Shropshire Local Plan

Additional Sustainability Appraisal Report: Appendix 3

Updated Stage 3 Site Assessment:
Albrighton Key Centre

Site Assessment - Stage 3 Updated	
Site Reference:	ALB002
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	1%
<i>Percentage of site in Flood Zone 2:</i>	2%
<i>Percentage of site in Flood Zone 1:</i>	98%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	3%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	6%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject to a check on the capacity of Rectory Road and consideration of a shared highway network with ALB015 & P39 which would allow westbound traffic to access the Newport Rd via ALB015. This group of sites could accommodate 957 homes.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Buffering the southern and eastern boundaries and the pond will reduce the developable area available.
<i>Ecology Comments Other Constraints:</i>	Donington & Albrighton LNR lies adjacent to the southern boundary. The potential impacts on the LNR will need to be assessed and it will need to be adequately buffered. The southern and eastern boundaries form an Environmental. Network corridor. There is a pond on the Shropshire GCNs be present, a min. 50m buffer will be required. Requires EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles (known to be present), white-clawed crayfish, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effects on settings Grade II* St. Cuthbert's Church (NHLE ref. 1273838), associated Scheduled Monument and Grade II* Listed churchyard cross (NHLE refs. 1015301 & 1239196), and Albrighton Conservation Area. Some metal detectorist finds and large size of site suggests it has some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges around site and copses of woodland within site. Strip of woodland continuous with Donnington Pool along southern boundary
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure sufficient development stand-off from Donnington Pool and woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate central wooded copse in open space and plant to connect to / expand adjoining wooded areas.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Railway line to the north causing noise. Possible noise from RAF Cosford which may need assessment. Old farm buildings on site and historic map shows features which may present contamination of the land
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail. Noise assessment and suitable glazing and ventilation if issues with aircraft noise found. Remediation likely to be available for any contaminated land that may be found.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of the built form of the settlement.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.</p> <p>This site contains significant trees and hedgerows. It is also located within the gap between Albrighton and Cosford. Furthermore the noise generated at Cosford Airfield may require mitigation.</p> <p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>Whilst the site is relatively well related to the built form of the settlement it adjoins and is separated from the bulk of the built form of the settlement by a local nature reserve (which also has local amenity and landscape value). The site also adjoins a conservation area and other heritage assets.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A suitable buffer would be required to southern and eastern boundaries to mitigate and manage impacts on adjoining Local nature reserve.</p> <p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Opportunity for high quality tree planting and creation of links into/between existing wooded areas.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is also separated from the built form of the settlement by a Local Nature Reserve, in proximity to numerous heritage assets and within the gap between Cosford and Albrighton.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes
(where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	ALB003
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	N/A
<i>Landscape Considerations: (from the LVSS)</i>	Not assessed
<i>Visual Impact Considerations: (from the LVSS)</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Assuming access will be permitted via private road to Railway Station onto Station Road.
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assuming small number of dwellings
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assuming small number of dwellings due to limitations of the Railway Station access road junction onto Station Road.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The railway line forms an Env. Network corridor. Requires EclA and surveys for GCNs (ponds within 500m), bats, badgers, reptiles and nesting birds. Hedgerows will need to be buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site immediately adjacent to and likely to have a negative affect upon the setting of II Listed station buildings (NHLE refs. 1221627)
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site bordered by hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey & Tree Protection Plan
<i>Tree Comments Opportunities:</i>	no trees on site - enhance tree cover within site, to deliver net gain for biodiversity.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise assessment required for rail noise and commercial noise and odour from existing restaurant. The site is possibly viable as long as mitigation on the rail facing façade such as s gables or walls which are uninterrupted by windows or internal layout of dwelling so non habitable rooms are facing away from rail track.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>The site is not located within the Green Belt. It is located within the existing built form of Albrighton, with clearly defined site boundaries.</p> <p>The capacity of the site is likely to be limited to a small number of houses given limitations of the Railway Station access road junction onto Station Road.</p> <p>Site immediately adjacent to and likely to have a negative affect upon the setting of II Listed station buildings (NHLE refs. 1221627).</p> <p>The site is adjacent to the railway line which will have noise implications, there is also an environmental network alongside the railway line.</p> <p>Hedgerows along northern and southern boundaries.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Capacity of local highway network (access onto Station Road) would need to be reflected when determining scale of any development.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Retain and enhanced hedgerows.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Potential for windfall development</p>
<p>Reasoning</p>	<p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is already located within the development boundary of Albrighton. It is relatively small and its capacity is constrained by the highway access.</p> <p>Any potential for windfall development is subject to such factors as the assessment and ability to appropriately manage any impact on the impact on the adjacent grade II Listed station buildings and their settings, effective mitigation of noise from the railway line, retention of hedgerows and enhancement of the environmental network.</p> <p>In light of the above, the site would also not be appropriate to contribute to assist in meeting the unmet need of the Black Country.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation

Site Assessment - Stage 3 Updated	
Site Reference:	ALB007
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	1%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	2%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The northern element of the site is located within a parcel which performs weakly against purpose 2, purpose 3 and purpose 4. The southern element of the site is located within a parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The release of the parcel containing the northern element of the site would have a low-moderate level of harm on the Green Belt. The release of the parcel containing the southern element of the site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p>
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. An improved Bowling Green Lane (eastern end) would need to be incorporated into the highway layout of the overall site. Links with ALB018 would need to be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. This site is likely to significantly increase traffic on the western end of Bowling Green Lane and improvements may require third party land. The impact on the eastern end of Bowling Green Lane and junction with Newport Rd (linked with ALB018) is likely to be unacceptable but subject to a detailed assessment. This could be reduced if a strategic road connection can be made between Worthington Dr Loak Road, through P38.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed. The pond/priority habitats /watercourse/hedgerows should be appropriately buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	<p>The site may contain priority habitats - botanical survey required.</p> <p>There are ponds on/adjacent to the site. If GCNs are present then a min. 50m will be required.</p> <p>The northern boundary forms an Environmental. Network corridor, due to the presence of a watercourse. A PROW crosses the site.</p> <p>Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds</p>

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147). No known archaeological interest but large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges around site boundaries and occasional trees within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate internal trees in open space and plant to connect to / expand adjoining strip of woodland to the north.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise from RAF Cosford which may need assessment. Sewage works to the north east of the site creating odour. Potential for land contamination with historic features noted on the site and unknown filled ground
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and suitable glazing and ventilation if issues with aircraft noise found. Significant stand off distance from sewage treatment works recommended. Remediation likely to be available for any contaminated land that may be found.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the west of and only partly adjoining the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The northern element of the site is located within a parcel which performs weakly against purpose 2, purpose 3 and purpose 4. The southern element of the site is located within a parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The release of the parcel containing the northern element of the site would have a low-moderate level of harm on the Green Belt. The release of the parcel containing the southern element of the site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p> <p>There is concern about the ability to provide an appropriate access to the site and the capacity of the wider road network. Resolving these issues may involve third party land.</p> <p>The site is located within the gap between Albrighton and Cosford Airfield.</p> <p>The site contains identified areas of open space and mature trees/hedgerows. It may also contain priority habitats, which would require assessment /management. Noise generated at Cosford Airfield may require mitigation.</p> <p>The site is adjacent to a sewage treatment works and in proximity of ecological and heritage assets which will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Local highway network (in particular Bowling Green Lane) and access are not satisfactory and would require improvement to accommodate development requiring land outside the promoted site to achieve this.</p> <p>Any priority habitats should be retained.</p> <p>Identified areas of open space should be retained and enhanced.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could be restored/improved to provide a priority wildlife habitat and enhance environmental network.</p> <p>Opportunity for high quality tree planting and creation of links into/between existing wooded areas.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The local highway network and access are constrained.</p> <p>Part of the site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes
(where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	ALB008
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	3%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to the critical role the parcel plays in preserving the setting of the historical settlement area within Albrighton. Whilst a sub-parcel was identified with a reduced harm, this did not include the land promoted within this site.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Capacity of Rectory
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. The eastern boundary borders an Environmental. Network. A PROW crosses the site. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site partially within Shifnal Conservation Area. Includes non designated historic farmstead of Mere House (HER PRN 27973) . No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance and setting of CA; Level 2 historic building assessment of historic farmstead if demo proposed; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	north-east of site in conservation area. TPO trees on northern boundary.
<i>Tree Comments Other Constraints:</i>	trees, groups of trees and hedges within and around site and strip of woodland to part of eastern boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure reasonable development stand-off form woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Some noise from the school but generally not expected to be an issue unless there is plant and equipment that may make noise and impact on proposed dwellings.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and appropriate stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to any noise source.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to the critical role the parcel plays in preserving the setting of the historical settlement area within Albrighton. Whilst a sub-parcel was identified with a reduced harm, this did not include the land promoted within this site.</p> <p>The site is well related to the built form of Albrighton, close to services and facilities including the primary school.</p> <p>Part of the site is within Albrighton Conservation Area this is therefore a significant consideration, particularly with regard to design quality.</p> <p>The site also has some significant trees and may contain priority habitats. These factors will also require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);

<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of Albrighton, adjacent to the built form of Cosford. The site is separated from Albrighton by other land and the railway line.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2, purpose 3; and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a low level of harm on the Green Belt.</p> <p>Much of the site has already been developed and forms part of the settlement of Cosford. The remainder of the site lies in the gap between Cosford and Albrighton.</p> <p>The site is not well related to the built form of Albrighton and it may therefore be more appropriate to consider in the context of Cosford.</p> <p>As the site is sandwiched between the A41 and the railway line, the impact of noise on residential amenity would be a significant consideration. The site contains wooded belts along its boundaries and may also contain priority habitats, which would require due assessment/management.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could be restored/improved to provide a priority wildlife habitat and enhance environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites location sandwiched between the railway line and A41 and the associated noise is a significant consideration for residential development.</p> <p>The site is divorced from the built form of Albrighton (this separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm). It may therefore be more appropriate to consider in a Cosford context.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes
(where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	ALB014
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	3%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	7%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	40%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	24%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that whilst the wider parcel within which this site is located would have a high level of harm on the Green Belt, the site has been identified within a sub-parcel which would have a moderate level of harm on the Green Belt, as it is well contained and considered to have characteristics of the settlement edge.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed.
<i>Ecology Comments Other Constraints:</i>	Some of the boundaries form Environmental. Network corridors. These should be retained and buffered. The site may contain priority habitats - botanical survey required. There is a pond adjacent to the north-western boundary. Should GCNs be present, a min. 50m buffer will be required. Requires botanical survey, EclA and EclA preforms GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, the site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site contains earthwork remains of ridge and furrow (HER PRN 33238). Large size of site suggests it may hold other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO trees to eastern boundary
<i>Tree Comments Other Constraints:</i>	trees and hedgerows within and around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential road noise from roads to the north, west and east.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the south and adjoining the built form of Albrighton. The site is well related to the built form of Albrighton adjoining the primary school and close to services and facilities.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that whilst the wider parcel within which this site is located would have a high level of harm on the Green Belt, the site has been identified within a sub-parcel which would have a moderate level of harm on the Green Belt, as it is well contained and considered to have characteristics of the settlement edge.</p> <p>The site has some significant trees on and in proximity; archaeological interest; parts are within an environmental network; and there may be priority habitats. These factors will require due consideration.</p> <p>A small portion of the site is located within the 30 year and 100 year surface flood risk zones, whilst 40% of the site is located within the 1,000 year surface flood zone.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>A small portion of the site is in areas at higher risk of surface water flooding, this will need to be assessed and managed. Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could be restored/improved to provide a priority wildlife habitat and enhance environmental network. Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Remove from the Green Belt and safeguard for future development.</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. However, the site is located within a sub-parcel which has been identified as having a moderate level of harm on the Green Belt, as such it is considered an appropriate location to remove from the Green Belt and safeguard for future development beyond the current plan period. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Assumes primary access onto Newport Road where the existing speed limit will need to be extended with appropriate traffic calming.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
<i>Ecology Comments Significant Constraints:</i>	Buffering the southern boundary may reduce the developable area available.
<i>Ecology Comments Other Constraints:</i>	Donington & Albrighton LNR lies adjacent to the southern boundary. The potential impacts on the LNR will need to be assessed and it will need to be adequately buffered. Requires EcIA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles (known to be present), white-clawed crayfish, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effects on settings Grade II* St. Cuthbert's Church (NHLE ref. 1273838), associated Scheduled Monument and Grade II* Listed churchyard cross (NHLE refs. 1015301 & 1239196), and Albrighton Conservation Area. No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows within and around site. Block of mature trees adjacent eastern boundary and woodland continuous with Donington Pool to south.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Fine trees in northern section could be focal points in open space within any development. Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise from road to the west of the site. Rail noise to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road and rail.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of and only partly adjoining the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.</p> <p>This site contains significant trees and hedgerows. It is also located within the gap between Albrighton and Cosford (noise generated at Cosford, adjacent roads and railway lines may require mitigation).</p> <p>Whilst the site is relatively well related to the built form of the settlement it is separated from the bulk of the built form of the settlement by a local nature reserve (which also has local amenity and landscape value). The site also adjoins a conservation area and other heritage assets.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Buffer would be required to southern and eastern boundaries to mitigate and manage impacts on adjoining LNR.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could enhance environmental network.</p> <p>Existing trees on the northern portion of the site could form a focus for any open space provision. Trees could also provide buffers to the south and east of the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is also separated from the built form of the settlement by a Local Nature Reserve, in proximity to numerous heritage assets and within the gap between Cosford and Albrighton.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);

<i>Tree Comments Other Constraints:</i>	hedgerow and trees to northern boundary. Group of trees within site. Mature trees at southern access with Kingswood Road
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site is located to the east of Albrighton within land safeguarded for future development.</p> <p>The site is adjacent to the Albrighton development boundary, directly adjoining an allocated housing site, and would be well related to the future built up extent of the settlement.</p> <p>The site forms part of an environmental network and there are significant trees and hedgerows present, these will need due consideration.</p> <p>The site may be subject to other ecological and heritage interests which would need to be evaluated as part of any development scheme.</p> <p>Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed. Impact on the A41 / Beamish Lane junction also needs to be assessed.</p> <p>Existing road network and access will require improvement to accommodate development.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Traffic calming and extension of 30mph speed limit necessary.</p> <p>Need to consider capacity of junction of Beamish Lane with A41.</p> <p>Buffering of the railway line.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could enhance environmental network.</p> <p>The site should integrate into the existing built form of the settlement and the developments occurring on adjacent sites.</p> <p>Strategic links through the site and into the adjacent development site required - vehicular/cyclist/pedestrian and green infrastructure/environmental networks.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>Yes</p>
Recommendation	<p>Allocate for development alongside ALB021.</p>
Reasoning	<p>The site is well related to the settlement within an area of safeguarded land identified to meet Albrighton's future development requirements and is a natural direction for expansion.</p> <p>Given its position geographically it is considered an appropriate site for housing development to meet the needs of the local community and its surrounding rural hinterland.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	<p>ALB017 & ALB021 Total: 180 dwellings</p>

**If proposed for Allocation
Design Requirements:**

Comprehensive masterplan required for ALB017 and ALB021. Design and layout will ensure vehicular, cyclist and pedestrian access from ALB017 into ALB021. Contributions to jointly required infrastructure will be proportional, based on the level of development forecast.

An appropriately designed roundabout will be provided on Kingswood Road at the point of access into the site.

The 30mph zone on Kingswood Road will be extended to reflect the extent of the site and the impact on Beamish Lane/A41 junction assessed and mitigated. This will likely involve closure of this junction.

To enhance access to services and facilities in the town and achieve integrated communities, the development will include a northern vehicular, cyclist and pedestrian connection and any other appropriate pedestrian and cycle links into the saved SAMDev Allocation ALB002.

Green infrastructure will be provided through the site and link into the wider area. This provision will include an appropriate green buffer of the railway line and the associated green infrastructure corridor.

The pond on ALB017 will be appropriately assessed and managed (opportunity to integrate into open space provision). Where possible trees and hedgerows on the site should be retained and enhanced, supported by positive tree planting, particularly on areas of open space.

The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.

***Green Belt Purposes
(where applicable):**

N/A

Site Assessment - Stage 3 Updated	
Site Reference:	ALB018
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. An improved Green Lane would need to be incorporated into the highway layout of the overall site. Along with major junctions on the A464 and Elm Road. Links with ALB007 would need to be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Cross Road / Elm Road junction would need to be assessed for improvements. The impact on the eastern end of Bowling Green Lane and junction with Newport Rd (linked with ALB007) is likely to be unacceptable but subject to a detailed assessment. This could be reduced if a strategic road connection can be made between Worthington Dr Loak Road, through P38.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed. The pond/priority habitats/hedgerows should be appropriately buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. There are ponds on/adjacent to the site. If GCNs are present then a min. 50m will be required. A PROW crosses the site. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed The Old Windmill (NHLE ref. 1053693), The Elms (NHLE ref. 1053692) and Barn 60m SE of The Elms (NHLE ref. 1367612). Tithe Map indicates that a brickfield present in one part of site, and together with its large size, suggests that it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around site boundaries and along internal lanes. Copse of trees in northern corner of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Design open space to integrate with existing good trees.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the edge of the site to the north and east.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the south-west of the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p> <p>This is a very large site which comprises several land parcels. Whilst the site adjoins the development boundary to the east, due to its size it does project into the countryside to the south-west of the settlement.</p> <p>There is concern about the ability to provide an appropriate access to the site and the capacity of the wider road network. Resolving these issues may involve third party land.</p> <p>The site contains some significant trees and hedgerows and is in proximity to listed buildings. It may also contain priority habitats and be of archaeological interest. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Local highway network and access are not satisfactory and would require improvement to accommodate development requiring land outside the promoted site to achieve this. This would include improvements to Green Lane and junctions with A464, Elm Road and potentially a new road connection through P38.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The local highway network and access are constrained.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>The site is located to the east of Albrighton within land safeguarded for future development. The site is separated from the Albrighton development boundary by another promoted site (ALB017), which forms the remainder of the safeguarded land. The site forms part of an environmental network and there are significant trees and hedgerows present, these will need due consideration.</p> <p>The site may be subject to other ecological interests which would need to be evaluated as part of any development scheme. Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed. Existing road network and access will require improvement to accommodate development. Impact on the A41 / Beamish Lane junction also needs to be assessed.</p> <p>Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Traffic calming and extension of 30mph speed limit necessary.</p> <p>Need to consider capacity of junction of Beamish Lane with A41.</p> <p>The existing road network and access off Beamish Lane is not satisfactory and will require improvement to accommodate development, potentially by seeking access via ALB017 to Kingswood Road.</p> <p>Buffering of the railway line.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Site could enhance environmental network.</p> <p>Opportunity for high quality tree planting.</p> <p>The site should integrate into the existing built form of the settlement and the developments occurring on adjacent sites. Strategic links through the site and into the adjacent development site required - vehicular/cyclist/pedestrian and green infrastructure/environmental networks.</p> <p>This site should also be considered in the context of ALB017 - to ensure a rational approach to development and the provision of infrastructure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Allocate for development alongside ALB017.</p>
<p>Reasoning</p>	<p>The site is well related to the settlement within an area of safeguarded land identified to meet Albrighton's future development requirements and is a natural direction for expansion.</p> <p>Whilst the site performs poorly within Stage 2a Settlement Sustainability Appraisal of the Site Assessment process, this is primarily due to access to services and facilities. Enhancing access from the site to the services and facilities available within the town can be achieved through development of the site (in combination with ALB017). Furthermore additional green infrastructure provision can be achieved through development of the site (in combination with ALB017).</p> <p>Given its position geographically it is considered an appropriate site for housing development to meet the needs of the local community and its surrounding rural hinterland.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>ALB017 & ALB021 Total: 180 dwellings</p>

**If proposed for Allocation
Design Requirements:**

Comprehensive masterplan required for ALB017 and ALB021. Design and layout will ensure vehicular, cyclist and pedestrian access from ALB017 into ALB021. Contributions to jointly required infrastructure will be proportional, based on the level of development forecast.

An appropriately designed roundabout will be provided on Kingswood Road at the point of access into the site.

The 30mph zone on Kingswood Road will be extended to reflect the extent of the site and the impact on Beamish Lane/A41 junction assessed and mitigated. This will likely involve closure of this junction.

To enhance access to services and facilities in the town and achieve integrated communities, the development will include a northern vehicular, cyclist and pedestrian connection and any other appropriate pedestrian and cycle links into the saved SAMDev Allocation ALB002.

Green infrastructure will be provided through the site and link into the wider area. This provision will include an appropriate green buffer of the railway line and the associated green infrastructure corridor.

The pond on ALB017 will be appropriately assessed and managed (opportunity to integrate into open space provision). Where possible trees and hedgerows on the site should be retained and enhanced, supported by positive tree planting, particularly on areas of open space.

The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.</p> <p>The site is separated from the built form of the settlement.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Traffic calming and extension of 30mph speed limit necessary.</p> <p>Need to consider capacity of junction of Beamish Lane with A41.</p> <p>The existing road network and access off Beamish Lane is not satisfactory and will require improvement to accommodate development, potentially by seeking access via ALB017 to Kingswood Road.</p> <p>Buffering of the railway line.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Site could enhance environmental network.</p> <p>Opportunity for high quality tree planting.</p> <p>The site should integrate into the existing built form of the settlement and the developments occurring on adjacent sites.</p> <p>Strategic links through the site and into the adjacent development site required - vehicular/cyclist/pedestrian and green infrastructure/environmental networks.</p> <p>This site should also be considered in the context of ALB017 - to ensure a rational approach to development and the provision of infrastructure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is separated from the built form of the settlement by land which is also located within the Green Belt, release of which would also have high harm.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The site is not located within the Green Belt. The site consists of a large field with well defined field boundaries. There are residential dwellings to west and south, land to the east is currently allocated for residential development and to the north is the school and associated playing fields.</p> <p>The site is currently only accessible via a field gate access onto Shaw Lane. There is insufficient width to achieve an estate road vehicle access in this location and it is also unlikely to be able to deliver a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site (to the east of this site), any such access would need to have due regard of trees along site boundaries.</p> <p>The site is bounded by substantial belts of TPO'd trees to east, west and south.</p> <p>The existing site access falls within the Albrighton Conservation Area.</p> <p>Possible effect of setting of Grade II Meeson Hall and the site may also have archaeological potential.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>The site is currently only accessible via a field gate access onto Shaw Lane. There is insufficient width to achieve an estate road vehicle access in this location and it is also unlikely to be able to deliver a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site to the east of this site), any such access would need to have due regard of trees along site boundaries.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Potential for windfall development</p>
Reasoning	<p>The site is located within the development boundary.</p> <p>Any potential for windfall development is subject to identification and provision of an appropriate vehicular, cycle and pedestrian access. The current potential point of access is significantly constrained due to the width of available land, which means an appropriate access is unlikely to be achievable, and the limited ability to achieve a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site (to the east of this site), although any such access would be subject to highway approval and would need to have due regard of trees along site boundaries.</p> <p>Whilst the site performs poorly within the Sustainability Appraisal this is primarily due to access to services and facilities. Development could provide enhanced access to services and facilities and on-site green infrastructure.</p> <p>In addition to the above factors, any potential for windfall development is also subject to factors such as appropriate enhancement of site boundaries, due consideration of heritage assets in the area and the protection and integration of TPOs along site boundaries.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>

<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the sub-parcel containing this site would have a low-moderate level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	12
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas of the site should not be developed, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	The southern boundary forms an Environmental. Network corridor. This must be buffered. There is a pond on the site - if this contains GCNs then a min. 50m buffer will be required. The site may contain priority habitats - botanical survey required. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature hedgerows within and around site and trees to southern boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	plant large, long-lived trees within site open space as part of a quality landscape scheme.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A41 and railway.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail and road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the east of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the sub-parcel containing this site would have a low-moderate level of harm on the Green Belt.</p> <p>The site is bounded by the Albrighton By-Pass and railway line (noise associated with these features will require due consideration). Whilst the site is adjacent to the built form of the settlement/land safeguarded for future development, it is some distance from the majority of the services and facilities in the settlement. The site is located within a parcel with medium landscape and visual impact for housing and medium-high impact for employment.</p> <p>The site also contains some significant trees/hedgerows and may contain priority habitats. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Remove from the Green Belt and safeguard for future development.</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>Due to the sites location, bounded by the Albrighton By-Pass and Railway Line and separated from the services and facilities available within the settlement by these physical features, it is likely that future use for employment purposes will be considered most appropriate. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>These uses would need to complement existing uses on the site and in the surrounding area.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Tree Comments Other Constraints:</i>	mature trees to north and west boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Smallish site needs careful attention to shading and other constraints posed by trees.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A41 and railway. Farm to the east creating possible noise, odours, dust.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail and road. As this is a rather small site and noise sources surround it mitigation may be difficult or constrain the amount of development that can take place.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a moderate level of harm on the Green Belt.</p> <p>The site is bounded by the Albrighton By-Pass and railway line (noise associated with these features will require due consideration). The site is separated from the built form of the settlement by the railway line and other land. It is also some distance from the majority of the services and facilities in the settlement.</p> <p>The site also contains some mature trees and may contain priority habitats, these factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is separated from the built form of the settlement by the railway line and other land (separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm).</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a moderate level of harm on the Green Belt.</p> <p>The site is bounded by the Albrighton By-Pass and railway line (noise associated with these features will require due consideration). The site is separated from the built form of the settlement by the railway line and other land. It is also some distance from the majority of the services and facilities in the settlement.</p> <p>15% of the site is located within flood zones 2 and/or 3, this is the element of the site most closely associated with the built form of Albrighton.</p> <p>8% of the site is located within the 30 year surface flood zone, 12% within the 100 year surface flood risk zones and 21% within the 1,000 year surface flood zone.</p> <p>The site also contains some mature trees; may contain priority habitats; and is adjacent to a scheduled monument. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is separated from the built form of the settlement by the railway line and other land (separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm).</p> <p>The element of the site is closest proximity to the built form of the settlement is located within flood zones 2 and/or 3.</p> <p>The site is adjacent to a scheduled monument.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

(where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	P35
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	2%
<i>Percentage of site in Flood Zone 2:</i>	3%
<i>Percentage of site in Flood Zone 1:</i>	97%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	10%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	14%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	28%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	1%
<i>Percentage of the site within 20m of a detailed river network:</i>	18%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. This site could accommodate 1,158 homes and the impact on the highway in the vicinity could be very significant. In particular it will be necessary to assessments the A41 bypass junction (eastern end). However, the site should have the financial capacity to afford all necessary mitigation. Two access points onto Kingswood Road will need to be created and traffic from the centre of the site should be able to reach both access points. This would also enable public transport to be potentially re-routes through the site from Kingswood Road. Excellent pedestrian and cycle provision, including links to ALB008 and the school are critical to minimising single occupancy car traffic generated by the site.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
<i>Ecology Comments Significant Constraints:</i>	The developable area is much reduced by the presence of the Environmental. Network (and its associated habitats).
<i>Ecology Comments Other Constraints:</i>	Much of the site is Environmental. Network core habitat or corridors. The Environmental. Network must be retained and enhanced. There are ponds on/adjacent to the site and a ditch/drain along the southern boundary. The site may contain priority habitats - botanical survey required. There are PROWs and TPOs on the site. Requires botanical survey, ECLA and a survey for bats (buildings, trees and transects), GCNs (ponds within 500m), badgers, white-clawed crayfish, otters, water voles, invertebrates, reptiles and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Environmental. Network and priority habitats must not be developed. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Parts of the site could potentially be restored/enhanced as priority habitat. Habitat connectivity and POS could be enhanced.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site partially within Shifnal Conservation Area. Includes part of non-designated historic parkland for Albrighton Hall and also has potential to impact on setting of non-designated Albrighton Hall. Some metal detectorist finds and large size of site suggests it has some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance and setting of CA; impacts on non-designated parklands and setting of Albrighton Hall; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	north-western part of site in conservation area. Strip of TPO woodland projects into central northern part of site.
<i>Tree Comments Other Constraints:</i>	mature trees and groups of trees and hedges around and throughout site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the east, particularly from the A41. Possible noise from Albrighton Hotel.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road and hotel noise.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site.</p> <p>Development of the entirety of the site would result in the need for an assessment of the eastern end of the A41 By-Pass junction; two access points onto Kingswood Road (this would also allow for public transport to be re-routed); and excellent pedestrian/cyclist links.</p> <p>10% of the site is located within the 30 year surface flood zone, 14% within the 100 year surface flood risk zones and 28% within the 1,000 year surface flood zone.</p> <p>The site contains environmental networks, which must be retained/enhanced.</p> <p>The site contains ponds and may contain priority habitats; part of the site is located within a conservation area; the site also includes part of a non-designated historic parkland and could impact on the setting of the non-designated Albrighton Hall; there are trees subject to TPO protection; and mature trees and hedgerows on the site.</p> <p>For the sub-area of the site it is expected that these factors will require proportional consideration, although some issues may only apply to the wider site.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Development of the entirety of the site would result in the need for an assessment of the eastern end of the A41 By-Pass junction; two access points onto Kingswood Road (this would also allow for public transport to be re-routed); and excellent pedestrian/cyclist links. For the identified sub-area, these requirements would need to be proportional to the scale of development proposed. Flood risk (FZ2 and/or 3) relates to SW corner of parcel.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Remove the identified sub-area from the Green Belt and safeguard for future development.</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>The wider site contains designated and undesignated heritage assets, however these are considered to be focused outside the identified sub-parcel.</p> <p>The site contains ecological assets, however the majority of which are outside the identified sub-parcel.</p> <p>The wider site would require significant highway improvements, these would need to be provided proportional to the level and impact of development on the sub-parcel.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in developable area available due to presence of ponds.
<i>Ecology Comments Other Constraints:</i>	An Environmental. Network corridor (a ditch) runs through part of the site. There are a number of ponds on the site. Ponds (priority habitat) should be retained, buffered and connectivity increased, which will reduce the developable area available. If GCNs are present in any of the ponds, buffers of at least 50m are likely to be required. Requires Ecla and surveys for bats (in trees), GCNs (ponds within 500m), badgers and nesting birds. The hedgerows will need to be appropriately buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees and groups of trees around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site. large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the boundaries of the site. Commercial operation to the northwest creating possible noise, dusts, odour.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.</p> <p>The site is separated from the built form of the settlement and projects into the countryside.</p> <p>The site may have archaeological potential.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is poorly related to the built form of the settlement.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modification Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	

**If proposed for Allocation
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Holyhead Road Bowling Green Lane Green Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	But onto Holyhead Road only. An estate road access for potentially 382 homes would not be satisfactory onto Green Lane or Bowling Green Lane unless improvements on these roads, to the north of the site, can be delivered.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If vehicular trips into Albrighton can be controlled such that no routing via Bowling Green Lane and Green Lane takes place.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	12
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires Ecla and surveys for bats (in trees), GCNs (ponds within 500m), badgers and nesting birds. The hedgerows will need to be appropriately buffered. A FROW crosses the site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Poor spatial relationship with existing settlement form. No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	scattered trees and gappy hedgerows around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Commercial in the north, east and south creating possible noise, dust odour including possible kennel in the south and a depot in the east.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment. Significant separation distances may be necessary.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.</p> <p>The site is separated from the built form of the settlement and projects into the countryside.</p> <p>The site may have archaeological potential.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. <i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	Sewage works to the north east of the site creating odour on occasion. Bringing residential properties closer to this site may cause concerns to the sewage treatment works operator.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2, purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a low-moderate level of harm on the Green Belt.</p> <p>The site contains a mature hedgerow and may contain priority habitats.</p> <p>A small proportion of the site is located within the 30 year and 100 year surface flood zones. 22% of the site is within the 1,000 year surface flood zone.</p> <p>The site is located in the gap between Albrighton and Cosford.</p> <p>The site is adjacent to a sewage treatment works which will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Retain as Green Belt</p>
Reasoning	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>Whilst the site is considered to be located within a Green Belt parcel, where the release would result in low-moderate harm it is also located in the gap between Cosford and Albrighton.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modification Required	<p>No</p>

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes junction onto A442 can be achieved without conflicting with the Cemetery junction and crossing facilities for pedestrians to the west side of the A442 incorporated. The topography and visibility on the B4363 may not allow a highway standard junction to be achieved but pedestrian cycle access should be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	22
<i>Ecology Comments Significant Constraints:</i>	Site lies entirely within Env. Network corridor. CS17 Environmental Networks applies. No or reduced number of dwellings possible. Suggest seek landscape advice.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for Dormice, Badgers, Bats, nesting birds, vascular plants (possible species-rich semi-improved grassland needs botanical survey), reptiles. Environmental Network if very restricted housing numbers proposed.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north east and south in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Retain as part of Environmental Network in accordance with CS17 Environmental Networks and MD12. Otherwise use minimum number of houses to release majority of site for semi-natural open space, accessible to the public.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	blocks of TPO woodland adjoin north and south of site
<i>Tree Comments Other Constraints:</i>	derelect hedgerow trees along eastern site boundary, group of trees within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover to the north and south and enhance tree / hedge linkage along east of site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the west
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is outside the development boundary within the Green Belt to the north of Low Town adjacent to the A442. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The land occupies a visually prominent site with hilly topography which may no longer be available, having been purchased to provide additional cemetery land.</p> <p>The severe topographical issues affecting the site's access and the site's ecological interest and role as an environmental network are significant constraints to development. Proximity to a range of recognised natural and historic assets, including protected trees and woodland, a wildlife site and high landscape value and visual impact are also significant considerations. In particular the sensitivity of the landscape to change arising from new housing is high and from new employment is very high. Similarly the views experienced are of high sensitivity to change arising from new housing and very high sensitivity to change arising from employment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Acceptable highway access required.</p> <p>Retention/enhancement of environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is also located in an area with ecological, high landscape and visual sensitivity. The sites topography may be challenging to create an appropriate access.</p> <p>It is understood that the site may have been purchased to provide an extension to the cemetery.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	The site is located in east Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is an area of green open space which forms part of the environmental network within the built form of Bridgnorth. Development of the site is compromised by its ecological value and by the difficulty and cost of achieving an acceptable highway access. Possible impact on the setting of the Conservation Area and TPO trees are also significant considerations.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Major earthworks and drainage would be required in an ecologically sensitive location and Conservation Area setting context to achieve an acceptable highway access.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Potential Windfall site</p>
<p>Reasoning</p>	<p>Whilst potentially suitable in principle, this is an environmentally sensitive site with access problems. The modest proportion of the site which is developable may not provide sufficient viability to deliver an acceptable scheme.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is also located in an area with high landscape and visual sensitivity and adjacent to ancient woodland. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	B4364 Ludlow Road
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	Y
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Assuming the development (linked to BRD023, BRD019, BRD019a and BRD022) fund extension of speed limit with associated traffic calming, a shared roundabout access and associated pedestrian facilities linking development sites to the Bridgnorth via the Ludlow Road corridor. BRD017, 022, 021 and ODY008, 002 should provide a highway link from Oldbury Road to the Ludlow Road.
Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	Assuming the developments will fund any necessary improvements at the B4364 / A458 Bypass roundabout junction.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
Ecology Comments Significant Constraints:	Site lies entirely within Env. Network corridor and CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision. Natural England would need to be consulted if >100 houses according to IRZs (potential impacts on SSSIs).
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12, preferably by providing open space with semi-natural habitat to north and east corner and maintain a buffered green corridor along the eastern boundary..
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow and woodland to north and east. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A

<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerow around site and woodland adjacent north boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to west
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site forms part of the environmental network, occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth (and its services and facilities) by a wooded field and the A458. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Countryside</p>
<p>Reasoning</p>	<p>The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The junction of Manor Farm Lane and the B4363 are not suitable for the additional traffic from 568 homes and can not be improved without third party land.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds adjacent and within 500m with GCN records), Dormice, Badgers , Bats, nesting birds. Environmental Network lies adjacent to the site along the northern border. Footpath crosses site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees and hedges in field.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and public footpaths. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	SE part of site may effect setting of Oldbury Conservation Area. Large size of site and scatter of metal detectorist finds suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of CA; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around site and a group of a few trees within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Air quality mitigation may be necessary.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Large site close to the village of Oldbury which occupies a rural setting and is physically and functionally separated from the development boundary the Bridgnorth bypass. The site slopes away from the A458. An acceptable highway access cannot be achieved without third party land. Possible impact on the setting of the Oldbury Conservation Area and areas of landscape value and visual impact are also considerations.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>An acceptable highway access. A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Countryside</p>
<p>Reasoning</p>	<p>An acceptable highway access cannot be achieved without third party land. The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure, although it is acknowledged that given its size it would have the potential to provide services on site.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	N/A
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium- High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium- High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Assume this is achieved via the private track to Conduit Farmhouse to the B4364
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assuming the development (linked to BRD017, BRD019, BRD019a and BRD023) funds extension of speed limit with associated traffic calming, a shared roundabout access and associated pedestrian facilities linking development sites to the Bridgnorth via the Ludlow Road corridor. A highway standard improvement of the existing track to Conduit Farmhouse junction with the B4364 would not be desirable. BRD017, 022, 021 should provide a highway link from Oldbury Road to the Ludlow Road.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assuming the developments will fund any necessary improvements at the B4364 / A458 Bypass roundabout junction.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	Western third lies within Env. Network corridor and CS17 Environmental Networks applies. Reduced numbers of housing may be required as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for Dormice, Badgers , Bats, nesting birds, reptiles.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees, hedges and scrub in field. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12, by focusing enlarged open space with semi-natural habitat in western half of the site.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes non-designated historic farmstead of Conduit farm (HER PRN 25942). Large size of site and scatter of metal detectorist finds suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic buildings assessment if demo of farm included; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by trees and hedgerows, groups of mature trees within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland and seek to retain internal trees within open space.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site forms part of the environmental network and occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the A458. The western portion of the site has a very steep topography dropping down from Ludlow Road. In order to achieve an acceptable highway access third party land may be required. The size and capacity of the site would be insufficient to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth. Protection/enhancement of environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Countryside</p>
<p>Reasoning</p>	<p>The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as employment land</p>
<p>Reasoning</p>	<p>The site forms an integral part of an existing, mixed-use allocation (ELR011b) . Residential development in this location would result in housing which is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account the fact that only part of the site is understood to be available for development, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	use tree landscaping to enhance tree cover within site as appropriate.
<i>Public Protection Comments Significant Constraints:</i>	Due to nature of surrounding land uses this site is unacceptable as residential land use (noise, odour, dust, contamination).
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Small area of land which represents an allocated employment site (WO39) in the adopted SAMDev Plan and is located within an existing employment area. The site is surrounded by an employment site/commitments, and is therefore an inappropriate location for residential development.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Surface water management. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as employment allocation</p>
<p>Reasoning</p>	<p>The site is an allocated employment site located within an existing employment area and as such is considered most appropriate for employment uses.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Public Protection Comments Other Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Assessment of impact on AQMA needed and mitigation where available.
<i>Public Protection Comments Opportunities:</i>	Removal of existing commercial may improve noise environment for residents close by.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	The site is located in central Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Vacant former builders yard which is in close proximity to services and facilities being located just to the north of Bridgnorth town centre within the development boundary. The site includes non designated heritage assets and is located between two conservation areas therefore the setting of these and impact on non designated heritage assets will be an important consideration. Part of the site is potentially impacted by surface and ground water flood risk which will need investigation.</p> <p>It is understood that this site now has Planning Permission for extra care facilities.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>An appropriate highway access.</p> <p>Design measures appropriate to its location within the conservation area and in proximity to a number of listed buildings.</p> <p>Surface water flood risk management.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Potential windfall</p>
<p>Reasoning</p>	<p>Site is a suitable location for residential development within the development boundary subject to access and design considerations and measures.</p> <p>It is understood that this site now has Planning Permission for extra care facilities.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	B4555 but not Oldbury Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. If the development can demonstrate a highway standard and safe access can be built in close proximity to the B4555 / Oldbury Road T-junction.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If the development can demonstrate there will be no adverse impact on the operation of the B4555 / Oldbury Road junction.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	Site lies partly within Env. Network corridor and CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for Dormice, Badgers, Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Env. Network corridor covers the site, linking it to the River Severn LWS. Grassland appears relatively unimproved.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Protect, enhance and restore Env. Network by restricting development close to the roadside boundary and providing large semi-natural open space to the east towards the river, in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Use large open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	May effect setting of the Scheduled Monuments of Bridgnorth Castle (NHLE ref. 1004783) and Panpudding Hill (NHLE ref. 1013493), together with the setting of the Bridgnorth Conservation Area. Site also contains a number of lynchet banks of possible medieval date (HER PRN 33335).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of SMs and CA, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	woodland adjacent south-west part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south-west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Assessment of impact on AQMA needed and mitigation where available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located in south Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Irregularly shaped site located to the rear of residential dwellings on Oldbury Road adjacent to but outside the development boundary. Approximately half of the site is located within flood zones 2 and/or 3 and lies partly within the environmental network. The remainder of the site is developable in principle, subject also to heritage considerations, but a highway access cannot be safely achieved. Planning appeal against refusal of outline consent dismissed 2016.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Acceptable highway access. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Countryside</p>
<p>Reasoning</p>	<p>The site is not achievable since a safe highway access cannot be achieved.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site has good vehicular access potential, directly onto the A458 and Ludlow Road. If allocated, during the Planning Application process, consideration will need to be given to the most appropriate forms of access, this will be determined on the projected number of vehicles using the access, and the interaction with the access to land already in the Local Plan.</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promote cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, the parts of site that are closest to Bridgnorth High Town are well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing ProW and into the town, including a footbridge crossing of the A458. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within High Town, although appropriate bus provision on the site should also be considered.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	Within SSSI IRZ (potential impacts on SSSIs) - triggers consultation with Natural England (>100 houses).
<i>Ecology Comments Other Constraints:</i>	May require botanical survey. Requires EclA and surveys for GCNs (ponds within 500m), bats, dormice, otters, water voles, badgers, reptiles and nesting birds. Much of the western boundary forms an Env. Network corridor (formed by Tiddle Brook), a corridor crosses the site (formed by a drain) and the woodland on the site forms a further corridor.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes Grade II Listed The Leasowes (NHLE ref. 1294006) and the former Farm House at The Leasowes (NHLE ref. 1294006). The effects upon their settings would need to be carefully considered. Also the significance the farmhouses and surviving traditional farm buildings at the non-designated historic farmsteads at Footbridge Farm (HER PRN 25926), Hundred House Farm (HER PRN 25940), and Roundthorn Farm (HER PRN 25941). Only known archaeological interest if a former brickworks at the NW end of site (HER PRN 33038). However, very large site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs, Level 2 historic buildings assessment if demo of any historic farmhouses or farm buildings included; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments Opportunities:</i>	Creation of appropriate settings within amenity green space for LBs and retained non-designated historic farm buildings. Retention of historic field patterns/ hedgerows as green infrastructure and within the grain of the development.
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Numerous mature trees and hedgerows within and around site. Blocks of woodland to parts of north, west and south site boundary
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme.
<i>Tree Comments Opportunities:</i>	Retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. Seek to expand existing woodland blocks by planting new native woodland, as part of a planned network of natural habitats / accessible open space distributed throughout the site .
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A Phase I Desk Study should be undertaken and submitted to identify any potential contamination issues from historical map information and other sources. The site has a number of identified features such as unknown filled ground, but these are unlikely to have a huge impact on any proposed development. The proposal is over known foul water private drainage facilities to the Punch Bowl and other residential properties (properties in the area have private sewerage treatment plants with infiltration fields and pipework into adjacent fields). These are not severn trent assets. Road Noise from the 60mph A458, road noise assessment required. Commercial Noise from the Punch Bowl Inn (wedding venue premises) and a manufacturing business a further 60 metres south of Punch Bowl Inn which have proposed residential near to the premises. The current Nock Deighton Livestock Market may be relocated from existing site onto the new business area of the site and give rise to odour complaint. General interaction of business area and residential to be managed by class uses. There is an active application for Chicken Rearing units in the Tasley area. There may be an air quality impact on the existing AQMA.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>A very large site located to the south-west of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, a new employment site in a prime roadside location, community facilities within a new local centre to support the new community and extensive green infrastructure. The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the A458. The site is also separated from the built form of the settlement by either land allocated for employment development or land which is included within the site promotion, but is in third party ownership and the owners have indicated that the land is not available for development. Once the employment allocation is implemented this will form part of the built form of Bridgnorth increasing the sites connectivity to the town. The land which is in third party ownership would effectively 'buffer' the site from the main road and in the longer term may in part represent a windfall development opportunity - although an appropriate buffer of the A458 would need to be retained. Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The site has the potential to provide significant and effective pedestrian and cycle links over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This could include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land.</p> <p>The site has grade 3 agricultural land quality. Best and most versatile agricultural land is graded 1-3a. Precautionary approach to assume land is amongst best and most versatile.</p> <p>Parts of the site, along its western and southern boundaries, are located within flood zones 2 and/or 3. Additionally parts of the site are also located within the 1 in 1,000 surface water flood risk zone. However, the site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is not located within the Green Belt.</p> <p>The parcel which covers the majority of the site has medium-high landscape and visual sensitivity to employment. A portion of the site was beyond the area assessed.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Impact Risk Zone for 2 SSSI's, one of which is for residential development of greater than 100 dwellings. Discussions with Ecology Officers at Shropshire Council and initial discussions with Natural England indicate that risks can be managed through appropriate design, layout and construction of the development.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, wooded areas and along the route of a drain. There may also be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains two Grade II listed buildings and several non-designated heritage assets, these will need to be retained and appropriately buffered. Due to its size is likely to have archaeological potential.</p> <p>The site adjoins two existing employment allocations, one of which is for the relocation of the livestock market. Design and layout will need to give these factors due consideration.</p> <p>The site is close to sources of current road and commercial noise and potential future noise and odour from the relocated livestock market (the adjacent employment allocation includes land specifically for the livestock market and associated landscaping), other commercial uses on the existing employment allocation and potential commercial uses on the employment land proposed within the site promotion itself. These issues would require careful and sensitive consideration; however, it is considered that this can be appropriately managed through appropriate design and layout and use of green infrastructure buffering.</p> <p>The site is in proximity to quarries (and allocated extensions) at Morville and Bridgwalton. It is considered that through the use of appropriate buffers this proximity can be mitigated.</p> <p>The relationship with the site subject to a planning application for Poultry Units (within the site promotion).</p> <p>The site is located over known foul water private drainage facilities to the Punch Bowl and other residential properties, but this could be appropriately managed if the site were developed.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A new local centre to provides retail and community uses.</p> <p>A new community centre.</p> <p>A raised pedestrian/cyclist bridge of the A458.</p> <p>Primary school.</p> <p>Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth.</p> <p>Necessary improvements to road infrastructure.</p> <p>Significant open space and green infrastructure on the site with opportunities for linkages to the existing environmental network.</p>
<p>Known Infrastructure Opportunities:</p>	<p>A linear park.</p> <p>SUDs and water treatment facilities.</p> <p>A potential park and ride.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>

Recommendation	Allocate part of the site as a sustainable urban extension of Bridgnorth to include around 1,050 dwellings (600 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 16ha employment land, a new local centre, 20ha of green infrastructure and a 19ha linear park. Identify part of the site as a potential future direction for growth.
Reasoning	<p>The site represents an opportunity to achieve a high quality mixed use development providing around 1,050 dwellings, 16ha of employment land, a new local centre (which could include a range of retail and community uses) and significant areas of Green Infrastructure including a new Linear Park which extends beyond the site area. Further land would also be available for further development beyond 2038. The level of housing proposed means that there is an opportunity to provide a range of sizes, types and tenures which will respond to local needs, including the need for affordable, key worker and local employee housing.</p> <p>The employment provision will be visible from the A458 Bridgnorth Bypass, as such it could represent an attractive location for employers in a 'gateway location'. It is considered that this site could complement existing and proposed provision within the area.</p> <p>The mixed-use development of this site presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 600 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country.</p> <p>It is therefore considered appropriate to identify BRD030 as a sustainable urban extension, the development of which will contribute to meeting the development needs of Shropshire and accommodate 600 dwellings of the proposed contribution to the unmet housing need forecast to arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>Whilst it is acknowledged that the A458, employment allocations and a small area of third party land causes severance between the site and the existing built form of the settlement, due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Furthermore, due to the scale of the site it has the potential to provide significant and effective pedestrian and cycle links over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This could include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land. Provision of facilities on site and access improvements will address specific sustainability appraisal issues. Once the employment allocation is implemented this will form part of the built form of Bridgnorth increasing the sites connectivity to the town. The land which is in third party ownership would effectively 'buffer' the site from the main road and in the longer term may in part represent a windfall development opportunity - although an appropriate buffer of the A458 would need to be retained.</p> <p>Due to the scale of the site, it is considered that appropriate public transport links can be provided. There is also the potential to operate a dedicated park and ride service from the site, this will need to be investigated in partnership with appropriate local community groups and bus operators.</p> <p>Any necessary improvements to the A458 Ludlow Road roundabout, the wider highway network and associated infrastructure will be informed by Strategic and Local Highway Transport Assessments. An air quality assessment of the impact of increased vehicular movements into Bridgnorth will also be undertaken and its recommendations implemented. Given the scale of the site, it is considered that necessary works are achievable.</p> <p>The site is not located within the Green Belt, the NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. This site is considered to represent a sustainable option for meeting the development needs of Bridgnorth.</p> <p>Whilst some of the site is located within Flood Zones 2 and/or 3, the site is of a sufficient scale that these areas can be used for green infrastructure provision.</p> <p>Whilst some of the site is within the 1 in 1,000 surface water flood zone, it is considered that the site is of sufficient size that following the use of SUDs and attenuation ponds, development can avoid any areas with residual surface water flood risk.</p> <p>The site is located within the Impact Risk Zone for 2 SSSI's, one of which is for residential development of greater than 100 dwellings. Discussions with Ecology Officers at Shropshire Council and initial discussions with Natural England indicate that risks can be managed through appropriate design, layout and construction of the development.</p> <p>Environmental networks and wooded areas on the site can also be retained and form part of the green infrastructure provision.</p> <p>The parcel which covers the majority of the site has medium-high landscape and visual sensitivity to employment. High quality design and layout will reduce any visual impact.</p> <p>The site contains two Grade II listed buildings and several non-designated heritage assets. A Heritage Assessment provided by the Promotors indicates that less than substantial harm would arise to the significance of these designated heritage assets as a result of the changes that would occur to their settings. Because Sections 66(i) of the Planning (Listed Buildings and Conservation Areas) Act 1990 and the tests set out in Paragraphs 193, 194 and 196 of the Framework are therefore engaged, the Council is required to place great weight upon to their conservation. However, whilst this requirement is acknowledged, it is considered that through appropriate design and layout of development and incorporation of effective Green Infrastructure, impacts on these assets can be minimised.</p> <p>Noise, any odour and any dust associated with the A458, nearby quarries and proposed extensions of quarries, the existing employment allocations (one of which is allocated specifically for the relocated livestock market) and the employment proposed on the site will need to be considered within the design, layout and use of green infrastructure. Given the scale of the site, this is considered achievable.</p> <p>Part of the site was subject to a Planning Application for 'poultry units' however this was refused at appeal. In any event, given that the land subject to this Planning Application is within the site promotion, it is considered that this could be appropriately mitigated through inclusion of a guideline stipulating that before occupation of the first dwelling on the site, any poultry units operating on the site or indeed land within the wider site promotion will cease operation and subsequent conditions/legal agreements within any Planning Application for development of the site.</p> <p>The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed 'Garden Village' proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (July 2021 Update), provided as part of the evidence base for the Local Plan Review.</p> <p>Furthermore, it is considered appropriate for the development occurring on this site to contribute to meeting the development needs of Shropshire and accommodate 600 dwellings of the proposed contribution to the unmet housing need forecast to arise within the Black Country. Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required:	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S3 to be amended to reflect the fact that 600 of the dwellings proposed on the site form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>1,050 dwellings, 16ha employment land, a new local centre, 20ha of green infrastructure and a 19ha linear park.</p> <p>Of these 1,050 dwellings, 600 dwellings form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>

<p>If proposed for Allocation Design Requirements:</p>	<p>A comprehensive mixed-use sustainable urban extension informed by a Supplementary Planning Document and applying Garden Village Standards.</p> <p>A construction management plan is required.</p> <p>High quality design, mix and layout of housing responding to site constraints and opportunities and local needs.</p> <p>Maximise energy efficiency. Opportunities for on-site energy generation.</p> <p>Employment provision is an intrinsic element of the development, occurring alongside and cross-subsidised by housing in a gateway location.</p> <p>New local centre, primary school and if required a medical centre will support the sites community.</p> <p>Site design and layout will respond to any identified landscape and visual effects and heritage assets on site and in wider area.</p> <p>Green infrastructure is a key component. Mature trees, hedgerows, structural vegetation retained.</p> <p>Listed and non-designated historic farm buildings will be retained.</p> <p>Noise, odour and dust arising from roads, employment (current and future) the relocated livestock market and mineral activities.</p> <p>Before occupation of dwellings on the site, any poultry units operating on the site promotion to cease operation.</p> <p>Appropriate pedestrian, cycle and vehicle accesses and links to and through the site to be provided. Necessary highway works to be undertaken.</p> <p>An air quality assessment of the impact of increased vehicular movements into Bridgnorth will also be undertaken and its recommendations implemented.</p> <p>Appropriate public transport links will be provided including investigation of potential park and ride.</p> <p>Significant and effective pedestrian and cycle links will be provided over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This will include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land.</p> <p>Historic environment assets on the site will be retained and appropriately buffered.</p> <p>Natural environment assets on and in proximity of the site, including Thatcher's Wood and Westwood Covert SSSI, Devil's Hole SSSI and any priority habitats will be safeguarded and appropriately buffered.</p> <p>Multi-stage SuDs and water treatment facilities, informed by a sustainable drainage strategy to be provided. Water runoff will be restricted to the equivalent greenfield rate and water quality in the wider drainage network will be protected. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site.</p> <p>Development will be excluded from the portions of the site located in Flood Zones 2 and/or 3.</p>

Coal Authority Reference Area?	Yes
Mineral Safeguarding Area?	Yes
Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:	Yes
Percentage of site in Flood Zone 3:	2%
Percentage of site in Flood Zone 2:	3%
Percentage of site in Flood Zone 1:	97%
Percentage of the site in the 30 year surface flood risk zone:	1%
Percentage of the site in the 100 year surface flood risk zone:	2%
Percentage of the site in the 1,000 year surface flood risk zone:	6%
Percentage of the site identified on the EA Historic Flood Map:	0%
Percentage of the site within 20m of an historic flood event:	0%
Percentage of the site within 20m of a detailed river network:	94%
All or part of the site within a Source Protection Zone:	No
Green Belt* Considerations: (from the GB Assessment/Review)	N/A
Landscape Considerations (Residential) (from the LVSS):	Not Assessed
Visual Impact Considerations (Residential) (from the LVSS):	Not Assessed
Landscape Considerations (Employment) (from the LVSS):	Not Assessed
Visual Impact Considerations (Employment) (from the LVSS):	Not Assessed
Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Via Telegraph lane
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	Telegraph lane is already well used route, likely to be able to accommodate development.
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Y
Highway Comments - Could the Development Occur Without Off-Site Works?	Y - May need localised improvements to Telegraph lane depending on scale of development.
Highway Comments - Are Envisaged Off-Site Works Achievable?	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
Ecology Comments Significant Constraints:	The brook forms an Environmental Network corridor and CS17 Environmental Networks applies. Reduced numbers of housing may be required as protection of Environmental Network unlikely to be fully possible in open space provision.
Ecology Comments Other Constraints:	EclA required and surveys for badgers, bats, GCNs, water voles, otters, white-clawed crayfish, nesting birds and reptiles

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Retain and enhance all hedgerows/tree lines on boundaries. Protect, enhance and restore Env. Network in accordance with CS17 and MD12
<i>Ecology Comments Opportunities:</i>	Enhance Env. Network
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	A number of cropmarks on land to the west of brook and large size of site suggest it may have some archaeological potential. Site is detached from and relates poorly to the urban form of the town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Boundary hedgerows and mature trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover approach to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Industrial works at north of site. Sewerage issues known in the area
<i>Public Protection Comments Management of Constraints:</i>	BS4142 assessment. Parts of the site may not be suitable.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>An irregularly shaped site, some distance from the existing built form of Bridgnorth, separated by a number of agricultural fields (subject to consideration within site BRD030).</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A very small portion of the site is located within flood zones 2 and/or 3 and within the 1 in 30, 1 in 100 and 1 in 1,000 surface flood risk zones.</p> <p>The majority of the site is within 20m of a detailed river network.</p> <p>The landscape and visual sensitivity of the site has not been assessed.</p> <p>The site has boundary hedgerows and mature trees.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p> <p>The brook along the sites northern and western boundaries forms part of an environmental network. There may also be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site may have archaeological potential.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as countryside</p>
<p>Reasoning</p>	<p>In isolation the site is separated from the build form of Bridgnorth by a number of agricultural fields. Whilst the site could be considered alongside BRD030, BRD030 is very extensive and it is not considered necessary to further extend the site southwards.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment and Review undertaken for Shropshire indicates that this site is located within four Green Belt Parcels. These are: P54 (containing only a small part of the site at its western extent); P56 (containing the majority of the site); P57 (containing a small part of the site at its eastern extent) and P58 (containing only a small part of the site at its south-eastern extent).</p> <p>The Green Belt Assessment indicates that these parcels perform a weak contribution to purpose 2; a moderate (P54 and P58) and strong (P56 and P57) contribution against purpose 3; and makes no (P54, P57 and P58) and weak (P56) contribution against purpose 4.</p> <p>The Green Belt Review indicates that release of these parcels would have the following levels of harm to the Green Belt: Moderate (a small sub-parcel of P54 to the west of The Hobbins, proposed for mixed-use/residential development on the most recent Concept Masterplan prepared by the site promoter; P57, part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter; and P58 part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter); Moderate high (P56, the parcel closest to Bridgnorth and proposed for the majority of the residential development and land safeguarded for future development on the most recent Concept Masterplan prepared by the site promoter); and High (majority of P54, part of which is proposed for employment development on the most recent Concept Masterplan prepared by the site promoter).</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site consists of P54 (part - significantly reduced to that within previous iterations of the site promotion), P56, P58a, STC002 and STC005. A larger proposal in this general location (including additional land) was consulted upon as a preferred site allocation within the Preferred Sites consultation in late 2018/early 2019).</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>This site represents a very large site located to the East of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, opportunities for expansion of a very successful employment site, community facilities within a new local centre to support the new community and extensive green infrastructure. The components of the site generally have good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The provision of pedestrian and cycle links between the site and the existing built form of Bridgnorth will require very careful consideration due to the presence of the Hermitage Ridge and associated ancient woodland. The site also offers the potential to provide a park and ride on the site, which would provide a level of mitigation.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The Green Belt Assessment indicates that the parcels which cover the site: perform a weak contribution to purpose 2; a moderate (P54 and P58) and strong (P56 and P57) contribution against purpose 3; and makes no (P54, P57 and P58) and weak (P56) contribution against purpose 4.</p> <p>The Green Belt Review indicates that release of these parcels would have the following levels of harm to the Green Belt: Moderate (a small sub-parcel of P54 to the west of The Hobbins, proposed for mixed-use/residential development on the most recent Concept Masterplan prepared by the site promoter; P57, part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter; and P58 part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter).</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is primarily located outside of identified source protection zones, although much of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, is located within Source Protection Zone 3. However, it is considered that this issue could be managed through appropriate design and construction of development.</p> <p>The majority of the site is located within a landscape parcel which has medium landscape and visual sensitivity to housing and employment. A very small portion of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site lies immediately adjacent to ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth. Design and layout will need to give these factors due consideration.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, although the entirety of STC002 is located within an environmental network. There are also wooded areas within the site and may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is close to sources of road and commercial noise and potential future noise from other commercial uses on the employment land proposed within the site promotion itself. However, it is considered that this can be managed through design and layout of the development and use of green infrastructure buffering.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A new local centre to provides retail and community uses.</p> <p>A new community centre.</p> <p>A park and ride.</p> <p>Primary school.</p> <p>Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth. This will need to positively respond to the presence of ancient woodland and the gradient between the site and the town.</p> <p>Necessary improvements to road infrastructure.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Significant open space and green infrastructure on the site.</p> <p>Improvements to Stanmore Country Park.</p> <p>SUDs and water treatment facilities.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>

Recommendation	Retain the majority of the site as Green Belt. Allocate two of the component sites (P58a and STC002) specifically for extensions to Stanmore Industrial Estate.
Reasoning	<p>The site adjoins ancient woodland along Hermitage Ridge. This ridge also creates physical and functional separation between the site and the built form of Bridgnorth. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site contains part of and parts of the site are in proximity of The Hermitage Scheduled Monument.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed ‘Garden Village’ proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (Updated), provided as part of the evidence base for the Local Plan Review.</p> <p>However, Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the Industrial Estate, it is considered appropriate to identify further land for its expansion, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of some land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint. Sites P58a and STC002 are well related to the built form of Stanmore Industrial Estate and as such represent opportunities for the expansion of the site. As extensions of Stanmore Industrial Estate they will be accessed through the existing access (subject to necessary improvements). Much of P58a is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint. STC002 forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park. A small portion of P58a has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact. Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site’s size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	

**If proposed for Allocation
Design Requirements:**

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

**If proposed for Allocation

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P52 and P53a/b): If 66% of these sites were developed as housing they could accommodate 2,225 homes. These site have good vehicular access potential, directly onto the A454.</p> <p>As part of a strategic settlement east of Bridgnorth Low Town these sites lie the furthest north from the existing development and therefore have less sustainable transport potential. The most direct route into Low town from these sites would be along the Wolverhampton Road which is not attractive for pedestrians and has limited scope for improvement.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>Ancient Woodland (AW) immediately adjacent to western site boundary. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer will be required reducing numbers of houses possible.</p> <p>Suggest seek landscape advice.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Footpath runs diagonally through site. Environmental Network corridor and core area immediately adjoins the site. Reduced numbers of housing may be required as protection of Environmental Network unlikely to be fully possible in open space provision.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Provide a green route through site along footpath and link to open space and boundary hedges to enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Inaccessible buffer required to Ancient Woodland of 15-50m in addition.
<i>Ecology Comments Opportunities:</i>	Buffer and protect ancient woodland. Enhance environmental network by providing green link along footpath. Use open space provision to provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large size and substantial number of metal detectorist finds suggests that it may hold significant archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site. Mature deciduous woodland adjacent western boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise issues. Agricultural, commercial and game activity to the north of the site creating potential noise and odour. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Separation distance from agri, commercial and game rearing to the north of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Poor
Relationship to the Black Country	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and consists of a series of undulating agricultural fields to the north east of Bridgnorth in the Green Belt. The site is physically and functionally separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. Possible impact on adjoining ancient woodland is a significant consideration. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The site performs poorly in Stage 2a Settlement and Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Highway capacity. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Park & Ride, local highway improvements. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is additionally located in an area with challenging topography, and is also separated from the built form of the settlement by the cemetery and adjoins ancient woodland.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
Ecology Comments Significant Constraints:	None.
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Two footpaths run north-south through site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Provide green routes through site along footpaths and link to open space and boundary hedges.
<i>Ecology Comments Opportunities:</i>	Enhance environmental network by providing green link along footpaths linked to open space. Use open space provision to provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed Swancote Farmhouse (NHLE ref. 1190070) and Garden House at Swancote Farmhouse (NHLE ref.) Prehistoric cropmark pit alignment (HER PRN 21522) present towards SW end of site. In addition, its large size and two significant clusters of metal detectorist finds suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise issues. Some agricultural barns which may create noise/odour /fly issues depending on use. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Suggest good separation distance from any agricultural buildings located on the edge of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The western part of a larger site located to the north east of Bridgnorth which consists of a large number of agricultural fields bounded by the A454 to the south and rural roads/lanes to the west and north. The site is located in the Green Belt and does not adjoin any of the existing development at The Hobbins or Stanmore. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and wooded ridge. Proximity to buildings and sites of heritage interest, trees and any other ecological interest will also be a consideration. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site occupies a rural setting, well removed from The Hobbins to the South and remote from Bridgnorth. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

In addition, its large size and two significant clusters of metal detectorist finds suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise issues. Some agricultural barns which may create noise/odour /fly issues depending on use. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Suggest good separation distance from any agricultural buildings located on the edge of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located in the Green Belt and does not adjoin any of the existing development at The Hobbins or Stanmore. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth. A portion of the eastern extent of the site has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment. Proximity to buildings and sites of heritage interest will also be a consideration. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. As the sites availability is currently unknown, the site is not considered suitable for allocation but has potential for future safeguarding. The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment. However, whilst it performs poorly in the Stage 2a Black Country Contribution Sustainability Appraisal for housing, it performs fair for employment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>This large site occupies a rural setting, well removed from The Hobbins and Stanmore to the South and remote from Bridgnorth. Additionally its availability is unknown. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	P54
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	3%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	1%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; with no contribution against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. A sub-parcel within the south west of this parcel, including The Hobbins & field to the west was identified which would have a moderate level of harm if released.</p> <p>NB The SLAA parcel being assessed however excludes the sub parcel which forms sites STC005 & STC006</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P54, P55, P56 and P58a/b): If 66% of these sites were developed as housing they could accommodate 4,591 homes. These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PROW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles, otter and water vole. 3 footpaths run through site. Environmental Network corridor immediately adjacent to southern and eastern boundary and stepping stone on site. Reduced area available for development if GCN found on site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub/ditches on site. Retain all ponds as part of landscaping of open space to maintain and enhance Env. Network. Create green corridors along footpaths and link with open space and Env. Network to the south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green link along footpaths and 'Brook' linked to open space. Use open space provision to provide biodiversity enhancements and links to Stanmore Country Park.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by projected line of former Roman road from Greensforge (Staffs) to central Wales (HER PRN 04076), and also includes a prehistoric cropmark pit alignment (HER PRN 21522) and part of site of Bridgnorth racecourse (HER PRN 32056). In addition, very large size of site suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site. Blocks of plantation and natural woodland within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from woodland and seek to retain internal trees within open space.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover and expand woodland in association with future development. Retain fine trees and woodland within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Anaerobic digester on northern boundary of the site creating odour and noise. Road noise to northern boundary of the site. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Separation distance from anaerobic digester a necessity. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>A large site consisting of agricultural land in the Green Belt to the east of Bridgnorth. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and the Hermitage Ridge (and associated ancient woodland). Part of the site adjoins the built form of The Hobbins and is in proximity of Stanmore Industrial Estate. Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration. The site also offers the potential to provide a park and ride on the site would provide a level of mitigation.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>A portion of the eastern extent of the site has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>Approximately 1/3 of the site has grade 2 agricultural land quality and the remainder grade 3 agricultural land. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>Part of the site is located within Source Protection Zone 3. The design of development on these elements of the site will need to be appropriately designed in order to respond to this.</p> <p>The site is in proximity of ancient woodland which runs along Hermitage Ridge, an environmental network corridor, there are trees and hedgerows on and around the site, and there may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains and is in proximity to a number of heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is in proximity of an anaerobic digester.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment, primarily due to poor access to existing facilities and services and for potential impacts on environmental and heritage assets. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p><i>Air quality in Bridgnorth</i></p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Waste water treatment capacity.</p> <p>A range of community services and infrastructure as part of a large scale planned mixed-use development.</p> <p>Separation distance and appropriate residential amenity protection measures.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Park & Ride, local highway improvements.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is some distance from the built form of Bridgnorth, separated physically and functionally by agricultural land and the Hermitage Ridge. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Assessment of the site in combination with adjoining sites is summarised separately within this assessment.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	This site consists largely of Ancient Woodland and Local Geological Site and is covered by a TPO. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, greatly reducing the remaining land available to development. Site lies completely within Env. Network corridor and CS17 Environmental Networks applies. Suggest seek landscape advice.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (Ancient Woodland and other priority habitats need botanical survey to assess impacts) and reptiles. 2 footpaths run through site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Protect Ancient Woodland and the Local Geological site under MD12 and the Env. Network in accordance with CS17 Environmental Networks. Suggest do not allocate this site.
<i>Ecology Comments Opportunities:</i>	Retain as Environmental Network.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes part of designated area of the Scheduled Monument of The Hermitage (NHLE ref. 1004782) and steep scarp slope on which Hermitage Hill Coppice sits, which may contain unrecorded archaeological features.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	Development would need to avoid area of Scheduled Monument. S106 monies could help to secure management and enhanced access and interpretation of SM.
<i>Tree Comments Significant Constraints:</i>	eastern half of site is TPO woodland.
<i>Tree Comments Other Constraints:</i>	scattered scrub within field and hedgerows to field boundaries on western side of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Industrial estate close by with Household recycling centre which may produce odour and noise. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Suggest separation distances from the industrial estate (no housing on the thin handle of the site in the south). AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site contains a scheduled ancient monument, ancient woodland, TPO trees a geological site and has significant ecological and heritage value. Part of the site forms a prominent escarpment which has an important role in relation to the setting of the town and green belt purposes and has high landscape value. Additionally the site adjoins an industrial area, including a waste recycling centre therefore residential amenity would be compromised without appropriate buffering. The site is therefore not considered suitable for allocation or to have potential for future safeguarding for development.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>This is a very sensitive site subject to a number of visual, natural, historic environment and other constraints, including topography. Additionally the site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. <i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>This site lies immediately adjacent to Ancient Woodland which Has a TPO and a Local Geological Site. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, which is inaccessible to the public, reducing the remaining land available to development. Site also lies partly within the Env. Network corridor (on the western boundary) and adjacent to the Network on the south and south-east boundaries. CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision. Suggest seek landscape advice.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (Ancient Woodland and other priority habitats need botanical survey to assess impacts) reptiles and geology. A footpath runs through the site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees on site. Retain pond as part of landscaping of open space. If GCN present mitigation land will need to be provided. Protect Ancient Woodland with inaccessible buffer of 15 - 50m, managed for biodiversity and address any adverse impacts on Local Geological site under MD12. Create green corridor along footpath and link with open space and Env. Network to the south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green link along footpath linked to open space. Use open space provision to provide biodiversity enhancements and accessible links to Stanmore Country Park.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes part of designated area of the Scheduled Monument of The Hermitage (NHLE ref. 1004782). Also contains three Iron Age/ Roman cropmark enclosure sites (HER PRNs 02320, 02321 & 00205) and a possible medieval holy well known as the Hermits Well (HER PRN 00386). Beyond these site, finds of prehistoric flint scatter (HER PRN 01341) and metal detectorist finds suggest wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on SM and its setting, archaeological DBA + field evaluation). Development would need to avoid
<i>Heritage Comments Opportunities:</i>	Development would need to avoid area of Scheduled Monument. S106 monies could help to secure management and enhanced access and interpretation of SM.
<i>Tree Comments Significant Constraints:</i>	TPO woodland adjoins length of western boundary.
<i>Tree Comments Other Constraints:</i>	hedges within and around site and occasional mature trees around site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and important retained trees.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover and expand woodland in association with future development. Retain fine trees and woodland within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Landfill off site to the south poses a gassing risk. Noise from roads bordering the site. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Contaminated land assessment necessary and mitigation required. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Suggest good separation distance from any agricultural buildings located on the edge of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>A large site consisting of agricultural land in the Green Belt to the east of Bridgnorth. The site is bounded by the A458 to the south, A454 to the east, Hermitage Hill to the west, and the B4363 to the north. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Part of the site adjoins the built form of The Hobbins and is in proximity of Stanmore Industrial Estate (separated by Stanmore Country Park). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration. The site also offers the potential to provide a park and ride on the site would provide a level of mitigation.</p> <p>The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site adjoining ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth, proximity to trees subject to TPO protection, proximity to an environmental network corridor, there are hedgerows on and around the site, occasional trees on site boundaries and there may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains and is in proximity to a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Waste water treatment capacity.</p> <p>A range of community services and infrastructure as part of a large scale planned mixed-use development.</p> <p>Improvement of environmental network & measures to protect ancient woodland including buffer strip.</p> <p>Contaminated land and other appropriate environmental mitigation measure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Park & Ride.</p> <p>Potential interpretation of ancient monument on the site and provision of footpath link to Bridgnorth across and open space provision, if compatibility with the need to protect Hermitage Coppice.</p> <p>Environmental network enhancement and formation of linkage to Stanmore Country Park.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is separated physically and functionally by agricultural land and the Hermitage Ridge. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Assessment of the site in combination with adjoining sites is summarised separately within this assessment.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	P58a
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	9%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; with no contribution against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a moderate level of harm on the Green Belt due to the level of encroachment on countryside within the parcel itself. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P54, P55, P56 and P58a/b): If 66% of these sites were developed as housing they could accommodate 4,591 homes. These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PRoW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	Suggest seek landscape advice.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (unimproved grassland and other priority habitats need botanical survey to assess impacts), reptiles. This site lies immediately adjacent to the Env. Network corridor (on the northern and western boundary). CS17 Environmental Networks applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees on site. Retain pond as part of landscaping of open space. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided. Open space to include retained mature trees and link to Env. Network to the west and northern corner in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links along northern boundary, including centralised open space. Use open space provision to provide biodiversity enhancements and links to Stanmore Country Park for residents.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large size of site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by and containing mature trees and hedgerows. Tree nursery / young plantation? Occupying southern portion of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	Retain fine trees and woodland within site as features in open space within any development. Expand / link with existing woodland adjacent site
<i>Public Protection Comments Significant Constraints:</i>	Busy industrial site to border. Noise etc considered considerable and not acceptable to build residential in close proximity that may inhibit the industrial activity in future.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>A greenfield site in a rural setting more closely associated with the Stanmore Industrial Estate, it is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate, Stanmore Country Park, agricultural fields and the Hermitage Ridge (and associated ancient woodland). The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Much of the site is located within a source protection zone 3.</p> <p>The site is located within two landscape parcels (much of the site is in the less sensitive parcel), which have medium and medium-high landscape and visual sensitivity to housing development and medium and high landscape and visual sensitivity to employment development.</p> <p>The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken.</p> <p>The site is adjacent to an environmental network corridor and may contain priority habitats and protected species. The site contains and is in proximity of mature trees and hedgerows.</p> <p>The site may have archaeological potential.</p> <p>The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use.</p> <p>There is a foul sewer through site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Improvements to the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout. Substantial and effective boundary treatments. Links to adjacent woodland. An effective buffer to residential properties.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Protection and enhancement of Stanmore Country Park. Green infrastructure links through the site. SuDS. Acoustic design, layout, green infrastructure and appropriate building materials. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Allocate in part as an employment allocation to support the expansion of Stanmore Industrial Estate</p>
<p>Reasoning</p>	<p>The site is well related to Stanmore Industrial Estate, an existing employment area which is inset within the Green Belt. Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the site, it is considered appropriate to identify further land for the expansion of this site, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of dome land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>The sites will form extensions of Stanmore Industrial Estate and as such will be accessed through the existing access (subject to necessary improvements).</p> <p>A small part of the site is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint.</p> <p>Much of the site is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint.</p> <p>A small portion of the site has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact.</p> <p>Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	6.8ha of employment land
If proposed for Allocation Design Requirements:	<p>The site represents an extension to the existing Stanmore Industrial Estate. Development will be for complementary employment uses (use classes B1, B2, B8 and appropriate sui generis uses) only.</p> <p>Access will be provided via the existing Stanmore Industrial Estate. Necessary improvements will be made to highways infrastructure, including the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. An effective buffer to nearby residential properties is particularly important. The buffer to the north should provide a positive link to nearby woodland.</p> <p>Development should seek to provide green infrastructure links through the site, retain high quality trees, woodland and priority habitats on the site. Any lost trees should be offset within the sites buffer. The public right of way along part of the sites southern boundary will be retained.</p> <p>Acoustic design, layout, green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the site.</p> <p>The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere. Compensatory provision to the Green Belt will be made through investment in the quality of Stanmore Country Park.</p>

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A greenfield site located in a rural setting within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Much of the site is located within a source protection zone 3. The site in part adjoins Stanmore Industrial Estate, but separation is caused by P58a. The site is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate, agricultural fields and the Hermitage Ridge (and associated ancient woodland).</p> <p>The site is located within two landscape parcels (about half of the site in each), which have medium and medium-high landscape and visual sensitivity to housing development and medium and high landscape and visual sensitivity to employment development.</p> <p>The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken.</p> <p>The site is adjacent to an environmental network corridor and may contain priority habitats and protected species. The site contains and is in proximity of mature trees and hedgerows. The site may have archaeological potential. The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use. There is a foul sewer though site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Links to Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site in part adjoins Stanmore Industrial Estate, separation is caused by P58a. The site could have potential as part of a larger allocation or for future safeguarding following any future development of P58a. However around half of the site has high visual and landscape sensitivity to employment development and has not been actively promoted. As such on reflection it is considered most appropriate to retain as Green Belt.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3 Updated	
Site Reference:	P59
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P59): If 66% of this site was housing this site could accommodate 830 homes. This site has good vehicular access potential, directly onto the A458.</p> <p>As part of a strategic settlement east of Bridgnorth Low Town this site lies the furthest east from the existing development and therefore has less sustainable transport potential.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>Complicated site from aerial photos. Part of site core and corridor of Environmental Network. CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision. Suggest seek landscape advice. If GCN present then mitigation land will also reduce potential area for development. Extreme north and southern quarter appear to have no unmanageable constraints.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles, otters and water vole. This site lies partly within and immediately adjacent to the Env. Network corridor CS17 Environmental Networks applies. Area possible for development will greatly depend on surveys. Buffer of semi-natural vegetation to watercourse and preferably additional room for public access.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/ponds on site. Retain pond as part of landscaping of open space. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided. Open space to include Env. Network and link to Stanmore Country Park with semi-natural corridors with footpaths in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links for residents to Stanmore Country Park. Use more than the minimum open space provision to protect existing biodiversity and provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Very large size of site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows within and around site boundary. Plantation and natural woodland occupy central part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	Retain fine trees and woodland within site as features in open space within any development. Expand / link with existing woodland adjacent site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise close to the established industrial estate. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A linear site located in a rural setting to the east of Stanmore Industrial Estate and Stanmore Country Park, physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate and agricultural fields and the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration.</p> <p>The northern portion of the site has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. It may have potential for future safeguarding but some high landscape and visual impact, proximity to industrial estate, trees, potential archaeological and other ecological interest, known pluvial flood risk are considerations. Development would need to be restricted to land outside the 1,000 year surface flood risk zone.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Links to Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is distant from the built form of Bridgnorth and due to its linear shape, poorly related to the built form of Stanmore Industrial Estate.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	
Highway Comments - Could the Development Occur Without Off-Site Works?	
Highway Comments - Are Envisaged Off-Site Works Achievable?	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
Ecology Comments Significant Constraints:	Large, complicated site from aerial photos. Much of site core and corridor of Environmental Network. CS17 Environmental Networks applies. Only very reduced numbers of housing possible as protection of Environmental Network would not be possible in open space provision. Suggest seek landscape advice. If GCN present then mitigation land will also reduce potential area for development. Part of Env. Network on site is plantation Ancient Woodland. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, reducing the remaining land available to development.
Ecology Comments Other Constraints:	EcIA required. Surveys for GCN (ponds close by and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. More than half of this lies within and immediately adjacent to the Env. Network corridor. CS17 Environmental Networks applies. Area possible for development will greatly depend on surveys but will be greatly reduced, perhaps a small amount of development on few arable areas.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links for residents. Use more than the minimum open space provision to protect existing biodiversity and provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site falls partially within, and has potential to effect the setting of, Quatford Conservation Area. Site includes former historic parkland of Stanmoregove (HER PRN 07549) and has potential to effect setting of the associated Grade II Listed Stanmore Hall (NHLE ref. 1367568). May also effect the setting of Grade II listed Quatford Castle (NHLE ref. 1374849). Site includes a prehistoric cropmark pit alignment (HER PRN 28775). Scatter of metal detectorist finds and very large size suggests there may be other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance and setting of CA; impacts on non-designated parkland and settings of LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site contains protected woodland at the north. Large swathe of north, central and southern parts of site are covered in mature woodland.
<i>Tree Comments Other Constraints:</i>	mature trees, groups of trees, woodland and hedgerow around and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development and seek to expand existing woodland.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise close to the established industrial estate. Any significant scale development causing additional traffic movements into town requires air quality assessment. Landfill within 250m that requires assessment for potential landfill gas migration and impact on the proposed site.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated. Contaminated land assessment and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the south-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A large site in a rural setting to the south-east of Bridgnorth within the Green Belt. <i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; weakly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a low- moderate level of harm on the Green Belt due to some encroachment on countryside. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	(Comments on P62 and P63): If 66% of these sites was developed as housing they could accommodate 1,519 homes. P62 has good vehicular access potential, directly onto the A442 at several location. The section of P63 which straddles the A458 can only be access via and existing field gate on the north west corner of the A458 / A442 roundabout. It is very unlikely that this junction could be remodelled to accommodate a new link providing access to this area given the topographical and existing development constraints. The remainder of P63 has good vehicular access potential, directly onto the A442 at a number of locations but the ground level difference may limit these. As strategic settlement south of Bridgnorth Low Town theses sites have a number of disadvantages. There linear nature will limit the potential to create a compact layout which maximises sustainable travel for local trips and their proximity to existing facilities will restrict sustainable trips to neighbouring facilities during the initial phases of construction.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	N/A
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers , Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Small sections of site are immediately adjacent to the Fwy Network corridor. CS17 Environmental Networks applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If GCN present or priority habitats, mitigation land will need to be provided. Corridor link to be created using open space and green pedestrian routes between Env. Network in north west to that in south-east of the sites around the 50m contour.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed Grange Cottage (NHLE ref.1053948) and 4-5 Danesford (NHLE ref. 1295289). Large size of site and cluster of metal detectorist finds suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	belt of TPO woodland meets northern end of site.
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around and within the separate portions of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development and seek to expand existing woodland.
<i>Public Protection Comments Significant Constraints:</i>	Known noise close to the established industrial estate which causes complaint in the locality. Not considered acceptable to move more residents to the area.
<i>Public Protection Comments Other Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment. Landfill within 250m that requires assessment for potential landfill gas migration and impact on the proposed site.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated. Contaminated land assessment and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the south-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. As the sites availability is currently unknown, the site is not considered suitable for allocation. Potential for future safeguarding but proximity to industrial estate, contamination, trees, potential archaeological and other ecological interest, known pluvial flood risk are considerations. In particular there are existing conflicts between noise generation by employment uses and local resident amenity concerns and due to concerns regarding residential amenity being compromised by existing employment uses. The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment, primarily due to poor access to existing facilities and services and for potential impacts on environmental and heritage assets. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Safeguarding of the environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Enhancement of Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site it is located in Danesford close to the existing large industrial premises and residential development to the north west, but not well connected to the main built form of Bridgnorth. There are existing issues with the compatibility of employment and residential uses. The site is also not promoted.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

<i>Tree Comments Other Constraints:</i>	site surrounded by woodland and containing belts of mature trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from woodland and seek to retain internal trees within open space.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover and expand woodland in association with future development. Retain fine trees and woodland within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Con land likely from past land use. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Con land assessment likely to show remediation possible. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site consists of the built form of Stanmore Industrial Estate. It is some distance from the built form of Bridgnorth, forming an associated employment site.</p> <p>Stanmore Industrial Estate is considered a 'centre of excellence for engineering and advanced manufacturing' due to the cluster of businesses within and associated with the engineering and advanced manufacturing sector. As a result, it is considered to be a key employment location associated with Bridgnorth and one of the most successful centres for employment in Shropshire.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Links to Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as a key employment site in Shropshire</p>
<p>Reasoning</p>	<p>Stanmore Industrial Estate is considered a 'centre of excellence for engineering and advanced manufacturing' due to the cluster of businesses within and associated with the engineering and advanced manufacturing sector. As a result, it is considered to be a key employment location associated with Bridgnorth and one of the most successful centres for employment in Shropshire.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	8
<i>Ecology Comments Significant Constraints:</i>	Site entirely within the Environmental Network and CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for GCN (ponds close to site boundary and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Site adjacent to the Env. network (Stanmore Country Park) and CS17 applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If priority habitats present (looks likely), mitigation land will need to be provided. Open space to be provided should be next to and linked by green corridors to Stanmore Country Park. Reduced development area.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site formally part of RAF Bridgnorth (HER PRN 29127) and formerly included part of Bridgnorth racecourse (HER PRN 32056).
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees, groups of trees and scrub across site. Woodland adjacent east, south and west boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from woodland and seek to retain significant internal trees within open space.
<i>Tree Comments Opportunities:</i>	Expand adjacent woodland in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	Industrial use abuts significant part of the site boundary. Placing residential here may restrict businesses on the industrial estate which is not considered acceptable.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site was formerly part of the RAF Stanmore site. Whilst the rest of the site was converted to an industrial estate, this component was allowed to naturalise. The site forms part of the gap between Stanmore Industrial Estate and The Hobbins (residential). It is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Country Park, agricultural fields and the Hermitage Ridge (and associated ancient woodland). The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken. The site forms part of an environmental network and may contain priority habitats. The site contains mature trees, groups of mature trees and scrubland. There is also woodland adjacent to the site's eastern, southern and western boundaries. The site forms part of the former RAF Bridgnorth and formerly included part of the Bridgnorth racecourse.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use. Conversely it is also close to existing residential properties at The Hobbins, as such any noise generating uses on the site will require due consideration. There is a foul sewer though site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Power supply and other utilities. Improvements to the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout. Substantial and effective boundary treatments. An effective buffer to The Hobbins and other residential properties.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Protection and enhancement of Stanmore Country Park. Green infrastructure links through the site. Acoustic design, layout, green infrastructure and appropriate building materials. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Allocate in part as an employment allocation to support the expansion of Stanmore Industrial Estate</p>
<p>Reasoning</p>	<p>The site is well related to Stanmore Industrial Estate, an existing employment area which is inset within the Green Belt. Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the site, it is considered appropriate to identify further land for the expansion of this site, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of dome land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint.</p> <p>The sites will form extensions of Stanmore Industrial Estate and as such will be accessed through the existing access (subject to necessary improvements).</p> <p>The site forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park.</p> <p>Design and layout of development will need to mitigate any noise and visual impact on nearby residential properties. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	4.6ha of employment land
If proposed for Allocation Design Requirements:	<p>The site represents an extension to the existing Stanmore Industrial Estate. Development will be for complementary employment uses (use classes B1, B2, B8 and appropriate sui generis uses) only.</p> <p>Access will be provided via the existing Stanmore Industrial Estate. Necessary improvements will be made to highways infrastructure, including the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. An effective buffer to The Hobbins and other residential properties is particularly important.</p> <p>Site design and layout will positively respond to the site's relationship with Stanmore Country Park and The Hobbins. Development should seek to provide green infrastructure links through the site, retain high quality trees and retain priority habitats on the site. Any lost trees should be offset within the sites buffer.</p> <p>Acoustic design, layout, green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the site.</p> <p>Compensatory provision to the Green Belt will be made through investment in the quality of Stanmore Country Park.</p>

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

AQ assessment likely to be required and mitigation stated. Con land assessment likely to be necessary and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site lies in a rural setting to the south of Stanmore Country Park and a small group of dwellings at Russell Close. South of the site lies Stanmore Hall Touring Caravan Park. The site is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and the Hermitage Ridge (and associated ancient woodland). The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is also poorly connected to the existing development at Stanmore Industrial Estate and The Hobbins, being separated by the Country Park and more closely linked with Russell Close.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Whilst there natural environment considerations including TPO & significant trees these are generally a manageable constraints. However the site is not as well connected to the existing development at Stanmore Industrial Estate and The Hobbins being separated by the Country Park and more closely linked with Russell Close.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Improved access /junction with A458. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Environmental network enhancement and formation of linkage to Stanmore Country Park. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	A454
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes improvements of the existing estate road junction with the A454, including review of speed limit, will be funded by the development (linked with STC001 & STC002).
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Assuming any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions are funded by the adjacent developments.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	8
<i>Ecology Comments Significant Constraints:</i>	Existing country park and completely in the Environmental Network, largely woodland. CS17 Environmental Networks applies. Priority species present (invertebrates) which would require mitigation land.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for GCN (ponds close to site boundary and within 500m,) Dormice, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), Badgers, Bats, nesting birds, reptiles and invertebrates (priority spp present).

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance the whole country park.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site formally part of RAF Bridgnorth (HER PRN 29127), including site of the memorial monument, and formerly included part of Bridgnorth racecourse (HER PRN 32056).
<i>Heritage Comments Management of Constraints:</i>	RAF monument should be retained and given appropriate setting
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered by woodland
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating a noise source. Any significant scale development causing additional traffic movements into town requires air quality assessment. Potential con land from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated. Con land assessment likely to be necessary and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site is an extensive Country Park located to the west of Stanmore Industrial Estate, forming part of the gap between the estate and the settlement of Bridgnorth. The site was formerly part of the RAF Stanmore site. The site is located in the Green Belt and is a Country Park with significant trees which forms part of the environmental network and has significant ecological value. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Part of the site also forms a buffer between the Stanmore Industrial Estate and adjacent residential uses to the south.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Retention and enhancement of Stanmore Country Park Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Retain as Green Belt</p>
<p>Reasoning</p>	<p>The site is a well-valued Country Park and located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3 Updated

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	8
Ecology Comments Significant Constraints:	None.
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Site adjacent to the Env. network (Stammore Country Park) and CS17 applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If priority habitats present, mitigation land will need to be provided. Open space to be provided should be linked by green corridors to Stanmore Country Park and the open space in the existing development THB002.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Formerly included part of Bridgnorth racecourse (HER PRN 32056) and site also included former Royal Observer Core observation post (HER PRN 32791). Much of site appears to have been extensively levelled ?during construction of Stanmore Camp.
<i>Heritage Comments Management of Constraints:</i>	Consider retaining and conserving ROC observation post.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedgerows around site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to west and south. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair

Relationship to the Black Country	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>This site consists of a series of sites (P54 (part), P56 (part), P58a, STC002, STC005 and STC006) which were in combination consulted upon as a preferred site allocation within the Preferred Sites consultation in late 2018/early 2019), although the specific extent of the site is somewhat reduced from that previously identified as a preferred site allocation, to exclude areas of Stanmore Country Park.</p> <p>This site represents a very large site located to the East of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, opportunities for expansion of a very successful employment site, community facilities within a new local centre to support the new community and extensive green infrastructure. The components of the site generally have good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The provision of pedestrian and cycle links between the site and the existing built form of Bridgnorth will require very careful consideration due to the presence of the Hermitage Ridge and associated ancient woodland. The site also offers the potential to provide a park and ride on the site, which would provide a level of mitigation.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The Green Belt Assessment indicates that the parcels which cover the site: perform a weak contribution to purpose 2; a moderate (P54 and P58) and strong (P56 and P57) contribution against purpose 3; and makes no (P54, P57 and P58) and weak (P56) contribution against purpose 4.</p> <p>The Green Belt Review indicates that release of these parcels would have the following levels of harm to the Green Belt: moderate (P58a, STC002, STC005 and STC006), moderate-high (P56) and high (P54).</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is primarily located outside of identified source protection zones, although much of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, is located within Source Protection Zone 3. However, it is considered that this issue could be managed through appropriate design and construction of development.</p> <p>The majority of the site is located within a landscape parcel which has medium landscape and visual sensitivity to housing and employment. A very small portion of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site lies immediately adjacent to ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth. Design and layout will need to give these factors due consideration.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, although the entirety of STC002 is located within an environmental network. There are also wooded areas within the site and may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is close to sources of road and commercial noise and potential future noise from other commercial uses on the employment land proposed within the site promotion itself. However, it is considered that this can be managed through design and layout of the development and use of green infrastructure buffering.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>A new local centre to provides retail and community uses. A new community centre. A park and ride. Primary school. Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth. This will need to positively respond to the presence of ancient woodland and the gradient between the site and the town. Necessary improvements to road infrastructure.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Significant open space and green infrastructure on the site. Improvements to Stanmore Country Park. SUDs and water treatment facilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>

Recommendation	Retain the majority of the site as Green Belt. Allocate two of the component sites (P58a and STC002) specifically for extensions to Stanmore Industrial Estate.
Reasoning	<p>The site adjoins ancient woodland along Hermitage Ridge. This ridge also creates physical and functional separation between the site and the built form of Bridgnorth. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site contains part of and parts of the site are in proximity of The Hermitage Scheduled Monument.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>It is understood that this site has been superseded by BRD032 a Revised Stanmore Garden Village proposal. The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed 'Garden Village' proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (July 2021 Update), provided as part of the evidence base for the Local Plan Review.</p> <p>However, Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the Industrial Estate, it is considered appropriate to identify further land for its expansion, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of some land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint. Sites P58a and STC002 are well related to the built form of Stanmore Industrial Estate and as such represent opportunities for the expansion of the site. As extensions of Stanmore Industrial Estate they will be accessed through the existing access (subject to necessary improvements). Much of P58a is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint. STC002 forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park. A small portion of P58a has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact. Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assumes vehicular access would not be via Pound La.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Bat potential in mature trees and also notable species recorded nearby that are likely to forage over this area given 'wide' character. Retain mature trees and hedges in landscaping as part of corridor. Northern portion is within Environmental Network and also identified as potentially priority habitat which would require survey between May and end of August.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Retain mature trees in field. Enhance and restore Env. Network to north and west in accordance with CS17 Environmental Networks and MD12. Extend the network to the south along the east boundary

<i>Ecology Comments Opportunities:</i>	Enhancement of the network to the east and south. Also greenspace provision should be accessible to existing housing to the west who currently don't have much Accessible Natural Greenspace. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates that eastern side of site previously formed part of the Dunge Colliery and associated coal workings (HER PRN 07285). N part of the site also formed part of the Broseley Tileries (HER PRN 04631) and is crossed by the former course of an early tramway (HER PRN 07287). Site therefore holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and trees to site boundary and trees and scrub internal to northern end of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land possible due to past mining operations and historic railway line crossing the site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation possible.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.

<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Using current field access / Bridleway
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. But suitable visibility and access road width may not be achieved via the current bridleway access onto Dark Lane without acquiring third party land.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	23
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Grassland has been identified as potentially of UK Priority status. Haycop Local Wildlife Site is adjacent and has significant fungi species and also Dingy Skipper (UK Priority Species). Both of which could also be found on this site.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Enhance and restore Env. Network surrounding most of site in accordance with CS17 Environmental Networks and MD12. Extend the network to the south along the east boundary

<i>Ecology Comments Opportunities:</i>	Suggest green/brown roofs as habitat for priority butterflies and moths and to reduce surface water run-off. Avoid topsoil on open space where possible. Use 'green hay' technique for seeding any grassland - ideally using hay from nearby Enhance woodland edge as part of open space requirement and buffer woodland and scrub with most enhancements being to the north east adjacent to the Wildlife Site. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located adjacent to former Clench Acre Mine (HER PRN 32987), so has some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + ?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by trees and continuous with wider network of woodland.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
<i>Ecology Comments Significant Constraints:</i>	Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	Much of site appears to be woodland, scrub or potential priority open habitat of some kind. Two ponds are present nearby. Environmental Network covers much of site.
<i>Ecology Comments Management of Constraints:</i>	Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Protected species mitigation and enhancement. Very likely to have reptiles on site in the open areas near paths. Buffers would be needed to the pond and the woodland areas leaving very little for development

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements in woodland and open habitat. Avoid topsoil on open space where possible. Suggest green/brown roofs and reduce surface water run-off. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Western side of site contains former mine workings (HER PRN 32861) and therefore hold archaeological interest
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered in trees and scrub and connects to adjoining and wider woodland network.
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination. Possible noise etc from factories to the south.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the north of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. <i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Very High
<i>Visual Impact Considerations: (from the LVSS)</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Given scale of development
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	14
<i>Ecology Comments Significant Constraints:</i>	Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	Much of site appears to be woodland / scrub and potentially priority habitat. Half the site is currently in the Environmental Network and the rest (which arguably should also be) is an area Tree Preservation Order. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. A pond is present to the west which would require survey for newts.
<i>Ecology Comments Management of Constraints:</i>	Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Protected species mitigation and enhancement. Buffers would be needed to the pond and the woodland areas leaving very little for development

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements in woodland and open habitat. Avoid topsoil on open space where possible. Suggest green/brown roofs and reduce surface water run-off. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Broseley Conservation Area and setting of the Ironbridge Gorge World Heritage Site. Former coal workings (HER PRN 31083) and a tramway (HER PRN 31082) present on site, so hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on character and appearance of CA and settings of WHS). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered in coppice and other woodland, part of which is subject to a TPO. It connects to the woodland of Ironbridge Gorge
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available but mining shaft on site which could cause stability issues etc (outside my remit but worth noting).
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Poor
Relationship to the Black Country	The site is located to the north of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	<p>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</p> <p>This Neighbourhood Plan also includes a housing allocation.</p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Site Assessment - Stage 3 Updated	
Site Reference:	BRO012
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	10%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	12%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	17%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Suitability of access will need to be checked by probably OK given small scale of development
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Most of site is within the Environmental Network. Bat potential in mature trees. Retain mature trees and hedges in landscaping as part of corridor, any open space to be adjacent to and enhance Env. Network.
<i>Ecology Comments Management of Constraints:</i>	Reduced numbers of housing as protection of Environmental Network and retention of mature trees unlikely to be fully possible in open space provision

<i>Ecology Comments Opportunities:</i>	Avoid topsoil on open space where possible. Use 'green hay' technique for seeding any grassland - ideally using hay from the nearby. Protect, enhance and restore Env. Network. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Broseley Conservation Area and may fall within the settings of a number of the Grade II listed buildings in the vicinity . HER indicates the earthwork and below ground remains of post-medieval coal workings may be present across much the site (HER PRNs 04565 &0728), so site may hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment; impact on character and appearance of CA and settings of LBs). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	numerous trees spread across most of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the west of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. <i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	N. Chapel Lane is unsuitable for the additional traffic that is likely to be generated by the development which may potential involve 90 homes.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The Chapel Lane / B4375 junction would need to be improved and third party land would be needed.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for habitats, GCN (in pond 80m to west), Dormice (known records in general area), Badgers (known), Bats, nesting birds, vascular plants, reptiles.. Some Environmental Network crosses site and, with more survey, additional core / priority habitat or corridor could be identified.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision.

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing. Better assess corridor and core environmental network, retain this and enhance where possible. Use 'Green Hay Strewing' technique as best practice for creation of grassland areas. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within and on the boundary of, and within the setting, of the Broseley Conservation Area. HER indicates the earthwork and below ground remains of early post-medieval coal workings (bell pits) are present across the site (HER PRN 04565), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact character and appearance on setting of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	numerous trees around and within site, particularly areas in the central and northern parts of the site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	None expected
<i>Public Protection Comments Management of Constraints:</i>	None likely
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the west of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Site Assessment - Stage 3 Updated	
Site Reference:	BRO030
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Very High
<i>Visual Impact Considerations: (from the LVSS)</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Via Woodlands Close
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. it would be difficult to justify permitting development (20 homes in this case) that increased the traffic along Woodlands Road and northern section of King Street. This route is very narrow and lacking any footway in places.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	12
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Grassland may be of interest but low risk. Low risk of Reptiles on site.
<i>Ecology Comments Management of Constraints:</i>	Simple ecological assessment all that is required (Extended Phase 1).

<i>Ecology Comments Opportunities:</i>	Opportunity to create linking corridor of woodland / hedgerow along eastern boundary to act as stepping stone for woods to north and south. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site potentially within setting of Ironbridge Gorge World Heritage Site
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of WHS)
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	single tree near entrance on south western side of site
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land conditions required due to off site contamination migrating.
<i>Public Protection Comments Management of Constraints:</i>	Remediation possible.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	<p>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</p> <p>This Neighbourhood Plan also includes a housing allocation.</p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	No

If proposed for Allocation Design Requirements:	N/A

Site Assessment - Stage 3 Updated	
Site Reference:	BRO031
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	1%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. This site would be able to deliver improvements to Floyer Lane. But suitable site access improvements onto Benthall Lane might be difficult to achieve. Access onto Bridge Road could be achieved.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If the site access is on Bridge Road then check would need to be made at the Benthall Lane / Bridge Road junction to ensure it was suitable to carry the additional traffic generated by the 84 home on this development.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	15
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for habitats, GCN (in pond 20m to north), Badgers, Bats, nesting birds, vascular plants, reptiles.. Majority of site is in the Environmental Network and, with additional survey, additional core / priority habitat or corridor could be identified. Tree Preservation Orders on several roadside trees on or adjacent to this site. Likely to be key foraging site for bats and birds of prey like Owls and Kestrel. Anthills in earlier Street View indicates good quality grassland.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to in accordance with CS17 Environmental Networks and MD12. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision.

<i>Ecology Comments Opportunities:</i>	Grassland areas appear to have been better at some stage. Opportunities to restore these as part of any open space allocation exists. Green Hay Strewing should be used if this ever happens. Suggest green/brown roofs and reduce surface water run-off. Enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Position between two Local Wildlife Sites of similar habitat suggests lots of opportunities to enhance area. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Broseley Conservation Area. HER, LIDAR and historic OS maps indicates the earthwork and below ground remains of post-medieval coal workings are present across much the site (HER PRN 07284), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	limited tree and scrub cover around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Mine shafts and associated contamination likely. Potential noise from road.
<i>Public Protection Comments Management of Constraints:</i>	Remediation where necessary for contaminated land. Regulatory Services are not experts in stability aspects related with mine shafts and cannot comment other than to state that a stand off distance may be appropriate. Road noise could be mitigated through location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-west of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Pound Lane adjacent to site would need to be improved for traffic and pedestrians.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. Pound Lane leading to the B4373 and the junction with the B4373 would need to be improved and third party land would be needed. Y. If access can be achieved through the adjacent employment allocation directly onto the B4373.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Partly within Env. Network. Paddocks to east may be unimproved grassland. Surveys of tightly grazed grasslands are difficult and would require grass to be left to grow before survey. Area of scrub / woodland has interest, could support protected species (including Dormice) and should be in the Env. Network. Area of overgrown grassland to north of this may also have interest in own right and may support reptiles.
<i>Ecology Comments Management of Constraints:</i>	EclA required. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Retain mature trees in field. Protect, enhance and restore Env. Network to in accordance with CS17 Environmental Networks and MD12.

<i>Ecology Comments Opportunities:</i>	Retain and improve hedges, hedgerow trees and woodland/ scrub. Grassland area could be improved with more sympathetic management as meadow. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates that eastern side of site previously formed part of The Dunge Brick and Tile Works (HER PRN 07237) and the associated Dunge Colliery and associated coal workings (HER PRN 07285), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	boundary hedgerows and double internal hedgerow and copse of trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate central hedgerows and copse in open space and plant to connect to adjoining hedgerows.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for con land.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation.
Reasoning	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates part of this site for residential development. This Neighbourhood Plan also includes an employment allocation. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Site Assessment - Stage 3 Updated	
Site Reference:	BRO037
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	4%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	10%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Currently a bridleway
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. But suitable visibility and access road width may not be achieved via the current bridleway access onto the B4373 without acquiring third party land.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	23
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Potential grassland interest. Entire area is corridor habitat and close to two core areas. The habitat might be priority habitat. Some trees in the field and boundaries appear to be mature and could support bats. Movement of hedgehogs could be disrupted by any development if poorly planned.
<i>Ecology Comments Management of Constraints:</i>	Survey grassland between May and September. Damp area in nearby Local Wildlife Site would need survey for potential as a breeding site for Great Crested Newts.

<i>Ecology Comments Opportunities:</i>	Ensure hedgehog friendly development that includes gaps in fence gravel boards, etc. Plan areas of open space that compliment the priority habitats to the west and south. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates the earthwork and below ground remains of early post-medieval coal workings (bell pits) are present across the site (HER PRN 04565), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	boundary trees and copse internal to central part of site

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Top field of site is in the Environmental Network. Species found nearby and potentially on site are Hedgehog, Dingy Skipper, Slow-worm, Common Lizard, other butterfly and moth species that have been recorded nearby at The Haycop Local Wildlife Site nearby. Some potential for the same species to occur on the boundaries and also the rough area to the north east of the site.
<i>Ecology Comments Management of Constraints:</i>	EclA required. In particular of edges of site and rough corner at the north east of the site. Boundary trees and hedgerows should be retained where possible. Survey of reptiles over summer (avoiding July and August when possible). A wide buffer to the south where the Haycop Local Wildlife Site is close by. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision.

<i>Ecology Comments Opportunities:</i>	Ensure hedgehog friendly development that includes gaps in fence gravel boards, etc. Plan areas of open space that compliment the priority habitats to the west and south. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large site which included the site of the site of Yew Tree Mine (HER PRN 33000) and therefore has archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	isolated trees and hedgerows within and around site boundaries. Borders wider woodland network to north and east
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Connect to woodland to north and east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land from past land use in the area. Possible road noise issues.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for con land. Noise can be mitigated by glazing and orientation of buildings to shelter garden areas
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The area is bisected by Environmental Network that follows the hedge and watercourse across the site. This water course flows into Corbett's Dingle Local Wildlife Site and Ancient Woodland which clearly has implications for drainage. Culverting of watercourses is rarely approved as part of Open Water Consents that would likely be required for this site. Mature in-field and boundary trees are present. The grassland at this site may be of interest.
<i>Ecology Comments Management of Constraints:</i>	EclA required. Survey grassland between May and September. Significant boundary trees are present which should, with hedgerows, be retained where possible. Water course should be built into any design as an open water feature and incorporated into SUDS.

<i>Ecology Comments Opportunities:</i>	In addition to the standard list of opportunities the water course could be enhanced with good design that doesn't rely on culverting. The Environmental Network should be enhanced.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Medium sized site, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees around site boundaries and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Seek to retain internal tree and hedgerow within open space within site
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contamination from off site sources. Potential road noise.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Site Assessment - Stage 3 Updated	
Site Reference:	BRO043

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	<p>The eastern boundary that follows the hedgerow and watercourse forms an Env. Network corridor. This watercourse flows into Corbetts Dingle Local Wildlife Site and Ancient Woodland, which has implications for drainage. Culverting of watercourses is rarely approved as part of Open Water Consents that would likely be required for this site.</p> <p>Potential grassland interest including in the wide road verge on north west corner. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.</p> <p>Hedgerows, trees and watercourse will need to be buffered.</p>
<i>Ecology Comments Management of Constraints:</i>	<p>Water course should be built into any design as an open water feature and incorporated into SUDS. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.</p>

<i>Ecology Comments Opportunities:</i>	Seek to open up the footpath to the west and combine with open space provision. The watercourse could be enhanced with good design that doesn't rely on culverting.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Medium sized site, so may have some archaeological potential. Condition advised for an archaeological watching brief on a 2015 application on part of the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment +?evaluation). Archaeological watching brief condition on any PP.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	individual TPO trees around boundary and within site
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees on site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Seek to retain internal trees within open space within site
<i>Tree Comments Opportunities:</i>	enhance tree cover within site, to deliver net gain for biodiversity.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Site is in area of known coal mining and contaminated land vicinity. Site investigation would be required.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	All the woodland to the south west is listed as under a TPO. Reptile, badger, bats, nesting birds and even Dormice could be present. The small woodlands may also be of interest. While not listed on our maps the woodland is clearly either corridor or perhaps core habitat in the Environmental Network. The maps will be adjusted accordingly. A reduced number of houses may be required to allow for the network / core habitat and TPO.
Ecology Comments Management of Constraints:	EclA required. The woodland should be surveyed in Spring or early summer to ensure spring flowers are picked up. Reptile survey mats should be installed early in the year or late the previous year to allow reptiles to become used to them. A buffer should be included to the woodland.

<i>Ecology Comments Opportunities:</i>	In addition to the standard list of opportunities the woodland could be enhanced. The Environmental Network should be enhanced and woodland edge habitat promoted. If reptiles are found then ground features that can be used for hibernation and basking should be incorporated into the open space.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Site formed part of the Rock Tile Works (HER PRN 07242) and also contains mine workings (HER PRN 07283) , so holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on Outstanding Universal Value of WHS and character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Belt of TPO woodland occupies north-west to south-east side of site.
<i>Tree Comments Other Constraints:</i>	trees to north-east site boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees. Development stand-off from protected woodland.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contamination from historic land use on and in the vicinity of the site. Possible noise impact from industrial estate to the east.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for contaminated land. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Poor
Relationship to the Black Country	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. <i>Heritage Comments Other Constraints:</i>	Site located within Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Site formed part of the Rock Tile Works (HER PRN 07242) and also contains mine workings (HER PRN 07283), so holds archaeological interest. ?some of the present buildings on site may be historic industrial buildings.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; ?Level 2 historic building recording; impact on Outstanding Universal Value of WHS and character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by mature trees - part of ironbridge gorge woodland network
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings around periphery of site, in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover within site, in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land due to past and existing land uses. Potential noise from industrial site to the east.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for contaminated land. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment. Significant noise mitigation measures likely which may slightly reduce the number of properties possible on site.
<i>Public Protection Comments Opportunities:</i>	Potential to remove potential noise sources for nearby residential properties if this site was developed for residential.
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
Ecology Comments Significant Constraints:	If priority habitats are present then the site should not be developed. If priority habitats not present, boundary vegetation should be retained, enhanced and buffered, reducing developable area.
Ecology Comments Other Constraints:	The site forms an Env. Network corridor. The site may contain priority habitat - botanical survey required. If priority habitats are present then the site should not be developed. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.

<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located adjacent to the boundary, and within the setting, of the Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Historic editions of the OS map indicates that at least one mine shaft is present on the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on Outstanding Universal Value of WHS and character and appearance of CA; archaeological Desk Based Assessment + ?evaluation). High quality design for development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	abuts conservation area to the east.
<i>Tree Comments Other Constraints:</i>	open rough grassland site with scrubby trees and shrubs mostly around the perimeter. Adjoins extensive deciduous woodland to the south and east
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land due to past land use. Possible noise from road to west. Possible stability issues however this steps outside of my remit.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	<p>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</p> <p>This Neighbourhood Plan also includes a housing allocation.</p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

<i>Visual Impact Considerations: (from the LVSS)</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	B4373
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Development accessed off B4373 Ironbridge Road, likely to be able to accommodate development, subject to achieving satisfactory access and potential improvements to ironbridge road.
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	y
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	No
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Yes - necessary improvements should be achievable
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	SC Ecology unlikely to support development on this site. The site forms an Environmental Network corridor, due to the presence of woodland and brook. CS17 Environmental Networks applies. Reduced numbers of housing would be required as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA and botanical survey required and surveys for badgers, bats, GCNs, water voles, otters, white-clawed crayfish, nesting birds and reptiles
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Protect, enhance and restore Env. Network in accordance with CS17and MD12

<i>Ecology Comments Opportunities:</i>	Not recommended for inclusion in allocated sites
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within/adjoins Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Site contains mine workings (HER PRN 07283), so holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on Outstanding Universal Value of WHS and character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site within/adjoins ironbridge / jackfield conservation area and world heritage site and is a natural extension of and buffer to it in terms of habitat and landscape.
<i>Tree Comments Other Constraints:</i>	extensive scrub and mature woodland covering north, east and south of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement
<i>Tree Comments Opportunities:</i>	To protect and extend woodland cover and integrate the development into the broader landscape through the sustainable use of existing landscape features. Plan for suitable development stand-off from woodland and links to new planting within the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Known noise source to east and north. Contaminated land and mining.
<i>Public Protection Comments Management of Constraints:</i>	Parts of the site may be unsuitable due to proximity to industrial noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Known Infrastructure Requirements to make Development Suitable in Planning Terms:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Potential for Allocation?	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Recommendation	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
Reasoning	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
Further Main Modifications Required:	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Assumes access via Jubilee Drive. Netherton Lane also possible but no pedestrian provision and limited potential for improvement.
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	N
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development. Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Therefore subject to an assessment of Netherton Lane and implementation of any necessary improvements to the north of the site.
Highway Comments - Could the Development Occur Without Off-Site Works?	N
Highway Comments - Are Envisaged Off-Site Works Achievable?	See above
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
Ecology Comments Significant Constraints:	
Ecology Comments Other Constraints:	May require botanical survey. Requires EclA and surveys for GCNs (ponds within 500m), bats, dormice, badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.

<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church (NHLE ref. 1188722), together with GII Church House (NHLE ref. 1188730). Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs and CA; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Mature trees and hedgerows around and within site.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme
<i>Tree Comments</i> <i>Opportunities:</i>	retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. New native woodland creation, as part of a planned network of natural habitats / accessible open space distributed throughout the site.
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	A Phase I Desk Study should be undertaken and submitted to support any application on the site. This should identify any potential contamination issues from historical map information and other sources. Highley is a past mining village and it is not unknown for there to be undocumented contamination in such sites.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	
<i>Public Protection Comments</i> <i>Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Strategic Considerations:	<p>A very large site located to the west of Highley, the site adjoins the built form of the settlement to the north, but is separated in part to the east by another agricultural field.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Remain as open countryside.</p>

<p>Reasoning</p>	<p>The site is very large and forms much of the gap between the settlements of Highley and Netherton. The site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m), Dormice (known records nearby), Badgers, Bats, nesting birds, vascular plants (possible species-rich semi-improved grassland needs botanical survey), reptiles. Seems to have been left to re-vegetate for some time and included in corridor of Environmental Network.
Ecology Comments Management of Constraints:	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Reduced area of land available due to need to retain Environmental Network function. Area dependant on results of EclA.
Ecology Comments Opportunities:	Use open space provision and reduced number of dwellings to provide biodiversity enhancements and access to semi-natural greenspace for existing housing to east of site. Link open space to existing hedgerow system/ Env. Network system.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effects on setting of the non-designated historic buildings at Wood Hill Farm and Castle Inn
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (assessment of impact on settings of non-designated heritage assets)
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedges around boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to plant trees adjacent existing hedgerows and within site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Pub to the east of the site which may create noise at times.
<i>Public Protection Comments Management of Constraints:</i>	Possible orientation, positioning and standoff to the pub if it has the potential to create noise.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<p>Strategic Considerations:</p>	<p>The site is located adjacent to the built form of Highley.</p> <p>Whilst it is considered that an access can be achieved, that traffic associated with the development can be supported at the access point and no off-site works are required, it is understood that there is local concern about the impact of development of this site on the slip road off Woodhill Road.</p> <p>The site is more distant from services and facilities than other promoted sites.</p> <p>The site is located within a landscape sensitivity parcel which is considered to have medium-high landscape sensitivity and high visual sensitivity.</p> <p>The site would result in an increased level of residential development to the west of Bridgnorth Road.</p> <p>The site is located within an environmental network.</p> <p>Possibility of effects on non-designated historic assets.</p> <p>Any noise associated with adjacent pub will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Need to maintain environmental network function.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Link open space provision to the existing hedgerow system and environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Remain as open countryside.</p>

<p>Reasoning</p>	<p>The site is located within a landscape sensitivity parcel which is considered to have medium-high landscape sensitivity and high visual sensitivity.</p> <p>The site would result in an increased level of residential development to the west of Bridgnorth Road.</p> <p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. <i>Public Protection Comments Other Constraints:</i>	Active farm to the north east. Due to stand off distance do not anticipate any issues.
<i>Public Protection Comments Management of Constraints:</i>	None required
<i>Public Protection Comments Opportunities:</i>	Good site
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the east of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p>Strategic Considerations:</p>	<p>The site is adjacent to the built form of the settlement, with development to the sites west and south (including a site with Planning Permission for affordable housing). It is a relatively large site. A small part of the site is within an environmental network. The site may be within the setting of a listed building. The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land. Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Link open space provision to the existing hedgerow system. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Proposed for allocation.</p>

<p>Reasoning</p>	<p>The site is well related to the built form of the settlement and existing allocated sites. It presents an opportunity to provide a mix of residential uses and some high quality open space. It is considered that through appropriate design and layout of development and incorporation of effective Green Infrastructure any impact on listed buildings or their settings can be minimised. Further, it is considered that the significant public benefits of meeting the housing needs of Highley and its hinterland would outweigh any harm to the significance of these listed buildings.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>100</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>The site should provide an appropriate residential mix, responding to local housing needs. It presents an opportunity for bungalows and an extra-care facility.</p> <p>The design and layout should respond to Highley’s character and landscape setting.</p> <p>Site design and layout will reflect and respect the site’s heritage and heritage assets within the wider area, including Grade II listed Hazelwell’s Farm House.</p> <p>Strong and significant natural site boundaries and green infrastructure corridors through the site will form an intrinsic component of this development. They will be planted with native species and be used to buffer and create appropriate settings for nearby heritage assets and built form.</p> <p>A pedestrian crossing of Bridgnorth Road should be provided at an appropriate location in proximity of the site. The public right of way through the site should be retained and enhanced.</p> <p>Open space provision should respond to local needs, provide biodiversity enhancements and be easily accessible for residents on the site and within the surrounding area.</p> <p>All hedgerows, tree lines and mature trees on the site should be retained.</p> <p>The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.</p>

Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Assumes since access points for each dwelling in a linear development.
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	Y
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	
Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	21
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m), Dormice (known records nearby), Badgers, Bats, nesting birds, reptiles.
Ecology Comments Management of Constraints:	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow system.

<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedges around boundaries and across site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	None
<i>Public Protection Comments Management of Constraints:</i>	Nothing required
<i>Public Protection Comments Opportunities:</i>	Good site
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

Strategic Considerations:	<p>The site is more distant from services and facilities than other promoted sites.</p> <p>Whilst the site is located adjacent to the built form of the settlement, it is a linear site without an obvious north-eastern boundary.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Link open space provision to the existing hedgerow system.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Remain as open countryside.</p>

<p>Reasoning</p>	<p>The site is more distant from services and facilities than other promoted sites.</p> <p>Whilst the site is located adjacent to the built form of the settlement, it is a linear site without an obvious north-eastern boundary.</p> <p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	EcIA required. Surveys for GCN (ponds within 500m and immediately adjacent), Dormice (known records nearby), Badgers, Bats, nesting birds, reptiles. Included in corridor of Environmental Network more as a potential link between two better areas of habitat.
Ecology Comments Management of Constraints:	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Reduced area of land available due to need to retain Environmental Network function. Semi-natural corridor required to north-west and south-west boundaries to maintain Environmental Network and open space should adjoin this.
Ecology Comments Opportunities:	Provide additional habitat in Environmental Network along western boundaries. Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing to east of site. Link open space to existing hedgerow system.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Eastern corner of site located close on the boundary, and within the setting of, the Highley Clee View Conservation Area and other non-designated historic buildings.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (assessment of impact on setting of CA)
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedges around boundaries but not within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to eastern border of the site creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distances, orientation of dwellings, location of dwellings and gardens on site and glazing specification.
<i>Public Protection Comments Opportunities:</i>	Good site
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the north-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p>Strategic Considerations:</p>	<p>The site lies adjacent and is relatively well related to the built form of the settlement. The site benefits from a good access off Woodhill Road and its boundaries are defined by substantial hedgerow field boundaries. The site is located within a landscape sensitivity parcel which is considered to have medium-high landscape sensitivity and high visual sensitivity. The site would result in an increased level of residential development to the west of Bridgnorth Road. The site is located within an environmental network. The site is adjacent to and within the setting of a conservation area and other non-designated assets. Any noise associated with the adjacent road will need to be considered. The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land. Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Need to maintain environmental network function. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Provide access to green space for housing to the east of the site. Formation of additional habitats within the environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas. Link open space provision to the existing hedgerow system.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Remain as open countryside.</p>

<p>Reasoning</p>	<p>The site is located within a landscape sensitivity parcel which is considered to have medium-high landscape sensitivity and high visual sensitivity.</p> <p>The site would result in an increased level of residential development to the west of Bridgnorth Road.</p> <p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
Ecology Comments Significant Constraints:	The trees and hedgerows should be retained and buffered (reducing developable area).
Ecology Comments Other Constraints:	There is a TPO'd area along the northern boundary. The trees and hedgerows should be retained and buffered (reducing developable area). Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 250m/500m), badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
Ecology Comments Opportunities:	

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes part of a former brick works (HER PRN 07035) and the site of a former colliery (HER PRN 07034).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	belt of TPO trees to half of northern road frontage
<i>Tree Comments Other Constraints:</i>	belts of mature trees and hedgerows within and around site boundaries. Care required in location and extent of built development so as to create sustainable juxtaposition between mature trees and buildings.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Substantial ground remediation / preparation likely to be required as part of landscaping scheme.
<i>Public Protection Comments Significant Constraints:</i>	Odour from sewage works to south.
<i>Public Protection Comments Other Constraints:</i>	Noise from commercial activity to the south. Contaminated land from past land use on site.
<i>Public Protection Comments Management of Constraints:</i>	Noise and con land mitigation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<p>Strategic Considerations:</p>	<p>The site is located within Highley's development boundary. It is closely associated with surrounding employment uses.</p> <p>The site is more distant from services and facilities than other promoted sites.</p> <p>Potential noise and odour associated with sewage works and commercial activity to the south.</p> <p>Trees and hedgerows on the site.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Potential for mixed use windfall development.</p>

<p>Reasoning</p>	<p>Potential noise and odour associated with sewage works and commercial activity to the south. The mix of uses and their layout on the site would need to reflect the sites relationship with these alternative uses. Whilst the site performs poorly within Stage 2a Settlement Sustainability Appraisal, this is primarily associated with the sites access to services and facilities. The site performs fair within the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site is located within Highley's development boundary. It is closely associated with surrounding employment uses. As such mixed use employment and residential development may be appropriate on the site. If the site is developed, a mix of uses, including employment would ensure that the site complements surrounding uses whilst on-site open space and enhanced links into the centre of the town could increase access to services.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Strategic Considerations:	<p>A linear site located to the west of Highley. The site adjoins the built form to north and east. The site consists of part of HNN006.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Jubilee Drive leads onto Redstone Drive. It is understood that there is concern locally about the capacity/constraints of Redstone Drive and the amenity impact resulting from additional usage on Redstone Drive.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity and implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. Relationship to the Black Country	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

Strategic Considerations:	<p>A linear site located to the west of Highley. The site adjoins the built form to north and east. The site consists of part of HNN006.</p> <p>The site could either be accessed via Netherton Lane, in combination with HNN023, via Jubilee Drive (subject to land ownership) which leads onto Redstone Drive, or in combination with HNN010 (or its variation), via Redstone Drive (subject to land ownership).</p> <p>Jubilee Drive leads onto Redstone Drive. It is understood that there is concern locally about the capacity/constraints of Redstone Drive and the amenity impact resulting from additional usage on Redstone Drive.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity and an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Remain as open countryside.</p>

<p>Reasoning</p>	<p>It is not considered that the site is appropriate for development in isolation due to its connectivity with the town (it is separated from the built form by HNN010 (or its variation) and HNN023 respectively) and constraints to highway access.</p> <p>With regard to the site in combination with either HNN010 (or its variation) or HNN023, there is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

Site Assessment - Stage 3	
Site Reference:	HNN026
Coal Authority Reference Area?	Yes
Mineral Safeguarding Area?	Yes
Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:	Yes
Percentage of site in Flood Zone 3:	0%
Percentage of site in Flood Zone 2:	0%
Percentage of site in Flood Zone 1:	100%
Percentage of the site in the 30 year surface flood risk zone:	0%
Percentage of the site in the 100 year surface flood risk zone:	0%
Percentage of the site in the 1,000 year surface flood risk zone:	1%
Percentage of the site identified on the EA Historic Flood Map:	0%
Percentage of the site within 20m of an historic flood event:	0%
Percentage of the site within 20m of a detailed river network:	2%
All or part of the site within a Source Protection Zone:	No
Landscape Considerations: (from the LVSS)	Medium-Low
Visual Impact Considerations: (from the LVSS)	Medium
Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Assumes access via Jubilee Drive. Netherton Lane also possible but no pedestrian provision and limited potential for improvement and localised widening as site does not extend along whole section of Netherton Lane.
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	N
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development. Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Therefore subject to an assessment of Netherton Lane and implementation of any necessary improvements to the north of the site.
Highway Comments - Could the Development Occur Without Off-Site Works?	N
Highway Comments - Are Envisaged Off-Site Works Achievable?	See above
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
Ecology Comments Significant Constraints:	
Ecology Comments Other Constraints:	May require botanical survey. Requires EclA and surveys for GCNs (ponds within 500m), bats, dormice, badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church (NHLE ref. 1188722), together with GII Church House (NHLE ref. 1188730). Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs and CA; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Mature trees and hedgerows around and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme
<i>Tree Comments Opportunities:</i>	retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. New native woodland creation, as part of a planned network of natural habitats / accessible open space distributed throughout the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise from the adjacent pen factory. Landfill in the area and gassing issues known to occur. A Phase I Desk Study should be undertaken and submitted to support any application on the site. This should identify any potential contamination issues from historical map information and other sources. Highley is a past mining village and it is not unknown for there to be undocumented contamination in such sites.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment BS4142 and mitigation. Contaminated land assessment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p>Strategic Considerations:</p>	<p>A very large site located to the west of Highley, the site adjoins the built form of the settlement to the north, but is separated in part to the east by other agricultural fields. The site also adjoins built form to the south.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north and/or south-east of the site and the fact that the site does not extend along the whole section of Netherton Lane, such improvements would likely involve third party land.</p> <p>Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20

<i>Ecology Comments</i> <i>Significant Constraints:</i>	None
<i>Ecology Comments</i> <i>Other Constraints:</i>	None
<i>Ecology Comments</i> <i>Management of Constraints:</i>	None
<i>Ecology Comments</i> <i>Opportunities:</i>	Landscaping with biodiversity value, especially adjacent to trees to northwest.
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site located close to the boundary, and within the setting of, the Much Wenlock Conservation Area and potentially within the setting of the Grade II listed 6 & 7 Smithfield Road (NHLE ref. 1261504) and other non-designated historic buildings. Also site of Much Wenlock's former Smithfield (HER PRN 05218)
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (setting assessment)
<i>Heritage Comments</i> <i>Opportunities:</i>	Good quality design could provide an enhancement over the existing commercial usage.
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Mature trees to north-west of site
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	landscaping to enhance internal landscape of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Potential for contaminated land from past land use. Possible noise impacts from the A4169 Smithfield Road.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation probable for con land. Layout and orientation likely to be able to remove noise concerns (have nearest houses set back from the Smithfield Road and fire station. Additionally glazing, ventilation and boundary treatment possible for noise if required.
<i>Public Protection Comments</i> <i>Opportunities:</i>	Reduced noise to nearby existing residential properties by removing commercial activities and providing more screening to existing rear gardens.

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located in the centre of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Brownfield site in an accessible location within the built form of the settlement. Much Wenlock's geographical position being fairly distant from the Black Country and eastern corridor make this site an inappropriate location to accommodate the Black Country's housing need. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Assess impact on flood risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	No
Recommendation	Potential windfall site

<p>Reasoning</p>	<p>Accessible site within the body of the town which would lend itself well to redevelopment.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the north-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	The site is well related to the built form of the settlement, but occupies a visually prominent site with steep topography which has significant implications for surface water flood risk in the town. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Assess impact on flood risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

<p>Reasoning</p>	<p>Visual prominence. Steep topography has significant adverse implications for surface water flood risk management. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>n/a</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>n/a</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the north-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	The site is well related to the built form of the settlement, but occupies a visually prominent site with steep topography which has significant implications for surface water flood risk in the town. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Assess impact on flood risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

<p>Reasoning</p>	<p>Visual prominence. Steep topography has significant adverse implications for surface water flood risk management. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>n/a</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>n/a</p>

<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	9%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium-High and Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-High and Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Needs to be joint access with MUW013.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Cumulative impact of MUW010, 011, 013 & 014 (198 houses) on A458 / B4371 junction needs to be examined.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	14

<i>Ecology Comments</i> <i>Significant Constraints:</i>	Adjacent to new flood alleviation scheme. GCN and Dormouse mitigation likely to be required. Mitigation likely to reduce number of dwellings possible.
<i>Ecology Comments</i> <i>Other Constraints:</i>	EclA required. Surveys for GCN (in ponds adjacent), Dormice (known records nearby), Badgers (known), Bats, nesting birds, vascular plants, reptiles. Partly within Env. Network (disused railway - need to retain green route through development (check with Outdoor Rec.) Retain mature trees and hedges in landscaping as part of corridor.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Retain mature trees in field. Enhance and restore Env. Network to south-west and south-east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments</i> <i>Opportunities:</i>	Promote disused railway as access route. Suggest green/brown roofs and reduce surface water run-off. (Flood alleviation scheme adjacent). Avoid topsoil on open space where possible (promote calcareous grassland).
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site has potential to affect the setting of the non-designated small country house and associated farmstead (HER PRN 23069) and lodge of The Grange. Site is detached from built edge of the town so development (especially employment uses) likely to be incongruous with the semi-rural character of the immediate surroundings. Lidar data held by the HER suggests it contains some archaeological some archaeological earthworks and therefore has some potential
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (archaeological desk based assessment and ?evaluation + setting assessment)
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around and within site. Adjacent long, overgrown double hedgerow to the south-east.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	Use 20% canopy cover policy to plant woodland adjacent existing hedgerows
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Some quarrying to the northeast. Do not consider any contaminated land issues with this unless any landfilling has occurred. No evidence of filling from GIS layers. Possible noise along northern border of site from the road.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Gas protection should landfilling in quarry area would avert gassing issues. Set properties back from the road, orientation and layout of buildings, noise barriers (mounds and fencing) and glazing all available to mitigate against noise.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	The site is detached from the built form of the settlement outside and separated from the development boundary within the open countryside. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan upstream of flood attenuation pond. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Not known Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

<p>Reasoning</p>	<p>Whilst the site benefits from being above the flood attenuation pond and development would not represent a significant risk to flooding, it is detached from the built form of the settlement and separated from the development boundary and does not therefore compare favourably with other potential site options.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	14

<i>Ecology Comments</i> <i>Significant Constraints:</i>	None
<i>Ecology Comments</i> <i>Other Constraints:</i>	EClA required. Surveys for GCN (in area), Dormice (known records nearby), Badgers (known), Bats, nesting birds, vascular plants, reptiles. Within Env. Network (disused railway - need to retain green route through development (check with Outdoor Rec.) Retain mature trees in landscaping as part of corridor.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	Enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments</i> <i>Opportunities:</i>	Promote disused railway as access route. Suggest green/brown roofs and reduce surface water run-off. (Flood alleviation scheme adjacent)
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site previously crossed by Much Wenlock, Craven Arms & Coalbrookdale Railway (HER PRN 08447), although track bed now entirely removed.
<i>Heritage Comments</i> <i>Management of Constraints:</i>	
<i>Heritage Comments</i> <i>Opportunities:</i>	Good quality design could provide an enhancement over the existing commercial usage of the site at this gateway location to the town.
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around site and belt of trees across middle of site. Quality of the trees has a bearing on acceptability of development on arboricultural grounds.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	little opportunity for additional planting due to small size and irregular shape of site.
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Historic railway, contamination likely. Potential noise to northern façade therefore possible constraints. Existing depot to south and east may cause noise throughout day and night.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation probable for con land. Layout, orientation, glazing, ventilation and boundary treatment possible for noise. Noise assessment would be likely to consider impact of the Depot to the rear and full details of its permitted times of operation etc would be required.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Brownfield site within development boundary on edge of built up area, adjacent to existing employment uses and SAMDev employment allocation. Much Wenlock is located on the A458 corridor linking to the Black Country. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Highway access Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Green corridor route along disused railway Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	Yes
Recommendation	Windfall employment

Reasoning	<p>Natural extension to neighbouring employment uses in an accessible location. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	<p>No</p>
If proposed for Allocation, Potential Capacity:	<p>0.24Ha net</p>
If proposed for Allocation Design Requirements:	<p>Subject to the establishment of an appropriate access, appropriate contamination remediation, ecological surveys and appropriate tree management</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south-east of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	The extension to the site is also likely to make the site more viable and facilitate the Highway infrastructure works required to make this development acceptable. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	
Known Infrastructure Opportunities:	
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	Allocate as Preferred Site

<p>Reasoning</p>	<p>The extension to the site is also likely to make the site more viable and facilitate the Highway infrastructure works required to make this development acceptable. There are considerable community benefits resulting from the increased residential capacity, most notably the implications for on and off site flood alleviation at Hunters Gate and Forester Avenue.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required:</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>120</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>A new roundabout access will be provided from the A458 into the site.</p> <p>Development will be required to deliver substantial community benefits both on and off site by way of flood alleviation. Specifically, development must demonstrate how properties currently at risk of flooding at Hunters Gate and Forester Avenue will be protected, as well as removing exceedance water from the existing surface water and foul sewer systems. Given the importance of this issue, development proposal will be required to show sufficient information on how these measures will be achieved in practice in order for planning permission to be granted. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the green Infrastructure / open space network. Flood and water management measures must not displace water elsewhere.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. This will include the reinstatement of a hedgerow along the sites southern boundary.</p> <p>Green infrastructure links will be provided through the site linking to the open space provision and the public right of way network beyond the site. High-quality trees and hedgerows will be retained.</p> <p>Acoustic design, layout, use of green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the A458.</p>

<i>Percentage of the site within 20m of an historic flood event:</i>	22%
<i>Percentage of the site within 20m of a detailed river network:</i>	6%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations: (from the LVSS)</i>	Medium-High
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Cumulative impact of MUW010, 011, 013 & 014 (198 houses) on A458 / B4371 junctions needs to be examined.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17

<i>Ecology Comments</i> <i>Significant Constraints:</i>	Immediately adjacent to priority calcareous grassland at NT car park site. Aerial photos indicate similar habitat possible. Priority habitat should be avoided if at all possible - i.e. we shouldn't allocated such a site. Presence of valuable grassland to be determined by an EclA including a detailed National Vegetation Classification level survey. If calcareous grassland is present avoidance unlikely to be possible and therefore application could be refused under MD12. Within Env. Network and so CS17 applies. Housing would reduce/damage the corridor.
<i>Ecology Comments</i> <i>Other Constraints:</i>	EclA required. Good quality semi-natural vegetation including grassland, scattered trees/shrubs and hedges within Environmental Network. Surveys for GCN (in ponds within 500m, at least one at c.110m), Dormice (known records nearby), Badgers, Bats, nesting birds, vascular plants, reptiles. Avoidance, mitigation and compensation measures would be required under MD12.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	See previous boxes. Otherwise, retain mature trees and hedges in landscaping as part of corridor, any open space to be adjacent to, buffer and enhance Env. Network (Blakeway Hollow). Need to buffer existing priority habitat and so only a reduced number of houses would be possible.
<i>Ecology Comments</i> <i>Opportunities:</i>	If habitats are as expected only damage likely.
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site previously formed of an area of lime workings (HER PRN 04534) and contains related archaeological features. Therefore considered to hold archaeological interest.
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ? Level 2 earthwork survey).
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Mature trees within and around site present potentially significant constraint to development
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	development stand-off required around existing significant trees - might restrict development to southern part of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Past quarried area to west may cause gassing or other issues. Noise from road to the south of the site.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation including gas protection possible. Noise could be mitigated by introducing distance, site location and orientation, glazing, noise barriers.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Poor
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Small site located adjacent to but outside the development boundary, downstream of the flood attenuation pond to the west of the town is more distant from local facilities, services and infrastructure than some other site options. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Assess impact on nearby SSSI, impact on Conservation area Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

Reasoning	<p>Distance from town services and potential for adverse implications for surface water flood risk management and does not therefore compare favourably with other potential site options.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	<p>No</p>
If proposed for Allocation, Potential Capacity:	<p>n/a</p>
If proposed for Allocation Design Requirements:	<p>n/a</p>

Site Assessment - Stage 3 Updated	
Site Reference:	MUW016
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	2%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y South of Oakfield Park the existing highway (Callaughton Lane) is narrow and would need to be widened for around 50m with pedestrian footway added. These comments assume that the 12 homes development - 16/02910/FUL - does not go ahead.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y 410 houses should be able to fund (linked with MUW012) construction of roundabout on A458 needed for traffic calming / gateway purposes. To achieve a workable roundabout layout it may be necessary to incorporate triangle of land between Oakfield Park and A458.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	16

<i>Ecology Comments</i> <i>Significant Constraints:</i>	None
<i>Ecology Comments</i> <i>Other Constraints:</i>	EclA required. Arable site but surveys for Dormice, Badgers, Bats (in trees and hedges), nesting birds.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	Retention of mature trees in hedges and hedgerows.
<i>Ecology Comments</i> <i>Opportunities:</i>	Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing to north of site. Link open space to existing hedgerow system.
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA +field evaluation).
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around but not within site.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	landscaping to enhance canopy cover and internal landscape of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Possible road noise to very east of the site
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Glazing, orientation and location of dwellings.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Large, sloping site to south of town adjacent to recently completed Callaughton Ash housing development. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

Reasoning	<p>Significantly larger area than required to deliver settlement guideline. Visually prominent site. Potential adverse implications for surface water flood risk management and does not therefore compare favourably with other potential site options. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	<p>No</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Good
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Good
Relationship to the Black Country	The site is located to the south of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Variation on MUW016 is more appropriately scaled to support the Town's growth requirements. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

Reasoning	<p>Whilst the site is of a more appropriate scale than previously promoted to the Council, it is considered there remains more sustainable options to support the town's growth, including supporting community benefit.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required:	<p>No</p>
If proposed for Allocation, Potential Capacity:	<p>n/a</p>
If proposed for Allocation Design Requirements:	<p>n/a</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal:	Fair
Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:	Fair
Relationship to the Black Country	The site is located to the south-east of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Strategic Considerations:	Located adjacent to but outside the development boundary, south of the existing Hunters gate development. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Potential to help address existing residual flood attenuation risk in existing built areas adjacent to the site. Potential opportunity to improve local environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Countryside

<p>Reasoning</p>	<p>Whilst development of the site could be acceptable in principle, it does not compare favourably with other potential site options.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Public Protection Comments Other Constraints:</i>	Known to flood, major noise source from Jaspers.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Strategic Considerations:	<p>Small, backland brownfield site comprising the rear car park of the operational Jaspers public house that is visible from the elevated rail line to the south of the site. The site is accessed from a significant highway access from Victoria Road which may provide access to a small residential development subject to highway visibility onto there highway. The site level drops significantly from the highway into the main part of the site leading to some river flooding on the eastern boundary and surface water flooding across the majority of the site in severe flood conditions with known flood events affecting the site. The site directly abuts the watercourse of the Wesley Brook with the eastern part of the site situated within the Green Infrastructure network along the Brook. The site would require detailed ecological assessment and protection of an adjacent Tree Protection Order but the size and constraints on the site provide limited opportunities for the provision of further Green Infrastructure. The site sits wholly within the Shifnal Conservation Area and is situated inside the medieval core of Shifnal. A Heritage Impact Assessment would be required to assess impacts on the character and appearance of the Conservation Area and to assess the need for detailed investigation of the archaeological potential of the site. Residential amenity on the site is expected to be adversely affected by the Jaspers public house if it continues to trade on the reduced site area following the loss of the car park however, it is expected that some rear car parking may need to be retained for servicing and mobility or emergency access to the public house. The situation of the site within the built form of the town and close to the retail core of the town around Bradford Street gives the site a Good sustainability rating .</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	Yes - subject to constraints particularly flood risk and noise
Potential for Allocation?	No
Recommendation	Land within existing Shifnal development boundary

<p>Reasoning</p>	<p>This small redevelopment opportunity could adversely affect the operation of the Jaspers public house and has some significant constraints for such a small site with few apparent opportunities to redress the effects on the developable area of the site. The assessment of the site requires further detailed investigation of the development potential of the land. The site lies within the development boundary, forms part of the built form of the town with direct access to the highway network. The detailed assessments may reveal the development potential of the site but the site is likely to have limited capacity for residential use.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Via Meadow Drive
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Possible need to improve T-junction of Drayton Rd with B4379
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of woodland/Env. Network corridor.
<i>Ecology Comments Other Constraints:</i>	Site contains and is adjacent to Env. Network corridors. This will need to be retained and appropriately buffered. Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a medium size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on belt of mature trees along road
<i>Tree Comments Other Constraints:</i>	mature trees / woodland to western end of site and abutting northern boundary along motorway
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	The most northern part of the site would require levels of mitigation in relation to road noise which may not be possible as evidenced by the development to the east which was not able to comply with noise conditions specified for the site. As a result no residential development is considered suitable in the site where garden areas would be exposed to road noise.
<i>Public Protection Comments Other Constraints:</i>	Air quality will be impacted by emissions from vehicles on the M54.
<i>Public Protection Comments Management of Constraints:</i>	Assessment will be necessary to consider the air quality concerns and relevant mitigation proposed where available. It is not considered that it is easy for noise to be mitigated without significant mitigation which must be proved could be achieved prior to any future application being considered.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the north of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This generally flat, smaller greenfield site (3.9ha) is situated on the northern edge of Shifnal adjacent to the embankment of the M54 motorway. The site also adjoins the B4379 Newport Road close to the under pass of the M54. The B4379 would require improvements to the T junction with Meadow Drive to provide vehicular access to the site. The enclosure of the site within the built form of the settlement reduces its landscape sensitivity whereas the larger parcel (east) has medium landscape and medium-high visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The trees and hedgerows should be retained or their removal will require compensatory planting in any design scheme. The mature trees to the north and the west are protected by a Tree Preservation Order. The site has no known heritage value but the scale and open character of the site suggest the need for a Heritage Assessment. The proximity to the M54 and B4379 indicate a potential noise nuisance within any development, requiring a design solution. The site has a Good sustainability rating because of the accessibility to many of Shifnal's recreational facilities which help to offset the potential effects of development on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shinfal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	Include this previously safeguarded land within the development boundary and allocate for housing development

<p>Reasoning</p>	<p>Site SHF013 has been safeguarded for future development for some time. The evidence of the developability of the site provides positive indications of the suitability and availability of the land although the site has environmental qualities worthy of protection. The site might be considered for a suitable housing scheme with a good quality contemporary design that would complete the built form of north Shifnal. This site is considered suitable for housing development and is currently being considered for exceptional housing development to meet the community's current need for affordable and low cost housing. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium-high) and visual (medium-high) impacts which are greater than for housing development.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>around 65 dwellings</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>Site to provide a broad range of housing types to meet local needs. The site to be accessed from Meadow Drive through existing gated access possibly requiring verge land to achieve the turning geometry, with stand off from existing residential units to protect their amenity. Consideration to be given to the need for off-site highway works at Newport Road / Meadow Drive / Haughton Road junction to address highway capacity, drainage and surface water flooding constraints at this principal junction. Green Infrastructure network to be enhanced to strengthen existing woodland and mature trees around site, provide SUDs drainage system through central area of site to exclude built development and protect site from surface water flooding, open space with equipped play space to be located on east of site with consideration of footpath link to existing developed areas of town to the east. Green Infrastructure to protect the existing corridors through the town and allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of the site and surrounding area and to investigate the archaeological potential of the site.</p> <p>Noise and air quality assessments required due to proximity to M54 corridor with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Onto A464
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The western boundary is Env. Network corridor and is covered by a TPO. There is woodland on the site. There is a pond adjacent to the south-western boundary. GCNs are likely to be present. A buffer of at least 50m around the pond is likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes substantial unlisted historic building (?early C19) known as Beech House, which is considered to be a non-designated heritage asset. Any proposals which involve the demolition of this building would be resisted.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 building assessment + impact on its settings).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on mature trees on site
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the north creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
Strategic Considerations:	<p>This generally flat, small brownfield site (1.4ha) is situated on the south-eastern edge of Shifnal next to the current development by Redrow Homes. The site adjoins the A464 Wolverhampton Road offering vehicular access but requiring a new main road junction possibly shared with other sites, extension of the 30mph restricted zone, traffic calming measures and creation of a town gateway. The built character of the site reduces its landscape sensitivity whereas the larger parcel (east) has medium-low landscape and medium-high visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of known priority habitat including grassland and ponds within and surrounding the site may reduce the developable area to permit the restoration and enhancement of this habitat. The mature hedgerows and trees within and around the site should be retained especially those protected by a Tree Preservation Order (west boundary). The removal of trees and hedgerows will require compensatory planting in any design scheme. The site is a non-designated heritage asset due to the presence of Beech House, requiring a Heritage Assessment. The proximity to the A464 indicates a potential noise nuisance within any development, requiring a design solution. The site has a Good sustainability rating reflecting its brownfield character, accessibility to recreational facilities and services which help to offset the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	Include this previously safeguarded land within the development boundary and allocate for housing development

Reasoning	<p>Site SHF015 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land although the site has environmental qualities worthy of protection. Although the site is better suited to housing use, the buildings on the site are worthy of protection and have a productive use and the surrounding open land has some environmental value. The evidence for developing this small area of safeguarded land is not sufficient to justify specifically allocating this land for housing use but it might from a suitable windfall site subject to an appropriate development proposal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	around 65 dwellings with SHF029
If proposed for Allocation Design Requirements:	<p>Site SHF015 to be developed as a single scheme in conjunction with site SHF029 to provide a broad range of housing types to meet local needs. Development site excludes Beech House (non-designated heritage asset HER PRN 34751) with garden, curtilage building and frontage walling to A464. Beech House forms part of urban land and no longer safeguarded for future development. Consideration may be given to sympathetic restoration/conversion of house and curtilage buildings. Existing northern access to Beech House to be closed and sealed with existing gates retained. Beech House to be serviced from existing southern access. Highway junction to be situated at northern point on A454 frontage to provide safe junction with good visibility and appropriate measures to manage traffic speeds and highway safety. The development should provide access to the footway and cycling network along the A464 to improve access to local services using 'active travel' options to walk, 'wheel' or cycle to local services.</p> <p>The need to conserve Beech House, protect the setting from effects of development and to deliver a safe and visible highway junction to A464 may require removal of mature trees on A464 frontage with complementary planting within the site. Consideration to be given to internal highway layout within the site to make effective use of the developable land and to improve the accessibility of the dwellings to the main and secondary accesses to encourage 'active travel' options to reach local services. Development of site SHF029 to give consideration to secondary access to Park Lane through access strip from backland boundary of site. Secondary access to provide pedestrian and cycling access to Park Lane offering a potentially safer access to local services including the local primary school and with emergency vehicular access into the site only. Green Infrastructure network to be enhanced to strengthen existing woodland mature trees around site, provide SUDs drainage system along boundary to safeguarded land to exclude built development and protect site from surface water flooding, open space with equipped play space to be provided, allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of Beech House and the effect of development on the setting of the heritage asset and to investigate the archaeological potential of the site. Noise assessment required due to proximity to A464 with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	groups of mature trees to north eastern and western corners of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to road.
<i>Public Protection Comments Opportunities:</i>	Club currently on site if demolished and site fully developed for housing would remove a potential noise source from within proximity of existing housing creating a betterment to the local noise environment.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
Strategic Considerations:	<p>This generally flat, small brownfield site (0.4ha) is situated on the south-western edge of Shifnal adjacent to the current Green Belt boundary. The site adjoins the A464 Bridgnorth Road and has an existing vehicular access onto the A464. The built character of the site reduces its landscape sensitivity whereas the larger parcel (west) has medium landscape and medium visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment and Arboricultural Assessment to confirm the level of sensitivity to development. In particular, the site has mature trees to the north, east and west boundaries which should be accommodated into any potential design scheme for the site. The removal of any existing tree or hedgerow cover will require compensatory planting in any proposed development. The site has no known heritage value and is not considered to justify a heritage assessment although the site lies in the setting of adjacent listed buildings and the Shifnal Conservation Area. The proximity of the site to the A464 indicates a noise nuisance for any development, requiring a design solution but the demolition of the existing club-house would produce betterment in the local noise environment. The site has a Fair sustainability rating as a brownfield site with accessibility to local services but this does not entirely offset the distance to the services and the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	No
Recommendation	Land within existing Shifnal development boundary

<p>Reasoning</p>	<p>Site SHF016 is situated within the existing development boundary and forms part of the built form of the town. The site is already developed and has a productive use that contributes to the sense of community in the town. The site also has some environmental qualities worthy of protection. The scale of the site would not justify specifically allocating for housing development, but the situation and character of the site might facilitate its redevelopment as a windfall housing site subject to an appropriate development proposal. This land is not suited to employment development because the land is brownfield with greater development costs, close proximity to existing housing uses and the sensitivities to landscape (medium-high) and visual (medium-high) impacts being greater than for housing.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the site's size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

<i>Percentage of the site in the 100 year surface flood risk zone:</i>	3%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	7%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	31%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	5%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High and Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High and High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	A4169 but not onto Park La
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF017S. Note this site fronts Park La to the south east but a highway connection at this point would not be acceptable.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject to an assessment of the impact on Innage Rd and Church St and associated junctions.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env. Network corridor (Wesley Brook).
<i>Ecology Comments Other Constraints:</i>	Northern section: The northern boundary forms and Env. Network corridor (due to the presence of a vegetated railway line). This corridor should be buffered and enhanced. Southern section: Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. Part of the north-western and south-western boundaries contain or are adjacent to Env. Network corridors and priority habitat (woodland) - these will also need to be appropriately buffered. There is a GCN breeding pond to the south of the site boundary. A buffer of at least 50m around the pond will be required, but given the number of known GCN breeding ponds in the area, a greater amount of mitigation land is likely to be required. Parts of the site are TPO'd. A PROW runs along the western boundary and a section of the southern boundary (by the pond). Requires botanical survey, ECLA and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147) and cluster of associated Grade II LBs. Site itself includes putative, but now largely discounted, site of Idsall (pre-1590 Shifnal - HER PRN 00757) and site of a 17th century mill pond. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on group of trees around property on A464
<i>Tree Comments Other Constraints:</i>	belt of woodland to north of site along railway and group of trees in semi-natural habitat along watercourse in centre of site, adjoining woodland to the south
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the north and south and along watercourse
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A4169 runs through the site and is a noise source for consideration. Railway line runs along northern boundary of the site. Farm to the south east of the site with many barns which may produce noise, odour, dusts.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to roads, rail and farm.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This large, undulating greenfield site (36ha) is situated to the west of Shifnal adjoining the A4169 (Bridgnorth Road) to the south and north (comprising site P17b) of this road and extends south to the country road known as Park Lane which is severely constrained by current traffic usage. The land is located within the Green Belt with a moderate-high harm caused by its release. However, of the parcels considered in the Green Belt Review the release of SHF017 (excluding P17b) has a lower impact on the remaining Green Belt land. Accessibility to the B4169 from the south would also provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and an assessment of the impacts on Innage Road and Church Street. However, Park Lane would not provide a suitable secondary access. The site adjoins the built form of the town and the varying topography influences its landscape sensitivity to medium (west) and medium-low (south) however the land remains visible in the wider landscape with medium (west) and medium-high (south) visual sensitivities. The site has little flood risk (Flood Zone 1) except for the corridor of the Wesley Brook and has a nominal surface water flood risk in severe conditions however, the topography may expose the land to inundation which requires a detailed flood risk assessment. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to restore and enhance any habitat. The site has significant woodland around the railway, Wesley Brook and a Tree Protection Order to the south. This cover should be retained or any removal mitigated by compensatory planting in any design scheme. The site lies close to the Shifnal Conservation area and contains a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment given the scale of the land area. Proximity to the A4169 indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove land from Green Belt and safeguard for future development

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF017 (excluding P17b) offers the potential for a large scale housing development with the benefit of access to the A4169 Bridgnorth Road in an area of medium landscape sensitivity. Although these factors must be balanced with the moderate-high visual sensitivity of SHF017 and the moderate-high harm to the Green Belt from releasing this land for development. The release of SHF017 is considered to be justified in order to deliver a new strategic link from the A4169 to the A464 in combination with sites P16, P15b(west) and SHF019 which have lower landscape sensitivities and lower harm from their release from the Green Belt. These land releases may also provide related highway improvements at Five Ways and Innage Road, a range of housing opportunities to meet local needs and improvements to the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop the site SHF017 (north) that lies to the north of Bridgnorth Road in combination with site P17a (Priorslee Road) north of the rail line however, releasing these land parcels would cause high harm to the Green Belt. This has the potential to contribute to the longer term provision of new housing and create a future opportunity for a one way gyratory system via the railway under-pass between these two land parcels and using the separate under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released to the south and west of the town. However, it is recommended that the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes

Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove land from Green Belt and safeguard for future development

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018a offers the potential to safeguard land to support the long term growth of a large scale, new employment area to the east of Shifnal. This potential employment area would have the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The safeguarding of SHF018a (with site P14), in proximity to existing and newly allocated employment activities around Stanton Road / Lamledge Lane has the capacity to support the employment needs of the town in combination with sites SHF108b and SHF18d.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, undulating greenfield site (14ha) is situated to the east of Shifnal adjoining Stanton Road (north) and Shifnal Industrial Estate (south). The land is located within the Green Belt with a moderate-high harm caused by its release however, Green Belt parcels to the north would have a higher impact on the remaining Green Belt land. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018b would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and despite its enclosed nature has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site and any development should introduce appropriate planting and retain existing cover where possible. The site has no known heritage value but the size of the site would require an archaeological appraisal as part of a Heritage Assessment. The site would have a Fair sustainability rating for employment use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for housing use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone encompassing Shifnal town and SHF018b accommodates the core zone in the north-east of site around the adjacent pumping station on Stanton Road. The north-east of the site would need to be kept clear of built development any potential contaminating uses and the drainage of the whole site would need to draw water away from the core zones of the SPZ.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	Remove land from Green Belt and allocate for employment development alongside site SHF018d. These sites have a combined capacity of around 39 hectares (15.6 hectares net) (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018b offers the potential for a large scale employment development to the east of Shifnal with the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The release of SHF018b in combination with SHF018d, in close proximity to the existing, poor quality employment area of Shifnal Industrial Estate would constitute a strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre. It has the capacity to redress the employment needs of the town and provide sufficient employment land to accommodate the entirety of the proposed 30ha contribution to the employment land need forecast to be arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>These land releases may also provide related highway improvements to Upton Lane which links south to the A464 Wolverhampton Road.</p> <p>The release of strategic employment land in this location would require significant investment in the infrastructure and development of the land indicating a need to secure a large land release at the outset of the Local Plan.</p> <p>This site would be complemented by the safeguarding of sites SHF018a and P14.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that exceptional circumstances exist to justify the release of this land for employment, as documented within the new Green Belt Topic Paper.</p>
Further Main Modifications Required	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S15 to be amended to reflect the fact that 30ha of the employment land proposed on this site and SIF018d forms the entirety of the proposed contribution towards the unmet employment land needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>SHF018b and SHF18d have a combined capacity of around 39 hectares (15.6 hectares net) of employment land (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</p>
If proposed for Allocation Design Requirements:	<p>Site SHF018b will be developed as part of a larger employment area with SHF018d to provide serviced land for a broad range of Class B uses with a proportion of other employment generating uses and ancillary service uses to improve the sustainability of the employment area. Consideration should also be given to the relationship with the adjacent Shifnal Industrial Estate and the capacity for the existing development to create a secondary access and for the new development to release the pressure within the existing estate and to improve the character, quality and operation of the existing estate. The development should create a campus style, employment area on the edge of town to enclose the built form of development and any off site infrastructure within the Green and Blue Infrastructure networks. Infrastructure to include a strategic electricity/power supply and sustainable drainage system comprising multi-stage sustainable drainage and water treatment facilities, informed by a sustainable drainage strategy. This will serve to create strong boundaries to the employment area to separate the development from the Green Belt and the surrounding rural landscape. At the boundary with Shifnal Industrial Estate, a looser boundary treatment may be considered to support the operation of the functional relationship between these two employment areas. The development of this site will be in accordance with a vision, design code and masterplan prepared in consultation with the public and adopted as a Supplementary Planning Document by Shropshire Council. A construction management plan will be prepared to inform the development of the site. Strategic Transport Assessment and Transport evidence will be required to assess the effects of the development and the cumulative growth of Shifnal on the M54 Junction 3 and the A41/Stanton Road junction. The sites should be serviced from the A41/M54 Junction 3 along Stanton Road with traffic restrictions on commercial vehicle movements to the site using the A464 / Aston Street through Shifnal via the town centre. Sites SHF18b and SHF18d will share a principal access from Stanton Road to serve the employment area and Upton Lane to the viaduct bridge at the rail line will be improved and modified to form the primary distributor road serving the site. Upton Lane forms an historic thoroughfare and the road route or its historical presence will need to be conserved in the development. It is desirable for the viaduct bridge to remain open to pedestrian and cyclist movements. Significant and effective pedestrian and cycle links will be provided along Stanton Road, into and through the development to encourage safe and sustainable patterns of movement between the employment area and the town.</p> <p>Appropriate public transport links should be provided linking to parking facilities on the site to support wider use including the possibility for electric vehicle charging points. The potential to operate a dedicated Park and Ride service should also be investigated. Natural environment assets in proximity to the site and any priority habitats will be safeguarded and buffered. Site design and layout will respect any local heritage assets and the potential for archaeological deposits which will be recorded. Green infrastructure will protect the settings for any identified heritage assets. Historic field patterns and hedgerows will be retained by Green Infrastructure within the grain of the development. Any removal of trees or hedgerows will be replaced as part of the structural planting for the employment area.</p>

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	0%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs moderately against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel which would have a high level of harm on the Green Belt if released for development due to the level of encroachment on countryside with regard to purpose 3 and the weakening of the role of adjoining areas with regard to purpose 4. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit on Stanton Road but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF018b. This site (2,385 homes) should not have highway (vehicular) access onto Coppice Green Land unless major improvements can be delivered.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The collective impact of the developments off Stanton Road will have an unacceptable impact on Aston Street and Curriers Lane and associated junctions which are already at or close to capacity.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env. Network/priority habitats.
<i>Ecology Comments Other Constraints:</i>	The site contains patches of woodland (Env. Network and potential priority habitats). These areas should be retained and appropriately buffered. There are ponds on the site. Should GCNs be present in these ponds, a buffer of at least 50m will be required. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. A PROW runs along the eastern and northern boundaries.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential impact on setting of Grade II* listed Aston Hall (NHLE ref. 1308059) and cluster of associated Grade II LBs. The site includes a former area of parkland for Aston Hall (HER PRN 07504), and a small disused quarry. No other know archaeological interest but very large site size suggests there may be some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows, mature trees, groups of trees and blocks of woodland within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Opportunity to create larger area of publicly accessible woodland, around existing blocks of woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Page 1277 Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This very large, elevated greenfield site (80ha) is situated to the north-east of Shifnal adjoining Stanton Road (south) and Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018c would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity which may be difficult to achieve. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has no flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site with woodland at its southern boundary which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies further to the east along Stanton Road.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

<p>Reasoning</p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF018a would extend the settlement well beyond its current built form and layout and would have significant impacts on the town's setting and its infrastructure particularly its highway network whilst potentially compromising the open character and environmental values of SHF018a.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The collective impact of the developments off Stanton Road will have an unacceptable impact on Aston Street and Curriers Lane and associated junctions which are already at or close to capacity.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires Ecla and surveys for bats (in trees), GCNs (ponds within 500m), badgers and nesting birds. Most of the boundaries are adjacent to Env. Network corridors. The hedgerows should be retained and buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Poor relationship with existing built form of settlement. No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological desk based assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and scattered trees within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Seek to link to / expand offsite woodland to the east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible road noise to west and north and rail noise to south. Also possible noise from industrial uses to southwest.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Suggest stay away from southwest corner to increase separation to existing industrial/commercial.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, undulating greenfield site (24ha) is situated to the east of Shifnal adjoining Stanton Road (north) and close to Shifnal Industrial Estate (south). The land is located within the Green Belt with a high harm caused by its release however, Green Belt parcels to the west which have a relationship with SHF018b would have a lower impact. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018d would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and its open aspect has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires Ecological Assessment and Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site and any development should introduce appropriate planting and retain existing cover where possible. The site has no known heritage value but the size of the site would require an archaeological appraisal through a Heritage Assessment. The site would have limited accessibility to Shifnal's facilities to redress the environmental values of the site. The site would have a Fair sustainability rating for employment use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for housing use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies to the west along Stanton Road.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	Remove land from Green Belt and allocate for employment development alongside site SHF018b. These sites have a combined capacity of around 39 hectares (15.6 hectares net) (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018d offers the potential for a large scale employment development to the east of Shifnal with the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The release of SHF018d in combination with SHF018b, in close proximity to the existing, poor quality employment area of Shifnal Industrial Estate would constitute a strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre. It has the capacity to redress the employment needs of the town and provide sufficient employment land to accommodate the entirety of the proposed 30ha contribution to the employment land need forecast to be arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>These land releases may also provide related highway improvements to Upton Lane which links south to the A464 Wolverhampton Road.</p> <p>The release of strategic employment land in this location would require significant investment in the infrastructure and development of the land indicating a need to secure a large land release at the outset of the Local Plan.</p> <p>This site would be complemented by the safeguarding of sites SHF018a and P14.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that exceptional circumstances exist to justify the release of this land for employment, as documented within the new Green Belt Topic Paper.</p>
Further Main Modifications Required	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S15 to be amended to reflect the fact that 30ha of the employment land proposed on this site and SHF018d forms the entirety of the proposed contribution towards the unmet employment land needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>SHF018b and SHF18d have a combined capacity of around 39 hectares (15.6 hectares net) of employment land (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</p>
If proposed for Allocation Design Requirements:	<p>Site SHF018b will be developed as part of a larger employment area with SHF018d to provide serviced land for a broad range of Class B uses with a proportion of other employment generating uses and ancillary service uses to improve the sustainability of the employment area. Consideration should also be given to the relationship with the adjacent Shifnal Industrial Estate and the capacity for the existing development to create a secondary access and for the new development to release the pressure within the existing estate and to improve the character, quality and operation of the existing estate. The development should create a campus style, employment area on the edge of town to enclose the built form of development and any off site infrastructure within the Green and Blue Infrastructure networks. Infrastructure to include a strategic electricity/power supply and sustainable drainage system comprising multi-stage sustainable drainage and water treatment facilities, informed by a sustainable drainage strategy. This will serve to create strong boundaries to the employment area to separate the development from the Green Belt and the surrounding rural landscape. At the boundary with Shifnal Industrial Estate, a looser boundary treatment may be considered to support the operation of the functional relationship between these two employment areas. The development of this site will be in accordance with a vision, design code and masterplan prepared in consultation with the public and adopted as a Supplementary Planning Document by Shropshire Council. A construction management plan will be prepared to inform the development of the site. Strategic Transport Assessment and Transport evidence will be required to assess the effects of the development and the cumulative growth of Shifnal on the M54 Junction 3 and the A41/Stanton Road junction. The sites should be serviced from the A41/M54 Junction 3 along Stanton Road with traffic restrictions on commercial vehicle movements to the site using the A464 / Aston Street through Shifnal via the town centre. Sites SHF18b and SHF18d will share a principal access from Stanton Road to serve the employment area and Upton Lane to the viaduct bridge at the rail line will be improved and modified to form the primary distributor road serving the site. Upton Lane forms an historic thoroughfare and the road route or its historical presence will need to be conserved in the development. It is desirable for the viaduct bridge to remain open to pedestrian and cyclist movements. Significant and effective pedestrian and cycle links will be provided along Stanton Road, into and through the development to encourage safe and sustainable patterns of movement between the employment area and the town.</p> <p>Appropriate public transport links should be provided linking to parking facilities on the site to support wider use including the possibility for electric vehicle charging points. The potential to operate a dedicated Park and Ride service should also be investigated. Natural environment assets in proximity to the site and any priority habitats will be safeguarded and buffered. Site design and layout will respect any local heritage assets and the potential for archaeological deposits which will be recorded. Green infrastructure will protect the settings for any identified heritage assets. Historic field patterns and hedgerows will be retained by Green Infrastructure within the grain of the development. Any removal of trees or hedgerows will be replaced as part of the structural planting for the employment area.</p>

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs.
<i>Ecology Comments Other Constraints:</i>	There are ponds adjacent to the north-eastern boundary - one is a known GCN breeding pond and the other is likely to contain GCNs. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed house known as The Terrace (NHLE ref. 1053636). Site also includes a former brickworks (HER PRN 01825). Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature tree within site and hedgerows to the boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover on the site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A464 to the north boundary of the site. Significant historic pond noted on site now filled in potentially causing a contaminated land issue.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, gently sloping greenfield site (10ha) is situated to the south of Shifnal adjoining the A464 Wolverhampton Road. This site has the potential for an appropriate highway junction with signage and traffic calming to form a new gateway to Shifnal particularly marked by an extension of the speed restricted zone. However, SHF019 on its own has only limited potential because it does not form a secondary frontage with Park Lane to the south. A new gateway at SHF019 would have the potential along with site P15b(west) to provide the highway entry point into the larger area of safeguarded land south and west of the town identified in site SHF034 which is proposed to be released from the Green Belt and safeguarded for an extension to Shifnal to meet the future development needs of the town. The land around SHF019 is currently located within the Green Belt and the release of land would have a moderate-high harm to the Green Belt. However, SHF019 would have a lower, moderate harm due to its relative position adjacent to the ridgeline that lies to the south of the site and separates the land from the wider Green Belt. The release of this land with the collection of sites in SHF034 to the south and west of Shifnal would facilitate the provision of a strategic highway link from the A464 (south) to the A4169 (south west) to reduce congestion on the highway network through the town and locally on the constrained Park Lane as part of a significant urban extension to meet Shifnal's future development needs beyond 2038. SHF019 is close to the built form of the town with the adjacent safeguarded sites SHF015 and SHF029 now proposed for residential development. The varying topography influences its landscape sensitivity to medium-low but the land remains visible with medium-high sensitivity. The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature field trees and boundary hedgerows which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development and evidence of an infilled historical pond may suggest some ground contamination. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove land from Green Belt and safeguard for future development

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF019 has the potential to provide an access to the A464 (south) and contribute to a large scale housing development with sites P15b(west), SHF017 (excluding P17b) and P16. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country lane at Park Lane. SHF019 has the benefit of having medium-low landscape sensitivity and only moderate harm to the Green Belt from its release for development. Although these factors must be balanced with the moderate-high visual sensitivity of SHF019 and the moderate-high harm to the Green Belt from the release of sites P16 and SHF017. The release of SHF019 is considered to be justified in order to deliver the new strategic link from the A4169 to the A464 in combination with sites P15b(west), P16 and SHF017, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site P17b north of the A4169 Bridgnorth Road. This will further contribute to the long term provision of new housing and create a future opportunity for a one way gyratory system via a railway under-pass to link to the A464 (west) in combination with the sister under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released as site SHF034 to the south and west of the town. To complement these proposals, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. However, SHF019VAR is an identified sub-parcel which would have a moderate level of harm if released from the Green Belt.

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This extended greenfield site comprises SHF019 (10ha) which is a gently sloping greenfield site that runs into the western portion of site P15b of similar character. These combined sites provide an extended development opportunity comprising SHF019 to the north fronting the A464 Wolverhampton Road and site P15b(west) to the south fronting Park Lane. The two sites together offer the potential for an appropriate highway junction with signage and traffic calming to form a new gateway to Shifnal particularly marked by an extension of the speed restricted zone. This new gateway would provide the highway entry point into the larger area of safeguarded land south and west of the town proposed for a future extension to Shifnal to meet the future development needs of the town. The addition of site P15b(west) to site SHF019 to form SHF019VAR would enable a new highway to pass from the A464 to Park Lane to connect with the extended land mass identified as site SHF034. The two sites combined in SHF019VAR (SHF019 and P15bwest) are currently located within the Green Belt where the release of land in this locality would have a moderate-high harm to the Green Belt. SHF019VAR would have a lower, moderate harm due to the relative position of these adjacent sites behind the ridgeline that lies to the south of site SHF019VAR. The release of SHF019VAR as part of SHF034 combining parcels to the south and west of Shifnal would facilitate the provision of a strategic highway link from the A464 (south) to the A4169 (south-west). This would help to reduce congestion on the highway network through the town and locally on the constrained Park Lane as part of a significant urban extension to meet Shifnal's future development needs beyond 2038. The release of SHF019VAR with other parcels to the west would particularly reduce traffic impacts on the constrained Park Lane that accommodates one of the primary schools serving Shifnal. SHF019VAR is close to the built form of the town with the adjacent safeguarded sites SHF015 and SHF029 now proposed for residential development. The varying topography in this area of Shifnal influences its landscape sensitivity to medium-low but the land remains visible with medium-high sensitivity. The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Green Infrastructure network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature field trees and boundary hedgerows which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development and evidence of an infilled historical pond may suggest some ground contamination. The site has a Fair sustainability rating due to the accessibility to some of Shifnal's facilities but the larger distance to the town centre and the relative environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>

Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove this extended area of land from Green Belt and safeguard for future development

<p>Reasoning</p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF019VAR has the potential to provide an access to the A464 (south) and contribute to a large scale housing development with sites P15b(west), SHF017 (excluding P17b) and P16. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country lane at Park Lane. SHF019VAR has the benefit of having medium-low landscape sensitivity and only moderate harm to the Green Belt from its release for development. Although these factors must be balanced with the moderate-high visual sensitivity of SHF019VAR and the moderate-high harm to the Green Belt from the release of sites P16 and SHF017. The release of SHF019VAR is considered to be justified in order to deliver a new strategic link from the A4169 to the A464 in combination with sites P15b(west), P16 and SHF017, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site SHF017 (north) which lies to the north of the A4169 Bridgnorth Road. This will further contribute to the long term provision of new housing and create a future opportunity for a one way gyratory system via a railway under-pass to link to the A464 (west) in combination with the sister under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released as site SHF034 to the south and west of the town. To complement these proposals, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Strategic Considerations:	<p>Site SHF021 forms a small rectangular paddock adjacent to an area of mixed residential and employment allocations. The development of the allocated land will extend the built form of the town to join with the peripheral developments of the Shifnal Hillcrest School and the existing Shifnal Industrial Estate. Site SHF021 has a large frontage to Lamledge Lane with an existing gated field entrance and would require an appropriate highway junction and provision of a footway to link to the existing footway network to the north where Lamledge Lane forms a junction with Aston Road. The site has no known flood risks either from watercourses or surface water runoff. The distance from the current built form of the town also suggests limited heritage value but as part of the larger land parcels the archaeological potential of the site may need to be investigated. The site does lie over a Source Protection Zone encompassing the east of Shifnal but SHF021 is some distance from the core zone located on Stanton Road to the north. The site would require detailed ecological assessment and protection of the trees and hedgerows on the eastern boundary. The need to protect trees and hedgerows and to enhance the Green Infrastructure network in this part of town would constrain the site capacity particularly in the east of the site. Noise assessment is required due to proximity to the surrounding employment uses and the commercial traffic using Lamledge Lane with appropriate mitigation measures to be provided in the layout, design, materials and landscaping of the built development to provide satisfactory standards of residential amenity. The site has a fair sustainability rating due to accessibility to some of Shifnal's facilities which mitigates for the potential effects of the environmental values of the site. The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	Yes
Potential for Allocation?	No
Recommendation	Land within existing Shifnal development boundary

<p>Reasoning</p>	<p>This small development opportunity will remain as a pocket of agricultural land on the edge of an extensive area of mixed use development extending the built form of the town to the east. The site has the potential to complete the pattern of development in this location, to help meet the housing needs of the town and to provide new housing close to the existing and proposed new employment areas serving Shifnal. The development potential of the land requires further detailed assessment but the land lies within the development boundary, will soon form a stronger element of the built form of the town with direct access to the highway network and the capacity to join with the footway network. The detailed assessments may reveal the development potential of the site but the site is likely to have limited capacity for residential use due to its size and environmental qualities around the eastern boundary.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Strategic Considerations:	<p>This smaller, relatively flat greenfield site (1.7ha) is situated on the south-eastern edge of Shifnal adjoining the A464 Wolverhampton Road. This site offers the potential for a suitable highway junction onto the A464 that might be shared with adjoining sites and to provide for an extension of the speed restricted zone and traffic calming. The site adjoins the built form of the town and is currently safeguarded for development and so, has no direct effect on the Green Belt. The land comprises a relatively flat area of land used for grazing which influences its landscape sensitivity (medium-low) but the land has an open aspect with a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature trees and hedgerows to the south and east boundaries and mature woodland to the north which should be retained or any removal mitigated by compensatory planting. Proximity to the A464 indicates a need for a noise assessment and mitigation as part of the design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	Yes
Potential for Allocation?	Yes
Recommendation	Include this previously safeguarded land within the development boundary and allocate for housing development

<p>Reasoning</p>	<p>Site SHF022 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site has environmental qualities worthy of protection, the land does not form part of the Green Belt, now lies on the built edge of the town and was previously indicated as land suitable for future development. The woodland known as Revell's Rough lies between this site and further safeguarded land to the north and presents a development challenge to bring the land forward and to incorporate the woodland into the development scheme. The site is better suited to housing use and lies in an area currently preferred by the housing market with significant existing investment in infrastructure to support further development. The evidence for developing this smaller area of safeguarded land is sufficient to justify specifically allocating this land for housing use to contribute to the residual requirement for housing in Shifnal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	<p>around 100 dwellings with SHF023 part</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>These two sites SHF022 and SHF023 (south) should ideally be developed together, or the two development sites should have inter-related development schemes. The two sites require a suitable joint highway access to serve both sites and inter-related drainage solutions that remediate for any surface water issues on SHF023. The two sites both include the significant wooded area of Revell's Rough which must be appropriately managed within the developments but should address the physical separation of these sites from the further safeguarded land to the north. Other relevant supporting studies should be undertaken particularly transport assessments, ecology, tree and hedgerow surveys, flood risk and drainage with their recommendations clearly reflected in the proposed development scheme. Careful consideration will need to be given to the creation of an effective urban edge to the settlement and the strengthening of the Green Belt boundary adjoining site SHF023.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Onto A464 but not onto Lamledge Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464. This site (420 homes) should not have highway (vehicular) access onto Lamledge Land unless major improvements can be delivered along its whole length and along Upton Lane.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and woodland/Env. Network. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site consists of Env. Network corridor. The site may contain priority grassland and woodland habitats - botanical survey required. If priority habitats are present then the site should not be developed. There are GCN breeding ponds on the site. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. This site looks like it contains some excellent GCN and reptile terrestrial habitat. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. The woodland and hedgerows will need to be appropriately buffered.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site previously included areas of ridge and furrow (HER PRN 21024) but EA Lidar data indicates these are now ploughed out. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	block of mature woodland across centre of site and groups of trees around existing development in northern end of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Opportunity to create larger area of publicly accessible woodland, around existing block of woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A464 to south of the site and railway line to the north creating noise sources. To north of rail is an industrial area also creating potential noise, dust, odour etc.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and rail.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Strategic Considerations:	<p>This larger, relatively flat greenfield site (14ha) is situated on the south-eastern edge of Shifnal adjoining the A464 Wolverhampton Road. The site is separated into two discrete land parcels situated to the north and south of the Revell's Rough woodland. The northern parcel is relatively isolated being served by the Lamledge via a restricted road bridge over the railway and comprising a relatively tranquil area of land close to the town. The southern parcel sits on the A464 frontage and mirrors the size and situation of adjoining site SHF022. This southern area of the site offers the potential for a suitable highway junction onto the A464 that might be shared with adjoining sites and to provide for an extension of the speed restricted zone and traffic calming. The site is close to the built form of the town and is currently safeguarded for development and so, has no direct effect on the Green Belt. The land southern area comprises a relatively flat area of land which influences its landscape sensitivity (medium-low) but the land has an open aspect to the west and east with a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature trees and hedgerows to the north boundaries and the mature woodland of Revell's Rough which should be retained or any removal mitigated by compensatory planting. Proximity to the A464 to the south indicates a potential noise nuisance requiring a design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north. The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	Yes but only the southern portion of the larger site
Potential for Allocation?	Yes but only the southern portion of the larger site
Recommendation	<p>Include the previously safeguarded land fronting the A464 up to and including Revells Rough within the development boundary and allocate for housing development</p> <p>The land north of Revells Rough to remain outside the development boundary and be safeguarded for future development</p>

Reasoning	<p>Site SHF023 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site has environmental qualities worthy of protection, the land does not form part of the Green Belt, now lies close to the built edge of the town and was previously indicated as land suitable for future development. The woodland known as Revell's Rough separates this site into two discrete areas with further safeguarded land to the north. Revell's Rough therefore presents a development challenge to bring the land forward and to incorporate the woodland into the development scheme in a manner that would permit the land to the north to be made available for development. The area of the site on the A464 frontage is suited to housing use and lies in an area currently preferred by the housing market with significant existing investment in infrastructure to support further development. The evidence for developing this smaller area of safeguarded land on the A464 frontage is sufficient to justify specifically allocating this land for housing use to contribute to the residual requirement for housing in Shifnal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	around 100 dwellings with SHF022
If proposed for Allocation Design Requirements:	<p>These two sites SHF022 and SHF023 (south) should ideally be developed together, or the two development sites should have inter-related development schemes. The two sites require a suitable joint highway access to serve both sites and inter-related drainage solutions that remediate for surface water issues on SHF023. The two sites both include the significant wooded area of Revell's Rough which must be appropriately managed within the developments but should address the physical separation of these sites from the further safeguarded land to the north. Other relevant supporting studies should be undertaken particularly transport assessments, ecology, tree and hedgerow surveys, flood risk and drainage with their recommendations clearly reflected in the proposed development scheme. Careful consideration will need to be given to the creation of an effective urban edge to the settlement and the strengthening of the Green Belt boundary adjoining site SHF023.</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
Strategic Considerations:	<p>This brownfield site is currently in a productive use as a retail vehicular sales places and repair workshop in the retail core of the town with direct access to the highway network from a service road on the frontage to Cheapside/Bradford street and a secondary access to Shrewsbury Road. The current use would indicate the need for investigation of possible ground contamination with treatment during any redevelopment of the land. The site has no known watercourse flooding risk and only a small peripheral risk of surface water flooding in severe conditions. The site has the potential for a small scale redevelopment opportunity but residential use would reduce the floorspace in the retail core. The location in the retail core on a principal junction between Shrewsbury Road and Bradford Street would require a noise assessment of highway traffic movements. This assessment may require appropriate mitigation measures in the layout, design, materials and landscaping of any built development particularly to provide satisfactory standards of residential amenity in an housing redevelopment. The site will require a heritage impact assessment as it lies within the medieval core of Shifnal and partially within and adjacent to the Shifnal Conservation Area and in the setting of a number of listed buildings. The assessment should consider impacts on the character and appearance of the Conservation Area, investigation of the archaeological potential of the site and the presence of non-designated heritage assets on the site. Any redevelopment will require strengthening of the Green Infrastructure network including the protection of hedgerows on the western boundary. The site lies over a Source Protection Zone covering Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	No
Recommendation	Land within existing Shifnal development boundary

<p>Reasoning</p>	<p>This small site should continue in its current use provided the site and location remain viable for this business use. The redevelopment of the site has the potential to contribute to the range of uses and the vitality and viability of the retail core of the town. The redevelopment potential of the land requires further detailed assessment but the land lies within the development boundary, forms an integral part of the urban form and retail area with direct access to the highway network and is well served by the footway network. The detailed assessments may reveal the site has ground contamination but forms a significant part of the heritage of this historic town.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	23
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires surveys for bats and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located partially within and adjacent to the Shifnal Conservation Area. Currently occupied by a former works industrial that is likely to comprise non-designated heritage assets. Also located within the post-medieval core of Shifnal and may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA; historic buildings assessment; archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	A scheme which seeks to retain and convert elements of the most significant former works buildings would help to conserve and enhance the character and appearance of the Conservation Area
<i>Tree Comments Significant Constraints:</i>	conservation area
<i>Tree Comments Other Constraints:</i>	hedge to southern boundary and a few trees within the site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	limited opportunity for small scale tree planting to enhance urban tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land investigation required, noise assessment for Shrewsbury and Victoria Road.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
Strategic Considerations:	<p>This brownfield site accommodates a former industrial works but is a relatively high quality sandstone building with the potential to be a non-designated heritage asset worthy of retention and conversion to a new use to conserve and enhance the character and structure of the building . The site will require a heritage impact assessment as it lies within the medieval core of Shifnal and partially within and adjacent to the Shifnal Conservation Area and in the setting of a number of listed buildings. The assessment should consider impacts on the character and appearance of the Conservation Area, investigation of the archaeological potential of the site and the presence of non-designated heritage assets on the site. The site has direct access to the highway network from a generous drop kerb access on Shrewsbury Road with the potential for a secondary rear access to Victoria Road subject to traffic flows and on street parking constraints on these accesses. The previous industrial use of the site indicates the need for investigation of possible ground contamination with treatment during any redevelopment of the land. The site has no known watercourse flooding risk and no known surface water flooding even in severe conditions. The site has the potential for a small scale redevelopment opportunity but residential use would require a noise assessment of highway traffic movements with appropriate mitigation measures in the layout, design, materials and landscaping of any built development to provide satisfactory standards of residential amenity. Any redevelopment will require strengthening of the Green Infrastructure network including the protection of hedgerows on the southern boundary and trees within the site which contribute to the character of the Conservation Area. The site lies over a Source Protection Zone covering Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	No
Recommendation	Land within existing Shifnal development boundary

<p>Reasoning</p>	<p>This small redevelopment opportunity requires a new productive use for these historical industrial buildings. They are of substantial construction and could offer attractive accommodation for either a contemporary employment or residential use. The redevelopment of the site for residential use has the potential to contribute to the range and choice of housing types and sizes in the town and is located close to the central retail area. The redevelopment potential of the land requires further detailed assessment but the lies within the development boundary, forms an integral part of the urban form, is close to the principal Five Ways Junction and is readily accessible to the strategic routes into/out of town on the A4169 and the A464 to M54 Junction 4. The site is well served by the urban highway network and footway network to the front and rear of the site. The detailed assessments may reveal ground contamination but the site has the potential to be confirmed as a significant element of the industrial heritage of this historic town.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. Unlikely that necessary improvements along Park La can be secured due to the need for third party land.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site forms an Env. Network corridor and is covered by a TPO. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. There are GCN breeding ponds adjacent to the site. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. This site looks like excellent quality GCN and reptile terrestrial habitat. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible earthwork remains of ridge and furrow (HER PRN 21024) present across much of the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ?Level 2 earthwork survey).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	mature trees may be under TPO
<i>Tree Comments Other Constraints:</i>	mature trees and scrub around site boundaries. Mature tree at tight site access may be a constraint
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover on the site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	Good site with no notable constraints identified.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This generally flat, small brownfield site (1.4ha) is situated on the south-eastern edge of Shifnal next to the current development by Redrow Homes. The site adjoins Park Lane where highway access would be constrained by roadway capacity and the limited opportunity for highway improvements. The developability of the land would rely on a suitable access onto the A464 Wolverhampton Road. The proximity to the built form of the town reduces its landscape sensitivity (medium-low) but increase the visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1) but the land may be prone to inundation which requires a detailed flood risk assessment. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of known priority habitat including grassland and ponds within and surrounding the site may reduce the developable area to permit the restoration and enhancement of this habitat. The mature hedgerows and trees within and around the site should be retained especially where protected by a Tree Preservation Order. The site has some heritage value which would require an archaeological appraisal through a Heritage Assessment. The site has a Fair sustainability rating reflecting its accessibility to recreational facilities and services which help to offset the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	Yes
Potential for Allocation?	Yes
Recommendation	Include this previously safeguarded land within the development boundary and allocate for housing development

Reasoning	<p>Site SHF029 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site would be better suited to housing use the open land on the site has environmental qualities worthy of protection. The evidence for developing this small area of safeguarded land is not sufficient to justify specifically allocating this land for housing but it might form a suitable windfall site subject to an appropriate development proposal that conserved the value of the site. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	around 65 dwellings with SHF015
If proposed for Allocation Design Requirements:	<p>Site SHF029 to be developed as a single scheme in conjunction with site SHF015 to provide a broad range of housing types to meet local needs. Development site excludes Beech House (non-designated heritage asset HER PRN 34751) with garden, curtilage building and frontage walling to A464. Beech House forms part of urban land and no longer safeguarded for future development. Consideration may be given to sympathetic restoration/conversion of house and curtilage buildings. Existing northern access to Beech House to be closed and sealed with existing gates retained. Beech House to be serviced from existing southern access. Highway junction to be situated at northern point on A454 frontage to provide safe junction with good visibility and appropriate measures to manage traffic speeds and highway safety. The development should provide access to the footway and cycling network along the A464 to improve access to local services using 'active travel' options to walk, 'wheel' or cycle to local services.</p> <p>The need to conserve Beech House, protect the setting from effects of development and to deliver a safe and visible highway junction to A464 may require removal of mature trees on A464 frontage with complementary planting within the site. Consideration to be given to internal highway layout within the site to make effective use of the developable land and to improve the accessibility of the dwellings to the main and secondary accesses to encourage 'active travel' options to reach local services. Development of site SHF029 to give consideration to secondary access to Park Lane through access strip from backland boundary of site. Secondary access to provide pedestrian and cycling access to Park Lane offering a potentially safer access to local services including the local primary school and with emergency vehicular access into the site only. Green Infrastructure network to be enhanced to strengthen existing woodland mature trees around site, provide SUDs drainage system along boundary to safeguarded land to exclude built development and protect site from surface water flooding, open space with equipped play space to be provided, allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of Beech House and the effect of development on the setting of the heritage asset and to investigate the archaeological potential of the site. Noise assessment required due to proximity to A464 with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This smaller, gently sloping greenfield site (3ha) is situated to the north-east of Shifnal adjoining Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Coppice Green Lane served from Stanton Road would provide an appropriate highway access subject to widening improvements to the Lane to increase highway and parking capacity. However, development of SHF032 will produce some increase in vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has some flood risk (Flood Zone 1) from a significant surface water risk in severe conditions. The site requires Ecological Assessment and Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows tot eh west and south and woodland to the north-west which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

<p>Reasoning</p>	<p>Site SHF032 is situated on the edge of Shifnal adjoining the mixed use developments along Coppice Green Lane and close to the building conversions within the Aston Hall complex. SHF032 offers the potential to enclose some of these mixed use developments and to create a 'sense of place' by consolidating the built urban form along Coppice Green Lane. This sense of place is intended to settle the preferred use of SHF032 to further consolidate the open spaces and recreational uses within the campus of Idsall School and to create an opportunity to improve the highway and cart parking capacities along Coppice Green Lane. This land is not suited to employment development because the sensitivities to landscape and visual impacts (both medium-high) are greater than for housing use.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assuming access can be secure to Coppice Green Lane via Aston Hall track
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Due to small scale development but would still add impact on Aston Street, Curriers lane and associated junctions
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	22
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The site lies within an Env. Network corridor. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 250m), badgers, reptiles and nesting birds. Hedgerows and trees will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site within walled garden and of the setting of Grade II* Aston Hall (NHLE ref. 1308059). Walled garden itself is likely to be deemed curtilage listed. Scheme in this location would only be possible if it could be justified as enabling development in line with Historic England's guidance.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	area TPO adjacent to south-east of site
<i>Tree Comments Other Constraints:</i>	mature trees to north, west and east boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure appropriate development stand-off from trees south of the site
<i>Tree Comments Opportunities:</i>	limited opportunity for small scale tree planting to enhance urban tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Strategic Considerations:	<p>Site SHF033 lies in the setting of the Grade II* listed Aston Hall and is the walled garden that supplied the former kitchens to the Hall. The site could be accessed along the access lane into the Aston Hall complex but development of the site would have some affect on the surrounding highway network and principal junctions. The site is in the Green Belt adjoining the boundary with the town along Coppice Green Lane. The release of the land for development would have a high level of harm on the Green Belt arising from the weakening of the role of the Green Belt in separating adjoining towns and the encroachment into the setting of the town. The site would require detailed ecological assessment and protection of the trees and hedgerows around the site and the Tree Protection order to the south-east boundary. The need to protect trees and hedgerows and to enhance the Green Infrastructure network in this part of town would constrain the site capacity although there are only limited opportunities to enhance the tree cover across the site. The site has no known watercourse flooding risk and no known surface water flooding even in severe conditions. The site will require a heritage impact assessment as it lies within the setting of Aston Hall and its curtilage listed structures. The assessment should consider impacts on the significance and setting of the Hall and investigate the archaeological potential of the site. The site lies over a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	<p>Protect land within the Green Belt</p>

<p>Reasoning</p>	<p>This small curtilage listed feature should be protected as part of the history and interpretation of Aston Hall. The site forms part of the Green Belt containing the town on its north-eastern edge where the wall, tree and hedgerow boundary help to strengthen the edge of the Green Belt along Coppice Green Lane. The development potential of the land would require further detailed assessment but the release of this small site from the Green Belt to deliver windfall residential development would require evidence of very special circumstances.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes
 (where applicable):**

Site Assessment - Stage 3	
Site Reference:	SHF034
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	2%
<i>Percentage of site in Flood Zone 2:</i>	2%
<i>Percentage of site in Flood Zone 1:</i>	98%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	5%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	23%
<i>Percentage of the site benefitting from defence:</i>	0%

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within three Green Belt parcels which have moderate and strong performance against purposes 2 and 4; and moderate performance against purpose 3. The Green Belt Review undertaken for Shropshire indicates that these Green Belt parcels, if released for development, would have a moderate-high and high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. One of the Green Belt parcels covering the site contains a sub-parcel (representing the entirety of the site within this particular parcel) which would have a moderate level of harm on the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High and High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Via a strategic link between Priorslee Road (link under railway bridge), A4169 and A464 but vehicular access onto Park Lane would be restricted.
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. With appropriate junctions and speed limit reviews and extension and traffic calming on the radial routes.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y.

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Assuming checks are made on any adverse impact on Innage Road and Church Street and associated junctions and mitigation provided if necessary.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	19
<i>Ecology Comments Significant Constraints:</i>	Protection of ponds, Env. Network and GCNs will reduce the no. of houses possible.
<i>Ecology Comments Other Constraints:</i>	Northern section: The northern boundary forms and Env. Network corridor (due to the presence of a vegetated railway line). This corridor should be buffered and enhanced. Southern section: Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. Part of the north-western and south-western boundaries contain or are adjacent to Env. Network corridors and priority habitat (woodland) - these will also need to be appropriately buffered. There are GCN breeding ponds adjacent to the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible. Given the number of known GCN breeding ponds in the area, a large amount of mitigation land is likely to be required, particularly in the south-eastern section of the site. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds. Hedgerows, trees and ponds will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147), setting of Grade II listed house known as The Terrace (NHLE ref. 1053636) and cluster of associated Grade II LBs at Shifnal Manor. Site itself includes putative, but now largely discounted, site of Idsall (pre-1590 Shifnal - HER PRN 00757) and site of a 17th century mill pond. Site also includes a former brickworks (HER PRN 01825). Site includes non-designated historic buildings at Lodgehill Farm. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPOs adjacent site
<i>Tree Comments Other Constraints:</i>	belt of woodland to north of site along railway and group of trees in semi-natural habitat along watercourse in centre of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Expand woodland cover along northern boundary and expand buffer along watercourse with a development stand-off
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Multiple noise sources including A4169 which will require noise assessment to ensure internal standards with windows open are achieved and impact on and from existing farm business off Park Lane marked as Lodghill farm. Brook known to flood.
<i>Public Protection Comments Management of Constraints:</i>	Noise survey, orientation, layout, stand-off and working with existing business. Farm building use will likely be disturbing to residents.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This extended greenfield site comprises individual sites to the east with SHF019 (10ha) as a gently sloping greenfield site that runs into the western portion of site P15b of similar character running to Park Lane. The site then comprises individual sites to the west with P16 forming the land around the south of Lodgehill Farm and on the lower slopes of Lodge Hill and site SHF017 (south) forming the land around the north of Lodgehill Farm and along the woodland boundary to the urban edge of town, crossing the corridor of the Wesley Brook and fronting the A4169. Site SHF07 (north) continues to the north of the A4169 forming a gently sloping, open greenfield site adjoining the open urban edge of town and the green corridor along the railway embankment to the west of the town. of the west. These combined sites provide an extended development opportunity between the A464 Wolverhampton Road and the A4169 and would present a future opportunity to under pass the railway and link to the A464 west. These sites are located in the Green Belt where they serve to prevent urban development encroaching into the countryside and separate Shifnal from adjoining towns. The release of this land form the Green Belt would have a moderate-high harm to the Green Belt for sites SHF017 and P16. The local topography screens sites SHF019 and P15b west behind a ridgeline where the harm of release would be moderate. The landscape effects on the western parcels are medium-high lying below Lodge Hill but this screens the sites where the visual impact would be medium. To the east, the landscape impacts are medium and the visual impacts are medium-high where the land is open to views from the south and east but sites SHF019 and P15b west have the benefit of concealment behind the ridgeline. The land area is affected by the flood risks around the Wesley brook with its constrained watercourse through he town capable of being addressed by a roadway viaduct across the river channel and the creation of a Green Infrastructure network along the watercourse potentially to include public open space with equipped play space. There is a further risk of surface water flooding through local channels to the north-west and north- east within the site which are capable of being addressed through a SuDS system again to form part of the Green Infrastructure network. This would be supported by Ecological Assessment, Arboricultural Assessment and a Botanical Survey with the presence of protected or priority species requiring appropriate conservation, retention, mitigation and enhancement to sustain these as part of the Green Infrastructure network. This would consider the woodland boundary to the urban area, Tree Protection Order along the A4169 and strengthening of the green buffer along the rail line to the north. The site lies in the setting of a number of listed buildings requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464, A4169, rail line and to Lodgehill Farm would require a noise assessment with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity. Evidence of an infilled historical pond may suggest some ground contamination. The site has a Good sustainability rating due to the accessibility to some of Shifnal's out of centre facilities and the reasonable accessibility to the town centre. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	<p style="text-align: center;">Protect the land north of the rail line within the Green Belt</p> <p style="text-align: center;">The extended area of land south of the rail line and extending though the A4169 and up to the A464 (south) to be removed from the Green Belt and safeguard for future development</p>

<p>Reasoning</p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal that combine these sites to form SHF034 and contribute to a large scale housing development to meet the future needs of Shifnal. This would create a continuous link road between the two principal highways at A4169 and A464 to reduce congestion on the highway network through the town and locally on the constrained country lane at Park Lane. The release of SHF034 is considered to be justified to provide for the future needs of Shifnal delivering new strategic infrastructure investment, new housing opportunities, new community facilities and commercial services for the residents of the town and building on proposed highway improvements at Five Ways and Innage Road. The provision of new strategic highway to the A4169 and into site SHF017 (north) north of the A4169 Bridgnorth Road will facilitate the longer term provision of a roadway underpass linking the A464 west to create the potential for a one way gyratory system via the underpass onto the A464 and to return through the 'sister' under-pass at Innage Road. These land parcel may accommodate employment development within the broad range of land uses on site SHF034 however, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option for SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3	
Site Reference:	SHF035
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	1%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	<p>Within the Green Belt Assessment undertaken for Shropshire this site is considered within two Green Belt parcels (P15 and BA2). The assessment indicates that these parcels make no contribution against purposes 1a and 1b; perform moderately against purpose 2 and purpose 4; and performs either moderately or strongly against purpose 3.</p> <p>Within the Green Belt Review undertaken for Shropshire the element of the site located within P15 is considered, however Parcel BA2 (which contains a large portion of the site) was not specifically assessed. The review of parcel P15 indicates that there would be moderate-high harm to the Green Belt resulting from release (although a sub-parcel containing a small portion of this site would have moderate harm to the Green Belt if released).</p> <p>Within the Green Belt Review, the element of the site within parcel P15 is also considered within sub-opportunity area (Sh-1 and Sh-2), furthermore a sub-area of the parcel is also considered within opportunity area Sh-1a. The review of opportunity areas Sh-1 and Sh-2 indicates that there would be high harm to the Green Belt resulting from release. The review of sub-opportunity areas Sh-1a indicates that there would be moderate harm to the Green Belt resulting from release.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site has three existing highway access points. Two of the existing accesses are on to minor roads, Lamledge Lane and Upton Lane with restricted width and forward visibility. Therefore, access to the site without improvements to Lamledge Lane and Upton Lane would need to be via the A464. The Development would provide an opportunity to upgrade the existing Junction on to the A464. Upton Crossroads is an Accident Cluster site due to the high approach speeds and restricted visibility for vehicles emerging on to the A464. The site appears to include land that would enable these improvements to be delivered if needed.</p> <p>If developed as a strategic site it is assumed that local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities. The nearest schools is St Andrews Primary School which is approximately 2km from the centre of the site and are linked by a continuous footway, which would require upgrading. The nearest convenience store and GP is in Shifnal Town Centre are approximately 2.5km from the centre of the site and are linked by a continuous footway.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for any employment use that generates airborne pollution or road traffic including HGVs. Detailed emissions modelling would be required due to proximity of designated wildlife sites. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	There is a patch of priority habitat woodland on the site that is TPO'd and within the Env. Network. This area should be retained and appropriately buffered. The eastern and southern boundaries form Env. Network corridors. There is a pond within the woodland and many others within 500m Requires an Kecia and surveys for bats, GCN (ponds within 500m), badgers and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential. Site detached from existing built edge of town, so development likely to be incongruous in relation to the semi-rural character of the immediate surroundings.
<i>Heritage Comments Other Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees and groups of trees and hedgerows associated with large ponds to the west of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure appropriate development stand-off from trees and woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure. Look to connect to / expand block of woodland to the west of the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to south and rail to north. Potential contaminated land (not had access to systems to check on this aspect). Possible odour from farm buildings close to edge of site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be available for contaminated land. Appropriate assessments will be necessary. Noise mitigation likely to be available. As a first option it is recommended that noise sensitive receptors (residential properties) are provided with sufficient distance from noise sources to avoid issues. Where this is not possible good design and layout including orientation and layout of development, glazing barriers including fencing and bunding, mechanical ventilation. Odour concerns can be reduced by having separation distance from odour sources and where possible not placing residential down wind from odour sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This extended greenfield site comprises two Green Belt land parcels at P15 and Broad Area 2 (BA2) which comprise an open ridgeline running north towards the rail line enclosing two large man made but naturalising ponds within parcel P15 and open land sloping downwards to the east into the Green Belt as part of BA2. This second area includes a third agricultural pond with a dedicated highway access from Upton Lane which itself is located in the centre west of the land. Parcel P15 adjoins proposed housing allocations SHF023 and SHF022 on the south west boundary will become part of the built form of the town. To the north up to the rail line, the land is partially separated from the built form of Shifnal by the exclusion of sites P15a and SHF023(north) with the important local route of Lamledge Lane that forms a local road viaduct over the rail line and leads into the north and centre of the town and passes Shifnal Industrial Estate. This route, more than Upton Lane, provides direct access to the town by means other than private motor vehicles. The two areas of P15 and BA2 combined provide an extended development opportunity served from the A464 to provide for the future housing needs of Shifnal. This proposed areas for housing would have direct access to the proposed new employment area on Upton Lane to the north of the rail line to help create a sustainable development option to the east of Shifnal. The road viaduct of Upton Lane over the rail line is proposed to be closed with the development of an employment area on sites SHF018b and SHF018d and to maintain this road route would require investment in Upton Lane and the road viaduct over the rail line. The sites are located in the Green Belt where they serve to prevent urban development encroaching into the countryside and help protect the setting to this historic town. The release of this land from the Green Belt would have a moderate-high harm to the Green Belt for parcel P15. This has a more complicated set of relationships when considering sub-opportunity areas and the fact that BA2 was not assessed in the Green Belt Review. The assessment of sub-opportunity areas indicates land in the west has a lower, moderate harm from release but in the east the impact is moderate-high at least and may have a high harm as the land extends east into the Green Belt. Evidence submitted by the site promoter does not alter this conclusion. The ridgeline in the local topography forms a local horizon in the centre west of the site and screens the western land and Shifnal from distant views. East of the ridgeline, the land is open to the distant views from the east. The downward slope of the topography here, means the landscape impacts are medium-low but the open aspect means the visual impacts are medium-high. The land area has limited flood risks focused around the third agricultural pond in the north, to the north-east along the rail line and to the south-east along the A464. These peripheral effects are capable of being addressed by SuDS and the creation of a Green Infrastructure network which in turn seeks to create strong, structural landscaping boundaries to the Green Belt. The release of this land would need to be supported by Ecological Assessment, Arboricultural Assessment and a Botanical Survey with the presence of known protected woodland and priority species including Great Crested Newts requiring appropriate conservation, retention, mitigation and enhancement to sustain these as part of the Green Infrastructure network. The site contains the non-designated heritage asset of the former windmill on the ridgeline proposed to be conserved as a local landmark and focus for the Green Infrastructure Network. The land would require a Heritage Assessment to investigate the archaeological significance of the land. Proximity to the A464, rail line and local farm enterprises require a noise assessment with appropriate mitigation measures in the layout, design, materials and landscaping of any development to offer satisfactory residential amenity. Evidence suggests some ground contamination to be addressed. The site has a Good sustainability rating due to the accessibility to some of Shifnal's out of centre facilities and the reasonable accessibility into the town centre but this relates to highway linkages outside the proposed area for future development. The site is in a Source Protection Zone around Shifnal but is some distance from the core zone on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

<p>Reasoning</p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the future development needs of the community than this greenfield land in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF035 would extend the settlement well beyond its current built form and layout extending directly into the Green belt and with a partial separation from the built form of the town. The release of this land would have significant impacts on the town's setting and the protection of the Green Belt. These reasons indicate that SHF035 should not be preferred as the safeguarded land to meet the future development needs of Shifnal.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3	
Site Reference:	SHF037
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	2%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two Green Belt parcels which have moderate performance against purpose 2; moderate and strong performance against purpose 3; and weak and no contribution against purpose 4. The Green Belt Review undertaken for Shropshire indicates that these Green Belt parcels, if released for development, would have a moderate-high and high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road and Coppice Green Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit on Stanton Road but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout. This site should not have highway (vehicular) access onto Coppice Green Land unless major improvements can be delivered in the wider network.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. As the impact of this development Coppice Green Lane, Aston Street and Curriers Lane and associated junctions would not be accommodated and only reduced by the establishment of a strategic circular road to provide alternative access routes. This would be prevented by existing development to the north west and the need to secure agreements with third party landowners to the south.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Protection of adjacent ponds and Env. Network will reduce the no. of houses possible.
<i>Ecology Comments Other Constraints:</i>	The site contains patches of woodland (Env. Network and potential priority habitats). These areas should be retained and appropriately buffered. There are ponds adjacent to the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. Hedgerows, trees and ponds will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	Land N of Stanton Lane likely to have substantial negative impact on setting of Grade II* Aston Hall (NHLE ref. 1308059) and associated cluster of GII LBs.
<i>Heritage Comments Other Constraints:</i>	For land S of Stanton Rd this area also has a poor relationship with existing built form of settlement. No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO adjacent site
<i>Tree Comments Other Constraints:</i>	site contains numerous hedgerows and trees and a strip of mature woodland along the northern boundary. Site adjoins several blocks of mature woodland
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Seek to expand adjoining woodlands with new woodland creation as part of open space within the development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Multiple noise sources including main roads out of Shifnal and M54, rail line and Lamledge lane industrial site (the latter being a source of other dis-amenity issues). Potential contaminated land close to Lamledge lane industrial site. The area close to M54 more appropriate for employment.
<i>Public Protection Comments Management of Constraints:</i>	Areas close to M54 unsustainable for housing. Multiple noise assessments required. All should be assessed for windows open which will lead to thoughtful orientation, glazing and positioning of habitable rooms. Consider flatted developments near rail line.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This extended greenfield site comprises three sites including SHF018a and SHF018b with SHF018d. These comprise an arc of open greenfield sites spanning the land around the north and north east of Shifnal within the Green Belt and seeking to provide a sustainable extension to Shifnal to meet the future development needs for housing on site SHF018a whose proposed development is addressed below. The sustainable extension also addressed the employment needs of Shifnal on sites SHF018b and SHF018d and the evidence for these sites was accepted they are now proposed to be allocated for employment use. Site SHF018a proposed for housing development is a very large, elevated greenfield site (80ha) is situated to the north-east of Shifnal adjoining Stanton Road (south) and Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018c would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity which may be difficult to achieve. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has no flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site with woodland at its southern boundary which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies further to the east along Stanton Road. This is not the preferred location for the safeguarding of land to meet the long term development needs of Shifnal. There are more preferable opportunities for the release of Green Belt to provide for future development that provide better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF018a would extend the settlement well beyond its current built form and layout and would have significant impacts on the setting of important heritage assets and this historic town and on the infrastructure of Shifnal particularly its highway network whilst potentially compromising the open character and environmental values of SHF018a.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes - southern portion only to be removed from the Green belt and allocated for employment development
Recommendation	<p style="text-align: center;">Protect the land north of Stanton Road within the Green Belt</p> <p style="text-align: center;">The land to the south around Upton Lane from Stanton Road (north) to the rail line (south) to be removed from the Green Belt and allocated for employment development</p>

<p>Reasoning</p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the future development needs of the community than this greenfield land in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF037 would extend the settlement well beyond its current built form and layout removing a strong boundary to the Green Belt at Coppice Green Lane. The land is elevated above and visible from the built form of the town and forms the setting and backdrop to the Grade II* listed Aston Hall. The release of this land would have significant impacts on the setting of the town and its key heritage assets, the protection of the Green Belt and the capacity of the highway network in the north-east and retail core of the town. These reasons indicate that SHF037 should not be preferred as the safeguarded land to meet the future development needs of Shifnal.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Percentage of the site within 20m of a detailed river network:</i>	9%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs strongly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel where the release for development would have a high level of harm on the Green Belt due to the weakening of the role of adjoining areas with regard to purpose 2 to separate adjoining towns and the level of encroachment on the setting of the town under purpose 4. No sub-parcels were identified which would have less harm.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Priorslee Road, Haughton Lane and unnamed road to the west of Haughton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes that the site would fund any necessary improvements along the three frontage roads, including speed limits and footways.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	If developed as a strategic site then a review of several major junctions would be needed, including M54 junction 4 and the Priorslee Road / Victoria Road / Shrewsbury Road roundabout and any necessary improvements funded.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	18
<i>Ecology Comments Significant Constraints:</i>	Significant reduction in no. of houses due to presence of Env. Network/potential priority habitats/woodland/protected species.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority grassland and woodland habitats - botanical survey required. If priority habitats are present then these areas should not be developed. There are otter, water vole and badger records on the site. Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. If GCNs are present in the on-site ponds, a min. 50m buffer is likely to be required. Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds. There are a number of TPOs on the site.
<i>Ecology Comments Management of Constraints:</i>	If priority habitats are present, these areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site partially within Haughton Conservation Area. Probable impact on setting of Grade II* listed Haughton Hall. Site includes non-designated parkland for Haughton Hall (HER PRN 07526). Site includes cluster of non-designated historic buildings at Banks Farm. Very large size and numerous metal detectorist finds suggests it has archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA and non-designated parkland; setting of LBs ; Level 2 Historic Buildings Assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	surrounds Haughton village conservation area. Numerous tree, group, area and woodland TPO designations in southern half of site. Large linear woodland and water features run through central part of site , linking to Haughton Hall
<i>Tree Comments Other Constraints:</i>	hedgerows and trees within and around site boundaries
<i>Tree Comments Management of Constraints:</i>	due to size of site - full EIA and landscape character assessment and VIA. At a smaller scale - Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site. large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat. Expand woodland where feasible.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north and south and noise from service station to the west. Historic landfill on site. Possible noise from events at Haughton Hall(?)
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Con land remediation may be available. Suggest stay away from western tip of the site.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the north-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, gently sloping greenfield site is situated to the west of Shifnal adjoining the A464 Priorslee Road (south) and Haughton Lane (east). The land is located within the Green Belt with a high harm caused by its release where the primary objectives are to protect the setting of the town and the separation from Telford, more than encroachment into the countryside. Accessibility to Haughton Lane would provide an appropriate highway access subject to detailed assessment of further highway improvements at the Five Ways roundabout and Priorslee Road. The site adjoins the edge of the built form of the town which influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The site has significant tree and woodland cover recognised through Tree Protection Orders requiring detailed assessment of the value of the site. The site lies in / close to Haughton Village Conservation Area and in the setting of listed and non-designated heritage assets requiring a detailed Heritage Assessment.</p> <p>The site would have a Fair sustainability rating for housing use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for employment use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>

Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

<p>Reasoning</p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site P10 would extend the settlement well beyond its current built form and layout and would have significant impacts on the town's setting and its infrastructure particularly its highway network whilst potentially compromising the open character and environmental values of site P10. These reason would suggest that P10 should not be developed and the degree of harm from employment uses would be even greater than that likely to be caused by housing use.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes (where applicable):**

Site Assessment - Stage 3

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs moderately against purpose 2; moderately against purpose 3; and weakly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel where the release of the land would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purposes 2 and 3. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF018c.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The collective impact of the developments off Stanton Road will have an unacceptable impact on Aston Street and Curriers Lane and associated junctions which are already at or close to capacity.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present, development is not recommended. Developable area greatly reduced due to presence of ponds/woodland/Env. Network.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority woodland and grassland habitats - botanical survey required. If priority habitats are present then the site should not be developed. There are ponds on and in close proximity to the site. If GCNs are present in any of the ponds, a min. 50m buffer will be required. If GCNs aren't present, the ponds (priority habitat) and associated habitats should be retained and enhanced, with connectivity maintained, which will greatly reduce the developable area available. The site lies forms an Env. Network corridor. Requires Ecla and surveys for bats (trees, buildings and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitats are present, these areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II* listed Aston Hall (NHLE ref. 1308059) and cluster of associated Grade II LBs. Site includes a former 19th century brick field (HER PRN 07291), and otherwise of a large size, so has archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	large blocks of woodland to centre and south of site restrict developable space to fields to north and east of site
<i>Tree Comments Other Constraints:</i>	hedges and trees around site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	Ensure development stand-off from existing woodland and expand if possible, linking the woodland areas.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Commercial/industrial to the south. Road to the north. Potential con land from infilled ponds on site.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation.
<i>Public Protection Comments Opportunities:</i>	Advise stay away from commercial/industrial to south leaving good distance to stop interference with the existing site. Con land remediation likely to be available.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, undulating greenfield site (14ha) is situated to the east of Shifnal adjoining Stanton Road (north) and Shifnal Industrial Estate (south). The land is located within the Green Belt with a moderate-high harm caused by its release however, Green Belt parcels to the north would have a higher impact on the remaining Green Belt land. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018b would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and despite its enclosed nature has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The site has large blocks of woodland restricting development in the centre and south of the site. Possible impact on setting of Grade II* listed Aston Hall and cluster of associated Grade II Listed Buildings. The site also includes a former 19th century brick field and is large, so has archaeological potential. As such a Heritage Assessment will be required. The site would have limited accessibility to Shifnal's facilities to redress the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove land from Green Belt and safeguard for future development

<p>Reasoning</p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. Site P14 offers the potential to safeguard land to support the long term growth of a large scale, new employment area to the east of Shifnal. This potential employment area would have the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The safeguarding of site P14 (with SHF018a), in proximity to existing and newly allocated employment activities around Stanton Road / Lamledge Lane has the capacity to support the employment needs of the town in combination with sites SHF108b and SHF18d.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would also have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. However, Site P15a has an identified sub-parcel which would have a moderate level of harm if released from the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Lamlidge La and Upton La
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	N. This site (540 homes) should not have highway (vehicular) access onto Lamlidge Lane or Upton Road unless major improvements can be delivered along the whole length of both lanes and this would require significant amount of third party land.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	15
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env/ Network/woodland. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site forms an Env. Network corridor. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. This site looks like it contains some excellent quality GCN and reptile terrestrial habitat. There are GCN breeding ponds 100-150m from the boundary. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. The woodland and hedgerows will need to be retained and appropriately buffered.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes a widening of the railway cutting (HER PRN 29639) opposite the former Coalport China and Wire Works (HER PRN 07289). No other known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	block of woodland and group of trees to northern edge of site and mature trees and hedges around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the existing and any future woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Factory on site to the north east creating possible noise etc and possible contamination to the land. Rail to the north with industrial estate to the opposite side.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road. However, due to the nature of the industrial estate to the north significant stand off may be necessary.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Page 1345 Poor

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This larger, relatively flat greenfield site is situated on the south-eastern edge of Shifnal adjoining the railway line east of the town and opposite Shifnal Industrial estate. The site is served from the north by Lamledge Lane across a narrow road bridge over the railway and from the east by the country lane of Upton Lane. These two highways are not suitable to serve development on P15a unless improved along the entire length of the roadways serving the site. The site would therefore benefit from an alternative access such as might be achieved through the development of the entire area of the adjoining site SHF023. The site lies close to the built form of the town principally comprising the employment area of Shifnal Industrial Estate to the north across the rail line. The land area comprises a sub-parcel of Green Belt land considered for release with a moderate effect on its release on the remaining Gren Belt land. The land has some evidence of use in connection with the railway which influences its landscape sensitivity (medium-low) but the land has an open aspect with a higher visual sensitivity (medium-high). The site has little known flood risk (Flood Zone 1) but a nominal surface water risk in severe conditions. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site requires an archaeological assessment to explore the scale of the site including known historical railway excavations on the land. The site has mature tree and hedgerow boundaries and mature trees and woodland to the north which should be retained or any removal mitigated by compensatory planting. Proximity to the railway and Shifnal Industrial Estate indicates the potential for nuisances requiring a design solution in any development with a stand from any nuisance uses. The site has a Poor sustainability rating for housing and employment in the context of the settlement, due to the relative isolation of the land in combination with the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

<p>Reasoning</p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this more isolated greenfield site in the Green Belt. It is recognised that the site makes only a moderate contribution to the Green Belt but it is currently situated in a relatively inaccessible location along with northern portion of adjacent site SHF023. There other sites with better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site P15a and the northern section of SHF023 would extend the settlement well beyond its current built form and layout. This land may become more accessible and suitable for development should the proposed development of land at SHF022 and SHF023(south) provide an access solution across the Revell's Rough woodland but this is not likely to happen for some time. This land is not suited to employment development despite the proximity to Shifnal Industrial Estate as the land lies in a relatively isolated location with very poor accessibility via the existing highway network, the close proximity to some existing and newly proposed housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Western Portion: N. Unless access can be gain access to A464 via SH015 and/or SHF019. Eastern Portion: Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	Western Portion: 16 Eastern Portion: 18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs.
<i>Ecology Comments Other Constraints:</i>	There is a pond on the site in which GCNs are likely to be present. There is a GCN breeding pond adjacent to the north-east boundary. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Probable impact on setting of Grade II listed house known as The Terrace (NHLE ref. 1053636). Site also includes a former brickworks (HER PRN 01825). Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedges, mature trees and groups of trees within and around site. Unnatural block of plantation in centre of south-eastern part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Opportunity to create larger area of publicly accessible woodland, extending and reshaping existing block of woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the north and southwest of the site creating a noise source. Possible contamination to north west of site from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and Contamination likely to be able to be remediated. Orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Poor
Relationship to the Black Country	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This split greenfield site (18ha) is situated to the south-east of Shifnal adjoining the A464 Wolverhampton Road but the main part of the site is poorly related to the built form of the town. However, the smaller parcel located to the west on Park Lane offers the potential to conduct an access road tot he A464 from other parcels to the west to reduce traffic impacts on the constrained Park Lane. The land is located within the Green Belt with a moderate-high harm caused by its release. However, the eastern parcel may have a lower moderate harm due to its relative position adjacent to the ridgeline south of the site. The western site adjoins the built form of the town with a lower landscape sensitivity (medium-low) but the land retains a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature tree and hedgerow cover within and around the site which should be retained or any removal mitigated by compensatory planting. Possible impact on Grade II listed building. The site also includes a former brickworks and due is large so has archaeological potential. As such a Heritage Assessment will be required. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development. The site has a Poor sustainability rating (both in the context of the settlement and a contribution to the Black Country for housing and employment) for the eastern parcel due to the distance from Shifnal's facilities and the environmental values of the site, the western parcel might be considered more sustainable and in combination with site SHF019 with good accessibility to the A464 this smaller sub-parcel has a Fair sustainability rating under site SHF019VAR. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect the land east up to Hinington Road within the Green Belt but release the western land between SHF019 (north) and Park Lane (south) from the Green Belt and safeguard for future development

<p>Reasoning</p>	<p>The main part of P15b located to the east comprises a greenfield site in the open countryside that makes an important contribution to the Green Belt as it largely forms a ridgeline that is visible to the wider Green Belt but serves to enclose Shifnal from these long distance views. In relation to the larger part of P15b, there are more preferable sites available within Shifnal offering better opportunities to meet the needs of the community.</p> <p>A marginal part of P15b located to the west and closer to the built form of the town, has potential with SHF019 to provide a highway access to Park Lane from the A464 (south). In this way, P15b (west) could contribute to a larger scale release of land from the Green Belt with sites P16 and SHF017 (excluding P17b). This would create a continuous link road between the two principal highways at A464 and A4169 to remove traffic from the highway network through the town and from the country lane at Park Lane. This would require related highway improvements at Five Ways and Innage Road but it would permit the provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. SHF034 might accommodate employment development within the larger scale land release in SHF034 to the south and west of the town. However, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to P15b (west) as part of the combined sites that form SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Percentage of the site within 20m of a detailed river network:</i>	5%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High and Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High and Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Park Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes the site can fund improvements to Park Lane along the frontage for vehicles and pedestrians with land from the site, including extension of existing speed limit.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. Park Lane to the north of the site is narrow with substandard footways and the site could not delivery necessary improvements without third party land.
Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store & Public Transport Service):	14
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env. Network.
<i>Ecology Comments Other Constraints:</i>	<p>Wesley Brook runs through the western section of the site - this an its associated riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS.</p> <p>There is a GCN breeding pond on the site. A buffer of at least 50m around the pond will be required, but given the number of known GCN breeding ponds in the area, a greater amount of mitigation land is likely to be required.</p> <p>There are white-clawed crayfish records in the brook.</p> <p>Requires botanical survey, Ecla and surveys for bats (trees, buildings and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds.</p> <p>A PROW runs through the site.</p>
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on cluster of Grade II listed buildings at Shifnal Manor. Site includes non-designated historic buildings at Lodgehill Farm. No known archaeological interest but very large size suggest it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Impact on settings of LBs; Level 2 Historic Buildings Assessment; archaeological desk based assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and isolated trees within and around site boundaries. Area of woodland at western end of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Seek to link to / expand offsite woodland to the west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to east. Possible con land.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Con land remediation may be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the south of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This large, undulating greenfield site is situated to the south of Shifnal adjoining SHF017 and Park Lane which is severely constrained by current traffic usage. The land is located within the Green Belt with a moderate-high harm caused by its release however, of the parcels considered in the Green Belt Review the release of P16 has a lower impact on the remaining Green Belt land. Accessibility to the land from the west via SHF017 from the B4169 would be acceptable but an alternative eastern link would be required to intersect Park Lane. The site partly adjoins the built form of the town which influences its landscape sensitivity to medium-low however the land remains visible in the wider landscape with medium-high visual sensitivities. The site has little flood risk (Flood Zone 1) except for the corridor of the Wesley Brook and has a nominal surface water flood risk in severe conditions however, the topography may expose the land to inundation which requires a detailed flood risk assessment. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area of the land. The site has woodland at its western end which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Remove land from Green Belt and safeguard for future development

<p>Reasoning</p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. Site P16 has the potential to provide an access from SHF017 to the A464 (south) and contribute to a large scale housing development with sites SHF015b(west), SHF019. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country road at Park Lane. P16 has the benefit of having medium to medium-low landscape sensitivity but this has to be balanced with the medium to medium-high visual sensitivity and moderate-high harm to the Green Belt from its release for development. This balance relates to the potential benefits of delivering a new strategic link from the A4169 to the A464(south) in combination with sites SHF017, SHF15b(west) and SHF019, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site P17b north of Bridgnorth Road in combination with site P17a (Priorslee Road) north of the rail line however, releasing these land parcels would cause high harm to the Green Belt. This will further contribute to the long term provision of new housing and create the opportunity for a one way gyratory system via the railway under-pass between these two land parcels and using the separate under-pass on Innage Road. SHF034 might accommodate employment development within the larger scale land release in SHF034 to the south and west of the town. However, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to P15b (west) with SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications Required</p>	<p>No</p>
<p>If proposed for Allocation, Potential Capacity:</p>	
<p>If proposed for Allocation Design Requirements:</p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This smaller, gently sloping greenfield site is situated to the west of Shifnal between the A464 Priorslee Road and the railway embankment and comprises a field that previously included the existing cemetery extension and allotments. The land is located within the Green Belt with a high harm caused by its release where the primary objectives are to protect the setting of the town and the separation from Telford, more than encroachment into the countryside. Accessibility to the A464 would provide an appropriate highway access subject to detailed assessment of further highway improvements at M54 J4, Five Ways roundabout and Priorslee Road including the provision of additional footways. The site adjoins the complementary developments on the edge of the built form of the town which influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees, hedgerows and tree lines especially around the cricket club and cemetery which should be retained where possible. The site lies in the setting of listed and non-designated heritage assets and require a Heritage Assessment including an archaeological assessment due to the scale of the site. Proximity to the A464 and railway indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>

Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	No
Recommendation	Protect land within the Green Belt

Reasoning	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this more isolated greenfield site in the Green Belt. It is recognised that the site makes a moderate-high contribution to the Green Belt and is situated in a relatively inaccessible location to the west of the town. There other sites with better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In future site P17a might serve to extend the settlement beyond its current built form and layout should it be possible to underpass the rail line at site SHF017 (north) to form a new highway link to the A464 (west) but this is not likely to happen for some time. This land is also not suited to employment development as the land lies in a relatively isolated location some distance from the current employment focus to the east of the town.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
Strategic Considerations:	<p>This smaller, gently sloping greenfield site (part of SHF017 at 36ha) is situated to the west of Shifnal north of the A4169 (Bridgnorth Road) and adjoining the railway embankment. The land is located within the Green Belt with a high harm caused by its release. However, the release of SHF017 (excluding P17b) has a lower impact on the remaining Green Belt land. Accessibility to the B4169 would provide an appropriate highway access subject to the provision of a suitable junction possibly from the release of SHF017, extension of the restricted speed zone (30mph) and an assessment of the impacts on Innage Road and Church Street. The site adjoins the built form of the town with an open boundary in need of strengthening. The varying topography influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has no flood risk (Flood Zone 1) and no surface water flood risk. The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has significant woodland around the railway and cover should be retained where possible. The site lies close to the Shifnal Conservation area and may require a Heritage Assessment including an archaeological assessment of the history of the site. Proximity to the A4169 and railway indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. <p>If proposed for Allocation Design Requirements:</p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
 Purpose 2 (merging of neighbouring towns);
 Purpose 3 (safeguarding countryside from encroachment);
 Purpose 4 (preserving setting/character of historic towns); and
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

***Green Belt Purposes
 (where applicable):**

Shropshire Local Plan

Additional Sustainability Appraisal Report: Appendix 9

Updated Stage 3 Site Assessment:
Shrewsbury Strategic Centre

Site Assessment - Stage 3 Updated

Site Reference:	BIT026
Coal Authority Reference Area?	No
Mineral Safeguarding Area?	Yes
Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:	Yes
Percentage of site in Flood Zone 3:	0%
Percentage of site in Flood Zone 2:	0%
Percentage of site in Flood Zone 1:	100%
Percentage of the site in the 30 year surface flood risk zone:	2%
Percentage of the site in the 100 year surface flood risk zone:	4%
Percentage of the site in the 1,000 year surface flood risk zone:	10%
Percentage of the site identified on the EA Historic Flood Map:	0%
Percentage of the site within 20m of an historic flood event:	0%
Percentage of the site within 20m of a detailed river network:	6%
All or part of the site within a Source Protection Zone:	Yes
Landscape Considerations (Residential) (from the LVSS):	Medium-Low
Visual Impact Considerations (Residential) (from the LVSS):	Medium-Low
Landscape Considerations (Employment) (from the LVSS):	Medium
Visual Impact Considerations (Employment) (from the LVSS):	Medium
Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	B4380
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Y. Subject to the introduction of a suitable access junction and review and extension of the existing speed limit. Potentially 457 homes
Highway Comments - Could the Development Occur Without Off-Site Works?	N
Highway Comments - Are Envisaged Off-Site Works Achievable?	Y. The B4380 at this location still has the appearance of a high speed inter urban main road. Significant changes to the appearance of the section of B4380 between Bicton Village and Shrewsbury will be necessary before this and a number of other sites along the B4380 are developed.
Ecology Comments Significant Constraints:	Developable area reduced by possible presence of priority habitats, hedgerows and Env. Network. Possible HRA required due to road emissions from increased traffic (in-combination) of Hencott Pool Ramsar. See LPR HRA.
Ecology Comments Other Constraints:	The southern sections of the site (Calcott Moss and associated water course, previously LWS) are within the Env. Network, connected to the core area of Oxon Pool LWS. If priority habitats are present then these areas will need to be retained and appropriately buffered, along with the hedgerows and trees. Requires botanical survey, Ecla and surveys for bats, GCNs (records in ponds within 500m), badgers, reptiles, water voles, otters and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to restore priority habitats of Calcott Moss and maintain key arm of the Environmental Network. See accompanying document.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with significant field and boundary trees and hedgerows.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of existing mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the settlement.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north creating noise. Agricultural building (?) on the west boundary. Commercial to east.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment. Additional separation away from agricultural and commercial activities on the site perimeter to ensure no impacts on existing buildings.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the west of Shrewsbury, but it is some distance from the built form. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Significant site located between Shrewsbury and Bicton. Could accommodate 300+ dwellings. 10% of site in 1,000 year surface flood risk zone.</p> <p>New access required off Holyhead Road.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Whilst the site is relatively free of on-site constraints and safe access is considered achievable, the site is considered to be divorced from the urban edge of Shrewsbury and represents a fairly isolated countryside location. As such there are significant concerns over the site's overall sustainability, particularly in relation how the site could encourage the use of sustainable transport modes. In addition the site's proximity to Bicton, along with the scale of growth proposed, raises concern as to the site's impact on the character of the village. It is envisaged the allocated SUE West situated to the south of the proposed site will be developed over the next 15 years and therefore it is not envisaged the site's proximity to Shrewsbury's urban edge will improve until much later in the plan period. It is considered there are far more sustainable options closer to the urban edge capable of delivering major sustainable greenfield land releases.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Site Assessment - Stage 3 Updated

Site Reference:	SHR011
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 27 homes with access onto Belvidere Avenue. The site includes sufficient land to create an appropriate standard estate road junction and access link from the existing highway.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). The woodland here may be priority habitat or corridor in the Network Map that would require consideration under MD12 and CS17. The grassland would also require survey to determine if it has value. If it is of interest there isn't likely to be enough land available for development to make this a viable site.
<i>Ecology Comments Other Constraints:</i>	Ecia required. Woodland, boundary trees and buildings may support protected species like bats and birds. Badger may have setts here. Several trees on site and on the borders are protected by TPOs. Grassland may also have interest. The woodland is already used as informal accessible natural greenspace and accessed from the path to the south.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required. Buffers to the woodland replacement planting for any trees removed.
<i>Ecology Comments Opportunities:</i>	Retained woodland be retained and could be enhanced by selective thinning and understory planting. Better routes through the wood could be provided that link to the path to the south of the site.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Likely impact on setting of Grade II Listed The Elms, particularly as site includes its former park-like grounds
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Many mature trees on site (TPO)
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Very low density with retention of mature trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No notable constraints.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	The site is located in the eastern part of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The site is within the existing and proposed development boundary and as such has potential to be considered as windfall development. However, the site assessment has raised concern over the impact on both Grade II listed building (the Elms) and mature trees on site.</p> <p>The site is approximately 500m from the nearest supermarket and regular bus service and 1.0km from the nearest primary school. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Heritage assessment required. Mature trees should be retained. Lower density development likely to be required to make development acceptable.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site can be considered on its merits through a planning application as part of the windfall allowance.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p> <p>It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 30 homes or more if apartments are developed. Existing access link onto Monkmoor Road would benefit from some improvement which would be necessary if it was to become adopted highway. There may be some historical constraints on improvements.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Bats are likely in the buildings and perhaps nesting birds. Swifts in particular should be checked for. A scarce plant associated with brownfield sites has been recorded on site.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required. Mature tree on boundaries should be retained.
<i>Ecology Comments Opportunities:</i>	Green roofs should be required that also incorporate 'brown-roof' (very thin soils or rubble) aspects that help replace the conditions needed for the rare plant found here.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Highly sensitive site that falls wholly within Shrewsbury Conservation Area and includes Grade II* Listed Whitehall mansion (NHLE ref. 1254660), together with the associated Grade II Listed dovecote (NHLE ref. 1270676) & outbuildings (NHLE ref. 1270688). Also within setting of Grade II* Listed Whitehall Gatehouse (NHLE ref. 1254671) and attached Grade II listed boundary wall. Site considered to have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	Any scheme should include conservation of dovecote. High quality, well designed scheme has potential to enhance the character and appearance of the CA and settings of LBs over existing 1960s/ 70s office building.
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Occasional mature trees and adjacent trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land from past building uses on site but site not recorded as a site with possible contamination.
<i>Public Protection Comments Management of Constraints:</i>	Assessment of the site past uses may suggest no likely con land. If not remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Improve amenity for surrounding residential properties.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	The site is located in the eastern part of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>Site considered a potential windfall site. No significant constraints identified. The site is less than 500m from the nearest convenience store, 1.0km from the nearest primary school and adjacent the Monkmoor Road where regular bus services can be accessed. There is a good pedestrian and cycle network in the vicinity. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site is within the defined development boundary and therefore can be considered on its merits through a planning application as part of the windfall allowance. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 48 homes. Access would be via Montgomery Way and a simple T-junction onto Sundorne Road which should have capacity to take additional traffic.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). An internationally significant population of GCN is present adjacent to this site. The site in question is part of the mitigation land set aside when the medical centre was created and so can't now be developed.
<i>Ecology Comments Other Constraints:</i>	EclA required. Habitat would require survey as this may be priority habitat which would be protected under MD12 and CS17

<i>Ecology Comments Management of Constraints:</i>	There are no ways under current legislation that this site could be developed
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Screening belt of trees to south curtilage and occasional scattered trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise from sports pitches to the east.
<i>Public Protection Comments Management of Constraints:</i>	Glazing and boundary treatment would resolve any noise concern.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	The site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>Site has Great Crested Newts present on site. Landscape sensitivity is high. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Due to the presence of great crested newts and the high landscape sensitivity this site should not be considered for allocation. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	7%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Site has potential to deliver around 650 dwellings. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The potential new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts in-combination on Hencott Pool Ramsar. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A small pond is present on the eastern boundary with the road which would need checking for GCN and other protected species. An ephemeral pool not marked on Ordnance Survey is present to the west and beyond this at 170m is a large more permanent water body. Standing water is occasional in the lower lying north eastern end of the site. Infield and boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. A thin band of woodland is present on the western side. This is corridor habitat that is protected under MD12 and CS17 and could be home to protected species including badgers, reptiles and amphibians</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees should be retained. The hedge could feasibly be moved to the northern boundary of this site.
<i>Ecology Comments Opportunities:</i>	The damp northern area could provide a useful open water and / or wetland area. The woodland area could be enhanced to improve the
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). No known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	Poultry Farm to the west only 215m away from the site. This may cause significant odour and noise issues particularly in summer months.
<i>Public Protection Comments Other Constraints:</i>	Road noise from the A528 to the east and road to the south.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>This is a large greenfield site and would represent a major expansion of the town to the north west. However, ahead of the development of the proposed NWRR it is considered the current highway network has major constraints, especially in relation to the level of traffic on Ellesmere Road and the A49 by-pass north of Sundorne Road roundabout.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Strategic and local highway considerations.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>Not appropriate to allocate land ahead of the development of the NWRR due to significant levels of congestion on Ellesmere Road.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If the grassland is of interest the area available for development may be too small to make this viable. Similarly if significant populations of newts are present this will reduce the amount of land available for development.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Large areas of the pasture are labelled as 'semi-improved grassland' and therefore close to priority / core habitat. Two ponds are present on site with two more ponds found within 125m of the site. These could support GCN. Bats and birds are likely to use in-field and boundary trees in addition to the buildings. Badgers, reptiles and other protected species are also reasonably likely.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees should be retained. If the grassland is of interest the area available for development may be significantly smaller
<i>Ecology Comments Opportunities:</i>	Opportunities should be sought to create large areas of greenspace using contributions from other development proposals nearby. Ponds and in-field trees should be buffered and enhanced for biodiversity and public access. Remaining areas of grassland should not be re-turfed but enhanced with green hay strewing and management as traditional hay meadow.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site includes, and would potentially impact on the setting of, the Grade II Listed Newton farmhouse (NHLE ref. 1176148). Site crossed by the projected line of a possible Roman road (HER PRN 00057). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of LB; DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise from the A5 to the south and additional road to the north west. Noise, odour and dusts a potential from farm on site. Some historic features on site that may require contaminated land investigation.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and farm if it is retained. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site has potential to be part of a large strategic allocation, although it is recognised further heritage assessment is necessary. Improvement to local highway network required and impact on Strategic road network will need to be assessed. Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly in the context of the Black Country Contribution for housing (although fair for employment) within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Strategic and local highway considerations, heritage assessment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038, and in isolation this site is divorced from the existing built edge of the town. Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a significant level of development (potentially 3,000 homes) in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and for possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclIA required. Corridor habitat that is protected under MD12 and CS17 runs around all sides of this side except the western boundary. This is partly due to a water course that runs along the north and east boundaries. A pond is present near the southern boundary which would need checking for GCN and other protected species - including Tubular Water-dropwort, a UK Priority Species. Infield and boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. Polecat, a UK Priority Species, has been recorded on site. These species like the cover of hedgerows and scrub.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees infield and the boundary should be retained.
<i>Ecology Comments Opportunities:</i>	A feature could be made of the pond, the water course to the east and the hedgerow that links the pond to the eastern edge.
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Listed Albright Hussey (NHLE ref. 1295586) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retain existing trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from roads to west and south. Potential noise from commercial estate to the south of road to the south of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site could come forward with SHR186 as a comprehensive development. However, the site is to the north of the A5 and therefore this would establish a direction of growth beyond a current defined and defensible boundary.</p> <p>In addition there are significant heritage concerns raised over the impact of development on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey. The Shrewsbury Battlefield Heritage Assessment shows that this site makes a strongly positive contribution to the significance of the Registered Battlefield. In this respect, the site's sensitivity to change is high and it is unlikely that development could take place without causing substantial harm to the designated heritage asset.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Impact on setting of Registered Battlefield and listed building.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If the grassland (pasture) in the northern half is of interest the area available for development may be too small to make this viable. The existing woodland is core habitat so this would also reduce the overall area available</p>
<i>Ecology Comments Other Constraints:</i>	<p>Woodland to north is priority / core habitat and protected by MD12 and CS17. Grassland in northern block may also be priority / core habitat. The two ponds to the west of the railway line would require assessment for GCN. GCN have been recorded in two ponds to the east. The road barrier may mean they don't forage on the site but a rail line is less of a barrier and some land set aside for mitigation may be required. A small water course runs along the far southern boundary.</p>

<i>Ecology Comments Management of Constraints:</i>	EcIA required. Grassland would require survey between May and August. The arable portion in the south does not require survey. Some level of mitigation may be required if GCN are found in the ponds over the rail line. The existing good hedges and boundary / in-field trees should be retained and a good buffer provided. Water course to the south should be buffered and ideally opened up, increasing it's capacity.
<i>Ecology Comments Opportunities:</i>	The woodland in the north could be enhanced the rail line could be buffered to enhance this existing environmental corridor.
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Battlefield Church (NHLE ref. 1246192) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Northern third of site is dense woodland
<i>Tree Comments Other Constraints:</i>	Lower site has screen of trees to railway only
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to the east and rail to the west.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and rail. However the northern end of the site is so slender it may not be practicably useable for residential with mitigation.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site is divorced from the settlement and should only come forward if SHR195 is preferred.</p> <p>There are also outstanding concerns relating to the heritage impact on the Registered Battlefield and the impact to the on-site dense woodland to the north of the site.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The site is divorced from the settlement and should only come forward if SHR195 is preferred.</p> <p>There are also outstanding concerns relating to the heritage impact on the Registered Battlefield and the impact to the dense woodland to the north of the site. The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). GCN have been recorded in the pond. The area of land required for mitigation may make this site unviable.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Pond supports GCN and other amphibians which mean the pond is core habitat. Large trees, other vegetation and buildings may support birds and bats. Reptiles are also possible</p>

<i>Ecology Comments Management of Constraints:</i>	EclA required. Terrestrial foraging habitat for the GCN would need to be provided. Other mitigation for birds and bats may be required.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Dense tree planting to front and back of site
<i>Tree Comments Other Constraints:</i>	Area of open space central to the site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Possible very low density residential retaining mature trees

<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 24 homes. Access would be via a new junction onto Ellesmere Road. This site would be infill between establish housing and recent development.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	A large portion of this site is a breeding pool for GCN. The area of mitigation land required for GCN is likely to mean the viability of this site is questionable
<i>Ecology Comments Other Constraints:</i>	GCN - medium population is present in the pool on site. Reptiles like grass snake are also likely. Badgers may use areas just off site. Grassland may be of interest and if core or corridor habitat would require consideration under CS17 and MD12.

<i>Ecology Comments Management of Constraints:</i>	EclA required
<i>Ecology Comments Opportunities:</i>	Enhancements to the pool and potentially to any remaining grassland areas
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	Site on edge of historic suburb of Greenfields
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	Appropriate design necessary
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Few trees - ponds present on western side
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east is a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The site was granted permission for 36 dwellings at appeal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Ecological mitigation resulting from GCN population.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site was granted permission for 36 dwellings at appeal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. <i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would either be via existing private lane (to Pimley Manor) which would need to be improved to estate road standards, or by using existing access through the Shrewsbury Club. The simple T-junction onto Sundorne Road would also need to be improved to the relevant visibility standards which may not be possible without securing third party land.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Corridor habitat of the Environmental Network surrounds this site on 3 sides and includes the woodland planting along the eastern boundary with the road. An aquatic feature just past the northern boundary may support protected species including Great Crested Newts - unless this is a flowing ditch. Boundary and in-field trees may support bats and nesting birds. Badger may also have setts in the woodland strip to the east and south. The woodland to the south and south west corner is designated as Sundorne Canal (Great Crested Newt Site) Local Wildlife Site.</p>

<i>Ecology Comments Management of Constraints:</i>	EclA required - in particular to check the more mature trees and the water feature to the north. Other checks for ponds in the vicinity should be made considering the internationally important population of GCN not far to the west.
<i>Ecology Comments Opportunities:</i>	The existing environmental network could be buffered and enhanced
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site adjacent to former Shrewsbury Canal to south (HER PRN 03410)
<i>Heritage Comments Management of Constraints:</i>	Address canal through appropriate design.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	occasional tree on site important belts of trees adjacent to east and south curtilages
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east is a noise source. Some potential noise from sports ground and facilities to the north.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and sports ground.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Shropshire Council's landscape sensitivity assessment considers this site to be of medium/high sensitivity for residential use. The site promoter has provided additional site specific landscape sensitivity considerations which considers the site within its immediate context, as a well contained option within the wider landscape parcel. It is considered the site's containment mitigates the wider impact on the integrity of the assessed parcel.</p> <p>The site promoter has also clarified access arrangements, with the potential to include a vehicular access through the car park of the Shrewsbury Club.</p> <p>Whilst the site is located on the periphery of the town, the location offers the opportunity to provide a pedestrian route from the Shropshire Way footpath to Sundorne Road as part of the site's green infrastructure contribution.</p> <p>Landscape buffering with the Shrewsbury Canal will be required, and there are more sustainable options to allocate, particularly to the west on the town.</p> <p>The site offers a moderately scaled option, which would complement the other proposed development options for the town. There is potential for early delivery.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Identify the site as a residential allocation</p>
<p>Reasoning</p>	<p>Shropshire Council's landscape sensitivity assessment considers this site to be of medium/high sensitivity for residential use. The site promoter has provided additional site specific landscape sensitivity considerations which considers the site within its immediate context, as a well contained option within the wider landscape parcel. It is considered the site's containment mitigates the wider impact on the integrity of the assessed parcel.</p> <p>The site promoter has also clarified access arrangements, with the potential to include a vehicular access through the car park of the Shrewsbury Club. Whilst the site is located on the periphery of the town, the location offers the opportunity to provide a pedestrian route from the Shropshire Way footpath to Sundorne Road as part of the site's green infrastructure contribution.</p> <p>Landscape buffering with the Shrewsbury Canal will be required, and there are more sustainable options to allocate, particularly to the west on the town. However, the site offers a moderately scaled option, which would complement the other proposed development options for the town. There is also potential for early delivery.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	60
If proposed for Allocation Design Requirements:	Appropriate access from Sundorne Road. Potential for compensatory car parking at the Shrewsbury Club if required. Improvements to local highway network. Pedestrian access to Shrewsbury Way and appropriate buffering with former Shrewsbury Canal and the environmental network surrounding it.

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access onto A49 bypass or B5062 would be close to the existing Sundorne Roundabout so a review of this junction would be needed to determine the most appropriate junction arrangement for this site and SHR054c. There are existing congestion problems at the A49 bypass Sundorne Roundabout which would need to be addressed by this and other developments in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Sundorne Pool Local Wildlife Site (and Env. Network core area) lies adjacent to the eastern (and part of the southern) boundary. The northern boundary lies adjacent to the northern boundary. Sufficient buffers from the boundaries will be required.</p> <p>Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on settings of Grade II listed Gatehouse to Sundorne Castle (NHLE ref. 1177292) and Chapel to Sundorne Castle (NHLE ref. 1366956). Site also located in former historic parkland for Sundorne Castle (HER PRN 07706). No known archaeology but large size of site suggests it may have wider archaeological potential. Site detached from existing built edge of town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB; impact on character and appearance of former parkland; archaeological DBA +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Large field site with good boundary hedges (appear to be excluded?) Wooded area to east
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Development density and layout needs to be considered so that it allows room for sustainable planting of large trees along the boundaries to integrate this prominent site into the landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to west. Air quality concerns close to road, particularly junction. Possible con land issues due to off site contamination nearby.
<i>Public Protection Comments Management of Constraints:</i>	Air quality mitigation through stand off distances to the road (assessment will show distance required).
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Development beyond the A49 to the east is a major new direction of growth. Heritage impacts. The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The site would represent a new direction of growth for the town to the east of the A49 by-pass, which is considered to cause a significant degree of physical and perceived severance from the main urban area. Concern has also been raised regarding the impact on the highway network given existing levels of congestion on the A49/A53, and over the heritage impact on Sundorne Castle. It is not considered necessary to grow the town in this new direction, especially in the light of the availability of more sustainable options to the west of the town. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Site Assessment - Stage 3 Updated

<i>Percentage of site in Flood Zone 2:</i>	59%
<i>Percentage of site in Flood Zone 1:</i>	41%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	6%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	16%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	57%
<i>Percentage of the site within 20m of an historic flood event:</i>	68%
<i>Percentage of the site within 20m of a detailed river network:</i>	39%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	High and Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High and Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access onto A49 bypass or B5062 would be close to the existing Sundorne Roundabout so a review of this junction would be needed to determine the most appropriate junction arrangement for this site and SHR054b. There are existing congestion problems at the A49 bypass Sundorne Roundabout which would need to be addressed by this and other developments in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA. If priority habitats are present then the site should not be developed. If priority habitats not present, the Env. Network will require a significant buffer, vastly reducing the developable area.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The majority of the site is Env. Network corridor and may contain priority habitats - botanical survey required. Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles and nesting birds. A PROW crosses the site.</p>

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. An important arm of the Env. Network covers at least the southern half of the site.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by outlet channels from Sundorne Pool, a former ornamental lake (HER PRN 08283) that formed part of the historic parkland for Sundorne Castle (HER PRN 07706). Medium size of site suggests it may otherwise have archaeological potential. Site detached from existing built edge of town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application archaeological DBA +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Part open field part heavily tree'd site
<i>Tree Comments Other Constraints:</i>	Open areas
<i>Tree Comments Management of Constraints:</i>	B55837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement.
<i>Tree Comments Opportunities:</i>	Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the west and north. Poss. con land to north and south from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have good access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the SRN. SHR177 could deliver 1,545 homes and SHR177 is promoted as a small employment site. Land would be available from the sites to deliver a series of appropriate type junctions and pedestrian and cycle infrastructure that connects to the existing network in the area.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclIA required to check all ponds on site for full range of protected species in addition to mature trees, buildings, badger Setts, hedgerows, water course. Pasture may be species rich grassland that would be Core or corridor habitat. The Bowbrook runs through this area with much of this being in Flood Zones 2 or 3. GCN have been recorded in the area including a pond directly adjacent to the eastern side at Earl's View. Several Badger records have been made in the area so setts are likely in the area. Otters are known to use the Bowbrook as a corridor and a number of otter deaths have been recorded on the A5 bypass as a result of insufficiently large culverts under the road. There are a large number of mature trees within and bordering this site. Tree Preservation Orders are listed for several trees along the eastern boundary.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network that crosses and surrounds much of site in accordance with CS17 Environmental Networks and MD12. The Bowbrook should be fully buffered.
<i>Ecology Comments Opportunities:</i>	A feature should be created of the Bowbrook. Safe passage for otters under or over the A5 should be installed or a means of preventing them from crossing the road. This could also provide a better crossing for people. A green bridge.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes two potential prehistoric cropmark enclosures (HER PRNs 02126 & 04233).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A5 to the west and other road along south boundary are noise sources with the junction of these two roads creating a possible air quality concern. Potential contaminated land from past land uses a potential.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road to avoid noise issues and stand off distance to road junction to avoid air quality impacts. Con land likely to have remediation available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site represents a major opportunity for greenfield release on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of the promoted land consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road).</p> <p>The site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network. The site can provide a suitable access into SHR177 from Mytton Oak Road.</p> <p>Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road.</p> <p>There are no overriding site constraints identified.</p> <p>Whilst a small portion of the site is in Flood Zone 2 it is considered this can be mitigated due to the scale of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>There are no overriding infrastructure constraints identified as part of this assessment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>Yes</p>
Recommendation	<p>Identify part of the site as a proposed residential allocation alongside SHR057</p>
Reasoning	<p>The site represents a major opportunity for greenfield release on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of the promoted land consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road). <i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Ecia required. Large pool to the east is core / priority habitat. A small pond is present 112m from the north west boundary. Another large pond has been created as part of other development 87m east from the north east side. The grassland may also be core / priority habitat. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite pond would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The entire area beyond this development should be master-planned - in part to ensure that adequate greenspace provision is provided for people and wildlife. The main pool here could be enhanced in many ways and a large buffer should be the part of any plans. The environmental network along the northern boundary should be enhanced to link existing corridor.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to south is a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road to avoid noise issues
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR161 and SHR060. Whilst these sites are being promoted separately, it is understood there is good opportunity to deliver a comprehensively planned development.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well.</p> <p>The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. This site is over 1.5km to the nearest primary school and convenience store. Frequent bus service operate along Mytton Oak Road and Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Identify the site as part of a mixed use sustainable urban extension allocation alongside sites SHR158 & SHR161. This sustainable urban extension is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p>Reasoning</p>	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR158 and SHR161. These sites are being promoted jointly and it is understood this is underpinned by a land promotion agreement. This will ensure the site is developed in a comprehensive manner, through a master planned approach.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well. The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. Given the proximity of services it would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. It is recognised there is potential for new education provision within the existing allocated site to the east which could also serve this site. The mix of uses on the site has evolved since the Preferred Options consultation in November 2018, reflecting early urban design work being carried out by the site promoter, alongside the consideration of opportunities for park and ride provision and a more focussed and consolidated employment provision.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>This sustainable urban extension presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 300 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. This is considered to constitute sustainable development.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications required:</p>	

<p>If proposed for Allocation, Potential Capacity:</p>	<p>This sustainable urban extension of SHR060, SHR158 & SHR161 is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>This is a significant additional Sustainable Urban Extension (SUE) development opportunity for the town. Development will be progressed in a comprehensively planned way, subject to an agreed masterplan reflecting the objectives of the Big Town Plan. This will include a mix of uses, including substantial residential development, commercial land and potentially additional community, leisure and retail uses, where these would not impact on the viability of the town centre.</p> <p>Due to the scale of the site it is likely delivery will continue beyond 2038 into the next plan period.</p> <p>The total site area of land proposed is around 100 hectares. However, to ensure a suitable balance of development it is considered around 50 hectares will be required for residential purposes (to deliver around 1,500 dwellings) and a minimum of 5 hectares will come forward for employment purposes, alongside the potential for new park and ride provision. There are significant opportunities to enhance infrastructure as part of this development.</p> <p>Vehicular access will be served from both Mytton Oak Road and Hanwood Road and will support the creation of a circular link road sufficient to sustain a bus route. Where necessary improvements to the Local and Strategic Road Networks will be funded through the development.</p> <p>Development will support the creation of and enhancements to existing green corridors as part of the Big Town Plan's wider strategy to improve the town's green network. This will also support enhancements to pedestrian and cycle links in this area of town.</p>

Site Assessment - Stage 3 Updated

Site Reference:	SHR063
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	5%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If GCN are present in the pool and / or the grassland is priority / core habitat, then the reduced area available for development after adequate mitigation has been provided may make this site unviable.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Ecia required. Two large ponds onsite, a large pond in the garden to the west and others nearby would require GCN surveys. Grassland may be of interest. The combination of pools, scrub and hedgerows forms interesting environmental network habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite ponds would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network on site and to south in accordance with CS17 Environmental Networks and MD12. The field to the east has far fewer lower ecological interest. Leaving the field to the west may work.
<i>Ecology Comments Opportunities:</i>	Work to enhance the western field would provide good greenspace for any development in the field to the east. Tree planning along the southern boundary would boost the environmental network. Or just letting the hedge grow wide. Another pool could be dug in the western pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes 19th century brickyard (HER PRN 28270) and small, non-designated field barn
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA and Level 2 historic building assessment of field barn).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land due to past land uses. Road is a noise source to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Noise can be mitigated via stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site has potential to be part of a large strategic allocation.</p> <p>Improvements to local highway network required and impact on Strategic road network will need to be assessed.</p> <p>Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation..</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038.</p> <p>Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

<i>Highway Comments - Direct Access to Highway Network?</i>	Directly onto Shillingston Drive. The site has sufficient frontage to be able to deliver a suitable form of junction.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required. Most of the many mature trees on this sites are have TPOs. The habitat appears to be overgrown grassland / scrub in one part, overgrown garden in another and woodland to the east. Several protected species could be found here. The most likely include nesting birds, bats and badgers. It may be that not all the site would qualify as Environmental Network. But it is likely that a big proportion would be which leaves little space for mitigation measures

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if found. The hedgerows and mature trees should be retained. In particular the TPO trees
<i>Ecology Comments Opportunities:</i>	It may still be the former grassland on site retains interest that could be restored. Woodland enhancement may be possible.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Mature Oak trees on site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retention of mature tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No significant constraints noted.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p>Strategic Considerations:</p>	<p>The site is within the existing development boundary, without any overriding constraints. Care will need to taken to retain trees on site. Windfall opportunity. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The site is within the existing development boundary and therefore has windfall potential. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would access the highway directly onto the new route of Pulley Lane with the exception of SHR185 which is promoted with access to the old route of Pully Lane south of Lower Pulley Cottages - this section of old Pulley Lane in not suitable for new development traffic and improvements could not be achieved without third party land. The left only turn onto Hereford road (from new Pully Lane) works for the current users of the new Pulley Lane route as this accommodates Bayston Hill traffic that wants to access Shrewsbury. If these sites were developed those wanting to access the A5 bypass would need to take a detour to the Meole Brace retail park roundabout - this is not ideal.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are present on the borders of this site and perhaps within. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The grassland may be of interest.

<i>Ecology Comments Management of Constraints:</i>	Grassland would require survey between May and August but an experienced surveyor as pastures are difficult to assess.
<i>Ecology Comments Opportunities:</i>	Good existing hedgerows could be enhanced or thickened to create think woodland and ecological network.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site close to projected line of Roman road (HER PRN 00098).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA).

<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 33 homes. Access would be onto Oteley Road. An appropriate junction should be able to be accommodated along with appropriate improvements and links to the existing pedestrian and cycle networks.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). None
<i>Ecology Comments Other Constraints:</i>	EclA required. The western boundary is environmental network that requires protection in accordance with CS17 Environmental Networks and MD12. Mature trees are bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.

<i>Ecology Comments Management of Constraints:</i>	A buffer to the network is required. The hedgerows and mature trees should be retained on the borders
<i>Ecology Comments Opportunities:</i>	Woodland planting along the western boundary should be encouraged to enhance the environmental network.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Significant prehistoric and Roman activity in area, so site has some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Important linear group of road frontage Lime trees
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retention of mature tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Oteley road is a busy road and a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Mitigation through stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the centre of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The site forms part of the current Shrewsbury South SUE.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site forms part of the existing Shrewsbury South SUE allocated for development in the SAMDev Plan. This site has an extant planning permission.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Access onto Mount Pleasant and Lancaster Road. Dual access to the site will minimise impact on highway network. Impact on existing congestion on Mount Pleasant linked to Mount Pleasant / Ditherington Road junction needs to be assessed and mitigated.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A Tree Preservation Order is listed for one tree on the north western corner. The thin woodland strips and scrubby area in the south is environmental network that requires protection in accordance with CS17 Environmental Networks and MD12. A pond is present 162m to the north east. The grassland, despite regular mowing, may hold interest.

<i>Ecology Comments Management of Constraints:</i>	Pond to NE would need survey for GCN. Other protected species mitigation may be required. Bats and nesting birds are most likely. Survey the grassland between May and August.
<i>Ecology Comments Opportunities:</i>	This area is one of the few areas of greenspace in this area. Any provision of greenspace should be publicly available and ideally enhance existing habitats.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees to North and West curtilages screen site from existing residential
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retention of mature tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise from commercial to the north and east of the site where there is also noise from railway line. Possible contaminated land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>Brownfield site, potential windfall opportunity.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site is predominantly brownfield and is located within the existing and proposed development boundary for the town. The site has no overarching constraints, although highway impact on Mount Pleasant linked to Mount Pleasant / Ditherington Road junction needs to be assessed. Potential windfall opportunity.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Difficult to access the Strategic Road Network as no direct link to A5 from Longden Road
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. The eastern boundary is environmental network on account of the water course. This requires protection in accordance with CS17 Environmental Networks and MD12. A small pond is present on site at the southern end. A new pond appears to be present in the new development to the east (27m away) and another pool 165m to the west. There are several mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Water Voles are possible on this water course and otter are likely to use it as corridor.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to east in accordance with CS17 Environmental Networks and MD12. A large buffer to the water course should be provided.
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Post-medieval coal workings present on site (HERPRN 06776) Site would reduce/remove spatial separation between built edge of town and Nobold, harming its historic character.
<i>Heritage Comments Management of Constraints:</i>	Site subject to full archaeological DBA and evaluation in 2014. Further round of evaluation and mitigation would be secured by condition. Design would need to ensure that a distinct spatial separation is maintained with Nobold
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees and hedgerows on the boundaries of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential for some impacts from commercial to the east however noted there are closer residential properties therefore no likely issues. Possible contamination of land from mining and quarrying operations in the southern part of the site.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site has been subject to a planning appeal against refusal in 2015 with the Inspector dismissing the proposal (SC ref: 14/01983/OUT).</p> <p>It is recognised there are no overarching landscape and visual impact considerations identified as part of the Local Plan Review assessment with the site scoring medium/low. However, there are heritage concerns relating to potential removal of the gap between the existing built form to the east and the historic hamlet of Nobold. On this it is worth noting that this issue of local character was raised in a planning appeal at Inquiry in 2015, with the inspector concluding that Nobold has a distinctive, rural character and its own separate identity and is that these characteristics are worthy of protection. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site represents a strategic gap between the urban form and the historic hamlet of Nobold; its potential erosion would impact adversely on the character of the area.</p> <p>Whilst current site assessment evidence suggests there are no other overarching on-site constraints, it is felt that the preferred site/s offers more strategic benefit to the town in meeting the identified housing need up to 2038.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Potentially 34 homes. Access arrangements onto Woodcote way will need to be carefully assessed due to the close proximity of the A5112 roundabout and the new Redwings development access. Modifications to the roundabout may be required or access could be incorporated into a modified roundabout. Access should be linked with SHR218. The site is approximately 1.0km from the nearest supermarket, 1.5km from the nearest school. Regular bus services operate along Woodcote Way which is adjacent to the site. There is a good pedestrian and cycle network in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>

Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>Generally, vehicular and wider sustainable access links are considered good. Site has medium to high landscape sensitivity. Currently outside the development boundary. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	
Known Infrastructure Opportunities:	
Potential for Windfall?	no
Potential for Allocation?	no
Recommendation	Do not allocate
Reasoning	<p>It is considered there are more sustainable options in the town to deliver planned growth over the plan period. The site is considered to have a relatively high sensitivity to landscape change. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	No

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will be required for impacts on Hencott Pool Ramsar Site part of which is within the area indicated. Impacts include recreational impacts in-combination and direct run-off into site. Part of the area is also in the catchment of Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) may be required to address potential impact identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>3 ponds are present within 50m of the site. There are a few damp hollows / pools on site. These and others further away may support GCN. Tree Preservation Orders are listed for several trees and area TPOs both within the sites and on the boundaries. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Much of the northern area is likely to be too close to the Ramsar site and not possible to develop. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and west in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation to the north of the site could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site detached from built edge of town. Site includes an a possible prehistoric cropmark enclosure (HER PRN 04415). Very large size suggests there may also be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	Future proposals for a north west relief road would run through this land making it undesirable to develop if this removes the potential for such a road in future.
<i>Public Protection Comments Other Constraints:</i>	Rail noise to the west.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for rail noise.
<i>Public Protection Comments Opportunities:</i>	Site considered unacceptable on the basis it removes future potential for NWRR. Without this constraint this is a good site.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Poor
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly for employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal, although fair for housing.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>In isolation the site does not benefit from direct access to the highway network. As such access would need to be in association with other land promoted for development as part of the Local Plan Review (to the west), with access off Mytton Oak Road or Hanwood Road. Further assessment would be required to review cumulative impact of development within the area. Likely to be acceptable, subject to mitigation on the local highway network. Development could not occur without appropriate off-site works, such mitigation works would need to be determined in association with neighbouring developments.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites, on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). See LPR HRA.</p> <p>The middle pond is a known GCN breeding pond. The other two ponds may contain GCNs. A buffer of at least 50m will be required for any ponds that contain GCNs, reducing the developable area available.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA and botanical survey required and surveys for badgers, bats, nesting birds, GCNs and reptiles</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Protect, enhance and restore Env. Network in accordance with CS17 and MD12.
<i>Ecology Comments Opportunities:</i>	Enhance Env. Network
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site is within setting and includes park like ground of Ley Grange, which is considered to be a non-designated heritage asset. No known archaeological interest but large size suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of Ley Grange and its grounds; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Land known to be heavily waterlogged.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>In isolation the site does not have a substantial road frontage.</p> <p>The site adjoins the proposed allocation of SHR060/158/160, however it has not been considered against the emerging site promotion and urban design considerations.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>no</p>
Potential for Allocation?	<p>no</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Whilst adjoining the proposed allocation of SHR060/158/160, the site has not been considered against the emerging site promotion and urban design considerations for the preferred site option.</p> <p>The site is not required for access from Mytton Oak Road, and there is no evidence of any joint land promotion with adjoining land. As such it is not considered necessary for this site to come forward as part of the proposed site allocation at Edgebold.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Site Assessment - Stage 3 Updated

Site Reference:	SHR120
<i>Coal Authority Reference Area?</i>	No

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Access onto Whitchurch Road at a signal controlled T-junction should continue to be via the roundabout the site currently shares with Morrisons supermarket.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA.. Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required as potential for bats and nesting birds in the buildings. Potential for reptiles alongside the railway line.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement if required.
<i>Ecology Comments Opportunities:</i>	The Environmental Network along the railway line could be improved. Much more permeable surfaces should be provided.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Includes historic Sentinel Works buildings (HER PRN 06782)
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic buildings assessment of historic sentinel works buildings). Seek to retain historic works buildings on Battlefield road frontage.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Site is brownfield and devoid of trees
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to east - area designated a noise action zone therefore significant noise mitigation likely to be necessary. Potential for noise from Morrisons supermarket, car park and petrol filling station to the south. Contaminated land a potential from existing and past land use on site and
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Suggest standoff from main road is the best option to reduce impacts and ensure no air quality issues are raised. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	Residential to north may get a betterment in noise environment by removal of commercial that currently exists.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Brownfield site within the current and emerging Development Boundary. Site within a Source Protection Zone. Potential need for increased open space requirements to mitigate the possible recreation impact on Hencott Pool. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>Yes</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The brownfield site has no identified overarching constraints and is located within the defined development boundary. Considered to offer a good opportunity to respond to the objectives of the Big Town plan by virtue of its edge of centre location. Potential windfall opportunity.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Access would be directly onto Monkmoor Road via a new estate road access.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required as potential for bats and nesting birds in the buildings. Mature trees border this site to the south west. The trees may support bats and nesting birds as well as being habitat in their own right. Hedgerow, present along part of the south east border is Core / Priority Habitat.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement if required.
<i>Ecology Comments Opportunities:</i>	Retain and widen the border of trees to the SW.
<i>Heritage Comments Significant Constraints:</i>	Site includes WWI aircraft hangars from former RAF Monkmoor (HER PRN 06783). Planning appeal to demolish and replace with housing refused in 2017 - now seen by Historic England as model case for protecting non-designated heritage assets.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment produced for applications in 2016.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Site is brownfield and devoid of trees
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination from past and existing commercial operations. Possible noise from commercial to the northeast
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be possible.
<i>Public Protection Comments Opportunities:</i>	Would remove noise sources from existing commercial activities on existing residential properties providing a betterment.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located in the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The brownfield site is approximately 1.0km from the nearest supermarket, 1.5km from the nearest school. Regular bus services operate along Woodcote Way which is adjacent to the site. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Whilst the site is brownfield, significant concern has been raised as to the potential impact on the former WW1 aircraft hangers, identified as a non-designated heritage asset.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would be accessed from Longden Road. It is more strategically beneficial to consider the site alongside the cluster of sites to the north of Longden Road as there is no vehicular access to the A5 from Longden Road and therefore there would be benefits from establishing a spine road between Hanwood Road and Longden Road. However this site could be delivered independently with some local highway improvements.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A water course runs along the north eastern boundary and this - with a buffer - forms part of the Environmental Network. The network requires protection in accordance with CS17 Environmental Networks and MD12. The band of trees alongside the railway line to the east is protected as an area TPO and it also forms part of the network. This should also be adequately buffered. There are a large number of mature trees bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A pond is present about 85m north of the site however the barriers (like the road) and the poor apparent condition of this pond (very overgrown) would mean GCN are unlikely to be harmed by development at this site (unless other ponds are found).</p>

<i>Ecology Comments Management of Constraints:</i>	Buffers to the water course to the north and TPO trees to the east are required. Hedgerows should be retained and mature boundary trees given a good buffer to protect their roots.
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes an area of former coal workings (HER PRN 06776). Site would potentially remove separation of historic hamlet of Nobold from the built edge of Shrewsbury, resulting in harm to its historic character
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + evaluation). Design would need to ensure that a distinct spatial separation is maintained with Nobold
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Few boundary trees of some significance
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from rail to south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site is over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site represents a strategic gap between the urban form and the historic hamlet of Nobold; its potential erosion would impact adversely on the character of the area. Whilst current site assessment evidence suggests there are no other overarching on-site constraints, it is felt that the preferred site/s offers more strategic benefit to the town in meeting the identified housing need up to 2038.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 174 homes. Access would be via a new signal controlled junction onto Hereford Road. Direct access to the Meole Brace retail park should be maintained for vehicles as well as pedestrians and cyclists.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Mature trees border this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Grassland may be of interest and would require a survey between May and August.

<i>Ecology Comments Management of Constraints:</i>	Retain and enhance all hedgerows/tree lines on boundaries. If the grassland is of interest then the area available may be reduced.
<i>Ecology Comments Opportunities:</i>	Extend the young woodland on the south west all the way along the western boundary to create ecological network and also help reduce traffic noise / air pollution. Consider soil stripping to create areas of interest.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Number of Bronze Age ring ditches (HER PRNs 00014).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA). NB. Site previously subject to archaeological evaluation and archaeological mitigation would be dealt with by condition.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Field site with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise from commercial to the north and certainly from road to the west - area designated a noise action zone therefore significant noise mitigation likely to be necessary.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site is a greenfield site situated between the Meole Brace Retail Park to the north and the Park and Ride to the south. The site has previously been promoted for an extension to the Retail Park, but is now being promoted for residential purposes.</p> <p>The site is adjacent to the existing development boundary, and therefore offers a good strategic opportunity to develop within the existing urban envelope of the town, promoting cycling and walking given the site is within 500 meters of existing services and regular bus provision and 1km from the nearest primary school.</p> <p>It is not considered necessary to protect any of this area for the expansion of the retail park.</p> <p>Development of the site presents opportunities to improve vehicular access into the Park and Ride through a new signal controlled junction on Hereford Road, although it is preferred that the vehicular/pedestrian/cycle access between the site and the Retail Park is maintained.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>New signal controlled junction on Hereford Road. Maintain existing access point to Retail Park, including vehicular. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Identify the site as a residential allocation</p>
<p>Reasoning</p>	<p>The site is a greenfield site situated between the Meole Brace Retail Park to the north and the Park and Ride to the south. The site has previously been promoted for an extension to the Retail Park, but is now being promoted for residential purposes.</p> <p>The site is adjacent to the existing development boundary, and therefore offers a good strategic opportunity to develop within the existing urban envelope of the town, promoting cycling and walking given the site is within 500 meters of existing services and regular bus provision and 1km from the nearest primary school.</p> <p>It is not considered necessary to protect any of this area for the expansion of the retail park.</p> <p>Development of the site presents opportunities to improve vehicular access into the Park and Ride through a new signal controlled junction on Hereford Road, although it is preferred that the vehicular/pedestrian/cycle access between the site and the Retail Park is maintained.</p> <p>This site benefits from an extant planning permission.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	<p style="text-align: center;">150 dwellings</p>
If proposed for Allocation Design Requirements:	<p style="text-align: center;"> Development to provide residential development with the potential for extra care / assisted living facilities. Development to be served by a new access from Hereford Road. Whilst there is a preference to retain an access into the retail park, it is envisaged the current road alignment will be remodelled to avoid 'rat running' and to support an improved road layout. Signal controlled junction on Hereford Road. Maintain vehicular/pedestrian/cycle links to Retail park. </p>

Site Assessment - Stage 3 Updated

Site Reference:	SHR149
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	12%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	17%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	22%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would be accessed from Longden Road. It is more strategically beneficial to consider the site alongside the cluster of sites to the north of Longden Road as there is no vehicular access to the A5 from Longden Road and therefore there would be benefits from establishing a spine road between Hanwood Road and Longden Road. However this site could be delivered independently with some local highway improvements.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Area of core habitat that needs to be retained and perhaps buffered would restrict the area available for development potentially to the point where viability is impacted. There does remain lots of arable land of little biodiversity interest however.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A significant proportion of the site is made up of wet woodland / swamp which is almost certainly core / priority habitat. It is also likely to support protected species such as GCN, otter, badger, bats, nesting birds and potentially rare plants and invertebrates. Mature trees are in the border of this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Wet woodland block needs to be retained and a significant buffer created the size of which depends on what protected species might be found there. This will impact on the number of dwellings possible on this site which may impact the viability. Hedgerows and boundary trees should be retained.
<i>Ecology Comments Opportunities:</i>	The wet woodland could be improved for wildlife and potentially for people with a boardwalk through the area created. A full survey would be required first. Woodland planting along the southern boundary would help the network here and also reduce road noise.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site located immediately south of the projected line of a Roman road (HER PRN 00098). No other known archaeological interest but large size of site and proximity to the Roman road suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant group of trees / area of emerging woodland within the site. Hedgerows on site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Significant noise from road to south and rail to east. Potential contaminated land in the area already noted to have been developed in the southeast corner of the site.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site is over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PROW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site in its own right is significantly divorced from the town and there are concerns about how the site would be accessed except through third party land.</p> <p>There are also heritage concerns regarding potential impact on the Roman Road, and noise impacts from the A5 and rail line.</p> <p>The site could form part of a much wider extension to the town when combined with other promoted land between Hanwood Road and Longden Road, but it is not considered this scale of growth is necessary in this plan period. There is also no evidence of joint land promotion.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	This potential employment site lies beyond the A5 bypass and would access the A488 south west of its roundabout junction with the A5 bypass. A new junction to the west of Two mile Houses would be needed as the existing field access is too close the bypass junction.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	There are 3 ponds on the site and a number of ponds within 500m. Mitigation land required for GCN may impact the area of land available for development The woodland to the southern border and alongside the A5 is Env. Network and would require protection in accordance with MD12 and CS17. The block of trees to the south is TPO'd. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers (records on the site), reptiles and nesting birds. The ponds, woodland and hedgerows will need to be retained and appropriately buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and ponds. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site crossed by the projected line of a Roman roads (HER PRN 00098). No other known archaeological interest but very large site size suggests and scatter of metal detectorist finds suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with small copse, scattered field trees and hedgerows, area of TPO woodland adjacent to the site, opposite railway line.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A5. Landfill on site but likely to be inert however as on site may require checks.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>This site, which is being promoted for employment, is around 2km away from the nearest significant areas of housing and the route between does not make any provision for walking or attractive for cycling. The A5 bypass would also represent a significant barrier for sustainable modes of transport. The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The site is significantly divorced from the town and from services and facilities. As a potential employment area the site has a medium-high landscape/visual sensitivity rating and it is considered there are more appropriate locations for large scale employment land. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>This site, which is being promoted for employment, is around 2km away from the nearest significant areas of housing and the route between does not make any provision for walking or attractive for cycling.</p> <p>The A5 bypass would also represent a significant barrier for sustainable modes of transport.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site is significantly divorced from the town and from services and facilities.</p> <p>As a potential employment area the site has a medium-high landscape/visual sensitivity rating and it is considered there are more appropriate locations for large scale employment land.</p> <p>It is considered there are more sustainable locations to accommodate employment growth in the town during the plan period.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EciA required. To check all ponds on site (only one obvious pond but others may be present) for full range of protected species in addition to mature trees, buildings, badger setts, hedgerows and the water course. Pasture in northern fields may be species rich grassland that would be Core / priority or corridor habitat. Environmental Corridor buffers a long ditch that runs through this area. GCN have been recorded in the area including a pond 66m away from the north eastern field (to the west of this field). There are a large number of mature trees within and bordering this site. One is protected by a TPO. Otters are known likely to use the ditch as a corridor and a number of otter deaths have been recorded on the A5 bypass as a result of insufficiently large culverts under the road. Two semi-natural areas at the northern ends of the two north east fields should be surveyed.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network that crosses the site in accordance with CS17 Environmental Networks and MD12. In particular the ditch should be fully buffered.
<i>Ecology Comments Opportunities:</i>	The entire area beyond this development should be master-planned - in part to ensure that adequate greenspace provision is provided for people and wildlife. The ditch could be re-naturalized and its capacity increased with in-line pools to made a feature for people and wildlife. De-culvert this where possible. Enhancement of the two semi-natural areas at the northern ends of the two north east fields. Save passage for otters under or over the A5 should be installed or a means of preventing them from crossing the road. This could also provide a better crossing for people. A green bridge.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes, and has the potential to effect the setting of, Grade II listed Upper Edgebold farmhouse (NHLE ref. 1055682). Also includes the associated historic farmstead (HER PRN 40903) and medieval moated site (HER PRN 02968). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of LB; Level 2 historic buildings assessment if any demo proposed at Upper Edgebold Farm; DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to the west and south. Existing farm on site which if it remains may cause concerns (noise, odour, dusts) and of this area were to be developed may have contaminated land due to past activity.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available. Should the farm remain I would suggest that good stand off distance to first residential properties is proposed to ensure the business does not get hampered by development and vice versa.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site represents a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR161 and SHR060. Whilst these sites are being promoted separately, it is understood there is good opportunity to deliver a comprehensively planned development.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site has no overarching constraints identified.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. These sites (158, 060, 161) are over 1.5km to the nearest primary school and convenience store. Frequent bus service operate along Mytton Oak Road and Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	<p>The site's scale offers significant opportunity to develop additional services and facilities and to mitigate out identified constraints.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	<p>Identify the site as part of a mixed use sustainable urban extension allocation alongside sites SHR060 & SHR161. This sustainable urban extension is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
Reasoning	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR060 and SHR161. These sites are being promoted jointly and it is understood this is underpinned by a land promotion agreement. This will ensure the site is developed in a comprehensive manner, through a master planned approach.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well. The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. Given the proximity of services it would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. It is recognised there is potential for new education provision within the existing allocated site to the east which could also serve this site. The mix of uses on the site has evolved since the Preferred Options consultation in November 2018, reflecting early urban design work being carried out by the site promoter, alongside the consideration of opportunities for park and ride provision and a more focussed and consolidated employment provision.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>This sustainable urban extension presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 300 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. This is considered to constitute sustainable development.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications required:	<p>Yes:</p> <p>Draft Policies SP2 and S16 to be amended to reflect the fact that 300 of the dwellings proposed across SHR060, SHR158 and SHR161 form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>

<p>If proposed for Allocation, Potential Capacity:</p>	<p>This sustainable urban extension of SHR060, SHR158 & SHR161 is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>This is a significant additional Sustainable Urban Extension (SUE) development opportunity for the town. Development will be progressed in a comprehensively planned way, subject to an agreed masterplan reflecting the objectives of the Big Town Plan. This will include a mix of uses, including substantial residential development, commercial land and potentially additional community, leisure and retail uses, where these would not impact on the viability of the town centre.</p> <p>Due to the scale of the site it is likely delivery will continue beyond 2038 into the next plan period.</p> <p>The total site area of land proposed is around 100 hectares. However, to ensure a suitable balance of development it is considered around 50 hectares will be required for residential purposes (to deliver around 1,500 dwellings) and a minimum of 5 hectares will come forward for employment purposes, alongside the potential for new park and ride provision. There are significant opportunities to enhance infrastructure as part of this development.</p> <p>Vehicular access will be served from both Mytton Oak Road and Hanwood Road and will support the creation of a circular link road sufficient to sustain a bus route. Where necessary improvements to the Local and Strategic Road Networks will be funded through the development.</p> <p>Development will support the creation of and enhancements to existing green corridors as part of the Big Town Plan's wider strategy to improve the town's green network. This will also support enhancements to pedestrian and cycle links in this area of town.</p>

Site Assessment - Stage 3 Updated

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Woodland to the north is Plantation Ancient Woodland and would need to be buffered from the effects of development under NPPF and MD12 (15 - 50m) reducing area available for development. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>GCN have been recorded in the pond in the garden to the south. Boundary trees may support bats and birds and should be assessed. The hedgerows are core / priority habitat and should be retained. The thin woodland on the northern boundary is protected under an area TPO.</p>

<i>Ecology Comments Management of Constraints:</i>	Some land may be required near this pool for mitigation. A large buffer would be required along the northern boundary to protect the TPO trees.
<i>Ecology Comments Opportunities:</i>	Woodland planting along the north and east boundaries should be encouraged to enhance the environmental network. A pond should be created near the southern boundary. SUDS features should be suitable for GCN.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Possible archaeological interest relating to the battle archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Scattered mature curtilage trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise to the west from road. Small landfill to north, commercial to the north as a noise and dust source.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Poor
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north-east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site is divorced from the settlement and should only come forward if SHR195 is preferred.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly for housing in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal, although fair for employment.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>

<i>Ecology Comments Other Constraints:</i>	<p>Ecia required. At least one pond is present on site. Two ponds found within 50m of the site are known to have GCN. Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Tree Preservation Orders are listed for several trees on site and in the boundary - mostly the eastern side. The created landscape may have already developed biodiversity interest. Some species of interest have been found in the SUDS feature near the entrance.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. This is likely to involve setting aside terrestrial habitat near the pond in the garden to the north of the site. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field with large buffers for the TPO trees in particular. Protect, enhance and restore Env. Network that runs down the eastern side in accordance with CS17 Environmental Networks and MD12. This would also take into consideration the TPO trees.
<i>Ecology Comments Opportunities:</i>	Environmental Network could be enhanced in many places. In particular the eastern side. The side would serve well as a country park given the infrastructure has already been installed.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Archaeological features identified through archaeological work in 2012 -13.
<i>Heritage Comments Management of Constraints:</i>	Archaeological mitigation can be secured by condition.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows, some TPO trees on and adjacent to the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>

Frequent bus service operate along Mytton Oak Road and Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Known Infrastructure Opportunities:	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
Potential for Windfall?	No
Potential for Allocation?	Yes
Recommendation	<p>Identify the site as part of a mixed use sustainable urban extension allocation alongside sites SHR060 & SHR158.</p> <p>This sustainable urban extension is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
Reasoning	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR060 and SHR158. These sites are being promoted jointly and it is understood this is underpinned by a land promotion agreement. This will ensure the site is developed in a comprehensive manner, through a master planned approach.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well. The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. Given the proximity of services it would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. It is recognised there is potential for new education provision within the existing allocated site to the east which could also serve this site. The mix of uses on the site has evolved since the Preferred Options consultation in November 2018, reflecting early urban design work being carried out by the site promoter, alongside the consideration of opportunities for park and ride provision and a more focussed and consolidated employment provision.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>This sustainable urban extension presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 300 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. This is considered to constitute sustainable development.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications required:	<p>Yes:</p> <p>Draft Policies SP2 and S16 to be amended to reflect the fact that 300 of the dwellings proposed across SHR060, SHR158 and SHR161 form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>

<p>If proposed for Allocation, Potential Capacity:</p>	<p>This sustainable urban extension of SHR060, SHR158 & SHR161 is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p>If proposed for Allocation Design Requirements:</p>	<p>This is a significant additional Sustainable Urban Extension (SUE) development opportunity for the town. Development will be progressed in a comprehensively planned way, subject to an agreed masterplan reflecting the objectives of the Big Town Plan. This will include a mix of uses, including substantial residential development, commercial land and potentially additional community, leisure and retail uses, where these would not impact on the viability of the town centre.</p> <p>Due to the scale of the site it is likely delivery will continue beyond 2038 into the next plan period.</p> <p>The total site area of land proposed is around 100 hectares. However, to ensure a suitable balance of development it is considered around 50 hectares will be required for residential purposes (to deliver around 1,500 dwellings) and a minimum of 5 hectares will come forward for employment purposes, alongside the potential for new park and ride provision. There are significant opportunities to enhance infrastructure as part of this development.</p> <p>Vehicular access will be served from both Mytton Oak Road and Hanwood Road and will support the creation of a circular link road sufficient to sustain a bus route. Where necessary improvements to the Local and Strategic Road Networks will be funded through the development.</p> <p>Development will support the creation of and enhancements to existing green corridors as part of the Big Town Plan's wider strategy to improve the town's green network. This will also support enhancements to pedestrian and cycle links in this area of town.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	SHR162 is part of SHR216 which has the potential to deliver 694 homes. Access would be onto Holy Head Road. Land would need to be protected to deliver the Shrewsbury North West Relief Road across the southern part of the site.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required. A large garden pond is found 40m to the west of this area. Shelton Rough Local Wildlife Site is directly adjacent to the eastern boundary and northern corner. The grassland may be species rich and could be defined as Core / Priority Habitat and therefore be considered in accordance with CS17 Environmental Networks and MD12. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A block of woodland to the north west is at least Corridor Habitat and likely Core Habitat. Several protected species are likely to be found on or near the site including birds, bats, badgers

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement - in particular if the pond is found to support breeding GCN. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network borders the site on most sides in accordance with CS17 Environmental Networks and MD12. In particular a wider buffer should be in place adjacent to the Local Wildlife Site woodland.
<i>Ecology Comments Opportunities:</i>	The woodland to the east and the block to the west could be enhanced by further tree planting adjacent to it.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees and woodlands on the boundaries of the site, level of important tree cover may limit developable area.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	See assessment for SHR216.

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have the potential to deliver 4,958 homes. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for other impacts on Hencott Pool Ramsar Site part of which is directly adjacent and within the surface water catchment. Issues include recreational impacts in-combination and direct run-off into site. More than the minimum 30m per bedroom (SAMDev Policy MD2) may be required to address potential recreational impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>One pond is found in this area and 2 ponds are present within 50m. These and others further away may support GCN. The outflow from Hencott Pool flows through this area. Mature trees are within and bordering this site - most of which are protected under TPOs. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Much of the area is arable with little biodiversity interest.</p>

<i>Ecology Comments Management of Constraints:</i>	Much of the northern area is likely to be too close to the Ramsar site and not possible to develop. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and through the site in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation to the north of the site could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges borders woodland to the NW
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	NWRR location likely to run through the site. Road on southeast boundary a noise source. Poss. con land from unknown filled ground to the northwest.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Consideration of any future NWRR should be given.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>2 large new ponds are present within 40m and 60m. These and others further away may support GCN. Part of the site already appears to be developed in part. There is a block of new woodland to the north west. Hedgerow, that forms some of the boundaries, is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement - in particular if the ponds are found to support breeding GCN. Retain and enhance all hedgerows/tree lines on boundaries.
<i>Ecology Comments Opportunities:</i>	Further woodland planting at the north west corner plus some network creation along the eastern boundary would be useful.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Field site is surrounded with mature trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Low density with retention of mature trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail and road noise to site boundaries.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>61% of site in flood zones 2 and 3 which will reduce the potential numbers of dwellings. Within the existing development boundary.</p> <p>The site is approximately 500m from the nearest supermarket and regular bus service and less than 1.5km from the nearest primary school. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site is a greenfield location within the development boundary capable of safe access. However, flood risk is a major constraint which could undermine viability as the scale of delivery will need to be significantly reduced.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	This employment site has direct access onto the A49 bypass and appropriate junction(s) could be achieved along the site frontage.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	North west and south west corners of this area are within the Environmental Network due to the proximity to the flood plain. These parts are in flood zone two and three. Requires EclA and surveys for bats (transects), GCNs (ponds within 500m), badgers and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12
<i>Ecology Comments Opportunities:</i>	A useful habitat corridor could be created to the west and also along the line of the power cables. See accompanying document.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site may effect settings of Scheduled Monuments of Haughmond Hill hillfort (NHLE ref. 1021282) and Queen Eleanor's Bower ringwork (NHLE ref. 1021281). Site contains majority of large Roman marching camp (HER PRN 00124) so has significant archaeological potential. Site detached from existing built edge of Shrewsbury
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of SMS; archaeological DBA + field evaluation). NB Part of Roman marching camp excavated in advance of construction of A49 bypass.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Treeless field site - would need buffer zone to the river and screening to the A49
<i>Tree Comments Management of Constraints:</i>	N/A
<i>Tree Comments Opportunities:</i>	Retain existing trees and Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A49 and rail.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site is well contained between the A49 to the east, the River Severn to the west and north, and the railway line to the south. Highway access can be achieved from the A49.</p> <p>The scale of the site allows for the opportunity for a self contained employment site appropriate for a range of class B uses north of the strategic A49/A5 junction.</p> <p>The prospects of sustainable travel to / from this location are extremely limited unless a new cycle / footbridge could be constructed across the river Severn to Crowmere Road. There are no footways along the existing bypass routes from housing in Sundorne to the north or London Road to the south, both of which are over 2km away. Therefore not suited to residential use.</p> <p>The site is physically separated from the existing built form of the town and therefore is not considered to offer opportunities for mixed use.</p> <p>The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and fair for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>It is recognised the site has been identified as having high landscape and visual sensitivity, however, this is in relation to the larger land use parcel also covers land to the east of the A49 into an area of less self containment.</p> <p>The site is currently identified as having potential for a Parkway Station in the adopted Core Strategy.</p> <p>Much of the site contains a newly designed Scheduled Monument. The site is also in the setting of Scheduled Monuments on Haughmond Hill.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>7% of the site is in Flood risk zone 2 and 3 and therefore must be mitigated through the design and layout of the any future proposal.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Access from the A49 offers the potential to attract investment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Maintain the site as a proposed employment allocation whilst proactive discussions with the landowner are undertaken to inform the eventual decision regarding the proposed status of this site.</p>
<p>Reasoning</p>	<p>The site is well contained but divorced from the existing residential built form of the town, and therefore not considered appropriate for housing development. However, the site's strategic access point from the A49 offers a good opportunity to develop a strategically important employment location.</p> <p>Much of the site contains a newly designed Scheduled Monument. This matter is currently being due consideration, informed by ongoing engagement with the site promoter.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	<p>45ha of employment land</p>
If proposed for Allocation Design Requirements:	<p>This site offers the opportunity for a significant new employment area to the east of the town. Access is proposed from the A49, which also provides a defined boundary to the site.</p> <p>It is envisaged this site could be development for a wide range of employment uses including B1, B2 and B8.</p> <p>A small proportion of the site is within Flood Zones 2 and/or 3 and this will need to be considered in the layout and design of development.</p>

Site Assessment - Stage 3 Updated

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High and Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would be onto Corporation Lane some 200m north of the Nursery Meadows junctions. This section of Corporation Lane is a single track lane with no pedestrian facilities and unsuitable for the traffic associated with the proposed development. Third party land would be required to improve the lane. Also the access route onto the Berwick Road (Corporation Lane and Coton Crescent) are narrow residential streets.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others.) and for possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. Entire area may be Environmental Network - Core Habitat and/or Corridor. There is no space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The grassland habitat has been identified as potentially of interest and if so this would mean the entire site is core habitat in the environmental network and requires protection in accordance with CS17 Environmental Networks and MD12. There is a large pool just over the railway line which has recently been shown to support a medium population of Great Crested Newts. If the grassland isn't of interest then much of the boundary of the site is corridor in the Env. Network. Mature trees border this site. One mature tree is protected with a TPO. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Survey may reveal that not all the site is Environmental Network but where this is present it should be protected, enhanced and restored in accordance with CS17 Environmental Networks and MD12. Area of mitigation required is likely to reduce the area available for development.
<i>Ecology Comments Opportunities:</i>	Corridor to the east and west could be enhanced
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Curtilage trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to east as noise source.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>Around 10% of the site is brownfield.</p> <p>The site is over 1.0km to the nearest shops and primary school on Ellesmere Road. The route would be via Corporation Lane which has no footways albeit lightly trafficked.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site's access is not considered suitable, and there are more sustainable options elsewhere.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>his site is isolated from the other sites being promoted between the Mytton Oak Road and the Radbrook Road. It would therefore need to be developed as a stand alone site with access assumed to be via the existing private lane to Ley Grange. The junction of this lane with the Mytton Oak Road would need to be improved. If the lane is to be adopted it would need to be improved to highway estate road standards. Alternatively the site could be accessed via a new roundabout junction replacing the existing Gains Park Way / Mytton Oak Road ghost island right turn junction.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. The area required may impact the viability of any development here. If the grassland is priority / core habitat, then the reduced area available for development after adequate mitigation has been provided may make this site unviable</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Eastern part of site is in Flood Zone 2 and 3 and also the Environmental Network on account of the buffered area from the Bowbrook. A pond is present and GCN are known from the area. Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. Another large pond is present to the east which may also support GCN. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Buffer to the Bowbrook could provide useful enhancement to this corridor if large enough (at least 10m). In-line pools could also act as a flood mitigation measure.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees on and adjacent to the site, may limit developable area and access.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>10% of site in flood zones 2 and 3. Site is a Source Protection Zone. 18% of site in 1000 years surface water flooding zone. The site can easily be linked into existing pedestrian and cycle infrastructure and there is a frequent bus service on Mytton Oak Road (less than 400m away). It is approximately 1 km from a local shopping centre Oxon Primary School. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>The site could form part of a wider allocation with other promoted sites between Mytton Oak Road and Hanwood Road, but this would be reliant on additional land being promoted to the east. Other site preferable at this stage to accommodate need. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Site Assessment - Stage 3 Updated

Site Reference:	SHR173
<i>Coal Authority Reference Area?</i>	No

<i>Percentage of the site identified on the EA Historic Flood Map:</i>	6%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This is part of a cluster of site options (along with SHR179 and SHR180) SHR173 has the potential to deliver 700 homes. Access would be via a new junction onto Ellesmere Road. The traffic generated by such a large development - as high as 500 trip in the peak hour - would create significant congestion on Ellesmere Road. It is very unlikely that the congestion can be mitigated. Development of this scale on Ellesmere Road is unlikely to be acceptable in highway terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. North western corner is within a Local Wildlife Site (Core Habitat in the Env. Network) and a wide border of the north and west are Env. Network corridor on account of the grassland which may be of interest. The trees in the LWS are also protected under an area TPO. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Some areas look a little like dry ponds. These could require checking.</p>

<i>Ecology Comments Management of Constraints:</i>	Grassland would require survey between May and August but an experienced surveyor as pastures are difficult to assess. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12. Reduced area of development likely due to mitigation land required for Environmental Network.
<i>Ecology Comments Opportunities:</i>	Environmental Network could be enhanced in many places. In particular the western side along the railway and the northern side next to the Local Wildlife Site.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges borders woodland to the NW
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east, rail to west creating noise sources. Possible contamination from off site sources. Any large scale development on this side of town will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Development of the NWRR would remove the highway objection to this site. If allocated developer contributions should be sought towards the creation of a NWRR. Large site on the edge of Shrewsbury's urban area, within easy walking distance of the town centre and train station and on a public transport. Opportunity for biodiversity gain as part of buffering to the north and east/south-east of the site. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>Yes</p>
<p>Recommendation</p>	<p>Identify the site as a proposed residential allocation</p>
<p>Reasoning</p>	<p>The proposal for the North West Relief Road (NWRR) is central to the inclusion of this site as an allocation. Currently, traffic between areas to the north and west of Shrewsbury has to pass through the town centre, through unsuitable roads west of the town or take the significantly longer route around the A5 / A49 bypass. As a result, there are unacceptably high levels of traffic including heavy vehicles on residential roads, including Ellesmere Road, approaching the town centre and within the centre itself where there is only limited highway capacity. This leads to problems of congestion, delays and journey unreliability for road users, and problems of noise, poor air quality and reduced accessibility, public transport services are also affected by congestion.</p> <p>At the time of the original Preferred Options consultation in November 2018, Shropshire Council did not have agreed funding for this road and it was therefore not considered as a viable opportunity to include within the Local Plan review. In February 2019 it was agreed the Council would received £54m of funding towards the construction of the NWRR. A Planning Application for the NWRR is currently being considered by Shropshire Council.</p> <p>Without the NWRR it is not considered the highways access to SHR173 is achievable without unacceptable impact on existing road network and amenity value of local residents. It is therefore considered the allocation should not come forward until the completion of the NWRR.</p> <p>The scheme has the potential to support funding for the NWRR through community infrastructure levy (CIL) funding.</p> <p>The scheme is considered to be in a sustainable location within a 15/20min walk of the town centre, and can support biodiversity gain through the creation of a green infrastructure buffer to the north of the site, adjacent to the Old River Bed SSSI and to the east/south-east adjacent to the railway line. There are also opportunities to deliver local facilities at the scale of housing proposed which increases the self-containment of the proposal and reduces the need to travel.</p> <p>The option represents a complementary area of growth with land to the west of the town. This supports a balanced approach to growth in the town in the long term.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	450
If proposed for Allocation Design Requirements:	Dependent upon the delivery of the NWRR, and phasing should reflect this with no occupation before the road's operation. Opportunity to deliver the scheme through a master planned approach, focussing on design quality, layout and mix. Opportunity to support key objectives of the Big Town Plan.

Site Assessment - Stage 3 Updated

<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	15%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have the potential to deliver 4,958 homes. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for impacts on Hencott Pool Ramsar Site, which is entirely within this allocation. Clearly the Ramsar will not be possible to build on but it may well be impossible to develop much of the rest of this area. Impacts directly and indirectly on the Ramsar would also include destruction of habitats, recreational impacts in-combination, damage to the water catchment and direct run-off into site. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address potential recreation impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting. SHR200 is part of this site but there is no entry in this spreadsheet. Similar reservations would apply.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (in ponds adjacent), Reptiles, Badgers (known), Bats (buildings could require survey if being altered / destroyed), nesting birds, vascular plants. Environmental Network, including several areas of core / priority habitat would require survey. TPO trees are throughout.</p>

<i>Ecology Comments Management of Constraints:</i>	The HRA - informed by the EclA - will have to assess how much of this area might be available for development. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network - mostly to west and north but also through site - in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation close to the Ramsar could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Site includes historic farmstead of Cross Hill Farm (HER PRN 26966) and possible prehistoric cropmark enclosure (HER PRN 04241).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; Level 2 historic buildings assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	This site has 2 important Heavily wooded or plantation of trees on to the NW and Hencott pool Ramsar site
<i>Tree Comments Other Constraints:</i>	Remainder of site is agricultural with hedges and scattered trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature woodlands
<i>Tree Comments Opportunities:</i>	Part of site suitable part of site not suitable
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east creating noise sources. Any large scale development on this side of time will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively. Poss. contaminated land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better site if air quality concerns for town centre were not so pronounced.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Poor
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and fair for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access is proposed onto Preston Street. In the interests of highway safety and to protect the amenity of residents in the vicinity of Preston Street, the new development south this site was given permission based on a 150 occupancy limit (with access onto Preston Street only) before a through route to London Road (south of Shrewsbury College) is in place. This through route has been designed to be attractive for those living in the new development to travel in both direction but is not direct and would not be attractive for those from SHR176 to use to gain access the strategic highway network at the A5 Emstrey Roundabout. Therefore it is unlikely that SHR176 would be acceptable due to the impact on Preston Street.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network which may impact the viability of this area as a whole. Fields to the west are arable and outside the network so less likely to have issues.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12. The River Severn along the eastern boundary and a buffer to this is also designated as a Local Wildlife Site. To the north a former quarry in the woodland is also protected as a Local Geological Site. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Two ponds are found in this area and 2 ponds are present within 210m. These and others further away may support GCN. Otter will use the River corridor but may also shelter in the woodland / scrub near the pond and drain and other areas. Badger are likely. Bats and birds are likely to use the buildings.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries and woodland block. Environmental Network and both Local designated sites should be protected, enhanced and restored in accordance with CS17 Environmental Networks and MD12. Area of mitigation required is likely to reduce the area available for development.
<i>Ecology Comments Opportunities:</i>	The field to the far east should be planted up as a mix of woodland and ephemeral pools. The line of the drain with the pool should be extended on both ends to enhance this corridor and perhaps coupled with an access route. The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools and 'leaky dams' should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site contains non-designated historic farmstead of Weirhill (HER PRNs 15145 & 27842) and site of Preston Ferry (HER PRN 02759). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic building assessment of historic farmstead if demo proposed or setting assessment to provide suitable stand-off from farm ; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Remainder of site is agricultural with hedges and scattered trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north creating noise. Possible con land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site would represent a further phase to the currently allocated and approved scheme south of Preston Street for 600 dwellings.</p> <p>The site could accommodate around 400 additional dwellings and provide for an extension to the planned open space south of Preston Street.</p> <p>There is potential for the site to contribute additional community facilities to support this and the consented scheme to the south.</p> <p>Road access is a major concern, and, if preferred, development would need to be phased until after the current scheme has been fully built out. This will have an impact on the rate of housing delivery in the early part of the plan period.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The new access to the development site to the south of this site has been designed to be attractive to those living in the new development to travel in both direction but it is not direct and it is considered that it would not be attractive for future residents of any development on SHR176 to use to gain access the strategic highway network at the A5 Emstrey Roundabout. Therefore it is unlikely that SHR176 would be acceptable due to the impact on Preston Street.</p> <p>A proportion of the site is located in flood zones 2 and/or 3. A large proportion of the site constitutes part of the Environmental Network - Core Habitat and/or Corridor. There is little remaining space on site to mitigate for the loss of this component of the network.</p> <p>A HRA may be required for NOx pollution from increased traffic, in-combination with other sites.</p> <p>The site contains the non-designated historic farmstead of Weirhill (HER PRNs 15145 & 27842) and site of Preston Ferry (HER PRN 02759).</p> <p>The site has a medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>Considered there are more sustainable options to the west of the town to accommodate major expansion.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

<i>Percentage of site in Flood Zone 2:</i>	23%
<i>Percentage of site in Flood Zone 1:</i>	77%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	4%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	7%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have good access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the SRN. SHR177 could deliver 1,545 homes and SHR177 is promoted as a small employment site. Land would be available from the sites to deliver a series of appropriate type junctions and pedestrian and cycle infrastructure that connects to the existing network in the area.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network which may impact the viability of this area as a whole.</p>
<i>Ecology Comments Other Constraints:</i>	<p>A water course runs along the northern and eastern boundary. This and a 50m buffer into the site is within the Env. Network. The coarse grassland may be of interest. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Two trees just north of this area protected under TPO. Hedgerow is Core / Priority Habitat. Birds and bats may also use the buildings present on site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and east in accordance with CS17 Environmental Networks and MD12. This is likely to leave very little room for development.
<i>Ecology Comments Opportunities:</i>	Network could be enhanced alongside the water course in particular but also down west border.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes medieval historic farmstead of Oak Farm (HER PRNs 13055 & 27846).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic buildings assessment if demo at Oak Farm proposed, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees along east boundary of the site, hedgerows on other boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Residential; to the north west and opposite Gains Park Way.
<i>Public Protection Comments Management of Constraints:</i>	Separation distances primarily with good layout and orientation, abatement technologies and boundary treatment or a combination of the above could be employed to reduce any noise, odour and dust impacts on residential properties.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>The site represents a major opportunity for greenfield release alongside SHR057 on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of this combined site consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2036. The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road). The combined site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network. Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road. There are no overriding site constraints identified.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>Yes</p>
Recommendation	<p>Identify the site as a proposed residential allocation alongside part of SHR057</p>
Reasoning	<p>The site represents a major opportunity for greenfield release alongside SHR057 on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of this combined site consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road).</p> <p>The combined site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network.</p> <p>Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road. There are no overriding site constraints identified.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	<p style="text-align: center;">SHR057 (part) / SHR177 combined capacity of 500 dwellings</p>
If proposed for Allocation Design Requirements:	<p style="text-align: center;">Development to come forward as part of a comprehensive scheme to enable the delivery of sustainable residential development.</p> <p style="text-align: center;">Vehicular access will be from Mytton Oak Road.</p> <p style="text-align: center;">Development will be expected to reflect the key objectives of the Big Town Plan.</p> <p>Development will be expected to contribute to the delivery of enhancements to green infrastructure and wherever possible create green linkages with other existing and planned development sites in the west of the town.</p> <p>Green infrastructure to be planned to link into future planned green network to land south of Mytton Oak Road (proposed allocation SHR158/060/161).</p>

Site Assessment - Stage 3 Updated

Site Reference:	SHR178
<i>Coal Authority Reference Area?</i>	No

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Access would be onto Albert Road. Estate road access with associated pedestrian facilities can be achieved within the site frontage.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are within and bordering this site. One tree in the south east corner is protected with a TPO. The trees, hedgerows and buildings may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. This area has very low availability of Public Open Space (POS). Loss of this area to housing would represent the loss of potential POS.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	occasional adjacent mature tree
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No constraints noted.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>Site is the existing Reman Services Sports and Social Club with approx. 20% is brownfield. Site within the main urban form with opportunities to connect to existing services and facilities. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>Yes</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>Part of the site is currently in use. No overarching constraints identified. Windfall opportunity. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	1%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This is part of a cluster of site options (along with SHR179 and SHR180) SHR173 has the potential to deliver 700 homes. Access would be via a new junction onto Ellesmere Road. The traffic generated by such a large development - as high as 500 trip in the peak hour - would create significant congestion on Ellesmere Road. It is very unlikely that the congestion can be mitigated. Development of this scale on Ellesmere Road is unlikely to be acceptable in highway terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others) and possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The areas is bordered to the north and west with Env. Network. The small separate field to the south may contain grassland of interest that qualifies as Core/Priority Habitat. Some areas look a little like dry ponds or small areas of interesting habitat. These could require checking.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Build on the existing small blocks of non-arable land to create accessible natural greenspace. Consider soil stripping to help create biodiverse habitat.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges and 2 "islands" of trees one central one to the south
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Poss. contaminated land. Road noise to the east. Any large scale development on this side of town will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	Would be a better site if no air quality issues in the town centre on this side of town.
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Good
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair

Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

Strategic Considerations:	<p>The site is approximately 1km to the nearest food store, 800m to the nearest primary school and less than 400m from the nearest bus stop but this is only a 2 hourly bus service.</p> <p>The pedestrian and cycle network in the vicinity is reasonable but there are sections of footway on Ellesmere Road that are narrow. There has been significant growth along Ellesmere Road over the last five years and there is a risk further growth in a short period could lead to the over-development of the area.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>There has been significant growth along Ellesmere Road over the last five years and there is a risk further growth in a short period could lead to the over-development of the area. In addition the developable area of the site is likely to be reduced due to the need to enhance open space requirements beyond the 30sqm policy to mitigate against impacts from recreation pressure, and given the site is within the Environmental Network.</p> <p>Other sites present more sustainable opportunities to develop the town.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for additional impacts on Hencott Pool Ramsar Site part of which is directly adjacent including recreational impacts in-combination and direct run-off into site. Part of the area is also in the catchment of Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address potential residential impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Two ponds are found in this area and 3 ponds are present within 50m. These and others further away may support GCN. Mature trees are within and bordering this site - with some boundary trees to the south protected under TPOs. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Most of the area is arable farmland with little biodiversity interest. Otter has been recorded in the small copse near the north west.</p>

<i>Ecology Comments Management of Constraints:</i>	South west part of this area is directly adjacent to Hencott Pool Ramsar site. Much of the area is likely to be too close to the Ramsar site for development. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north west and adjacent to the Ramsar in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The woodland block with pools to the north west could form the core of public open space. The buffer to Hencott Pool needs to be significant. Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation near the Hencott Pool could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Site includes possible prehistoric cropmark enclosure (HER PRN 04241).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; Level 2 historic buildings assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	NWRR location likely to run through the site. Any large scale development on this side of time will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively. Road to north and east noise sources. Possible air quality constraints by road junction to northeast.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Separation distance from northeast to ensure no residents exposed to unacceptable air pollution. Air quality monitoring likely to be required for at least a year by any developer to show air pollution concentrations and highlight what mitigation is necessary.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Good
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Good
Relationship to the Black Country	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

Strategic Considerations:	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
Known Infrastructure Requirements to make Development Suitable in Planning Terms:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Known Infrastructure Opportunities:	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
Potential for Windfall?	<p>No</p>
Potential for Allocation?	<p>No</p>
Recommendation	<p>Do not allocate</p>
Reasoning	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications required:	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:

Relationship to the Black Country	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>Site covers area from A5 to the south to Pulley Lane to the north. Northern part of the site (SHR185) is being promoted independently, but it is understood the two landowners are collaborating over promotion. A joint site option (SHR066, 082 and 085) would be preferred if proposed for allocation. Whilst north of the A5 the site is considered to make a contribution to the gap between Bayston Hill and Shrewsbury. Development of this site would extend development to the by-pass which, aside from the Meole Brace Park and Ride, is beyond the extent of the current built form. Noise mitigation required as a buffer to the A5. Access to the by-pass from the site would need to use the Meole Brace junction because of the left turn only onto Hereford Road. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>Concern that development onto the site could erode the gap between Bayston Hill and Shrewsbury. Development of this site would extend development to the by-pass which, aside from the Meole Brace Park and Ride, is beyond the extent of the current built form. Access to the by-pass from the site would need to use the Meole Brace junction because of the left turn only onto Hereford Road. Other sites are considered more sustainable to contribute to the development needs of Shrewsbury up to 2038. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would be via an improved existing private track onto Longden Road adjacent to the Monumental Mason. Track would need to be improved to estate road standards and it is questionable whether the track is wide enough for this or whether suitable visibility can be achieved within controlled land at Longden Road. The development of the site with two or three homes would allow a private access road to be maintained which is likely to be achievable.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Almost entire area may be Environmental Network - Core Habitat and/or Corridor. There is no space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. The grassland may be of interest and qualify as Core/Priority Habitat. A buffer of the core habitat along the Radbrook is also required and the lower area is in Flood Zone 2 and 3. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The Radbrook is used by otters. Badgers are likely to use this site. Reptiles are possible here. In particular grass-snake.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. In particular a wide buffer to the water course. Survey site between May and August to determine grassland interest.
<i>Ecology Comments Opportunities:</i>	Every opportunity should be made to provide public access along the Radbrook. This corridor could be improved in many ways for biodiversity and people. Some shelter must be retained for otters on this route.
<i>Heritage Comments Significant Constraints:</i>	Site located within an area of open amenity space within the Shrewsbury Conservation Area.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Field site with mature trees and woodland to the north
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retain mature trees

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Corridor habitat that is protected under MD12 and CS17 runs around the southern and the south western boundary. This is in the form of woodland that would require survey. A pond is present just over the A528. It would need checking for GCN and other protected species - including Tubular Water-dropwort, a UK Priority Species that is recorded nearby. Boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. Polecat, a UK Priority Species, has been recorded on site and badgers may use the woodland. These species like the cover of hedgerows and scrub.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees in the boundary should be retained. The woodland on the southern boundary should be retained.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Listed Albright Hussey (NHLE ref. 1295586) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Roads to west and east creating noise and air pollution. Road junction to southwest needs consideration for air quality.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Separation distances to road to ensure no air pollution issues. Monitoring necessary ideally for a period of a year prior to any thorough assessment being possible.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site could come forward with as a comprehensive development with adjoining sites. However, the site is to the north of the A5 and therefore this would establish a direction of growth beyond a current defined and defensible boundary. In addition there are significant heritage concerns raised over the impact of development on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>The site would establish a direction of growth beyond a current defined and defensible boundary. In light of more sustainable options to the west of the town it is not felt necessary to breach the by-pass in this direction in this plan period.</p> <p>In addition there are significant highway and heritage concerns, in particular on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey. The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>

If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Site Assessment - Stage 3 Updated

Site Reference:	SHR187
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes

<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Northern two fields are arable and are likely to have less ecological interest. The permanent pasture to the south may have grassland of interest. EclA required to assess this and the boundary and onsite trees for nesting birds and bats. A pond is indicated on OS maps in the southern field and on some aerial photos but other aerial photos suggest this is often dry. This will require confirmation. Ponds to the east including the one immediately adjacent in the garden and a small pond on the boundary, in the young woodland, would require survey for GCN and, if found, some mitigation for loss of terrestrial habitat may be required.</p>

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite ponds would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network on site and to south in accordance with CS17 Environmental Networks and MD12. The fields to the north are of lower ecological interest. Leaving the field to the south may work.
<i>Ecology Comments Opportunities:</i>	The environmental network and small pond to the east of this area could be enhanced by opening up the pond and perhaps extending it onto the site but planting trees elsewhere along the boundary with the woodland.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. No other known archaeological interest but very large site size suggests there may archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows, area of woodland on the boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north. Poss. landfill impacts from off site to northeast and east.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available where necessary.
<i>Public Protection Comments Opportunities:</i>	
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):	Fair
Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):	Fair
Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):	Fair
Relationship to the Black Country	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p>Strategic Considerations:</p>	<p>The site has potential to be part of a large strategic allocation, although it is recognised further heritage assessment is necessary. Improvement to local highway network required and impact on Strategic road network will need to be assessed. Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known joint promotion agreement in place.</p> <p>These sites are over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Known Infrastructure Opportunities:</p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p>Potential for Windfall?</p>	<p>No</p>
<p>Potential for Allocation?</p>	<p>No</p>
<p>Recommendation</p>	<p>Do not allocate</p>
<p>Reasoning</p>	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038, and in isolation this site is divorced from the existing built edge of the town. Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p>Further Main Modifications required:</p>	<p>No</p>
