss will need to be fully justified.
- That proposals that provide further tourist experience within the IGWHS and allows further understanding of the Outstanding Universal Value of the IGWHS will be considered on merit.

9.5 Guidance for the Maintenance and Development of Infrastructure

9.156 Infrastructure refers to the basic physical systems of a business, region or nation. These systems tend to be capital intensive and high-cost investments that are vital to economic development and societal prosperity. For the IGWHS the main aim is to develop sustainable, resilient and inclusive infrastructure ranging from access to highways, maintaining economic prosperity in businesses, improving and maintaining the Green Network and protecting and enhancing neighbourhoods from the effects of climate change.

9.157 Protecting the existing historic building stock within the IGWHS and building in resilience into infrastructure is critical to combat the negative impacts on the environment of the IGWHS.

9.158 Climate resilience will become a priority over the coming years, with the likelihood of regular extreme weather increasing. The need to push for sustainable development and to protect and enhance our natural and built environment will become ever more interconnected.

9.159 Climate change will impact the buildings, flora and fauna and land stability within the IGWHS. It is critical to plan for this so that mitigation and adaption are built into new development and infrastructure.

9 Guidance for Development in the IGWHS

9.160 New infrastructure developments will need to be designed to accommodate prolonged and heavy rain and long periods of drought. Maintaining businesses within the IGWHS and allowing them to prosper during extreme weather events is vital. Large gutter profiles, bigger hoppers and additional downpipes on rainwater goods, grey water recycling and storage facilities should be considered. Hard landscaping must be designed to allow for permeability of rainwater to reduce run-off.

9.161 Protecting the Green Network should remain fundamental to maintaining the identity of the IGWHS which is valued by its local communities. In addition, highways should be properly maintained with potential improvements being carefully thought out so as not to compromise movement.

9.162 There is an opportunity through the provision of new infrastructure, to secure the future economic viability of the IGWHS. Carefully thought-out projects which improve businesses, enhance the Green Network, develop climate resilience in historic buildings or streamline movement, should all look to sustain and improve the future of the IGWHS whilst continuing to protect its Outstanding Universal Value.

Infrastructure Development Proposals - Key Guidance Points

Proposals should consider...

- All new development proposals are required to show how climate resilience is built into the design reflecting the Outstanding Universal Value of the IGWHS and the immediate surroundings of the proposal.
- New infrastructure development must also be able to show that the proposals have taken into account the Outstanding Universal Value of the IGWHS, and the design reflects the immediate surroundings of the development both in appearance and materials.
- Infrastructure proposals affecting the historic built environment need to show through a thorough Heritage Impact Assessment how the proposals have built in climate resilience and that the design will enhance the heritage context.
- Hard landscaping must be constructed providing sufficient permeability to restrict water runoff.

Waterways and Pools

9.163 The waterways, both manmade and natural, within the Gorge will play a significant role in how climate change will impact the communities and the Outstanding Universal Value of the IGWHS.

9.164 All mitigation planned to assist with climate change must take into account the Outstanding Universal Value of the IGWHS and be designed to fit in with the immediate surroundings.

9.165 The Environment Agency are responsible for drawing up climate resilience plans for the River Severn within the IGWHS.

9 Guidance for Development in the IGWHS

9.166 Along with engineering solutions, flood risk in the IGWHS should be an important design consideration and design should be in line with any Sustainable Drainage Developer Guidance documents and the relevant Local Authorities (Telford & Wrekin Council or Shropshire Council) Local Flood Risk Management Strategy.

9.167 Designing ‘out’ flood disasters can, if care is not taken, result in designing ‘in’ intrusive elements, structures and massing of developments that have an impact on the historic grain of a place. Flood defence engineering requires extra vigilance when designing in the context of a WHS and the sensitivity of the area should be considered at the outset of the design process.

9.168 It will be necessary to take a co-ordinated approach to plans for flood mitigation with the local communities part of the decision-making process.

9.169 Telford & Wrekin Council manage pools in their ownership using silt-traps that have been installed, working with the Severn Gorge Countryside Trust and their Management Plan when necessary. Many pools are in private ownership and, like many of the pools in the Gorge, access to these can be difficult and many are not de-silted on a regular basis. In extreme cases, enforcement legislation is available to statutory bodies to rectify this maintenance issue although it is rare for this to be used.

Waterways and Pools – Key Guidance Points

Proposals should consider...

- All mitigations planned to assist with climate change must take into account the Outstanding Universal Value of the IGWHS and be designed to fit in with the immediate surroundings.
- Mitigation should reflect future sustainable drainage developer guidance and Telford & Wrekin’s and Shropshire’s Local Flood Risk Management Strategy.
- Both Telford & Wrekin and Shropshire Council will continue to develop a co-ordinated approach to engineering works.
- Encouragement will be given to private owners to manage their pools in a sustainable manner to facilitate maximum water capture.
- Telford & Wrekin and Shropshire Council will work where appropriate with the Severn Gorge Countryside Trust to manage the pools in their ownership.

Proposals should avoid...

- Engineering works which are obtrusive.
- Design should reflect the materials, scale and massing of the immediate surroundings.

Maintenance of Highways, Structures, Bridges and Public Realm

Highways

9.170 Highways are critical to economic and social performance and productivity, providing a key form of connectivity to our immediate surroundings and beyond. This is no less the case for the IGWHS and as such the highways within the IGWHS and its setting have the potential to impact on the Outstanding Universal Value of the IGWHS.

9 Guidance for Development in the IGWHS

9.171 Within the IGWHS there are well-defined linear routes to either side of the River Severn, and further steep principal routes rising up through Coalbrookdale along Dale Road and Wellington Road, towards Madeley along Legges Way. Otherwise, the historic settlement roads and lanes are tight, constricted and literally zigzag up the slopes of the gorge with narrow awkward junctions. Lanes can quickly become blocked and impassable during high levels of traffic. Some of the narrow lanes such as Belle Vue Road and St Luke's Road in Ironbridge and School Road and Woodside Road suffer from parking pressures and over-use. In Ironbridge where larger vehicles attempt access for delivery, this often causes damage to curtilage structures due to constricted routes. The hillside areas are subject to a Traffic Regulation Order.

9.172 The repair and maintenance of the highways within the IGWHS requires a multi-disciplinary and cross-Council team to manage the design of the highways so that the IGWHS Outstanding Universal Value is taken into account and materials are appropriate and relate to the area that the highway is located in.

9.173 Retaining walls constructed to stabilise the Gorge and that are visible from the public realm should be constructed using materials that relate to the Outstanding Universal Value of the IGWHS. The selection of the correct type and colour of bricks need to relate to the location's historic materials. The use of large exposed concrete retaining walls will be discouraged as they are out of keeping and do not weather into their surroundings, they should be clad in materials that harmonise with their historic surroundings.

Highways - Key Guidance Points

Proposals should consider...

- That Telford & Wrekin and Shropshire Council will continue to develop a co-ordinated approach and will involve other partners in regards highways improvements and works.
- That materials suitable to the local immediate surrounds should be used for all retaining walls and boundary treatments. Plastic and other materials not found within the built heritage should not be used within the IGWHS.

Structures and Bridges

9.174 The structures and bridges within the IGWHS are numerous, some are designated as protected in their own right and some are more modern. It is important that these are maintained in the most sympathetic manner using the correct method and materials to maintain the Outstanding Universal Value of the IGWHS.

9.175 The structures and bridges are within the ownership of various parties and a co-ordinated approach is central to the ability to protect the Outstanding Universal Value from being damaged by inappropriate maintenance or repair techniques.

Public Realm

9.176 The term 'public realm' can be defined and understood in different ways. For the purposes of this SPD, it is defined as all the highway and hard surfaced spaces within the IGWHS which are freely accessible by the public. This includes the streets, roads, footpaths and public spaces. It does not however, include the green open spaces and woodland.

9 Guidance for Development in the IGWHS

9.177 National Cycling Routes such as the Mercian Way which runs through Shropshire and subsequently the Ironbridge Gorge (National Cycling Routes 45 and 55), provide active travel routes both south of the River Severn and up north through Madeley onto Telford. Routes such as these are integral to providing alternate methods of travel within the gorge. Additionally, the extensive range of footpaths and bridleways in the gorge offer further opportunities for active travel in the gorge.

9.178 This tied in with a mixture of commercial activity, high levels of traffic, tourism hubs, and light industry, results in a wide range of different features that are often utilised tie the IGWHS together. Street furniture, railings, pavement surface treatments, signage and service infrastructure are integral to the enjoyment of the public realm and without proper direction can end in an inappropriate mixture of different styles.

9.179 The use of sympathetic pavement surface treatments within the IGWHS is extremely important as it links the built heritage together and sets the buildings within the landscape. It is therefore important that materials used are of quality and natural for the immediate surroundings. For example, the use of manmade materials like plastic is not appropriate within the IGWHS.

9.180 Close boarded fencing would not be appropriate to be used as a boundary treatment within the public realm of the IGWHS. Cast iron or wrought iron railings or brick walls in the appropriate size, colour and laid in the correct bonding pattern should be used.

9.181 Public realm signage is integral to the general understanding of the IGWHS, by their nature signage is intended to grab the attention of visitors through either directing, informing or warnings. These should therefore be appropriately placed and should also look to remain consistent with the historic signage that is already set within the IGWHS as well as not becoming overbearing or rising significantly in numbers.

9.182 In some parts of the gorge there is a more rural character where timber fences, simple park railings and agricultural features are more prevalent. Greater concern with public safety means that there are more railings today than in the past, protecting drops and water courses.

9.183 Utilities work is often necessary in the gorge and affects the public realm. Most of this work is not controlled through Planning Permission but has the potential to impact upon Outstanding Universal Value of the IGWHS. It is expected that utilities providers will employ good design principles and select appropriate materials for 'making good' pavements, road surfacing and kerb stones following any necessary works. Both Telford & Wrekin Council and Shropshire Council work closely with utilities provers locally on this issue.

9 Guidance for Development in the IGWHS

Public Realm - Key Guidance Points

Proposals should consider...

- Developing multi-disciplinary Local Authority working groups to coordinate highway improvements, utilities work, major infrastructure, flood and river management, public transport etc.
- The coordination of physical works that do not require planning permission or impact on traffic but is within the control of Telford and Wrekin Council / Shropshire Council and other major stakeholders, should be carried out in a compatible manner.
- Producing best practice guidance for the Conservation Area including utilities installations, upgrades, repairs and road works. Work with the major local utility companies to encourage a partnership approach.
- That materials used within the IGWHS should be related to the historic built heritage and that modern manmade products should not be used.
- That boundary treatments and retaining walls should reflect the historic treatments found in the immediate surroundings.

Proposals should avoid...

- A proliferation of public realm signage, this should be kept to the minimum and the historic signage should be retained.

9.6 Guidance for Development Affecting the Setting of the IGWHS

9.184 The setting of the IGWHS is an important consideration in the context of its Outstanding Universal Value. Care must be taken when designing developments at the entrances or immediately adjacent to the boundary of the IGWHS, or in more distant locations that could nevertheless impact upon its setting. Poor quality development within the setting of the IGWHS can be harmful to its Outstanding Universal Value. The following guidance provides an overview of the considerations when proposing development within the setting of the IGWHS.

9.185 For potential development sites in the setting of the IGWHS, early and appropriate consideration of the site's context should be undertaken (including the significance of the proposed development site and its contribution to the setting and Outstanding Universal Value of the IGWHS) to help to inform the development of appropriate proposals. Both Telford & Wrekin Council and Shropshire Council offer pre-application services that may be of benefit in this process.

9.186 Proposals in these locations should represent and achieve high-quality design which reflects and respects:

- Heritage assets on the site itself.
- Heritage assets within the wider area (including the IGWHS).
- If appropriate, the design, layout, scale, materials and massing of development that may have occurred on the site itself in the past.
- The design, layout, scale, materials and massing of nearby buildings and built form - including that within the IGWHS*.

9 Guidance for Development in the IGWHS

9.187 *Due to the scale and diverse characteristics of the IGWHS and its setting, the manner in which development proposals within different parts of the setting can impact on the Outstanding Universal Value of the IGWHS and as such the actions needed are varied. The design, layout, scale, materials and massing influences will also inevitably vary from one part of the setting to another. The advice in Sections 3 and 4 of this chapter provides useful guidance and aids understanding in respect of the form, density, height, materials and detailing within the IGWHS and should be appropriately taken into consideration.

9.188 Particular emphasis must be placed on the quality of place making, applying high-quality design of both built form and landscaping, and ensuring the selection of appropriate good quality and sustainable materials. In general, given the scale and forms of buildings within the IGWHS and its organic evolution, buildings of atypically large or bulky mass will not be supported, or repetitive uniform layouts. Larger developments will be expected to be broken down and provide variety in layout, heights and designs, whether of individual detached buildings, or single buildings of larger mass.

9.189 Because of the international importance of the IGWHS the use of standard materials may not be appropriate even outside its boundary, and Design and Access Statements and Heritage Statements / Heritage Impact Assessments will need to demonstrate a robust argument to support proposals that depart from the usual approach. Modern architectural designs that diverge from the established traditions of the IGWHS may be considered for 'landmark' buildings but will still need to demonstrate a harmony and legible relationship to the historic environment and employ the highest standards of design and materials compatible with the international importance of the IGWHS.

9.190 No two sites are the same and the contribution that potential development sites make to the Outstanding Universal Value of the IGWHS will inevitably vary. This will need to be carefully analysed and set out in any Heritage Impact Assessment or Heritage Statement for a potential development site, to support a Planning Application. In particular, it is advised that the methodology for assessing the contribution a development site makes to settings, and thereby the significance, of any heritage assets affected (including the Outstanding Universal Value of the IGWHS) set out within Historic England's 'Historic Environment Good Practice Advice in Planning: 3: The Setting of Heritage Assets (2nd Edition)' is followed in full.

9.191 Development along the skyline of the valley (north and south sides) where rooves or infrastructure could break the illusion of continuing woodland or interrupt the skyline should be subject to sensitive design and layout and if appropriate be supported by suitable mitigation - for instance through additional tree planting. Where an appropriate design and layout (supported by suitable mitigation) is not possible, such development will usually be discouraged.

9.192 The setting of IGWHS should be protected by preventing inappropriate development which causes additional intrusion into existing woodland zones or key areas of landscape quality.

9 Guidance for Development in the IGWHS

Development within the Setting of the IGWHS - Key Guidance Points

Proposals should consider...

- Undertaking an analysis of the heritage significance of the proposed development site and its contribution to the Outstanding Universal Value of the IGWHS prior to drawing up any proposals for the design and development of the site.
- Undertaking appropriate pre-application discussions with the relevant Local Authority (Telford and Wrekin Council or Shropshire Council) to inform proposals within the setting of the IGWHS.
- Reflecting and respecting the design, layout, scale, materials and massing of nearby buildings and built form, including that within the IGWHS itself.
- That the introduction of modern architectural styles will only be supported in appropriate locations where high-quality design is achieved, and where appropriate high-quality materials are utilised. Whenever possible this should also make the story or history of the IGWHS more accessible.
- Important views and landscape features that contribute to the setting of the IGWHS should be protected.
- Design and Access Statements and Heritage Statements / Heritage Impact Assessments will need to show an emphasis placed on the quality of place making through using the adjacent IGWHS principles, including those of urban design, landscaping and the selection of materials.

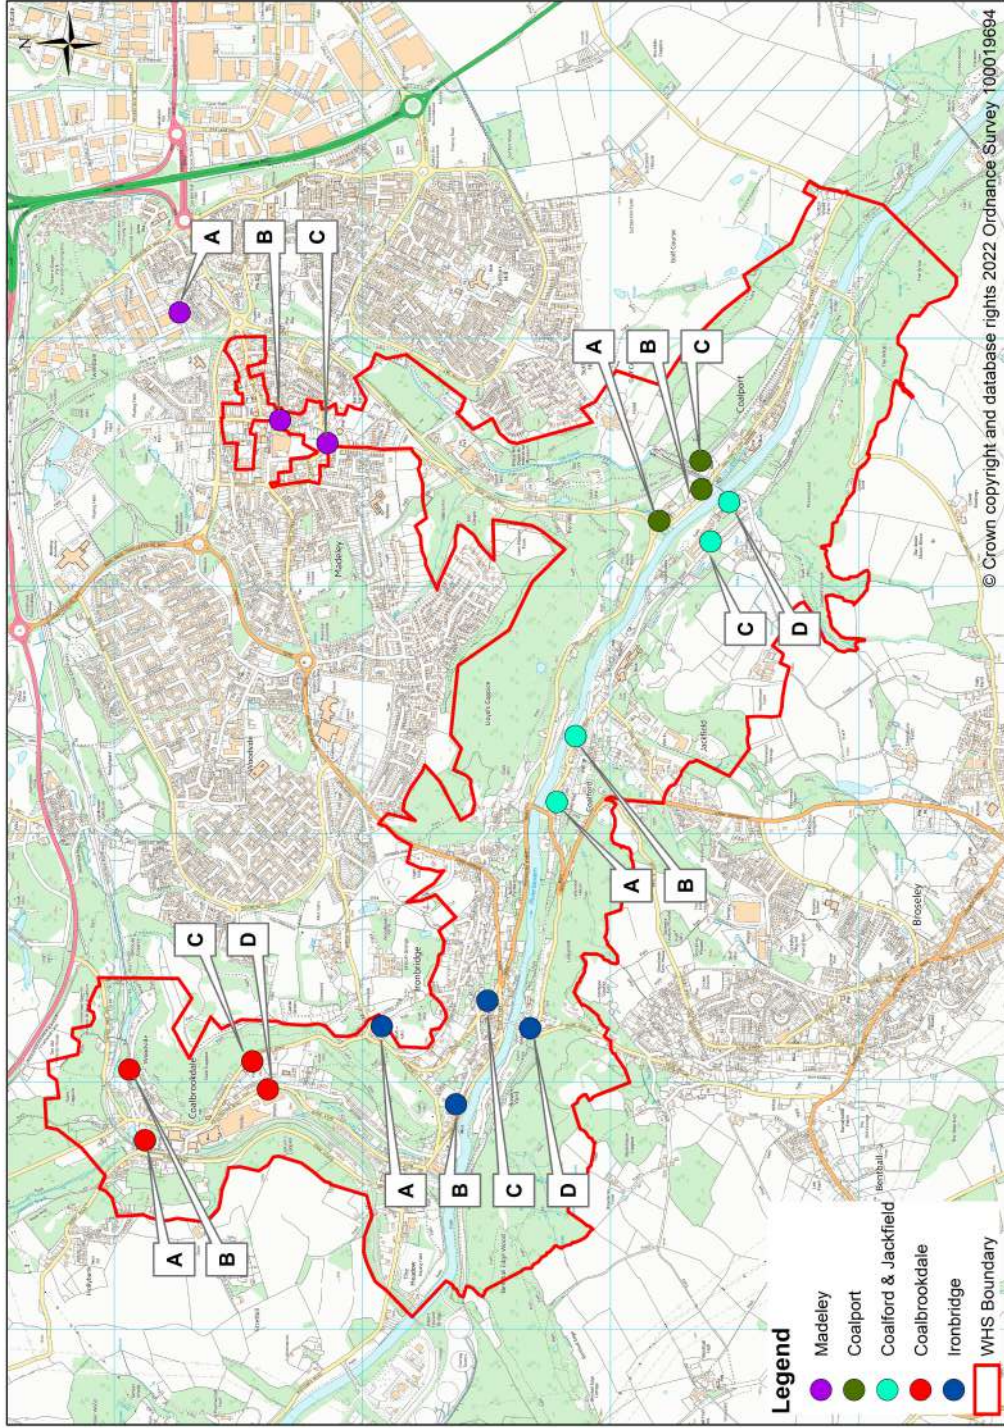

Proposals should avoid...

- Breaking the skyline or damaging the illusion of unbroken woodland.
- Adversely affecting key views into or out of the IGWHS.
- Overbearing structures or massing.

10 Annex 1 - Characteristic Views of Severn Gorge Settlements

10 Annex 1 - Characteristic Views of Severn Gorge Settlements

10 Annex 1 - Characteristic Views of Severn Gorge Settlements

10 Annex 1 - Characteristic Views of Severn Gorge Settlements

Legend

Ironbridge (Dark Blue)

- A. Expansive views. Views up to the steeply sided gorge
- B. Views along the river, alongside commercial area and towards the Iron Bridge
- C. Views down into the gorge
- D. Views up to the steeply sided gorge

Coalbrookdale (Red)

- A. Views to key structures highlighting industrial past – viaduct and Darby Houses
- B. Cross/through 'valley' views with wooded backdrop
- C. Dynamic views along the road, characterful roofscapes below, historic and existing industry
- D. Views up to parallel road above

Coalport (Green)

- A. Views of a flatter, more rural, leafy and less dense built environment
- B. View down canal to Coalport China Museum – highlighting industrial past
- C. Views capturing industrial past – Hay Inclined Plane and canal with narrow bridge

Coalford & Jackfield (Light Blue)

- A. Views showing difference in topography – lower lying land and informal vernacular
- B. Views across the river, isolated cottage and wooded backdrop
- C. View of more rugged, sparse and rural settlement
- D. Views across the river to Coalport with 'village like' built environment and open space

Madeley (Purple)

- A. Views up, along main High Street
- B. Connecting views from town centre to parish church
- C. Views to historic landmark buildings

Shropshire Council
Equality, Social Inclusion and Health Impact Assessment (ESHIA)
Initial Stage One Screening Record 2022-2023

A. Summary Sheet on Accountability and Actions

Name of proposed service change
Ironbridge Gorge World Heritage Site (WHS) –Supplementary Planning Document (SPD)

Name of lead officer carrying out the screening
Daniel Corden and Andy Wigley

Decision, review, and monitoring

Decision	Yes	No
Initial (stage one) ESHIA Only?	X	
Proceed to Full ESHIA or HIA (part two) Report?		X

If completion of an initial or Stage One assessment is an appropriate and proportionate action at this stage, please use the boxes above. If a Full or Stage Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.

Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality, social inclusion, and health considerations

Approval from Cabinet is being sought for Shropshire Council to adopt the Ironbridge Gorge World Heritage Site (WHS) Supplementary Planning Document (SPD) to provide guidance on application of Local Plan policies and form a material consideration in the planning application process.

It is anticipated that the equality impacts will be neutral to low positive across the nine Protected Characteristic groupings defined by the Equality Act 2010. There is potential for positive equality impact for the groupings of Age, Disability, Pregnancy and Maternity, and Sex, in terms of mental well-being opportunities arising for people in these groupings to feel safer on their journeys for education, work or leisure. This is particularly so for families with young children, wheelchair users, and older people who may consider themselves to be vulnerable and less likely to venture out without clear signage and lighting, and pavements that can be navigated safely by them and their carers.

An additional grouping for whom there may be positive impacts are people with less visible disabilities or conditions, including people with neurodiverse conditions, and for people with visual impairments. For example, a cluttered space can cause overstimulation for some people with autism, and many autistic people need space around them, which means that narrow passageways can cause stress. Additionally, sensitive use of appropriate lighting such as minimal use of

fluorescent lighting, as well as clear signage, will be anticipated to provide further benefits for people with neurodiverse conditions and for others including those with visual impairments.

Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations

The Ironbridge Gorge WHS SPD has been informed by a period of public consultation, which was undertaken in a way that is consistent with the requirements of Shropshire Council's Statement of Community Involvement. As such, it sought to engage all groups within our communities.

The public consultation ran for 6 weeks over the period from the 9th January 2023 and the 20th February 2023. A total of 26 responses were received from local residents, interested individuals, interest groups, organisations, and statutory bodies. These responses have been given due consideration in preparing the Ironbridge Gorge WHS SPD which is to be considered for adoption.

The intention is that the Ironbridge Gorge WHS SPD will provide guidance on application of Local Plan policies and form a material consideration in the planning application process.

Both the adopted Local Plan and the draft Shropshire Local Plan include a series of indicators that are utilised to monitor effects. It is considered that these indicators will assist with understanding the effects of the Ironbridge Gorge WHS SPD upon people in the nine Protected Characteristic groupings as defined by the Equality Act 2010, with additional recognition of the intersectionality between groupings and for people in a range of household circumstances, considered in our tenth grouping around social inclusion. This then includes people in rural households, people in low income households, and those that we may consider to be vulnerable.

The Council will draw upon the learning from pedestrianisation efforts in market towns in Shropshire, which are building upon Covid-19 measures that led to improved physical access around towns by people in Protected Characteristic groupings and those we may describe as vulnerable. The Council will also draw upon strategic policy around public transport infrastructure including Active Travel, and best alignment with economic growth strategy development and with implementation of cultural and leisure strategy actions. These strategies all very much include efforts to promote social inclusion and in so doing achieve equality of opportunity for people in Protected Characteristic groupings to safely access economic, leisure and cultural opportunities in market towns.

Associated ESHIAs

Draft Ironbridge Gorge WHS SPD ESIIA

Shropshire Local Plan Review ESIIAs

Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of any other considerations. This includes climate change considerations

Climate change

The Ironbridge Gorge WHS SPD seeks to promote sustainable development that conserves and enhances the Outstanding Universal Value (OUV) of the Ironbridge Gorge WHS (which include the woodlands and geological resources of the gorge).

The Ironbridge Gorge WHS SPD includes guidance on renewable energy, energy efficiency, and resilience and adaptation measures that seek to balance development with the need to reduce the impacts of climate change. It is therefore considered that the draft SPD and associated public consultation and stakeholder engagement is expected to have a positive outcome on the climate change impacts listed below:

- energy and fuel consumption (buildings and/or travel)
- renewable energy generation
- carbon offsetting or mitigation, and
- climate change adaptation.

Health and well being

From a health and well-being perspective, it is anticipated that the Ironbridge Gorge WHS SPD will encourage the submission of well-designed development and infrastructure schemes that protect the OUV of the WHS whilst also encouraging the use of public transport and active travel. This can be maximised through efforts to ensure that there are accessible routes within, to and around the WHS which will be perceived as safe by pedestrians and cyclists, e.g: sensitive use of appropriate lighting such as minimal use of fluorescent lighting, as well as clear signage, and that green infrastructure is maintained and enhanced whenever possible. There are additional positive impacts in terms of the recognised positive mental well-being that may accrue from employment, leisure, and cultural opportunities.

Economic and societal/wider community

The Ironbridge Gorge WHS is an internationally recognised area of OUV and is designated as a conservation area. UNESCO awarded the Ironbridge Gorge World Heritage Site status in 1986 in recognition of the areas record of innovation during the Industrial Revolution. The OUV of the area is captured in the many historical sites, landscape, setting of the gorge and the social history of the area.

The value of the Ironbridge Gorge WHS designation has helped the area maintain a strong visitor economy, promoted Shropshire as a place to visit, live, work, and invest and has helped secure investment into ground stabilisation works and conservation projects in the WHS area.

The Ironbridge Gorge WHS SPD will provide guidance and information to support the implementation of policies within the adopted Local Plan and in the future the draft Shropshire Local Plan.

The Ironbridge Gorge WHS SPD clarifies why conserving and enhancing the OUV is of such importance and it will form part of a suite of documents including the Local Plan (adopted and draft) and WHS Management Plan that set out how the area will be protected and managed.

As such it will help conserve and enhance the OUV of the Ironbridge Gorge WHS and support sustainable development within the WHS. It will also assist the Council in continuing to make the most effective use of its resources and support the efficient delivery of the development management process.

The WHS boundary extends into the Borough of Telford & Wrekin and therefore the SPD has been prepared jointly by Shropshire Council and Telford and Wrekin Council and will, subject to adoption, be used by both Local Planning Authorities' to help determine planning applications in their areas.

The Ironbridge Gorge WHS SPD has been informed by a period of public consultation, which was undertaken in a way that is consistent with the requirements of Shropshire Council's Statement of Community Involvement. As such, it sought to engage all groups within our communities.

The public consultation ran for 6 weeks over the period from the 9th January 2023 and the 20th February 2023. A total of 26 responses were received from local residents, interested individuals, interest groups, organisations, and statutory bodies. These responses have been given due consideration in preparing the Ironbridge Gorge WHS SPD which is to be considered for adoption.

The adoption and implementation of the Ironbridge Gorge WHS SPD will be met from existing resources and budgets.

B. Detailed Screening Assessment

Aims of the service change and description
<p>World Heritage Sites (WHS's) are internationally important heritage assets that receive the highest level of heritage protection in the planning process.</p> <p>The Ironbridge Gorge WHS was inscribed by UNESCO in 1986. It covers 550ha, of which 131ha (around 23%) falls within Shropshire Council's administrative area. The remainder is in Telford & Wrekin Council's administrative area. WHS status provides international recognition of the value of the area, this is encapsulated by its OUV.</p> <p>The Ironbridge Gorge WHS is also a Conservation Area (cross-boundary between Shropshire and Telford and Wrekin Council administrative areas) and enjoys additional protection under that designation. It also contains a significant number of other designated heritage assets - not least the Iron Bridge itself which is a Scheduled Monument.</p> <p>What is Outstanding Universal Value (OUV)?</p> <p><i>"Outstanding Universal Value means cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations of all humanity. As such, the permanent protection of this heritage is of the highest importance to the international community as a whole".</i></p> <p>The aim of the Ironbridge Gorge WHS SPD is to provide guidance and information to support the implementation of a policies in the adopted Local Plan and in the future the draft Shropshire Local Plan.</p> <p>It will provide residents, businesses, and other organisations with information on how relevant planning proposals within the WHS and its setting can conserve and enhance the OUV of the Ironbridge Gorge WHS when they are considering preparing a planning application. This includes planning applications relating to:</p> <ul style="list-style-type: none">• Alterations, extensions, and refurbishment of existing residential and commercial properties.• Change of use from one development type to another.• New residential and employment development proposals.• Applications relating to renewable energy.

The SPD sets out how the planning system will seek to fulfil the responsibilities and opportunities that arise from WHS status. The SPD will help:

- Protect the WHS;
- Conserve and enhance the significance of the WHS;
- Present and transmit to future generations the importance of the WHS;
- Encourage investment and development to secure a healthy economy and support regeneration.

Once adopted, the Ironbridge Gorge WHS SPD will be used by Shropshire Council when determining planning applications within the WHS and its setting within the Council's administrative area. Assuming it is also adopted by Telford and Wrekin Council, it will be used for the same purpose in their administrative area.

As such it will help conserve and enhance the OUV of the WHS, preventing loss through deterioration and disappearance of its heritage value.

There are also opportunities that guidance in the Ironbridge Gorge WHS SPD will help address including appropriate repair techniques, bringing redundant buildings back into use whilst retaining internal and external original features and the repair and reinstatement of historical features.

Intended audiences and target groups for the service change

The Ironbridge Gorge WHS SPD will provide residents, business and organisations that intend to submit planning applications with planning guidance. Users and stakeholders for the SPD will include: -

- Local residents;
- Businesses based within the WHS;
- Architects, developers and planners;
- Statutory Agencies;
- Town and Parish Councils;
- Unitary Authorities (Shropshire Council and Telford and Wrekin Council);
- World Heritage Site Steering Group.
- Local MPs
- Government Departments and Agencies

Once adopted, the Ironbridge Gorge WHS SPD will be used by Shropshire Council when determining planning applications within the WHS and its setting within the Council's administrative area. Assuming it is also adopted by Telford and Wrekin Council, it will be used for the same purpose in their administrative area.

Evidence used for screening of the service change

- Shropshire Council adopted Development Plan (consisting of the Core Strategy; Site Allocations and Management of Development (SAMDev) Plan; and any adopted formal Neighbourhood Plans).
- Economic Growth Strategy for Shropshire 2017–2021.
- Submission draft of the Shropshire Local Plan (Local Plan Review).
- Ironbridge Gorge World Heritage Site (IGWHS) Management Plan.

Specific consultation and engagement with intended audiences and target groups for the service change

The Ironbridge Gorge WHS SPD has been informed by a period of public consultation, which was undertaken in a way that is consistent with the requirements of Shropshire Council’s Statement of Community Involvement. As such, it sought to engage all groups within our communities.

The public consultation ran for 6 weeks over the period from the 9th January 2023 and the 20th February 2023. A total of 26 responses were received from local residents, interested individuals, interest groups, organisations, and statutory bodies. These responses have been given due consideration in preparing the Ironbridge Gorge WHS SPD which is to be considered for adoption.

The consultation material was made available on Shropshire Council’s website, Telford & Wrekin Council’s website and the Ironbridge Gorge World Heritage Site’s webpage. It was jointly promoted by both Local Planning Authorities.

The consultation process for the Ironbridge Gorge WHS SPD included:

- The use of social media channels and Council websites.
- Engagement with key stakeholder organisations such as ICOMOS UK, Historic England, the WHS Steering Group and relevant Town and Parish Councils.
- A series of public consultation drop-in events.

Initial equality impact assessment by grouping (Initial health impact assessment is included below)

Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Protected Characteristic groupings and other groupings in Shropshire	High negative impact Part Two ESIIA required	High positive impact Part One ESIIA required	Medium positive or negative impact Part One ESIIA required	Low positive, negative, or neutral impact (please specify) Part One ESIIA required
<u>Age</u> (please include children, young people, young people leaving care, people of working age, older people. Some people may belong to more than one group e.g., a child or young person for whom there are safeguarding concerns e.g., an older person with disability)			√Low positive	
<u>Disability</u> (please include mental health conditions and syndromes; hidden disabilities including autism and Crohn’s disease; physical and sensory disabilities or impairments; learning disabilities; Multiple Sclerosis; cancer; and HIV)			√ Low positive	
<u>Gender re-assignment</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)				√Neutral

Protected Characteristic groupings and other groupings in Shropshire	High negative impact <i>Part Two ESIIA required</i>	High positive impact <i>Part One ESIIA required</i>	Medium positive or negative impact <i>Part One ESIIA required</i>	Low positive, negative, or neutral impact (please specify) <i>Part One ESIIA required</i>
Marriage and Civil Partnership (please include associated aspects: caring responsibility, potential for bullying and harassment)				√Neutral
Pregnancy and Maternity (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			√Low positive	
Race (please include ethnicity, nationality, culture, language, Gypsy, Traveller)				√Neutral
Religion and belief (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Zoroastrianism, and any others)				√Neutral
Sex (this can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			√Low positive	
Sexual Orientation (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)				√Neutral
Other: Social Inclusion (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health inequalities; refugees and asylum seekers; rural communities; veterans and serving members of the armed forces and their families)			√Low positive	

Initial health and wellbeing impact assessment by category

Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.

Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing? For example, would it cause ill health, affecting social inclusion, independence and participation?				√Neutral

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
<p>Will the proposal <i>indirectly impact</i> an individual's ability to improve their own health and wellbeing?</p> <p>For example, will it affect their ability to be physically active, choose healthy food, reduce drinking and smoking?</p>				<p>√Positive (The SPD will promote the protection, conservation and enhancement of the OUV of the Ironbridge Gorge WHS, aiming to thereby create a well-cared for and healthy environment that helps people maintain active lifestyles and good mental health).</p>
<p>Will the policy have a <i>direct impact</i> on the community - social, economic and environmental living conditions that would impact health?</p> <p>For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation?</p>			<p>√Positive (The SPD will promote well-designed, sustainable development that seeks to conserve and enhancing the OUV of the Ironbridge Gorge WHS and its associated green spaces, cultural heritage and visitor attractions and the resultant economic benefits the WHS status brings).</p>	
<p>Will there be a likely change in <i>demand</i> for or access to health and social care services?</p> <p>For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services?</p>				<p>√Neutral</p>

Identification of likely impact of the service change in terms of other considerations including climate change and economic or societal impacts

The Ironbridge Gorge WHS SPD provides an opportunity to address climate change pressures within the WHS / conservation area. There are many listed buildings that have residential and business uses, improving the thermal and energy efficiency of buildings will help tackle climate change and reduce the running costs of such buildings thereby improving their long term sustainability. The Ironbridge Gorge WHS SPD would provide guidance on where appropriate measures can be put in place to address climate change in the WHS area.

Guidance Notes

1. Legal Context

It is a legal requirement for local authorities to assess the equality and human rights impact of changes proposed or made to services. It is up to us as an authority to decide what form our equality impact assessment may take. By way of illustration, some local authorities focus more overtly upon human rights; some include safeguarding. It is about what is considered to be needed in a local authority's area, in line with local factors such as demography and strategic objectives as well as with the national legislative imperatives.

Carrying out these impact assessments helps us as a public authority to ensure that, as far as possible, we are taking actions to meet the general equality duty placed on us by the Equality Act 2010, and to thus demonstrate that the three equality aims are integral to our decision making processes.

These are: eliminating discrimination, harassment and victimisation; advancing equality of opportunity; and fostering good relations.

These screening assessments for any proposed service change go to Cabinet as part of the committee report, or occasionally direct to Full Council, unless they are ones to do with Licensing, in which case they go to Strategic Licensing Committee.

Service areas would ordinarily carry out a screening assessment, or Stage One equality impact assessment. This enables energies to be focussed on review and monitoring and ongoing evidence collection about the positive or negative impacts of a service change upon groupings in the community, and for any adjustments to be considered and made accordingly.

These screening assessments are recommended to be undertaken at timely points in the development and implementation of the proposed service change.

For example, an ESHIA would be a recommended course of action before a consultation. This would draw upon the evidence available at that time, and identify the target audiences, and assess at that initial stage what the likely impact of the service change could be across the Protected Characteristic groupings and our tenth category of Social Inclusion. This ESHIA would set out intended actions to engage with the groupings, particularly those who are historically less likely to engage in public consultation eg young people, as otherwise we would not know their specific needs.

A second ESHIA would then be carried out after the consultation, to say what the feedback was, to set out changes proposed as a result of the feedback, and to say where responses were low and what the plans are to engage with groupings who did not really respond. This ESHIA would also draw more upon actions to review impacts in order to mitigate the negative and accentuate the positive. Examples of this approach include the Great Outdoors Strategy, and the Economic Growth Strategy 2017-2021

Meeting our Public Sector Equality Duty through carrying out these ESHIAs is very much about using them as an opportunity to demonstrate ongoing engagement

across groupings and to thus visibly show we are taking what is called due regard of the needs of people in protected characteristic groupings

If the screening indicates that there are likely to be significant negative impacts for groupings within the community, the service area would need to carry out a full report, or Stage Two assessment. This will enable more evidence to be collected that will help the service area to reach an informed opinion.

In practice, StageTwo or Full Screening Assessments have only been recommended twice since 2014, as the ongoing mitigation of negative equality impacts should serve to keep them below the threshold for triggering a Full Screening Assessment. The expectation is that Full Screening Assessments in regard to Health Impacts may occasionally need to be undertaken, but this would be very much the exception rather than the rule.

2. Council Wide and Service Area Policy and Practice on Equality, Social Inclusion and Health

This involves taking an equality and social inclusion approach in planning changes to services, policies, or procedures, including those that may be required by Government.

The decisions that you make when you are planning a service change need to be recorded, to demonstrate that you have thought about the possible equality impacts on communities and to show openness and transparency in your decision-making processes.

This is where Equality, Social Inclusion and Health Impact Assessments (ESHIA) come in. Where you carry out an ESHIA in your service area, this provides an opportunity to show:

- What evidence you have drawn upon to help you to recommend a strategy or policy or a course of action to Cabinet.
- What target groups and audiences you have worked with to date.
- What actions you will take in order to mitigate any likely negative impact upon a group or groupings, and enhance any positive effects for a group or groupings; and
- What actions you are planning to review the impact of your planned service change.

The formal template is there not only to help the service area but also to act as a stand-alone for a member of the public to read. The approach helps to identify whether or not any new or significant changes to services, including policies, procedures, functions, or projects, may have an adverse impact on a particular group of people, and whether the human rights of individuals may be affected.

This assessment encompasses consideration of social inclusion. Whilst not mandated by legislation, this is so that we are thinking as carefully and completely as possible about all Shropshire groups and communities, including people in rural areas and people or households that we may describe as vulnerable.

Examples could be households on low incomes or people for whom there are safeguarding concerns, as well as people in what are described as the nine 'protected characteristics' of groups of people in our population, e.g., Age. Another specific vulnerable grouping is veterans and serving members of the Armed Forces, who face particular challenges with regard to access to Health, to Education, and to Housing.

We demonstrate equal treatment to people who are in these groups and to people who are not, through having what is termed 'due regard' to their needs and views when developing and implementing policy and strategy and when commissioning, procuring, arranging, or delivering services.

When you are not carrying out an ESHIA, you still need to demonstrate and record that you have considered equality in your decision-making processes. It is up to you what format you choose.-You could use a checklist, an explanatory note, or a document setting out our expectations of standards of behaviour, for contractors to read and sign. It may well not be something that is in the public domain like an ESHIA, but you should still be ready for it to be made available.

Both the approaches sit with a manager, and the manager has to make the call, and record the decision made on behalf of the Council. Here are some examples to get you thinking.

Carry out an ESHIA:

- If you are building or reconfiguring a building.
- If you are planning to reduce or remove a service.
- If you are consulting on a policy or a strategy.
- If you are bringing in a change to a process or procedure that involves other stakeholders and the wider community as well as particular groupings

Carry out an equality and social inclusion approach:

- If you are setting out how you expect a contractor to behave with regard to equality, where you are commissioning a service or product from them.
- If you are setting out the standards of behaviour that we expect from people who work with vulnerable groupings, such as taxi drivers that we license.
- If you are planning consultation and engagement activity, where we need to collect equality data in ways that will be proportionate and non-intrusive as well as meaningful for the purposes of the consultation itself.
- If you are looking at services provided by others that help the community, where we need to demonstrate a community leadership approach

3. Council wide and service area policy and practice on health and wellbeing

This is a relatively new area to record within our overall assessments of impacts, for individual and for communities, and as such we are asking service area leads to consider health and wellbeing impacts, much as they have been doing during 2020-2021 and 2021-2022, and to look at these in the context of direct and indirect impacts for individuals and for communities. A better understanding across the Council of these impacts will also better enable Public Health colleagues to prioritise

activities to reduce health inequalities in ways that are evidence based and that link effectively with equality impact considerations and climate change mitigation.

Health in All Policies – Health Impact Assessment

Health in All Policies is an upstream approach for health and wellbeing promotion and prevention, and to reduce health inequalities. The Health Impact Assessment (HIA) is the supporting mechanism

- Health Impact Assessment (HIA) is the technical name for a common-sense idea. It is a process that considers the wider effects of local policies, strategies and initiatives and how they, in turn, may affect people's health and wellbeing.
- Health Impact Assessment is a means of assessing both the positive and negative health impacts of a policy. It is also a means of developing good evidence-based policy and strategy using a structured process to review the impact.
- A Health Impact Assessment seeks to determine how to maximise health benefits and reduce health inequalities. It identifies any unintended health consequences. These consequences may support policy and strategy or may lead to suggestions for improvements.
- An agreed framework will set out a clear pathway through which a policy or strategy can be assessed and impacts with outcomes identified. It also sets out the support mechanisms for maximising health benefits.

The embedding of a Health in All Policies approach will support Shropshire Council through evidence-based practice and a whole systems approach, in achieving our corporate and partnership strategic priorities. This will assist the Council and partners in promoting, enabling and sustaining the health and wellbeing of individuals and communities whilst reducing health inequalities.

Individuals

Will the proposal have a *direct impact* on health, mental health and wellbeing?

For example, would it cause ill health, affecting social inclusion, independence and participation?

Will the proposal directly affect an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to be physically active e.g., being able to use a cycle route; to access food more easily; to change lifestyle in ways that are of positive impact for their health.

An example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g., green highways), and changes to public transport that could encourage people away from car usage. and

increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve lives.

Will the proposal *indirectly impact* an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to access local facilities e.g., to access food more easily, or to access a means of mobility to local services and amenities? (e.g. change to bus route)

Similarly to the above, an example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g. pedestrianisation of town centres), and changes to public transport that could encourage people away from car usage, and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve their health and well being.

Communities

Will the proposal directly or indirectly affect the physical health, mental health, and wellbeing of the wider community?

A *direct impact* could include either the causing of ill health, affecting social inclusion, independence and participation, or the promotion of better health.

An example of this could be that safer walking and cycling routes could help the wider community, as more people across groupings may be encouraged to walk more, and as there will be reductions in emission leading to better air quality.

An *indirect impact* could mean that a service change could indirectly affect living and working conditions and therefore the health and well being of the wider community.

An example of this could be: an increase in the availability of warm homes would improve the quality of the housing offer in Shropshire and reduce the costs for households of having a warm home in Shropshire. Often a health promoting approach also supports our agenda to reduce the level of Carbon Dioxide emissions and to reduce the impact of climate change.

Please record whether at this stage you consider the proposed service change to have a direct or an indirect impact upon communities.

Demand

Will there be a change in demand for or access to health, local authority and social care services?

For example: Primary Care, Hospital Care, Community Services, Mental Health and Social Services?

An example of this could be: a new housing development in an area would affect demand for primary care and local authority facilities and services in that location and surrounding areas. If the housing development does not factor in consideration

of availability of green space and safety within the public realm, further down the line there could be an increased demand upon health and social care services as a result of the lack of opportunities for physical recreation, and reluctance of some groupings to venture outside if they do not perceive it to be safe.

For further information on the use of ESHIAs: please contact your head of service or contact Mrs Lois Dale, Rurality and Equalities Specialist and Council policy support on equality, via telephone 01743 258528, or email lois.dale@shropshire.gov.uk.

Cabinet 19th July 2023

Public

Local Plan Examination in Public – Response to Inspectors Stage 1 Interim Findings

Responsible Officer:	Mark Barrow		
email:	mark.barrow@shropshire.gov.uk	Tel:	01743 258919
Cabinet Member (Portfolio Holder):	Richard Marshall		

1. Synopsis

- 1.1. This report seeks Cabinet approval to submit additional material to the Local Plan Examination as a response to the Inspectors' Interim Findings into the Local Plan.

2. Executive Summary

- 2.1. The purpose of this report is to seek Cabinet approval for the submission of additional material to the Local Plan Examination in Public.
- 2.2. The additional material has been prepared specifically to respond to the Inspectors' Interim Findings into the Local Plan following the Stage 1 hearing sessions in July 2022 and January 2023. These Interim Findings are included as Appendix 1 to this report.
- 2.3. The additional material specifically being sought for approval to submit are: Shropshire Council Response to Interim Findings (Appendix 2); Additional Sustainability Appraisal Report (Appendix 3); the Housing and Employment Topic Paper (Appendix 4); the Green Belt Topic Paper (Appendix 5); the revised Local Development Scheme (LDS) (Appendix 6); and the Updated Schedule of Main Modifications (Appendix 7).

- 2.4. It is recommended that Cabinet agree Appendices 2-7, allowing officers to submit this to the Examination for consideration by the Inspectors.
- 2.5. This new information provides further technical assessment work, principally through additional Sustainability Appraisal (SA), and provides a reasoned and justified response on a number of key points. Importantly, the new material provides a justification for why it is felt the Council does not need to amend its previously agreed housing and employment land requirements, and therefore that we do not believe it necessary to identify any additional site allocations for development.
- 2.6. It has been confirmed by the Inspectors that the Council has met the legal Duty to Cooperate, and therefore the Examination can proceed. It is anticipated the submission of the new material will allow for the future timeframe for the Examination to be agreed. The revised Local Development Scheme (LDS) (Appendix 6) sets out the likely future timeframe for the remainder of the Examination process.

3. Recommendations

- 3.1. That Cabinet approve the response to the Local Plan Inspectors' Interim Findings (Appendix 2), alongside the additional Sustainability Appraisal Report (Appendix 3); the Housing and Employment Topic Paper (Appendix 4); the Green Belt Topic Paper (Appendix 5); the revised Local Development Scheme (LDS) (Appendix 6); and the Updated Schedule of Main Modifications (Appendix 7), and agree that these documents can be submitted to the Local Plan Examination.
- 3.2. That Cabinet agree that if through further discussions with the Inspectors it is considered appropriate to do so, that the additional material provided in Appendices 2-7, alongside any other necessary material, can be consulted on in line with the Council's Statement of Community Involvement (SCI), and relevant national regulations.

Report

4. Risk Assessment and Opportunities Appraisal

- 4.1. It is a statutory responsibility for Councils to maintain an up-to-date Local Plan. Under the Government's 'plan-led' approach to development, the Local Plan is a key component of the overall Development Plan for the area, and should provide a positive strategy to enable an area to grow in a sustainable manner.
- 4.2. The Local Plan is a key part of the Development Plan for an area. Section 38 (6) of the Planning and Compulsory Purchase Act 2004 states if regard is to be had to the Development Plan for the purpose of any determination to be made under the Planning Acts the determination must be made in accordance with the plan unless material considerations indicate otherwise. In dealing with planning applications, section 70(2) of the Town and Country Planning Act 1990 requires a planning authority to have regard to the provisions of the Development Plan so far as it is

material to the application. Other parts of the Development Plan for an area include Neighbourhood Development Plans usually prepared by Town and Parish Councils.

- 4.3. It is the purpose of the Local Plan Review to ensure that Shropshire's Development Plan remains up to date for the purposes of decision making. One of the key elements of ensuring that a Development Plan is up to date is ensuring it has at least a five years' supply of deliverable housing sites against an up-to-date housing requirement. Whilst the Council's current housing land position shows a supply of 5.64 years' supply of deliverable housing land against the housing requirement within the adopted Development Plan, and 7.20 years supply of deliverable housing land against the housing need identified within the Local Housing Need Assessment undertaken using government's standard methodology, this position needs updating at least annually, and is at risk of challenge by potential applicants. The most effective way to ensure a plan-led sustainable housing land supply in excess of five years is to have an up to date and adopted Development Plan in place which provides a range of sustainable and deliverable housing allocations.
- 4.4. The Examination in Public (EiP) is an integral part of the Plan making process, and is the point in the process where the draft plan, alongside its evidence base, is assessed by an independently appointed Planning Inspector(s). The Council submitted the Local Plan to the Secretary of State in September 2021. Stage 1 hearing sessions into the Local Plan took place in July 2022 and January 2023. Whilst the Council can present reasoned and justified evidence to support its position, decisions on timescale and regarding the need to amend the Plan in any way are with the Inspectors. This is a normal procedural part of plan making, but one that does present some risk to the Council. To counter this risk it is important the Council continues to present an evidenced and justified approach to the plan, and seeks to respond to any Inspector's concerns in a timely and efficient manner.

5. Financial Implications

- 5.1. Planned growth provides the best possible opportunity for Shropshire Council to harness growth potential by providing a stable platform for investors and developers (from both the public and private sectors). Growth also provides an opportunity to secure contributions to help maintain and improve local facilities, services and infrastructure. New growth simultaneously imposes an additional burden on local services and provides opportunities to secure investment to improve local facilities which are the responsibility of Shropshire Council and other public service providers.
- 5.2. The Local Plan process is subject to a number of costs, both during preparation principally due to the need to commission evidence base documents to inform both site allocations and development management policies, and through the EiP, principally through the cost of the Planning Inspectorate. This expenditure is both necessary and unavoidable in the pursuit of a 'sound' Plan. The Council has been incurring costs of the Examination since 2021 when the Plan was submitted and Inspectors appointed. However, attempts have been made to reduce the cost to the Council with support from the Inspectors, such as holding public hearing sessions virtually.

- 5.3. There is also a financial risk to the Council of not pursuing a review of the Local Plan in a timely manner, most notably through the likelihood of increased levels of planning appeals as a result of increased challenges to the integrity of the currently adopted Core Strategy and SAMDev Plan.
- 5.4. The EiP has a significant cost implication to the Council, most notably through the cost of the Inspectorate, the need to appoint a Programme Officer to support the role of the Inspector and the cost of hiring rooms for the public hearing sessions. The estimated costs of the EiP have been included within the budget of Planning Policy and Strategy, although it should be recognised that the final cost of the EiP is not known.

6. Climate Change Appraisal

- 6.1. The recommendations propose that Cabinet agree to submit additional information to the Examination in Public to support the progression of the Local Plan through Examination and eventually to adoption. The proposed Local Plan includes new policies SP3 – Climate Change and DP11 – Minimising Carbon Emissions. In combination these policies provide a more robust local policy framework for supporting the transition to a zero-carbon economy through future masterplanning work and ultimately decisions on planning applications, and relate to energy and fuel consumption, renewable energy generation, carbon offsetting and mitigation and climate change adaptation.

7. Background

- 7.1. Following a period of plan preparation and several stages of public consultation since 2017, Shropshire Council submitted the Local Plan to the Secretary of State on 3rd September 2021. This commenced the Examination in Public (EiP) stage.
- 7.2. It is the role of government appointed independent Planning Inspector(s) to examine the soundness and legal compliance of the Local Plan, having regard to a number of factors including the Planning and Compulsory Purchase Act 2004 (as amended); the National Planning Policy Framework (the NPPF); associated national guidance (NPPG); and representations made to the Plan at the Regulation 19 stage of the plan preparation phase.
- 7.3. Paragraph 35 of the NPPF sets out how Local Plans are examined. Plans are considered ‘sound’ if they are:
 - a) **Positively prepared** – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
 - b) **Justified** – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
 - c) **Effective** – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and

d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.

- 7.4. In addition, the Inspectors need to be satisfied the Council has met other procedural requirements, including the legal Duty to Cooperate (DtC), regarding how the Council has cooperated on strategic cross boundary issues with neighbouring and closely related authorities and other relevant stakeholders.
- 7.5. Stage 1 hearing sessions were held in July 2022 and in January 2023. These sessions dealt with the strategic elements of the Plan, as well as legal and procedural issues. The Inspectors subsequently published their Interim Findings (ID28) on 15th February 2023, and this is included as Appendix 1 to this report.
- 7.6. It is a normal part of the examination process for Inspectors to identify the need for modifications to the Plan in order to make it ‘sound’. These can either be Additional Modifications which are generally minor in nature and don’t impact on overall ‘soundness’, or Main Modifications which are more significant in nature, such as changes to policy wording. By definition, where Inspectors find there is a need to make Main Modifications, the current version of the Local Plan cannot be considered ‘sound’. However, it is important to stress that one of the roles of the Examination process is to provide the appropriate mechanism and process for Main Modifications to be identified and to be agreed.
- 7.7. Through the course of preparing the Local Plan for submission to the Secretary of State in September 2021, and through ongoing discussions with the appointed Inspectors through the Examination, a composite list of Main Modifications has been developed. The Inspectors Interim Findings required that further Main Modifications were agreed at the direction of the Inspectors. For instance, this includes the deletion of the proposal to remove RAF Cosford from the Green Belt. Through the preparation of the additional material requested by the Inspectors, there has been a need to propose further Main modifications to this schedule. The updated list of all proposed Main Modifications to the Plan, including those agreed with the Inspectors as part of the recent hearing session into the Mineral and Waste elements of the Plan, are captured in the Updated Schedule of Main Modifications, included as Appendix 7 to this report. It is considered these Modifications are necessary in order to make the Plan sound, and addresses the comments raised by the Inspectors at the Stage 1 hearing sessions. However, it is likely this will need to be revisited again as the Examination continues.
- 7.8. One area which cannot be rectified by the inclusion of additional Main Modifications, is the legal aspect of the Duty to Cooperate, covered by the Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended). This places a legal duty on a local planning authority to co-operate with other local authorities and other prescribed bodies to engage constructively, actively and on an ongoing basis when preparing a Development Plan Document, such as a Local Plan. This cooperation is intended to identify genuinely strategic cross boundary matters in order to maximise the effectiveness of plan preparation.
- 7.9. Through the course of the Stage 1 hearing sessions, the issue of the Duty to Cooperate was discussed in a number of Matters. This discussion focussed extensively on the cooperation the Council has had with the four local authorities of Dudley, Sandwell, Walsall and Wolverhampton, through the Association of

Black Country Authorities (ABCA), and in particular the agreement reached between Shropshire and these four authorities for the Local Plan to accommodate an element of the Black Country's forecast unmet housing and employment need over the plan period. As a result of these discussions the Inspectors requested additional evidence from the Council showing the activity around these duty to cooperate discussions, which the Council provided in September 2022, and which led to an additional hearing session in January 2023.

- 7.10. Resulting from these discussions and evidence, the Inspectors have concluded the Council has met its legal Duty to Cooperate, and as such the Examination can continue. This outcome is clearly welcomed and supported. Indeed, it is notable the Inspectors in their Interim Findings have also stated that "in principle, the Council's intention to address some of the ABCA unmet needs (1,500 homes and 30ha employment land) aligns with the spirit of the Duty to Cooperate". They add, "It is clear that the Council and the ABCA authorities are all content with the contribution and this is set out in a Statement of Common Ground".
- 7.11. It is therefore considered the Inspectors Interim Findings have provided endorsement to the agreement made between Shropshire Council and the Black Country authorities concerning the level of forecast unmet housing and employment need from the Black Country to be accommodated in the Shropshire Local Plan up to 2038.
- 7.12. However, the Inspectors interim findings also raises questions about how the Local Plan is seeking to accommodate this unmet need. This relates primarily to the Council's position that the 1,500 homes and 30ha of employment land (the unmet need) is to be accommodated within the wider Local Plan housing and employment requirements. The Inspectors have raised concerns about this approach, and have asked the Council to respond to the issues raised. The Inspectors have also asked the Council to confirm more precisely on which proposed housing and employment land allocations in the Plan the Council anticipate the unmet need to be accommodated.
- 7.13. Whilst it is not the role of the Inspectors to dictate how the Council responds to these issues, the interim findings are quite clear that the Council prepare additional Sustainability Appraisal (SA) material and that the unmet need is specifically reflected in this process. One of the options which the Inspectors have asked the Council to assess is higher housing and employment growth options for County in the Plan period, where the unmet need is effectively added on top of these Shropshire based requirements. Given a higher housing and employment land requirement would result in a need for additional supply to be identified over the plan period, under this scenario there would be a need for the Council to consider proposing to allocate additional land in the Local Plan above that already included.
- 7.14. For the avoidance of doubt, the SA process is intended to assess the likely environmental, social and economic impacts of the reasonable options considered, and is a specific requirement in Regulation 12 of the Environmental Assessment of Plans and Programmes Regulations 2004. Importantly, however, whilst the Inspectors have quite rightly considered the selection of a preferred strategy should have regard to this additional SA, they have confirmed it is for the Council to present an appropriate strategy, and for this to be assessed for soundness through the Examination process.

- 7.15. The additional SA work and its outcomes are included as Appendix 3 to this report. In responding to the Inspectors comments, this has included assessing options for growth which exceed the housing and employment land requirements currently included in the Local Plan, as well as reassessing the previously considered SA options, with the specific inclusion of the Black Country forecast unmet need element. In assessing the options in this manner, it is considered this meets the expectations of the Local Plan Inspectors with regard to this aspect of their initial findings.
- 7.16. In response to the Inspectors request, the Council have prepared a new Housing and Employment Topic Paper included as Appendix 4 to this report. The key purpose of the Topic Paper is to show how the Council has considered the conclusions of the new SA work, alongside other material considerations, and to arrive at a planning judgement on the preferred strategy for the Local Plan.

Proposed Housing and Employment Land Requirement 2016-2038

- 7.17. With regards to the housing requirement of the Local Plan, as currently drafted this is 30,800 dwellings over the plan period 2016-2038. This represented a ‘high’ growth option in the original SA of options during the earlier stages of plan preparation. In incorporating explicitly the 1,500 dwellings from the Black Country over the plan period, the same housing requirement of 30,800 represents a 13% increase on defined local housing need. The Council considers this uplift continues to constitute a ‘high’ growth option and is now referred to as High Growth Variation 1.
- 7.18. In seeking to respond effectively to the Inspectors interim findings, four other options are considered in the additional SA. Two of these options provide a housing requirement in excess of 30,800 dwellings, whilst two provide options lower than 30,800 dwellings. The highest option proposed is 32,300 dwellings over the plan period, which is the sum of the 30,800 plus in addition 1,500 dwellings for the Black Country. This option was specifically requested to be assessed by the Inspectors.
- 7.19. Following the careful consideration of the conclusions of the new SA, alongside a number of other material considerations, **it is considered the Local Plan’s housing requirement should be maintained at 30,800 dwellings over the plan period (2016-2038)**. It is considered this continues to represent the most sustainable option for the County, and one which is:
- responsive to the principle of and will deliver high growth, providing increased opportunities to deliver the wider Council strategic aspirations, including the Shropshire Plan and the Economic Growth Strategy, and will support increased delivery of additional affordable housing;
 - sufficient to meet local housing need, whilst providing appropriate flexibility to changing need over the plan period; and
 - includes a specific contribution of 1,500 dwellings towards the unmet housing need forecast to arise in the Black Country.

- 7.20. The proposed housing requirement is consistent with that previously proposed within the draft Shropshire Local Plan. As such, Shropshire Council considers that the strategy for achieving the proposed housing requirement proposed within the draft Shropshire Local Plan remains appropriate. It is considered this outcome responds positively to the Interim Findings of the Inspectors, and is evidence based.
- 7.21. **As such, only minimal modifications would be required to reflect this proposal, and there is no requirement to identify any additional site allocations at this stage.**
- 7.22. With respect to the employment land requirement of the Local Plan, as submitted this is 300 hectares over the plan period 2016-2038. The Housing and Employment Topic Paper provides the Council's conclusion on this following the consideration of the additional SA material as well as other relevant considerations.
- 7.23. In seeking to respond effectively to the Inspectors interim findings, five reasonable options for the employment land requirement were identified and assessed within the additional SA assessment work. Each of the five options explicitly incorporates the contribution of 30 hectares as Shropshire's contribution towards the unmet employment land need forecast to arise in the Black Country.
- 7.24. Following the careful consideration of the conclusions of the new SA, alongside a number of other material considerations, **it is considered the Local Plan's employment land requirement should be maintained at 300 hectares over the plan period (2016-2038).**
- 7.25. **As such, only minimal modifications would be required to reflect this proposal, and there is no requirement to identify any additional site allocations at this stage.**
- 7.26. It should be noted that one of the interim findings of the Inspectors was to require the Local Plan's housing and employment land requirements to be addressed as minimum requirements. This is not unusual for Local Plans, and whilst this does require a Main Modification to Policy SP2 it is considered appropriate to include.
- 7.27. In seeking to respond positively to the Inspector's request, it is considered the following three sites are appropriate to be specifically identified in the Plan as making a combined contribution of 1,500 dwellings to the Black Country's forecast unmet housing need:
- **BRID030, Tasley Garden Village, Bridgnorth** – 600 dwellings from total of 1,050 dwellings proposed;
 - **IRN001, Former Ironbridge Power Station, Ironbridge** – 600 dwellings from a total of 1,000 dwellings proposed;
 - **SHR060,158 &161 – Land between Mytton Oak Road and Hanwood Road, Shrewsbury** - 300 dwellings from a total of 1,500 dwellings proposed.

7.28. The following site is considered to be appropriate to be specifically identified in the Plan as making a contribution of 30ha to the Black County's forecast unmet employment land need:

- **SHF018b/SHF018d – Land East of Shifnal Industrial Estate, Upton Lane, Shifnal** – 30 ha from a total of 39ha proposed.

7.29. These four sites have been identified as being appropriate to make a specific contribution to the Black County's forecast unmet needs, primary due to their close geographical relationship and functional linkages, including via a direct train service in the case of Shifnal and Shrewsbury.

7.30. A new Green Belt Topic Paper (Appendix 5) has also been prepared in response to the Inspectors Interim Findings. To avoid any doubt, no additional Green Belt land is being proposed to be released in response to the Inspector's Interim Findings.

7.31. Appendix 2 to the report provides the Council's comprehensive response to the wider issues addressed by the Inspectors in their Interim Findings.

7.32. These include:

- A proposed new policy to address the Inspectors comments regarding ensuring sufficient housing for older people (the draft policy wording is included within Appendix 2 to this report).
- Confirmation that it is considered the start of the plan period should be maintained at 2016;
- A proposed approach to 'saving' parts of the existing SAMDev Plan, specifically those allocated Site Allocations which are not fully delivered;
- Confirmation that the Council's evidence for the Gypsy and Traveller Accommodation Assessment (GTAA) remains up to date and the approach proposed in the Local Plan remains appropriate;
- That the Strategic Infrastructure and Investment Network will support ongoing discussions regarding strategic infrastructure resulting from planned growth;
- Confirmation that it is felt appropriate for the Inspectors to take a view on the five year housing land supply position, whilst acknowledging they will not be able to 'fix' this for a set period.

7.33. The revised Local Development Scheme (LDS) (Appendix 7) sets out a new programme for the remainder of the Examination and the adoption of the Local Plan. This anticipates that, subject to the agreement of Cabinet, following the submission of the additional material to the Inspectors it is anticipated the Stage 2 hearing sessions will take place in November 2023. Subject to the conclusion of the Examination and the conclusions of the Inspectors it is anticipated the Local Plan could be subject to adoption in June 2024.

Shropshire Council. Examination of Shropshire Local Plan 2016-2038

Inspectors: Louise Crosby MA MRTPI, Carole Dillon BA (Hons) MRTPI and Nick Palmer BA (Hons) BPI MRTPI

Programme Officer: Kerry Trueman

Tel: 07582 310364, email: programme.officer@shropshire.gov.uk

Mr West
Planning Policy
Shropshire Council
PO BOX 4826
Shrewsbury
SY1 9LJ

15 February 2023

Dear Mr West

Inspectors' Interim Findings following stage 1 hearings sessions

1. Set out below are our interim findings in relation to a number of matters following the stage 1 hearing sessions in July last year and January this year. Some of these findings require the Council to do additional work and some are just confirming Main Modifications (MMs) that were agreed at the hearings and other matters that were discussed, such as updating the evidence base.

Duty to Cooperate (DtC)

2. Following the hearing sessions, we wrote to you on 26 July 2022 (ID17) asking for you to provide more information in relation to the DtC and the activities that took place in relation to this prior to the submission of the Plan for examination.
3. We have now received this and had a chance to consider it and hear from the Council and representors on the matter at a further hearing session on 17 January 2023. Consequently, we can confirm that we are satisfied that the Council has met the legal duty set out in Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended), in so far as it imposes a duty on a local planning authority to co-operate with other local planning authorities, the County Council and prescribed bodies or other persons by engaging constructively, actively and on an ongoing basis in relation to the preparation of a development plan document so far as relating to a strategic matter to maximise the effectiveness of the activity of plan preparation. Therefore, the examination can proceed.

Next Steps

4. Before we proceed to stage 2 hearing sessions there are a number of matters where we consider more work is necessary to make the plan sound and these are set out below. We have also taken this opportunity to set out our thoughts on other matters which we said we would give further thought to at stage 2 of the examination.

Plan Period

5. During the matter 1 hearing session the Council agreed to consider whether the Plan period and Local Housing Needs Assessment should be aligned along with any implications of doing so, including those relating to the Housing Requirement set out in policy SP2 and the supply of sites identified in Policies S1 to S21. Please advise what stage the Council have reached with this.

Saved Policies

6. During the matter 3 hearing session the Council agreed to review the means by which the necessary SAMDev policies would be “saved” to ensure that they will, as intended, remain extant for Development Management purposes should the Plan be adopted. Can you please provide further information on how the Council intends to do this, along with any necessary MMs.

Gypsy and Traveller Transit Site Provision

7. During the matter 5 hearing session the Council agreed to provide a cabinet report and minutes regarding new transit site provision for the Gypsy and Travelling community. Can this please be placed on the examination website.
8. Also, as part of the matter 5 hearing session, the Council provided an updated position in respect of the need and supply of pitches. Using this data can the Council please update Table 7.9 and the GTAA conclusion and executive summary as an addendum to the 2019 GTAA Update – Final Report. The Plan’s relevant supporting text should be reviewed in view of this.
9. The Council will be aware of the judgment *Lisa Smith v SSLUHC* [2022] EWCA Civ 1391 of 31st October 2022, regarding the interpretation of the Planning Policy for Traveller Sites and the application of that policy to Gypsies and Travellers who have ceased to pursue nomadic lifestyles. Can the council please consider whether, in light of this judgment, they wish to review the traveller site needs in the GTAA, and if not, the justification for this?

Unmet Housing and Employment Land Needs of the Association of Black Country Authorities (ABCA) and Policy SP2

10. The Council has identified the need for housing in the County as being 28,750 homes (1430 dwellings per annum) over the Plan period, based on the ‘high growth scenario’ and 300 ha of employment land based on a ‘balanced employment growth scenario’, as set out in the Sustainability Appraisal and Site Assessment Environmental Report, dated December 2020 (SA). The housing

requirement figure in policy SP2 is around 30,800 homes (1400 dwellings per annum) and the employment land requirement is around 300ha. The increase in the total quantum of housing is to take account of the different time period. The annual requirement is virtually the same. However, it is the Council's intention that the Plan should provide 1,500 new homes and 30ha of employment land over the plan period in order to help address a need for housing and employment land in the Black Country, that would otherwise not be met. We consider the question of this unmet need further below.

11. At the hearings, the Council suggested that these 1,500 new homes and 30ha of employment land is accounted for within the aforementioned housing and employment land requirement in policy SP2. We cannot see how. They are not mentioned in the SA and form no part of the growth scenarios considered therein. Consequently, we are concerned that there has been a conflation of housing need and housing requirement and also employment land need and employment land requirement – but these are two distinctly different things.
12. You will appreciate that we need clarity on this point, and the Plan itself must also be equally clear. We therefore ask that the Council provides us with a Topic Paper that unambiguously sets out the need for housing over the plan period and the local plan's housing requirement and the same for employment land. On the face of it, it seems to us that the latter is likely to be the sum of Shropshire's housing/employment need plus the 1,500/30ha homes/employment land relating to unmet need in the Black Country – whatever the case may be, these requirement figures should be made clear in the Plan, through a main modification to policy SP2.
13. This strategic issue crosscuts a number of important matters, including the Plan's development requirements, spatial distribution, Green Belt release and site allocations. As such, it has resulted in a great deal of discussion during the hearing sessions to date. The Council's approach to identifying the housing and employment land needs derived within Shropshire itself is sound. In principle, the Council's intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire's housing need to meet some of this externally derived unmet need.
14. Since the initial stage 1 hearings the joint plan making arrangements for the ABCA Councils have materially changed as these four separate councils are now preparing individual plans. The councils are all individually preparing their respective evidence bases, but utilising some of the existing joint evidence that has already been prepared. As a consequence, their anticipated adoption dates will be later than that of the previously proposed joint plan. Despite this new plan making context, there is no reason before us to find that the identified unmet needs in the Black Country area will disappear.

15. However, we are mindful that confirmation of the exact quantum requires the examination of these plans which is some time away and other councils will also be assisting in meeting some of the unmet needs since it is not and should not be the sole responsibility of Shropshire Council to meet all of ABCAs unmet needs for housing and employment land. This would be highly unlikely in any event given the emerging scale of unmet need, the Green Belt constraint within Shropshire, particularly in the part closest to the boundary with ABCA areas and also the AONB constraint in the southern part of the plan area. Nonetheless it remains an important strategic cross boundary matter that should not be deferred.
16. It is clear is that the unmet housing and employment needs being accommodated in Shropshire is the starting point as there is agreement to revisit the unmet need with a view to providing further assistance once the local plans for the ABCA councils have been examined and adopted. As set out above this is likely to be a number of years away given the stage they are currently at.
17. However, it was not until a point between the Regulation 18 and 19 stages of the plan making process that the Council agreed to accommodate 1500 dwellings and 30ha of employment land to support the unmet needs emerging in the ABCA area. This was after most of the evidence base had been completed, including the SA.
18. Regulation 12 of The Environmental Assessment of Plans and Programmes Regulations 2004 requires that an environmental report for the purpose of the regulations must identify, describe and evaluate the likely significant effects on the environment of implementing the plan policies and of the reasonable alternatives, taking into account the objectives and geographical scope of the plan. The SA will need to show how these requirements have been met as well as recording the wider assessment of social and economic effects.
19. We are concerned that the objectives and geographical scope of the Plan changed when the Council agreed to accommodate some of the unmet needs of the Black Country, but unfortunately the SA was not revisited. The SA is based on meeting only the needs of Shropshire. It tested different housing and economic growth options as well as different distribution options, but these were all based on just meeting the needs of Shropshire.
20. Further SA work therefore needs to be undertaken to assess the likely effects of the proposed strategy – which is based on meeting Shropshire’s housing and employment needs and contributing towards unmet needs from the Black Country. In carrying out this work, consideration also needs to be given to the selection of the preferred strategy when judged against reasonable alternatives. For example, by testing a scenario which includes the originally envisaged ‘high growth scenario’ and a contribution towards unmet housing needs.
21. If the intention is to contribute towards the unmet need from the Black Country, then for effectiveness this distinction needs to be set out in the housing and employment land requirements in the Plan. In doing so the Council will also

need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.

22. If, following the additional SA work, the Council chooses to pursue the same growth option as before then it follows that the housing and employment land requirements will increase, and more sites will be required. Consideration will also need to be given to the distribution of development since accommodating some of the unmet needs may result in more sites being required in the part of Shropshire nearest the Black Country. It would therefore be helpful if, once the Council has carried out the additional SA work, the proposed strategy in relation to the housing and employment land requirement is set out in the topic paper requested at paragraph 12 above. The Plan should also make clear what the Council's strategy is, through main modifications.
23. Given the Council were planning on releasing Green Belt land to meet its own needs, it seems unlikely that the unmet needs of the Black Country could be met without the release of Green Belt land. Can the Council please provide a revised Green Belt Topic Paper setting out the exceptional circumstances for releasing Green Belt land to meet its own needs and as a separate exercise the exceptional circumstances for releasing land to meet the unmet needs of the Black Country.
24. Great importance is placed on Council's having up to date plans by national planning policy. As set out above there is a requirement to carry out additional work on the SA and to produce topic papers and some main modifications to the Plan once the SA work is complete and there a clear way forward. This is likely to require a pause in the examination whilst the work is undertaken. Once the work has been undertaken, we will take a view on whether we consider further public consultation is required. The need to carry out this additional work will delay the examination and adoption of this Plan. However, we are unable to identify an alternative remedy that would avoid such a delay unfortunately. The additional work we have identified is necessary for us to find that the Plan is sound.
25. Regardless of the outcome of this work, it is likely that there will be a further request from the individual Black Country authorities in the future to meet some more of the unmet needs, but this could be dealt with by way of an early review trigger built into policy SP2 or by relying on the statutory 5-year review process set out in the Framework. We would welcome the Council's formal views on these alternative approaches.
26. Furthermore, we note that the related indicators and targets set out in the Plan's monitoring framework only focus on delivery within the Plan area against the Plan's overall proposed development requirements. In addressing some of the unmet needs of ABCA then the Plan's performance in doing so needs to be monitored. A failure to do this would undermine the effectiveness and therefore soundness of the Plan's approach to meeting housing and employment needs. The monitoring framework will need to be reviewed in light of this concern.

27. Any changes to the Plan as a result of the above will need to form the basis of Main Modifications which should be submitted to the examination.

Habitat Regulations Assessment

28. The matter of the River Clun and nutrient neutrality was discussed at the hearings in July. Shortly after the hearings the Government issued a Written Ministerial Statement (WMS) entitled '*Statement on improving water quality and tackling nutrient pollution*'. The Council's letter of 16th September 2022 (GC16) addresses the WMS. This suggests that the WMS may alter the position of Natural England and the Environment Agency on this matter. Can the Council please approach these organisations with a view to preparing updated SoCG. Once this is done can the Council advise on the implication of the latest position for the Plan and whether any outstanding issues could be dealt with by MMs.

Green Belt – RAF Cosford

29. The Council's Green Belt Topic Paper sets out the exceptional circumstances for the release of land from the Green Belt. This includes 214.2 ha of land at RAF Cosford which is a strategic site in the Plan (policy S21). The Council proposes to inset RAF Cosford in the Green Belt, in recognition of its existing and future operational areas and requirements. Para 7.18 of the Plan says that this will enable numerous and complementary development opportunities and that in turn these will complement and facilitate delivery of the Economic Growth Strategy for Shropshire and the objectives of the Plan.
30. One of these development opportunities is the development of the Midlands Air Ambulance Charity headquarters, however we understand that this now has planning permission despite it being in the Green Belt, demonstrating that this was not a barrier to development. The RAF base has grown and developed over many years and is now also home to the RAF Museum Cosford. There is no evidence before us to demonstrate that the site's Green Belt status has in anyway prevented it being developed in a manner consistent with its use as an RAF base or indeed related activities such as training facilities and domestic accommodation.
31. Paragraph 143(b) of the Framework which advises that when defining Green Belt boundaries, plans should not include land which it is unnecessary to keep permanently open. However, it seems that the site has large areas of undeveloped land which, if developed, could harm openness of the surrounding Green Belt land. It would also make it more difficult for the Council to control future non-military related development on the site as other general development management policies would apply.
32. To summarise, we find that exceptional circumstances do not exist to justify the removal of this site from the Green Belt. Consequently, the Council will need to draft a MM to ensure that this site remains within the Green Belt and make any necessary map changes.

Infrastructure Delivery Plan (IDP) and Strategic Funding Statement (SFS)

33. We still have some concerns about the gaps in the IDP and would urge the Council to treat this as a living document and aim to keep populating it when new figures become available.
34. In terms of the SFS, as set out at the hearings this should be forward facing rather than backward looking. The PPG advises that *“this should set out the anticipated funding from developer contributions, and the choices local authorities have made about how these contributions will be used. At examination this can be used to demonstrate the delivery of infrastructure throughout the Plan-period”*¹. Can the Council please provide a timescale for updating the SFS.

Five-year Housing Land Supply

35. The Council has requested that we confirm their 5-year housing land supply as part of the examination of the Plan policies. However, the PPG² advises that, among other things, *“when confirming their supply through this process, local planning authorities will need to be clear that they are seeking to confirm the existence of a 5-year supply as part of the plan-making process and engage with developers and others with an interest in housing delivery”*. Crucially, the Council have confirmed that they did not do this and therefore we cannot confirm the 5-year housing land supply through the local plan examination process.
36. In addition, the matter of 5-year housing land supply will be considered at stage 2 of the examination once we have examined the site allocations in the Plan. We still have serious doubts over whether we can fully consider this matter and come to a conclusion on whether the Council have a 5-year supply of housing land given that many of the sites the Council are relying on are allocated in the SAMDev plan and therefore are not before us.

Housing Requirement

37. The housing requirement in the Plan is expressed as ‘around’ 30,800 new homes and the employment land as ‘around’ 300ha. In our view these development requirements should be expressed as definitive minimum figures for both monitoring and effectiveness.

Specialist Housing/Older Persons Housing

38. Paragraph 62 of the Framework requires that the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies, including older people. The Council’s evidence shows that there is a much higher number of older people residing in the Plan area than the national average.

¹ Paragraph: 059 Reference ID: 61-059-20190315

² Paragraph: 010 Reference ID: 68-010-20190722

39. Whilst there is a requirement within policy DP1 to provide older persons housing on sites of 50 dwellings or more, the amount that will need to be provided is not quantified and it is also not clear why the threshold of 50 dwellings has been chosen. The PPG advises that “*plan-making authorities should set clear policies to address the housing needs of groups with particular needs, such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require. They could also provide indicative figures or a range for the number of units of specialist housing for older people needed across the plan area throughout the plan period (our emphasis)*”³.
40. Whilst the PPG advises that Council’s ‘could’ provide indicative figures, we consider that as there is clear evidence of a higher-than-average need for such accommodation in this particular instance, either the policy should include indicative figures, or the Plan should contain a specific policy to deal with specialist housing.
41. Also, neither this Plan, nor the SAMDev plan appear to make any provision for this sector of the community, by allocating land for specialist housing or requiring it to be provided in some of the larger allocations. This would be another positive way in which the Council could address this matter. Please can the Council give some further consideration to this important matter.

Policy SP4 – Sustainable Development

42. The Council agreed during the hearings that they would introduce a MM to delete policy SP4 from the Plan and instead rely on national planning policy to ensure that development in the district is sustainable. This needs to be included in the list of MMs.

Policy SP5 – High-Quality Design

43. The Council agreed to look at the wording of policy SP5 and whether it should contain a reference to the National Design Guidance. Can the Council please confirm if they have done this and what the outcome was. Any changes will need to be set out as a MM.

Policy SP6 – Health and Wellbeing

44. A discussion took place at the hearings regarding criterion 5a. of this policy and whether it should refer to ‘improved’ health facilities and criterion 10 and its requirement for a Health Impact Assessment for all major development proposals. The Council agreed to give the wording in these 2 criteria further consideration. Can you please confirm the outcome of this and whether any MMs are being advanced as a result.

³ Paragraph: 006 Reference ID: 63-006-20190626

Policy SP10 – Managing Development in the Countryside

45. It was agreed during the hearings that this policy wording needs to clarify that it does not apply to sites in the countryside that are allocated for development in this Plan or any other adopted development plan. This revised policy wording will need to be set out in as a MM.

Policy SP12 Shropshire Economic Growth Strategy

46. We do have some concerns about the effectiveness of this policy as a great deal of it seems to be more of a vision rather than a strategic policy. Can the Council please review this policy in the context of the advice in relation to strategic policies set out in paragraphs 20 to 23 of the Framework. Proposed changes will need to be set out as MMs.

Policy SP13 – Delivering Sustainable Economic Growth and Enterprise

47. It was agreed at the hearings that the text box 'Figure SP13.1', should be incorporated into policy SP13. This will need to be included as a MM.

Strategic Settlements and Sites

48. We have set out our concerns above regarding the removal of the RAF Cosford site from the Green Belt. We have no further comments to make on policy S21 or policy S20 which relate to the former Ironbridge Power Station site.
49. Turning to Tern Hill and policy S19, we have concerns about the deliverability of the affordable housing that would be required in connection with the development of this proposed site allocation given the evidence set out in the Council's Viability Study 2020 (EV115.01) and the fact that the trajectory shows that 400 of the 750 proposed dwellings will be delivered after the Plan period.
50. This also leads us to find that there is a lack of evidence to demonstrate that this proposed allocation will be capable of supporting the necessary infrastructure and services planned. Given the site's location away from any main settlements, it is important that it contains a range of services to limit trips by private car. Therefore, we require evidence which demonstrates that the appropriate necessary infrastructure would be delivered at the appropriate stages in the delivery of this site to serve its occupants.
51. Finally, as discussed in detail at the relevant hearing session we have some concerns about the vagueness of some of the policy wording in policy S19. The Council agreed it would look at this with a view to improving its precision and certainty for the benefit of developers and local residents. These changes should be advanced as MMs.

Strategic Flood Risk Assessment

52. The issue of whether the Council's Strategic Flood Risk Assessment (SFRA) was up to date in terms of hydraulic modelling and fluvial flood risk was raised at the relevant hearing session. It was agreed that the Council would provide a note of clarification regarding the methodology and data relied upon and whether any updating is necessary. Also, the Council should review whether the SoCG with the Environment Agency needs to be updated in view of this.

Local Development Scheme

53. During the matter 1 hearing session the out of datedness of the Local Development Scheme (LDS) and the reasons for that were discussed. We would be obliged if the Council would keep the LDS under review and arrange an update. A note to this effect should be placed on the Council's examination website to inform web users of this.

Overall Conclusions

54. For the reasons set out above, as things stand, the development strategy set out in the Plan is unsound and further work and main modifications will be required to progress the examination. We appreciate that there is a lot in our letter for the Council to consider. Therefore, we have not set a deadline for a response. However, it would be helpful if you could provide an indicative timescale for a response. When you respond in full to our letter can you please also provide a timetable for the additional work that is required for soundness.
55. Once we have a timescale for any additional work, we can then agree some provisional dates for the stage 2 hearings. At these hearings it is likely we will first need to re-consider some of the stage 1 matters as then the development management policies in the plan and the site allocations.
56. The Council and participants should be aware that the above comments do not represent our full findings on these matters, which shall be set out in our final report having considered any representations made in response to further public consultation and/or further hearing sessions which may be required in due course.
57. We are not inviting comments to this letter from representors, they will be given an opportunity to comment on the above matters in due course, either through representations to consultation organised by the Council, through hearing statements, appearing at hearing sessions or through the opportunity to comment on MMs.
58. Should the Council require any further clarification on any of the above matters you can contact us through the Programme Officer.

Dear Inspectors,

Shropshire Council Response to ID28: Inspectors' Interim Findings Following Stage 1 Hearings Sessions

1. Introduction

- 1.1. Thank you for your correspondence of the 15th February 2023 (ID28) in which you set out your Interim Findings on the Stage 1 Hearing Sessions. Within ID28, you posed a series of questions to the Council and identified areas of further work for the Council to undertake before you proceed with the Stage 2 Hearing Sessions.
- 1.2. Within ID28, you also indicated that your questions and identified further areas of work may result in the identification of additional potential Main Modifications to support the soundness of the draft Shropshire Local Plan.
- 1.3. In our initial response (GC20), the Council indicated our intention to respond to ID28 by the 30th June 2023. However, as we subsequently advised, in order to allow for approval of this response by Shropshire Council's Cabinet, these timescales have been subject to a short extension. The Council very much appreciate your understanding on this matter.

- 1.4. We have now taken the opportunity to reflect on ID28 and in particular the conclusions you had reached, the questions you raised and the further areas of work identified.
- 1.5. Our initial response (GC20), this correspondence, and the accompanying documents represent our full response to ID28.
- 1.6. Between the issuing of ID28 and this response, a further hearing occurred regarding minerals and waste. Following the completion of this hearing the Council provided a schedule of proposed main modifications resulting from this hearing. You have subsequently issued a response (with correspondence reference ID34) requesting that the Council give due consideration to the need for main modifications to address a limited number of very specific issues.
- 1.7. The Council has reflected upon these suggestions and is supportive of the identification of proposed main modifications on all the issues identified. As such, a series of proposed main modifications have been prepared.
- 1.8. The documents which accompany this response include an Updated Schedule of Main Modifications and an Updated Schedule of Minor (Additional) Modifications.
- 1.9. These Schedules have been comprehensively reviewed and updated so that they capture all proposed modifications to date. This includes those proposed in response to ID28, those resulting from the recent hearing session on minerals and waste, and those proposed in response to mineral and waste correspondence ID34.
- 1.10. To aid with the consideration of proposed modifications, they have been re-referenced and re-ordered so that they reflect the structure of the draft Shropshire Local Plan.

- 1.11. For convenience, the Council has also prepared a 'track changes' version of the draft Shropshire Local Plan, which captures all of the proposed Main and Minor (Additional) Modifications to the draft Local Plan to this point in the examination.
- 1.12. *Please Note: The Updated Schedules of Main Modifications and Minor (Additional) Modifications utilise policy references as at the submission of the draft Shropshire Local Plan for examination. The 'track changes' version of the draft Shropshire Local Plan includes hyperlinks on policy references to aid navigation, these update to reflect changes resulting from proposed modifications.*
- 1.13. For ease, the Council has structured the remainder of this response to follow the order of ID28 and where appropriate we cross-refer to relevant paragraphs of ID28.

2. Duty to Cooperate (DtC)

- 2.1. Paragraphs 2-3 of ID28 address compliance with the Duty to Cooperate (DtC). Shropshire Council acknowledges and welcomes the conclusions about our engagement with our duty to cooperate partners, as recorded within these paragraphs of ID28.

3. Next Steps

- 3.1. Paragraph 4 of ID28 addresses next steps. This correspondence and the accompanying documents are intended to provide the information necessary to allow the examination of the draft Shropshire Local Plan to proceed to the Stage 2 Hearing Sessions.

4. Plan Period

- 4.1. Paragraph 5 of ID28 addresses the plan period for the draft Shropshire Local Plan. It identifies two questions for the Council:
- a. Whether the start of the plan period (currently proposed to be 2016) should align with the base date for the Local Housing Needs Assessment (which is 2020) submitted as part of the evidence base that informed the preparation of the draft Shropshire Local Plan?
 - b. What are the implications of aligning these two dates, including in relation to the Housing Requirement in draft Policy SP2 and the settlement guidelines / supply of sites in Policies S1-S20?
- 4.2. Shropshire Council has considered these questions and addresses each in turn.

a. Should the start of the plan period be aligned with the base date for the Local Housing Needs Assessment?

- 4.3. The Council acknowledges there may be advantages to aligning the start of the plan period with the base date for the Local Housing Needs Assessment. However, the Council considers that these advantages would be outweighed by the disadvantages and it is also considered unnecessary to change the plan period to ensure the plan is 'sound'.
- 4.4. The disadvantages resulting from such a change to the plan period, include:
- a. Consultations and discussions with communities undertaken during the preparation of the draft Shropshire Local Plan were predicated on a 2016 start date for the plan period. Changing this date now may cause unnecessary confusion.
 - b. Evidence base prepared to inform the draft Shropshire Local Plan is predicated on a 2016 start date for the plan period. Whilst a change

would not invalidate the evidence, it could again cause some unnecessary confusion.

- c. Change would have 'knock-on' implications for settlement housing and employment land guidelines (see below) which could also cause unnecessary confusion.
- d. It could lead to further debate over whether the start of the plan period should be updated again as the examination process continues. This may cause unnecessary delay and confusion.

4.5. Shropshire Council is concerned that unnecessary confusion has the potential to undermine implementation of the draft Shropshire Local Plan.

b. What are the implications of aligning these two dates?

4.6. If the start of the plan period is aligned with the base date for the Local Housing Needs Assessment, the housing and employment land requirements within draft Policy SP2 would need to be reduced to exclude the housing and employment land completed prior to 2020.

4.7. This is because these proposed requirements were directly informed by the supply at 2016, as this represented the start of the plan period when the draft Shropshire Local Plan was being prepared. The consultation material produced to inform preparation of the draft Shropshire Local Plan documents this.

4.8. Similarly, the housing and employment land guidelines for all settlements within draft Policies S1-S20 would need to be amended to exclude the housing and employment land completed prior to 2020.

4.9. This is again because these proposed guidelines were directly informed by the supply at 2016, as this represented the start of the plan period when the draft Shropshire Local Plan was being prepared and this

formed the basis for discussions with communities. Again, documented within the consultation material produced to inform preparation of the draft Shropshire Local Plan.

- 4.10. As such, a range of Main Modifications would be required to the draft Shropshire Local Plan in order to reflect this change. This would include:
 - a. The introduction to the draft Shropshire Local Plan.
 - b. Draft policies, including SP2, SP7, SP13, DP1, DP2, DP3, DP30 and S1-S20.
 - c. The explanation to a number of draft Policies, including those referenced above.
 - d. Appendices 5 and 6 of the draft Shropshire Local Plan.
- 4.11. Again, it could also lead to further debate over whether the start of the plan period should be updated again as the examination process continues.
- 4.12. As such, upon reflection Shropshire Council's clear preference is for the start of the Plan period to remain 2016, unless you consider that a change to 2020 is required to ensure the draft Shropshire Local Plan is 'sound'.

5. Saved Policies

- 5.1. Paragraph 6 of ID28 addresses the means by which relevant policies within the SAMDev Plan would be 'saved'. It requested that the Council provide further information on how this is intended to be achieved.
- 5.2. Within Appendix 1 of GC20 three initial mechanisms were identified to 'save' the relevant policies within the SAMDev Plan – one of which reflected the approach already proposed in the draft Shropshire Local Plan.

- 5.3. Within your response to GC20 (within correspondence referenced as ID33) you provided the following advice:

“Turning now to appendix 1 of your letter, Mrs Dillon and I have looked at this and given it a great deal of thought. Our view is that whilst you can retain policies in your existing plan you cannot save parts of them by striking through text as there is no mechanism for this. To do this you would have to replicate all of the amended policies in an appendices to the emerging plan. This would make the emerging plan very long and difficult for future users to navigate. Moreover, these policies as you know are not before this examination.

Our advice would be to refer to the policies in appendix 2 of the emerging plan as is the case at present, but then add some wording into emerging Policy SP2 to make it clear that the housing and employment land requirement is made up of sites in the emerging plan and sites in appendix 2. You could also consider adding some wording to the beginning of the Place Plans section of the emerging plan as ‘supplementary text’ in order to provide further context to the policy situation for allocations within the Place Plan areas.”

- 5.4. Firstly, Shropshire Council would like to thank you for reflecting upon the initial mechanisms identified by the Council and providing your views on this matter.
- 5.5. Having considered ID33, Shropshire Council is in agreement that the proposed approach is both effective and appropriate.
- 5.6. The Council has identified two proposed modifications to implement this proposed approach, which are to:
- a. Include additional text in draft Policy SP2 of the draft Shropshire Local Plan to explain that the housing and employment land requirements will be implemented using a land supply that

comprises sites within the draft Shropshire Local Plan and sites already allocated within the SAMDev Plan, as identified within Appendix 2 of the draft Shropshire Local Plan.

b. Include additional text within the introduction to Section 5 of the draft Shropshire Local Plan explaining that 'saved' allocations and new allocations will contribute towards the achievement of the housing and employment land guidelines for settlements. Thereby providing further context to the settlement policies across the 18 Place Plan areas.

5.7. These proposed modifications are documented within the enclosed Updated Schedule of Proposed Main Modifications.

5.8. Shropshire Council considers that these proposed modifications provide greater clarity about the sites that contribute to the achievement of the proposed housing and employment land requirements within the draft Shropshire Local Plan.

5.9. Shropshire Council also considers that these modifications complement:

a. The existing references to sites already allocated within the SAMDev Plan (as identified within Appendix 2 of the draft Shropshire Local Plan), in both the explanation to draft Policy SP2 and in the draft settlement policies (S1-S18).

b. The previously proposed modification to Appendix 2 of the draft Shropshire Local Plan to update the list of proposed 'saved' site allocations to exclude sites that have been built out since 31st March 2019 and include the development guidelines and approximate provision figures from the SAMDev Plan for each 'saved' allocation (the location and extent of these 'saved' allocations are already illustrated on the draft Policies Map).

6. Gypsy and Traveller Transit Site Provision

- 6.1. Paragraphs 7-9 of ID28 address Gypsy and Traveller transit site provision. They include the following questions:
- a. Can the Council provide copies of the Cabinet Report and Cabinet Minutes regarding the proposed Gypsy and Traveller transit site on the examination webpage?
 - b. Can the Council update 'Table 7.9', the conclusion, and the executive summary of the Gypsy and Traveller Accommodation Assessment (GTAA) 2019 Update, as an addendum to this document?
 - c. Can the Council review the supporting text within the draft Shropshire Local Plan in response to the addendum to the GTAA 2019 Update?
 - d. Can the Council consider whether they wish to review the Gypsy and Traveller site needs within the GTAA 2019 Update in the light of the judgment *Lisa Smith v SSLUHC* [2022] EWCA Civ 1391 of 31st October 2022?
- 6.2. Shropshire Council has considered these questions and addresses each in turn.

a. Copies of the Cabinet Report and Cabinet Minutes regarding the proposed Gypsy and Traveller transit site

- 6.3. Shropshire Council can confirm that copies of the Cabinet Report and Cabinet Minutes regarding the proposed Gypsy and Traveller transit site to the north of Shrewsbury have been provided to the Programme Officer and have subsequently been made available on the examination webpage as an Examination Stage Document (reference GC21).

6.4. For information, a Planning Application (reference 23/00567/FUL) was submitted for the provision of this new transit site. This was subsequently withdrawn to allow the preparation of further additional technical assessments. It is anticipated that a new Planning Application for this proposal will be submitted shortly.

b. Prepare an Addendum to the GTAA 2019 Update

6.5. Shropshire Council has undertaken a review of Table 7.9, the conclusion, and the executive summary of the GTAA 2019 Update. This was informed by professional advice provided by our consultants Arc4.

6.6. Following this review an addendum to the GTAA 2019 Update has been prepared. This addendum has been provided alongside this correspondence to be made available on the examination webpage.

c. Review of supporting text within the draft Shropshire Local Plan

6.7. Following preparation of the addendum referenced above, Shropshire Council has undertaken a review of the supporting text within the draft Shropshire Local Plan.

6.8. As a result of this review, a number of main modifications are proposed to the explanation of draft Policy DP8, to reflect the additional information set out in the GTAA 2019 addendum. These proposed main modifications are documented within the enclosed Updated Schedule of Proposed Main Modifications.

d. Implications of the judgment Lisa Smith v SSLUHC [2022] EWCA Civ 1391 of 31st October 2022

6.9. Shropshire Council recognises the Court of Appeal's judgment in Lisa Smith v SSLUHC [2022] EWCA Civ 1391 of 31st October 2022 about the

interpretation and application of the Planning Policy for Traveller Sites (2015) (PPTS).

- 6.10. Having reviewed it and considered the implications of this case for the Council's published evidence (including the GTAA 2019 Update), the Council considers that it would not change the Council's approach to assessing the accommodation needs of Gypsies and Travellers for the purposes of the Local Plan review.
- 6.11. The Shropshire GTAA 2019 Update assesses the accommodation needs of all Gypsies and Travellers, with those relating to Travellers meeting the Annexe A definition in the PPTS identified as a proportion of the total identified cultural need. Thus, the housing needs of all ethnic Gypsies and Travellers are assessed, including those that may be deemed to have permanently ceased to travel and fall outside the definition of Gypsies and Travellers in the PPTS.
- 6.12. This is succinctly documented within the explanation to draft Policy DP8 of the draft Shropshire Local Plan, which includes a brief summary of the GTAA 2019 Update. This notes that it *"includes ethnic gypsies and travellers who fall outside the definition of Travellers in the PPTS who nonetheless are able to demonstrate a right to culturally appropriate accommodation."*
- 6.13. As such, it is not considered that the GTAA 2019 Update needs to be reviewed in the light of the judgment in *Lisa Smith v SSLUHC* [2022] EWCA Civ 1391 of 31st October 2022. However, the Council has separately addressed the required update of the GTAA requested in relation to Paragraph 8 of ID28.
- 6.14. The Council understands that it has a requirement to assess and meet the accommodation needs of all Gypsy and Travellers, irrespective of their travelling status. The conclusions of the GTAA 2019 Update confirm that all cultural need has been assessed and that for the

purposes of the Local Plan Review, it is expected that supply will be sufficient to meet this need.

- 6.15. Thus, the proposed approach to meeting the housing needs of Gypsies and Travellers within the draft Shropshire Local Plan will meet both the needs of those that comply with the definition of Gypsies and Travellers in the PPTS; and the needs of ethnic Gypsies and Travellers that fall outside the definition of Gypsies and Travellers in the PPTS, who nonetheless can demonstrate a right to culturally appropriate accommodation.

7. Unmet Housing and Employment Land Needs of the Association of Black Country Authorities (ABCA) and Policy SP2

- 7.1. Paragraphs 10-27 of ID28 address a range of issues related to housing and employment land.

Housing and Employment Topic Paper

- 7.2. Paragraphs 10-12 of ID28 address housing and employment land needs and requirements and culminate in a request for a Housing and Employment Topic Paper to address these matters.
- 7.3. Paragraph 22 of ID28 relates to the proposed strategy for achieving the housing and employment land requirement. It culminates in a request for the new Housing and Employment Topic Paper to document the proposed strategy.
- 7.4. Shropshire Council has sought to positively respond to these requests and has prepared a new Housing and Employment Topic Paper. This seeks to explain the Council's position with regard to housing and employment land needs and requirements, including the proposed

strategy for the distribution of development to achieve these proposed requirements.

7.5. For the avoidance of doubt, the content of this new Housing and Employment Topic Paper has been directly informed by the wider work undertaken in response to ID28 (particularly the additional Sustainability Appraisal and site assessment work undertaken in responses to paragraphs 17-21 of ID28). The Housing and Employment Topic Paper is enclosed with this response.

7.6. In summary, with regard to the housing and employment land requirements and the approach to the strategic distribution of planned development, the Housing and Employment Topic Paper concludes that:

- a. *Over the proposed plan period from 2016 to 2038, **a minimum of 30,800 new dwellings and a minimum of 300 hectares of employment land will be delivered**, of which 1,500 dwellings and 30ha of employment land are to contribute towards the unmet needs forecast to arise within the Black Country. The proposed housing and employment land requirements equate to around 1,400 dwellings and around 14ha of employment land per annum.*
- b. *To achieve a sustainable and appropriate pattern of development which also maximises investment opportunities, **new development will be focused in the 'urban areas'**, which consist of Strategic Centre of Shrewsbury, proposed Principal Centres, proposed Key Centres and proposed Strategic Settlements.*
- c. *Recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in 'urban areas' will be **complemented by appropriate new development** within Community Hubs, which are considered significant rural service centres; and to a lesser extent Community Clusters, which consist of settlements with aspirations to maintain or*

enhance their sustainability. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.

- 7.7. This therefore forms the basis for the proposed spatial strategy for the level and distribution of development across Shropshire.

Housing and Employment Land Need and Proposed Contributions to the Black Country

- 7.8. Paragraph 13 of ID28 specifies that *“The Council’s approach to identifying the housing and employment land needs derived within Shropshire itself is sound.”* It also specifies that *“In principle, the Council’s intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC.”* These conclusions are welcome.
- 7.9. Paragraphs 14-16 continue discussion of the unmet needs forecast to arise within the Black Country and conclude that proposed contributions are *“the starting point as there is agreement to revisit the unmet need with a view to providing further assistance once the local plans for the ABCA councils have been examined and adopted.”*
- 7.10. Shropshire Council acknowledges this conclusion and is committed to continued positive engagement through the duty to cooperate with the Black Country Authorities.

Further Sustainability Appraisal (SA) Assessment Work

- 7.11. Paragraphs 17-20 continue to address the proposed contribution to unmet needs forecast to arise within the Black Country, in the context of Sustainability Appraisal (SA). They raise concern about the

consideration of proposed contributions to the unmet needs forecast to arise within the Black Country when undertaking SA assessments.

7.12. Paragraph 20 concludes that *“Further SA work therefore needs to be undertaken to assess the likely effects of the proposed strategy – which is based on meeting Shropshire’s housing and employment needs and contributing towards unmet needs from the Black Country.”*

7.13. As such, Shropshire Council has undertaken further Sustainability Appraisal (SA) assessment work regarding the proposed housing and employment land requirements, including consideration of a range of reasonable options for each.

7.14. Consistent with ID28, within the additional SA assessment work an explicit distinction is made between Shropshire need and the proposed contribution to unmet needs forecast to arise within the Black Country.

7.15. The conclusions of this additional SA assessment work have been carefully considered and have informed proposals regarding the housing and employment land requirements for inclusion within the draft Shropshire Local Plan. These proposals and the relationship to need is documented within the new Housing and Employment Topic Paper.

Black Country Contribution

7.16. Paragraph 21 of ID28 explains that if the Council intend to contribute towards the unmet needs forecast to arise within the Black Country, for effectiveness this should be set out in the housing and employment land requirements of the draft Shropshire Local Plan.

7.17. As documented within the further SA assessment work and new Housing and Employment Topic Paper, Shropshire Council continues to consider that the proposed contributions of 1,500 dwellings and 30ha of employment land towards the unmet needs forecast to arise within the

Black Country are appropriate and should be included within the draft Shropshire Local Plan.

- 7.18. The draft Shropshire Local Plan includes explicit reference to these proposed contributions within the explanation to draft Policy SP2. However, in seeking to positively respond to ID28, a main modification is proposed to specify that these contributions constitute part of the proposed housing and employment land requirements within draft Policy SP2 itself.

Sites to Accommodate Proposed Contributions to the Unmet Needs Forecast to Arise in the Black Country

- 7.19. Paragraph 21 of ID28 also specifies that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.
- 7.20. Specifically, it states *"...the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan."*
- 7.21. To ensure the effectiveness of the draft Shropshire Local Plan, Shropshire Council has undertaken additional SA and site assessment work to inform the identification of the site or sites to accommodate the proposed contributions of 1,500 dwellings and 30ha of employment land towards unmet needs forecast to arise within the Black Country.
- 7.22. This scope and conclusions of this assessment work are explained within the enclosed additional SA and site assessment work.
- 7.23. In conclusion, a series of sites have been identified to accommodate the proposed contributions of 1,500 dwellings and 30ha of employment land towards unmet needs forecast to arise within the Black Country. These

sites and a brief summary of the reasons for their identification are documented within Table 7.1.

7.24. The additional SA assessment work also considered the sustainability of the proposed contributions and approach / sites to accommodate contributions to unmet needs forecast to arise within the Black Country through the updated SA assessment of draft Policy SP2. Reflecting the outcome of this work, a series of proposed modifications are documented within the enclosed Updated Schedule of Proposed Main Modifications.

Table 7.1: Sites Identified to Accommodate the Proposed Contributions to the Unmet Needs Forecast to Arise in the Black Country

Site Reference	Site Name	Specific Policy	Total Capacity	Black Country Contribution	Summary
BRD030	Tasley Garden Village, Bridgnorth	S3.1	1,050 dwellings 16ha employment land New local centre 20ha of green infrastructure and a 19ha linear park	600 dwellings	<p>Bridgnorth is located in south-east Shropshire with a functional relationship to the Black Country. It benefits from strong road links to the Black Country via the A454 corridor.</p> <p>Bridgnorth is a principal centre and performs a strategic role in the east of Shropshire.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
SHF018b & SHF018d	Land east of Shifnal Industrial Estate, Upton Lane, Shifnal	S15.1	39 hectares (15.6ha net development)	30ha of employment land	<p>Shifnal is located in east Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shifnal is a key centre and a focus for investment, employment, housing and development on the M54/A5 strategic corridor.</p> <p>The site constitutes a proposed strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre.</p> <p>The site can accommodate a sizeable contribution towards the unmet employment land needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that exceptional circumstances exist to justify the release of this land for employment, as documented within the new Green Belt Topic Paper.</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Site Reference	Site Name	Specific Policy	Total Capacity	Black Country Contribution	Summary
SHR060, SHR158 & SHR161	Land between Mytton Oak Road and Hanwood Road, Shrewsbury	S16.1	1,500 dwellings 5ha of employment land	300 dwellings	<p>Shrewsbury is located in central Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 / A5 corridor and Shrewsbury-Wolverhampton railway line. Shrewsbury is the strategic centre of Shropshire and the primary focus for new development in the County.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
IRN001	Former Ironbridge Power Station	S20	Range of local services and facilities Around 1,000 dwellings Around 6ha of employment land Extensive green infrastructure	600 dwellings	<p>The Former Ironbridge Power Station is located in east Shropshire with a functional relationship to the Black Country. It benefits from road access to the M54 / A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.</p> <p>The Former Ironbridge Power Station is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Green Belt Topic Paper

- 7.25. Paragraph 23 of ID28 addresses the role of proposed Green Belt releases in supporting the housing and employment land supply to meet Shropshire needs and proposed contributions to unmet needs forecast to arise within the Black Country.
- 7.26. It culminates in a request for an updated Green Belt Topic Paper, setting out exceptional circumstances for releasing Green Belt land to meet the needs of Shropshire and as a separate exercise the exceptional circumstances for releasing land to meet the unmet needs of the Black Country.
- 7.27. In seeking to positively respond to this request, Shropshire Council has prepared an additional Green Belt Topic Paper.
- 7.28. However, it is important to note that a comprehensive Green Belt Exceptional Circumstances Statement (EV051) has already been prepared. Furthermore, a previous Green Belt Topic Paper (GC4g) was also prepared to provide a strategic overview of the role and purpose of proposed Green Belt releases.
- 7.29. Additionally, as documented within Table 7.1, through the additional SA and site assessment work four sites have been identified to accommodate the proposed contribution to the unmet needs of the Black Country. Of these, only one: SHF018b & SHF018d is located within the Green Belt – with the intention that it accommodates 30ha of employment land towards the unmet employment land needs forecast to arise within the Black Country.
- 7.30. As such, the new Green Belt Topic Paper seeks to:
- a. Provide a summary of the purpose of each of the proposed releases of land from the Green Belt to meet current or future needs arising

within Shropshire. This is supported by appropriate cross-references to other relevant material where appropriate.

- b. Provide a more detailed explanation of the purpose and exceptional circumstances for the proposed release of land from the Green Belt to accommodate a proposed contribution to the unmet needs forecast to arise within the Black Country.

Need for Consultation

- 7.31. Paragraph 24 of ID28 explains that it is necessary to address the issues raised in paragraphs 10-23 of ID28 in order for the plan to be found sound. Shropshire Council recognises this conclusion and within this response and the accompanying material has sought to positively respond to the conclusions reached.
- 7.32. Paragraph 24 indicates that following the submission of the full response to ID28, you will determine whether there is a need for further public consultation. Shropshire Council appreciates your consideration of this matter and will of course positively respond to your conclusions.

Local Plan Review Mechanism

- 7.33. Paragraph 25 of ID28 addresses the Local Plan review process. It states that such a review *“could be dealt with by way of an early review trigger built into policy SP2 or by relying on the statutory 5-year review process set out in the Framework”* and requests that the Council provide its formal views on these alternatives.
- 7.34. Shropshire Council very strongly favours the use of the statutory 5-year review process set out in the National Planning Policy Framework (NPPF).

- 7.35. There are a number of factors which inform this position. In summary, the statutory 5 year review process:
- a. Is the mechanism that Government has introduced for reviewing Local Plans.
 - b. Is a cycle with which many within the industry and Shropshire's communities are familiar.
 - c. Provides much needed stability and certainty regarding the policy framework in an area for individuals, communities, developers and decision makers. One of the issues with other mechanisms is the considerable uncertainty about whether / when a review will be 'triggered'.
 - d. Provides a better opportunity to focus on post adoption implementation and delivery. This implementation process is crucial, as without it the value of the Local Plan is diminished.
 - e. Is appropriately aligned with the timescales for the preparation of the Local Plans within the Black Country Authorities in order to support ongoing cross boundary discussions.

Monitoring Indicators

- 7.36. Paragraph 26 of ID28 addresses monitoring indicators and concludes that there is a need for indicators associated with the delivery of the proposed contributions to the unmet needs forecast to arise within the Black Country.
- 7.37. Shropshire Council has identified proposed modifications which seek to respond to this conclusion, which are documented within the enclosed Updated Schedule of Proposed Main Modifications.

Main Modifications

- 7.38. Paragraph 27 of ID28 explains that any main modifications resulting from the issues addressed within Paragraphs 10-26 of ID28 need to be appropriately documented and submitted to the examination.
- 7.39. Shropshire Council has identified a series of proposed modifications informed by the additional work undertaken in response to Paragraphs 10-26 of ID28. These proposed modifications are documented within the enclosed Updated Schedule of Proposed Main Modifications and Updated Schedule of Proposed Minor (Additional) Modifications.

8. Habitat Regulations Assessment

- 8.1. Paragraph 28 of ID28 addresses the Habitat Regulations Assessment (HRA) of the draft Shropshire Local Plan, specifically with regard to the Clun catchment.
- 8.2. It requests that Shropshire Council engages with Natural England and the Environment Agency regarding the Written Ministerial Statement (WMS) entitled 'Statement on improving water quality and tackling nutrient pollution', with a view to updating the prepared Statements of Common Ground (SoCG).
- 8.3. It also asks that following this engagement, the Council should advise on the implications for the latest position in the draft Shropshire Local Plan and whether any outstanding issues might be addressed through further proposed Main Modifications.
- 8.4. Proactive engagement between Shropshire Council and Natural England is currently ongoing with regard to this matter. The Council will provide further updates on this matter in due course.

9. Green Belt – RAF Cosford

- 9.1. Paragraphs 29-32 of ID28 address RAF Cosford. They explain that you have concluded that RAF Cosford should remain in the Green Belt, because:
- a. There is *“no evidence before us to demonstrate that the site’s Green Belt status has in anyway prevented it being developed in a manner consistent with its use as an RAF base or indeed related activities such as training facilities and domestic accommodation”*.
 - b. *“Paragraph 143(b) of the Framework which advises that when defining Green Belt boundaries, plans should not include land which it is unnecessary to keep permanently open. However, it seems that the site has large areas of undeveloped land which, if developed, could harm openness of the surrounding Green Belt land.”*
 - c. *“It would also make it more difficult for the Council to control future non-military related development on the site as other general development management policies would apply.”*
- 9.2. Whilst of course disappointed, Shropshire Council accepts the reasoning and conclusions in your Interim Findings. As such, appropriate main modifications are proposed. In summary these proposed modifications involve:
- a. The deletion of draft Policy S21 and its explanation.
 - b. Appropriate amendments to draft Policies SP11 and S1 and their explanations.
 - c. Other necessary amendments for the purpose of consistency.
- 9.3. Given the extensive built form that exists on the RAF Cosford site and the fact that there are known development aspirations / opportunities, Shropshire Council considers it is important to recognise within the

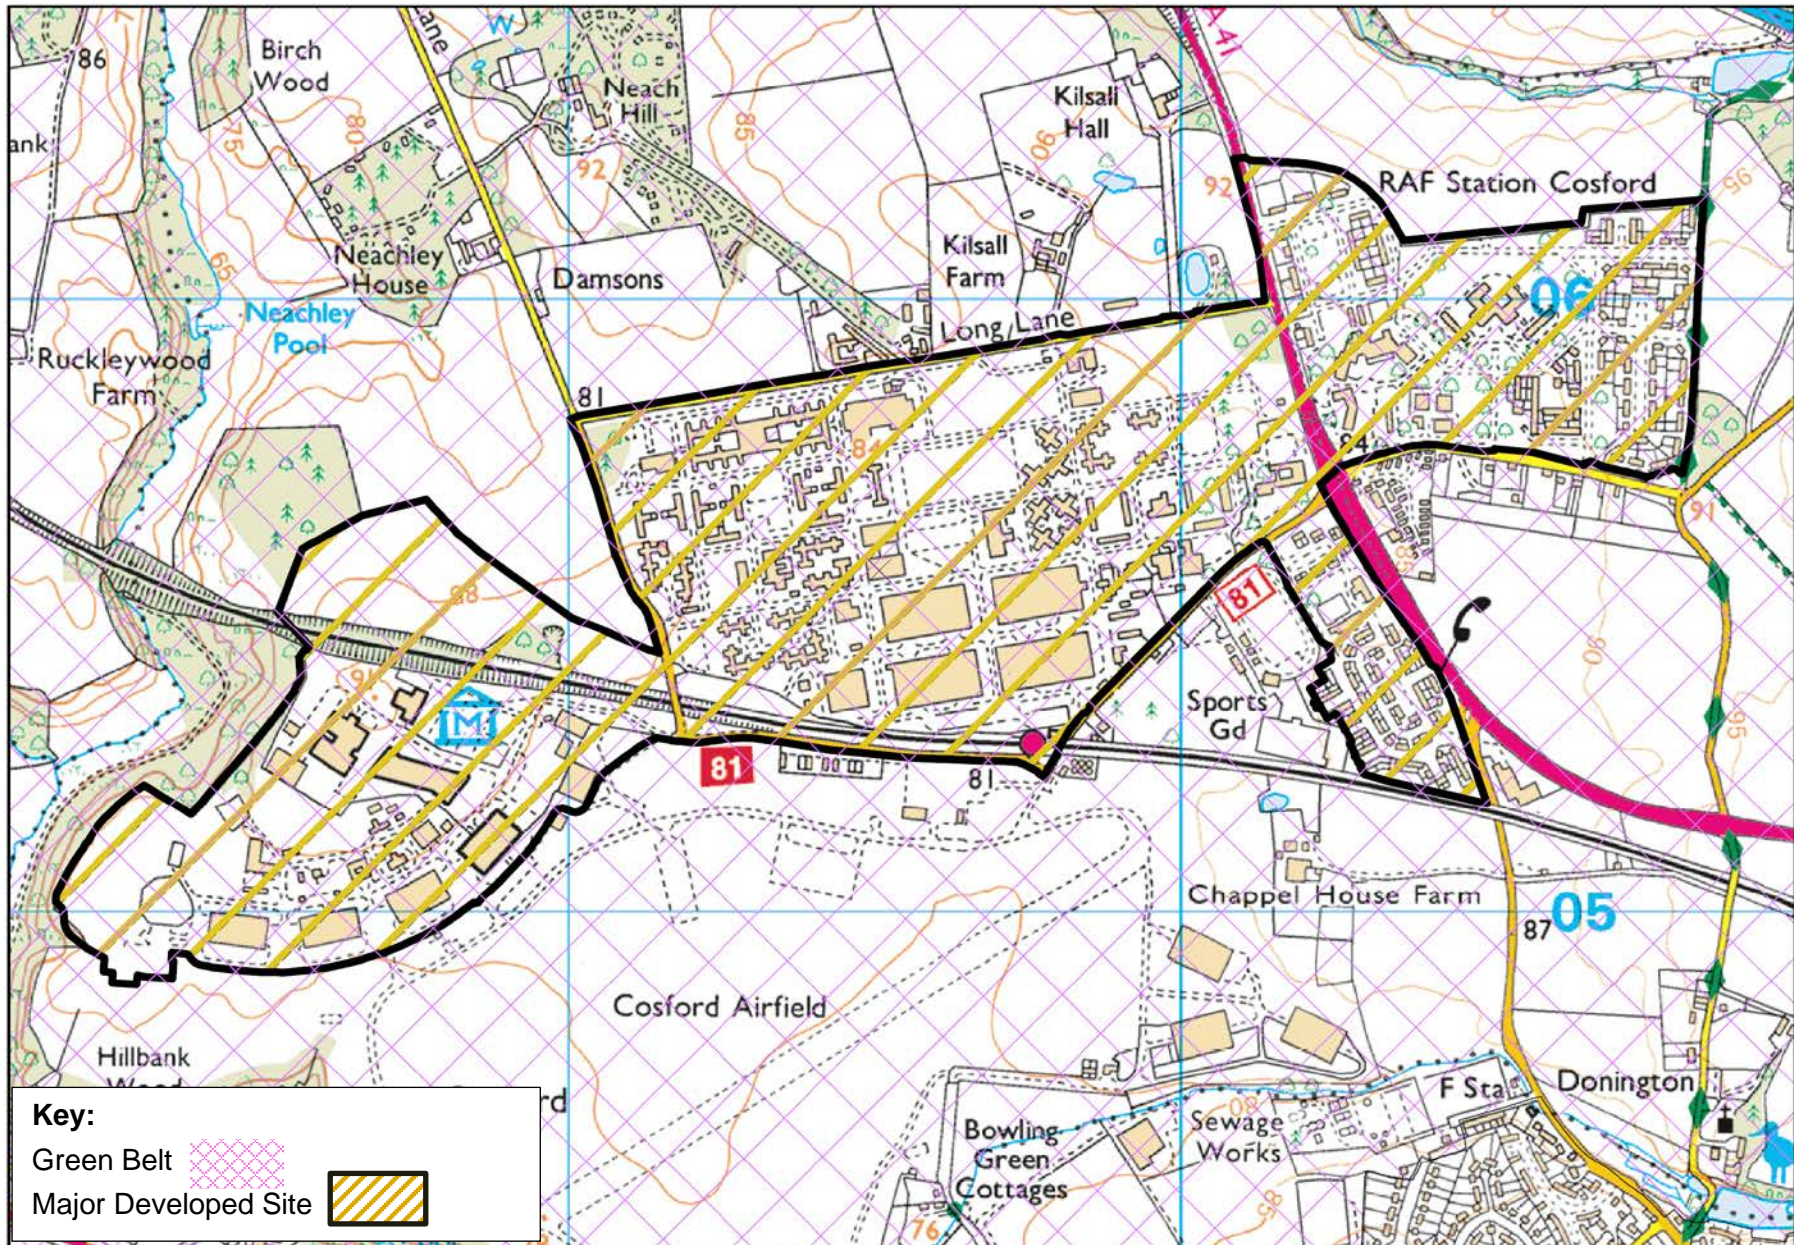

draft Shropshire Local Plan that RAF Cosford is a major developed predominantly brownfield site located within the Green Belt.

- 9.4. It is also important to recognise that this is a consideration when determining whether very special circumstances exist for development within the Green Belt - this position is consistent with that within the adopted Local Plan and is responsive to the conclusions you have reached within your Interim Findings.
- 9.5. As such, it is proposed that this is reflected within the modifications to draft policies SP11 and S1.
- 9.6. These proposed modifications are documented within the enclosed Updated Schedule of Proposed Main Modifications and Updated Schedule of Proposed Minor (Additional) Modifications.
- 9.7. Modifications will also be required to the draft Policies Map to remove reference to the RAF Cosford Strategic Site and include reference to the RAF Cosford Major Developed Site, this will be undertaken in due course.
- 9.8. For information, the proposed extent of the major developed predominantly brownfield component of the RAF Cosford site, which it is proposed will be reflected on the Policies Map, is identified in Figure 9.1.

Figure 9.1: Extent of the Proposed RAF Cosford Major Developed Site

10. Infrastructure Delivery Plan (IDP) and Strategic Funding Statement (SFS)

- 10.1. Paragraphs 33-34 of ID28 address infrastructure.
- 10.2. Paragraph 33 of ID28 advises the Council to treat the Infrastructure Delivery Plan (known in Shropshire as the Strategic Infrastructure and Investment Plan (GC4t)) as a 'live document' and to continue populating it as further information becomes available.
- 10.3. Shropshire Council recognises the importance of having a robust understanding of the infrastructure required to support development proposals within the draft Shropshire Local Plan. However, the strategic nature of the Local Plan can mean providing detailed assessments will be challenging.
- 10.4. However, Shropshire Council very much recognises the importance of continuing to enhance its understanding of infrastructure requirements across Shropshire, and in particular the infrastructure required to support the development proposals within the draft Shropshire Local Plan.
- 10.5. The Council therefore welcomes the recommendation and strongly embraces the principle of the Strategic Infrastructure and Investment Plan (GC4t) being viewed as a 'live document' that should be continued to be populated as further information becomes available.
- 10.6. Indeed, as documented within the Strategic Infrastructure and Investment Plan (GC4t) itself *"It is important that this Strategic Infrastructure and Investment Plan provides a 'live' framework, enabling the alignment of future planning, prioritisation, and delivery. It can only provide a snapshot in time using the best available data and assumptions from Shropshire's strategic providers. The Plan will be subject to an annual review and agreement via Shropshire's Strategic*

Infrastructure and Investment Network and informed with local intelligence via the annual Place Plan review.”

- 10.7. Shropshire Council would note that reflecting the 'live' nature of infrastructure planning in Shropshire, a comprehensive update of the Place Plans (EV067.01-EV067.18) that identify infrastructure needs and priorities is currently ongoing.
- 10.8. Further information regarding the infrastructure needed to support new development and the infrastructure priorities and investment strategies of the main infrastructure providers in Shropshire are also currently being sought through productive discussions with site promoters and the Strategic Infrastructure and Investment Network. This Network includes representatives from several partner organisations, including the NHS, National Highways, Utility Providers and Network Rail, as well as ongoing contributions from the Council's own Education service in assessing school place planning requirements in response to planned development.
- 10.9. This work will in sequence inform future updates of the Strategic Infrastructure and Investment Plan (GC4t).
- 10.10. Paragraph 34 of ID28 requests timescales for the update of the Strategic Funding Statement, known as the Annual Infrastructure Funding Statement in Shropshire.
- 10.11. Shropshire Council can confirm the Annual Infrastructure Funding Statement for Shropshire was last updated for the period 01/04/2021 - 31/03/2022. This was published in December 2022 and a copy is enclosed with this response.
- 10.12. The Annual Infrastructure Funding Statement (2022) presents an infrastructure list (see pages 9-21) which *“sets out the potential infrastructure projects or types of infrastructure which Shropshire*

Council intends to be wholly or partly funded by the Community Infrastructure Levy (CIL)."

10.13. It should be noted that this list is subject to a number of caveats, including:

"This report will not dictate how Shropshire Council must spend CIL, but will set out Shropshire Council's intentions."

"The intention is for the infrastructure list to be reviewed regularly. Future iterations of the list will include additional infrastructure projects where they are considered necessary to support new development."

"items not included on this infrastructure list can continue to be CIL funded in advance of being included in any future infrastructure list."

"The list refers only to the use of the CIL local and strategic funds by Shropshire Council." As such, it does not include use of the CIL 'neighbourhood fund' which is distributed to Town and Parish Councils.

10.14. The content of the Infrastructure List within the Annual Infrastructure Funding Statement is directly linked to and informed by the Place Plans and Strategic Infrastructure and Investment Plan.

10.15. Shropshire Council envisages that the number of projects and level of specificity within the Annual Infrastructure Funding Statement will increase on completion of the Place Plan updates and the ongoing discussions within the Strategic Infrastructure and Investment Network.

11. Five-year Housing Land Supply

11.1. Paragraphs 35-36 of ID28 address the five year housing land supply.

11.2. Paragraph 35 of ID28 explains your finding that you cannot 'fix' the five year housing land supply in Shropshire. This position and your reasoning is acknowledged by Shropshire Council.

- 11.3. Paragraph 36 of ID28 explains your finding that you might not be able to fully consider our 5-year housing land supply and to come to a conclusion on whether the Council do have a 5-year supply of housing land. This is because the Council are relying on a number of 'saved' site allocations in the SAMDev Plan which are not subject to examination.
- 11.4. The Council would note that the process of determining whether a 5-year housing land supply exists during the examination of a draft Local Plan will inevitably involve the consideration of sites that are not proposed for allocation within the draft Local Plan that is the subject of the examination.
- 11.5. This is because a housing land supply invariably extends beyond sites that are proposed for allocation within a draft Local Plan.
- 11.6. For instance, as summarised within Paragraph 3.8 of the explanation to draft Policy SP2 of the draft Shropshire Local Plan: *"The types of site available to achieve the housing requirement in Shropshire are varied and extensive. They include small, medium and large:*
- a. Sites with planning permission or prior approval;*
 - b. Sites with a 'resolution to grant' planning permission;*
 - c. Saved SAMDev Plan allocations;*
 - d. Local Plan allocations; and*
 - e. Windfall opportunities, where sites comply with the requirements of this Local Plan."*
- 11.7. These sources of housing land supply extend beyond those that are specifically allocated within the draft Shropshire Local Plan. They also extend beyond the proposed 'saved' allocations within the adopted Local Plan.

11.8. This is not considered to be unique to Shropshire or indeed in any way unusual. Ultimately the Council remain keen for the examination to consider the housing land supply identified in Shropshire.

11.9. For information, an updated Five Year Housing Land Supply (2022 base date) based on the housing requirement proposed within the draft Shropshire Local Plan, is enclosed with this document.

12. Housing Requirement

12.1. Paragraph 37 of ID28 addresses the housing and employment land requirements. It explains your finding that the housing and employment land requirements should be expressed as definitive 'minimum' figures for both monitoring purposes and for the effectiveness of the plan.

12.2. Whilst the Council is somewhat surprised by this conclusion, it is accepted. A series of proposed modifications have therefore been identified in order to respond to this conclusion.

12.3. This change to expressing both the housing and employment requirements as minimum figures has been a significant consideration when undertaking the additional work regarding the proposed housing and employment land requirements. The Housing and Employment Topic Paper provides more information on this.

13. Specialist Housing / Older Persons Housing

13.1. Paragraphs 38-41 of ID28 address the requirement to meet the housing needs of older people. In summary, these paragraphs recognise that the Council's evidence indicates a higher proportion of older people residing in the Shropshire Council's administrative area than the national average. Given this, you consider there is clear evidence of a higher-than-average need for specialist housing for older people and

that either the policy should include indicative need figures, or the Plan should contain a specific policy to deal with specialist housing.

- 13.2. Shropshire Council has considered this matter and on reflection has prepared a specific policy to address the housing needs of older people and those with disabilities and special needs, to be included within the draft Shropshire Local Plan. The preparation of this draft Policy has been informed by additional SA assessment work and proactive discussions with colleagues in the Housing and Adult Social Care Teams at Shropshire Council.
- 13.3. It is considered that this policy represents an effective means of ensuring that the housing needs of older people are met in a way that is responsive to both the current Adult Social Care Strategy for Shropshire (2018) and the emerging People's Strategy for Shropshire (currently in development). Crucially, it is also responsive to the geography and characteristics of Shropshire.
- 13.4. This draft policy is appended to this document. Appropriate proposed main modification are also identified within the enclosed Updated Schedule of Proposed Main Modifications.
- 13.5. *Please Note: The version of this draft policy integrated into the track changes version of the draft Shropshire Local Plan includes updated policy cross-references resulting from proposed main modifications. The version within the Appendix of this document and the Updated Schedule of Proposed Main Modifications maintains the policy references as at the submission draft of the Shropshire Local Plan.*

14. Policy SP4 – Sustainable Development

- 14.1. Paragraph 42 of ID28 addresses draft Policy SP4. It notes that during the hearings it was agreed that a Main Modification would be introduced

to delete draft Policy SP4 and instead rely on national policy in the context of the presumption in favour of sustainable development.

14.2. Accordingly, Shropshire Council has identified proposed modifications to the Updated Schedule of Proposed Main Modifications, submitted alongside this correspondence.

14.3. The Updated Schedule of Minor (Additional) Modifications includes proposed amendments to policy titles to reflect this deletion, but the numerous cross references are currently documented as a single entry. However, the 'track changes' version of the draft Shropshire Local Plan includes hyperlinks on policy references to aid navigation, these update to reflect the policy references resulting from the proposed modifications to date.

15. Policy SP5 – High-Quality Design

15.1. Paragraph 43 of ID28 addresses draft Policy SP5. It notes that the Council agreed to consider whether a reference should be included to the National Design Guidance within draft Policy SP5. Shropshire Council considers that it would be appropriate to include a reference to the National Design Guidance within draft Policy SP5.

15.2. The Council also recognises the role of Local Design Codes within the National Design Guidance and the important role that such documents will play in ensuring high-quality design in the future. The Council considers that a specific reference to Local Design Codes within draft Policy SP5 would also be appropriate.

15.3. Shropshire Council has therefore identified appropriate proposed modifications within the Updated Schedule of Main Modifications submitted alongside this correspondence.

16. Policy SP6 – Health and Wellbeing

16.1. Paragraph 44 of ID28 addresses draft Policy SP6. It recognised that the Council had agreed to consider two matters in Policy SP6 and whether to propose any main modifications to the Policy.

16.2. These are:

- a. Should criterion 5a refer to ‘improved’ health facilities.
- b. What is the expectation of criterion 10 regarding the need for a Health Impact Assessment for all major development proposals and is this appropriate.

16.3. Shropshire Council has considered these questions and addresses each in turn.

a. Criterion 5

16.4. Shropshire Council has reviewed criterion 5a of draft Policy SP6. The intention of this paragraph was to support existing and provision of new health facilities to serve an expanding population.

16.5. On reflection, it is considered that including reference to ‘improved’ health facilities alongside existing references to ‘maintenance’ and ‘delivery’ of health facilities provides greater clarity on this matter. As such, Shropshire Council has identified appropriate proposed modification within the Updated Schedule of Main Modifications submitted alongside this correspondence.

b. Criterion 10

16.6. With regard to the expectations of criterion 10, Shropshire Council has considered three questions:

- a. Is it reasonable to include a policy requirement requiring a Health Impact Assessment (HIA)?

- b. Is the trigger point of 'all major development' being required to undertake a HIA appropriate?
- c. Is the scope of the HIA appropriate – as established within the wider requirements of draft Policy SP6?

16.7. With regard to whether it is reasonable to include a policy requirement to undertake a HIA, The Public Health England Guidance "*Health Impact Assessment in spatial planning: A guide for local authority public health and planning teams*" (October 2020) provides guidance on the use of Health Impact Assessment (HIA) in the planning system.

16.8. It specifies that "*Local authorities are encouraged to adopt policies that require an HIA to be carried out for certain types of developments in their local plan or spatial development processes. Such a requirement may support local health and wellbeing priorities (Annex 2) as well as the local health and wellbeing policy. An HIA policy requirement may also support other health-promoting policies such as those relating to sustainable transport, sport and play, housing, access to healthy and affordable food and green infrastructure.*"

16.9. Furthermore, the National Planning Practice Guidance (NPPG) on Health and Wellbeing (ID53) recognises within paragraph 5 that "*A health impact assessment is a useful tool to use where there are expected to be significant impacts.*"

16.10. As such, it is clear that the principle of requiring a HIA within Local Plan policy is appropriate and consistent with national guidance.

16.11. With specific regard to the 'trigger' for undertaking a HIA, having regard to paragraph 5 of the NPPG (ID53) and the advice provided within the afore-referenced Public Health England Guidance, the trigger in criterion 10 of draft Policy SP6 is also considered to be appropriate.

- 16.12. With regard to the 'scope' of a HIA, having regard to paragraph 5 of the NPPG (ID53), advice provided within the Public Health England Guidance and discussions during the relevant hearing session, it is considered criterion 10 of draft Policy SP6 should be modified to make it clear that the expectation is that major development proposals are required to undertake HIA screening. A full HIA would only be required in circumstances where HIA screening concludes it is necessary.
- 16.13. Shropshire Council has prepared an initial draft template of the HIA screening and associated guidance, which are enclosed with this document.
- 16.14. Reflecting this conclusion, Shropshire Council has identified appropriate proposed modifications to both draft Policy SP6 and its explanation, within the Updated Schedule of Main Modifications submitted alongside this correspondence.

17. Policy SP10 – Managing Development in the Countryside

- 17.1. Paragraph 45 of ID28 addresses draft Policy SP10. Specifically, it addresses the agreed modification to this draft Policy to dis-apply the policy requirements to sites in the countryside that are allocated for development in the draft Shropshire Local Plan or any other adopted Development Plan Document.
- 17.2. Accordingly, Shropshire Council has identified appropriate proposed main modification within the Updated Schedule of Main Modifications submitted alongside this correspondence.

18. Policy SP12 Shropshire Economic Growth Strategy

- 18.1. Paragraph 46 of ID28 addresses draft Policy SP12. Within this paragraph you have expressed concern regarding the effectiveness of this draft policy as *“a great deal of it seems to be more of a vision rather than a strategic policy.”*
- 18.2. Shropshire Council has reflected on this concern and proposed a main modification to delete this policy within the Updated Schedule of Main Modifications submitted alongside this correspondence.
- 18.3. Shropshire Council will regard the Shropshire Economic Growth Strategy as a material consideration in future planning decisions following the deletion of draft Policy SP12.

19. Policy SP13 – Delivering Sustainable Economic Growth and Enterprise

- 19.1. Paragraph 47 of ID28 addresses draft Policy SP13, documenting the agreement to integrate Figure SP13.1 into draft Policy SP13.
- 19.2. Shropshire Council has identified appropriate proposed main modifications within the Updated Schedule of Main Modifications submitted alongside this correspondence.
- 19.3. These proposed main modifications further introduce Figure SP13.1 as a new criterion 8 in Policy SP13. This provides a ‘quality ranking’ of sites within the employment land supply.
- 19.4. The proposed main modifications also include further guidance within the explanation to Policy SP13 on the implications of this ‘quality ranking’ of sites for the implementation of the policy and also that this ‘quality ranking’ of sites will be further explained and monitored annually in the Authority Monitoring Report (AMR).

20. Strategic Settlements and Sites

- 20.1. Paragraphs 48-51 of ID28 address the proposed Strategic Settlements and Strategic Site.
- 20.2. Paragraph 48 confirms that there are no specific comments on draft Policy S20 (Former Ironbridge Power Station) and no further comments on draft Policy S21 (RAF Cosford) already discussed earlier in ID28.
- 20.3. Paragraphs 49 and 50 relate to draft Policy S19 (Clive Barracks, Tern Hill), raising concerns about the viability and deliverability of this proposed allocation and requests further evidence to demonstrate that necessary infrastructure is deliverable.
- 20.4. To respond positively to this request, Shropshire Council has proactively engaged with the site promoter regarding the identified concerns.
- 20.5. Following this engagement both parties have agreed an addendum to the previously submitted Statement of Common Ground (SoCG) between the two parties, which is enclosed with this response.
- 20.6. The SoCG and its addendum demonstrate the site is viable and deliverable and that infrastructure necessary to serve future occupants will be delivered at the appropriate stages in the delivery of this site. This investment will also benefit the surrounding community.
- 20.7. With specific regard to assumptions on delivery timescales, Shropshire Council would note that:
 - a. Delivery timescale assumptions are not a result of concerns about site viability or deliverability, but reflect the timing of site disposal (expected in 2029).

b. Delivery timescale assumptions have been informed by and recognise the need to deliver necessary infrastructure at appropriate stages of the development.

c. Delivery timescale assumptions have been discussed and agreed with the site promoter. This is documented within the SoCG which includes *“Subject to the adoption of the Shropshire Local Plan (2016 – 2038), and determination of the future planning application(s) for Clive Barracks, the below delivery schedule should be used to indicate housing delivery at the site. This schedule has been informed by the evidence base and represents an appropriate and deliverable delivery trajectory for the site.”*

20.8. As also documented within the SoCG and its addendum, the promotion of the site and the Indicative Masterplan that has been prepared have been informed by a suite of technical evidence. This technical evidence provides confidence that infrastructure will be delivered at appropriate points within the development project.

20.9. The SoCG and its addendum again records the agreement reached on this matter, stating *“Any phasing of the delivery of the infrastructure requirements will be agreed with SC and the appropriate stakeholders ahead of and during determination of a planning application. These timescales will appropriately reflect the policy requirements within draft Policy S19 and the wider construction of the site.”*

20.10. Shropshire Council would also note that identification of proposed allocations has been informed by a proportionate and robust site assessment process (summarised within the Appendices of the Sustainability Appraisal and Site Assessment Environmental Report of the Draft Shropshire Local (SD006.01)) and a Delivery and Viability Study (2020) (EV115.01).

- 20.11. Shropshire Council considers Clive Barracks, Tern Hill is viable and deliverable and can deliver a policy compliant development.
- 20.12. Paragraph 51 of ID28 relates to concerns regarding the vagueness of policy wording within draft Policy S19. The intention of draft Policy S19 was to provide sufficient certainty about policy requirements, whilst maintaining flexibility. Furthermore, it is important to note that the wider policies within the draft Shropshire Local Plan expand on the policy requirements within draft Policy S19.
- 20.13. However, Shropshire Council has given this concern due consideration and has identified a series of proposed main modifications. These proposed modifications provide greater clarity on the intention of each policy requirement, including through appropriate cross referencing to other relevant policies within the draft Shropshire Local Plan.
- 20.14. These proposed main modifications are identified within the Updated Schedule of Main Modifications submitted alongside this correspondence.

21. Strategic Flood Risk Assessment

- 21.1. Paragraph 52 of ID28 relates to the Council's Strategic Flood Risk Assessment (SFRA) and requests a note of clarification regarding the methodology and data relied upon with regard to hydraulic modelling and fluvial flood risk.
- 21.2. Shropshire Council has engaged with our consultants (JBA Group) that undertook both the Stage 1 and Stage 2 SFRA's to inform the preparation of the draft Shropshire Local Plan and they have prepared the requested note of clarification.
- 21.3. It is understood from this note that:
- a. The SFRA utilised a cautious and robust methodology.

- b. At the time that the SFRA was undertaken, it was based on best available information.
- c. The hydraulic modelling undertaken within the SFRA is considered to be comprehensive and robust.
- d. The approach to climate change modelling undertaken within the SFRA resulted in allowances that were generally comparable to those provided within the more recent guidance.

21.4. Furthermore, it is important to note that the site guidelines for all sites that contain a portion of the site within Flood Zones 2 and/or 3 specifically include a site guideline specifying that development will be excluded from these portions of the site.

21.5. In addition, draft Policy DP21 includes a requirement to undertake site specific flood risk assessments (FRA) for all development proposals that are:

"a. In Flood Zones 2 and 3;

b. In Flood Zone 1 if the site is 1 hectare or above;

c. In Flood Zone 1 where there are critical drainage problems;

d. On land which either the Shropshire SFRA (Levels 1 and 2) shows, or more recent information indicates, is at increased risk of flooding either now or in the future e.g. through the impact of climate change;

e. On land subject to other sources of flooding (surface water, groundwater, infrastructure/sewer failure, reservoir overflow) where development would introduce a more vulnerable use; and

f. On land in those catchments identified in the Shropshire SFRA Level 2 as being at highest risk from the cumulative impacts of development."
(my emphasis).

- 21.6. Draft Policy DP21 then explains the required scope of a FRA, stating
*“The FRA should demonstrate how flood risk, including residual risk, will be managed now and over the development’s lifetime, **taking climate change into account and with regard to the vulnerability of its users**. It should cover all sources of flooding and be proportionate to the scale and nature of the development and the flood risk involved. The FRA should show how the development has been designed to be resilient to both actual and residual flood risk...”* (my emphasis).
- 21.7. As such, these proposed policy requirements ensure that at the time of a development proposal all relevant sites are subject to FRA informed by the most up to date information at the time of the assessment, which ensures that flood risk is appropriately considered and informs these development proposals.
- 21.8. Within Paragraph 52 you also ask the Council to review the Statement of Common Ground (SoCG) with the Environment Agency (EA) and consider whether it needs to be updated in view of this. It is important to note that the EA were on the steering board for the SFRA. Following the completion of the Regulation 19 Consultation, the EA raised concerns that new climate change figures had emerged since the preparation of the SFRA. However, there is no suggestion from the EA that any site allocations are inappropriate as a result.
- 21.9. Shropshire Council has considered the SoCG with the Environment Agency and given the above, does not consider that it needs to be amended at this time.

22. Local Development Scheme

- 22.1. Paragraph 53 of ID28 addresses the Local Development Scheme (LDS) which provides the ‘Project Plan’ for the preparation of planning policy

documents over the next 3-year period. Within paragraph 52 you have requested that the LDS is updated and kept under review.

22.2. Shropshire Council has prepared an updated LDS enclosed with this response. The Council recognises the importance of keeping the LDS under review and will do so throughout the Local Plan examination.

23. Overall Conclusions

23.1. Paragraphs 54-58 of ID28 provide the overall conclusions. Having carefully considered the various matters you have raised within ID28, Shropshire Council has undertaken additional work and where appropriate identified further proposed modifications.

23.2. When you have considered this information, the Council would welcome your views and discussion of our next steps, including any need to consult on the information provided and the further proposed modifications, the need for further discussion of these matters during a mop-up hearing, and the timescales for the Stage 2 Hearings.

23.3. As recognised within your correspondence reference ID33, all parties are keen to progress to the Stage 2 Hearings as soon as possible.

Yours sincerely

Eddie West
Planning Policy and Strategy Manager
Shropshire Council

Draft DP Policy: Housing Provision for Older People and those with Disabilities and Special Needs

1. The housing needs of older people and those with disabilities and special needs will be met in a way that provides choice and importantly complements and facilitates the People's Strategy for Shropshire. A fundamental principle of the People's Strategy for Shropshire is supporting people to remain independent within their own homes and within their existing communities and support networks for as long as possible. The People's Strategy for Shropshire will be facilitated and complemented through the provision of accessible and adaptable housing and appropriate forms of specialist housing in accordance with the requirements of this Policy.

Accessible and Adaptable Housing

2. All housing specifically designed for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations.
3. On sites of 5 or more dwellings, at least 5% of the dwellings will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and a further 70% of the dwellings will be built to the M4(2) (accessible and adaptable dwellings) or higher standard within Building Regulations, unless site-specific factors indicate that step-free access cannot be achieved.
4. All dwellings on sites of less than 5 dwellings and the remaining dwellings on sites of 5 or more dwellings that are not subject to the requirements of Paragraph 3 of this Policy are strongly encouraged to achieve the M4(2) (accessible and adaptable dwellings) standard within Building Regulations or higher.
5. All housing designed to M4(3) (wheelchair user dwellings) standard within Building Regulations must also be designed to be 'friendly' to those with dementia and to those with disabilities and special needs.
6. All housing designed to M4(2) (accessible and adaptable dwellings) within Building Regulations is strongly encouraged to be designed to be 'friendly' to those with dementia and to those with disabilities and special needs.

Specialist Housing

7. All specialist housing for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and must also be designed to be 'friendly' to those with dementia and to those with disabilities and special needs.
8. Reflecting the People Strategy for Shropshire, and the principle of supporting people to remain independent within their own homes and within their existing communities and

support networks for as long as possible, new specialist housing provision for older people or those with disabilities and special needs will consist of:

- a. The forms of specialist housing which support independent living, including age-restricted housing; retirement/sheltered housing; or extra care housing; or
 - b. Nursing homes providing high-level care for those with dementia and/or complex needs; or
 - c. A combination of the above.
9. All specialist housing provision will integrate into rather than be apart (gated-off) from existing and new communities, recognising the social and sustainability benefits of multi-generational and inclusive communities.
 10. Ideally, specialist housing should be located where future occupiers can benefit from access to existing services and facilities. Where appropriate services and facilities are not already available, a range of supporting services and facilities will need be provided on sites where specialist housing is provided. Any services and facilities provided should be proportionate in scale to the type of specialist housing and ensure the scheme remains affordable.
 11. When providing specialist housing, opportunities to provide appropriate key worker accommodation for any associated care staff should be proactively considered.
 12. Specialist housing designed to meet the diverse needs of older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy and the requirements of other relevant Local Plan Policies (particularly Policies SP3-SP10, DP3, DP11 and Policies S1-S20) will be supported in appropriate locations within the development boundaries identified on the Policies Map.
 13. Specialist housing schemes that consist of 100% local needs affordable specialist housing for older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy, the requirements of Policy DP4 and the requirements of other relevant Local Plan Policies will be positively considered.
 14. Specialist housing that is consistent with the requirements of Paragraph 8 of this Policy and is agreed to be Use Class C2 development, will in addition to meeting the housing needs of older people also constitute a secondary employment use. These forms of specialist housing will therefore be considered an appropriate secondary employment use on mixed-use employment sites, where they are consistent with the requirements of Policy SP13; complement the existing and planned wider employment uses of the site; are served by appropriate infrastructure; and facilitate the delivery of the wider employment site, including through the provision of accesses, servicing and other infrastructure.
 15. On site allocations for 250 or more dwellings and all development sites for 250 or more dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 20% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy.

16. On site allocations for 150-249 dwellings and all development sites for 150-249 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 15% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. At the lower end of this category, it is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers, as they generally have lower operational and staffing costs and requirements.
17. On site allocations for 50-149 dwellings and all development sites for 50-149 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 10% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. It is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers as they generally have lower operational and staffing costs and requirements.
18. Specialist housing provided in accordance with Paragraphs 15-17 of this Policy that is consistent with the definition of affordable housing can also represent all or part of the contribution to affordable housing required in accordance with Policy DP4 of the Local Plan. However:
 - a. The mix of specialist housing provided across Shropshire should include both open market and affordable housing.
 - b. Affordable housing provision should not be concentrated only in affordable specialist housing, as it is important that the other forms of affordable housing are delivered, including for key workers such as the care staff for specialist housing.
 - c. As such, if it is considered that completions and commitments of specialist housing is concentrated in affordable tenures or if it is considered that affordable housing completions and commitments are concentrated in forms of specialist housing, specialist housing provision on a site may be required to be open market and similarly the affordable housing provision may be required to be general housing.
19. On site allocations, provision of a level of housing which results in the relevant settlements housing guideline being exceeded and/or the site allocations approximate site provision figure within the relevant Settlement Policy (S1-S20) being exceeded will be positively considered where:
 - a. This over-provision is a direct result of the provision of a significant quantity of specialist housing in excess of that required within Paragraphs 15-17 of this Policy,
 - b. Over provision is specialist housing of a type documented within Paragraph 8 of this Policy,
 - c. The development proposed remains an appropriate form of development on the site having regard to its characteristics and the character of the surrounding area, and

- d. The proposed development complies with the wider policies of the Local Plan, particularly Policies SP3, SP5, SP6, DP1, DP2, DP3, DP11, DP12, DP14-DP17, DP25, DP27, and DP28.
20. Proposals that result in the loss of existing specialist housing designed to meet the needs of older people or those with disabilities and special needs will be resisted unless:
- a. There is no longer an identified need for the existing form of specialist housing in the settlement and Shropshire as a whole; or
 - b. The needs will be met elsewhere within the settlement, preferably close to the existing specialist housing or in a preferential location for specialist housing; or
 - c. Redevelopment would provide an improved quality of a comparable category of specialist housing and associated facilities; or
 - d. Redevelopment would provide an alternative form of specialist housing which is identified within Paragraph 8 of this policy, demonstrably of greater need in Shropshire, and the provision of the specialist housing and associated facilities is of a high quality.

Explanation

Introduction

1. The Strategic Housing Market Assessment (SHMA) for Shropshire demonstrates that there is a higher proportion of older people living in Shropshire than the national average. Furthermore, it anticipates that over the plan period to 2038, the proportion of older people living in Shropshire and the number of single person households will increase at a faster rate than the national average.
2. The health and lifestyles of older people living within our communities inevitably varies and it is expected that this will remain the case in the future. Similarly, the housing needs and aspirations of older people in our communities will also inevitably differ.
3. Those with disabilities and special needs can include those with physical and/or mental health needs. Like older people, their health and lifestyles are diverse and this is reflected in their housing needs and aspirations.
4. The housing needs and aspirations of older people and those with disabilities and special needs will likely include:
 - a. The provision of appropriate adaptations to their homes.
 - b. Moving to new accessible and adaptable general needs housing.
 - c. Moving to an appropriate form of specialist housing.
5. Further information on accessible and adaptable general needs housing and specialist housing is provided later within this Explanation.
6. National Planning Practice Guidance on Housing for Older and Disabled People specifies that *“Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected*

to their communities and help reduce costs to the social care and health systems.” It also specifies that “The provision of appropriate housing for people with disabilities, including specialist and supported housing, is crucial in helping them to live safe and independent lives.”

People’s Strategy for Shropshire

7. The People’s Strategy for Shropshire includes the strategy for meeting the care and support needs of older people and those with disabilities and special needs. This strategy is underpinned by the key principle of:
Wherever possible, seeking to support older people and those with disabilities and special needs living in Shropshire to remain independent within their own homes, within their existing communities and with access to their established support networks.
8. This key principle is considered to be consistent with Government’s reform of Health and Adult Social Care, which is underpinned by a principle of sustaining people at home for as long as possible.
9. Importantly, this key principle has also been directly informed by and is responsive to our understanding of the needs and aspirations of the older people living in our communities, including through consideration of the Housing Need Survey undertaken for Shropshire and the ‘Right Home, Right Place Surveys’ undertaken for Parishes in Shropshire.
10. Furthermore, this key principle is responsive to the geography and characteristics of Shropshire. Specifically, Shropshire is a large, diverse and predominantly rural County with a very low population density across much of its geography. As such, the vast majority of our settlements are small both in terms of population and number of households. In these settlements it is not always appropriate to provide new adaptable and accessible housing or specialist housing – due to their size and location.
11. However, older people and those with disabilities and special needs living within these small rural settlements often have a very strong connection to their community and a clear preference to remain within it. In circumstances where these individuals have support or care needs, the only practicable means of meeting these needs, whilst also respecting their preference to remain within their existing community, it to provide support within their existing home.
12. As such, in implementing the People’s Strategy, where older people and those with disabilities and special needs require support, in the first instance this will be achieved through the provision of appropriate adaptations, equipment, assistive technology and if necessary domiciliary care to support them to continue to live independently within their existing home.
13. Given the rapid advancements to assistive technologies, it is considered that over the plan period to 2038, the ability to effectively provide support in this way will expand.

14. These various measures are generally outside the scope of the planning system. However, by seeking to positively influence the types of housing delivered in the future, the planning system can positively facilitate this strategy moving forwards.
15. Specifically, to facilitate this strategy in the future and also provide genuine choice for those older people and people with disabilities and special needs that require support and do wish to move to alternative general housing, it is essential that new development includes a significant quantity of properties designed to M4(2) (accessible and adaptable dwellings) or M4(3) (wheelchair user dwellings) standard within Building Regulations.
16. The National Planning Practice Guidance on Housing for Older and Disabled People explains that *“Accessible and adaptable housing enables people to live more independently, while also saving on health and social costs in the future. It is better to build accessible housing from the outset rather than have to make adaptations at a later stage – both in terms of cost and with regard to people being able to remain safe and independent in their homes.”*
17. It is considered that this strategy can also be complemented by the provision of appropriate quantities and forms of specialist housing that support independent living, as such provision allows support and care to be provided within the home, albeit not the current home. It also provides genuine choice for those older people and people with disabilities and special needs that require support and wish to move to a form of specialist housing whilst still maintaining independence.
18. However, if accessible and adaptable housing and specialist housing provision is to be capable of accommodating those that require support they must be of the right size, type, tenure and affordability. Crucially it must also be in appropriate locations.
19. Whilst the key principle of the strategy for meeting the care and support needs of older people and those with disabilities and special needs is to seek to support them to remain independent within their own homes (generally their existing home unless the individuals preference is either new adaptable and accessible housing or specialist housing including for such reasons as moving closer to their wider family or moving to more accessible locations with better provision of services and facilities), the strategy equally recognises that unfortunately this is not always possible.
20. As such, there remains an important role for nursing homes, which provide high level care (including dementia care) for those individuals who cannot be supported to remain independent within their own home.
21. However, conversely it is considered that there will be a reduced role for residential homes that do not provide high level care (including dementia care) in the future – as increasingly more older people and people with disabilities and special needs that would have moved to residential homes will be supported within their own home.

Accessible and Adaptable Housing

22. Part M of the Building Regulations¹ addresses the access to and use of dwellings. It identifies three categories of dwelling, these are:
 - a. M4(1) Category 1: Visitable dwellings.
 - b. M4(2) Category 2: Accessible and adaptable dwellings.
 - c. M4(3) Category 3: Wheelchair user dwellings.
23. M4(1) is mandatory for all new dwellings. M4(2) and M4(3) only apply in instances where a Local Plan introduces such a requirement, as is the case with this policy. The M4(2) and M4(3) standards can be summarised as follows:
24. M4(2): Accessible and adaptable housing provides safe and convenient approach routes into and out of the home and outside areas, suitable circulation space and suitable bathroom(s) and kitchen within the home.
25. M4(3): Wheelchair user dwellings achieve the accessibility and adaptability requirements of M4(2) housing, but also include additional features to meet the needs of occupants who use wheelchairs, or allow for adaptations to meet such needs.
26. **Guidance on how to achieve these requirements is provided within Part M of the Building Regulations¹.**
27. M4(2) and M4(3) requirements have been introduced in Shropshire for a number of reasons, including:
 - a. There is a higher proportion of older people living in Shropshire than the national average.
 - b. It is anticipated that over the plan period to 2038, the proportion of older people living in Shropshire will increase at a faster rate than the national average.
 - c. The anticipated contribution that growth in older households makes to total household growth in Shropshire.
 - d. The higher prevalence of long-term health problems and/or disabilities amongst older people;
 - e. Within the People's Strategy for Shropshire, a key principle for meeting the care needs of older people and those with disabilities and special needs is supporting them to remain independent within their own homes, within their existing communities and with access to their established support networks wherever possible. Provision of M4(2) and M4(3) housing will directly facilitate this in the future, whilst also providing genuine choice for those older people and people with disabilities and special needs that do wish to move to alternative general housing; and

¹ www.gov.uk/government/publications/access-to-and-use-of-buildings-approved-document-m

- f. Government's aspiration for adult social care is to sustain people at home for as long as possible. Provision of M4(2) and M4(3) housing directly facilitates this strategy.
28. The need for M4(2) and M4(3) housing was specifically considered within the SHMA. It estimated that for the total projected growth in households in Shropshire during the Local Plan period, 13% will require wheelchair accessible dwellings, M4(3) standard and 33% will require accessible and adaptable dwellings to M4(2) standard.
29. However closer inspection of household growth by the age of Household Reference Person, reveals a significantly higher level of household growth in households with a Household Reference Person aged 65 years and over. With a higher prevalence of long-term health problems and/or disabilities amongst older people, the importance of ensuring that the Local Plan does not underestimate the level of need for accessible housing that meets M4(3) and M4(2) standards is very much apparent.
30. As such, the SHMA considers the number of older households (with a Household Reference Person aged 65 years and over) with a long-term health problem or disability that impacts on their housing needs. It estimates that such households will increase by an amount equivalent to 77% of the total growth in older households over the Local Plan period, requiring either M4(2) or M4(3) standard dwellings.
31. The SHMA also estimates that the number of older wheelchair user households is projected to increase by an amount equivalent to 10% of the total growth in older households, requiring M4(3) standard dwellings. This suggests the remaining 67% of older households with a long-term health problem or disability that impacts on their housing needs will require M4(2) standard dwellings, although it is acknowledged that a proportion of this need will be met within specialist housing.
32. Therefore, it is considered appropriate to require that on sites of 5 or more dwellings 5% of dwellings meet M4(3) standard and a further 70% of dwellings meet M4(2) standard, unless site-specific factors indicate that step-free access cannot be achieved.
33. There will be an expectation that M4(3) dwellings within a development will be sited nearest to service provision and maximise the ease of which the household can access public transport and open space. An updated Type and Affordability of Housing Supplementary Planning Document will provide detailed guidance on the siting and integration of M4(3) dwellings into a development.
34. It is also considered appropriate to require all dwellings specifically designed for the elderly or those with disabilities, including specialist housing, to meet M4(3) (wheelchair user dwellings) standard within Building Regulations. If site-specific factors indicate that step-free access cannot be achieved, it is questionable as to whether the site or element of the site should be identified for dwellings specifically to meet the needs of the elderly or those with disabilities and special needs.
35. This policy requirement is consistent with the National Planning Practice Guidance advice on Housing: Optional Technical Standards, which specifies in Paragraph 5

(ID: 56-005-20150327) *“The National Planning Policy Framework (NPPF) is clear that local planning authorities should plan to create safe, accessible environments and promote inclusion and community cohesion. This includes buildings and their surrounding spaces. Local planning authorities should take account of evidence that demonstrates a clear need for housing for people with specific housing needs and plan to meet this need”.*

36. It should be noted that M4(3) (wheelchair user dwellings) standard within Building Regulations sets a distinction between wheelchair accessible (a home readily useable by a wheelchair user at the point of completion) and wheelchair adaptable (a home that can be easily adapted to meet the needs of a household including wheelchair users) dwellings.
37. Where dwellings are required to meet M4(3) (wheelchair user dwellings) standard within Building Regulations to comply with this policy, they will normally consist of wheelchair adaptable homes. Wheelchair accessible homes will only be required where Shropshire Council is responsible for nominating a person to live in the dwelling.
38. This approach is consistent with National Planning Practice Guidance advice on Housing: Optional Technical Standards, which specifies in Paragraph 9 (ID: 56-009-20150327) *“Wheelchair accessible homes will only be required where the Council is responsible for nominating a person to live in the dwelling”*,
39. **It should also be noted that where references to the Building Regulations in this policy change, the requirement shall be taken to refer to the most up-to-date standard.**

Dementia Friendly Housing

40. Dementia friendly housing is designed to support the independence of and provide a comfortable environment for those living with dementia.
41. The SHMA indicates that as a result of the increase in older people in Shropshire over the plan period, there will also be a significant rise in the number of people with dementia. Specifically, the SHMA concludes that between 2017 and 2035 the number of people aged 65 years and over with dementia is expected to increase by 80%.
42. As a result, it is considered appropriate to require all housing, including specialist housing, designed to M4(3) standard to be dementia ‘friendly’ and to strongly encourage all housing designed to M4(2) standard to be dementia ‘friendly’.
43. Guidance on achieving dementia ‘friendly’ housing is available through such organisations as the Alzheimer’s Society which has produced a Dementia-friendly housing guide available at: https://www.alzheimers.org.uk/sites/default/files/2020-06/Dementia%20Friendly%20Housing_Guide.pdf
44. This guide addresses such issues as consideration of layout, décor, lighting, flooring, furnishings, seating, signage, toilets, navigation, parking, noise and quiet spaces.

45. These measures generally have only a very minimal (if any) additional cost compared to the design requirements to achieve M4(2) and particularly M4(3) housing, but can make a significant difference to the quality of life and independence of those living in the home with dementia.

Types of Specialist Housing for Older People and those with Disabilities and Special Needs

46. The National Planning Practice Guidance on Housing for Older and Disabled People recognises there is a significant amount of variability in the types of specialist housing available to meet the housing needs of older people and those with disabilities and special needs. It identifies four main categories of specialist housing, whilst equally acknowledging that this list is not definitive.
47. The forms of specialist housing identified are as follows:

“Age-restricted general market housing: *This type of housing is generally for people aged 55 and over and the active elderly. It may include some shared amenities such as communal gardens, but does not include support or care services.*

Retirement living or sheltered housing: *This usually consists of purpose-built flats or bungalows with limited communal facilities such as a lounge, laundry room and guest room. It does not generally provide care services, but provides some support to enable residents to live independently. This can include 24 hour on-site assistance (alarm) and a warden or house manager.*

Extra care housing or housing-with-care: *This usually consists of purpose-built or adapted flats or bungalows with a medium to high level of care available if required, through an onsite care agency registered through the Care Quality Commission (CQC). Residents are able to live independently with 24 hour access to support services and staff, and meals are also available. There are often extensive communal areas, such as space to socialise or a wellbeing centre. In some cases, these developments are known as retirement communities or villages - the intention is for residents to benefit from varying levels of care as time progresses.*

Residential care homes and nursing homes: *These have individual rooms within a residential building and provide a high level of care meeting all activities of daily living. They do not usually include support services for independent living. This type of housing can also include dementia care homes.*

48. The key distinctions between the different categories of specialist housing are the level of on-site care and the level of communal facilities available.
49. Developers are encouraged to seek pre-application advice to establish whether their proposal may be classified as Use Class C2 or C3. When determining the Use Class of housing for older people, due consideration will be given to the level of care and scale of communal facilities provided.

50. However, it is important to note that irrespective of the Use Class of the development, all specialist housing constitutes residential accommodation and housing which is subject to all relevant housing policies within the Local Plan. This is clear within the approach taken in the Local Plan itself to such specialist housing, the National Planning Policy Framework and the National Planning Practice Guidance, including the National Planning Practice Guidance on Housing for Older and Disabled People.

Provision of new Specialist Housing for Older People and those with Disabilities and Special Needs

51. The SHMA projects that over the Local Plan period, there will be a need for around an additional 3,500 specialist older persons accommodation units and around 2,500 additional units of residential care provision in order to maintain current prevalence rates (this being the amount of specialist houses for older people compared to the number of older people).
52. As already documented, the People's Strategy for Shropshire includes the strategy for meeting the care and support needs of older people and those with disabilities and special needs. This strategy is underpinned by the key principle of wherever possible seeking to support older people and those with disabilities and special needs living in Shropshire to remain independent within their own homes, within their existing communities and with access to their established support networks.
53. As also already documented, there are numerous reasons for this approach, including responding to our understanding of the needs and aspirations of older people and those with disabilities and special needs living in Shropshire and importantly the geography and characteristics of Shropshire.
54. This strategy inevitably means that the 'prevalence rates' for specialist housing in Shropshire will be lower than in other areas with either a different strategy for meeting the needs of older people and those with disabilities and special needs and/or with a different geography and characteristics – for instance more urban and densely populated geographies.
55. However, it is recognised that this strategy can be complemented by the provision of appropriate quantities and forms of specialist housing that support independent living (particularly in our larger settlements), which can provide genuine choice for those older people and people with disabilities and special needs that require support. There also remains an important role for nursing homes which provide high level care (including dementia care), for those individuals who cannot be supported to remain independent within their own home.
56. The strategy is however likely to reduce the need for residential homes that do not provide high-level care. This role will be increasingly met by the provision of support within the home.
57. As such, it is considered both necessary and appropriate to introduce a series of measures to ensure the delivery of appropriate types and quantities of specialist

housing in Shropshire – particularly within our larger settlements, which will complement (but importantly must not undermine) the strategy for meeting the care and support needs of older people and those with disabilities and special needs.

58. These measures include providing support for the provision of appropriate forms of specialist housing (as documented within Paragraph 14 of this Policy) that is consistent with the requirements of the Local Plan (particularly Policies S1-S20) in appropriate locations within identified development boundaries. Such locations are more likely to benefit from appropriate access to services and facilities and can be integrated into existing communities, enhancing the social and sustainability benefits of multi-generational and inclusive communities.
59. These measures also include providing support for the provision of appropriate forms of 100% local needs affordable specialist housing, where this provision is consistent with the requirements of the Local Plan (particularly Policy DP4). Provision of affordable (particularly social rent) specialist housing is of particular importance in Shropshire.
60. This is because a significantly higher proportion of households living in social rent properties in Shropshire contain people with long-term health problems or disabilities than other tenures of housing. Specifically, the SHMA concludes that 27.8% of households living in social rent properties contain a person with a long-term health problem or disability, compared to 17.1% of households living in owner-occupied properties, 13.6% living in private rented properties, and 17.9% of households living in any property tenure.
61. Furthermore, older people and those with disabilities and special needs with care and support needs that occupy social rented properties may be more inclined to move to specialist housing than owner-occupiers.
62. Another measure is the provision of support for appropriate forms of Use Class C2 specialist housing being provided as a secondary employment use on mixed use employment sites. Provided that this provision is consistent with the requirements of the Local Plan (particularly Policy SP13) and that such provision complements other existing and proposed employment uses on the site and facilitates the delivery of the wider employment site, including through the provision of accesses, servicing and other infrastructure.
63. Such provision provides the dual benefit of providing appropriate forms of specialist housing and also facilitating the delivery of the wider employment site. Furthermore, these employment sites are generally well-located, allowing appropriate access to services and facilities. The elements of mixed use employment sites that are likely appropriate for specialist housing are also likely to be those closest to other forms of housing, thereby providing opportunities to integrate the specialist housing into existing communities.

64. Another measure is the requirement for proportionate quantities of appropriate forms of specialist housing to be provided on larger development sites, in a way that integrates this provision into the wider development site. Such an approach facilitates the achievement of the social and sustainability benefits of multi-generational and inclusive communities.
65. The thresholds identified for the 'categories' of housing within which proportionate provision of appropriate forms of specialist housing is required are responsive to both our understanding of the nature of development schemes that occur in Shropshire and the concept of achieving multi-generational and inclusive communities.
66. Specifically, developments of 50 or more dwellings are generally considered to represent a 'large-scale' development in a Shropshire context. Development at this scale benefits from economies of scale and have the potential to integrate specialist housing as part of a wider housing mix that encourages multi-generational and inclusive communities.
67. Developments of over 150 dwellings constitute 'significant-scale' development in a Shropshire context. Developments of this scale benefit from significant economies of scale and have the potential to integrate specialist housing as part of a wider housing mix that encourages multi-generational and inclusive communities. Many developments above 150 dwellings will have the potential to provide those forms of specialist housing that require larger numbers of units due to their operating model and the requirement for economies of scale, such as extra-care housing and nursing homes offering high end care (including dementia care).
68. Developments of 250 or more dwellings represent 'strategic-scale' development in a Shropshire context. Developments of this scale benefit from significant economies of scale and the potential to integrate much larger forms of specialist housing provision as part of a wider housing mix, that encourages multi-generational and inclusive communities. On such sites there are particular opportunities for the provision of those forms of specialist housing that require larger numbers of units due to their operating model and the requirement for economies of scale, such as extra-care housing and nursing homes offering high end care (including dementia care). It is expected that these opportunities would be fully explored.
69. The specific thresholds identified for the proportionate 'quantities' of specialist housing are responsive to our understanding of the 'critical mass' required for the various forms of specialist housing, development viability, the level of 'need' that exists in Shropshire, and the concept of achieving multi-generational and inclusive communities.
70. New specialist housing should ideally be located where residents can benefit from access to existing services and facilities. This has the dual benefit of supporting the integration of the specialist housing development and its residents into the

wider community and also supports the long-term sustainability of these existing services and facilities.

71. Where services and facilities are not already available, or there is a need for specific services and facilities on the specialist housing site, this provision should be responsive to the types of services and facilities already available and be proportionate in scale to the type of specialist housing. It is important to ensure that specialist housing remains affordable – recognising that specialist housing occupiers will have to pay both service-charges and care-costs in addition to any rent/mortgage. The greater the level of services and facilities on the site, the greater the risk that the resultant specialist housing becomes unaffordable to many of the older people or people with disabilities and special needs in Shropshire whose needs it is intended to meet.
72. It is important that specialist housing is supported by the provision of an appropriate quantity and quality of open space. Consistent with Policy DP15, consideration will be given to reducing the quantity of open space provided, where a specialist housing development is able to provide a particularly high quality of open space on site which meets the needs of all residents. High quality open space is particularly important for specialist housing as residents may be less able or willing to travel to other open space in the area and recognising the wider value and health benefits of the ability to both access and view open space.
73. Furthermore, any new specialist housing scheme should also give consideration to the potential for the provision of appropriate key worker accommodation for any associated care staff. This is a particularly important consideration in Shropshire, as one of the barriers to the care worker labour force is the availability of affordable housing and yet many specialist housing facilities require a significant number of care workers to ensure their operation. Such provision has the potential to complement the provision of smaller open market housing consistent with the requirements of Policy DP1 and affordable housing consistent with the requirements of Policies DP3-DP7.
74. As documented above, the provision of affordable (particularly social rent) specialist housing is of particular importance in Shropshire. However, there is also a need for market specialist housing and crucially there is a need for affordable general housing.
75. As such, whilst the specialist housing provision required within Paragraphs 15-17 of this Policy can, where it is consistent with the definition of affordable housing, also constitute all or part of the affordable housing required from the development - consistent with the requirements of Policy DP4 of the Local Plan, there is a need to ensure this does not undermine the provision of either market specialist housing or affordable general housing.
76. Therefore, this policy includes the ability to require specialist housing provided in accordance with Paragraphs 15-17 of this Policy to be market provision, if this is

considered necessary in order to ensure the appropriate provision of market specialist housing or affordable general housing.

77. It is recognised that many forms of specialist housing present opportunities to achieve a denser form of development than general housing, whilst still achieving a high-quality design that is complementary to the development site, surrounding character and importantly consistent with wider policies within the Local Plan – including those relating to high-quality design (SP5) and health and wellbeing (SP6).
78. It is also recognised that some forms of specialist housing require a ‘critical-mass’ in order to ensure operational efficiency and viability, which may mean that opportunities arise to provide a significant quantity of specialist housing in excess of that required within Paragraphs 15-17 of this Policy.
79. As such, it is considered important and appropriate to provide further flexibility regarding the approximate site provision figure and overall settlement housing guideline in circumstances where a site allocation is proposing to significantly over-provide the amount of specialist housing provision, above that required within this Policy. Provided that the resultant development remains appropriate to the site having regard to its characteristics and the character of the surrounding area, and the resultant development complies with the wider policies of the Local Plan, particularly Policies SP3, SP5-SP6, DP1, DP2, DP3, DP11, DP12, DP14-DP17, DP25 and DP27-DP28.
80. Such an approach also incentivises the provision of specialist housing as an important and valued component of the housing mix on site allocations and supports the achievement of multi-generational communities.

Retention of Existing Specialist Housing for Older People and those with Disabilities and Special Needs

81. In addition to addressing the provision of new forms of specialist housing for older people and those with disabilities and special needs, this policy also introduced an important requirement for the retention of existing specialist housing, unless any loss is offset through the appropriate replacement with equivalent or better provision or it can be demonstrated that there is no longer a need for the particular form of specialist housing within the relevant settlement and Shropshire as a whole. This approach is considered important given that:
 - a. There is a higher proportion of older people living in Shropshire than the national average.
 - b. There is an expectation that the proportion of older people living in Shropshire will increase at a faster rate than the national average.
 - c. Specialist housing can complement the strategy for meeting the care and support needs of older people and those with disabilities and special needs in Shropshire.

- d. Many of the sites containing specialist housing are well integrated into their community and as such support the principle of multi-generational communities and provide good access to services and facilities. As such, it is important that these locations are retained for specialist housing, even if it is ultimately an alternative form of specialist housing.

2. Introduction

- 2.1. On 15th February 2023, the Planning Inspectors examining the draft Shropshire Local Plan issued an Interim Findings document (ID28). This followed the completion of the Stage 1 Hearing Sessions, which focused on legal and strategic issues (including strategic policies). These Hearing Sessions were primarily undertaken in July 2022, with a further session specifically regarding the Duty to Cooperate in January 2023.
- 2.2. ID28 addresses a range of matters, including Sustainability Appraisal (SA). With regard to SA, the Planning Inspectors conclude that an additional SA assessment should be undertaken regarding **Unmet Housing and Employment Land Needs of the Association of Black Country Authorities (ABCA) and Policy SP2**, in order to assist the examination of the draft Shropshire Local Plan, ensure compliance with Regulation 12 of The Environmental Assessment of Plans and Programmes Regulations (2004), and ensure the legal compliance and soundness of the draft Shropshire Local Plan.
- 2.3. With specific regard to the housing and employment land needs of Shropshire, the Planning Inspectors conclude within ID28 that the approach to identifying need is sound, stating within Paragraph 13 that: *“The Council’s approach to identifying the housing and employment land needs derived within Shropshire itself is sound.”*
- 2.4. With regard to the housing and employment land needs of the Black Country, the Planning Inspectors have acknowledged that the draft Shropshire Local Plan is proposing to provide 1,500 new homes and 30ha of employment land over the plan period in order to contribute to the unmet housing and employment land needs forecast to arise in the Black Country and concluded that these contributions are appropriate.
- 2.5. Specifically, within paragraph 13 of ID28 the Planning Inspectors conclude: *“In principle, the Council’s intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire’s housing need to meet some of this externally derived unmet need.”*
- 2.6. However, the Planning Inspectors explain within paragraphs 17-20 of ID28 that they are concerned that the decision to accommodate some of the housing and employment land needs of the Black Country may have changed the objectives and geographical scope of the draft Shropshire Plan. As this decision was reached at a point between the Regulation 18 and Regulation 19 stages of plan making, following the completion of much of the evidence base including the SA, these contributions were not considered within the SA, which tested options that were based on just meeting the needs of Shropshire.

- 2.7. As such, the Planning Inspectors explain within Paragraph 20 of ID28 *“Further SA work therefore needs to be undertaken to assess the likely effects of the proposed strategy – which is based on meeting Shropshire’s housing and employment needs and contributing towards unmet needs from the Black Country. In carrying out this work, consideration also needs to be given to the selection of the preferred strategy when judged against reasonable alternatives. For example, by testing a scenario which includes the originally envisaged ‘high growth scenario’ and a contribution towards unmet housing needs.”*
- 2.8. Within Paragraph 21 of ID28, the Planning Inspectors explain that if the intention remains to include proposed contributions to the unmet housing and employment land needs of the Black Country, then *“the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.”*
- 2.9. Within Paragraph 21 of ID28, the Planning Inspectors address the level and distribution of development, explaining that if *“following the additional SA work, the Council chooses to pursue the same growth option as before”* then *“the housing and employment land requirements will increase, and more sites will be required. Consideration will also need to be given to the distribution of development since accommodating some of the unmet needs may result in more sites being required in the part of Shropshire nearest the Black Country.”*

3. Purpose of this Document

- 3.1. The purpose of this document is to provide a summary of the additional SA assessment work undertaken by Shropshire Council in order to positively respond to the conclusions reached by the Planning Inspectors within ID28.

4. Scope of this Document

- 4.1. Reflecting the conclusions reached by the Planning Inspectors within ID28, this document includes a summary of the additional SA assessment work undertaken by Shropshire Council in relation to:
- a. Identifying an appropriate housing requirement for Shropshire, having regard to Local Housing Need and the potential for a contribution of 1,500 dwellings towards the unmet housing needs of the Black Country.
 - b. Identifying an appropriate employment land requirement for Shropshire, having regard to Local Employment Land Need and the potential for a contribution of 30ha towards the unmet employment land needs of the Black Country.
 - c. Identifying an appropriate strategic distribution of development across Shropshire.

- d. Identifying an appropriate site(s) upon which the proposed contribution of 1,500 dwellings towards the unmet housing needs of the Black Country can be accommodated.
- e. Identifying an appropriate site(s) upon which the proposed contribution of contribution of 30ha of employment land towards the unmet employment land needs of the Black Country can be accommodated.
- f. If necessary, identifying additional housing allocations.
- g. If necessary, identifying additional employment land allocations.
- h. Re-assessment of relevant draft Policies within the draft Shropshire Local Plan, to support identification of appropriate main modifications in response to the consideration of the additional SA assessment work undertaken.

5. Assessment Methodology

- 5.1. The assessment methodology utilised within the additional SA assessment work summarised within this document is consistent with the utilised to date within the wider SA process undertaken to inform the draft Shropshire Local Plan, as documented within the Regulation 19 Pre-Submission Draft Shropshire Local Plan 2016 to 2038: Sustainability Appraisal and Site Assessment Environmental Report and Appendices (SD006.01-SD006.22). This includes the use of the same SA Objectives and assessment framework as outlined within **Chapter 2 of SD006.01**.
- 5.2. With respect to the SA assessment work undertaken to date, the main aspects of particular relevance to this additional SA assessment work include:
 - a. The SA assessment of reasonable housing requirement options and the preferred housing requirement as summarised within the Issues and Strategic Options: Sustainability Appraisal Report (EV003.03); the Preferred Scale and Distribution of Development: Sustainability Appraisal Report (EV004.03); and SD006.01 (particularly Chapters 5 and 6).
 - b. The SA assessment of reasonable employment land requirement options and the preferred employment land requirement summarised within EV003.03; EV004.03; and SD006.01 (particularly Chapters 5 and 6).
 - c. The SA assessment of reasonable options for the strategic distribution of development and the preferred option for the strategic distribution of development summarised within EV003.03; EV004.03; and SD006.01 (particularly Chapters 5 and 6).
 - d. The SA assessment of draft Policy SP2: Strategic Approach within the Regulation 18 Pre-Submission Draft Shropshire Local Plan 2016 to 2038 Sustainability Appraisal and Site Assessment Environmental Report (EV007.04.01-EV007.04.22); and SD006.01 (particularly Chapters 9, 10 and 11) and SD006.02.

- e. The SA assessment of potential housing site allocations within the Preferred Sites: Sustainability Appraisal Report (EV005.03.01-EV005.03.02); the Strategic Sites: Sustainability Appraisal Report (EV006.03); EV007.04.01-EV007.04.22; and SD006.01 (particularly Chapters 7, 8, 9, 10 and 11) and SD006.03-SD006.22.
 - f. The SA assessment of potential employment land site allocations within the Preferred Sites: Sustainability Appraisal Report (EV005.03.01-EV005.03.02); the Strategic Sites: Sustainability Appraisal Report (EV006.03); EV007.04.01-EV007.04.22; and SD006.01 (particularly Chapters 7, 8, 9, 10 and 11) and SD006.03-SD006.22.
- 5.3. The additional SA assessment work summarised within this document has drawn upon and built upon the SA assessment work already undertaken, particularly that summarised above.

6. Summary of the SA Assessment: Reasonable Options for the Housing Requirement

Introduction

- 6.1. This section of the document summarises the additional SA assessment of the reasonable options for the housing requirement.
- 6.2. The baseline for these reasonable options was the local housing need for Shropshire of 25,894 dwellings over the 22-year plan period from 2016-2038 (equating to an annual average of 1,177 dwellings), as calculated using Government's Standard Methodology with a 2020 base date. This calculation is summarised within the Local Housing Need Assessment 2020 (EV069).
- 6.3. It should be noted that Shropshire Council reviews Local Housing Need using Government's Standard Methodology annually. The assessment with a 2020 base date has been utilised to establish the baseline within this additional SA Assessment, as it was this calculation that underpinned the housing requirement at the time of the Regulation 19 Consultation and when Shropshire Council made the decision to submit the draft Shropshire Local Plan for examination.
- 6.4. This additional SA Assessment work is a very important consideration when undertaking the planning judgement regarding which reasonable housing requirement option should be identified as the proposed housing requirement within the draft Shropshire Local Plan.
- 6.5. However, a range of other evidence/factors will also require due consideration when undertaking this planning judgement. This will include the conclusions reached by the Planning Inspectors within their Interim Findings (ID28) particularly regarding the decision that the housing requirement should be established as a 'minimum' rather than being expressed as 'around'.

- 6.6. This will also include subsequent calculations of Local Housing Need - the most recent Local Housing Need Assessment has a 2023 base date and results in a considerable reduction to the level of local housing need in Shropshire.

Identification of Reasonable Options for the Housing Requirement

- 6.7. Consistent with the methodology utilised to identify reasonable options for the housing requirement within the SA assessment already undertaken to inform the draft Shropshire Local Plan, reasonable options were identified based on various reasonable percentage uplifts above the identified baseline (which totalled 25,894 dwellings over the 22-year plan period from 2016-2038, equating to an annual average of 1,177 dwellings).
- 6.8. These uplifts ensure that local housing need is achieved, whilst also providing some flexibility to respond to changes to local housing need over the plan period and opportunities to:
- a. Respond positively to specific sustainable development opportunities;
 - b. Increase the delivery of family and affordable housing to meet the needs of local communities and support new families coming into Shropshire;
 - c. Support the delivery of specialist housing for older people, people with disabilities and the needs of other groups within the community;
 - d. Support the diversification of our labour force; and
 - e. Support wider aspirations, including increased economic growth and productivity
- 6.9. Furthermore, reflecting the outcomes of duty to cooperate discussions undertaken with the Black Country Authorities, each reasonable option also includes a further specific uplift of 1,500 dwellings (equating to an annual average of 68 dwellings over the 22-year plan period from 2016-2038) to reflect the proposed contribution to the unmet housing need forecast to arise within the Black Country. This approach ensures that the proposed contribution to the unmet housing need forecast to arise in the Black Country is explicitly considered and is achieved as part of the delivery of the housing requirement.
- 6.10. As such, five reasonable options for the housing requirement were identified and were assessed within this additional SA assessment work. These reasonable options are:
- a. **Housing Requirement Option 1: Moderate Growth** - Consisting of around a 5% uplift on the identified baseline need, plus a specific 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. This option is responsive to and represents a consistent uplift on baseline need to that within the Moderate Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan whilst also explicitly incorporating a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country.

- b. **Housing Requirement Option 2: Significant Growth** - Consisting of around a 10% uplift on the identified baseline need, plus a specific 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. This option is responsive to and represents a consistent uplift on baseline need to that within the Significant Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan, whilst also explicitly incorporating a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. It results in a housing requirement that is comparable to the housing requirement identified within the adopted Local Plan.
- c. **Housing Requirement Option 3: High Growth (Variation 1)** - Consisting of around a 13% uplift on the identified baseline need, plus a specific 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. This option is responsive to the High Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan, whilst also explicitly incorporating a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. It results in a housing requirement that is consistent with that proposed within the draft Shropshire Local Plan.
- d. **Housing Requirement Option 4: High Growth (Variation 2)** - Consisting of around a 15% uplift on the identified baseline need, plus a specific 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. This option is responsive to and represents a consistent uplift on baseline need to that within the High Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan, whilst also explicitly incorporating a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country.
- e. **Housing Requirement Option 5: High Growth (Variation 3)** - Consisting of around an 19% uplift on the identified baseline need, plus a specific 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. This option is responsive to the High Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan, whilst also explicitly incorporating a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country. It results in a housing requirement that equates to the housing requirement proposed within the draft Shropshire Local Plan plus an additional 1,500 dwellings, which is comparable to the proposed contribution to the unmet housing need forecast to arise within the Black Country.

Assessment of Reasonable Options for the Housing Requirement

6.11. The following tables summarise the additional SA assessment of the identified reasonable Housing Requirement Options:

Table 6.1: Housing Requirement Option 1: Moderate Growth

Housing Requirement Option 1: Moderate Growth
<p>This option represents around a 5% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country (annual average of 68 dwellings).</p> <p>This option represents a total minimum housing requirement of 28,700 dwellings over the 22-year plan period from 2016-2038, which equates to around 1,305 dwellings as an annual average.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats.
2: Encourage a strong and sustainable economy throughout Shropshire	-	-	-	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered it is likely to reduce the ability compared to that which currently exists and have the lowest potential of the options considered to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also impact on the ability to appropriately balance housing and employment land development.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	-	-	-	Whilst this option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country, it would represent a decreased rate of development compared with the annual average housing requirement within the adopted Local Plan and recent and longer-term completion rates achieved. This option also represents the lowest level of housing growth considered. As such, it is likely that this option will reduce the ability compared to that which currently exists and have the lowest potential of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. It could also have a geographic implication, with the more limited amounts of new housing development being focused within locations / settlements that are seen as ‘more viable’ or ‘attractive to the market’.
4: Promote access to services for all sections of society	-	-	-	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to reduce the ability to provide new services and facilities compared to that currently available and have the lowest potential of the options considered. Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability it is likely to impact on the longer term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.
5: Encourage the use of sustainable means of transport	-	-	-	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to reduce / have the lowest potential to maintain or improve existing access to public transport. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is lower than that within the adopted Local Plan, it is likely to result in less housing development compared to current policy requirements and it is also the lowest of the reasonable options identified. This may have a positive effect on car use.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0/-	0/-	Since many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option), overall activity levels may remain similar to the current situation. However, as the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and cultural facilities and activities, and support the provision of new health, leisure and cultural facilities and activities may be reduced / the lowest in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	+	+	+	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to have a positive impact on this Sustainability Objective, as there are less houses proposed and therefore less likelihood that housing would be located in more flood-prone areas.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	?	?	?	Fewer opportunities for the use of renewable energy may be balanced by reduced energy consumption arising from a lower level of housing as the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered.
13: Promote adaptation and mitigation to climate change	-/?	-/?	-/?	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to require a reduced / lower amount of land for development and as such reduce / have a lower potential for greenfield development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such a reduced / lower level of development will reduce the amount of biodiversity net gain achieved. Furthermore, the potential for new large scale habitats gained through residential development is also likely to be lower in this option than the others and compared with the housing requirement within the adopted Local Plan, thus reducing the contribution this can make to adapting and mitigating climate change.
14: Promote efficient use of natural resources	+	+	+	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to provide an increased / greatest opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely use a reduced / the lowest amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	+/?	+/?	+/?	As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it has a reduced / the lowest potential to harm existing heritage assets and their settings. However, this may be somewhat offset by reduced / the lowest opportunities to contribute to their restoration, enhancement and long-term management.
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered, it is likely to cause a reduced / the least change to existing landscape character and local distinctiveness.

Summary of Housing Requirement Option 1: Moderate Growth

- 6.12. The average annual housing requirement within this option is lower than that within the adopted Local Plan and this option represents the lowest level of growth considered. However, the amount of growth is sufficient to meet both local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country.
- 6.13. This level of growth is also lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being significantly exceeded.
 - b. The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed through a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
 - c. The anticipated capacity and/or rates of delivery across other sources of supply is reduced – including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
 - d. One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.
 - e. A combination of the above.
- 6.14. It is likely that this level of growth would have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire. It is also likely that it would reduce the need to travel by car, be more capable of being accommodated in areas of low flood risk, promote the efficient use of natural resources (by reducing the level of need) and conserve and enhance landscape character and local distinctiveness. It is also likely that this option would result in a lower potential for harm to heritage assets and their

settings although this may be somewhat offset by reduced opportunities to contribute to their restoration, enhancement and long-term management of these assets and the historic environment.

- 6.15. It is considered that there is insufficient information to reach a confident conclusion regarding whether this option would result in a small positive, small negative or little or no net effect on carbon dioxide emissions and the promotion of adaptation and mitigation to climate change, as more or less growth can positively or negatively contribute to these factors dependent on how and where development is undertaken. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.16. Furthermore, it is considered that it is more the location rather than the amount of development that is likely to have the most significant influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality, and on reducing the risk of water and air pollution. Again, the strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.17. It is likely that this level of growth would have a negative effect on Shropshire's ability to positively respond to sustainable economic development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Furthermore, whilst this option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country, it will likely have a negative effect on the ability to provide the right housing to meet the needs of all groups within our communities.
- 6.18. In addition, since new services and facilities are generally delivered through new development and all services and facilities require a 'critical population mass' to ensure their long term 'viability' and 'sustainability', there may be a negative impact on the provision and access to some services and facilities for some communities. This option may also negatively impact on the ability to improve access to public transport.
- 6.19. Although overall physical activity levels may not change, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and community facilities and activities, and to support the provision of new health, leisure and cultural facilities and activities may be reduced in the medium to long term.

Table 6.2: Housing Requirement Option 2: Significant Growth

Housing Requirement Option 2: 'Significant Growth'
This option represents around a 10% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country (annual average of 68 dwellings). This option represents a total minimum housing requirement of 30,000 dwellings over the 22-year plan period from 2016-2038, which equates to around 1,364 dwellings as an annual average.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, present trends in the range of plants and animals and the quality and extent of wildlife habitats in Shropshire are unlikely to change.
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country. As the annual average housing requirement is very similar to that within the adopted Local Plan, there is unlikely to be a significant change from the existing baseline situation with regard to the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.
4: Promote access to services for all sections of society	0	0	?/-	As the annual average housing requirement is very similar to that within the adopted Local Plan, it is likely to maintain the existing situation in respect of the ability to provide new services and facilities. However, given that many services and facilities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access key services and facilities such as schools, post offices and play areas in the longer-term.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, it is likely to maintain the existing situation with respect to the use and access to public transport and the prevalence of walking or cycling to work. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is very similar to that within the adopted Local Plan, it is considered likely that the numbers of houses envisaged in this option can be accommodated in accessible locations. As the location of development is the main driver for use of private vehicles, continued levels of development in sustainable locations would mean that residential development would be closer to necessary locations (i.e., areas of employment) and thus there would be less dependency county-wide on private vehicles when compared to Options that would propose development in less sustainable, more isolated locations.
7: Support active and healthy communities.	0	0	-/0	As the annual average housing requirement is very similar to that within the adopted Local Plan it is likely to maintain the existing situation in respect of the ability to provide new leisure and cultural activities. Furthermore, as many recreational activities are based on the natural environment (which is likely to be less affected by this option than those involving higher levels of growth), overall activity levels may remain similar to the current situation. However, given that many formal leisure and cultural activities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	0	0	0	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. However, as the annual average housing requirement is very similar to that within the adopted Local Plan, the baseline situation is unlikely to significantly change with regard to flood risk and opportunities to improve flood management.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, the current baseline with respect to carbon dioxide emissions is likely to remain the same.
13: Promote adaptation and mitigation to climate change	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, opportunities to adapt and mitigate climate change are likely to remain similar to the present. Likewise, the potential for new large-scale habitats gained through residential development is also likely to be a comparable to current trends.
14: Promote efficient use of natural resources	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, it is likely to provide a continuation of the current levels of opportunities to focus development on previously developed land and / or to re-use existing buildings. It will also likely result in the use of a comparable amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	As the annual average housing requirement is very similar to that within the adopted Local Plan, it is likely that the current situation with respect to the conservation and enhancement of the historic environment is likely to continue.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is very similar to that within the adopted Local Plan, this option is unlikely to change current trends in relation to conservation and enhancement of existing landscape character and local distinctiveness.

Summary of Housing Requirement Option 2: Significant Growth

- 6.20. The average annual housing requirement within this option is very similar to that within the adopted Local Plan. This amount of growth is sufficient to meet both local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country.
- 6.21. This level of growth is however lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being significantly exceeded.
 - b. The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
 - c. The anticipated capacity and/or rates of delivery across other sources of supply is reduced– including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
 - d. One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.
 - e. A combination of the above.
- 6.22. It is likely that the growth within this option could be accommodated in accessible locations, thus reducing the need of people to travel by car when compared to the baseline and other options being considered within this SA.

- 6.23. As the level of growth within this option is as an annual average very similar to that within the adopted Local Plan, it is likely that the current situation will be maintained for the following sustainability objectives: protecting and enhancing the range of plants and animals and the quality and extent of wildlife habitats in Shropshire; encouraging a strong and sustainable economy; providing a sufficient amount of good quality housing; encouraging the use of sustainable means of transport; reducing flood risk and improving flood management; reducing carbon dioxide emissions; adapting to and mitigating climate change; promoting the efficient use of natural resources; conserving and enhancing heritage features and their settings, and conserving and enhancing landscape character and local distinctiveness.
- 6.24. Whilst physical activity levels may not change over the plan period, the provision of some leisure and cultural facilities may decline in the longer term, as many formal leisure and cultural activities require a 'critical population mass' to maintain viability and sustainability. Similarly, as services and facilities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
- 6.25. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Table 6.3: Housing Requirement Option 3: High Growth (Variation 1)

Housing Requirement Option 3: High Growth (Variation 1)

This option represents around a 13% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country (annual average of 68 dwellings). The total minimum housing requirement would equate to **30,800 dwellings** over the 22-year plan period from 2016-2038, which equates to around 1,400 dwellings as an annual average.

This total minimum housing requirement is equivalent to 29,300 dwellings towards local housing needs over the 22-year plan period and a 1,500 dwelling contribution towards forecast unmet housing need in the Black Country, whilst recognising that these two matters are inherently interlinked.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the ‘central’ growth option (lowest of the 3 high-growth variations) considered, it could have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher levels of growth in this option mean that larger amounts of greenfield land will likely need to be released. However, as the level of growth is not significantly higher than that within the adopted Local Plan, it may not result in a significant change from present trends in the short term. Furthermore, this level of growth allows for more larger sites to come forward, and a master-planning approach on these sites may offer opportunities for biodiversity gains in the medium to long term. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the ‘central’ growth option (lowest of the 3 high-growth variations) considered, it is likely to increase the ability compared to that which currently exists and have a higher potential than a number of the other options considered to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. The ability to respond in the shorter term is influenced by both the actual increase to annual average housing requirement and the understanding of the implications of the longer term effect of this increased level of growth.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country.</p> <p>The annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered. It represents an increased rate of development compared with the long-term completion rates achieved in Shropshire, but is a lower rate of development compared with short-term completion rates achieved in Shropshire. As such, it is likely that this option will increase the ability compared to that which currently exists and have one of the higher potentials of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a positive geographic implication, allowing for the more balanced distribution of development across locations / settlements that are seen as more and less 'viable' or 'attractive to the market'.</p>
4: Promote access to services for all sections of society	+	+	+	<p>As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered, it is likely to increase the ability to provide new services and facilities compared to that currently available and have a higher potential than many of the other options considered.</p> <p>Furthermore, given that many services and facilities require a 'critical population mass' to maintain viability and sustainability, it is likely to positively impact on the longer-term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	0	+/?	+/?	<p>As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered, it is likely to increase the ability to facilitate the provision of new forms of sustainable transport. Although as the level of growth is not significantly higher than that within the adopted Local Plan, such effects are more likely to be felt in the medium to longer term.</p> <p>The scale of development in this option may require new transport infrastructure. If this development is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	-/?	-/?	-/?	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 High Growth variations) considered, it is likely to result in more housing development compared to current policy requirements. This may have a negative effect on car usage - more houses would likely result in more cars. However, as the level of growth is not significantly higher than that within the adopted Local Plan, it may not result in a significant change from present trends in the short term. Furthermore, the scale of development may be large enough to support new or existing public transport solutions to counter this in the medium to longer term.
7: Support active and healthy communities.	0	+	+	Many recreational activities are associated with the natural environment. As the annual average housing requirement is higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 High Growth variations) considered, opportunities to focus development in locations with good access to health, leisure and cultural facilities and activities. The ability to support existing and provide new health, leisure and cultural facilities and activities will also likely increase, offsetting any negative impact and resulting in an enhancement in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered, it will likely require more land, including greenfield land, for development. This may increase the potential for development in areas of higher flood risk, particularly in the medium to long term. However, larger scale growth creates more opportunities for flood management measures.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer some opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	?	?/+	?/+	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered, it is likely to require an increased amount of land for development and as such increase the potential for greenfield development, particularly in the medium to long term. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such an increased / higher level of development will increase the amount of biodiversity net gain achieved. Furthermore, this level of growth allows for more larger sites to come forward, therefore the potential for new large scale habitats gained through residential development is also likely to be increased / higher in this option than some other options considered and compared with the annual average housing requirement within the adopted Local Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.
14: Promote efficient use of natural resources	-	-	-	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 High Growth variations) considered, it is likely to provide decreased / lower opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely increase the amount of primary aggregates utilised.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	?	-/?	-/?	As the annual average housing requirement is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered, it has increased / one of the higher potentials to harm existing heritage assets and their settings, particularly in the medium to long term. However, this may be somewhat offset by increased opportunities to contribute to their restoration, enhancement and long-term management.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to cause an increased / higher change to existing landscape character and local distinctiveness.

Summary for Housing Requirement Option 3: High Growth (Variation 1)

- 6.26. The average annual housing requirement within this option is somewhat higher than that within the adopted Local Plan and this option represents the 'central' growth option (lowest of the 3 high-growth variations) considered. This amount of growth is sufficient to meet both local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country.
- 6.27. This level of growth is consistent with that proposed within the draft Shropshire Local Plan. As such, it would support the continued identification of all proposed allocations and the continuation of the assumptions made regarding delivery timescales and rates, which have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement.
- 6.28. The higher level of growth within this option would allow significant opportunities to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. The economy would also likely benefit from this option, as it provides greater opportunities to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
- 6.29. This option would also likely promote access to existing services such as schools or shops and provides the potential to increase provision in the medium to long term. Similarly, there may be good opportunities for provision of new health, leisure, recreational and cultural

facilities. Economies of scale may also contribute to an increased provision of energy from renewable sources, whilst supporting reductions in energy consumption and promoting energy efficiency, particularly in the medium to long term.

- 6.30. The scale of development in this option would likely require and facilitate a degree of new transport and other forms of infrastructure provision at a level higher than options with lower levels of growth, particularly in the medium to long term. If this growth was focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.31. Due to the scale of development, it is likely that larger amounts of greenfield land would need to be released in this option compared to the baseline and options for lower levels of growth, there may also be a negative effect on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this level of growth allows for more larger sites to come forward, a master-planning approach to larger sites may provide opportunities for biodiversity gains to offset such losses and provide opportunities for the creation of relatively large areas of new habitats. The specific site allocations are assessed separately within the SA process.
- 6.32. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.33. It is likely to be more difficult to focus this level of growth in accessible locations, so it may not be possible to reduce the need of people to travel by car, particularly in the medium to long term. However, new or existing public transport solutions may counter this. Due to the level of growth, this option may increase the potential for development in areas of higher flood risk. However, conversely larger scale growth creates more opportunities for flood management measures.
- 6.34. This option will likely use more land than the current baseline and the options with lower levels of growth considered, as such opportunities to focus development on previously developed land or existing buildings is likely to be more limited. This option would also likely increase the amount of primary aggregates required, above the baseline.
- 6.35. Higher levels of growth inevitably have a greater potential to cause harm to heritage assets and their settings, given that the level of growth in this option is somewhat higher, this is likely to be the case in the medium to long term. But equally, the associated increased economic benefits may offer opportunities to provide for the better management of the historic environment. This option is unlikely to maintain or improve existing landscape character and unless development is carefully located and designed, may have a negative effect on local distinctiveness.

Table 6.4: Housing Requirement Option 4: High Growth (Variation 2)

Housing Requirement Option 4: High Growth (Variation 2)
 This option represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country (annual average of 68 dwellings).
 This option represents a total minimum housing requirement of **31,300 dwellings** over the 22-year plan period from 2016-2038, which equates to around 1,423 dwellings as an annual average.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to have a negative effect in the short term on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher levels of growth in this option mean that larger amounts of greenfield land will likely need to be released. For the same reason, it is also likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in the medium and long term. However, this level of growth allows for more larger sites to come forward, and a master-planning approach on these sites may offer opportunities for biodiversity gains in the medium to long term. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to increase the ability compared to that which currently exists and have a higher potential than many of the other options considered to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country.</p> <p>The average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered. It represents an increased rate of development compared with the long-term completion rates achieved in Shropshire, but is a lower rate of development compared with short-term completion rates achieved in Shropshire.</p> <p>As such, it is likely that this option will increase the ability compared to that which currently exists and have one of the higher potentials of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a positive geographic implication, allowing for the more balanced distribution of development across locations / settlements that are seen as more and less ‘viable’ or ‘attractive to the market’.</p>
4: Promote access to services for all sections of society	+	+	+ / ++	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to increase the ability to provide new services and facilities compared to that currently available and have a higher potential than many of the other options considered.</p> <p>Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability, it is likely to positively impact on the longer-term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	+ / ?	+ / ?	+ / ?	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to increase the ability to facilitate the provision of new forms of sustainable transport.</p> <p>The scale of development in this option may require new transport infrastructure. If this development is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	-	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to result in more housing development compared to current policy requirements. This may have a negative effect on car usage - more houses would likely result in more cars. However, the scale of development may be large enough to support new or existing public transport solutions to counter this in the medium to longer term.
7: Support active and healthy communities.	0	+	+	Many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be negatively affected by this option), which could compromise the ability to support active and healthy communities. However, as the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, opportunities to focus development in locations with good access to health, leisure and cultural facilities and activities. The ability to support existing and provide new health, leisure and cultural facilities and activities will also likely increase, offsetting any negative impact and resulting in an enhancement in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it will likely require more land, including greenfield land, for development. This may increase the potential for development in areas of higher flood risk. However, larger scale growth creates more opportunities for flood management measures.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	?/+	?/+	?/+	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to require an increased / higher amount of land for development and as such increase / have a higher potential for greenfield development. As new development is expected to achieve a minimum of 10% biodiversity net gain, an increased / higher level of development will increase the amount of biodiversity net gain achieved. Furthermore, this level of growth allows for larger sites to come forward, therefore the potential for new large scale habitats gained through residential development is also likely to be increased / higher in this option than some other options considered and compared with the annual average housing requirement within the adopted Local Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.
14: Promote efficient use of natural resources	-	-	-	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to provide decreased / lower opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely increase the amount of primary aggregates utilised.
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it has increased / higher potential to harm existing heritage assets and their settings. However, this may be somewhat offset by increased opportunities to contribute to their restoration, enhancement and long-term management.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, it is likely to cause an increased / higher change to existing landscape character and local distinctiveness.

Summary for Housing Requirement Option 4: High Growth (Variation 2)

6.36. The average annual housing requirement within this option is higher than that within the adopted Local Plan and this option represents one of the highest level of growth considered. This amount of growth is sufficient to meet both local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country.

6.37. This level of growth is also higher than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:

- a. The housing land supply buffer is reduced. The existing buffer is considered to be robust and could be reduced to an extent and still maintain robustness. However, the maintenance of an appropriate housing land supply buffer is considered important in order to ensure confidence regarding the deliverability of the proposed housing requirement.
- b. The anticipated capacity and rates of delivery across proposed site allocations is increased. Site capacities have been informed a proportionate and robust site assessment process; however, Shropshire Council does generally take a cautious approach to approximate site capacities and there are likely locations where there are potentially opportunities to increase site capacity and still achieve an appropriate form of development (particularly in circumstances where a development includes a form of housing which is of a higher density such as specialist housing for older people). Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. This exercise would need to be undertaken on a site by site basis.
- c. The anticipated capacity and rates of delivery across other sources of housing land supply is increased. Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply. As such, there is the potential for this approach to result in additional deliverable housing land supply. This exercise would need to be undertaken on a site by site basis.

- d. Windfall allowances in one or more settlements could be increased. Whilst existing windfall allowances were considered reasonable when proposed and there is flexibility within the draft Shropshire Local Plan for settlement guidelines to be exceeded, where this is appropriate, there is evidence that in some instances windfall allowances have been overly cautious and as such there is potential to increase windfall allowance in recognition of this. As an example, Shrewsbury, had a windfall allowance of 505 dwellings as at 31st March 2019. Current monitoring suggests that this windfall allowance has already been exceeded. This exercise would need to be undertaken on a settlement by settlement basis.
 - e. One or more of the existing site allocations could be expanded to increase its capacity. Any increased capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
 - f. One or more additional site allocations could be proposed.
 - g. A combination of the above.
- 6.38. The high level of growth within this option would likely allow significant opportunities to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. The economy would also likely benefit from this option, as it provides greater opportunities to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
- 6.39. This option would also likely promote access to existing services such as schools or shops and provides the potential to increase provision, with particular opportunities in the medium to long term. Similarly, there may be good opportunities for provision of new health, leisure, recreational and cultural facilities. Economies of scale may also contribute to an increased provision of energy from renewable sources, whilst supporting reductions in energy consumption and promoting energy efficiency.
- 6.40. The scale of development in this option would likely require and facilitate new transport and other forms of infrastructure provision at a level higher than options with lower levels of growth. If this growth is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.41. Due to the scale of development, it is likely that larger amounts of greenfield land would need to be released in this option compared to the baseline and options for lower levels of growth, there may also be a negative effect on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this level of growth allows for more larger sites to

come forward, a master-planning approach to larger sites may provide opportunities for biodiversity gains to offset such losses and provide opportunities for the creation of relatively large areas of new habitats. The specific site allocations are assessed separately within the SA process.

- 6.42. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.43. It is likely to be more difficult to focus this level of growth in accessible locations, so it may not be possible to reduce the need of people to travel by car. However, new or existing public transport solutions may counter this. Due to the level of growth, this option may increase the potential for development in areas of higher flood risk. However, conversely larger scale growth creates more opportunities for flood management measures.
- 6.44. This option would likely use more land than the current baseline and the options with lower levels of growth considered, as such opportunities to focus development on previously developed land or existing buildings is likely to be more limited. This option would also likely increase the amount of primary aggregates required, above the baseline.
- 6.45. Higher levels of growth inevitably have a greater potential to cause harm to heritage assets and their settings, but equally the associated increased economic benefits may offer opportunities to provide for the better management of the historic environment. This option is unlikely to maintain or improve existing landscape character and unless development is carefully located and designed, may have a negative effect on local distinctiveness.

Table 6.5: Housing Requirement Option 5: High Growth (Variation 3)

Housing Requirement Option 5: High Growth (Variation 3)
<p>This option represents around an 19% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country (annual average of 68 dwellings).</p> <p>This option represents a total minimum housing requirement of 32,300 dwellings over the 22-year plan period from 2016-2038, which equates to around 1,468 dwellings as an annual average.</p> <p>This total minimum housing requirement is equivalent to a 30,800 dwelling contribution towards local housing needs over the 22-year plan period, plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country, whilst recognising that these two matters are inherently interlinked.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-/?	-/?	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to have a negative effect in the short term on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher levels of growth in this option mean that larger amounts of greenfield land will likely need to be released.</p> <p>For the same reason, it is also likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in the medium and long term. However, this level of growth allows for more larger sites to come forward, and a master-planning approach on these sites may offer opportunities for biodiversity gains in the medium to long term. Specific site allocations are assessed separately within the SA process.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to increase the ability compared to that which currently exists and have the highest potential of the options considered to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country.</p> <p>The average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered. It represents an increased rate of development compared with the long-term completion rates achieved in Shropshire, but is a lower rate of development compared with short-term completion rates achieved in Shropshire.</p> <p>As such, it is likely that this option will increase the ability compared to that which currently exists and have the highest potential of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a positive geographic implication, allowing for the more balanced distribution of development across locations / settlements that are seen as more and less ‘viable’ or ‘attractive to the market’.</p>
4: Promote access to services for all sections of society	+	+/**	+/**	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to increase the ability / have the highest potential of the options considered to provide new services and facilities.</p> <p>Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability, it is likely to positively impact on the longer-term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	<p>As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to increase the ability to facilitate the provision of new forms of sustainable transport.</p> <p>The scale of development in this option may require new transport infrastructure. If this development is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	-	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to result in more housing development compared to current policy requirements. This may have a negative effect on car usage - more houses would likely result in more cars. However, the scale of development may be large enough to support new or existing public transport solutions to counter this in the medium to longer term.
7: Support active and healthy communities.	0	+	+	Many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be negatively affected by this option), which could compromise the ability to support active and healthy communities. However, as the average annual housing requirement is higher than that within the adopted Local Plan and this option represents one of the higher levels of growth considered, opportunities to focus development in locations with good access to health, leisure and cultural facilities and activities. The ability to support existing and provide new health, leisure and cultural facilities and activities will also likely increase, offsetting any negative impact and resulting in an enhancement in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it will likely require more land, including greenfield land, for development. This may increase the potential for development in areas of higher flood risk. However, larger scale growth creates more opportunities for flood management measures.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	?/+	?/+	?/+	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to require an increased / highest amount of land for development and as such increase / have the highest potential for greenfield development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such an increased / highest level of development will increase the amount of biodiversity net gain achieved. Furthermore, this level of growth allows for larger sites to come forward, therefore the potential for new large scale habitats gained through residential development is also likely to be increased / higher in this option than some other options considered and compared with the annual average housing requirement within the adopted Local Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.
14: Promote efficient use of natural resources	-	-	-	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to provide decreased / lowest opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely increase the amount of primary aggregates utilised.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it has increased / highest potential to harm existing heritage assets and their settings. However, this may be somewhat offset by increased opportunities to contribute to their restoration, enhancement and long-term management.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the average annual housing requirement is higher than that within the adopted Local Plan and this option represents the highest level of growth considered, it is likely to cause an increased / highest change to existing landscape character and local distinctiveness.

Summary for Housing Requirement Option 5: High Growth (Variation 3)

6.46. The average annual housing requirement within this option is higher than that within the adopted Local Plan and this option represents the highest level of growth considered. This amount of growth is sufficient to meet both local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country.

6.47. This level of growth is also higher than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:

- a. The housing land supply buffer is reduced. The existing buffer is considered to be robust and could be reduced to an extent and still maintain robustness. However, the maintenance of an appropriate housing land supply buffer is considered important in order to ensure confidence regarding the deliverability of the proposed housing requirement.
- b. The anticipated capacity and rates of delivery across proposed site allocations is increased. Site capacities have been informed a proportionate and robust site assessment process; however, Shropshire Council does generally take a cautious approach to approximate site capacities and there are likely locations where there are potentially opportunities to increase site capacity and still achieve an appropriate form of development (particularly in circumstances where a development includes a form of housing which is of a higher density such as specialist housing for older people). Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. This exercise would need to be undertaken on a site by site basis.

- c. The anticipated capacity and rates of delivery across other sources of housing land supply is increased. Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply. As such, there is the potential for this approach to result in additional deliverable housing land supply. This exercise would need to be undertaken on a site by site basis.
 - d. Windfall allowances in one or more settlements could be increased. Whilst existing windfall allowances were considered reasonable when proposed and there is flexibility within the draft Shropshire Local Plan for settlement guidelines to be exceeded, where this is appropriate, there is evidence that in some instances windfall allowances have been overly cautious and as such there is potential to increase windfall allowance in recognition of this. As an example, Shrewsbury, had a windfall allowance of 505 dwellings as at 31st March 2019. Current monitoring suggests that this windfall allowance has already been exceeded. This exercise would need to be undertaken on a settlement by settlement basis.
 - e. One or more of the existing site allocations could be expanded to increase its capacity. Any increased capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
 - f. One or more additional site allocations could be proposed.
 - g. A combination of the above.
- 6.48. The very high level of growth within this option would likely allow significant opportunities to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. The economy would also likely benefit from this option, as it provides greater opportunities to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
- 6.49. This option would also likely promote access to existing services such as schools or shops and provides the potential to increase provision, with particular opportunities in the medium to long term. Similarly, there may be good opportunities for provision of new health, leisure, recreational and cultural facilities. Economies of scale may also contribute to an increased provision of energy from renewable sources, whilst supporting reductions in energy consumption and promoting energy efficiency.
- 6.50. The scale of development in this option would likely require and facilitate new transport and other forms of infrastructure provision at a level higher than options with lower levels of growth. If this growth is focussed towards existing public transport hubs, use of sustainable

means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

- 6.51. Due to the scale of development, it is likely that larger amounts of greenfield land would need to be released in this option compared to the baseline and options for lower levels of growth, there may also be a negative effect on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this level of growth allows for more larger sites to come forward, a master-planning approach to larger sites may provide opportunities for biodiversity gains to offset such losses and provide opportunities for the creation of relatively large areas of new habitats. The specific site allocations are assessed separately within the SA process.
- 6.52. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 6.53. It is likely to be more difficult to focus this level of growth in accessible locations, so it may not be possible to reduce the need of people to travel by car. However, new or existing public transport solutions may counter this. Due to the level of growth, this option may increase the potential for development in areas of higher flood risk. However, conversely larger scale growth creates more opportunities for flood management measures.
- 6.54. This option would likely use more land than the current baseline and the options with lower levels of growth considered, as such opportunities to focus development on previously developed land or existing buildings is likely to be more limited. This option would also likely increase the amount of primary aggregates required, above the baseline.
- 6.55. Higher levels of growth inevitably have a greater potential to cause harm to heritage assets and their settings, but equally the associated increased economic benefits may offer opportunities to provide for the better management of the historic environment. This option is unlikely to maintain or improve existing landscape character and unless development is carefully located and designed, may have a negative effect on local distinctiveness.

Comparison Summary of Reasonable Options for the Housing Requirement

- 6.56. The overall purpose of this component of the additional SA assessment work is to help inform judgements about which of the reasonable alternatives for the housing requirement is the most sustainable against the SA objectives. This additional SA assessment work is summarised within Tables 5.1 - 5.5 above.
- 6.57. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the housing requirement, Table 5.6 has been prepared for illustrative purposes only. This summarises, in comparative terms, how the five reasonable alternatives perform against each of the SA objectives. This is achieved by 'ranking' the performance of each of the reasonable options from best performing (1) to poorest performing (5) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 6.58. It is not however appropriate to 'total-up' the scores, because performance against each of the SA objectives requires consideration in and of itself and 'totalling-up' scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a 'totalling-up' of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

Table 6.6: Comparison of Housing Requirement Options

Sustainability Objective	Option 1: Moderate Growth	Option 2: Significant Growth	Option 3: High Growth (Variation 1)	Option 4: High Growth (Variation 2)	Option 5: High Growth (Variation 3)
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	3	4	5
2: Encourage a strong and sustainable economy throughout Shropshire	5	4	3	2	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	5	4	3	2	1
4: Promote access to services for all sections of society	5	4	3	2	1
5: Encourage the use of sustainable means of transport	5	4	3	2	1
6: Reduce the need of people to travel by car	1	2	3	4	5
7: Support active and healthy communities.	5	4	3	2	1
8: Protect and improve soil quality	?	?	?	?	?
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	?	?
10: Reduce flood risk and improve flood management	?	?	?	?	?
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	?	?
12: Reduce carbon dioxide emissions	?	4	3	2	1
13: Promote adaptation and mitigation to climate change	5	4	3	2	1
14: Promote efficient use of natural resources	1	2	3	4	5
15: Conserve and enhance features and areas of heritage value and their setting	1	2	3	4	5
16: Conserve and enhance landscape character and local distinctiveness	1	2	3	4	5

Conclusion

- 6.59. Tables 5.1 - 5.5 summarise the additional SA assessment work for each of the reasonable housing requirement options identified. Table 5.6 then summarises, in comparative terms, how the five reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.
- 6.60. It is apparent from the results of the additional SA assessment work that none of the reasonable housing requirement options are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 6.61. Conversely, housing requirement options 3, 4 and 5 (the three high growth variations) are each likely to result in a strongly positive effect on *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society* in the short, medium and long term (with options 4 and 5 also potentially resulting in a strongly positive effect on *SA objective 4: promoting access to services for all sections of society*, in the long term and medium and long term respectively). A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 6.62. This is perhaps unsurprising as the achievement of *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society*, is directly related to the amount of housing provided, and each of options 3, 4 and 5 represent significant levels of housing growth above the baseline housing need identified, thereby providing greater opportunities to deliver affordable housing and other forms of housing to meet the needs of groups within our communities
- 6.63. The achievement of *SA objective 4: promoting access to services for all sections of society* is also somewhat linked to the level of housing provided, as it provides greater ‘critical population mass’ thereby supporting the maintenance and enhancement of the viability and sustainability of services and facilities and also increasing the ability to provide new services and facilities.
- 6.64. It is important to note that there are a number of SA objectives that are linked to the strategic distribution and specific location of development (sites), and as such in the context of the additional SA assessment of reasonable options for the housing requirement the conclusion can only be unknown. The strategic distribution and location of development (sites) are assessed separately within the SA process.
- 6.65. In general terms, the additional SA assessment work can be summarised as concluding that the greater the level of housing proposed within the option, the greater the likelihood of positive impacts on social and economic factors. Conversely the greater

the level of housing proposed within the option, the greater the likelihood of negative impacts on environmental factors. **It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.**

- 6.66. It is also important, although beyond the scope of this additional SA assessment work, to ensure that the resultant housing requirement option chosen is deliverable within the proposed plan period. Consideration of deliverability will be informed by a range of factors, including:
- a. Past trends in housing completions and the housing market over the short, medium and long term;
 - b. Recognition of the factors that can influence future trends in housing completions and the housing market in the short, medium and long term. This will include the myriad of known and unknown local, regional, national and international factors that may influence the housing market and housing delivery rates.
- 6.67. The housing requirement within Option 1: Moderate Growth and Option 2: Significant Growth represent lower levels of growth than currently proposed within the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of these options) for the potential refinement of the proposed strategy to align with either of these options, but irrespective of this, there is clearly confidence that either of these options is deliverable.
- 6.68. Whilst both would achieve the identified local housing need and provide a 1,500 dwelling contribution to the unmet housing need forecast to arise within the Black Country, they would be unlikely to achieve a strongly positive effect against *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society.*
- 6.69. The housing requirement within Option 3: High Growth (Variation 1) is comparable to that currently proposed within the draft Shropshire Local Plan, as such the strategy for its achievement would be that proposed within the draft Shropshire Local Plan and there is clearly confidence that this option is deliverable.
- 6.70. Furthermore, this option would achieve the identified local housing need and provide a 1,500 dwelling contribution to the unmet housing need forecast to arise within the Black Country. It also provides an opportunity to achieve a strongly positive effect against *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society.*
- 6.71. Option 4: High Growth (Variation 2) and Option 5: High Growth (Variation 3) represent higher levels of growth than currently proposed within the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of these options) for the potential refinement of the proposed strategy to align with either of these options, but irrespective of this, as they both entail delivery

above that currently proposed there would need to be careful consideration of whether the relevant option is deliverable.

- 6.72. These options would both achieve the identified local housing need and provide a 1,500 dwelling contribution to the unmet housing need forecast to arise within the Black Country. They also provide an opportunity to achieve a strongly positive effect against *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society* and potentially provide an opportunity to achieve a strongly positive effect against *SA objective 4: promoting access to services for all sections of society*.
- 6.73. Inevitably, the final determination (planning judgement) about which reasonable housing requirement option should be identified as the proposed housing requirement within the draft Shropshire Local Plan will be informed by a range of evidence/considerations. This additional SA Assessment work is a very important consideration when undertaking this planning judgement.
- 6.74. However, a range of other factors will also require due consideration when undertaking this planning judgement. This will include consideration of deliverability (as summarised above). It will also include the conclusions reached by the Planning Inspectors within their Interim Findings (ID28) particularly regarding the decision that the housing requirement should be established as a 'minimum' rather than being expressed as 'around'. Another consideration will be subsequent calculations of Local Housing Need - the most recent Local Housing Need Assessment has a 2023 base date and results in a considerable reduction to the level of local housing need in Shropshire.

7. Summary of SA Assessment: Reasonable Options for the Employment Land Requirement

Introduction

- 7.1. This section of the document summarises the additional SA assessment of the reasonable options for the employment land requirement.
- 7.2. The baseline for the reasonable options were the employment land need derived from job forecasts for: the 'labour supply' from changes to the housing supply to meet the needs of the changing population (140.9 hectares (ha)); and the 'labour demand' from changes to the business base (161.9 ha).
- 7.3. These forecasts were conducted within the Economic Development Needs Assessment but were further adjusted in the Employment Topic Papers (EV112/GC4N) to correct the density assumptions in the EDNA about employment development in Shropshire. These forecasts were adjusted for the 'labour supply' from 140.9ha upwards to 216.8ha and for the 'labour demand' from 161.9ha upwards to 249.1ha.
- 7.4. The baseline employment land need for the Plan period therefore ranged from 217ha at an annual average of 9.9 hectares/year (ha/yr) for the need arising from the supply of labour from growth in the housing supply. This increased to 250ha at an annual average of 11.4ha/yr for the need arising from the demand for labour from the County's changing business base. A further element of need is considered through the contribution of 30ha towards unmet need in the Black Country. This increased the 'labour supply' need to 247ha (from 217ha) at 11.2ha/yr and the 'labour demand' need to 280ha (from 250ha) at 12.7ha/yr.
- 7.5. Shropshire Council wishes to ensure the employment land requirement meets the employment needs of the growing population and from those seeking employment in the County as the size and performance of the business base increases. The 'labour demand' employment land need of 280ha, at an annual average of 12.7ha/year, is therefore considered to be the key determinant for the reasonable options for the employment land requirement in this additional SA assessment.
- 7.6. This additional SA Assessment work is an important consideration when undertaking the planning judgement regarding which reasonable option should be identified as the proposed employment land requirement in the draft Shropshire Local Plan. A range of other evidence/factors is also considered in undertaking this planning judgement. This includes the conclusions reached by the Planning Inspectors in their Interim Findings (ID28) particularly the decision that the employment land requirement should be established as a 'minimum' rather than being expressed as 'around'.

Identification of Reasonable Options for the Employment Land Requirement

- 7.7. Consistent with the methodology to identify reasonable options within the SA assessment already undertaken for the draft Shropshire Local Plan, reasonable options were identified based on a series of reasonable percentage uplifts above the identified

baseline (which totalled 280ha over the 22-year plan period from 2016-2038, equating to an annual average of 12.7ha/yr).

- 7.8. These uplifts ensure the employment need in Shropshire would be met, whilst providing some flexibility to respond to changes to employment demands over the plan period. This would provide opportunities to improve the:
- a. inward investment potential of Shropshire by increasing the number and choice of strategic development opportunities and their distribution around the County;
 - b. sustainability and accessibility of this employment offer by focusing a significant proportion of development into the strategic corridors and principal settlements;
 - c. quality, range and choice of floorspace by increasing the supply and distribution of modern business units and commercial premises;
 - d. demand into Shropshire for employment land from a range of business types and sizes supported by:
 - i. promotion of the County as a good investment location and an attractive place for business and enterprise;
 - ii. provision of services to businesses and individuals to build their confidence and skills to make successful investments or encourage entrepreneurship;
 - e. workforce availability within Shropshire through opportunities for education, training and support to build confidence to enter the employment market and to provide the skills needed by businesses.
- 7.9. A contribution towards the unmet employment land needs forecast to arise in the Black Country is also proposed, as a result of the duty to cooperate discussions undertaken with the Black Country Authorities. Each of the reasonable options in this SA assessment includes a 30ha contribution (equal to 1.4ha/yr) within the employment land need in each option. This is set out in the Duty to Cooperate – Statement of Common Ground with the Black Country Authorities and supporting evidence in EV041 to EV041.05 and further evidence in GC10-GC10g and GC15a. This ensures the proposed contribution to the unmet employment land need forecast in the Black Country is included in the proposed employment land requirement.
- 7.10. Five reasonable options for the employment land requirement were identified and assessed within this additional SA assessment work. Each of the five options includes the contribution of 30ha for the unmet employment land need forecast in the Black Country as part of the baseline employment land need for Shropshire. This approach was explained in the EDNA (2021) (EV043) and set out in the Employment Requirement Topic Paper (2021) (EV112/GC4n). These options are:
- a. **Employment Land Requirement Option 1: Productivity Growth** - Consisting of a baseline local need of 161.9ha adjusted upwards to 250ha from the density standard in the EDNA (at 40%) to the lower density at 26% for Shropshire. This option combines the contribution of 30ha for the unmet employment land need forecast in the Black Country. These factors would require a **minimum of 280ha of**

- land at an annual average of around 13ha/yr.** This option approximates to the Productivity Growth Option (as Option 3) in the SA assessment to inform the draft Shropshire Local Plan. This would establish a new strategic approach for the 22-year period from 2016 to 2038, to capture the potential for new investment in Shropshire and influence the structure of the economy, the productivity of its sectors and the range, type and quality of new employment. This creates an aspiration to provide more 'higher value' jobs whilst setting a lower employment land requirement with a lower overall provision of new jobs.
- b. **Employment Land Requirement Option 2: Significant Growth** – providing a 5% uplift on the adjusted local need of 250ha for employment land in Shropshire from 2016-2038. This combines with the contribution of 30ha for the unmet employment land need in the Black Country. These factors would require a **minimum of 290ha of land at an annual average of around 13.5ha/yr.** This option approximates to the Significant Growth Option (as Option1) in the SA assessment to inform the draft Shropshire Local Plan. This option provides a significant uplift on the baseline employment land need for the County.
 - c. **Employment Land Requirement Option 3: High Growth Variation 1** – providing a 10% uplift on the adjusted local need of 250ha for employment land in Shropshire from 2016-2038. This combines with the contribution of 30ha for the unmet employment land need in the Black Country. These factors would require a **minimum of 300ha of land at an annual average of around 14ha/yr.** This option represents an uplift on baseline need consistent with the High Growth Option (as Option 2) in the SA assessment to inform the draft Shropshire Local Plan. It results in an employment land requirement consistent with the draft Shropshire Local Plan.
 - d. **Employment Land Requirement Option 4: High Growth Variation 2** – providing a 15% uplift on the adjusted local need of 250ha for employment land in Shropshire from 2016-2038. This combines with the contribution of 30ha for the unmet employment land need in the Black Country. These factors would require a **minimum of 315ha of land at an annual average of around 14.5ha/yr.** This employment land requirement has an annual average rate of development similar to the adopted Development Plan but provides for a 22 year plan period.
 - e. **Employment Land Requirement Option 5: High Growth Variation 3** - Consisting of a 20% uplift on the adjusted local need of 250ha for employment land in Shropshire from 2016-2038. This combines with the contribution of 30ha for the unmet employment land need in the Black Country. These factors would require a **minimum of 330ha of land at an annual average of around 15ha/yr.** This provides an employment land requirement of a scale not previously considered in the draft Shropshire Local Plan or any preceding Development Plan for Shropshire.

Assessment of Reasonable Options for the Employment Land Requirement

7.11. The following tables summarise the additional SA assessment of the identified reasonable Employment Land Requirement Options:

Table 7.1: Employment Land Requirement Option 1: Productivity Growth

Employment Land Requirement Option 1: Productivity Growth				
<p>This option represents the adjusted local need for employment land (250ha) over the 22-year plan period from 2016-2038. This option also combines the contribution of 30ha (annual average of 1.4ha) for the unmet employment land need forecast to arise in the Black Country. This option seeks to establish a new strategic approach for the 22-year period from 2016 to 2038, capturing the potential for new investment in Shropshire and seeking to influence the structure of the economy, the productivity of its sectors and the range, type, and quality of new employment. This option would create an aspiration to provide more ‘higher value’ jobs whilst setting a lower employment land requirement of 280ha equal to around 13ha/yr, with a lower overall provision of new jobs.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option represents the lowest employment land requirement and is below the level proposed in the draft Shropshire Local Plan. The annual average rate of employment development would be 13ha/year which is much lower than the 14.5ha/year in the adopted Development Plan. This option would result in a reduction in the release of greenfield land for employment development and a reduction in the current and proposed rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
2: Encourage a strong and sustainable economy throughout Shropshire.	+/?	+/?	+/?	This option seeks to change the employment offer in Shropshire but represents the lowest level of employment land provision proposed, although it is sufficient to meet local need forecast to arise in Shropshire and to contribute to unmet need in the Black Country. The annual average employment land requirement of around 13ha/year is lower than the 14.5ha/year in the adopted Local Plan. The option would represent a slowing down in the rate of employment land development and would affect the performance of the local economy by limiting the potential for positive changes in the business base, deliver a lower level of new employment growth to meet the needs of the local population and reduce the scope for positive changes to the number and productivity of the resident, working age, labour force. This option would provide few opportunities for strategic economic investment to meet demands in the local and sub-regional economy.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	+/?	+/?	+/?	This option seeks to change the employment offer in Shropshire towards higher value jobs. A restructuring of Shropshire's economy may increase the provision and connectivity of broadband services. Although there is uncertainty as to whether this option would achieve such significant changes even in the long term. This option represents the lowest level of employment land provision with an annual average rate of development at 13ha/year well below the 14.5ha/year in the adopted Development Plan. The consequent lower levels of investment in the County, reduced growth in numbers in employment and reduced growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport.	?	?	?	This option represents the lowest level of employment land provision proposed and the annual average employment land requirement of around 13ha/year would be lower than the 14.5ha/year in the adopted Development Plan. This option would reduce demand and have the lowest potential to maintain or improve existing access to and demand for public transport. Whilst this option seeks to change the employment offer in Shropshire towards higher value jobs, it is uncertain whether this option would deliver such significant changes. The location of these high value jobs would have the greatest impact on the demand for sustainable transport and so the uncertainty about the impacts of this option would affect this objective. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	+/?	+/?	+/?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These are the most accessible locations providing for a reduction in the need to travel by car to work. However, there is uncertainty about whether such significant changes would be achieved even in the long term. The level of employment growth in this option is also the lowest proposed at 13ha/year compared to 14.5ha/year in the adopted Development Plan and could increase the need for out-commuting to employment opportunities, including travel by car.
7: Support active and healthy communities.	0	0	0	Recreational activities are associated either with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option) or access to commercial 'recreational' services. On balance, there is likely to be little or no effect on the provision of health, leisure and recreational facilities in this lowest option.
8: Protect and improve soil quality.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These urban location are less likely to impact on soil quality but there is uncertainty as to whether such significant changes would be achieved even in the long term. Furthermore, the employment land requirement associated with this option is the lowest proposed and the annual average rate of development at 13ha/year is much lower than the 14.5ha/year in the adopted Development Plan which would further reduce impact on soil quality.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. As pollution from rural areas has a greater effect on water quality in Shropshire and the focus of this lower growth would be on a smaller number of principal towns with less allocated land, this option may have a positive effect on water quality and pollution risk. Furthermore, the employment land requirement associated with this option is the lowest proposed and this is also likely to reduce impact on water quality and reduce water pollution. However, there is uncertainty as to whether such significant changes would be achieved even in the long term.
10: Reduce flood risk and improve flood management.	+/?	+/?	+/?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. The emphasis would be on providing employment land in the principal towns where investment demand is most likely to be expressed. This might make it easier to avoid areas of flood risk especially as the level of growth in this option is the lowest proposed for the draft Shropshire Local Plan. However, it is uncertainty whether such significant changes would be achieved even in the longer term. Ultimately this is dependant on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?	?	?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These locations are most likely to contain Air Quality Management Areas. The impact upon these areas has the greatest potential to further affect air quality. However, this option proposes the lowest level of growth for the draft Shropshire Local Plan and is likely to reduce the potential to impact on air quality. There is uncertainty as to whether such significant changes would be achieved even in the long term. However, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions.	+	+	+	An emphasis on higher quality jobs may lead to a reduction in energy consumption and associated carbon dioxide emissions. Furthermore, the employment land requirement associated with this option is the lowest proposed for the draft Shropshire Local Plan and so, would help to reduce carbon dioxide emissions.
13: Promote adaptation and mitigation to climate change.	0	0	0	Opportunities to mitigate and adapt to climate change are likely to remain at the same level as present in this lowest growth option for the draft Shropshire Local Plan.
14: Promote efficient use of natural resources.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. As such, it is likely to offer the most efficient use of natural resources because of its focus on higher quality jobs rather than more land. Furthermore, the employment land requirement associated with this option is the lowest proposed for the draft Shropshire Local Plan and would reduce the demand for primary resources and increase potential for use of secondary/recycled resources.
15: Conserve and enhance features and areas of heritage value and their setting.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. The distribution of this lowest level of development into fewer settlements may cause the least harm or loss of heritage assets and their settings.
16: Conserve and enhance landscape character and local distinctiveness.	+	+	+	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option, with the lowest level of employment development is expected to have the least impact on this Sustainability Objective.

Summary of Employment Land Requirement Option 1: Productivity Growth

7.12. The employment land requirement with this option represents the lowest level of growth considered with an annual average rate of development consistent with recent take-up from 2026 to 2020 but lower than in the adopted Development Plan or the draft Shropshire Local Plan. The level of employment growth is sufficient to meet local need for employment land and provides an appropriate contribution (30 hectares) towards unmet employment land need forecast in the Black Country. This option would not provide any specific flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. However, the employment land requirement does not

represent the 'ceiling' on the scale of development and such circumstances may increase the rate of development through the effects of market demand.

7.13. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:

- a. This option proposed a substantial decrease in the rate of employment development to meet local needs and contribute to unmet need in the Black Country and this might affect the growth and performance of the local economy. This might limit the potential for positive changes in the business base, deliver a lower level of new employment growth to meet the needs of the local population and reduce the scope for positive changes to the number and productivity of the resident, working age, labour force. There would be fewer opportunities for strategic economic investment to deliver key improvements to the business base, the quality of the employment offer and to attract more working age people to live and work, or to simply access work, in the County.
- b. A slowing down in the rate of employment development would mean the employment land supply buffer would be greater than in the draft Shropshire Local Plan. Whilst this would give greater confidence about delivering the employment land requirement, it indicates the employment land requirement might be significantly exceeded should demand for employment development be greater than the anticipated need.
- c. Where this lower employment land requirement was delivered, the anticipated capacity and/or rates of delivery on the proposed site allocations might need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
- d. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.
- e. One or more of the proposed site allocations might need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
- f. A combination of the above.

- 7.14. This option is expected to have a positive effect on the range of plants and animals, the quality and extent of wildlife habitats, carbon dioxide emissions, efficient use of natural resources, conservation and enhancement of landscape character and local distinctiveness, and soil and water quality/water pollution. This option is also expected to result in a lower potential for harm to heritage assets and their settings. This is a result of the lower level of employment development proposed in this option than currently being delivered in the adopted Development Plan. The fact that this option also seeks to target the provision of employment towards higher value jobs and into urban locations where investment demand is most likely to be expressed.
- 7.15. This option should have a positive effect on the encouragement of a strong and sustainable economy in Shropshire through the change in the employment offer towards higher value jobs. However, there is uncertainty as to whether such significant changes would be achieved even in the long term and this is a particular risk given the associated reduction in total employment provision.
- 7.16. This option should also have a positive effect on promoting access to services for all sections of society; reducing the need to travel by car; and contributing to the reduction of flood risk. However, this is dependent on factors such as whether the change to higher value jobs is achieved and also the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process for these effects.
- 7.17. It is expected that this option would not impact on provision of sufficient good quality housing which meets the needs of all sections of society; or provide any further support for physical activity and healthy communities; or further promote the adaptation and mitigation of climate change. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process.
- 7.18. The impact of this option on encouraging use of sustainable means of transport and air quality is unclear, primarily as these issues are very much dependent on the location of development - the strategic distribution of development and specific site allocations assessed elsewhere in the SA process for these effects.

Table 7.2: Employment Land Requirement Option 2: Significant Growth

Employment Land Requirement Option 2: Significant Growth				
This option represents a 5% uplift on the adjusted local need for employment land (250ha + 5%) over the 22-year plan period from 2016-2038. This option also includes the contribution of 30ha (annual average of 1.4ha) for the unmet employment land need forecast to arise in the Black Country. This option would provide 290ha equal to around 13.5ha/yr . This option is responsive to and represents a consistent uplift on baseline need to that within the Significant Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan. This would be a significant uplift on the baseline employment land need for the County to meet some of the demands expressed in Shropshire over the 22 year plan period.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option represents an increase in the employment land requirement but is below the level proposed in the draft Shropshire Local Plan. The annual average rate of employment development would be higher at 13.5ha/year but remains below the rate of 14.5ha/year in the adopted Development Plan. This option would also result in a reduction in the release of greenfield land for employment development and a reduction in the current and proposed rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	+	+	+	This option represents a level of growth which whilst less than that within the adopted Local Plan (around 13.5ha/year compared to 14.5ha/year in the adopted Local Plan) represents a significant level of growth in the Shropshire context and reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. This option is likely to provide an appropriate and balanced supply of employment land and support existing businesses in Shropshire.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.

Page 649

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered that this option will not alter the current levels of access to services and facilities for all sections of society in Shropshire.
5: Encourage the use of sustainable means of transport.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered that this option is unlikely to affect the use of sustainable means of transport in Shropshire.
6: Reduce the need of people to travel by car.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered that current patterns of car travel are unlikely to change to any significant degree.
7: Support active and healthy communities.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, there is likely to be little or no effect on the provision of health, leisure and recreational facilities even for this higher option.
8: Protect and improve soil quality.	?	?	?	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. However, the location of development is likely to have the greatest influence on the impact on soil quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	?	?	?	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. However, the location of development is likely to have the greatest influence on the impact on water quality and water pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. Lower levels of development are more likely to be accommodated in areas of low flood risk but it is considered that the baseline situation is unlikely to significantly change with regard to flood risk and opportunities to further improve flood management.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?	?	?	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. However, the location of development and relationship to Air Quality Management Areas is likely to have the greatest impact on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. Where economies of scale exist especially in urban locations, they may offer some opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. The scale of economic activity in the County might encourage some uptake of renewable energy into primary production processes and some integration of new technologies to move towards a 'carbon neutral' economy.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered opportunities to mitigate and adapt to climate change are likely to remain at the same level as present in this higher growth option for the draft Shropshire Local Plan.
14: Promote efficient use of natural resources.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered that trends in resource efficiency are likely to continue as they are now.
15: Conserve and enhance features and areas of heritage value and their setting.	0	0	0	This option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) but this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. As such, it is considered that the current situation with respect to the conservation and management of the historic environment is likely to be maintained.
16: Conserve and enhance landscape character and local distinctiveness.	0	0	0	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place to the community or to the individual. However, this option represents a level of growth at 13.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year) although this is still a significant level of growth in the Shropshire context. This also reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. Nevertheless, this option would be unlikely to alter the local landscape character or distinctiveness to a significant degree for most communities in the County.

Summary for Employment Land Requirement Option 2: Significant Growth

7.19. The employment land requirement with this option is higher but still below the level of growth in the adopted Development Plan or the draft Shropshire Local Plan. This option has a rate of growth at 13.5ha/year which is lower than the adopted Development Plan at 14.5ha/year. A rate of growth at 13.5ha/yr is still significant in the Shropshire context and reflects some of the key principles for the

employment land requirement proposed in the draft Shropshire Local Plan. The annual average rate of employment development would exceed local need and provide an appropriate contribution (30 hectares) to unmet employment land need forecast in the Black Country. The uplift to the employment land requirement also offers some flexibility to respond to changing circumstances and significant employment opportunities during the Plan period to 2038.

7.20. This level of growth, whilst being lower than that proposed within the draft Shropshire Local Plan, would mean that:

- a. The rate of employment development in this option, to meet local needs, contribute to unmet need in the Black Country, also provides some flexibility to promote the growth and performance of the local economy. This will encourage the potential for positive changes in the business base, deliver new employment growth to meet the needs of the local population and broaden the scope for positive changes to the number and productivity of the resident, working age, labour force. There would be fewer opportunities for strategic economic investment to deliver key improvements to the business base, the quality of the employment offer and to attract more working age people to live and work, or to simply access work, in the County.
- b. A slowing down in the rate of employment development would mean the employment land supply buffer would still be higher than in the draft Shropshire Local Plan. Whilst this would give greater confidence about delivering the employment land requirement, it indicates the employment land requirement might still be exceeded should demand for employment development be greater than the anticipated need and the limited flexibility provided by this higher employment land requirement.
- c. If the employment land requirement was not to be exceeded to great a degree, the anticipated capacity and/or rates of delivery across proposed site allocations might still need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
- d. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.

- e. One or more of the proposed site allocations might still need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
- f. A combination of the above.

- 7.21. This option is expected to have a positive effect on the encouragement of a strong and sustainable economy throughout Shropshire as it represents a level of employment provision that exceeds identified needs plus includes an appropriate (30 hectare) contribution to unmet needs forecast to arise in the Black Country.
- 7.22. This option is expected to have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire to 2038 as a result of the reduction in the release of greenfield land for employment development and a reduction in the current and proposed rates of employment development in the County.
- 7.23. This option still proposes a lower employment land requirement with a lower annual average rate of development than in the adopted Local Plan or the draft Shropshire Local Plan. However, this higher rate of growth is significant in the Shropshire context and reflects some of the key principles for the employment land requirement proposed in the draft Shropshire Local Plan. Consequently, it is considered to have neutral effects on a number of the sustainability objectives: the delivery of good quality housing is more likely to be influenced by other components of the draft Shropshire Local Plan, there would also be neutral effects on the promotion of access to services for all sections of society; the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reducing flood risk and improve flood management; reducing carbon dioxide emissions; promoting adaptation and mitigation to climate change; promoting efficient use of natural resources; conserving and enhance features and areas of heritage value and their setting; and conserving and enhance landscape character and local distinctiveness.
- 7.24. The effect of this option on the protection and improvement of soil quality; the conservation and enhancement of water quality in Shropshire and to reduce the risk of water pollution; and the conservation and enhancement Shropshire's air quality and to reduce the risk of air pollution are more likely to be influenced by the location of development. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Table 7.3: Employment Land Requirement Option 3: High Growth – Variation 1

Employment Land Requirement Option 3: High Growth – Variation 1				
This option represents a 10% uplift on the adjusted local need for employment land (250ha + 10%) over the 22-year plan period from 2016-2038. This option also includes the contribution of 30ha (annual average of 1.4ha) for the unmet employment land need forecast to arise in the Black Country. This option is responsive to and represents a consistent uplift on baseline need to that within the High Growth Option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan. It results in an employment land requirement of 300ha equal to around 14ha/yr and is similar to that currently identified within the draft Shropshire Local Plan.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option is comparable with the proposed employment land requirement currently identified in the draft Shropshire Local Plan. The annual average of employment development would be higher at 14ha/year but is below the rate of 14.5ha/yr in the adopted Development Plan. This option requires the release of large greenfield sites but these would require a master-planning approach and would offer opportunities for biodiversity gains in the medium to longer term. Although this option proposes a rate of development closer to the adopted Development Plan it would still have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire.	++	++	++	This option provides for a higher level of development with an annual average employment land requirement of around 14ha/year which is comparable with the draft Shropshire Local Plan. This option would increase the capacity for the local and regional economy to invest in Shropshire, to support the achievement of the economic growth aspirations including the creation of more jobs, and support to diversify our labour force. This option provides both an opportunity to deliver strategic economic investment and to facilitate appropriate ‘windfall’ employment development in the strategic policy of the draft Shropshire Local Plan. This option would create a balanced supply of employment land and deliver more ‘higher value’ jobs with the potential to improve the distribution of economic opportunity across the County.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	?/0	?/0	?/0	The increase in investment and increased numbers of working age people in employment would drive the delivery of new services and facilities to serve communities in the county. This is also expected to require further investment in critical or higher value services and facilities that need to keep pace with increasing demand to maintain service quality standards. The longer-term viability of many more communities is expected to improve through the geographic implications of the increased economic investment in the County helping to sustain key local services and facilities like local shops, post offices and banks.
5: Encourage the use of sustainable means of transport.	+	+	+	The higher level of employment development would increase demand to maintain and improve existing access to public transport on primary and secondary routes in urban locations but would still be more challenging in rural areas. However, the move to a more productive and prosperous economy would facilitate increased investment in the public transport networks and services. A focus for the modal shift from car usage would also be walking, cycling and new electronic transport technologies which would highlight the need for improvements to the highway/footway infrastructure across the County. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	-	-	-	As the employment land requirement increases to the higher growth option, it would increase movement and changes to current travel to work patterns with further movements across the County boundary. This would increase the rate of car usage and distances travelled. An even greater increase in the growth of individual resources from economic participation, might encourage the rate of migration from fossil fuel vehicles to electric vehicles helping to reduce the carbon footprint of car usage. This migration would be supported by increasing investment in the expansion of the vehicle charging network and access to individual charging points through investment in new development. Any reduction in car travel would need to be supported strategically by investment in public transport and by an increasing modal shift to walking, cycling and new electric transport technologies.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	0	Recreational activities are associated either with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option) or access to commercial 'recreational' services. Overall activity levels would increase at this higher growth option as the level of employment development encourages more working age people to enter employment and seek recreational opportunities in the County. The encouragement of cross boundary travel to work movements into the County might mitigate some of the anticipated demand for commercial 'recreational' services and also limit the range of opportunities available to resident communities.
8: Protect and improve soil quality.	?/-	?/-	?/-	This Option would require a greater provision of new land for employment development above the supply of saved sites previously assessed for their impact on the natural environment. Whilst the Plan strategy focuses the greater proportion of development into urban locations this option would require a number of significant greenfield sites. This option would begin to impact the soil resources of the county with the potential to affect the best and most versatile agricultural land. The strategic distribution of development and specific site allocations are also assessed in the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	?/-	?/-	?/-	This Option would require a further increase on the provision of new land for development above the supply of saved sites previously assessed for their impact on the natural environment. Whilst the Plan strategy still focuses the greater proportion of development into urban locations this option would require a number of significant greenfield sites on the edge of settlements or in rural locations. This option would begin to impact water quality standards and require measures to protect against the potential for pollution. The strategic distribution of development and specific site allocations are also assessed in the SA process.
10: Reduce flood risk and improve flood management.	-	-	-	Lower levels of development are more likely to be accommodated in areas of low flood risk. The level of employment development in this option remains lower than that in the adopted Development Plan. This option has a high level of growth requiring a number of larger greenfield sites for employment development. This option would begin to negatively impact this Objective, but still allows for a careful selection of the locations for new development and the provision of appropriate flood management measures where necessary. The strategic distribution of development and specific site allocations are also assessed in the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?/0	?/0	?/0	This Sustainability Objective is primarily related to the presence of Air Quality Management Areas of which there are only a few in the county at key locations in the urban highway networks but not closely related to the pattern of existing or proposed employment areas. This Sustainability Objective also indicates the potential outcome from the effects of Sustainability Objectives 2 economy, 5 transport and 6 car travel. This higher level of employment development would necessitate investment in public transport and a movement towards more active travel especially in urban locations. Further, the proposed growth in the local economy and with greater participation from working age people, would further help to facilitate the migration from fossil fuel vehicles to electric vehicles.
12: Reduce carbon dioxide emissions.	?/0	?/0	?/0	Economies of scale would offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. The scale of economic activity in the County would also encourage the uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. However, the rate of economic activity and the implications for transport and air quality would be a strategic matter for the achievement of a 'carbon neutral' economy and standards of living in Shropshire which might be a challenge to pursuing this option.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	+	+	+	This option would increase the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs. It provides an increased rate of development compared with completion rates achieved in Shropshire but is lower than the completions achieved in some recent years. Whilst the much higher level of employment development would increase car usage and distances travelled, it would necessitate investment in public transport and a movement towards more active travel especially in urban locations. Further, the proposed growth in the local economy and with greater participation from working age people, would further help to facilitate the migration from fossil fuel vehicles to electric vehicles. The scale of economic activity in the county would also encourage the uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. It may become necessary to consider the rate of economic growth in the context of achieving a 'carbon neutral economy but the more significant release of new land for development in greenfield locations would also allow for biodiversity net gain improvements. This would include opportunities for more significant new or improved habitats to be created to positively contribute towards the adaptation and mitigation of climate change.
14: Promote efficient use of natural resources.	-	-	-	This option proposes a level of development comparable with the draft Shropshire Local Plan with a significant release of land for new development including some larger greenfield sites. There would be a comparable need for primary aggregate and this would include strategic infrastructure investment to access and service sites. This option is considered to have a negative impact on this Sustainability Objective.
15: Conserve and enhance features and areas of heritage value and their setting.	-	-	-	The potential to contribute towards the restoration, enhancement and long-term management of heritage assets through the process of economic development has a more limited viability. The more widespread impact on heritage assets from economic development is harm to the setting of heritage assets. This option, with a more significant level of employment development and its greater release of greenfield land for development has the potential to negatively impact this Sustainability Objective. This matter has been considered in detail in the assessment of the distribution of development and individual site assessments in this SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness.	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option, with a higher level of employment development and its significant release of greenfield land is expected to negatively impact this Sustainability Objective. These impacts are considered in greater detail in the distribution of development and individual site assessments in this SA process.

Summary for Employment Land Requirement Option 3: High Growth – Variation 1

7.25. The employment land requirement with this option is higher than the preceding options and consistent with the draft Shropshire Local Plan but still below the level of growth in the adopted Development Plan. This option has a rate of growth at 14ha/year which is still lower than the adopted Development Plan at 14.5ha/year. The level of employment development would substantially exceed both the local need for employment land and the contribution (30 hectares) towards unmet employment land need forecast in the Black Country. This employment land requirement provides an uplift above these two needs to facilitate a rate of employment development that exceeds recent take-up and sets an aspirational requirement to improve the growth and performance of the local economy.

7.26. This level of growth, which is comparable to that proposed within the draft Shropshire Local Plan, would mean that:

- a. This option proposed a slight decrease in the proposed rate of employment development but still exceeds the local need and the contribution to unmet need in the Black Country which would have a positive impact on the growth and performance of the local economy. This would facilitate significant changes in the business base, deliver an increased level of new employment to the local population and potentially accelerate positive changes to the number and productivity of the resident, working age, labour force. There would be more opportunities for strategic economic development to meet changing demands from the business base, to further improve the quality of the employment offer and to attract more working age people to live and work, or to simply access work, in the County.
- b. a continued increase in the rate of employment development would reduce the buffer in the employment land supply. Whilst the existing buffer in the supply is significant, this land supply seeks to provide a range and choice of sites to give greater confidence

about delivering the economic growth aspirations in Shropshire and to provide flexibility in meeting the employment land requirement in the County.

- c. If the employment land requirement was to be achieved, the anticipated capacity and/or rates of delivery across proposed site allocations might need to be increased possibly to achieve higher densities on larger and more centrally located sites. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis to improve the delivery of built floorspace on certain sites. An exercise to re-appraise anticipated floorspace delivery would need to be undertaken on a site by site basis.
 - d. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be increased. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to increase the density of development by type of site and location.
 - e. One or more of the existing site allocations could be expanded to increase its capacity. Any increased capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
 - f. One or more additional site allocations could be proposed.
 - g. A combination of the above.
- 7.27. Due to this scale of development, it is likely that an increased release of greenfield sites would have a negative impact on the need to reduce travel by car, the need for natural resources to deliver the scale of new greenfield development, an increased effect on flood risk with a greater need for flood management with additional impacts on heritage assets and their settings and landscape character and local distinctiveness.
- 7.28. This option proposes a rate of development below that in the adopted Development Plan. The release of greenfield sites also requires a master-planning approach to the development of the land which will deliver opportunities for biodiversity gains, climate change adaptation and investment to influence travel choices and behaviour in order to help balance the effects of development. This would have positive impacts on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to longer term. This would also positively impact investment to encourage the use of sustainable means of transport and other investments to

promote adaptation and mitigation to climate change. The specific site allocations are further assessed in the SA process for these effects.

- 7.29. This option provides a significant opportunity to deliver strategic economic development to further meet demands in the local and sub-regional economy and to create a balanced supply of employment land which also delivers more 'higher value' jobs. This option would have a strongly positive impact on the promotion of a vibrant and sustainable local economy across Shropshire.
- 7.30. The level of employment development in this option would be expected to have a negative impact on the quality of the soil with the potential to affect the best and most versatile agricultural land and on the water resources of the County with the risk of impacts on water quality standards possibly requiring measures to protect against the potential for pollution. The Plan strategy still focuses the greater proportion of development into urban locations but for employment there would be a number of significant greenfield sites on the edge of settlements or in rural locations. However, these issues are very much dependent on the location of development - the strategic distribution of development and specific site allocations are assessed elsewhere in the SA process.
- 7.31. In this option the level of employment growth would have neutral effects on the delivery of good quality housing as this is more likely to be influenced by other components of the draft Shropshire Local Plan. This option would also have neutral impacts on the activity levels and engagement in commercial and natural recreational opportunities in communities as the rate of growth is lower than that being delivered by the adopted Development Plan.
- 7.32. In this option, it is expected that, the level of employment growth may have neutral impacts on the delivery of new services and facilities to serve communities in the County as the rate of growth is lower than that being delivered by the adopted Development Plan. This relative scale of growth, representing a decrease from the current rate of development, may also have a neutral impact on the emissions of carbon dioxide where there is no increase in economic activity and this may have a further neutral impact on air quality standards in the Air Quality Management Areas and in other affected areas around the County.

Table 7.4: Employment Land Requirement Option 4: High Growth – Variation 2

Employment Land Requirement Option 4: High Growth – Variation 2				
This option represents a 15% uplift on the adjusted local need for employment land (250ha + 15%) over the 22-year plan period from 2016-2038. This option also includes the contribution of 30ha (annual average of 1.4ha) for the unmet employment land need forecast to arise in the Black Country. It results in an employment land requirement of 315ha equal to around 14.5ha/yr and is similar to the annual average rate of development in the adopted Development Plan over a 22 year plan period.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-	-	This option increases the proposed employment land requirement in Shropshire above the draft Shropshire Local Plan. However, the annual average rate of development at 14.5ha/yr remains the same as the adopted Development Plan although it is delivered over an extended 22 year plan period. This option would require more, large greenfield sites to be released to improve the quality of the land supply above that currently proposed. This would require a master-planning approach and would deliver opportunities for biodiversity gains in the medium to longer term. Nevertheless, it is likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats across Shropshire to 2038. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire.	++	++	++	This option would continue to increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support to diversify our labour force. This option provides opportunities to deliver strategic economic investment from regional, national or international markets and facilitate appropriate 'windfall' employment development consistent with the strategic policy of the draft Shropshire Local Plan. This option would create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society.	-	-	-	The continued investment and numbers of working age people in employment would continue to place pressures on the existing and new services and facilities that serve communities in the county particularly during the working day and especially at peak hours. This is expected to require further investment in critical or higher value services and facilities to keep pace with the increasing demand and to maintain service quality standards. The longer-term viability of many more communities is expected to improve through the geographic implications of the increased economic investment in the county helping to sustain key local services and facilities like local shops, post offices and banks.
5: Encourage the use of sustainable means of transport.	++	++	++	There would be a continued demand to maintain and improve existing access to public transport on primary and secondary routes where this investment may be a constraint on the growth of the economy. An increased focus for the modal shift from car usage would be walking, cycling and new electronic transport technologies with an increasing need for investment in the highway/footway infrastructure possibly constraining this modal shift with increasing levels of economic growth. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	-	-	-	The continued movement and travel to work patterns with greater cross boundary movements would be part of the carbon budgeting for the county. This would be a parallel consideration to the availability of personal and civil investment in modal shifts in transport choices and investment in transport and highway/footway infrastructure.
7: Support active and healthy communities.	+	+	+	Recreational activities are associated either with the natural environment (which as assessed within Sustainability Objective 1 may be negatively affected by this option) or access to commercial 'recreational' services. The level of employment development would continue to encourage more working age people to enter employment in the county, but an increasing proportion might come from cross boundary travel to work movements into the County. This cross boundary travel to work would mitigate demand for commercial 'recreational' services to some degree and limit the range of opportunities available to resident communities.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality.	-	-	-	The Plan strategy would focus the greater proportion of development into urban locations but for employment purposes this additional provision would comprise a larger number of significant greenfield sites. It is anticipated this option would negatively impact the soil resources of the County with the potential to affect the best and most versatile agricultural land. The strategic distribution of development and specific site allocations are also assessed in the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	-	-	-	The Plan strategy would focus the greater proportion of development into urban locations but this higher option would require a larger number of significant greenfield sites. It is anticipated this option would negatively impact water quality and the potential for pollution without appropriate measures as environmental safeguards. The strategic distribution of development and specific site allocations are also assessed in the SA process.
10: Reduce flood risk and improve flood management.	-	-	-	The level of employment development in this option is equal to than the adopted Development Plan. This option would negatively impact this Sustainability Objective but this still allows for a careful selection of the locations for new development and the provision of appropriate flood management measures where necessary. The strategic distribution of development and specific site allocations are also assessed in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?/0	?/0	?/0	This Sustainability Objective is primarily related to the presence of Air Quality Management Areas of which there are only a few in the county at key locations in the urban highway networks but not closely related to the pattern of existing or proposed employment areas. This Sustainability Objective also indicates the potential outcome from the effects of Sustainability Objectives 2 economy, 5 transport and 6 car travel. As a higher level of employment development, this option could further necessitate investment in public transport and a greater movement towards more active travel especially in urban locations. The proposed growth in the local economy and with greater participation from working age people, may help to facilitate the migration from fossil fuel vehicles to electric vehicles.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions.	-	-	-	Even greater economies of scale would offer further opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. The scale of economic activity in the county might also encourage a wider uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. However, the rate of economic activity and the implications for transport and air quality would be a strategic matter for the achievement of a 'carbon neutral' economy and standards of living in Shropshire which might be a primary reason for not pursuing this option.
13: Promote adaptation and mitigation to climate change.	+	+	+	This option would increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support to improve the size and productivity of our labour force. It provides an increased rate of development compared with completion rates achieved in Shropshire but remains lower than the completion achieved in some recent years. Whilst this higher level of employment development would increase car usage and distances travelled, it would necessitate investment in public transport and a movement towards more active travel especially in urban locations. Further, the proposed growth in the local economy and with greater participation from working age people, would further help to facilitate the migration from fossil fuel vehicles to electric vehicles. The scale of economic activity in the County would also encourage the uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. It would be necessary to consider the rate of economic growth in the context of achieving a 'carbon neutral economy but the very significant release of new land for development in greenfield locations would also allow for biodiversity net gain improvements. This would include opportunities for very significant new or improved habitats to be created to positively contribute towards the adaptation and mitigation of climate change.
14: Promote efficient use of natural resources.	-	-	-	This option would require a continued release of land for new development including a larger number of greenfield sites. There would be a greater need for primary aggregate to include strategic infrastructure investment to access and service these sites.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting.	-	-	-	The potential to contribute towards the restoration, enhancement and long-term management of heritage assets through economic development has a more limited viability. The more widespread impact on heritage assets arises from economic development is harm to the setting of heritage assets. This option, with a higher level of employment development and its significant release of greenfield land for development would negatively impact this Sustainability Objective. This matter has been considered in detail in the assessment of the distribution of development and individual site assessments in this SA process.
16: Conserve and enhance landscape character and local distinctiveness.	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. Whilst these impacts are considered through the distribution of development and individual site assessments the rate of development in this option is the same as the adopted Development Plan reflects the current patterns of change and their effects.

Summary for Employment Land Requirement Option 4: High Growth – Variation 2

- 7.33. The employment land requirement with this option proposes a level of growth that is substantially higher than any of the preceding options. The rate of employment development at 14.5ha/yr is consistent with the adopted Development Plan but for an extended plan period of 22 years. This rate of development is greater than the 14ha/yr proposed in the draft Shropshire Local Plan. This proposes a level of growth that will exceed both the local need for employment land and the contribution (30 hectares) to unmet employment land need forecast in the Black Country with a substantial uplift to facilitate the local economic growth aspirations. This scale of growth would require more, large greenfield sites to be released compared to preceding options.
- 7.34. This option would encourage more strategic economic investment and improvements in the growth and performance of the local economy. These strongly positive impacts would improve the sustainability of the local economy helping to deliver the economic aspirations across the county. These aspirations would include the creation of more, higher quality jobs, accelerated changes to the number and productivity of the resident, working age, labour force from the delivery of strategic economic investment in the principal settlements and strategic corridors across the County.

- 7.35. The Option proposes a significant proportion of employment development in urban locations but with a significant need for greenfield land. Whilst this would have a number of negative impacts it is considered the option would have a strongly positive impact on investment in public transport and a movement towards more active travel in and around in urban locations.
- 7.36. In this option, the level of growth would continue to encourage an increase in activity levels and engagement in commercial and natural recreational opportunities would increase as the level of employment development encourages more working age people to enter employment and dispose of their income within the county. The substantial encouragement of cross boundary travel to work movements into the County would affect the potential demand for commercial 'recreational' services in the county limiting some of the opportunities available to resident communities.
- 7.37. In this option it is expected that the level of growth would be a strategic matter for the achievement of a 'carbon neutral' economy and standards of living in Shropshire although greater economic investment and participation would encourage a greater uptake of renewable energy and new technologies.
- 7.38. In this option, it is considered that the scale of growth and the rate of development would have neutral impacts on the delivery of good quality housing and on the air resources of the county.
- 7.39. This option would have negative impacts on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this would be offset to a degree by the master-planning approach to developing these sites providing opportunities for biodiversity gains. This option would also have negative effects on the quality of the soil with the potential to affect the best and most versatile agricultural land and water quality standards which would require measures to protect against the potential for water pollution. This option would also negatively affect flood risks with a greater need for flood management with additional impacts on heritage assets and their settings and landscape character and local distinctiveness.
- 7.40. This option would also have negative impacts by increasing car usage and distances travelled, the need for investment in critical or higher value services and facilities to keep pace with increasing demand to maintain service quality standards, the production of carbon dioxide emissions from the rate and level of growth and the demand for natural resources to deliver the development.

Table 7.5: Employment Land Requirement Option 5: High Growth - Variation 3

Employment Land Requirement Option 5: High Growth - Variation 3				
<p>This option represents a 20% uplift on the adjusted local need for employment land (250ha + 20%) over the 22-year plan period from 2016-2038. This option also includes the contribution of 30ha (annual average of 1.4ha) for the unmet employment land need forecast to arise in the Black Country. It results in an employment land requirement of 330ha equal to around 15ha/yr as an annual average, which exceeds the requirement in the draft Shropshire Local Plan by an additional 10% or 30ha. This option identifies a scale of employment development not considered in any preceding stage of the Draft Shropshire Local Plan or any preceding Development Plan for Shropshire.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-	-	<p>This option requires the highest employment land requirement in Shropshire compared with the draft Shropshire Local Plan. The annual average rate of employment development increases to 15ha/year which exceeds the rate in the adopted Development Plan at 14.5ha/year. This option would sustain the higher rate of 15ha/yr over an extended plan period for 22 years which requires the release of more, large greenfield sites. This would require a master-planning approach to offer more opportunities for biodiversity gains in the medium to long term. Nevertheless, it is likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats across Shropshire to 2038. Specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
2: Encourage a strong and sustainable economy throughout Shropshire.	++	++	++	This is the highest option proposed for the draft Shropshire Local Plan. This would increase the capacity of the local economy to a level not previously proposed in Shropshire. This would require 15ha/year and would exceed the adopted Development Plan (14.5ha/year) and the draft Shropshire Local Plan (14ha/year). This option would increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support to diversify our labour force. This option provides opportunities to deliver strategic economic investment from regional, national or international markets and facilitate appropriate 'windfall' employment development consistent with the strategic policy of the draft Shropshire Local Plan. This option would create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	-	-	-	As the highest option proposed for the draft Shropshire Local Plan, the consequent increase in investment and increased numbers of working age people in employment would place substantial pressures on existing and new services and facilities serving the communities of the County particularly during the working day and especially at peak hours. This is expected to require significant investment in critical or higher value services and facilities to keep pace with the increasing demand and in order to maintain service quality standards. The longer-term viability of many more communities is expected to improve through the geographic implications of the increased economic investment in the County helping to sustain key local services and facilities like local shops, post offices and banks.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport.	++	++	++	At the highest level of employment development there would be significant demand to maintain and improve existing access to public transport on primary and secondary routes where this investment may be a constraint on the growth of the economy. A focus for the modal shift from car usage will be walking, cycling and new electronic transport technologies with greater demand for investment in the highway/footway infrastructure constraining the modal shift with increasing levels of economic growth. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	-	-	-	At the highest growth option for the employment land requirement, the increasing movement and changes to travel to work patterns with greater cross boundary movements, would be key to the carbon budgeting for the County. This would be a parallel consideration to the availability of personal and civil investment in modal shifts in transport choices and investment in transport and highway/footway infrastructure. Whilst modal shifts and infrastructure investment might be less challenging in a more prosperous economy, the rate of change might not be sustainable or compatible with the strategy and timeframe to achieve a 'carbon neutral' economy and standard of living in Shropshire.
7: Support active and healthy communities.	+	+	+	Recreational activities are associated either with the natural environment (which as assessed within Sustainability Objective 1 may be negatively affected by this option) or access to commercial 'recreational' services. Overall activity levels would be at their highest with this growth option. The level of employment development would encourage more working age people to enter employment in the county, but a higher proportion might come from cross boundary travel to work into the County. These higher cross boundary travel to work movements might mitigate demand for commercial 'recreational' services and limit the range of opportunities available to resident communities.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality.	-	-	-	This employment land requirement proposes the highest option for high growth strategies with a significant increase above even the adopted Development Plan. This would require the highest provision of new land for development above the supply of saved sites previously assessed for their impact on the natural environment. Whilst the Plan strategy would focus the greater proportion of development into urban locations the additional provision would comprise the highest number of significant greenfield sites. This option would negatively impact the soil resources of the County with the potential to affect the best and most versatile agricultural land. The strategic distribution of development and specific site allocations are also assessed in the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	-	-	-	This employment land requirement proposes the highest level of growth with a significant increase above even the adopted Development Plan. This would require the highest provision of new land for development above the supply of saved sites previously assessed for their impact on the natural environment. Whilst the Plan strategy would focus the greater proportion of development into urban locations this option would require the highest number of significant greenfield sites. It is anticipated this option would negatively impact water quality and the potential for pollution without appropriate measures as environmental safeguards. The strategic distribution of development and specific site allocations are also assessed in the SA process.
10: Reduce flood risk and improve flood management.	-	-	-	The level of employment development in this option is higher than the adopted Development Plan. This option proposes the highest level of growth that would require the greatest number of larger greenfield sites for employment development. This option would negatively impact this Sustainability Objective but this still allows for a careful selection of the locations for new development and the provision of appropriate flood management measures where necessary. The strategic distribution of development and specific site allocations are also assessed in the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?/0	?/0	?/0	This Sustainability Objective is primarily related to the presence of Air Quality Management Areas of which there are only a few in the County at key locations in the urban highway networks but not closely related to the pattern of existing or proposed employment areas. This Sustainability Objective also indicates the potential outcome from the effects of Sustainability Objectives 2 economy, 5 transport and 6 car travel. As the highest level of employment development, this option would likely further necessitate substantial investment in public transport and the greatest movement towards more active travel especially in urban locations. The proposed growth in the local economy and with greater participation from working age people, is more likely to help facilitate the migration from fossil fuel vehicles to electric vehicles.
12: Reduce carbon dioxide emissions.	-	-	-	Even greater economies of scale would offer greater opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. The scale of economic activity in the County might also encourage a greater uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. However, the rate of economic activity and the implications for transport and air quality would be a strategic matter for the achievement of a 'carbon neutral' economy and standards of living in Shropshire which might be a primary reason for not pursuing this option.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	+	+	+	This option would increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support to diversify our labour force. It provides an increased rate of development compared with completion rates achieved in Shropshire but remains lower than the completions achieved in some recent years. Whilst this highest level of employment development would increase car usage and distances travelled, it would necessitate investment in public transport and a movement towards more active travel especially in urban locations. Further, the proposed growth in the local economy and with greater participation from working age people, would further help to facilitate the migration from fossil fuel vehicles to electric vehicles. The scale of economic activity in the County would also encourage the uptake of renewable energy into primary production processes and a further integration of new technologies to contribute towards achieving a 'carbon neutral' economy. It would be necessary to consider the rate of economic growth in the context of achieving a 'carbon neutral' economy but the very significant release of new land for development in greenfield locations would also allow for biodiversity net gain improvements. This would include opportunities for very significant new or improved habitats to be created to positively contribute towards the adaptation and mitigation of climate change. However, the capacity to achieve a 'carbon neutral' economy in the proposed timeframe might be a primary reason for not pursuing this option.
14: Promote efficient use of natural resources.	-	-	-	This option proposes the highest level of employment development of all the growth option considered for the draft Shropshire Local Plan. This is a level of development that exceeds the requirement in the adopted Development Plan and which has not previously been proposed for Shropshire. This would require an even greater release of land for new development including a larger number of greenfield sites. There would be a greater need for primary aggregate to include strategic infrastructure investment to access and service these sites. This option is considered to have the greatest negative impact on this Sustainability Objective.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting.	-	-	-	The potential to contribute towards the restoration, enhancement and long-term management of heritage assets through economic development has a more limited viability. The more widespread impact on heritage assets arises from economic development in the setting of heritage assets. This option, with the highest level of employment development proposed for Shropshire and with its significant release of greenfield land for development would negatively impact this Sustainability Objective. This matter has been considered in detail in the assessment of the distribution of development and individual site assessments in this SA process.
16: Conserve and enhance landscape character and local distinctiveness.	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option, with the highest level of employment development proposed in Shropshire and its very significant release of greenfield land is expected to negatively impact this Sustainability Objective. Whilst these impacts are considered through the distribution of development and individual site assessments the rate of development in this option exceeds the rate in the adopted Local Plan and would increase the patterns of change and their effects on the County.

Summary for Employment Land Requirement Option 5: High Growth – Variation 3

7.41. The employment land requirement with this option proposes a level of growth that is substantially higher than any of the preceding options and this would be a level of growth that exceeded any previous Development Plan for Shropshire. The rate of employment development at 15ha/yr also exceeds the rate in the current adopted Development Plan and this higher rate would be for an extended plan period of 22 years. This rate of development is far greater than the 14ha/yr proposed in the draft Shropshire Local Plan. This proposes a level of growth that will exceed both the local need for employment land and the contribution (30 hectares) to unmet employment land need forecast in the Black Country with a considerable uplift to facilitate very high economic growth aspirations. This scale of growth would require the highest level of large greenfield sites to be released compared to of the preceding options and also to any previous Development Plan for Shropshire. However, the release of these greenfield sites would be supported by a master-planning approach to their development. The specific site allocations are further assessed in the SA process for these effects.

- 7.42. This option would encourage the highest level of strategic economic investment and improvements in the growth and performance of the local economy. These strongly positive impacts would improve the sustainability of the local economy helping to deliver the economic aspirations across the county. These aspirations would include the creation of more, higher quality jobs, accelerated changes to the number and productivity of the resident, working age, labour force from the delivery of strategic economic investment in the principal settlements and strategic corridors across the County.
- 7.43. The Option proposes a high proportion of employment development in urban locations but with a significant need for greenfield land. Whilst this would have a number of negative impacts it is considered the option would have a strongly positive impact on investment in public transport and a movement towards more active travel in and around in urban locations.
- 7.44. In this option, the level of growth would continue to encourage an increase in activity levels and engagement in commercial and natural recreational opportunities would increase as the level of employment development encourages more working age people to enter employment and dispose of their income within the county. The substantial encouragement of cross boundary travel to work movements into the County would affect the potential demand for commercial ‘recreational’ services in the county limiting some of the opportunities available to resident communities.
- 7.45. In this option it is expected that the level of growth would be a strategic matter for the achievement of a ‘carbon neutral’ economy and standards of living in Shropshire although greater economic investment and participation would encourage a greater uptake of renewable energy and new technologies.
- 7.46. In this option, it is considered that the scale of growth and the rate of development would have neutral impacts on the delivery of good quality housing and on the air resources of the county.
- 7.47. This option would have negative impacts on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this would be offset to a degree by the master-planning approach to developing these sites providing opportunities for biodiversity gains. This option would also have negative effects on the quality of the soil with the potential to affect the best and most versatile agricultural land and water quality standards which would require measures to protect against the potential for water pollution. This option would also negatively affect flood risks with a greater need for flood management with additional impacts on heritage assets and their settings and landscape character and local distinctiveness.

7.48. This option would also have negative impacts by increasing car usage and distances travelled, the need for investment in critical or higher value services and facilities to keep pace with increasing demand to maintain service quality standards, the production of carbon dioxide emissions from the rate and level of growth and the demand for natural resources to deliver the development.

Comparison Summary of Reasonable Options for the Employment Land Requirement

- 7.49. The purpose of this component of the additional SA assessment is to inform judgements about which of the reasonable alternatives for the employment land requirement is the most sustainable against the SA objectives. This additional SA assessment work is summarised within Tables 7.1 to 7.5 above.
- 7.50. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the employment land requirement, Table 7.6 has been prepared for illustrative purposes. This summarises, for comparison, how the five reasonable alternative options perform against each SA objective. This is achieved by 'ranking' the performance of each reasonable option from the best performing (1) to the poorest performing (5) against each SA objective. Where reasonable alternatives achieve the same ranking in the short, medium and longer term for an SA objective, professional judgement has been used to determine whether the increasing scale of growth proposed in the option would be more likely to have a positive or negative effect on that SA objective.
- 7.51. It is not appropriate to 'total' the scores across all the objectives for each option. The performance of the option requires consideration of each SA objective separately and 'totalling' the scores would not achieve this outcome. Furthermore, the SA objectives address different considerations, so it is not possible to combine them into a single score.
- 7.52. There are also more SA objectives addressing environmental matters than social and economic matters, as such 'totalling' the scores would create a bias towards environmental factors. The principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving 'sustainability'.

Table 7.6: Comparison of Employment Land Requirement Options

Sustainability Objective	Option 1: Productivity Growth	Option 2: Significant Growth	Option 3: High Growth Variation 1	Option 4: High Growth Variation 2	Option 5: High Growth Variation 3
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	3	4	5
2: Encourage a strong and sustainable economy throughout Shropshire	5	4	3	2	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	0	0
4: Promote access to services for all sections of society	1	2	3	4	5
5: Encourage the use of sustainable means of transport	5	4	3	2	1
6: Reduce the need of people to travel by car	1	2	3	4	5
7: Support active and healthy communities.	5	4	3	2	1
8: Protect and improve soil quality	1	2	3	4	5
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	2	3	4	5
10: Reduce flood risk and improve flood management	1	2	3	4	5
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	?	?
12: Reduce carbon dioxide emissions	1	2	3	4	5
13: Promote adaptation and mitigation to climate change	5	4	3	2	1
14: Promote efficient use of natural resources	1	2	3	4	5
15: Conserve and enhance features and areas of heritage value and their setting	1	2	3	4	5
16: Conserve and enhance landscape character and local distinctiveness	1	2	3	4	5

Conclusion

- 7.53. Tables 7.1 - 7.5 summarise the additional SA assessment work for each of the reasonable employment land requirement options identified in this section of the additional SA assessment. Table 7.6 summarises, for comparison, how the five reasonable alternatives perform against each of the SA objectives.
- 7.54. It is important to recognise that the principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving 'sustainability'.

Options 1 and 2

- 7.55. The employment land requirements proposed in Option 1: Productivity Growth and Option 2: Significant Growth represent lower levels of employment growth than currently proposed within either the draft Shropshire Local Plan or the adopted Development Plan. Indeed, Option 1 would provide for only Shropshire's local need and a contribution to the unmet need in the Black Country. Option 2 would meet these needs and also provide some uplift on this limited scale of growth.
- 7.56. These two options would clearly be deliverable as they achieve the identified local employment land need and provide a 30 hectare contribution to the unmet employment needs forecast in the Black Country. Further, there are a number of different means (including those within the summary of these options) for the potential refinement of the Plan strategy to align with either of these two options.
- 7.57. The judgement remains however, as to whether they are appropriate strategies for Shropshire in relation to SA objective 2: to encourage a strong and sustainable economy throughout Shropshire despite the many positive benefits (Option 1) or neutral impacts (Option 2) on the environmental objectives in the SA assessment.
- 7.58. There would be fewer environmental impacts from either of these two options but this would be a result of a reduction in the growth and performance of the local economy and this is likely to have social impacts on communities across the County.

Options 3 and 4

- 7.59. In these options, Option 3 High Growth – Variation 1 proposes a scale of employment development similar to that proposed in the draft Shropshire Plan. Option 4 High Growth – Variation 2 proposes a rate of employment development similar to that proposed in the adopted Development Plan but taking effect over a longer 22 year plan period.
- 7.60. The employment land requirements in Options 3 and 4 are likely to result in either a positive effect (mainly Option 3 but also 4) or a strongly positive effect (mainly Option 4 but also 3) especially SA objective 2: to encourage a strong and sustainable economy throughout Shropshire.
- 7.61. Options 3 and 4 both have the positive impacts on the economy but this is seen to bring more positive or neutral impacts across the other objectives in Option 3. Option 4 with its strongly positive impact on the economy actually brings more negative

impacts across the other objectives particularly the environmental objectives the impacts of human activities and behaviour. However, Option 4 would encourage more use of sustainable transport and might possibly bring a greater adaptation to the effects of climate change but this may be required by the scale of economic growth.

- 7.62. This is consistent with providing higher levels of employment land to support the needs of a changing business base and a growing local population with new and existing employment needs. It is also consistent with some further movement towards net in-commuting from outside the County to meet labour demands in Shropshire.
- 7.63. The SA assessment would question the higher level of provision in Option 4 against a number of objectives in the SA Assessment. Option 4 is expected to have a negative effect on SA objective 1: to protect biodiversity and the quality and extent of habitats. The much higher level of employment development is expected to increase car usage and distances travelled in SA Objective 6. The greater rate of development is also expected to have the potential to negatively affect water quality standards, flood risk, the protection of heritage assets and their settings and landscape character. This greater rate of development would require a greater supply of natural resources to deliver the strategy.
- 7.64. There are a number of different means (including those in the summary of these options) for the potential refinement of either of proposed Options 3 or 4 to better align with the SA objectives. Irrespective of this, Option 4 proposes to deliver at the current higher rate of development over a longer 22 plan period. This would require careful consideration of whether this option is deliverable and whether its effects are sustainable. Option 3 proposes a lower level of development which is comparable to the draft Shropshire Local Plan whilst its effects are shown to be more positive or neutral across the objectives in the SA Assessment.
- 7.65. Further, the employment land requirement in Option 3 is comparable to that in the draft Shropshire Local Plan which has an established strategy with a strategic and local policy framework to achieve this scale of growth. This provides confidence that Option 3 is deliverable and aligns with the economic growth aspirations for Shropshire.

Option 5

- 7.66. In contrast, it is apparent in Option 5 High Growth – Variation 3 that this employment land option may result in either negative or strongly positive/positive effects across most of the objectives in this additional SA assessment. The conclusions about Option 5 relate to the negative outcomes for the effects on the environment and the impacts of human activities and behaviour including biodiversity, soil quality, water quality, flood risk, car travel and carbon dioxide emissions.
- 7.67. The strongly positive outcomes from Option 5 relate to the effect on the size and performance of the local economy and the consequent demands for sustainable transport across the County. These conclusions arise from the proposed scale of growth being greater than any employment land requirement previously proposed for Shropshire.

7.68. As such, mitigations would be required for Option 5. These negative or strongly positive impacts are predicted to affect significant areas within the County. These negative impacts might also affect protected areas or asset within the County. For strongly positive effects these might impact large numbers of people or receptors including those outside the County.

Planning Judgement

7.69. A range of factors will be considered when undertaking this planning judgement. This will include consideration of deliverability and the conclusions reached by the Planning Inspectors within their Interim Findings (ID28), particularly regarding the decision that the employment land requirement be established as a 'minimum' rather than being expressed as 'around'.

7.70. It is important to ensure that the proposed employment land requirement is deliverable within the proposed plan period. Consideration of deliverability will be informed by factors including:

- a. Past trends in employment completions and recent changes to the commercial land and property market shown in monitoring data and other research;
- b. Recognition of factors that may influence the future rates of completion of employment land and premises in a changing commercial market.

7.71. In the planning judgement, the final determination of which reasonable employment land option should be identified as the proposed employment land requirement in the draft Shropshire Local Plan will be informed by a broad range of evidence and considerations. This additional SA Assessment will be an important consideration in reaching this planning judgement.

8. Summary of SA Assessment: Reasonable Options for the Strategic Distribution of Development Across Shropshire

Introduction

- 8.1. This section of the document summarises the additional SA assessment of the reasonable options for the strategic distribution of planned development across Shropshire.
- 8.2. The starting point for this additional SA assessment work on the strategic distribution of planned development was the 'broad categories' of settlement identified within the earlier stages of SA.
- 8.3. These have been updated to reflect the presence of the proposed Strategic Settlements, which in the future will form part of the 'urban area'. They have also been updated to reflect the terminology for these 'broad categories' of settlement within the draft Shropshire Local Plan, which is considered provide a clearer indication of the role and nature of the settlements within each 'broad category'.
- 8.4. These 'broad categories' are:
 - a. The Strategic Centre – Shrewsbury.
 - b. Principal Centres, Key Centres and Strategic Settlements.
 - c. Rural Area – including Community Hubs, Community Clusters and the wider rural area which is classified as 'countryside' for planning policy purposes.
- 8.5. Shropshire is a large and diverse rural county containing hundreds of settlements of varying sizes and an extensive rural area. The 'broad categories' of settlement are considered to be responsive to the demographics and characteristics of Shropshire and the range of settlements within it. As such, Shropshire Council considers that they represent an appropriate starting point for the additional SA assessment work on the strategic distribution of planned development.

Identification of Reasonable Options for the Strategic Distribution of Development

- 8.6. Consistent with the methodology utilised to identify reasonable options for the strategic distribution of planned development within the SA assessment already undertaken to inform the draft Shropshire Local Plan, reasonable options for the strategic distribution of planned development within this additional SA assessment work were identified based on various distributions of the total development between the three identified 'settlement categories'.
- 8.7. As such, three reasonable options for the strategic distribution of planned development were identified and were assessed within this additional SA assessment work. These reasonable options are:
 - a. **Strategic Distribution of Planned Development Option A: Rural Rebalance -** Consisting of around 25% of planned housing development within the Strategic Centre of Shrewsbury; around 40% of planned housing development in the

Principal Centres, Key Centres and Strategic Settlements; and around 35% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, with a significant component in the rural areas.

The principle of 'rural rebalance' is one which allows for a high proportion of planned development within the rural area (particularly the larger rural settlements) in order to enhance its sustainability.

This option is responsive to and consistent with the 'rural rebalance' option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan. It is also responsive to and generally comparable to the distribution of development within the adopted Local Plan.

- b. Strategic Distribution of Planned Development Option B: Urban Focus** - Consisting of around 28% of planned housing development within the Strategic Centre of Shrewsbury; around 46% of planned housing development in the Principal Centres, Key Centres and Strategic Settlements; and around 26% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, with the majority concentrated in urban areas.

The principle of 'urban focus' is one of accommodating a larger proportion of development within urban settlements that have the infrastructure available to best support development, with complementary development in the rural areas (particularly the larger rural settlements) to maintain and enhance sustainability.

This option is responsive to the 'urban focus' option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan. This option is also generally comparable to the proposed distribution of development within the draft Shropshire Local Plan.

- c. Strategic Distribution of Planned Development Option C: Balanced Growth** - Consisting of around 30% of planned housing development within the Strategic Centre of Shrewsbury; around 40% of planned housing development in the Principal Centres, Key Centres and Strategic Settlements; and around 30% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, approximately balancing provision across the three broad categories.

The principle of 'balanced growth' is seeking to evenly distribute development across all categories of settlement in Shropshire in order to support their long term sustainability.

This option is responsive to and consistent with the 'balanced growth' option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan.

Assessment of Reasonable Options for the Strategic Distribution of Planned Development

8.8. The following tables summarise the additional SA assessment of the identified reasonable Distribution of Development Options:

Table 8.1: Strategic Distribution of Planned Development Option A: Rural Rebalance

Strategic Distribution of Planned Development Option A: Rural Rebalance				
This option consists of around 25% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 40% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 35% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, with a significant component in the rural areas.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on the range of species and the quality and extent of habitats in Shropshire resulting from the strategic distribution of development.
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, this option is likely to represent little change to current ability to provide sufficient good quality housing to meet the needs of all sections of society.
4: Promote access to services for all sections of society	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be limited change to the impact on existing provision and accessibility of services and amenities resulting from the strategic distribution of development.
5: Encourage the use of sustainable means of transport	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on the provision and use of transport infrastructure resulting from the strategic distribution of development.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, this option is unlikely to alter the current situation with respect to the impact on the use of public transport and the prevalence of walking or cycling to work.
7: Support active and healthy communities.	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, this option is unlikely to change existing patterns of leisure and recreational activities and the provision of health and cultural activities resulting from the strategic distribution of development.
8: Protect and improve soil quality	?	?	?	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, it is unlikely that it will change the impact of the strategic distribution of development on soil quality. However, this is ultimately dependent on the sites allocated for development. The specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, it is unlikely that it will change the impact of the strategic distribution of development on water quality and pollution. This distribution of growth is likely to be capable of being accommodated without affecting existing water quality or causing water pollution. However, this is ultimately dependent on the sites allocated for development. The specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	?/0	?/0	?/0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, it is unlikely that it will change the impact of the strategic distribution of development on flood risk and flood management. However, ultimately the effect on flood risk and opportunities to improve flood management will depend on the location of sites allocated for development. Land allocated in the current Local Plan is generally not in areas of high flood risk so it may be possible to achieve a similar outcome with this option. The specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?/0	?/0	?/0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, it is unlikely that it will change the impact of the strategic distribution of development on air quality. However, ultimately the effect on air quality will depend on the location of sites allocated for development e.g. development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. The specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on carbon dioxide emissions resulting from the strategic distribution of development.
13: Promote adaptation and mitigation to climate change	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on climate change resulting from the strategic distribution of development.
14: Promote efficient use of natural resources	0/?	0/?	0/?	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, it is unlikely that it will change the impact of the strategic distribution of development on opportunities to use previously developed land, re-use existing buildings and use of primary aggregates. However, the location of allocated sites will have a significant impact on opportunities to use previously developed land and re-use existing buildings. The specific site allocations are assessed separately within the SA process.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on heritage assets and their setting resulting from the strategic distribution of development.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Local Plan, there is likely to be little change to the impact on landscape character and distinctiveness resulting from the strategic distribution of development.

Summary for Strategic Distribution of Planned Development Option A: Rural Rebalance

- 8.9. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘rural rebalance’. ‘Rural rebalance’ involves a high proportion of planned development occurring within the rural area (particularly the larger rural settlements) in order to enhance its sustainability, but still allows for a significant amount of development within the Strategic Centre, Principal Centres, Key Centres and Strategic Settlements.
- 8.10. The strategic distribution of planned development associated with this reasonable option has a reduced urban focus and increased rural focus when compared to that proposed within the draft Shropshire Local Plan. As such, it could result in a need to amend settlement guidelines and site allocations – unless the overall level of development was subject to change.
- 8.11. As the strategic distribution of planned development associated within this option is generally comparable to that within the adopted Local Plan, it is likely to result in little change to the impact of the strategic distribution of development on the following sustainability objectives: encouraging a strong and sustainable economy throughout Shropshire; providing a sufficient amount of good quality housing which meets the needs of all sections of society; protecting and enhancing the range of plants and animals and the quality and extent of wildlife habitats in Shropshire; promoting access to services for all sections of society; encouraging the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reducing carbon dioxide emissions; adapting to and mitigating climate change; conserving and enhancing heritage features and their settings; and conserving and enhancing landscape character and local distinctiveness.
- 8.12. The location of allocated sites is likely to have the most influence on protecting and improving soil quality and the conservation and enhancement of water resources. This is also likely to be the case for protection of air quality, reducing flood risk and promoting efficient use of natural resources (although impact on use of primary aggregates is unlikely to change as this is more closely linked to the strategic distribution of development). Land allocated in the adopted Local Plan is generally not in areas of high flood risk or directly impacting on air quality management areas, so it would likely be possible to achieve a similar outcome with this option.

Table 8.2: Distribution of Development Option B: Urban Focus

Strategic Distribution of Planned Development Option B: Urban Focus
 This option consists of around 28% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 46% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 26% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, with the majority concentrated in urban areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+/?	+/?	+/?	The majority of protected and priority habitats and species are found in the countryside. This option entails around a 9% reduction to the amount of planned development occurring within the rural area to that within the adopted Local Plan and compared with Option 1. As such, it is likely to have a positive effect on the range, extent and quality of plants and animals in Shropshire. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	This option is likely to support the provision of an appropriate and balanced supply of employment land across Shropshire. Due to the significantly increased focus on 'urban areas' to that within the adopted Local Plan it is likely to significantly increase the ability compared to that which currently exists to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. These settlements contain the highest proportion of the population and as such a significant component of the total housing need in Shropshire.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. There remains housing need in Shropshire's rural communities. As such, it is considered that this option would likely support provision of housing in locations that are responsive to needs.</p>
4: Promote access to services for all sections of society	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. These settlements benefit from the greatest range of services and facilities.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves offer some services and facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to services and facilities.</p> <p>This option will also support the sustainability of existing services and facilities and the provision of new services and facilities (particularly in the larger settlements) by increasing the 'critical population mass' which supports the viability and sustainability of services and facilities.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. These settlements benefit from the greatest access to and range of sustainable means of transport. Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves often offer more sustainable transport opportunities.</p> <p>As such, it is likely to significantly promote positive access to and encouragement of the use of sustainable means of transport.</p>
6: Reduce the need of people to travel by car	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. These settlements benefit from a range of services and facilities and means of sustainable transport which can reduced reliance on travel by car.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that offer some services and facilities and often offer sustainable transport opportunities.</p> <p>As such, this option is likely to maximise the reduction in the need for car-based transport.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. These settlements benefit from a range of health, leisure, recreation, and cultural facilities. Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that can offer some formal health, leisure, recreation and cultural facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to health, leisure, recreation, and cultural facilities.</p> <p>This option will also support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by increasing the ‘critical population mass’ which supports their viability and sustainability.</p>
8: Protect and improve soil quality	+/?	+/?	+/?	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. Focussing planned development in the urban areas offers the ability to reduce the amount of best and most versatile agricultural land and maximise the amount of brownfield land used for development. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+	+	+	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer greater protection to existing water resources.</p>
10: Reduce flood risk and improve flood management	?	?	?	<p>The effect on flood risk and opportunities to improve flood management will depend on the location of site allocations. The specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	The effect on air quality and the ability to reduce air pollution will to a large extent depend on the location of site allocations e.g., development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. The specific site allocations are assessed separately within the SA process. However, as all AQMAs are in urban areas this option is the most likely to have a negative impact on them. Conversely, less development in the rural area may protect air quality more generally.
12: Reduce carbon dioxide emissions	+	+	+	This option directs the majority of planned development towards urban areas which are most likely to support larger scale development(s). The economies of scale possible with this approach may promote opportunities for reducing energy consumption and the production of energy from renewable sources.
13: Promote adaptation and mitigation to climate change	+	+	+	This option directs the majority of planned development towards urban areas. If a strategic overview to each settlement is taken, this option may provide good opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Furthermore, urban areas are most likely to support larger scale development(s). Therefore, the potential for new large scale habitats gained through residential development is also likely to be increased / higher than the strategic approach within the adopted Local Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.
14: Promote efficient use of natural resources	+	+	+	This option directs the majority of planned development towards urban areas. Urban areas are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas have greater potential to use alternatives to primary aggregates and makes the best use of existing infrastructure. Specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option directs the majority of planned development towards urban areas. Focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the location of allocated sites. Specific site allocations are assessed separately within the SA process.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	This option directs the majority of planned development towards urban areas. Whilst increasing the proportion of planned development that occurring in locations associated with the urban area is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

Summary for Strategic Distribution of Planned Development Option B: Urban Focus

- 8.13. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘urban focus’. ‘Urban focus’ involves the largest proportion of planned development being directed towards urban settlements that have the infrastructure available to best support development, with complementary development in the rural areas - particularly the larger rural settlements to maintain and enhance rural sustainability.
- 8.14. The strategic distribution of planned development associated with this reasonable option is generally consistent with that proposed within the draft Shropshire Local Plan. As such, it would likely support the retention of proposed strategies for settlements across Shropshire and the proposed site allocations identified to support the achievement of these proposed settlement strategies – unless the overall level of development was subject to change.

- 8.15. As employers and employment opportunities are more significantly associated with 'urban areas' than rural areas, it is considered that this option would likely help retain and support existing businesses by providing suitable housing for existing and attracting new labour force. It is also considered that this option would increase the ability compared to that which currently exists to positively support the achievement of economic growth aspirations including through the creation of more jobs.
- 8.16. This option will also increase the ability to provide housing which meets the needs of all groups within our communities, given that it directs the majority of planned development to urban areas where a significant component of the total housing need in Shropshire is located, but continues to allow for complementary planned development within rural areas where there remains housing need.
- 8.17. Concentrating development of society to health, leisure, recreation, and cultural facilities; promote positive access to and encourage the use of sustainable means in the urban area and the associated larger settlements is also likely to increase the ability to promote positive access for all sections of society to services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities; promote positive access for all sections of transport and maximise the reduction in the need for car-based transport. It also provides support for the long term sustainability of existing and opportunities to provide new services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities and health, leisure, recreation, and cultural facilities.
- 8.18. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer the highest level of protection to existing water resources. The economies of scale possible with this approach may promote opportunities for reducing energy consumption, production of energy from renewable sources, and adapting to and mitigating climate change. An urban focus also maximises the potential to re-use existing buildings and land, using alternatives to primary aggregates and making the best use of existing infrastructure.
- 8.19. Focussing development in the urban areas offers the ability to minimise the amount of best and most versatile agricultural land, maximise the amount of brownfield land used for development, and minimise any harm to protected, priority, key or indicator habitats, plants, animals or birds as the majority of protected and priority habitats and species are found on the countryside. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
- 8.20. The potential to reduce flood risk, improve flood management and protect air quality is dependent on the location of allocated sites. Similarly, focussing development in the towns and larger settlements increases the likelihood of harm to the significance of heritage assets but also provides the best opportunities to contribute to their better management. The balance between these competing issues will depend on the location of allocated sites.

8.21. Whilst development in the more urban parts of the county is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints, can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

Table 8.3: Distribution of Development Option C: Balanced Growth

Strategic Distribution Option C: Balanced Growth

This option consists of around 30% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 40% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 30% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, approximately balancing provision across the three broad categories.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+/?	+/?	+/?	The majority of protected and priority habitats and species are found in the countryside. This option entails around a 5% reduction to the amount of planned development occurring within the rural area to that within the adopted Local Plan and compared with Option 1. As such, it is likely to have a positive effect on the range, extent and quality of plants and animals in Shropshire. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This option is likely to support the provision of an appropriate and balanced supply of employment land across Shropshire. Due to the increased focus on 'urban areas' to that within the adopted Local Plan it is likely to increase the ability compared to that which currently exists to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Local Plan. These settlements contain the highest proportion of the population and as such a significant component of the total housing need in Shropshire.</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. There remains housing need in Shropshire's rural communities.</p> <p>As such, it is considered that this option would likely support provision of housing in locations that are responsive to needs.</p>
4: Promote access to services for all sections of society	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Local Plan. These settlements benefit from the greatest range of services and facilities.</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves offer some services and facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to services and facilities.</p> <p>This option will also support the sustainability of existing services and facilities and potential provision of new services and facilities by increasing the 'critical population mass' which supports the viability and sustainability of services and facilities.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Local Plan. These settlements benefit from the greatest access to and range of sustainable means of transport</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves often offer more sustainable transport opportunities.</p> <p>As such, it is likely to promote positive access to and encourage the use of sustainable means of transport.</p>
6: Reduce the need of people to travel by car	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Local Plan. These settlements benefit from a range of services and facilities and means of sustainable transport which can reduced reliance on travel by car.</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that offer some services and facilities and often offer sustainable transport opportunities.</p> <p>As such, this option is likely to reduce the need of people to travel by car.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Local Plan. These settlements benefit from a range of health, leisure, recreation, and cultural facilities. This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Local Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that can offer some formal health, leisure, recreation and cultural facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to health, leisure, recreation, and cultural facilities.</p> <p>This option will also support the sustainability of existing health, leisure, recreation, and cultural facilities and potentially the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by increasing the 'critical population mass' which supports their viability and sustainability.</p>
8: Protect and improve soil quality	+/?	+/?	+/?	<p>This option directs more of the planned development towards urban areas, meaning that a higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. Focussing planned development in the urban areas offers the ability to reduce the amount of best and most versatile agricultural land and increase the amount of brownfield land used for development. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+	+	+	<p>This option directs more of the planned development towards urban areas, meaning that a higher proportion of planned development will occur in urban areas than within the strategy within the adopted Local Plan. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer greater protection to existing water resources.</p>
10: Reduce flood risk and improve flood management	?	?	?	<p>The effect on flood risk and opportunities to improve flood management will depend on the location of site allocations. The specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	The effect on air quality and the ability to reduce air pollution will to a large extent depend on the location of site allocations e.g., development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. The specific site allocations are assessed separately within the SA process. However, as all AQMAs are in urban areas this option is the more likely to have a negative impact on them than the strategic distribution of development within the adopted Local Plan. Conversely, less development in the rural area may protect air quality more generally.
12: Reduce carbon dioxide emissions	+	+	+	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Local Plan. Such locations are most likely to support larger scale development(s). The economies of scale possible with this approach may promote opportunities for reducing energy consumption and the production of energy from renewable sources.
13: Promote adaptation and mitigation to climate change	+	+	+	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Local Plan. If a strategic overview to each settlement is taken, this option may provide good opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Furthermore, urban areas are most likely to support larger scale development(s). Therefore, the potential for new large scale habitats gained through residential development is also likely to be increased / higher than the strategic approach within the adopted Local Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.
14: Promote efficient use of natural resources	+	+	+	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Local Plan. Urban areas are most likely to contain opportunities to re-use existing buildings and land. Furthermore, development in urban areas has greater potential to use alternatives to primary aggregates and makes the best use of existing infrastructure. Specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Local Plan. Increasing the amount of planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the location of allocated sites. Specific site allocations are assessed separately within the SA process.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Local Plan. Whilst increasing the proportion of planned development that occurring in locations associated with the urban area is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

Summary for Strategic Distribution of Planned Development Option C: Balanced Growth

- 8.22. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘balanced growth’. ‘Balanced growth’ involves the even distribution of development across all categories of settlement in Shropshire in order to support their long term sustainability.
- 8.23. The strategic distribution of planned development associated with this reasonable option has a reduced urban focus and increased rural focus when compared to that proposed within the draft Shropshire Local Plan. As such, it could result in a need to amend settlement guidelines and site allocations – unless the overall level of development was subject to change.
- 8.24. As employers and employment opportunities are more significantly associated with ‘urban areas’ than rural areas, it is considered that this option would likely help retain and support existing businesses by providing suitable housing for existing and attracting new labour

force. It is also considered that this option would increase the ability compared to that which currently exists to positively support the achievement of economic growth aspirations including through the creation of more jobs.

- 8.25. This option will also increase the ability to provide housing which meets the needs of all groups within our communities, given that it directs the more of planned development to urban areas than the strategic distribution of development within the adopted Local Plan, where a significant component of the total housing need in Shropshire is located, but continues to allow for significant planned development within rural areas, where there remains housing need.
- 8.26. Concentrating a higher proportion of the total development in the urban area and the associated larger settlements is also likely to increase the ability to promote positive access for all sections of society to services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities; promote positive access for all sections of society to health, leisure, recreation, and cultural facilities; promote positive access to and encourage the use of sustainable means of transport and maximise the reduction in the need for car-based transport. It also provides support for the long term sustainability of existing and some opportunities to provide new services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities and health, leisure, recreation, and cultural facilities.
- 8.27. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer higher levels of protection to existing water resources than the strategic distribution of planned development within the adopted Local Plan. The economies of scale possible with this approach may promote opportunities for reducing energy consumption, production of energy from renewable sources, and adapting to and mitigating climate change. Increasing the proportion of development in urban areas compared to the strategic approach for planned development within the adopted Local Plan also increases the potential to re-use existing buildings and land, using alternatives to primary aggregates and making the best use of existing infrastructure.
- 8.28. Focussing more development in urban areas than the strategic approach for the distribution of planned development within the adopted Local Plan offers the ability to reduce the amount of best and most versatile agricultural land, maximise the amount of brownfield land used for development, and minimise any harm to protected, priority, key or indicator habitats, plants, animals or birds as the majority of protected and priority habitats and species are found on the countryside. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
- 8.29. The potential to reduce flood risk, improve flood management and protect air quality is dependent on the location of allocated sites. Similarly, focussing development in the towns and larger settlements increases the likelihood of harm to the significance of heritage assets but also provides the best opportunities to contribute to their better management. The balance between these competing issues will depend on the location of allocated sites.

8.30. Whilst development in the more urban parts of the county is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints, can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

Comparison Summary of Reasonable Options for the Strategic Distribution of Planned Development

- 8.31. The overall purpose of this component of the additional SA assessment work is to help inform judgements about which of the reasonable alternatives for the strategic distribution of planned development is the most sustainable against the SA objectives. This additional SA assessment work is summarised within Tables 8.1 - 8.3 above.
- 8.32. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the strategic distribution of planned development, Table 8.4 has been prepared for illustrative purposes only. This summarises, in comparative terms, how the three reasonable alternatives perform against each of the SA objectives. This is achieved by 'ranking' the performance of each of the reasonable options from best performing (1) to poorest performing (5) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 8.33. It is not however appropriate to 'total-up' the scores, because performance against each of the SA objectives requires consideration in and of itself and 'totalling-up' scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a 'totalling-up' of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

Table 8.4: Comparison of Strategic Distribution of Planned Development Options

Sustainability Objective	Option A: Rural Rebalance	Option B: Urban Focus	Option C: Balanced Growth
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	2
2: Encourage a strong and sustainable economy throughout Shropshire	1	3	2
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	1	3	2
4: Promote access to services for all sections of society	1	3	2
5: Encourage the use of sustainable means of transport	1	3	2
6: Reduce the need of people to travel by car	1	3	2
7: Support active and healthy communities.	1	3	2
8: Protect and improve soil quality	1	2	2
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	2	2
10: Reduce flood risk and improve flood management	2	1	1
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	2	1	1
12: Reduce carbon dioxide emissions	1	3	2
13: Promote adaptation and mitigation to climate change	1	3	2
14: Promote efficient use of natural resources	1	3	2
15: Conserve and enhance features and areas of heritage value and their setting	3	1	2
16: Conserve and enhance landscape character and local distinctiveness	3	2	1

Conclusion

- 8.34. Tables 8.1 - 8.3 summarise the additional SA assessment work for each of the reasonable strategic distribution of planned development options identified. Table 8.4 then summarises, in comparative terms, how the three reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.
- 8.35. It is apparent from the results of the additional SA assessment work that none of the reasonable strategic distribution of planned development options are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 8.36. Conversely, strategic distribution of planned development Option B (urban focus) is likely to result in a strongly positive effect on SA objectives:
- a. 2: Encouraging a strong and sustainable economy throughout Shropshire.
 - b. 3: Providing a sufficient amount of good quality housing which meets the needs of all sections of society.
 - c. 4: Promoting access to services for all sections of society.
 - d. 5: Encouraging the use of sustainable means of transport.
 - e. 6: Reducing the need of people to travel by car.
 - f. 7: Supporting active and healthy communities.
- 8.37. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 8.38. This is perhaps unsurprising as the achievement of SA objectives 2, 3, 4, 5, 6 and 7 can all be contributed to through the focusing of development in urban areas as it is these locations where the majority of the larger employers in Shropshire are located; where due to the greater proportion of the population there is the highest housing need; and where there is the greatest potential to access services, facilities and infrastructure.
- 8.39. It is important to note that there are a number of SA objectives that are linked to specific location of development (sites), and as such in the context of the additional SA assessment of reasonable options for the strategic distribution of planned development, the conclusion can only be unknown. The location of development (sites) is assessed separately within the SA process.
- 8.40. In general terms, the additional SA assessment work can be summarised as concluding that focusing a higher proportion of development within urban areas achieves more positive impacts on social, economic and environmental factors.

- 8.41. However, it is important to ensure that the housing needs of Shropshire’s rural communities are recognised and appropriately planned for within any strategic distribution of planned development incorporated into the draft Shropshire Local Plan.
- 8.42. The strategic distribution of planned development associated with reasonable Options A and C would result in a reduced urban focus and increased rural focus (albeit to differing extents) when compared to that proposed within the draft Shropshire Local Plan. As such, they could result in a need to amend settlement guidelines and site allocations – unless the overall level of development was subject to change.
- 8.43. Conversely the strategic distribution of planned development associated with reasonable Option B is generally consistent with that proposed within the draft Shropshire Local Plan. As such, it would likely support the retention of proposed strategies for settlements across Shropshire and the proposed site allocations identified to support the achievement of these proposed settlement strategies – unless the overall level of development was subject to change.
- 8.44. Inevitably, the final determination (planning judgement) about which reasonable option for the strategic distribution of planned development should be identified as the approach to the strategic distribution of planned development within the draft Shropshire Local Plan will be informed by a range of evidence/considerations, including this additional SA assessment work. But this planning judgement is beyond the scope of this additional SA assessment work.

9. Summary of SA and Site Assessment: Site(s) to Accommodate a Proposed 1,500 Dwelling and 30ha Employment Land Contributions Towards the Unmet Needs Forecast to arise within the Black Country

Introduction

9.1. This section of the document summarises the additional SA and site assessment work undertaken to inform the identification of sites to accommodate the proposed 1,500 dwelling and 30ha employment land contribution towards the unmet needs forecast to arise within the Black Country (comprising the Local Planning Authority areas of Dudley, Sandwell, Walsall, and Wolverhampton).

Identification of a Reasonable Assessment Geography

- 9.2. As documented within the Housing Topic Paper (GC4i) and Employment Strategy Topic Paper (GC4n), it is considered that there is a clear functional relationship between Shropshire and the Black Country. However, it is also considered that the extent of the relationship with the Black Country Authorities varies across Shropshire, which is perhaps unsurprising given the size and geography of Shropshire.
- 9.3. As such, it was considered appropriate and proportionate to identify a reasonable geography of Shropshire within which potential sites that could contribute to the unmet housing and employment land need of the Black Country could be located, prior to undertaking additional SA and site assessment work.
- 9.4. Consistent with the assessment of the functional relationship between Shropshire and the Black Country, this was informed by consideration of:
- a. Geographic proximity and the location and quality of main road and rail transport links between Shropshire and the Black Country.
 - b. Migration patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
 - c. Commuting patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
 - d. The extent to which Travel to Work Areas (TTWA's) associated with the Black Country penetrate into Shropshire and vice versa.

Summary of the Process Undertaken to Identify a Reasonable Assessment Geography

Geographic Proximity and the Location of Main Road and Rail Transport Links

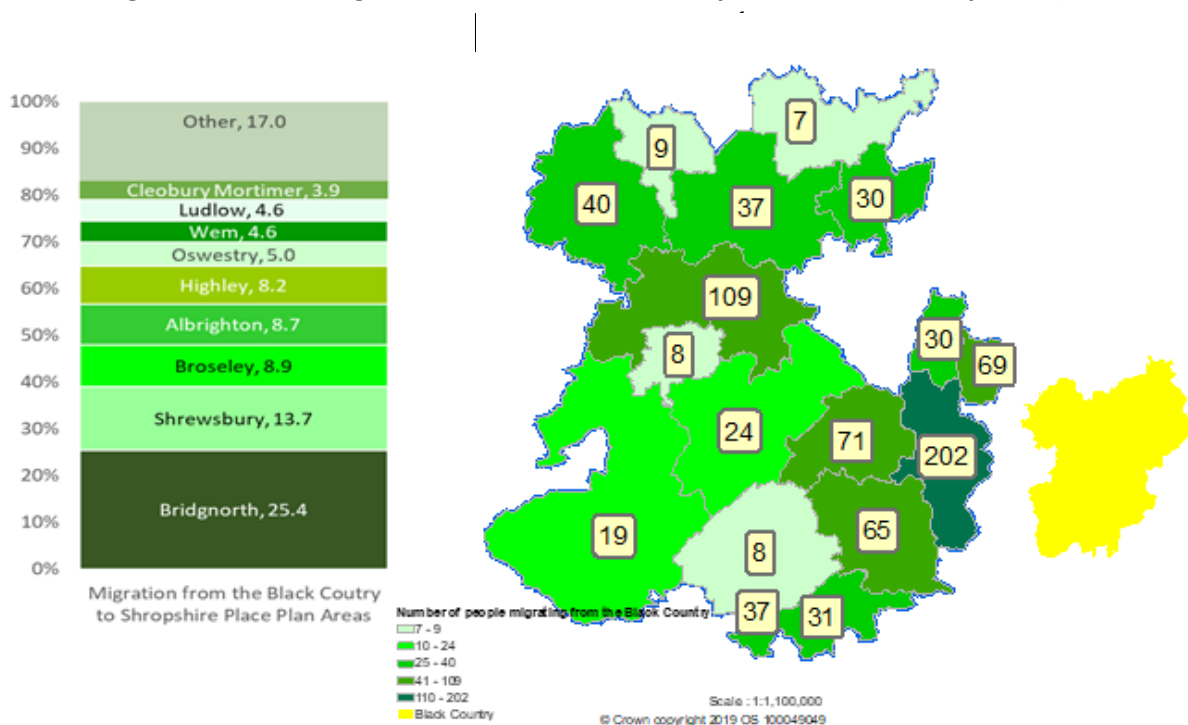

9.5. Shropshire covers a large and diverse geographic area. Whilst none of Shropshire adjoins the Black Country, it is considered that eastern and central parts of Shropshire are in geographic proximity, particularly to Wolverhampton and Dudley. However, northern, southern and western portions of Shropshire have a much more limited geographic proximity to the Black Country.

- 9.6. A number of road and rail links exist between Shropshire and the Black Country, as documented within the Housing Topic Paper (GC4i).
- 9.7. Key road link includes the A5 / M54 Corridor running from Shrewsbury to Wolverhampton (via Shifnal and Albrighton); the A41 corridor running from Albrighton to Wolverhampton (and also extending north into Shropshire linking with Shifnal, Market Drayton and Whitchurch); the A454 and A458 corridors linking Bridgnorth to Wolverhampton and Dudley respectively. These routes allow access to the rest of Shropshire and also to Sandwell and Walsall.
- 9.8. Rail links between Shropshire and the Black Country are provided via the Shrewsbury to Wolverhampton railway line, which includes regular stops at Shifnal and Albrighton in Shropshire and allows for onward travel from Wolverhampton to Birmingham with regular stops at various locations in Sandwell and Dudley including Coseley and Tipton in Dudley. This line allows for onward rail connections to other parts of Shropshire on the rail network and other parts of the Black Country on the rail network.
- 9.9. It is apparent and unsurprising that it is the parts of Shropshire on the east and in central areas that have the most direct transport links to the Black Country. Northern, southern and western portions of Shropshire have much less direct links to the Black Country.

Migration Patterns

9.10. The Housing Topic Paper (GC4i) provides information on migration patterns at a sub-Shropshire level (based on 2011 Census data). Figure 1 and Figure 2 summarise these migration patterns:

Figure 1: Internal Migration from the Black Country Authorities to Shropshire (at a Sub-

¹ ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

Figure 2: Internal Migration from Shropshire (at a Sub-Shropshire Level) to the Black Country

9.11. It is apparent from this data that the majority of people migrating into Shropshire from the Black Country are moving to eastern and central locations. It is also apparent that the majority of people migrating out of Shropshire to the Black Country are moving from eastern and central locations. Specifically:

- a. Bridgnorth Place Plan Area (25.4%) was by far the most popular destination for people migrating from the Black Country to Shropshire, closely followed by Shrewsbury (13.7%), Broseley (8.9%), Albrighton (8.7%) and Highley (8.2%) Place Plan Areas.
- b. The largest proportion of people migrating from Shropshire to the Black Country were from the Shrewsbury Place Plan Area (25.5%), followed by Bridgnorth (22.2%), and Albrighton (10.6%) Place Plan Areas.

9.12. It is also apparent from this data that migration links between the Black Country and western, north-western and south-western locations within Shropshire are much more limited and are likely to have stronger functional links with other locations such as Cheshire to the north, Herefordshire to the south and Wales to the west.

Commuting Patterns

9.13. The Housing Topic Paper (GC4i) also provides information on commuting patterns at a sub-Shropshire level (based on 2011 Census data).

² ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

9.14. Figure 3 and Figure 4 summarise these commuting patterns:

Figure 3: Commuting Between the Black Country Authorities and Shropshire (at a Sub-Shropshire Level)³

Figure 4: Commuting Between the Black Country Authorities and Shropshire (at a Sub-Shropshire Level)⁴

³ ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

⁴ ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

- 9.15. It is apparent from this data that the majority of people commuting into Shropshire from the Black Country are commuting to eastern and central locations. It is also apparent that the majority of people commuting out of Shropshire to the Black Country are commuting from eastern and central locations. Specifically:
- a. The majority of commuters from the Black Country into Shropshire were employed within the Bridgnorth Place Plan Area (34.9%), followed by Albrighton (22.5%), Shrewsbury (18.6%), and Shifnal (7.1%) Place Plan Areas.
 - b. The largest proportion of people commuting from Shropshire to the Black Country were from the Bridgnorth Place Plan Area (30.7%), followed by Albrighton (12.8%) and Shrewsbury (11.9%) Place Plan Areas.
- 9.16. It is also apparent from this data that commuting links between the Black Country to and western, northern and southern locations within Shropshire are much more limited.

Travel to Work Areas

- 9.17. Travel to Work Areas (TTWA's) are a geography created to approximate labour market areas - self-contained areas in which most people both live and work. As summarised within the Housing Topic Paper (GC4i), only one TTWA applies to both Shropshire and the Black Country, this being the Wolverhampton and Walsall TTWA which represents 2.7% of the Shropshire population. This population is located largely within the Albrighton Place Plan Area, Bridgnorth Place Plan Area and a very small part of the Shifnal Place Plan Area.

Conclusion

- 9.18. It was apparent from the consideration of the range of identified factors, that it is the eastern and central parts of Shropshire that have the strongest functional relationship with the Black Country – they are closest geographically, and generally benefit from the most direct transport links, and contain the areas with the strongest migration and commuting/TTWA links. The functional relationship with the Black Country is significantly more limited within western, northern and southern parts of Shropshire.
- 9.19. It was concluded that potential sites to accommodate the proposed contribution of 1,500 dwellings and 30ha of employment land towards the unmet needs forecast to arise within the Black Country should be located within either central or eastern parts of Shropshire. Specifically, within one or more of the following Place Plan Areas:
- a. Albrighton
 - b. Bridgnorth
 - c. Broseley
 - d. Highley
 - e. Much Wenlock
 - f. Shifnal
 - g. Shrewsbury

9.20. These Place Plan Areas have been identified, as the range of factors considered indicate they have the strongest functional relationship to the Black Country. It was therefore considered that sites in these areas would be best able to promote sustainable patterns of development and would also be most likely to meet the needs of the relevant Black Country households.

Housing

9.21. Within these Place Plan Areas, it was concluded that those sites suitable for accommodating all or part of the proposed contribution to the unmet housing needs forecast to arise within the Black Country would be those associated with the urban areas (Strategic, Principal and Key Centres) with reasonable housing guidelines proposed or potential strategic settlements/strategic sites.

9.22. This was because such locations:

- a. Perform both a local and more strategic function within Shropshire.
- b. Align with the principle of urban focus which underpins the distribution of development across Shropshire.
- c. Consistent with the principle of urban focus, are envisaged to have a reasonable amount of housing development occurring, potentially sufficient to contribute to local needs and more strategic needs.
- d. Are best able to sustainably accommodate the larger sites necessary to support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country (alongside local needs).
- e. Generally, offer the services and facilities best able to support connectivity between Shropshire and the Black Country.
- f. Are considered most likely to meet the needs of the relevant Black Country households.

9.23. Conversely other locations (Community Hubs, Community Cluster settlements, and the wider rural area – excluding potential strategic settlements / strategic sites) are:

- a. Generally smaller scale and perform a more local function.
- b. Do not constitute urban areas, therefore they do not align with the principle of urban focus that underpins the distribution of development across Shropshire.
- c. Consistent with the principle of urban focus, are generally envisaged to have a lower amount of housing development occurring.
- d. Are less able to accommodate sites large enough to meet local needs and support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.
- e. Offer lower levels of services and facilities to support connectivity between Shropshire and the Black Country.

Employment

- 9.24. Similarly, within these Place Plan Areas, it was concluded that those sites suitable for accommodating all or part of the proposed contribution to the unmet employment land needs forecast to arise within the Black Country would be those associated with the urban areas (Strategic, Principal and Key Centres) where significant employment land guidelines are proposed or potential strategic settlements / strategic sites.
- 9.25. This was because such locations:
- a. Perform both a local and more strategic function within Shropshire.
 - b. Align with the principle of urban focus which underpins the distribution of development across Shropshire.
 - c. Consistent with the principle of urban focus, are envisaged to have a significant amount of employment land made available for development, potentially sufficient to contribute to local needs and more strategic needs.
 - d. Are best able to sustainably accommodate the larger sites necessary to support all or part of the proposed contribution to the unmet employment land need forecast to arise within the Black Country (alongside local needs).
 - e. Generally, offer the services and facilities best able to support connectivity between Shropshire and the Black Country.
 - f. Are considered most likely to meet the needs of the relevant Black Country households.
- 9.26. Conversely other locations (Key Centres with lower employment land guidelines and supply, Community Hubs, Community Cluster settlements, and the wider rural area – excluding potential strategic settlements / strategic sites) are generally envisaged to have a lower amount of employment land development occurring. They are also generally less able to accommodate the large employment sites sufficient to meet both local needs and support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.

Conclusion

- 9.27. As such, the **reasonable options for sites** to accommodate all or part of the proposed contribution to the unmet housing needs forecast to arise within the Black Country are those in the following locations:
- a. Sites associated with the settlement of Albrighton.
 - b. Sites associated with the settlement of Bridgnorth.
 - c. Sites associated with the settlement of Broseley.
 - d. Sites associated with the settlement of Highley.
 - e. Sites associated with the settlement of Much Wenlock.
 - f. Sites associated with the settlement of Shifnal.
 - g. Sites associated with the settlement of Shrewsbury.

- h. Potential strategic settlements/sites within Albrighton Place Plan Area.
- i. Potential strategic settlements/sites within Bridgnorth Place Plan Area.
- j. Potential strategic settlements/sites within Broseley Place Plan Area.
- k. Potential strategic settlements/sites within Highley Place Plan Area.
- l. Potential strategic settlements/sites within Much Wenlock Place Plan Area.
- m. Potential strategic settlements/sites within Shifnal Place Plan Area.
- n. Potential strategic settlements/sites within Shrewsbury Place Plan Area.

9.28. The **reasonable options for sites** to accommodate all or part of the proposed contribution to the unmet employment land needs forecast to arise within the Black Country are those in the following locations:

- a. Sites associated with the settlement of Bridgnorth.
- b. Sites associated with the settlement of Shifnal.
- c. Sites associated with the settlement of Shrewsbury.
- d. Potential strategic settlements/sites within Albrighton Place Plan Area.
- e. Potential strategic settlements/sites within Bridgnorth Place Plan Area.
- f. Potential strategic settlements/sites within Broseley Place Plan Area.
- g. Potential strategic settlements/sites within Highley Place Plan Area.
- h. Potential strategic settlements/sites within Much Wenlock Place Plan Area.
- i. Potential strategic settlements/sites within Shifnal Place Plan Area.
- j. Potential strategic settlements/sites within Shrewsbury Place Plan Area.

9.29. Shropshire Council considers that these represent a comprehensive range of reasonable options for sites to accommodate all or part of the proposed contribution of 1,500 dwellings and 30ha of employment land to the unmet needs forecast to arise within the Black Country.

Scope of the Additional SA and Site Assessment Work

9.30. Having reviewed the SA and site assessment work already undertaken within the identified reasonable geography, conclusions were reached regarding the scope of the additional SA and Site Assessment work required in order to inform the identification of appropriate site(s) from within the reasonable options identified to accommodate the proposed contributions to the unmet housing and employment land needs forecast to arise within the Black Country.

9.31. With regard to the **identification of sites**, it was concluded that a comprehensive process was undertaken to identify sites for consideration within the site assessment process undertaken to inform the identification of proposed allocations within the draft Shropshire Local Plan.

- 9.32. This included a call for sites, identification of potential sites through a Strategic Land Availability Assessment (SLAA), and consideration of sites submitted during each of the five stages of Regulation 18 (Plan Making) consultation undertaken.
- 9.33. It is considered that this represented an extensive and comprehensive range of reasonable options for site allocations across Shropshire and similarly represented an appropriate range of reasonable options for sites to accommodate the proposed contribution to the unmet housing need forecast to arise in the Black Country. Therefore, it was not considered necessary or appropriate to undertake a further call for sites or to seek to identify further sites for consideration within the site assessment process.
- 9.34. **Stage 1 of the Site Assessment process** involved a high-level strategic assessment of sites across Shropshire (within the Strategic Land Availability Assessment), with more detailed assessment undertaken in later stages of assessment. It is at this later stage of assessment that conclusions were reached regarding the sustainability and suitability of sites for allocation. As such, it was also concluded that this stage of the site assessment process did not require updating.
- 9.35. **Stage 2a of the Site Assessment process** involved consideration of the performance of sites against relevant SA Objectives identified through the SA Scoping Report. These SA Objectives are considered appropriate to assess the sustainability of sites to accommodate the needs of Shropshire and any contribution to the Black Country.
- 9.36. The conclusion of **Stage 2a of the site assessment process** involved calculating an overall score for each site, based on performance against all identified SA objectives. Sites were then allocated a category, either 'Good', 'Fair' or 'Poor', through comparison to other sites at the relevant settlement. This was then considered as part of the wider site assessment process.
- 9.37. It is considered the process to calculate an overall score for each site and the principle of allocating each site to a category based on comparison to other relevant sites also remains appropriate when assessing the sustainability of sites to accommodate the needs of Shropshire and any contribution to the Black Country.
- 9.38. However, to allow for comparison across the entirety of the assessment geography (and therefore between all reasonable options for accommodating all or part of the proposed contribution to the unmet housing and employment land needs forecast to arise within the Black Country), a targeted update of the **Stage 2a Site Assessment process** will be undertaken.
- 9.39. This update will allocate each site a category of either 'Good', 'Fair' or 'Poor', through comparison to other sites within the relevant assessment geography identified. This alongside the category allocated on a settlement basis, will be considered as part of the wider site assessment process. In this way, it will inform the identification of appropriate site(s) to accommodate proposed contributions to the unmet needs forecast to arise in the Black Country.

- 9.40. **Stage 2b of the site assessment process** involved a ‘filter’ of sites based on availability, size and strategic suitability. When undertaking this screening, no specific consideration was given to the potential scale of development need in any location. As such, it is considered that this process remains relevant and appropriate for consideration of sites to accommodate the needs of Shropshire and any contribution to the Black Country and did not require updating.
- 9.41. **Stage 3 of the SA and site assessment process** was the point at which detailed consideration of sites that progressed through initial screening was undertaken. It was also at this stage that conclusions regarding proposed allocations were reached.
- 9.42. As such, it is considered that this stage is the most appropriate to consider suitability to accommodate / contribute towards accommodation of the proposed 1,500 dwelling and 30ha of employment land towards the unmet needs forecast to arise within the Black Country and ultimately to identify the site(s) to accommodate these proposed contributions. **Stage 3 of the SA and site assessment process will therefore be subject to a comprehensive update.**
- 9.43. Therefore, the additional SA and site assessment work required was focused within **Stage 2a of the Site Assessment and Stage 3 of the Site Assessment process.**

Targeted Update to the Stage 2a Site Assessment process

- 9.44. The SA Objectives utilised within the SA process to assess the sustainability of sites to meet the needs of Shropshire were considered equally appropriate to assess the sustainability of sites to accommodate all or part of the proposed contribution to the unmet needs forecast to arise in the Black Country.
- 9.45. Similarly, the principle of and process undertaken to allocate each site an overall ‘score’ and allocate a category, either ‘Good’, ‘Fair’ or ‘Poor’, through comparison to other sites was also considered appropriate.
- 9.46. However, to allow for comparison across the entirety of the assessment geography (and therefore between all reasonable options for accommodating all or part of the proposed contribution to the unmet housing and employment land needs forecast to arise within the Black Country), a targeted update of the **Stage 2a Site Assessment process** was required.
- 9.47. This update allocated each site a category of either ‘Good’, ‘Fair’ or ‘Poor’, through comparison to other sites within the relevant assessment geography identified.
- 9.48. Please Note: As this categorisation occurred over a different geography to that utilised when comparing sites in the context of the relevant settlement (or when comparing potential strategic sites / settlements), in some instances sites were allocated to a differing categories across the two process. This is to be expected, given the differing geographies and the differing purposes – accommodating the development needs of a specific settlement and contributing to meeting the needs of Shropshire, compared

with accommodating all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.

9.49. The results of this exercise, alongside the category allocated on a settlement basis, will be considered as part of the wider site assessment process. In this way, it will inform the identification of appropriate site(s) to accommodate proposed contributions to the unmet needs forecast to arise in the Black Country.

Updating the Stage 3 Site Assessment process

9.50. To allow for the Stage 3 Site Assessment process to effectively consider the sites that constitute reasonable options to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country, it was concluded that three further specific factors required consideration, these being:

- a. The results of the targeted update to the Stage 2a site assessment;
- b. Relationship of the site and where appropriate the associated settlement to the Black Country; and
- c. Potential of the site to accommodate all or part of the proposed contribution to the Black Country.

9.51. Other strategic factors related to the suitability and appropriateness of a site accommodating all or part of the proposed contribution to the Black Country were addressed as part of the wider strategic considerations.

9.52. These factors alongside other factors considered within the site assessment process then ultimately informed the decision regarding which sites are proposed to accommodate all or part of the proposed contributions to the unmet needs forecast to arise within the Black Country and equally which sites are not proposed to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.

Summary of the Additional SA and Site Assessment Work

9.53. **The Updated Stage 2a SA and Site Assessment work and the Updated Stage 3 Site Assessments form Appendices 1-10 of this Additional SA Report.**

9.54. Appendix 1 of this Additional SA Report provides the updated Stage 2a housing Assessments, for all the relevant settlements and the identified potential strategic settlements/sites. A summary of the results of this updated assessment is provided within Table 9.1:

- 9.56. Appendices 3-10 of this Additional SA Report consist of the updated Stage 3 Assessments for each of the relevant settlements and the identified potential strategic settlements/sites.
- 9.57. The decision regarding the sites appropriate to identify as sites to accommodate all or part of the proposed contributions to the unmet needs forecast to arise within the Black Country and the quantity of proposed contribution that should be accommodated upon them, were ultimately ones of professional judgement. This is comparable to the process undertaken when identifying sites to accommodate all or part of the proposed settlement housing guideline and overarching housing requirement.
- 9.58. This professional judgement was directly informed by the targeted updated to Stage 2a of the site assessment process; and the two additional factors considered regarding the relationship of each site (and where appropriate the associated settlement) to the Black Country and the potential of the site to accommodate all or part of the proposed contribution to the Black Country, within Stage 3 of the site assessment process. It was also directly informed by the other factors considered within the entirety of the site assessment process.
- 9.59. The reasoning for decisions is explained within the Updated Stage 3 Site Assessments, which form Appendices 3-10 of this Additional SA Report.
- 9.60. In summary, following the completion of the targeted Update to the Stage 2a SA and Site Assessments and the Updated Stage 3 SA and Site Assessments, a series of sites have been identified to accommodate the proposed contributions of 1,500 dwellings and 30ha of employment land towards unmet needs forecast to arise within the Black Country. These sites and a brief summary of the reasons for their identification are documented within Table 9.3.

- 9.61. It is apparent that these sites constitute existing proposed allocations within the draft Shropshire Local Plan. This is perhaps unsurprising as these proposed allocations were themselves informed by a proportionate and robust site assessment process, which was reviewed and updated as part of this process.
- 9.62. The Updated Stage 3 Site Assessments demonstrate that these proposed allocations are sustainable and appropriate locations for development when specifically considered in the context of the ability to accommodate all or part of the proposed contribution to the unmet needs of the Black Country.
- 9.63. They also demonstrate that these proposed allocations would have been identified whether considered specifically to meet the needs of Shropshire or to specifically provide a contribution to the unmet development needs of the Black Country from the outset.
- 9.64. In effect, the Updated Stage 3 Site Assessments endorse previous conclusions regarding the sustainability of these proposed site allocations and demonstrate that these proposed allocations are considered suitable and sustainable when considered specifically to meet the needs of Shropshire and when considered to accommodate all or part of the proposed contribution to the unmet needs of the Black Country.

Table 9.3: Sites Identified Through the Site Assessment Process to Accommodate Proposed Contributions to Unmet Needs Forecast to Arise in the Black Country

Site Reference	Site Name	Specific Policy	Total Capacity	Black Country Contribution	Summary
BRD030	Tasley Garden Village, Bridgnorth	S3.1	1,050 dwellings 16ha employment land New local centre 20ha of green infrastructure and a 19ha linear park	600 dwellings	<p>Bridgnorth is located in south-east Shropshire with a functional relationship to the Black Country. It benefits from strong road links to the Black Country via the A454 corridor. Bridgnorth is a principal centre and performs a strategic role in the east of Shropshire. The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
SHF018b & SHF018d	Land east of Shifnal Industrial Estate, Upton Lane, Shifnal	S15.1	39 hectares (15.6ha net development)	30ha of employment land	<p>Shifnal is located in east Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shifnal is a key centre and a focus for investment, employment, housing and development on the M54/A5 strategic corridor.</p> <p>The site constitutes a proposed strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre.</p> <p>The site can accommodate a sizeable contribution towards the unmet employment land needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that exceptional circumstances exist to justify the release of this land for employment, as documented within the new Green Belt Topic Paper.</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Page 742

Site Reference	Site Name	Specific Policy	Total Capacity	Black Country Contribution	Summary
SHR060, SHR158 & SHR161	Land between Mytton Oak Road and Hanwood Road, Shrewsbury	S16.1	1,500 dwellings 5ha of employment land	300 dwellings	<p>Shrewsbury is located in central Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54/A5 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shrewsbury is the strategic centre of Shropshire and the primary focus for new development in the County.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
IRN001	Former Ironbridge Power Station	S20	Range of local services and facilities Around 1,000 dwellings Around 6ha of employment land Extensive green infrastructure	600 dwellings	<p>The Former Ironbridge Power Station is located in east Shropshire with a functional relationship to the Black Country. It benefits from road access to the M54/A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.</p> <p>The Former Ironbridge Power Station is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Likely Significant Effects and Mitigation Measures

- 9.65. As the sites identified to contribute towards meeting the needs of each of the settlements considered within this updated SA assessment work and to accommodate the proposed contributions to the unmet needs forecast to arise in the Black Country are already proposed for allocation within the draft Shropshire Local Plan, consideration of significant effects and mitigation measures has already been undertaken within the earlier SA assessment work.
- 9.66. For completeness, Shropshire Council has re-considered significant effects and identified mitigation measures for these sites and concluded that they remain appropriate in the context of both meeting local needs and accommodating the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 9.67. Similarly, where mitigation measures were considered necessary, it has also been concluded that they are appropriate in the context of both meeting local needs and accommodating the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 9.68. In summary, the site SA process uses a Good, Fair or Poor rating system when assessing sites. Sites rated as 'Poor' are considered to have likely significant adverse effects for which mitigation measures should be proposed.
- 9.69. Table 9.4 summarises the 'ratings' for all proposed housing allocations within the assessment area, including those proposed to accommodate the proposed contribution of 1,500 dwellings towards the unmet needs forecast to arise within the Black Country.

Shrewsbury	SHR166	Poor	Fair
Potential Strategic Site	BNT002 (Clive Barracks, Tern Hill)	Fair	Fair
Potential Strategic Site	IRN001 (Former Ironbridge Power Station)	Poor	Poor

The **Bold conclusions identify the relevant Conclusion(s) for each site.*

9.71. It is apparent from Table 9.4 and Table 9.5 that only 2 of the proposed allocations within the assessment area perform ‘poorly’ and as such are considered to have likely significant adverse effects for which mitigation measures should be proposed.

9.72. The first site is SHR166 at Shrewsbury, which is intended to contribute towards achieving the proposed employment land guideline for Shrewsbury, the proposed employment land requirement for Shropshire and the wider spatial strategy for Shropshire. It is not proposed to accommodate any of the proposed contribution to the unmet employment land need forecast to arise within the Black Country. Much of the site contains a newly designated Scheduled Monument (designated in late 2022). This matter is currently being due consideration, informed by ongoing engagement with the site promoter.

9.73. The second site is IRN001 the Former Ironbridge Power Station which is intended to contribute towards achieving the housing and employment land need in Shropshire, accommodate part of the proposed housing contribution to the unmet housing need forecast to arise within the Black Country (600 dwellings), and as such contribute towards the achievement of the proposed housing and employment land requirements for Shropshire and the wider spatial strategy for Shropshire.

9.74. Having reviewed the mitigation measures previously identified for these sites (with the exception of the matter of the newly designed Scheduled Monument on site SHR166 which is currently being given due consideration), it is considered that they are equally effective in the context of sustainably accommodating part of the proposed contribution to the unmet housing need forecast to arise within the Black Country. These measures are summarised within Table 9.6. They are also set out in the relevant site guidelines in the draft Shropshire Local Plan.

**Table 9.6: Summary of Proposed Employment Allocations Likely Significant Effect
within the Assessment Areas**

Site: IRN001 SHR166 - Shrewsbury	
Reasons for 'Poor' Score	Mitigation Measure(s)
<p>Site is not within walking distance (480m) of services and facilities (Primary School, GP surgery, Leisure centre, Outdoor sports facility)</p>	<p>An appropriate vehicular access will be created from the A49 and all necessary improvements to the local and Strategic Road Network will be undertaken</p> <p>Development will create and enhance pedestrian and cycle links within and through the site and implement appropriate links from the site into the town.</p> <p>Key Green infrastructure corridors will be enhanced, including the River Severn and the environmental networks on and around the site.</p>
Site: IRN001 (Former Ironbridge Power Station)	
Reasons for 'Poor' Score	Mitigation Measure(s)
<p>Site contains parts of Tick Wood and Benthall Edge SSSI.</p> <p>Site contains part of the Buildwas Sand Quarry SSSI.</p> <p>Site is close to other parts of Tick Wood and Benthall Edge SSSI and the Buildwas River Section SSSI.</p> <p>Site contains part of the Buildwas Sand Quarry Wildlife Site.</p> <p>Site is close to the River Severn, Buildwas Roadside Verge and Birches Coppice Wildlife Sites.</p> <p>Site is close to Tick Wood, Banghams Wood and Benthall Edge Wood Ancient Woodland Sites.</p>	<p>Retention and protection by appropriate buffer zones within the development of Tick Wood and Benthall Edge SSSI, Buildwas Sand Quarry SSSI and Buildwas Sand Quarry Wildlife Site.</p> <p>Appropriate buffers to Tick Wood and Benthall Edge SSSI, the Buildwas River Section SSSI, the three Ancient Woodland Sites (in line with Natural England and Forestry Commission Standing Advice) and the three Wildlife Sites within the vicinity of the development Site.</p>
<p>Site contains an outdoor sports facility.</p>	<p>The provision of facilities and services within a village centre including a nursery and primary school and GP surgery - the latter subject to CCG assessment and advice</p>
<p>Site is in Flood Zones 2 and 3 (along the river).</p>	<p>The exclusion from development of those parts of the site within Flood Zones 2 and 3</p>
<p>Site contains (an extremely) small part of the Severn Gorge Conservation Area.</p> <p>Site is close to the Ironbridge Gorge World Heritage Site.</p> <p>Site is close to Buildwas Abbey Scheduled Monument.</p> <p>Site is close to the remainder of the Severn Gorge Conservation Area.</p> <p>Site is close to two Grade II Listed Buildings: The Slip and Albert Edward Bridge.</p>	<p>A comprehensive heritage assessment which addresses the site's relationship with the Ironbridge Gorge World Heritage Site, Buildwas Abbey Scheduled Monument, the Severn Gorge Conservation Area and the two Grade II Listed Buildings. This will then guide the conservation and enhancement of these features in line with the requirements of the National Planning Policy Framework and Local Plan policy</p>
<p>Site has a group Tree Preservation Order on its western boundary (in the grounds of Buildwas Abbey).</p>	<p>An assessment of the impact of development on the trees subject to TPO in order to demonstrate how they can be safeguarded.</p>
<p>Site is not within easy walking distance of community services and amenities such as a primary school or GP surgery.</p>	<p>The provision of green infrastructure (including accessible natural greenspace) and sports facilities – the latter being determined by the Shropshire Playing Pitch and Outdoor Sports Strategy. Pedestrian and cycle links to services and facilities both on-site and the wider area, will be integrated into the green infrastructure network.</p> <p>The provision of facilities and services within a village centre including a nursery and primary school and GP surgery - the latter subject to CCG assessment and advice.</p>

9.75. Therefore, whilst the Former Ironbridge Power Station Site performs 'poorly' in the context of SA objectives and are considered to have likely significant adverse effects for which mitigation measures are required, it is apparent that a range of appropriate mitigation measures are available. As such, Shropshire Council maintain the view that it is an appropriate location to accommodate part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.

9.76. This is because the site:

- a. Is located in east Shropshire with a functional relationship to the Black Country
- b. Benefits from road access to the M54/A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.
- c. Is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development, including a range of associated services and facilities.
- d. Can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.
- e. Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.

9.77. Furthermore, development of this site would, subject to the identified mitigation measures and identified site guidelines, be considered to constitute sustainable development.

10. Summary of SA Assessment: Relevant Draft Policies

Introduction

- 10.1. Following conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document (including an appropriate housing requirement, an appropriate employment land requirement, an appropriate strategic distribution of development, and appropriate sites to accommodate proposed contributions to the unmet housing and employment land needs forecast to arise within the Black Country), a series of main modifications are required to relevant draft policies within the draft Shropshire Local Plan.
- 10.2. This section of the document summarises the additional SA assessment of these relevant draft Policies, to support identification of appropriate main modifications in response to the conclusions reached.
- 10.3. For the avoidance of doubt, the need to undertake further SA assessment work to consider the implications of wider main modifications will be considered at an appropriate time within the ongoing examination process.

Draft Policies to be Assessed

- 10.4. Having reflected on the conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document, Shropshire Council considers that the following policies require Main Modifications:
- a. Draft Policy SP2: Strategic Approach⁵; and
 - b. Draft Policy SP13: Delivering Sustainable Economic Growth and Enterprise.
- 10.5. Furthermore, in response to the ID28 Shropshire Council has prepared a new draft Policy to address the housing needs of older people and those with disabilities and special needs. In preparing this draft Policy, Shropshire Council has undertaken additional SA assessment work. For completeness, this additional SA assessment work is also summarised within this section of the document.

⁵ Draft Policy SP2 sets out the Plan's strategic approach to development. It identifies Shropshire's housing and employment land requirements and the settlements in which these will be delivered. The SA for the Issues & Strategic Options and Preferred Scale and Distribution of Development documents evaluate the options considered in the preparation of draft Policy SP2. The draft settlement Policies S1 to S20 implement draft Policy SP2 (they show how SP2 applies, but they are not considered to represent reasonable alternatives for SA purposes), as such they were not subject to separate SA within the Sustainability Appraisal and Site Assessment Environmental Report undertaken to inform the Regulation 19: Pre-Submission Draft of the Shropshire Local Plan. To represent reasonable options, any evaluation should be capable of guiding the choice of an option by providing differing results. An individual evaluation of each settlement policy is unlikely to offer this. This approach follows NPPG which states that '*reasonable alternatives are the different realistic options considered by the plan-maker in developing the policies in its plan. They must be sufficiently distinct to highlight the different sustainability implications of each so that meaningful comparisons can be made*'

Summary of the Additional SA assessment of Policies

10.6. The following tables summarise the additional SA assessment of the policies that require Main Modifications following the conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document.

10.7. Each policy assessment is then followed by a written summary of the conclusions for each policy.

Table 10.1: SA Assessment of Revised Policy SP2. Strategic Approach

SP2. Strategic Approach

- Page 749
1. Shropshire will flourish, accommodating investment and new development that contributes to meeting needs and making its settlements more sustainable. New development will be supported by necessary infrastructure and be of a high-quality which positively responds to its setting, local needs and our changing climate.
 2. Over the plan period from 2016 to 2038, a minimum of 30,800 new dwellings and a minimum of 300 hectares of employment land will be delivered, of which 1,500 dwellings and 30ha of employment land are to contribute to unmet development needs forecast to arise within the Black Country. The housing and employment land requirements equate to around 1,400 dwellings and around 14ha of employment land per annum.

This Local Plan ensures that sufficient land in the right locations is available to achieve these growth aspirations, including sites that already benefit from planning permission or prior approval, sites allocated for development within the SAMDev Plan as documented within Appendix 2 of this Local Plan (referred to as ‘saved’ allocations), sites allocated for development within Settlement Policies S1-S20 of this Local Plan, and appropriate windfall sites that are consistent with the requirements of the Local Plan. However, the availability of land will be kept under review to ensure a continuous supply of suitable sites is available.
 4. Delivery of affordable housing remains a key priority in Shropshire, as such around 7,700 affordable dwellings (equating to around 25% of the total housing requirement) will be delivered during the plan period from 2016 to 2038.
 5. Main town centre uses will be focused into the diverse network of town centres and recognisable high streets across Shropshire. It will complement their scale and character and support appropriate diversification.
 6. To achieve a sustainable and appropriate pattern of development which also maximises investment opportunities, new development will be focused in the urban areas identified in Schedule SP2.1. Specifically:
 - a. Shrewsbury will bloom, fulfilling its role as a strategic centre and acting as a focus for well-designed new housing and employment development. This will be supported by the provision of supporting infrastructure, high-quality retail, leisure, transport and other public realm improvements within and on the edge of the town centre in support of the delivery of the Big Town Plan and its related masterplans.

- b. Principal and Key Centres will accommodate significant well-designed new housing and employment development, supported by necessary infrastructure. Growth within these diverse settlements will maintain and enhance their roles, support key services and facilities and maximise their economic potential.
 - c. Strategic Settlements will form successful, well-designed and sustainable communities, delivering new housing and employment development. They will provide an appropriate mix of housing, employment, local services and facilities and infrastructure.
7. Recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in urban areas will be complemented by appropriate new development within Community Hubs, identified in Schedule SP2.2, which are considered significant rural service centres; and to a lesser extent Community Clusters, identified in Schedule SP2.3, which consist of settlements with aspirations to maintain or enhance their sustainability. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.
8. The production of formal Neighbourhood Plans will be supported and can identify development opportunities which will complement proposals in this Local Plan. Where appropriate they can also identify additional Community Clusters.

Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	-	-	The level of growth in this option means that greenfield land may need to be released. This is likely to have an adverse effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire in the medium and long term.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	There are likely to be good opportunities to create a balanced supply of employment land and/or more or higher value jobs. It also includes an explicit contribution of 30ha of employment land towards the unmet needs forecast to arise in the Black Country.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	This option more than meets evidenced local housing need and offers significant opportunities to meet the requirements of all sections of society in terms of location, affordability and adaptability. It also includes an explicit contribution of 1,500 dwellings towards unmet housing need forecast to arise within the Black Country.
4: Promote access to services for all sections of society	0	+	+	Development should provide good opportunities to support existing services in the medium to long term. Master-planning of larger development may enable increased provision of services in the medium to longer term.

Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	0	+	+	Focussing growth on the urban areas increases opportunities for the use of sustainable travel options in the medium to long term
6: Reduce the need of people to travel by car	0	+/?	+/?	The scale of development in the county may be large enough to support new or existing public transport solutions to discourage private vehicle use over the medium to long term.
7: Support active and healthy communities.	0	+	+	This level of development is likely to provide opportunities for new leisure, recreational and cultural activities in the medium to long term.
8: Protect and improve soil quality	?/-	?/-	?/-	Even though development is focussed on the urban areas, greenfield land will still need to be released. This may have a negative effect on soil quality depending on location.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	Since pollution from rural areas is the main issue affecting water quality in Shropshire, there is likely to be little change in the current situation.
10: Reduce flood risk and improve flood management	0/?	0/?	0/?	This level of growth scale could create more opportunities for flood management measures.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Shropshire has two small Air Quality Management Areas (AQMA): one in Bridgnorth and the other in Shrewsbury. There is the potential for an effect on air quality, dependent on the location of development sites.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	0/?	0/?	0/?	Opportunities to mitigate and adapt to climate change through habitat creation and improved connectivity will be dependent on the location of allocated sites.
14: Promote efficient use of natural resources	0	-	-	Growth may encourage the re-use of existing buildings and previously developed land but these gains are likely to be offset by an increase in the use of primary aggregates and greenfield sites in the medium to long term

Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	0/?	0/?	0/?	Growth may lead to the loss of, or harm to, heritage features and their settings but depending on the location and design, development also enables better management of the historic environment. Development has the potential to cause harm, but equally, the associated increased economic benefits may offer good opportunities to enhance heritage assets and provide for their better management
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features which convey a sense of place. This policy is unlikely to maintain or improve existing landscape character over the Plan period.

Summary for Revised Policy SP2: Strategic Approach

- 10.8. The policy is likely to be **significantly positive** towards **encouraging a strong and sustainable economy** as well as **providing a sufficient amount of good quality housing** which meets the needs of all sections of society.
- 10.9. It is also likely to assist with the reduction of carbon dioxide emissions, and in the medium to long term would help to promote access to services and facilities for all sections of society, as well as encourage the use of sustainable means of transport and would support active and healthy communities. It could potentially help to reduce the need for people to travel by car in the medium to long term.
- 10.10. The policy is unlikely to effect on the sustainability objectives of conserving and enhancing water or air quality in Shropshire and reduce the risk of water/air pollution, although this is somewhat dependent on the location of development. It is also unlikely to change the current situation in respect of reducing flood risk and improve flood management, promoting adaptation and mitigation to climate change or conserving and enhancing features and areas of heritage value and their setting.
- 10.11. The policy may have a negative effect on soil quality; however, this is not wholly established. Nonetheless, it would appear that the policy could have a negative effect with regard to conserving and enhancing landscape character and local distinctiveness, and in the medium to long term may be harmful to the promotion of efficient use of natural resources and the protection and enhancement of the range of plants and animals in Shropshire and the quality and extent of wildlife habitats (which is mostly due to the use of greenfield land).

Table 10.2: SA Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise

SP13. Delivering Sustainable Economic Growth and Enterprise

1. Shropshire will deliver a minimum of 300 hectares of employment development from 2016 to 2038 and will protect established employment areas for employment uses to achieve the objectives of Policy SP2. The strategic supply of land and protected employment areas are identified on the Policies Map and in the Authority Monitoring Report which will monitor the delivery of this employment development.
2. Employment generating uses will comprise:
 - a. Primary employment uses in Classes B2, B8, E(g)(i),(ii),(iii) and Sui Generis Waste Installations for recycling/treating/disposing of recovered materials to diversify the local economy of Shropshire;
 - b. Secondary employment uses in Classes E(a),(c),(d),(e), C2, C2A, and Sui Generis Waste Material Recovery Facilities, Retail Warehousing and Sales (including vehicle sales) and Vehicle Hire (including taxis and 'vehicle sharing' services) to diversify the employment offer on larger employment areas;
 - c. Ancillary essential or exceptional service uses in Classes E(b),(f), C1 and Sui Generis Hot Food and Takeaway Services and Hostels to diversify the effective operation and self-containment of larger employment areas.

Development of employment generating uses will be expected to demonstrate that the:

 - a. Site has the capacity to accommodate the scale of the proposed development particularly uses which attract visiting members of the public;
 - b. Proposed uses and any intensification of use conforms with neighbouring uses particularly primary employment uses on or close to the site;
 - c. Infrastructure investment is sufficient to serve the proposed or intensified uses particularly to provide sufficient capacity in key utilities and to facilitate the use of renewable and low carbon energy and decentralised energy sources;
 - d. Development satisfies the requirements of national and local policies especially to:
 - i. Protect the Green Belt or safeguarded land except where there are very special circumstances for development,
 - ii. Protect the Shropshire Hills Area of Outstanding Natural Beauty except where there are exceptional circumstances for development,
 - iii. Conserve areas of higher landscape value except where justified; or
 - iv. Conserve the natural and historic environments except where justified.
4. Development on mixed-use sites will be expected to utilise returns from higher value land uses to bring the land within the employment site/area to the market through the provision of accesses, servicing and other infrastructure to facilitate the development of employment uses on the land.
5. Development on allocated sites will be expected to satisfy the:
 - a. Economic growth objectives of the Economic Growth Strategy;

- b. Strategy for the settlement in which the proposed site is located;
- c. Development guidelines for allocated employment sites or mixed-use sites with employment generating uses in Settlement Policies S1-S18, Strategic Settlement Policies S19-S20, or approved Neighbourhood Plans; and
- d. Requirements of Local Plan policies relevant to the proposed location or uses of land.

6. Windfall Class B employment development on other sites will be supported, where the proposal is:

- a. To expand the premises or to intensify the operation of an existing business;
- b. For the change of use / conversion of an existing building to employment use;
- c. Located on a site within or adjoining an established employment area;
- d. For development of a suitable scale located within a Community Hub, Community Cluster or in the Countryside that satisfies Policy, , , ;
- e. Distributed according to the strategic approach in Policy SP2;
- f. Consistent with the economic growth objectives of the Shropshire Economic Growth Strategy;
- g. For major employment development including large scale inward investment for known 'end users' or occupiers, that satisfies the objectives of Policy SP12.

To support strategic and local employers, there is a presumption to protect allocated employment land and established employment areas. The protection of these employment sites/areas will be proportionate to the significance of these sites/areas in this hierarchy which is explained in the Authority Monitoring Report:

- a. Regional Sites – inward investment sites of regional or national significance will be protected for primary employment uses;
- b. Sub-Regional Sites – high quality, premium investment sites will be protected for primary employment uses;
- c. Key Shropshire Sites – good quality, prime sites in the local market will be protected for employment uses;
- d. Key Local Sites – good quality, business and industrial sites in the local market will be protected for employment uses;
- e. Mixed Commercial Sites – traditional affordable sites for mixed commercial uses or sites with broad spectrum Class E uses with a mix of building formats.

8. To support strategic and local employers, there is a presumption to protect allocated employment land and established employment areas for employment uses consistent with the hierarchy of employment sites. Proposals for change of use or for the loss of employment land and premises from primary employment uses on regional or sub-regional sites or from employment uses on any other protected employment sites will only be supported where:

- a. A contemporary market assessment of the employment land in the Settlement demonstrates a satisfactory supply for the remaining period of the Local Plan which does not compromise the supply of land in the County; and
- b. A comprehensive marketing exercise demonstrates the site is not suitable or viable for the intended employment uses for the site in the hierarchy of employment sites; and:
- c. The application demonstrates that the proposed use will make a significant contribution to the local economy, the local community or to other significant Local Plan objectives.

Sustainability Appraisal Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	The policy requires that national and local policy requirements to protect habitats and species must be followed.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	This policy focusses on delivering this objective
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This objective is unlikely to be affected by this policy
4: Promote access to services for all sections of society	0	0	0	This objective is unlikely to be affected by this policy
5: Encourage the use of sustainable means of transport	0	0	0	This objective is unlikely to be affected by this policy
6: Reduce the need of people to travel by car	0	0	0	This objective is unlikely to be affected by this policy
7: Support active and healthy communities.	0	0	0	This objective is unlikely to be affected by this policy
8: Protect and improve soil quality	?/-	?/-	?/-	Development outside existing settlement boundaries is likely to lead to the release of greenfield land. This may have a negative effect on soil quality depending on location.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+	+	+	Since pollution from the countryside is the main issue affecting water quality in Shropshire, economic development may have a beneficial effect on water quality by taking land out of agricultural production.
10: Reduce flood risk and improve flood management	0	0	0	This objective is unlikely to be affected by this policy
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Shropshire has two small Air Quality Management Areas (AQMA): one in Bridgnorth and the other in Shrewsbury. There is the potential for an effect on air quality, dependent on the location of development sites.
12: Reduce carbon dioxide emissions	0	0	0	This objective is unlikely to be affected by this policy
13: Promote adaptation and mitigation to climate change	0	0	0	This objective is unlikely to be affected by this policy
14: Promote efficient use of natural resources	-	-	-	Economic development is likely to increase the need for primary aggregates and other natural resources

Sustainability Appraisal Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	+	+	+	The policy requires that national and local policy requirements relating to the conservation of the historic environment must be followed.
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	The policy requires that national and local policy requirements to protect areas of landscape value must be followed.

Summary for Revised Policy SP13: Delivering Sustainable Economic Growth and Enterprise

- 10.12. This policy is likely to be **significantly positive** for **encouraging a strong and stable economy** throughout the county, as this is its primary aim. Additionally, as this policy requires that national and local policies are followed, it also positively affects the conservation and enhancement of landscapes and areas of heritage value. Water quality would improve due to this policy, as economic development may have a beneficial effect by taking land out of agricultural production. Additionally, it would help to protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.
- 10.13. The policy would likely have no effect on the sustainability objectives of reducing flood risk and improve flood management, conserving and enhancing Shropshire’s air quality and reduce the risk of air pollution (although this is somewhat dependent on the location of development), reducing carbon dioxide emissions or promotion of adaptation and mitigation to climate change.
- 10.14. Likewise, it is unlikely to change the situation in relation to encouragement for the use of sustainable means of transport or the reduction the need of people to travel by car, as well as supporting active and healthy communities. Sustainability objectives concerned with sufficient numbers of good quality housing and access to services for all society are unlikely to be affected by this policy.
- 10.15. As development outside the existing settlement boundaries is likely to lead to the release of greenfield land, it may have a negative effect on soil quality depending on location. Likewise economic development is likely to increase the need for primary aggregates and other natural resources, thus affecting the promotion of efficient use of natural resources.

Table 10.3: SA Assessment of New Policy Regarding Housing Provision for Older People and those with Disabilities and Special Needs

New Policy. Housing Provision for Older People and those with Disabilities and Special Needs

1. The housing needs of older people and those with disabilities and special needs will be met in a way that provides choice and importantly complements and facilitates the People’s Strategy for Shropshire. A fundamental principle of the People’s Strategy for Shropshire is supporting people to remain independent within their own homes and within their existing communities and support networks for as long as possible. The People’s Strategy for Shropshire will be facilitated and complemented through the provision of accessible and adaptable housing and appropriate forms of specialist housing in accordance with the requirements of this Policy.

Accessible and Adaptable Housing

2. All housing specifically designed for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations.
3. On sites of 5 or more dwellings, at least 5% of the dwellings will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and a further 70% of the dwellings will be built to the M4(2) (accessible and adaptable dwellings) or higher standard within Building Regulations, unless site-specific factors indicate that step-free access cannot be achieved.
All dwellings on sites of less than 5 dwellings and the remaining dwellings on sites of 5 or more dwellings that are not subject to the requirements of Paragraph 3 of this Policy are strongly encouraged to achieve the M4(2) (accessible and adaptable dwellings) standard within Building Regulations or higher.
5. All housing designed to M4(3) (wheelchair user dwellings) standard within Building Regulations must also be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.
6. All housing designed to M4(2) (accessible and adaptable dwellings) within Building Regulations is strongly encouraged to be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.

Specialist Housing

7. All specialist housing for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and must also be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.

Page 757

8. Reflecting the People Strategy for Shropshire, and the principle of supporting people to remain independent within their own homes and within their existing communities and support networks for as long as possible, new specialist housing provision for older people or those with disabilities and special needs will consist of:
 - a. The forms of specialist housing which support independent living, including age-restricted housing; retirement/sheltered housing; or extra care housing; or
 - b. Nursing homes providing high-level care for those with dementia and/or complex needs; or
 - c. A combination of the above.
9. All specialist housing provision will integrate into rather than be apart (gated-off) from existing and new communities, recognising the social and sustainability benefits of multi-generational and inclusive communities.
10. Ideally, specialist housing should be located where future occupiers can benefit from access to existing services and facilities. Where appropriate services and facilities are not already available, a range of supporting services and facilities will need be provided on sites where specialist housing is provided. Any services and facilities provided should be proportionate in scale to the type of specialist housing and ensure the scheme remains affordable.
11. When providing specialist housing, opportunities to provide appropriate key worker accommodation for any associated care staff should be proactively considered.
12. Specialist housing designed to meet the diverse needs of older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy and the requirements of other relevant Local Plan Policies (particularly Policies SP3-SP9, DP4, DP12 and Policies S1-S20) will be supported in appropriate locations within the development boundaries identified on the Policies Map.
13. Specialist housing schemes that consist of 100% local needs affordable specialist housing for older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy, the requirements of Policy DP5 and the requirements of other relevant Local Plan Policies will be positively considered.
14. Specialist housing that is consistent with the requirements of Paragraph 8 of this Policy and is agreed to be Use Class C2 development, will in addition to meeting the housing needs of older people also constitute a secondary employment use. These forms of specialist housing will therefore be considered an appropriate secondary employment use on mixed-use employment sites, where they are consistent with the requirements of Policy SP11; complement the existing and planned wider employment uses of the site; are served by appropriate infrastructure; and facilitate the delivery of the wider employment site, including through the provision of accesses, servicing and other infrastructure.
15. On site allocations for 250 or more dwellings and all development sites for 250 or more dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 20% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy.

16. On site allocations for 150-249 dwellings and all development sites for 150-249 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 15% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. At the lower end of this category, it is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers, as they generally have lower operational and staffing costs and requirements.
17. On site allocations for 50-149 dwellings and all development sites for 50-149 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 10% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. It is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers as they generally have lower operational and staffing costs and requirements.
18. Specialist housing provided in accordance with Paragraphs 15-17 of this Policy that is consistent with the definition of affordable housing can also represent all or part of the contribution to affordable housing required in accordance with Policy DP4 of the Local Plan. However:
 - a. The mix of specialist housing provided across Shropshire should include both open market and affordable housing.
 - b. Affordable housing provision should not be concentrated only in affordable specialist housing, as it is important that the other forms of affordable housing are delivered, including for key workers such as the care staff for specialist housing.
 - c. As such, if it is considered that completions and commitments of specialist housing is concentrated in affordable tenures or if it is considered that affordable housing completions and commitments are concentrated in forms of specialist housing, specialist housing provision on a site may be required to be open market and similarly the affordable housing provision may be required to be general housing.
19. On site allocations, provision of a level of housing which results in the relevant settlements housing guideline being exceeded and/or the site allocations approximate site provision figure within the relevant Settlement Policy (S1-S20) being exceeded will be positively considered where:
 - a. This over-provision is a direct result of the provision of a significant quantity of specialist housing in excess of that required within Paragraphs 15-17 of this Policy,
 - b. Over provision is specialist housing of a type documented within Paragraph 8 of this Policy,
 - c. The development proposed remains an appropriate form of development on the site having regard to its characteristics and the character of the surrounding area, and
 - d. The proposed development complies with the wider policies of the Local Plan, particularly Policies SP3, SP5, SP6, DP1, DP3, DP4, DP12, DP13, DP15-DP18, DP26, DP28, and DP29.

20. Proposals that result in the loss of existing specialist housing designed to meet the needs of older people or those with disabilities and special needs will be resisted unless:
- There is no longer an identified need for the existing form of specialist housing in the settlement and Shropshire as a whole; or
 - The needs will be met elsewhere within the settlement, preferably close to the existing specialist housing or in a preferential location for specialist housing; or
 - Redevelopment would provide an improved quality of a comparable category of specialist housing and associated facilities; or
 - Redevelopment would provide an alternative form of specialist housing which is identified within Paragraph 8 of this policy, demonstrably of greater need in Shropshire, and the provision of the specialist housing and associated facilities is of a high quality.

Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
Page 760 1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations. This means those policies which seek to conserve and enhance the natural environment should prevent harm occurring to wildlife.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This policy supports provision of specialist housing which can create local employment opportunities. It also recognises the need to consider provision of appropriate housing for key workers associated with these employment opportunities, thereby supporting provision of an appropriate labour force.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	The policy aims to positively contribute to this objective. It is likely that it will positively contribute to the provision of the housing needs of specific groups within our communities – particularly older people and those with disabilities and special needs.
4: Promote access to services for all sections of society	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.

Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.
6: Reduce the need of people to travel by car	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.
7: Support active and healthy communities	+	+	+	This policy supports provision of adaptable housing and specialist housing, which can support older people and those with disabilities and special needs to remain healthy and active for longer.
8: Protect and improve soil quality	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
10: Reduce flood risk and improve flood management	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.

Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
13: Promote adaptation and mitigation to climate change	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
14: Promote efficient use of natural resources	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations. This means those policies which seek to conserve and enhance the built environment should prevent harm occurring to heritage. The policy also supports the continued use of existing specialist housing for appropriate forms of specialist housing, thereby supporting the continued use of such buildings, including those which are heritage assets.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.

Summary for New Policy: Housing Provision for Older People and those with Disabilities and Special Needs

- 10.16. This policy is likely to be **significantly positive** for the **provision of a sufficient amount of good quality housing** which meets the needs of all sections of society, in the short, medium and longer term. This can be achieved through the provision of adaptable housing and specialist housing to meet the needs of older people and those with disabilities and special needs.
- 10.17. The policy also likely to positively contribute to the encouragement of a strong and sustainable economy in Shropshire, promotion of access to services and facilities, encouraging use of sustainable means of transport, reduction in the need to travel by car, and supporting active and healthy communities.
- 10.18. There is likely to be no change to the situation with respect to environmental objectives including enhancing the range of plants and animals and quality of habitats, adaption to climate change, efficient use of natural resources, reducing flood risk, protecting soil quality, reduction in carbon emissions, and conserving air and water quality. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations which address these various environmental issues.

Conclusion

10.19. As part of undertaking the SA process, it is important to consider ways of mitigating adverse effects and maximising beneficial effects. This is responsive to National Planning Practice Guidance (NPPG) which states that *“The sustainability appraisal should identify any likely significant adverse effects and measures envisaged to prevent, reduce and, as fully as possible, offset them”*⁶ (mitigation measures).

10.20. Consistent with the methodology utilised throughout the SA assessments undertaken to inform the draft Shropshire Local Plan, effects as those that are scored either:

++ Strongly positive, likely to benefit a large area of Shropshire or a large number of people or receptors, including outside the county. The effect is likely to be direct, permanent, irreversible and of major magnitude.

or

-- Strongly negative, likely to have a significant adverse impact on the whole, or on a large part of, Shropshire, on internationally or nationally protected assets or on areas outside the county. The effect is predicted to be direct, permanent, irreversible and of major magnitude.

10.21. Table 10.4 summarises the significant effects of the Policies requiring Main Modifications following conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document.

10.22. Table 10.4 also summarises the significant effects of the new draft Policy to address the housing needs of older people and those with disabilities and special needs.

Table 10.4: Significant Effects of Revised and New Local Plan Policies

Policy	Sustainability Objectives significantly positively affected	Sustainability Objectives significantly negatively affected
SP2. Strategic Approach	SO2 & SO3	No objectives significantly negatively affected.
SP13. Delivering Sustainable Economic Growth and Enterprise	SO2	No objectives significantly negatively affected.
New Policy. Meeting the Housing Needs of Older People and Those with Disabilities and Special Needs	SO3	No objectives significantly negatively affected.

10.23. Table 10.4 demonstrates that these draft policies are not likely to result in any significant negative effects, so no mitigation is proposed.

⁶ NPPG – Strategic Environmental Assessment and Sustainability Appraisal, Paragraph 016, Reference ID: 11-016-20190722

100m of a Local Nature Reserve	0		0	0	0	0	0	0	0	0	0	0	0	
3	Tree Preservation Order (single or group) within or on site boundary	Yes = minus score (-) No = zero score (0)	0	-	0	0	0	0	0	0	0	0	0	0
4	Site contains one or more (or part) of the following² (record all that apply):													
	Children's playground	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0
	Outdoor sports facility		0	0	0	0	0	0	0	0	0	0	0	0
	Amenity green space		0	0	0	0	0	0	0	0	0	0	0	0
Accessible natural green space (natural/semi-natural green space)	0		0	0	0	0	0	0	0	0	0	0	0	
5	Site boundary within 480m³ of one or more of the following (record all that apply):													
	Primary School	Yes = plus score (+) No = minus score (-)	-	-	+	+	+	+	+	+	+	-	+	
	GP surgery		-	-	-	+	-	-	-	-	-	-	-	+
	Library(permanent or mobile library stop)		+	-	-	+	-	-	-	-	-	-	-	+
	Leisure centre		-	-	-	-	-	-	-	-	-	-	-	+
	Children's playground		+	+	-	-	-	-	-	+	+	+	-	+
	Outdoor sports facility		+	+	+	-	+	+	+	+	+	-	-	+
	Amenity green space		+	+	+	-	+	+	-	+	+	+	+	+
Accessible natural green space (natural/semi-natural green space)	+		+	-	+	-	-	-	-	-	+	+	-	+
6	Site boundary within 480m ³ of a public transport node with a regular service offered during peak travel times ⁴ .	Yes = plus score (+) No = minus score (-)	+	+	-	+	-	-	-	-	+	+	+	+
7	Site wholly or partly on grade 1 or 2 or 3 agricultural land (best & most versatile)	Yes = minus score (-) No = zero score (0)	0	-	-	0	-	-	-	-	-	-	-	0
	8	All or part of the site within a Source Protection Zone (groundwater)	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0
9	All or part of the site is within Flood Zones 2 or 3	Yes = minus score (-) No = zero score (0)	-	0	0	0	0	0	0	0	0	0	0	
10	Site wholly/partly within an Air Quality Management Area	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	
11	Site is wholly/partly classified as brownfield or is wholly/partly within an area with a previous industrial or potentially contaminative use	Yes = plus score (+) No = zero score (0)	0	0	0	0	0	0	0	+	+	0	0	+
12	Site would displace an existing waste management operation	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0
13	Site wholly/partly within/contains any of the following (record all that apply):													
	a World Heritage Site or its buffer zone	Yes = double minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0
	a Scheduled Monument		0	--	0	0	0	0	0	0	0	0	0	0
	a Registered Battlefield		0	0	0	0	0	0	0	0	0	0	0	0
	a Registered Park or Garden		0	0	0	0	0	0	0	0	0	0	0	0
	a Conservation Area		--	--	0	--	0	0	0	0	0	0	0	0
a Listed Building	0		0	0	0	0	0	0	0	0	0	0	0	0
14	Site boundary within buffer zone⁵ of one or more (record all that apply):													
	300m of a World Heritage Site or its buffer zone	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0
	300m of a Scheduled Monument		-	-	0	-	0	0	0	0	0	0	0	0
	300m of a Registered Battlefield		0	0	0	0	0	0	0	0	0	0	0	0
	300m of a Registered Park or Garden		0	0	0	0	0	0	0	0	0	0	0	0
	300m of a Conservation Area		-	-	0	-	0	0	-	0	0	0	0	0
300m of a Listed Building	-		-	0	-	0	0	-	-	0	-	-	0	-
15	Site is wholly/partly classified as very high landscape sensitivity for residential	Double minus score (--)												
	Site is wholly/partly classified as high landscape sensitivity for residential	Minus score (-)												
	Site is wholly/partly classified as medium low, medium, or medium high landscape sensitivity for residential	Zero score (0)		0	0		0	0	0	0	0	0		
	Site is wholly classified as low landscape sensitivity for residential or site is inside the development boundary	Plus score (+)	+			+							+	+
Please note: where a site falls into more than one category, highest sensitivity category is recorded

5	Site boundary within 480m³ of one or more of the following (record all that apply):														
	Primary School	Yes = plus score (+) No = minus score (-)	-	+	-	+	+	-	-	-	-	-	-	+	
	GP surgery		-	+	-	-	-	-	-	-	-	-	-	-	-
	Leisure centre		-	+	-	-	-	-	-	-	-	-	-	-	-
	Outdoor sports facility		+	+	-	+	+	-	-	+	+	+	+	+	+
	Amenity green space		+	+	+	+	+	-	+	+	+	+	+	+	+
Accessible natural green space (natural/semi-natural green space)	-		+	+	+	+	+	+	+	+	+	+	+	-	
6	Site boundary within 480m ³ of a public transport node with a regular service offered during peak travel times ⁴ :	Yes = plus score (+) No = minus score (-)	+	+	-	+	+	+	-	+	+	+	+	-	
Page 805	Site wholly or partly on grade 1 or 2 or 3 agricultural land (best & most versatile)	Yes = minus score (-) No = zero score (0)	0	-	-	-	0	-	-	0	-	0	-	-	
	All or part of the site within a Source Protection Zone (groundwater)	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0	
	All or part of the site is within Flood Zones 2 or 3	Yes = minus score (-) No = zero score (0)	0	-	0	0	0	0	0	0	0	-	0	0	
105	Site wholly/partly within an Air Quality Management Area	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0	
11	Site is wholly/partly classified as brownfield or is wholly/partly within an area with a previous industrial or potentially contaminative use	Yes = plus score (+) No = zero score (0)	+	+	0	0	0	0	+	0	+	0	0	0	
12	Site would displace an existing waste management operation	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	-	0	0	0	
13	Site wholly/partly within/contains any of the following (record all that apply):														
	a World Heritage Site or its buffer zone	Yes = double minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0	
	a Scheduled Monument		0	0	0	0	0	0	0	0	0	0	0	--	0
	a Registered Battlefield		0	0	0	0	0	0	0	0	0	0	0	0	0
	a Registered Park or Garden		0	0	0	0	0	0	0	0	0	0	0	0	0
	a Conservation Area		0	0	0	0	0	0	0	0	0	0	--	--	0
a Listed Building	0		0	0	0	0	0	0	0	0	0	0	0	0	
14	Site boundary within buffer zone⁵ of one or more (record all that apply):														
	300m of a World Heritage Site or its buffer zone	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0	0	0	0	
	300m of a Scheduled Monument		0	0	0	0	0	0	0	0	0	0	-	-	0
	300m of a Registered Battlefield		0	0	0	0	0	0	0	0	0	0	0	0	0
	300m of a Registered Park or Garden		0	0	0	0	0	0	0	0	0	0	0	0	0
	300m of a Conservation Area		0	0	0	-	-	0	0	-	0	-	-	-	0
300m of a Listed Building	-		0	-	-	-	0	-	-	0	-	-	-	0	
15	Site is wholly/partly classified as very high landscape sensitivity for employment	Double minus score (-)		--		--	--				--				
	Site is wholly/partly classified as high landscape sensitivity for employment	Minus score (-)											-		
	Site is wholly/partly classified as medium low, medium, or medium high landscape sensitivity for employment	Zero score (0)			0				0					0	
	Site is wholly classified as low landscape sensitivity for employment or is site inside the development boundary	Plus score (+)	+						+		+		+		
Please note: where a site falls into more than one category, highest sensitivity category is recorded

	All or part of the site within a Source Protection Zone (groundwater)	Yes = minus score (-) No = zero score (0)	0	-	0	0	-	-	-	-	-
	All or part of the site is within Flood Zones 2 or 3	Yes = minus score (-) No = zero score (0)	0	0	0	-	0	-	-	0	0
10	Site wholly/partly within an Air Quality Management Area	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0
11	Site is wholly/partly classified as brownfield or is wholly/partly within an area with a previous industrial or potentially contaminative use	Yes = plus score (+) No = zero score (0)	0	+	0	0	+	0	0	+	0
12	Site would displace an existing waste management operation	Yes = minus score (-) No = zero score (0)	0	0	0	-	0	0	0	0	0
13	Site wholly/partly within/contains any of the following (record all that apply):										
	a World Heritage Site or its buffer zone	Yes = double minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0
	a Scheduled Monument		--	0	0	0	0	0	0	0	0
	a Registered Battlefield		0	0	0	0	0	0	0	0	0
	a Registered Park or Garden		0	0	0	0	0	0	0	0	0
	a Conservation Area		0	0	--	--	0	0	0	0	0
a Listed Building	0		0	0	0	0	0	0	0	0	
14	Site boundary within buffer zone⁵ of one or more (record all that apply):										
	300m of a World Heritage Site or its buffer zone	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0
	300m of a Scheduled Monument		-	0	0	0	0	-	0	0	0
	300m of a Registered Battlefield		0	0	0	0	0	0	0	0	0
	300m of a Registered Park or Garden		0	0	0	0	0	0	0	0	0
	300m of a Conservation Area		0	0	-	0	0	0	-	0	0
300m of a Listed Building	-		0	-	0	-	-	-	-	0	
15	Site is wholly/partly classified as very high landscape sensitivity for employment	Double minus score (-)	--		--	--	not assessed				
	Site is wholly/partly classified as high landscape sensitivity for employment	Minus score (-)		-				-			
	Site is wholly/partly classified as medium low, medium, or medium high landscape sensitivity for employment	Zero score (0)							0	0	0
	Site is wholly classified as low landscape sensitivity for employment or is site inside the development boundary	Plus score (+)									
Please note: where a site falls into more than one category, highest sensitivity category is recorded											
Overall Score			-9	-7	-13	-14	-9	-3	-5	-4	-9
Overall Settlement Sustainability Conclusion			Fair	Fair	Fair	Poor	Fair	Good	Good	Good	Fair
Overall Black Country Contribution Sustainability Conclusion			Fair	Fair	Poor	Poor	Fair	Fair	Fair	Fair	Fair

Bridgnorth Settlement Range is 5 to -14 Good is 5 to -1 Fair is -2 to -8 Poor is -9 to -14
 Shifnal Settlement Range is -3 to -13 Good is -3 to -6 Fair is -7 to -10 Poor is -11 to -13
 Shrewsbury Settlement Range is 6 to -12 Good is 6 to 0 Fair is -1 to -6 Poor is -7 to -12
 Strategic Settlements / Strategic Sites Range 0 to -19 Good is 0 to -6 Fair is -7 to -13 Poor is -14 to -19
 Settlements and Strategic Settlements/Sites within scope for the Black Country Contribution Range is 6 to -19
 Good is 6 to -2 Fair is -3 to -11 Poor is -12 to -19

Local Nature Reserve		0	0	0	0	0	0	0	--	0	
2	Site boundary within buffer zone¹ of one or more (record all that apply):										
	1km of a Special Area of Conservation		0	0	0	0	0	0	0	0	0
	1km of a Ramsar Site		0	0	0	0	0	0	0	0	-
	500m of a National Nature Reserve		0	0	0	0	0	0	0	0	0
	500m of a Site of Special Scientific Interest		0	0	0	0	0	0	0	0	-
	500m of Ancient woodland		-	0	0	0	-	0	0	0	0
	250m of a Wildlife Site		-	0	0	0	0	0	-	0	-
100m of a Local Nature Reserve		0	0	0	0	0	0	0	-	0	
3	Tree Preservation Order (single or group) within or on site boundary	Yes = minus score (-) No = zero score (0)	-	-	0	0	0	-	0	-	-
4	Site contains one or more (or part) of the following² (record all that apply):										
	Children's playground		0	0	0	0	0	0	0	0	0
	Outdoor sports facility		0	0	0	0	0	0	0	-	0
	Amenity green space		0	0	0	0	0	0	0	-	0
Accessible natural green space (natural/semi-natural green space)		0	0	0	0	0	0	0	-	0	
5	Site boundary within 480m³ of one or more of the following (record all that apply):										
	Primary School		-	+	+	-	-	+	-	-	-
	GP surgery		-	+	-	-	-	+	-	+	-
	Leisure centre		-	-	-	-	-	-	-	+	-
	Outdoor sports facility		-	+	+	-	-	+	+	+	-
	Amenity green space		-	+	-	-	-	+	+	+	+
Accessible natural green space (natural/semi-natural green space)		-	-	-	-	-	+	+	+	+	
6	Site boundary within 480m ³ of a public transport node with a regular service offered during peak travel times ⁴ :	Yes = plus score (+) No = minus score (-)	-	+	-	-	-	+	-	-	+
Page 833 9	Site wholly or partly on grade 1 or 2 or 3 agricultural land (best & most versatile)	Yes = minus score (-) No = zero score (0)	-	-	-	-	-	-	-	-	-
	All or part of the site within a Source Protection Zone (groundwater)	Yes = minus score (-) No = zero score (0)	0	-	-	-	0	-	0	0	0
	All or part of the site is within Flood Zones 2 or 3	Yes = minus score (-) No = zero score (0)	0	-	0	0	-	-	-	-	0
10	Site wholly/partly within an Air Quality Management Area	Yes = minus score (-) No = zero score (0)	0	0	0	0	0	0	0	0	0
11	Site is wholly/partly classified as brownfield or is wholly/partly within an area with a previous industrial or potentially contaminative use	Yes = plus score (+) No = zero score (0)	0	+	0	0	0	0	0	+	0
12	Site would displace an existing waste management operation	Yes = minus score (-) No = zero score (0)	-	0	0	0	0	0	0	0	0
13	Site wholly/partly within/contains any of the following (record all that apply):										
	a World Heritage Site or its buffer zone		0	0	0	0	0	0	0	0	0
	a Scheduled Monument		0	0	0	0	0	0	0	0	0
	a Registered Battlefield		0	0	0	0	0	0	0	0	0
	a Registered Park or Garden		0	0	0	0	0	0	0	0	0
	a Conservation Area		0	0	0	0	0	0	0	0	0
a Listed Building		0	0	0	0	0	0	--	--	0	0
14	Site boundary within buffer zone⁵ of one or more (record all that apply):										
	300m of a World Heritage Site or its buffer zone		0	0	0	0	0	0	0	0	0
	300m of a Scheduled Monument		0	0	0	0	0	0	0	0	0
	300m of a Registered Battlefield		0	0	0	0	0	0	0	0	0
	300m of a Registered Park or Garden		0	0	0	0	0	0	0	0	0
	300m of a Conservation Area		0	-	0	0	0	0	0	-	0
300m of a Listed Building		0	-	0	0	-	-	-	-	0	
15	Site is wholly/partly classified as very high landscape sensitivity for employment	Double minus score (--)									
	Site is wholly/partly classified as high landscape sensitivity for employment	Minus score (-)									
	Site is wholly/partly classified as medium low, medium, or medium high landscape sensitivity for employment	Zero score (0)	0	0	0	0	0	0	0	0	0
