<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A greenfield site located in a rural setting within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Much of the site is located within a source protection zone 3. The site in part adjoins Stanmore Industrial Estate, but separation is caused by P58a. The site is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate, agricultural fields and the Hermitage Ridge (and associated ancient woodland).</p> <p>The site is located within two landscape parcels (about half of the site in each), which have medium and medium-high landscape and visual sensitivity to housing development and medium and high landscape and visual sensitivity to employment development.</p> <p>The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken.</p> <p>The site is adjacent to an environmental network corridor and may contain priority habitats and protected species. The site contains and is in proximity of mature trees and hedgerows. The site may have archaeological potential. The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use. There is a foul sewer though site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Power supply and other utilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Links to Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site in part adjoins Stanmore Industrial Estate, separation is caused by P58a. The site could have potential as part of a larger allocation or for future safeguarding following any future development of P58a. However around half of the site has high visual and landscape sensitivity to employment development and has not been actively promoted. As such on reflection it is considered most appropriate to retain as Green Belt.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P59</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	6%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	7%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; strongly against purpose 3; with no contribution against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the significant level of encroachment on countryside and weakening of the role of adjoining areas with regard to purpose 3. No sub-parcels were identified which would have less harm.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P59): If 66% of this site was housing this site could accommodate 830 homes. This site has good vehicular access potential, directly onto the A458.</p> <p>As part of a strategic settlement east of Bridgnorth Low Town this site lies the furthest east from the existing development and therefore has less sustainable transport potential.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>Complicated site from aerial photos. Part of site core and corridor of Environmental Network. CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision. Suggest seek landscape advice. If GCN present then mitigation land will also reduce potential area for development. Extreme north and southern quarter appear to have no unmanageable constraints.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EcIA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles, otters and water vole. This site lies partly within and immediately adjacent to the Env. Network corridor CS17 Environmental Networks applies. Area possible for development will greatly depend on surveys. Buffer of semi-natural vegetation to watercourse and preferably additional room for public access.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/ponds on site. Retain pond as part of landscaping of open space. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided. Open space to include Env. Network and link to Stanmore Country Park with semi-natural corridors with footpaths in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links for residents to Stanmore Country Park. Use more than the minimum open space provision to protect existing biodiversity and provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Very large size of site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows within and around site boundary. Plantation and natural woodland occupy central part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	Retain fine trees and woodland within site as features in open space within any development. Expand / link with existing woodland adjacent site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise close to the established industrial estate. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A linear site located in a rural setting to the east of Stanmore Industrial Estate and Stanmore Country Park, physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate and agricultural fields and the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration.</p> <p>The northern portion of the site has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. It may have potential for future safeguarding but some high landscape and visual impact, proximity to industrial estate, trees, potential archaeological and other ecological interest, known pluvial flood risk are considerations. Development would need to be restricted to land outside the 1,000 year surface flood risk zone.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Power supply and other utilities. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Links to Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is distant from the built form of Bridgnorth and due to its linear shape, poorly related to the built form of Stanmore Industrial Estate.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. Highway Comments - Direct Access to Highway Network?	(Comments on P61): If 66% of this site was housing this site could accommodate 1,943 homes. This site has good vehicular access potential, directly onto the A458 and A442. As part of a strategic settlement east of Bridgnorth Low Town this site lies the furthest south from the existing development and therefore has less sustainable transport potential.
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	
Highway Comments - Could the Development Occur Without Off-Site Works?	
Highway Comments - Are Envisaged Off-Site Works Achievable?	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
Ecology Comments Significant Constraints:	Large, complicated site from aerial photos. Much of site core and corridor of Environmental Network. CS17 Environmental Networks applies. Only very reduced numbers of housing possible as protection of Environmental Network would not be possible in open space provision. Suggest seek landscape advice. If GCN present then mitigation land will also reduce potential area for development. Part of Env. Network on site is plantation Ancient Woodland. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, reducing the remaining land available to development.
Ecology Comments Other Constraints:	EcIA required. Surveys for GCN (ponds close by and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. More than half of this lies within and immediately adjacent to the Env. Network corridor. CS17 Environmental Networks applies. Area possible for development will greatly depend on surveys but will be greatly reduced, perhaps a small amount of development on few arable areas.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links for residents. Use more than the minimum open space provision to protect existing biodiversity and provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site falls partially within, and has potential to effect the setting of, Quatford Conservation Area. Site includes former historic parkland of Stanmoregove (HER PRN 07549) and has potential to effect setting of the associated Grade II Listed Stanmore Hall (NHLE ref. 1367568). May also effect the setting of Grade II listed Quatford Castle (NHLE ref. 1374849). Site includes a prehistoric cropmark pit alignment (HER PRN 28775). Scatter of metal detectorist finds and very large size suggests there may be other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance and setting of CA; impacts on non-designated parkland and settings of LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site contains protected woodland at the north. Large swathe of north, central and southern parts of site are covered in mature woodland.
<i>Tree Comments Other Constraints:</i>	mature trees, groups of trees, woodland and hedgerow around and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development and seek to expand existing woodland.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise close to the established industrial estate. Any significant scale development causing additional traffic movements into town requires air quality assessment. Landfill within 250m that requires assessment for potential landfill gas migration and impact on the proposed site.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated. Contaminated land assessment and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. <i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P62 and P63): If 66% of these sites was developed as housing they could accommodate 1,519 homes. P62 has good vehicular access potential, directly onto the A442 at several location. The section of P63 which straddles the A458 can only be access via and existing field gate on the north west corner of the A458 / A442 roundabout. It is very unlikely that this junction could be remodelled to accommodate a new link providing access to this area given the topographical and existing development constraints. The remainder of P63 has good vehicular access potential, directly onto the A442 at a number of locations but the ground level difference may limit these.</p> <p>As strategic settlement south of Bridgnorth Low Town theses sites have a number of disadvantages. There linear nature will limit the potential to create a compact layout which maximises sustainable travel for local trips and their proximity to existing facilities will restrict sustainable trips to neighbouring facilities during the initial phases of construction.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Small sections of site are immediately adjacent to the Env. Network corridor. CS17 Environmental Networks applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If GCN present or priority habitats, mitigation land will need to be provided. Corridor link to be created using open space and green pedestrian routes between Env. Network in north west to that in south-east of the sites around the 50m contour.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed Grange Cottage (NHLE ref.1053948) and 4-5 Danesford (NHLE ref. 1295289). Large size of site and cluster of metal detectorist finds suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	belt of TPO woodland meets northern end of site.
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around and within the separate portions of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development and seek to expand existing woodland.
<i>Public Protection Comments Significant Constraints:</i>	Known noise close to the established industrial estate which causes complaint in the locality. Not considered acceptable to move more residents to the area.
<i>Public Protection Comments Other Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment. Landfill within 250m that requires assessment for potential landfill gas migration and impact on the proposed site.
<i>Public Protection Comments Management of Constraints:</i>	No residential in close proximity to industrial estate, increased noise attenuation through glazing and ventilation of and residential with line of sight to the industrial estate. AQ assessment likely to be required and mitigation stated. Contaminated land assessment and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. As the sites availability is currently unknown, the site is not considered suitable for allocation. Potential for future safeguarding but proximity to industrial estate, contamination, trees, potential archaeological and other ecological interest, known pluvial flood risk are considerations. In particular there are existing conflicts between noise generation by employment uses and local resident amenity concerns and due to concerns regarding residential amenity being compromised by existing employment uses. The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment, primarily due to poor access to existing facilities and services and for potential impacts on environmental and heritage assets. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Power supply and other utilities. Safeguarding of the environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Enhancement of Environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site it is located in Danesford close to the existing large industrial premises and residential development to the north west, but not well connected to the main built form of Bridgnorth. There are existing issues with the compatibility of employment and residential uses. The site is also not promoted.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	<b>8</b>
Ecology Comments Significant Constraints:	Site entirely within the Environmental Network and CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds close to site boundary and within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Site adjacent to the Env. network (Stanmore Country Park) and CS17 applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If priority habitats present (looks likely), mitigation land will need to be provided. Open space to be provided should be next to and linked by green corridors to Stanmore Country Park. Reduced development area.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site formally part of RAF Bridgnorth (HER PRN 29127) and formerly included part of Bridgnorth racecourse (HER PRN 32056).
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees, groups of trees and scrub across site. Woodland adjacent east, south and west boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from woodland and seek to retain significant internal trees within open space.
<i>Tree Comments Opportunities:</i>	Expand adjacent woodland in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	Industrial use abuts significant part of the site boundary. Placing residential here may restrict businesses on the industrial estate which is not considered acceptable.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site was formerly part of the RAF Stanmore site. Whilst the rest of the site was converted to an industrial estate, this component was allowed to naturalise. The site forms part of the gap between Stanmore Industrial Estate and The Hobbins (residential). It is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Country Park, agricultural fields and the Hermitage Ridge (and associated ancient woodland). The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken. The site forms part of an environmental network and may contain priority habitats. The site contains mature trees, groups of mature trees and scrubland. There is also woodland adjacent to the site's eastern, southern and western boundaries. The site forms part of the former RAF Bridgnorth and formerly included part of the Bridgnorth racecourse.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use. Conversely it is also close to existing residential properties at The Hobbins, as such any noise generating uses on the site will require due consideration. There is a foul sewer though site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Power supply and other utilities. Improvements to the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout. Substantial and effective boundary treatments. An effective buffer to The Hobbins and other residential properties.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Protection and enhancement of Stanmore Country Park. Green infrastructure links through the site. Acoustic design, layout, green infrastructure and appropriate building materials. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Allocate in part as an employment allocation to support the expansion of Stanmore Industrial Estate</p>
<p><b>Reasoning</b></p>	<p>The site is well related to Stanmore Industrial Estate, an existing employment area which is inset within the Green Belt. Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the site, it is considered appropriate to identify further land for the expansion of this site, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of dome land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint.</p> <p>The sites will form extensions of Stanmore Industrial Estate and as such will be accessed through the existing access (subject to necessary improvements).</p> <p>The site forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park.</p> <p>Design and layout of development will need to mitigate any noise and visual impact on nearby residential properties. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	4.6ha of employment land
<b>If proposed for Allocation Design Requirements:</b>	<p>The site represents an extension to the existing Stanmore Industrial Estate. Development will be for complementary employment uses (use classes B1, B2, B8 and appropriate sui generis uses) only.</p> <p>Access will be provided via the existing Stanmore Industrial Estate. Necessary improvements will be made to highways infrastructure, including the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. An effective buffer to The Hobbins and other residential properties is particularly important.</p> <p>Site design and layout will positively respond to the site's relationship with Stanmore Country Park and The Hobbins. Development should seek to provide green infrastructure links through the site, retain high quality trees and retain priority habitats on the site. Any lost trees should be offset within the sites buffer.</p> <p>Acoustic design, layout, green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the site.</p> <p>Compensatory provision to the Green Belt will be made through investment in the quality of Stanmore Country Park.</p>

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site lies in a rural setting to the south of Stanmore Country Park and a small group of dwellings at Russell Close. South of the site lies Stanmore Hall Touring Caravan Park. The site is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and the Hermitage Ridge (and associated ancient woodland). The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is also poorly connected to the existing development at Stanmore Industrial Estate and The Hobbins, being separated by the Country Park and more closely linked with Russell Close.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Whilst there natural environment considerations including TPO &amp; significant trees these are generally a manageable constraints. However the site is not as well connected to the existing development at Stanmore Industrial Estate and The Hobbins being separated by the Country Park and more closely linked with Russell Close.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Improved access /junction with A458. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Environmental network enhancement and formation of linkage to Stanmore Country Park. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes improvements of the existing estate road junction with the A454, including review of speed limit, will be funded by the development (linked with STC001 & STC002).
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Assuming any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions are funded by the adjacent developments.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	8
<i>Ecology Comments Significant Constraints:</i>	Existing country park and completely in the Environmental Network, largely woodland. CS17 Environmental Networks applies. Priority species present (invertebrates) which would require mitigation land.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for GCN (ponds close to site boundary and within 500m,) Dormice, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), Badgers, Bats, nesting birds, reptiles and invertebrates (priority spp present).

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance the whole country park.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site formally part of RAF Bridgnorth (HER PRN 29127), including site of the memorial monument, and formerly included part of Bridgnorth racecourse (HER PRN 32056).
<i>Heritage Comments Management of Constraints:</i>	RAF monument should be retained and given appropriate setting
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered by woodland
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating a noise source. Any significant scale development causing additional traffic movements into town requires air quality assessment. Potential con land from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated. Con land assessment likely to be necessary and remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site is an extensive Country Park located to the west of Stanmore Industrial Estate, forming part of the gap between the estate and the settlement of Bridgnorth. The site was formerly part of the RAF Stanmore site. The site is located in the Green Belt and is a Country Park with significant trees which forms part of the environmental network and has significant ecological value. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. Part of the site also forms a buffer between the Stanmore Industrial Estate and adjacent residential uses to the south.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Retention and enhancement of Stanmore Country Park  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is a well-valued Country Park and located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	<b>8</b>
Ecology Comments Significant Constraints:	None.
Ecology Comments Other Constraints:	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (unimproved grassland and other potential priority habitats need botanical survey to assess impacts), reptiles. Site adjacent to the Environment network (Stanmore Country Park) and CS17 applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/priority habitat on site. If priority habitats present, mitigation land will need to be provided. Open space to be provided should be linked by green corridors to Stanmore Country Park and the open space in the existing development THB002.
<i>Ecology Comments Opportunities:</i>	Use open space and green pedestrian links to provide biodiversity enhancements. Sandy soils in this area suitable for restoration of unimproved sandy grasslands, currently lost in agricultural areas - no topsoil and natural regeneration will result in low-maintenance, high biodiversity swards.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Formerly included part of Bridgnorth racecourse (HER PRN 32056) and site also included former Royal Observer Core observation post (HER PRN 32791). Much of site appears to have been extensively levelled ?during construction of Stanmore Camp.
<i>Heritage Comments Management of Constraints:</i>	Consider retaining and conserving ROC observation post.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedgerows around site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to west and south. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.

<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>This is an area of open space within the Hobbins residential development with significant trees and potential ecological value. It is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and the Hermitage Ridge (and associated ancient woodland). The size and capacity of the site would be insufficient to provide for the provision of local services in this location and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The site has grade 3 agricultural land quality. This is amongst the best and most versatile.</p> <p>Development of the site is also compromised by its amenity value and the role of open space will need to be taken into account.</p> <p>Site formally part of RAF Bridgnorth and formerly included part of Bridgnorth racecourse.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Waste water treatment capacity.</p> <p>A range of community services and infrastructure as part of a large scale planned mixed-use development.</p> <p>Separation distance and appropriate residential amenity protection measures.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Open space linkage to Stanmore Country Park</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is more closely associated with the built form of The Hobbins than Bridgnorth. It is some distance from the built form of Bridgnorth, separated physically and functionally by agricultural land and the Hermitage Ridge. The size and capacity of the site would be insufficient to provide for the provision of local services in this location and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Assessment of the site in combination with adjoining sites is summarised separately within this assessment.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>This site consists of a series of sites (P54 (part), P56 (part), P58a, STC002, STC005 and STC006) which were in combination consulted upon as a preferred site allocation within the Preferred Sites consultation in late 2018/early 2019), although the specific extent of the site is somewhat reduced from that previously identified as a preferred site allocation, to exclude areas of Stanmore Country Park.</p> <p>This site represents a very large site located to the East of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, opportunities for expansion of a very successful employment site, community facilities within a new local centre to support the new community and extensive green infrastructure. The components of the site generally have good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The provision of pedestrian and cycle links between the site and the existing built form of Bridgnorth will require very careful consideration due to the presence of the Hermitage Ridge and associated ancient woodland. The site also offers the potential to provide a park and ride on the site, which would provide a level of mitigation.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The Green Belt Assessment indicates that the parcels which cover the site: perform a weak contribution to purpose 2; a moderate (P54 and P58) and strong (P56 and P57) contribution against purpose 3; and makes no (P54, P57 and P58) and weak (P56) contribution against purpose 4.</p> <p>The Green Belt Review indicates that release of these parcels would have the following levels of harm to the Green Belt: moderate (P58a, STC002, STC005 and STC006), moderate-high (P56) and high (P54).</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is primarily located outside of identified source protection zones, although much of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, is located within Source Protection Zone 3. However, it is considered that this issue could be managed through appropriate design and construction of development.</p> <p>The majority of the site is located within a landscape parcel which has medium landscape and visual sensitivity to housing and employment. A very small portion of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site lies immediately adjacent to ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth. Design and layout will need to give these factors due consideration.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, although the entirety of STC002 is located within an environmental network. There are also wooded areas within the site and may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is close to sources of road and commercial noise and potential future noise from other commercial uses on the employment land proposed within the site promotion itself. However, it is considered that this can be managed through design and layout of the development and use of green infrastructure buffering.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A new local centre to provides retail and community uses.</p> <p>A new community centre.</p> <p>A park and ride.</p> <p>Primary school.</p> <p>Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth. This will need to positively respond to the presence of ancient woodland and the gradient between the site and the town.</p> <p>Necessary improvements to road infrastructure.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Significant open space and green infrastructure on the site.</p> <p>Improvements to Stanmore Country Park.</p> <p>SUDs and water treatment facilities.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>

<b>Recommendation</b>	Retain the majority of the site as Green Belt. Allocate two of the component sites (P58a and STC002) specifically for extensions to Stanmore Industrial Estate.
<b>Reasoning</b>	<p>The site adjoins ancient woodland along Hermitage Ridge. This ridge also creates physical and functional separation between the site and the built form of Bridgnorth. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site contains part of and parts of the site are in proximity of The Hermitage Scheduled Monument.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p><b>It is understood that this site has been superseded by BRD032 a Revised Stanmore Garden Village proposal. The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed 'Garden Village' proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (July 2021 Update), provided as part of the evidence base for the Local Plan Review.</b></p> <p>However, Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the Industrial Estate, it is considered appropriate to identify further land for its expansion, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of some land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint. Sites P58a and STC002 are well related to the built form of Stanmore Industrial Estate and as such represent opportunities for the expansion of the site. As extensions of Stanmore Industrial Estate they will be accessed through the existing access (subject to necessary improvements). Much of P58a is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint. STC002 forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park. A small portion of P58a has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact. Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>

<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	5%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low and Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Via Rough La / Collins Cl
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assumes vehicular access would not be via Pound La.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	21
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Bat potential in mature trees and also notable species recorded nearby that are likely to forage over this area given 'wide' character. Retain mature trees and hedges in landscaping as part of corridor. Northern portion is within Environmental Network and also identified as potentially priority habitat which would require survey between May and end of August.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Retain mature trees in field. Enhance and restore Env. Network to north and west in accordance with CS17 Environmental Networks and MD12. Extend the network to the south along the east boundary

<i>Ecology Comments Opportunities:</i>	Enhancement of the network to the east and south. Also greenspace provision should be accessible to existing housing to the west who currently don't have much Accessible Natural Greenspace. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates that eastern side of site previously formed part of the Dunge Colliery and associated coal workings (HER PRN 07285). N part of the site also formed part of the Broseley Tileries (HER PRN 04631) and is crossed by the former course of an early tramway (HER PRN 07287). Site therefore holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and trees to site boundary and trees and scrub internal to northern end of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land possible due to past mining operations and historic railway line crossing the site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation possible.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b>
<b>Reasoning</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b> This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>BRO007</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	6%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Using current field access / Bridleway
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. But suitable visibility and access road width may not be achieved via the current bridleway access onto Dark Lane without acquiring third party land.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	23
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Grassland has been identified as potentially of UK Priority status. Haycop Local Wildlife Site is adjacent and has significant fungi species and also Dingy Skipper (UK Priority Species). Both of which could also be found on this site.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Enhance and restore Env. Network surrounding most of site in accordance with CS17 Environmental Networks and MD12. Extend the network to the south along the east boundary

<i>Ecology Comments Opportunities:</i>	Suggest green/brown roofs as habitat for priority butterflies and moths and to reduce surface water run-off. Avoid topsoil on open space where possible. Use 'green hay' technique for seeding any grassland - ideally using hay from nearby Enhance woodland edge as part of open space requirement and buffer woodland and scrub with most enhancements being to the north east adjacent to the Wildlife Site. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located adjacent to former Clench Acre Mine (HER PRN 32987), so has some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + ?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by trees and continuous with wider network of woodland.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. <i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	21
<i>Ecology Comments Significant Constraints:</i>	Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	Much of site appears to be woodland, scrub or potential priority open habitat of some kind. Two ponds are present nearby. Environmental Network covers much of site.
<i>Ecology Comments Management of Constraints:</i>	Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Protected species mitigation and enhancement. Very likely to have reptiles on site in the open areas near paths. Buffers would be needed to the pond and the woodland areas leaving very little for development

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements in woodland and open habitat. Avoid topsoil on open space where possible. Suggest green/brown roofs and reduce surface water run-off. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Western side of site contains former mine workings (HER PRN 32861) and therefore hold archaeological interest
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered in trees and scrub and connects to adjoining and wider woodland network.
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination. Possible noise etc from factories to the south.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the north of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. The Neighbourhood Plan allocates this site for employment development. This Neighbourhood Plan also includes a housing allocation.</b>
<b>Reasoning</b>	<b>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</b> <b>This Neighbourhood Plan also includes a housing allocation.</b> The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>BRO011</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No

<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Given scale of development
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	14
<i>Ecology Comments Significant Constraints:</i>	Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	Much of site appears to be woodland / scrub and potentially priority habitat. Half the site is currently in the Environmental Network and the rest (which arguably should also be) is an area Tree Preservation Order. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. A pond is present to the west which would require survey for newts.
<i>Ecology Comments Management of Constraints:</i>	Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Protected species mitigation and enhancement. Buffers would be needed to the pond and the woodland areas leaving very little for development

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements in woodland and open habitat. Avoid topsoil on open space where possible. Suggest green/brown roofs and reduce surface water run-off. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Broseley Conservation Area and setting of the Ironbridge Gorge World Heritage Site. Former coal workings (HER PRN 31083) and a tramway (HER PRN 31082) present on site, so hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on character and appearance of CA and settings of WHS). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site is covered in coppice and other woodland, part of which is subject to a TPO. It connects to the woodland of Ironbridge Gorge
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available but mining shaft on site which could cause stability issues etc (outside my remit but worth noting).
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Relationship to the Black Country</b>	The site is located to the north of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. <b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	22
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Potential grassland interest. Entire area is corridor habitat between two core areas and the habitat is listed as nearly priority habitat. But it might be better. Some trees in the field and boundaries appear to be mature and could support bats.
<i>Ecology Comments Management of Constraints:</i>	Survey grassland between May and September. Damp area in next door Local Wildlife Site would need survey for potential as a breeding site for Great Crested Newts.

<i>Ecology Comments Opportunities:</i>	Ensure hedgehog friendly development that includes gaps in fence gravel boards, etc. Plan areas of open space that compliment the priority habitats to the west and south. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates the earthwork and below ground remains of early post-medieval coal workings (bell pits) are present across the site (HER PRN 04565), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site bordered by hedgerows and trees and connects to large block of woodland to the south
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Development stand-off to woodland to the south
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to connect to and extend woodland cover to the south.
<i>Public Protection Comments Significant Constraints:</i>	none
<i>Public Protection Comments Other Constraints:</i>	Possible mine shaft on site noted for your information.
<i>Public Protection Comments Management of Constraints:</i>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b>
<b>Reasoning</b>	<p><b>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</b></p> <p><b>This Neighbourhood Plan also includes a housing allocation.</b></p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>BRO029</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%

<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	N. Chapel Lane is unsuitable for the additional traffic that is likely to be generated by the development which may potential involve 90 homes.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The Chapel Lane / B4375 junction would need to be improved and third party land would be needed.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for habitats, GCN (in pond 80m to west ), Dormice (known records in general area), Badgers (known), Bats, nesting birds, vascular plants, reptiles.. Some Environmental Network crosses site and, with more survey, additional core / priority habitat or corridor could be identified.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision.

<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing. Better assess corridor and core environmental network, retain this and enhance where possible. Use 'Green Hay Strewing' technique as best practice for creation of grassland areas. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within and on the boundary of, and within the setting, of the Broseley Conservation Area. HER indicates the earthwork and below ground remains of early post-medieval coal workings (bell pits) are present across the site (HER PRN 04565), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact character and appearance on setting of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	numerous trees around and within site, particularly areas in the central and northern parts of the site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	None expected
<i>Public Protection Comments Management of Constraints:</i>	None likely
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good

<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. This site would be able to deliver improvements to Floyer Lane. But suitable site access improvements onto Benthall Lane might be difficult to achieve. Access onto Bridge Road could be achieved.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If the site access is on Bridge Road then check would need to be made at the Benthall Lane / Bridge Road junction to ensure it was suitable to carry the additional traffic generated by the 84 home on this development.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	15
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for habitats, GCN (in pond 20m to north), Badgers, Bats, nesting birds, vascular plants, reptiles.. Majority of site is in the Environmental Network and, with additional survey, additional core / priority habitat or corridor could be identified. Tree Preservation Orders on several roadside trees on or adjacent to this site. Likely to be key foraging site for bats and birds of prey like Owls and Kestrel. Anthills in earlier Street View indicates good quality grassland.
<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to in accordance with CS17 Environmental Networks and MD12. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision.

<i>Ecology Comments Opportunities:</i>	Grassland areas appear to have been better at some stage. Opportunities to restore these as part of any open space allocation exists. Green Hay Strewing should be used if this ever happens. Suggest green/brown roofs and reduce surface water run-off. Enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Position between two Local Wildlife Sites of similar habitat suggests lots of opportunities to enhance area. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Broseley Conservation Area. HER, LIDAR and historic OS maps indicates the earthwork and below ground remains of post-medieval coal workings are present across much the site (HER PRN 07284), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	limited tree and scrub cover around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Mine shafts and associated contamination likely. Potential noise from road.
<i>Public Protection Comments Management of Constraints:</i>	Remediation where necessary for contaminated land. Regulatory Services are not experts in stability aspects related with mine shafts and cannot comment other than to state that a stand off distance may be appropriate. Road noise could be mitigated through location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair

<i>Tree Comments Opportunities:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Mine shafts and associated contamination potential on site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation where necessary for contaminated land
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Relationship to the Black Country</b>	The site is located to the north-west of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b>
<b>Reasoning</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b> This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Pound Lane adjacent to site would need to be improved for traffic and pedestrians.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. Pound Lane leading to the B4373 and the junction with the B4373 would need to be improved and third party land would be needed. Y. If access can be achieved through the adjacent employment allocation directly onto the B4373.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Partly within Env. Network. Paddocks to east may be unimproved grassland. Surveys of tightly grazed grasslands are difficult and would require grass to be left to grow before survey. Area of scrub / woodland has interest, could support protected species (including Dormice) and should be in the Env. Network. Area of overgrown grassland to north of this may also have interest in own right and may support reptiles.
<i>Ecology Comments Management of Constraints:</i>	EclA required. Reduced numbers of housing as protection of Environmental Network unlikely to be fully possible in open space provision. Retain mature trees in field. Protect, enhance and restore Env. Network to in accordance with CS17 Environmental Networks and MD12.

<i>Ecology Comments Opportunities:</i>	Retain and improve hedges, hedgerow trees and woodland/ scrub. Grassland area could be improved with more sympathetic management as meadow. See also standard list of opportunities.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	HER indicates that eastern side of site previously formed part of The Dunge Brick and Tile Works (HER PRN 07237) and the associated Dunge Colliery and associated coal workings (HER PRN 07285), so site hold archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	boundary hedgerows and double internal hedgerow and copse of trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate central hedgerows and copse in open space and plant to connect to adjoining hedgerows.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for con land.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b>
<b>Reasoning</b>	<p><b>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</b></p> <p><b>This Neighbourhood Plan also includes a housing allocation.</b></p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<b>Site Assessment - Stage 3 Updated</b>

<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Existing speed limit on Coalport Road will need to be extended. Planning a shared access point with BRO040 could be considered if both sites progress.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The area is bisected by Environmental Network that follows the hedge and watercourse across the site. This water course flows into Corbett's Dingle Local Wildlife Site and Ancient Woodland which clearly has implications for drainage. Culverting of watercourses is rarely approved as part of Open Water Consents that would likely be required for this site. Mature in-field and boundary trees are present. The grassland at this site may be of interest.
<i>Ecology Comments Management of Constraints:</i>	EclA required. Survey grassland between May and September. Significant boundary trees are present which should, with hedgerows, be retained where possible. Water course should be built into any design as an open water feature and incorporated into SUDS.

<i>Ecology Comments Opportunities:</i>	In addition to the standard list of opportunities the water course could be enhanced with good design that doesn't rely on culverting. The Environmental Network should be enhanced.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Medium sized site, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees around site boundaries and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Seek to retain internal tree and hedgerow within open space within site
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contamination from off site sources. Potential road noise.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Broseley. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. <b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	All the woodland to the south west is listed as under a TPO. Reptile, badger, bats, nesting birds and even Dormice could be present. The small woodlands may also be of interest. While not listed on our maps the woodland is clearly either corridor or perhaps core habitat in the Environmental Network. The maps will be adjusted accordingly. A reduced number of houses may be required to allow for the network / core habitat and TPO.
Ecology Comments Management of Constraints:	EciA required. The woodland should be surveyed in Spring or early summer to ensure spring flowers are picked up. Reptile survey mats should be installed early in the year or late the previous year to allow reptiles to become used to them. A buffer should be included to the woodland.

<i>Ecology Comments Opportunities:</i>	In addition to the standard list of opportunities the woodland could be enhanced. The Environmental Network should be enhanced and woodland edge habitat promoted. If reptiles are found then ground features that can be used for hibernation and basking should be incorporated into the open space.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Site formed part of the Rock Tile Works (HER PRN 07242) and also contains mine workings (HER PRN 07283) , so holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on Outstanding Universal Value of WHS and character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Belt of TPO woodland occupies north-west to south-east side of site.
<i>Tree Comments Other Constraints:</i>	trees to north-east site boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees. Development stand-off from protected woodland.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contamination from historic land use on and in the vicinity of the site. Possible noise impact from industrial estate to the east.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be possible for contaminated land. Potential to mitigate noise by location of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor

Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.

<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Potential for Allocation?</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.
<b>Recommendation</b>	<b>A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations.</b>
<b>Reasoning</b>	<p><b>A Neighbourhood Plan is being prepared for Broseley. The Neighbourhood Plan allocates this site for employment development.</b></p> <p><b>This Neighbourhood Plan also includes a housing allocation.</b></p> <p>The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	N/A
<b>If proposed for Allocation Design Requirements:</b>	N/A

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>JKD004</b>
Coal Authority Reference Area?	No

Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	B4373
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	Y
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	
Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
Ecology Comments Significant Constraints:	If priority habitats are present then the site should not be developed. If priority habitats not present, boundary vegetation should be retained, enhanced and buffered, reducing developable area.
Ecology Comments Other Constraints:	The site forms an Env. Network corridor. The site may contain priority habitat - botanical survey required. If priority habitats are present then the site should not be developed. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.

<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located adjacent to the boundary, and within the setting, of the Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Historic editions of the OS map indicates that at least one mine shaft is present on the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on Outstanding Universal Value of WHS and character and appearance of CA; archaeological Desk Based Assessment + ?evaluation). High quality design for development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	abuts conservation area to the east.
<i>Tree Comments Other Constraints:</i>	open rough grassland site with scrubby trees and shrubs mostly around the perimeter. Adjoins extensive deciduous woodland to the south and east
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land due to past land use. Possible noise from road to west. Possible stability issues however this steps outside of my remit.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Broseley is some distance from a strategic corridor to the Black Country and linked to these corridors primarily by B-roads. The nearest railway stations to Broseley are at Telford and Shifnal. Both would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale and accessibility of Broseley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	A Neighbourhood Plan has been prepared for Broseley and was adopted as part of the Development Plan for Shropshire in December 2022. This Neighbourhood Plan includes housing and employment allocations. The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads. <i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	B4373
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Development accessed off B4373 Ironbridge Road, likely to be able to accommodate development, subject to achieving satisfactory access and potential improvements to ironbridge road.
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	y
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	No
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Yes - necessary improvements should be achievable
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	SC Ecology unlikely to support development on this site. The site forms an Environmental Network corridor, due to the presence of woodland and brook. CS17 Environmental Networks applies. Reduced numbers of housing would be required as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA and botanical survey required and surveys for badgers, bats, GCNs, water voles, otters, white-clawed crayfish, nesting birds and reptiles
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Protect, enhance and restore Env. Network in accordance with CS17and MD12

<i>Ecology Comments Opportunities:</i>	Not recommended for inclusion in allocated sites
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located within/adjoins Ironbridge Gorge World Heritage Site and Severn Gorge Conservation Area. Site contains mine workings (HER PRN 07283), so holds archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation; impact on Outstanding Universal Value of WHS and character and appearance of CA). High quality design for residential or employment development necessary to minimise any impacts on the setting of the CA and WHS.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site within/adjoins ironbridge / jackfield conservation area and world heritage site and is a natural extension of and buffer to it in terms of habitat and landscape.
<i>Tree Comments Other Constraints:</i>	extensive scrub and mature woodland covering north, east and south of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement
<i>Tree Comments Opportunities:</i>	To protect and extend woodland cover and integrate the development into the broader landscape through the sustainable use of existing landscape features. Plan for suitable development stand-off from woodland and links to new planting within the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Known noise source to east and north. Contaminated land and mining.
<i>Public Protection Comments Management of Constraints:</i>	Parts of the site may be unsuitable due to proximity to industrial noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north-east of Broseley at Jackfield. Broseley is located in eastern Shropshire, an area with a functional relationship to the Black Country. Landscape Considerations: (from the LVSS)	Medium-Low
Visual Impact Considerations: (from the LVSS)	Medium
Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Assumes access via Jubilee Drive. Netherton Lane also possible but no pedestrian provision and limited potential for improvement.
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	N
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development. Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Therefore subject to an assessment of Netherton Lane and implementation of any necessary improvements to the north of the site.
Highway Comments - Could the Development Occur Without Off-Site Works?	N
Highway Comments - Are Envisaged Off-Site Works Achievable?	See above
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
Ecology Comments Significant Constraints:	
Ecology Comments Other Constraints:	May require botanical survey. Requires EclA and surveys for GCNs (ponds within 500m), bats, dormice, badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church (NHLE ref. 1188722), together with GII Church House (NHLE ref. 1188730). Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs and CA; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Mature trees and hedgerows around and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme
<i>Tree Comments Opportunities:</i>	retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. New native woodland creation, as part of a planned network of natural habitats / accessible open space distributed throughout the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A Phase I Desk Study should be undertaken and submitted to support any application on the site. This should identify any potential contamination issues from historical map information and other sources. Highley is a past mining village and it is not unknown for there to be undocumented contamination in such sites.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<b>Strategic Considerations:</b>	<p>A very large site located to the west of Highley, the site adjoins the built form of the settlement to the north, but is separated in part to the east by another agricultural field.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Remain as open countryside.</p>

<p><b>Reasoning</b></p>	<p>The site is very large and forms much of the gap between the settlements of Highley and Netherton. The site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

<b>Site Assessment - Stage 3</b>	
<b>Site Reference:</b>	<b>HNN010</b>
Coal Authority Reference Area?	Yes
Mineral Safeguarding Area?	Yes
Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:	Yes

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	23
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	EclA required. Surveys for GCN ( ponds within 500m), Dormice (known records nearby), Badgers, Bats, nesting birds, vascular plants (possible species-rich semi-improved grassland needs botanical survey), reptiles.
Ecology Comments Management of Constraints:	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing to north and east of site. Link open space to existing hedgerow system.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located on boundary, and within the setting of, the Highley Conservation Area. HER indicates that there are archaeological earthworks of a former quarry may exist on the site (HER PRN 30178), so has some archaeological interest.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological desk based assessment + impact on the CA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees and hedges around boundaries and across site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site
<i>Public Protection Comments Significant Constraints:</i>	None
<i>Public Protection Comments Other Constraints:</i>	None
<i>Public Protection Comments Management of Constraints:</i>	Nothing required
<i>Public Protection Comments Opportunities:</i>	Good site
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is closely associated with the built form of Highley. Indeed there is built form to the north, east and south.</p> <p>Whilst it is considered that an access can be achieved (subject to any necessary land ownership agreements regarding the proposed access via 79 Redstone Drive), that traffic associated with the development can be supported at the access point and no off-site works are required. It is understood that there is concern locally about the capacity/constraints of Redstone Drive and the amenity impact resulting from additional usage on Redstone Drive.</p> <p>It is not considered that an access from Witley Gardens to the south of the site is achievable without third party land and this road significantly narrows before it reaches the site and approved development in the southern element of HNN010 would also restrict access. It is also not considered that the access point for this approved development could not serve development of the site.</p> <p>It is understood that the site performs a valuable local recreational use, as it is crossed by a number of paths.</p> <p>The site forms a green link into the built form of the settlement.</p> <p>The site is on the boundary and within the setting of the Highley Conservation Area and may have archaeological interest.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Link open space provision to the existing hedgerow system.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Remain as open countryside.</p>

<p><b>Reasoning</b></p>	<p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	21
Ecology Comments Significant Constraints:	None
Ecology Comments Other Constraints:	EclA required. Surveys for GCN ( ponds within 500m), Dormice (known records nearby), Badgers, Bats, nesting birds, reptiles. Included in corridor of Environmental Network more as a potential link between two better areas of habitat.
Ecology Comments Management of Constraints:	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries and within site Open space to link to hedges and woodland triangle to north.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements and access to greenspace for existing housing to west and south of site. Link open space to existing hedgerow system.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site potentially within the setting Grade II farm house Hazelwells (NHLE ref. 1053866.) No known archaeological interest but site is of a large size, so may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological Desk Based Assessment + evaluation & settings assessment)
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerow and two trees to southern boundary and mature TPO'd trees on opposite side of road to the south.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	enhance tree cover through landscape planting to northern side of site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Active farm to the north east. Due to stand off distance do not anticipate any issues.
<i>Public Protection Comments Management of Constraints:</i>	None required
<i>Public Protection Comments Opportunities:</i>	Good site
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the east of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<b>Strategic Considerations:</b>	<p>The site is adjacent to the built form of the settlement, with development to the sites west and south (including a site with Planning Permission for affordable housing).</p> <p>It is a relatively large site.</p> <p>A small part of the site is within an environmental network.</p> <p>The site may be within the setting of a listed building.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Link open space provision to the existing hedgerow system.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Yes</p>
<b>Recommendation</b>	<p>Proposed for allocation.</p>

<p><b>Reasoning</b></p>	<p>The site is well related to the built form of the settlement and existing allocated sites. It presents an opportunity to provide a mix of residential uses and some high quality open space. It is considered that through appropriate design and layout of development and incorporation of effective Green Infrastructure any impact on listed buildings or their settings can be minimised. Further, it is considered that the significant public benefits of meeting the housing needs of Highley and its hinterland would outweigh any harm to the significance of these listed buildings.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>100</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>The site should provide an appropriate residential mix, responding to local housing needs. It presents an opportunity for bungalows and an extra-care facility.</p> <p>The design and layout should respond to Highley’s character and landscape setting.</p> <p>Site design and layout will reflect and respect the site’s heritage and heritage assets within the wider area, including Grade II listed Hazelwell’s Farm House.</p> <p>Strong and significant natural site boundaries and green infrastructure corridors through the site will form an intrinsic component of this development. They will be planted with native species and be used to buffer and create appropriate settings for nearby heritage assets and built form.</p> <p>A pedestrian crossing of Bridgnorth Road should be provided at an appropriate location in proximity of the site. The public right of way through the site should be retained and enhanced.</p> <p>Open space provision should respond to local needs, provide biodiversity enhancements and be easily accessible for residents on the site and within the surrounding area.</p> <p>All hedgerows, tree lines and mature trees on the site should be retained.</p> <p>The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.</p>

<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Potential for mixed use windfall development.</p>

<p><b>Reasoning</b></p>	<p>Potential noise and odour associated with sewage works and commercial activity to the south. The mix of uses and their layout on the site would need to reflect the sites relationship with these alternative uses. Whilst the site performs poorly within Stage 2a Settlement Sustainability Appraisal, this is primarily associated with the sites access to services and facilities. The site performs fair within the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site is located within Highley's development boundary. It is closely associated with surrounding employment uses. As such mixed use employment and residential development may be appropriate on the site. If the site is developed, a mix of uses, including employment would ensure that the site complements surrounding uses whilst on-site open space and enhanced links into the centre of the town could increase access to services.</p> <p>The scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>

<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>A linear site located to the west of Highley. The site adjoins the built form to north and east. The site consists of part of HNN006.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Jubilee Drive leads onto Redstone Drive. It is understood that there is concern locally about the capacity/constraints of Redstone Drive and the amenity impact resulting from additional usage on Redstone Drive.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity and implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Remain as open countryside.</p>

<p><b>Reasoning</b></p>	<p>There is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>A linear site located to the west of Highley. The site adjoins the built form to north and east. The site consists of part of HNN006.</p> <p>The site could either be accessed via Netherton Lane, in combination with HNN023, via Jubilee Drive (subject to land ownership) which leads onto Redstone Drive, or in combination with HNN010 (or its variation), via Redstone Drive (subject to land ownership).</p> <p>Jubilee Drive leads onto Redstone Drive. It is understood that there is concern locally about the capacity/constraints of Redstone Drive and the amenity impact resulting from additional usage on Redstone Drive.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity and an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north of the site, such improvements would likely involve third party land.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Remain as open countryside.</p>

<p><b>Reasoning</b></p>	<p>It is not considered that the site is appropriate for development in isolation due to its connectivity with the town (it is separated from the built form by HNN010 (or its variation) and HNN023 respectively) and constraints to highway access.</p> <p>With regard to the site in combination with either HNN010 (or its variation) or HNN023, there is a preferable site available within the settlement. This site is considered to have strong relationship to the built form of the settlement; benefit from well defined site boundaries; and offer the opportunity to meet the needs of the community.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>

Percentage of the site identified on the EA Historic Flood Map:	0%
Percentage of the site within 20m of an historic flood event:	0%
Percentage of the site within 20m of a detailed river network:	2%
All or part of the site within a Source Protection Zone:	No
Landscape Considerations: (from the LVSS)	Medium-Low
Visual Impact Considerations: (from the LVSS)	Medium
Highway Comments - Direct Access to Highway Network?	Y
Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?	Assumes access via Jubilee Drive. Netherton Lane also possible but no pedestrian provision and limited potential for improvement and localised widening as site does not extend along whole section of Netherton Lane.
Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	N
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development. Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Therefore subject to an assessment of Netherton Lane and implementation of any necessary improvements to the north of the site.
Highway Comments - Could the Development Occur Without Off-Site Works?	N
Highway Comments - Are Envisaged Off-Site Works Achievable?	See above
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
Ecology Comments Significant Constraints:	
Ecology Comments Other Constraints:	May require botanical survey. Requires EclA and surveys for GCNs (ponds within 500m), bats, dormice, badgers, reptiles and nesting birds.
Ecology Comments Management of Constraints:	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
Ecology Comments Opportunities:	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.

<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church (NHLE ref. 1188722), together with GII Church House (NHLE ref. 1188730). Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs and CA; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Mature trees and hedgerows around and within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme
<i>Tree Comments Opportunities:</i>	retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. New native woodland creation, as part of a planned network of natural habitats / accessible open space distributed throughout the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise from the adjacent pen factory. Landfill in the area and gassing issues known to occur. A Phase I Desk Study should be undertaken and submitted to support any application on the site. This should identify any potential contamination issues from historical map information and other sources. Highley is a past mining village and it is not unknown for there to be undocumented contamination in such sites.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment BS4142 and mitigation. Contaminated land assessment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Highley. Highley is located in south-east Shropshire, an area with a functional relationship to the Black Country. Highley is linked to other settlements solely by B-roads with the nearest notable settlement being Bridgnorth around 4.3 miles to the north. From here, the A458 corridor provides links to the Black Country. The nearest railway station to Highley is in Kidderminster. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>A very large site located to the west of Highley, the site adjoins the built form of the settlement to the north, but is separated in part to the east by other agricultural fields. The site also adjoins built form to the south.</p> <p>The site could either be accessed via Jubilee Drive (subject to land ownership) or via Netherton Lane. Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. Any access via Netherton Lane would be subject to an appropriate assessment of its capacity an implementation of any necessary improvements to the north of the site. Given the length and character of the lane north and/or south-east of the site and the fact that the site does not extend along the whole section of Netherton Lane, such improvements would likely involve third party land.</p> <p>Site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Site would largely remove the spatial separation between the historic settlements of Highley and Netherton. Site may have archaeological interest.</p> <p>The site contains hedgerows and mature trees.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>Site investigation will be required due to historic coal mining/quarrying activities - stability and contamination.</p> <p>The site is some distance from strategic corridors linking to the Black Country and links to these corridors are primarily via B-roads.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale and accessibility of Highley means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Remain as open countryside.</p>

<p><b>Reasoning</b></p>	<p>The site is very large and forms much of the gap between the settlements of Highley and Netherton. The site lies adjacent to and within the setting of the Highley Conservation Area. Possible effects on the settings of Grade II* St Mary's Church and GII Church House.</p> <p>Given the scale of the site it is unlikely that an access via Jubilee Drive would have sufficient capacity to serve the development.</p> <p>Netherton Lane is very rural in character has no pedestrian provision and limited potential for improvement. <b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>MUW001</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations: (from the LVSS)</i>	Not Assessed
<i>Visual Impact Considerations: (from the LVSS)</i>	Not Assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20

<i>Ecology Comments</i> <i>Significant Constraints:</i>	None
<i>Ecology Comments</i> <i>Other Constraints:</i>	None
<i>Ecology Comments</i> <i>Management of Constraints:</i>	None
<i>Ecology Comments</i> <i>Opportunities:</i>	Landscaping with biodiversity value, especially adjacent to trees to northwest.
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site located close to the boundary, and within the setting of, the Much Wenlock Conservation Area and potentially within the setting of the Grade II listed 6 & 7 Smithfield Road (NHLE ref. 1261504) and other non-designated historic buildings. Also site of Much Wenlock's former Smithfield (HER PRN 05218)
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (setting assessment)
<i>Heritage Comments</i> <i>Opportunities:</i>	Good quality design could provide an enhancement over the existing commercial usage.
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Mature trees to north-west of site
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	landscaping to enhance internal landscape of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Potential for contaminated land from past land use. Possible noise impacts from the A4169 Smithfield Road.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation probable for con land. Layout and orientation likely to be able to remove noise concerns (have nearest houses set back from the Smithfield Road and fire station. Additionally glazing, ventilation and boundary treatment possible for noise if required.
<i>Public Protection Comments</i> <i>Opportunities:</i>	Reduced noise to nearby existing residential properties by removing commercial activities and providing more screening to existing rear gardens.

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located in the centre of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Brownfield site in an accessible location within the built form of the settlement. Much Wenlock's geographical position being fairly distant from the Black Country and eastern corridor make this site an inappropriate location to accommodate the Black Country's housing need. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Assess impact on flood risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	Yes
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Potential windfall site

<p><b>Reasoning</b></p>	<p>Accessible site within the body of the town which would lend itself well to redevelopment.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>n/a</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>n/a</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Cumulative impact of MUW010, 011, 013 & 014 (198 houses) on A458 / B4371 junction needs to be examined.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	14

<i>Ecology Comments</i> <i>Significant Constraints:</i>	Adjacent to new flood alleviation scheme. GCN and Dormouse mitigation likely to be required. Mitigation likely to reduce number of dwellings possible.
<i>Ecology Comments</i> <i>Other Constraints:</i>	EclA required. Surveys for GCN (in ponds adjacent ), Dormice (known records nearby), Badgers (known), Bats, nesting birds, vascular plants, reptiles. Partly within Env. Network (disused railway - need to retain green route through development (check with Outdoor Rec.) Retain mature trees and hedges in landscaping as part of corridor.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows on boundaries. Retain mature trees in field. Enhance and restore Env. Network to south-west and south-east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments</i> <i>Opportunities:</i>	Promote disused railway as access route. Suggest green/brown roofs and reduce surface water run-off. (Flood alleviation scheme adjacent). Avoid topsoil on open space where possible (promote calcareous grassland).
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site has potential to affect the setting of the non-designated small country house and associated farmstead (HER PRN 23069) and lodge of The Grange. Site is detached from built edge of the town so development (especially employment uses) likely to be incongruous with the semi-rural character of the immediate surroundings. Lidar data held by the HER suggests it contains some archaeological some archaeological earthworks and therefore has some potential
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (archaeological desk based assessment and ?evaluation + setting assessment)
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around and within site. Adjacent long, overgrown double hedgerow to the south-east.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	Use 20% canopy cover policy to plant woodland adjacent existing hedgerows
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Some quarrying to the northeast. Do not consider any contaminated land issues with this unless any landfilling has occurred. No evidence of filling from GIS layers. Possible noise along northern border of site from the road.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Gas protection should landfilling in quarry area would avert gassing issues. Set properties back from the road, orientation and layout of buildings, noise barriers (mounds and fencing) and glazing all available to mitigate against noise.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	The site is detached from the built form of the settlement outside and separated from the development boundary within the open countryside. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan upstream of flood attenuation pond. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Not known Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Countryside

<b>Reasoning</b>	<p>Whilst the site benefits from being above the flood attenuation pond and development would not represent a significant risk to flooding, it is detached from the built form of the settlement and separated from the development boundary and does not therefore compare favourably with other potential site options.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Ecology Comments</i> <i>Management of Constraints:</i>	Enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments</i> <i>Opportunities:</i>	Promote disused railway as access route. Suggest green/brown roofs and reduce surface water run-off. (Flood alleviation scheme adjacent)
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site previously crossed by Much Wenlock, Craven Arms & Coalbrookdale Railway (HER PRN 08447), although track bed now entirely removed.
<i>Heritage Comments</i> <i>Management of Constraints:</i>	
<i>Heritage Comments</i> <i>Opportunities:</i>	Good quality design could provide an enhancement over the existing commercial usage of the site at this gateway location to the town.
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around site and belt of trees across middle of site. Quality of the trees has a bearing on acceptability of development on arboricultural grounds.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	little opportunity for additional planting due to small size and irregular shape of site.
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Historic railway, contamination likely. Potential noise to northern façade therefore possible constraints. Existing depot to south and east may cause noise throughout day and night.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation probable for con land. Layout, orientation, glazing, ventilation and boundary treatment possible for noise. Noise assessment would be likely to consider impact of the Depot to the rear and full details of its permitted times of operation etc would be required.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Brownfield site within development boundary on edge of built up area, adjacent to existing employment uses and SAMDev employment allocation. Much Wenlock is located on the A458 corridor linking to the Black Country. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Highway access Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Green corridor route along disused railway Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	Yes
<b>Potential for Allocation?</b>	Yes
<b>Recommendation</b>	Windfall employment

<p><b>Reasoning</b></p>	<p>Natural extension to neighbouring employment uses in an accessible location. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>0.24Ha net</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>Subject to the establishment of an appropriate access, appropriate contamination remediation, ecological surveys and appropriate tree management</p>

<i>Tree Comments</i> <i>Opportunities:</i>	Use 20% canopy cover policy to connect belts of woodland with wooded school grounds north of the site, by planting across middle of the site.
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	A458 to the western boundary therefore noise may require control.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Layout, orientation of buildings and glazing, ventilation and boundary treatment where necessary to treat for noise.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-east of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	The site is well related to the built form of the settlement adjacent to the primary school to the South of the town with a frontage onto the A458. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Flood alleviation measures Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Opportunity to help deliver a fully functional flood alleviation scheme in combination with existing development at Hunter's Gate, together with a roundabout access to the site which will provide traffic calming on the southern approach to the town. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-east of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	The extension to the site is also likely to make the site more viable and facilitate the Highway infrastructure works required to make this development acceptable. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	
<b>Known Infrastructure Opportunities:</b>	
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	Yes
<b>Recommendation</b>	<b>Allocate as Preferred Site</b>

<p><b>Reasoning</b></p>	<p>The extension to the site is also likely to make the site more viable and facilitate the Highway infrastructure works required to make this development acceptable. There are considerable community benefits resulting from the increased residential capacity, most notably the implications for on and off site flood alleviation at Hunters Gate and Forester Avenue.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>120</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>A new roundabout access will be provided from the A458 into the site.</p> <p>Development will be required to deliver substantial community benefits both on and off site by way of flood alleviation. Specifically, development must demonstrate how properties currently at risk of flooding at Hunters Gate and Forester Avenue will be protected, as well as removing exceedance water from the existing surface water and foul sewer systems. Given the importance of this issue, development proposal will be required to show sufficient information on how these measures will be achieved in practice in order for planning permission to be granted. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the green Infrastructure / open space network. Flood and water management measures must not displace water elsewhere.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. This will include the reinstatement of a hedgerow along the sites southern boundary.</p> <p>Green infrastructure links will be provided through the site linking to the open space provision and the public right of way network beyond the site. High-quality trees and hedgerows will be retained.</p> <p>Acoustic design, layout, use of green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the A458.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Cumulative impact of MUW010, 011, 013 & 014 (198 houses) on A458 / B4371 junctions needs to be examined.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17

<i>Ecology Comments</i> <i>Significant Constraints:</i>	Immediately adjacent to priority calcareous grassland at NT car park site. Aerial photos indicate similar habitat possible. Priority habitat should be avoided if at all possible - i.e. we shouldn't allocated such a site. Presence of valuable grassland to be determined by an EclA including a detailed National Vegetation Classification level survey. If calcareous grassland is present avoidance unlikely to be possible and therefore application could be refused under MD12. Within Env. Network and so CS17 applies. Housing would reduce/damage the corridor.
<i>Ecology Comments</i> <i>Other Constraints:</i>	EclA required. Good quality semi-natural vegetation including grassland, scattered trees/shrubs and hedges within Environmental Network. Surveys for GCN (in ponds within 500m, at least one at c.110m), Dormice (known records nearby), Badgers, Bats, nesting birds, vascular plants, reptiles. Avoidance, mitigation and compensation measures would be required under MD12.
<i>Ecology Comments</i> <i>Management of Constraints:</i>	See previous boxes. Otherwise, retain mature trees and hedges in landscaping as part of corridor, any open space to be adjacent to, buffer and enhance Env. Network (Blakeway Hollow). Need to buffer existing priority habitat and so only a reduced number of houses would be possible.
<i>Ecology Comments</i> <i>Opportunities:</i>	If habitats are as expected only damage likely.
<i>Heritage Comments</i> <i>Significant Constraints:</i>	
<i>Heritage Comments</i> <i>Other Constraints:</i>	Site previously formed of an area of lime workings (HER PRN 04534) and contains related archaeological features. Therefore considered to hold archaeological interest.
<i>Heritage Comments</i> <i>Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ? Level 2 earthwork survey).
<i>Heritage Comments</i> <i>Opportunities:</i>	
<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Mature trees within and around site present potentially significant constraint to development
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	development stand-off required around existing significant trees - might restrict development to southern part of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Past quarried area to west may cause gassing or other issues. Noise from road to the south of the site.
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Remediation including gas protection possible. Noise could be mitigated by introducing distance, site location and orientation, glazing, noise barriers.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Small site located adjacent to but outside the development boundary, downstream of the flood attenuation pond to the west of the town is more distant from local facilities, services and infrastructure than some other site options. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. The site performs poorly within Stage 2a Settlement Sustainability Appraisal. However, it performs fair within the Stage 2a Black Country Contributions Sustainability Appraisal. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Assess impact on nearby SSSI, impact on Conservation area Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Countryside

<p><b>Reasoning</b></p>	<p>Distance from town services and potential for adverse implications for surface water flood risk management and does not therefore compare favourably with other potential site options.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>n/a</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>n/a</p>

<i>Tree Comments</i> <i>Significant Constraints:</i>	
<i>Tree Comments</i> <i>Other Constraints:</i>	Trees and hedges around but not within site.
<i>Tree Comments</i> <i>Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments</i> <i>Opportunities:</i>	landscaping to enhance canopy cover and internal landscape of site
<i>Public Protection Comments</i> <i>Significant Constraints:</i>	
<i>Public Protection Comments</i> <i>Other Constraints:</i>	Possible road noise to very east of the site
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	Glazing, orientation and location of dwellings.
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Large, sloping site to south of town adjacent to recently completed Callaughton Ash housing development. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Countryside

<b>Reasoning</b>	<p>Significantly larger area than required to deliver settlement guideline.  Visually prominent site.  Potential adverse implications for surface water flood risk management and does not therefore compare favourably with other potential site options.  This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Variation on MUW016 is more appropriately scaled to support the Town's growth requirements. Much Wenlock is located on the A458 corridor linking to the Black Country. This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Countryside

<b>Reasoning</b>	<p>Whilst the site is of a more appropriate scale than previously promoted to the Council, it is considered there remains more sustainable options to support the town's growth, including supporting community benefit.</p> <p>This site is of a sufficient scale that it could contribute to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, the scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications Required:</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	<p>n/a</p>
<b>If proposed for Allocation Design Requirements:</b>	<p>n/a</p>

<i>Public Protection Comments</i> <i>Other Constraints:</i>	
<i>Public Protection Comments</i> <i>Management of Constraints:</i>	
<i>Public Protection Comments</i> <i>Opportunities:</i>	

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-east of Much Wenlock. Much Wenlock is located in east Shropshire - an area with a functional relationship to the Black Country. Much Wenlock is located on the A458 corridor linking to the Black Country. The nearest railway stations to Much Wenlock are located in Telford and Shifnal. This would likely require some other form of transport to access.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Strategic Considerations:</b>	Located adjacent to but outside the development boundary, south of the existing Hunters gate development. Not in accordance with current policy in the Much Wenlock Neighbourhood Plan. Much Wenlock is located on the A458 corridor linking to the Black Country. The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country. Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Potential flood attenuation risk Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Potential to help address existing residual flood attenuation risk in existing built areas adjacent to the site. Potential opportunity to improve local environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Countryside

<p><b>Reasoning</b></p>	<p>Whilst development of the site could be acceptable in principle, it does not compare favourably with other potential site options.</p> <p>The scale of Much Wenlock means that the settlement would be unlikely to be considered appropriate to accommodate a substantial quantum of the proposed contribution to the unmet housing or employment needs of the Black Country.</p> <p>Furthermore, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution to the unmet housing or employment needs of the Black Country. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required:</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>n/a</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>n/a</p>

# Shropshire Local Plan

## Additional Sustainability Appraisal Report: Appendix 8

Updated Stage 3 Site Assessment:  
Shifnal Key Centre

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assuming small scale development
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	23
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	A watercourse adjacent to the eastern boundary forms an Env. Network corridor. Requires EclA and surveys for GCNs (ponds within 500m), otters, water voles and nesting birds. The watercourse will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site located wholly within Shifnal Conservation Area. Also located within the medieval core of Shifnal and may have high archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA; archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	conservation area. TPO tree adjacent
<i>Tree Comments Other Constraints:</i>	replanted trees along southern site boundary
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Limited opportunity for small scale tree planting to enhance urban tree cover.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Known to flood, major noise source from Jaspers.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Strategic Considerations:</b>	<p>Small, backland brownfield site comprising the rear car park of the operational Jaspers public house that is visible from the elevated rail line to the south of the site. The site is accessed from a significant highway access from Victoria Road which may provide access to a small residential development subject to highway visibility onto there highway. The site level drops significantly from the highway into the main part of the site leading to some river flooding on the eastern boundary and surface water flooding across the majority of the site in severe flood conditions with known flood events affecting the site. The site directly abuts the watercourse of the Wesley Brook with the eastern part of the site situated within the Green Infrastructure network along the Brook. The site would require detailed ecological assessment and protection of an adjacent Tree Protection Order but the size and constraints on the site provide limited opportunities for the provision of further Green Infrastructure. The site sits wholly within the Shifnal Conservation Area and is situated inside the medieval core of Shifnal. A Heritage Impact Assessment would be required to assess impacts on the character and appearance of the Conservation Area and to assess the need for detailed investigation of the archaeological potential of the site. Residential amenity on the site is expected to be adversely affected by the Jaspers public house if it continues to trade on the reduced site area following the loss of the car park however, it is expected that some rear car parking may need to be retained for servicing and mobility or emergency access to the public house. The situation of the site within the built form of the town and close to the retail core of the town around Bradford Street gives the site a Good sustainability rating .</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<b>Yes - subject to constraints particularly flood risk and noise</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Land within existing Shifnal development boundary</b>

<p><b>Reasoning</b></p>	<p>This small redevelopment opportunity could adversely affect the operation of the Jaspers public house and has some significant constraints for such a small site with few apparent opportunities to redress the effects on the developable area of the site. The assessment of the site requires further detailed investigation of the development potential of the land. The site lies within the development boundary, forms part of the built form of the town with direct access to the highway network. The detailed assessments may reveal the development potential of the site but the site is likely to have limited capacity for residential use.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

\*Green Belt Purposes  
(where applicable):

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Possible need to improve T-junction of Drayton Rd with B4379
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of woodland/Env. Network corridor.
<i>Ecology Comments Other Constraints:</i>	Site contains and is adjacent to Env. Network corridors. This will need to be retained and appropriately buffered. Requires botanical survey, ECLA and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a medium size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on belt of mature trees along road
<i>Tree Comments Other Constraints:</i>	mature trees / woodland to western end of site and abutting northern boundary along motorway
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	The most northern part of the site would require levels of mitigation in relation to road noise which may not be possible as evidenced by the development to the east which was not able to comply with noise conditions specified for the site. As a result no residential development is considered suitable in the site where garden areas would be exposed to road noise.
<i>Public Protection Comments Other Constraints:</i>	Air quality will be impacted by emissions from vehicles on the M54.
<i>Public Protection Comments Management of Constraints:</i>	Assessment will be necessary to consider the air quality concerns and relevant mitigation proposed where available. It is not considered that it is easy for noise to be mitigated without significant mitigation which must be proved could be achieved prior to any future application being considered.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the north of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This generally flat, smaller greenfield site (3.9ha) is situated on the northern edge of Shifnal adjacent to the embankment of the M54 motorway. The site also adjoins the B4379 Newport Road close to the under pass of the M54. The B4379 would require improvements to the T junction with Meadow Drive to provide vehicular access to the site. The enclosure of the site within the built form of the settlement reduces its landscape sensitivity whereas the larger parcel (east) has medium landscape and medium-high visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The trees and hedgerows should be retained or their removal will require compensatory planting in any design scheme. The mature trees to the north and the west are protected by a Tree Preservation Order. The site has no known heritage value but the scale and open character of the site suggest the need for a Heritage Assessment. The proximity to the M54 and B4379 indicate a potential noise nuisance within any development, requiring a design solution. The site has a Good sustainability rating because of the accessibility to many of Shifnal's recreational facilities which help to offset the potential effects of development on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shinfal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	Yes
<b>Recommendation</b>	<b>Include this previously safeguarded land within the development boundary and allocate for housing development</b>

<p><b>Reasoning</b></p>	<p>Site SHF013 has been safeguarded for future development for some time. The evidence of the developability of the site provides positive indications of the suitability and availability of the land although the site has environmental qualities worthy of protection. The site might be considered for a suitable housing scheme with a good quality contemporary design that would complete the built form of north Shifnal. This site is considered suitable for housing development and is currently being considered for exceptional housing development to meet the community's current need for affordable and low cost housing. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium-high) and visual (medium-high) impacts which are greater than for housing development.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>around 65 dwellings</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>Site to provide a broad range of housing types to meet local needs. The site to be accessed from Meadow Drive through existing gated access possibly requiring verge land to achieve the turning geometry, with stand off from existing residential units to protect their amenity. Consideration to be given to the need for off-site highway works at Newport Road / Meadow Drive / Haughton Road junction to address highway capacity, drainage and surface water flooding constraints at this principal junction. Green Infrastructure network to be enhanced to strengthen existing woodland and mature trees around site, provide SUDs drainage system through central area of site to exclude built development and protect site from surface water flooding, open space with equipped play space to be located on east of site with consideration of footpath link to existing developed areas of town to the east. Green Infrastructure to protect the existing corridors through the town and allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of the site and surrounding area and to investigate the archaeological potential of the site.</p> <p>Noise and air quality assessments required due to proximity to M54 corridor with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	This site is currently safeguarded for future development
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Onto A464
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Page 905 Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The western boundary is Env. Network corridor and is covered by a TPO. There is woodland on the site. There is a pond adjacent to the south-western boundary. GCNs are likely to be present. A buffer of at least 50m around the pond is likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes substantial unlisted historic building (?early C19) known as Beech House, which is considered to be a non-designated heritage asset. Any proposals which involve the demolition of this building would be resisted.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 building assessment + impact on its settings).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on mature trees on site
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the north creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 906 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
<b>Strategic Considerations:</b>	<p>This generally flat, small brownfield site (1.4ha) is situated on the south-eastern edge of Shifnal next to the current development by Redrow Homes. The site adjoins the A464 Wolverhampton Road offering vehicular access but requiring a new main road junction possibly shared with other sites, extension of the 30mph restricted zone, traffic calming measures and creation of a town gateway. The built character of the site reduces its landscape sensitivity whereas the larger parcel (east) has medium-low landscape and medium-high visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of known priority habitat including grassland and ponds within and surrounding the site may reduce the developable area to permit the restoration and enhancement of this habitat. The mature hedgerows and trees within and around the site should be retained especially those protected by a Tree Preservation Order (west boundary). The removal of trees and hedgerows will require compensatory planting in any design scheme. The site is a non-designated heritage asset due to the presence of Beech House, requiring a Heritage Assessment. The proximity to the A464 indicates a potential noise nuisance within any development, requiring a design solution. The site has a Good sustainability rating reflecting its brownfield character, accessibility to recreational facilities and services which help to offset the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	Yes
<b>Recommendation</b>	<b>Include this previously safeguarded land within the development boundary and allocate for housing development</b>

Reasoning	<p>Site SHF015 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land although the site has environmental qualities worthy of protection. Although the site is better suited to housing use, the buildings on the site are worthy of protection and have a productive use and the surrounding open land has some environmental value. The evidence for developing this small area of safeguarded land is not sufficient to justify specifically allocating this land for housing use but it might from a suitable windfall site subject to an appropriate development proposal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	around 65 dwellings with SHF029
If proposed for Allocation Design Requirements:	<p>Site SHF015 to be developed as a single scheme in conjunction with site SHF029 to provide a broad range of housing types to meet local needs. Development site excludes Beech House (non-designated heritage asset HER PRN 34751) with garden, curtilage building and frontage walling to A464. Beech House forms part of urban land and no longer safeguarded for future development. Consideration may be given to sympathetic restoration/conversion of house and curtilage buildings. Existing northern access to Beech House to be closed and sealed with existing gates retained. Beech House to be serviced from existing southern access. Highway junction to be situated at northern point on A454 frontage to provide safe junction with good visibility and appropriate measures to manage traffic speeds and highway safety. The development should provide access to the footway and cycling network along the A464 to improve access to local services using 'active travel' options to walk, 'wheel' or cycle to local services.</p> <p>The need to conserve Beech House, protect the setting from effects of development and to deliver a safe and visible highway junction to A464 may require removal of mature trees on A464 frontage with complementary planting within the site. Consideration to be given to internal highway layout within the site to make effective use of the developable land and to improve the accessibility of the dwellings to the main and secondary accesses to encourage 'active travel' options to reach local services. Development of site SHF029 to give consideration to secondary access to Park Lane through access strip from backland boundary of site. Secondary access to provide pedestrian and cycling access to Park Lane offering a potentially safer access to local services including the local primary school and with emergency vehicular access into the site only. Green Infrastructure network to be enhanced to strengthen existing woodland mature trees around site, provide SUDs drainage system along boundary to safeguarded land to exclude built development and protect site from surface water flooding, open space with equipped play space to be provided, allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of Beech House and the effect of development on the setting of the heritage asset and to investigate the archaeological potential of the site. Noise assessment required due to proximity to A464 with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	groups of mature trees to north eastern and western corners of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to road.
<i>Public Protection Comments Opportunities:</i>	Club currently on site if demolished and site fully developed for housing would remove a potential noise source from within proximity of existing housing creating a betterment to the local noise environment.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
<b>Strategic Considerations:</b>	<p>This generally flat, small brownfield site (0.4ha) is situated on the south-western edge of Shifnal adjacent to the current Green Belt boundary. The site adjoins the A464 Bridgnorth Road and has an existing vehicular access onto the A464. The built character of the site reduces its landscape sensitivity whereas the larger parcel (west) has medium landscape and medium visual sensitivities. The site has no known flood risk (Flood Zone 1) but a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment and Arboricultural Assessment to confirm the level of sensitivity to development. In particular, the site has mature trees to the north, east and west boundaries which should be accommodated into any potential design scheme for the site. The removal of any existing tree or hedgerow cover will require compensatory planting in any proposed development. The site has no known heritage value and is not considered to justify a heritage assessment although the site lies in the setting of adjacent listed buildings and the Shifnal Conservation Area. The proximity of the site to the A464 indicates a noise nuisance for any development, requiring a design solution but the demolition of the existing club-house would produce betterment in the local noise environment. The site has a Fair sustainability rating as a brownfield site with accessibility to local services but this does not entirely offset the distance to the services and the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Land within existing Shifnal development boundary</b>

<p><b>Reasoning</b></p>	<p>Site SHF016 is situated within the existing development boundary and forms part of the built form of the town. The site is already developed and has a productive use that contributes to the sense of community in the town. The site also has some environmental qualities worthy of protection. The scale of the site would not justify specifically allocating for housing development, but the situation and character of the site might facilitate its redevelopment as a windfall housing site subject to an appropriate development proposal. This land is not suited to employment development because the land is brownfield with greater development costs, close proximity to existing housing uses and the sensitivities to landscape (medium-high) and visual (medium-high) impacts being greater than for housing.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the site's size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High and High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	A4169 but not onto Park La
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF017S. Note this site fronts Park La to the south east but a highway connection at this point would not be acceptable.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject to an assessment of the impact on Innage Rd and Church St and associated junctions.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env. Network corridor (Wesley Brook).
<i>Ecology Comments Other Constraints:</i>	Northern section: The northern boundary forms and Env. Network corridor (due to the presence of a vegetated railway line). This corridor should be buffered and enhanced. Southern section: Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. Part of the north-western and south-western boundaries contain or are adjacent to Env. Network corridors and priority habitat (woodland) - these will also need to be appropriately buffered. There is a GCN breeding pond to the south of the site boundary. A buffer of at least 50m around the pond will be required, but given the number of known GCN breeding ponds in the area, a greater amount of mitigation land is likely to be required. Parts of the site are TPO'd. A PROW runs along the western boundary and a section of the southern boundary (by the pond). Requires botanical survey, ECLA and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147) and cluster of associated Grade II LBs. Site itself includes putative, but now largely discounted, site of Idsall (pre-1590 Shifnal - HER PRN 00757) and site of a 17th century mill pond. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO on group of trees around property on A464
<i>Tree Comments Other Constraints:</i>	belt of woodland to north of site along railway and group of trees in semi-natural habitat along watercourse in centre of site, adjoining woodland to the south
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the north and south and along watercourse
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A4169 runs through the site and is a noise source for consideration. Railway line runs along northern boundary of the site. Farm to the south east of the site with many barns which may produce noise, odour, dusts.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to roads, rail and farm.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This large, undulating greenfield site (36ha) is situated to the west of Shifnal adjoining the A4169 (Bridgnorth Road) to the south and north (comprising site P17b) of this road and extends south to the country road known as Park Lane which is severely constrained by current traffic usage. The land is located within the Green Belt with a moderate-high harm caused by its release. However, of the parcels considered in the Green Belt Review the release of SHF017 (excluding P17b) has a lower impact on the remaining Green Belt land. Accessibility to the B4169 from the south would also provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and an assessment of the impacts on Innage Road and Church Street. However, Park Lane would not provide a suitable secondary access. The site adjoins the built form of the town and the varying topography influences its landscape sensitivity to medium (west) and medium-low (south) however the land remains visible in the wider landscape with medium (west) and medium-high (south) visual sensitivities. The site has little flood risk (Flood Zone 1) except for the corridor of the Wesley Brook and has a nominal surface water flood risk in severe conditions however, the topography may expose the land to inundation which requires a detailed flood risk assessment. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to restore and enhance any habitat. The site has significant woodland around the railway, Wesley Brook and a Tree Protection Order to the south. This cover should be retained or any removal mitigated by compensatory planting in any design scheme. The site lies close to the Shifnal Conservation area and contains a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment given the scale of the land area. Proximity to the A4169 indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and safeguard for future development</b>

<p><b>Reasoning</b></p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF017 (excluding P17b) offers the potential for a large scale housing development with the benefit of access to the A4169 Bridgnorth Road in an area of medium landscape sensitivity. Although these factors must be balanced with the moderate-high visual sensitivity of SHF017 and the moderate-high harm to the Green Belt from releasing this land for development. The release of SHF017 is considered to be justified in order to deliver a new strategic link from the A4169 to the A464 in combination with sites P16, P15b(west) and SHF019 which have lower landscape sensitivities and lower harm from their release from the Green Belt. These land releases may also provide related highway improvements at Five Ways and Innage Road, a range of housing opportunities to meet local needs and improvements to the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop the site SHF017 (north) that lies to the north of Bridgnorth Road in combination with site P17a (Priorslee Road) north of the rail line however, releasing these land parcels would cause high harm to the Green Belt. This has the potential to contribute to the longer term provision of new housing and create a future opportunity for a one way gyratory system via the railway under-pass between these two land parcels and using the separate under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released to the south and west of the town. However, it is recommended that the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3</b>	
<b>Site Reference:</b>	<b>SHF018a</b>

<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the north
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 918 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This moderately sized, relatively flat greenfield site (5ha) is situated to the east of Shifnal adjoining Stanton Road and Lamledge Lane. The land is located within the Green Belt with a moderate-high harm caused by its release however, Green Belt parcels to the north would have a higher impact on the remaining Green Belt land. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018b would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and despite its enclosed nature has medium-high visual sensitivity for employment use. The site has no flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site with woodland at its southern boundary which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies further to the east along Stanton Road.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and safeguard for future development</b>

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018a offers the potential to safeguard land to support the long term growth of a large scale, new employment area to the east of Shifnal. This potential employment area would have the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The safeguarding of SHF018a (with site P14), in proximity to existing and newly allocated employment activities around Stanton Road / Lamledge Lane has the capacity to support the employment needs of the town in combination with sites SHF108b and SHF18d.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes

<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	0%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs moderately against purpose 2; moderately against purpose 3; and weakly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel where the release of the land would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purposes 2 and 3. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF018c.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The collective impact of the developments off Stanton Road will have an unacceptable impact on Aston Street and Curriers Lane and associated junctions which are already at or close to capacity.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and adjacent habitats.
<i>Ecology Comments Other Constraints:</i>	The site consist of Env. Network corridor. The habitats adjacent to the west may be priority habitat and will need to be appropriately buffered (they look like excellent quality GCN and reptile terrestrial habitat). There is a pond adjacent to, another 25m from and a third 70m from the western boundary. This ponds are likely to contain GCNs. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows within and around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 922 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, undulating greenfield site (14ha) is situated to the east of Shifnal adjoining Stanton Road (north) and Shifnal Industrial Estate (south). The land is located within the Green Belt with a moderate-high harm caused by its release however, Green Belt parcels to the north would have a higher impact on the remaining Green Belt land. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018b would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and despite its enclosed nature has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site and any development should introduce appropriate planting and retain existing cover where possible. The site has no known heritage value but the size of the site would require an archaeological appraisal as part of a Heritage Assessment. The site would have a Fair sustainability rating for employment use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for housing use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone encompassing Shifnal town and SHF018b accommodates the core zone in the north-east of site around the adjacent pumping station on Stanton Road. The north-east of the site would need to be kept clear of built development any potential contaminating uses and the drainage of the whole site would need to draw water away from the core zones of the SPZ.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>Yes</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and allocate for employment development alongside site SHF018d. These sites have a combined capacity of around 39 hectares (15.6 hectares net) (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</b>

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018b offers the potential for a large scale employment development to the east of Shifnal with the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The release of SHF018b in combination with SHF018d, in close proximity to the existing, poor quality employment area of Shifnal Industrial Estate would constitute a strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre. It has the capacity to redress the employment needs of the town and provide sufficient employment land to accommodate the entirety of the proposed 30ha contribution to the employment land need forecast to be arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>These land releases may also provide related highway improvements to Upton Lane which links south to the A464 Wolverhampton Road.</p> <p>The release of strategic employment land in this location would require significant investment in the infrastructure and development of the land indicating a need to secure a large land release at the outset of the Local Plan.</p> <p>This site would be complemented by the safeguarding of sites SHF018a and P14.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that all reasonable alternative options have been considered and that exceptional circumstances exist to justify the release of this land for employment, as documented within the Green Belt Exceptional Circumstances Statement and Green Belt Topic Papers.</p>
Further Main Modifications Required	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S15 to be amended to reflect the fact that 30ha of the employment land proposed on this site and SIF018d forms the entirety of the proposed contribution towards the unmet employment land needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>SHF018b and SHF18d have a combined capacity of around 39 hectares (15.6 hectares net) of employment land (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</p>
If proposed for Allocation Design Requirements:	<p>Site SHF018b will be developed as part of a larger employment area with SHF018d to provide serviced land for a broad range of Class B uses with a proportion of other employment generating uses and ancillary service uses to improve the sustainability of the employment area. Consideration should also be given to the relationship with the adjacent Shifnal Industrial Estate and the capacity for the existing development to create a secondary access and for the new development to release the pressure within the existing estate and to improve the character, quality and operation of the existing estate. The development should create a campus style, employment area on the edge of town to enclose the built form of development and any off site infrastructure within the Green and Blue Infrastructure networks. Infrastructure to include a strategic electricity/power supply and sustainable drainage system comprising multi-stage sustainable drainage and water treatment facilities, informed by a sustainable drainage strategy. This will serve to create strong boundaries to the employment area to separate the development from the Green Belt and the surrounding rural landscape. At the boundary with Shifnal Industrial Estate, a looser boundary treatment may be considered to support the operation of the functional relationship between these two employment areas. The development of this site will be in accordance with a vision, design code and masterplan prepared in consultation with the public and adopted as a Supplementary Planning Document by Shropshire Council. A construction management plan will be prepared to inform the development of the site. Strategic Transport Assessment and Transport evidence will be required to assess the effects of the development and the cumulative growth of Shifnal on the M54 Junction 3 and the A41/Stanton Road junction. The sites should be serviced from the A41/M54 Junction 3 along Stanton Road with traffic restrictions on commercial vehicle movements to the site using the A464 / Aston Street through Shifnal via the town centre. Sites SHF18b and SHF18d will share a principal access from Stanton Road to serve the employment area and Upton Lane to the viaduct bridge at the rail line will be improved and modified to form the primary distributor road serving the site. Upton Lane forms an historic thoroughfare and the road route or its historical presence will need to be conserved in the development. It is desirable for the viaduct bridge to remain open to pedestrian and cyclist movements. Significant and effective pedestrian and cycle links will be provided along Stanton Road, into and through the development to encourage safe and sustainable patterns of movement between the employment area and the town.</p> <p>Appropriate public transport links should be provided linking to parking facilities on the site to support wider use including the possibility for electric vehicle charging points. The potential to operate a dedicated Park and Ride service should also be investigated. Natural environment assets in proximity to the site and any priority habitats will be safeguarded and buffered. Site design and layout will respect any local heritage assets and the potential for archaeological deposits which will be recorded. Green infrastructure will protect the settings for any identified heritage assets. Historic field patterns and hedgerows will be retained by Green Infrastructure within the grain of the development. Any removal of trees or hedgerows will be replaced as part of the structural planting for the employment area.</p>

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 926 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This very large, elevated greenfield site (80ha) is situated to the north-east of Shifnal adjoining Stanton Road (south) and Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018c would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity which may be difficult to achieve. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has no flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site with woodland at its southern boundary which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies further to the east along Stanton Road.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<b>Reasoning</b>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF018a would extend the settlement well beyond its current built form and layout and would have significant impacts on the town's setting and its infrastructure particularly its highway network whilst potentially compromising the open character and environmental values of SHF018a.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications Required</b>	<p style="text-align: center;">No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires Ecla and surveys for bats (in trees), GCNs (ponds within 500m), badgers and nesting birds. Most of the boundaries are adjacent to Env. Network corridors. The hedgerows should be retained and buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Poor relationship with existing built form of settlement. No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological desk based assessment + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and scattered trees within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Seek to link to / expand offsite woodland to the east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible road noise to west and north and rail noise to south. Also possible noise from industrial uses to southwest.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Suggest stay away from southwest corner to increase separation to existing industrial/commercial.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, undulating greenfield site (24ha) is situated to the east of Shifnal adjoining Stanton Road (north) and close to Shifnal Industrial Estate (south). The land is located within the Green Belt with a high harm caused by its release however, Green Belt parcels to the west which have a relationship with SHF018b would have a lower impact. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018d would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and its open aspect has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires Ecological Assessment and Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site and any development should introduce appropriate planting and retain existing cover where possible. The site has no known heritage value but the size of the site would require an archaeological appraisal through a Heritage Assessment. The site would have limited accessibility to Shifnal's facilities to redress the environmental values of the site. The site would have a Fair sustainability rating for employment use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for housing use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies to the west along Stanton Road.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>Yes</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and allocate for employment development alongside site SHF018b. These sites have a combined capacity of around 39 hectares (15.6 hectares net) (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</b>

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF018d offers the potential for a large scale employment development to the east of Shifnal with the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The release of SHF018d in combination with SHF018b, in close proximity to the existing, poor quality employment area of Shifnal Industrial Estate would constitute a strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre. It has the capacity to redress the employment needs of the town and provide sufficient employment land to accommodate the entirety of the proposed 30ha contribution to the employment land need forecast to be arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>These land releases may also provide related highway improvements to Upton Lane which links south to the A464 Wolverhampton Road.</p> <p>The release of strategic employment land in this location would require significant investment in the infrastructure and development of the land indicating a need to secure a large land release at the outset of the Local Plan.</p> <p>This site would be complemented by the safeguarding of sites SHF018a and P14.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that all reasonable alternative options have been considered and that exceptional circumstances exist to justify the release of this land for employment, as documented within the Green Belt Exceptional Circumstances Statement and Green Belt Topic Papers.</p>
Further Main Modifications Required	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S15 to be amended to reflect the fact that 30ha of the employment land proposed on this site and SHF018d forms the entirety of the proposed contribution towards the unmet employment land needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>SHF018b and SHF18d have a combined capacity of around 39 hectares (15.6 hectares net) of employment land (30 hectares of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country).</p>
If proposed for Allocation Design Requirements:	<p>Site SHF018b will be developed as part of a larger employment area with SHF018d to provide serviced land for a broad range of Class B uses with a proportion of other employment generating uses and ancillary service uses to improve the sustainability of the employment area. Consideration should also be given to the relationship with the adjacent Shifnal Industrial Estate and the capacity for the existing development to create a secondary access and for the new development to release the pressure within the existing estate and to improve the character, quality and operation of the existing estate. The development should create a campus style, employment area on the edge of town to enclose the built form of development and any off site infrastructure within the Green and Blue Infrastructure networks. Infrastructure to include a strategic electricity/power supply and sustainable drainage system comprising multi-stage sustainable drainage and water treatment facilities, informed by a sustainable drainage strategy. This will serve to create strong boundaries to the employment area to separate the development from the Green Belt and the surrounding rural landscape. At the boundary with Shifnal Industrial Estate, a looser boundary treatment may be considered to support the operation of the functional relationship between these two employment areas. The development of this site will be in accordance with a vision, design code and masterplan prepared in consultation with the public and adopted as a Supplementary Planning Document by Shropshire Council. A construction management plan will be prepared to inform the development of the site. Strategic Transport Assessment and Transport evidence will be required to assess the effects of the development and the cumulative growth of Shifnal on the M54 Junction 3 and the A41/Stanton Road junction. The sites should be serviced from the A41/M54 Junction 3 along Stanton Road with traffic restrictions on commercial vehicle movements to the site using the A464 / Aston Street through Shifnal via the town centre. Sites SHF18b and SHF18d will share a principal access from Stanton Road to serve the employment area and Upton Lane to the viaduct bridge at the rail line will be improved and modified to form the primary distributor road serving the site. Upton Lane forms an historic thoroughfare and the road route or its historical presence will need to be conserved in the development. It is desirable for the viaduct bridge to remain open to pedestrian and cyclist movements. Significant and effective pedestrian and cycle links will be provided along Stanton Road, into and through the development to encourage safe and sustainable patterns of movement between the employment area and the town.</p> <p>Appropriate public transport links should be provided linking to parking facilities on the site to support wider use including the possibility for electric vehicle charging points. The potential to operate a dedicated Park and Ride service should also be investigated. Natural environment assets in proximity to the site and any priority habitats will be safeguarded and buffered. Site design and layout will respect any local heritage assets and the potential for archaeological deposits which will be recorded. Green infrastructure will protect the settings for any identified heritage assets. Historic field patterns and hedgerows will be retained by Green Infrastructure within the grain of the development. Any removal of trees or hedgerows will be replaced as part of the structural planting for the employment area.</p>

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

\*Green Belt Purposes

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. However, SHF019 is an identified sub-parcel which would have a moderate level of harm if released from the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Onto A464
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs.
<i>Ecology Comments Other Constraints:</i>	There are ponds adjacent to the north-eastern boundary - one is a known GCN breeding pond and the other is likely to contain GCNs. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed house known as The Terrace (NHLE ref. 1053636). Site also includes a former brickworks (HER PRN 01825). Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature tree within site and hedgerows to the boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover on the site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A464 to the north boundary of the site. Significant historic pond noted on site now filled in potentially causing a contaminated land issue.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, gently sloping greenfield site (10ha) is situated to the south of Shifnal adjoining the A464 Wolverhampton Road. This site has the potential for an appropriate highway junction with signage and traffic calming to form a new gateway to Shifnal particularly marked by an extension of the speed restricted zone. However, SHF019 on its own has only limited potential because it does not form a secondary frontage with Park Lane to the south. A new gateway at SHF019 would have the potential along with site P15b(west) to provide the highway entry point into the larger area of safeguarded land south and west of the town identified in site SHF034 which is proposed to be released from the Green Belt and safeguarded for an extension to Shifnal to meet the future development needs of the town. The land around SHF019 is currently located within the Green Belt and the release of land would have a moderate-high harm to the Green Belt. However, SHF019 would have a lower, moderate harm due to its relative position adjacent to the ridgeline that lies to the south of the site and separates the land from the wider Green Belt. The release of this land with the collection of sites in SHF034 to the south and west of Shifnal would facilitate the provision of a strategic highway link from the A464 (south) to the A4169 (south west) to reduce congestion on the highway network through the town and locally on the constrained Park Lane as part of a significant urban extension to meet Shifnal's future development needs beyond 2038. SHF019 is close to the built form of the town with the adjacent safeguarded sites SHF015 and SHF029 now proposed for residential development. The varying topography influences its landscape sensitivity to medium-low but the land remains visible with medium-high sensitivity. The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature field trees and boundary hedgerows which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development and evidence of an infilled historical pond may suggest some ground contamination. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and safeguard for future development</b>

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF019 has the potential to provide an access to the A464 (south) and contribute to a large scale housing development with sites P15b(west), SHF017 (excluding P17b) and P16. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country lane at Park Lane. SHF019 has the benefit of having medium-low landscape sensitivity and only moderate harm to the Green Belt from its release for development. Although these factors must be balanced with the moderate-high visual sensitivity of SHF019 and the moderate-high harm to the Green Belt from the release of sites P16 and SHF017. The release of SHF019 is considered to be justified in order to deliver the new strategic link from the A4169 to the A464 in combination with sites P15b(west), P16 and SHF017, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site P17b north of the A4169 Bridgnorth Road. This will further contribute to the long term provision of new housing and create a future opportunity for a one way gyratory system via a railway under-pass to link to the A464 (west) in combination with the sister under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released as site SHF034 to the south and west of the town. To complement these proposals, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

<i>Public Protection Comments Other Constraints:</i>	A464 to the north boundary of the site. Significant historic pond noted on site now filled in potentially causing a contaminated land issue.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 938 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This extended greenfield site comprises SHF019 (10ha) which is a gently sloping greenfield site that runs into the western portion of site P15b of similar character. These combined sites provide an extended development opportunity comprising SHF019 to the north fronting the A464 Wolverhampton Road and site P15b(west) to the south fronting Park Lane. The two sites together offer the potential for an appropriate highway junction with signage and traffic calming to form a new gateway to Shifnal particularly marked by an extension of the speed restricted zone. This new gateway would provide the highway entry point into the larger area of safeguarded land south and west of the town proposed for a future extension to Shifnal to meet the future development needs of the town. The addition of site P15b(west) to site SHF019 to form SHF019VAR would enable a new highway to pass from the A464 to Park Lane to connect with the extended land mass identified as site SHF034. The two sites combined in SHF019VAR (SHF019 and P15bwest) are currently located within the Green Belt where the release of land in this locality would have a moderate-high harm to the Green Belt. SHF019VAR would have a lower, moderate harm due to the relative position of these adjacent sites behind the ridgeline that lies to the south of site SHF019VAR. The release of SHF019VAR as part of SHF034 combining parcels to the south and west of Shifnal would facilitate the provision of a strategic highway link from the A464 (south) to the A4169 (south-west). This would help to reduce congestion on the highway network through the town and locally on the constrained Park Lane as part of a significant urban extension to meet Shifnal's future development needs beyond 2038. The release of SHF019VAR with other parcels to the west would particularly reduce traffic impacts on the constrained Park Lane that accommodates one of the primary schools serving Shifnal. SHF019VAR is close to the built form of the town with the adjacent safeguarded sites SHF015 and SHF029 now proposed for residential development. The varying topography in this area of Shifnal influences its landscape sensitivity to medium-low but the land remains visible with medium-high sensitivity. The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Green Infrastructure network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature field trees and boundary hedgerows which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of a number of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development and evidence of an infilled historical pond may suggest some ground contamination. The site has a Fair sustainability rating due to the accessibility to some of Shifnal's facilities but the larger distance to the town centre and the relative environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove this extended area of land from Green Belt and safeguard for future development</b>

<p><b>Reasoning</b></p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. SHF019VAR has the potential to provide an access to the A464 (south) and contribute to a large scale housing development with sites P15b(west), SHF017 (excluding P17b) and P16. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country lane at Park Lane. SHF019VAR has the benefit of having medium-low landscape sensitivity and only moderate harm to the Green Belt from its release for development. Although these factors must be balanced with the moderate-high visual sensitivity of SHF019VAR and the moderate-high harm to the Green Belt from the release of sites P16 and SHF017. The release of SHF019VAR is considered to be justified in order to deliver a new strategic link from the A4169 to the A464 in combination with sites P15b(west), P16 and SHF017, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site SHF017 (north) which lies to the north of the A4169 Bridgnorth Road. This will further contribute to the long term provision of new housing and create a future opportunity for a one way gyratory system via a railway under-pass to link to the A464 (west) in combination with the sister under-pass on Innage Road. These land parcel may accommodate employment development within the broad range of land parcels that may be released as site SHF034 to the south and west of the town. To complement these proposals, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to this group of sites.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Strategic Considerations:</b>	<p>Site SHF021 forms a small rectangular paddock adjacent to an area of mixed residential and employment allocations. The development of the allocated land will extend the built form of the town to join with the peripheral developments of the Shifnal Hillcrest School and the existing Shifnal Industrial Estate. Site SHF021 has a large frontage to Lamledge Lane with an existing gated field entrance and would require an appropriate highway junction and provision of a footway to link to the existing footway network to the north where Lamledge Lane forms a junction with Aston Road. The site has no known flood risks either from watercourses or surface water runoff. The distance from the current built form of the town also suggests limited heritage value but as part of the larger land parcels the archaeological potential of the site may need to be investigated. The site does lie over a Source Protection Zone encompassing the east of Shifnal but SHF021 is some distance from the core zone located on Stanton Road to the north. The site would require detailed ecological assessment and protection of the trees and hedgerows on the eastern boundary. The need to protect trees and hedgerows and to enhance the Green Infrastructure network in this part of town would constrain the site capacity particularly in the east of the site. Noise assessment is required due to proximity to the surrounding employment uses and the commercial traffic using Lamledge Lane with appropriate mitigation measures to be provided in the layout, design, materials and landscaping of the built development to provide satisfactory standards of residential amenity. The site has a fair sustainability rating due to accessibility to some of Shifnal's facilities which mitigates for the potential effects of the environmental values of the site. The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Land within existing Shifnal development boundary</b>

<p><b>Reasoning</b></p>	<p>This small development opportunity will remain as a pocket of agricultural land on the edge of an extensive area of mixed use development extending the built form of the town to the east. The site has the potential to complete the pattern of development in this location, to help meet the housing needs of the town and to provide new housing close to the existing and proposed new employment areas serving Shifnal. The development potential of the land requires further detailed assessment but the land lies within the development boundary, will soon form a stronger element of the built form of the town with direct access to the highway network and the capacity to join with the footway network. The detailed assessments may reveal the development potential of the site but the site is likely to have limited capacity for residential use due to its size and environmental qualities around the eastern boundary.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>

<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Strategic Considerations:</b>	<p>This smaller, relatively flat greenfield site (1.7ha) is situated on the south-eastern edge of Shifnal adjoining the A464 Wolverhampton Road. This site offers the potential for a suitable highway junction onto the A464 that might be shared with adjoining sites and to provide for an extension of the speed restricted zone and traffic calming. The site adjoins the built form of the town and is currently safeguarded for development and so, has no direct effect on the Green Belt. The land comprises a relatively flat area of land used for grazing which influences its landscape sensitivity (medium-low) but the land has an open aspect with a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature trees and hedgerows to the south and east boundaries and mature woodland to the north which should be retained or any removal mitigated by compensatory planting. Proximity to the A464 indicates a need for a noise assessment and mitigation as part of the design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>Yes</b>
<b>Recommendation</b>	<b>Include this previously safeguarded land within the development boundary and allocate for housing development</b>

<p><b>Reasoning</b></p>	<p>Site SHF022 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site has environmental qualities worthy of protection, the land does not form part of the Green Belt, now lies on the built edge of the town and was previously indicated as land suitable for future development. The woodland known as Revell's Rough lies between this site and further safeguarded land to the north and presents a development challenge to bring the land forward and to incorporate the woodland into the development scheme. The site is better suited to housing use and lies in an area currently preferred by the housing market with significant existing investment in infrastructure to support further development. The evidence for developing this smaller area of safeguarded land is sufficient to justify specifically allocating this land for housing use to contribute to the residual requirement for housing in Shifnal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>around 100 dwellings with SHF023 part</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>These two sites SHF022 and SHF023 (south) should ideally be developed together, or the two development sites should have inter-related development schemes. The two sites require a suitable joint highway access to serve both sites and inter-related drainage solutions that remediate for any surface water issues on SHF023. The two sites both include the significant wooded area of Revell's Rough which must be appropriately managed within the developments but should address the physical separation of these sites from the further safeguarded land to the north. Other relevant supporting studies should be undertaken particularly transport assessments, ecology, tree and hedgerow surveys, flood risk and drainage with their recommendations clearly reflected in the proposed development scheme. Careful consideration will need to be given to the creation of an effective urban edge to the settlement and the strengthening of the Green Belt boundary adjoining site SHF023.</p>

<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464. This site (420 homes) should not have highway (vehicular) access onto Lamledge Land unless major improvements can be delivered along its whole length and along Upton Lane.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and woodland/Env. Network. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site consists of Env. Network corridor. The site may contain priority grassland and woodland habitats - botanical survey required. If priority habitats are present then the site should not be developed. There are GCN breeding ponds on the site. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. This site looks like it contains some excellent GCN and reptile terrestrial habitat. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. The woodland and hedgerows will need to be appropriately buffered.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site previously included areas of ridge and furrow (HER PRN 21024) but EA Lidar data indicates these are now ploughed out. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	block of mature woodland across centre of site and groups of trees around existing development in northern end of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Opportunity to create larger area of publicly accessible woodland, around existing block of woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A464 to south of the site and railway line to the north creating noise sources. To north of rail is an industrial area also creating potential noise, dust, odour etc.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and rail.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 950 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Strategic Considerations:</b>	<p>This larger, relatively flat greenfield site (14ha) is situated on the south-eastern edge of Shifnal adjoining the A464 Wolverhampton Road. The site is separated into two discrete land parcels situated to the north and south of the Revell's Rough woodland. The northern parcel is relatively isolated being served by the Lamledge via a restricted road bridge over the railway and comprising a relatively tranquil area of land close to the town. The southern parcel sits on the A464 frontage and mirrors the size and situation of adjoining site SHF022. This southern area of the site offers the potential for a suitable highway junction onto the A464 that might be shared with adjoining sites and to provide for an extension of the speed restricted zone and traffic calming. The site is close to the built form of the town and is currently safeguarded for development and so, has no direct effect on the Green Belt. The land southern area comprises a relatively flat area of land which influences its landscape sensitivity (medium-low) but the land has an open aspect to the west and east with a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site has mature trees and hedgerows to the north boundaries and the mature woodland of Revell's Rough which should be retained or any removal mitigated by compensatory planting. Proximity to the A464 to the south indicates a potential noise nuisance requiring a design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north. The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>

<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<b>Yes but only the southern portion of the larger site</b>
<b>Potential for Allocation?</b>	<b>Yes but only the southern portion of the larger site</b>
<b>Recommendation</b>	<p><b>Include the previously safeguarded land fronting the A464 up to and including Revells Rough within the development boundary and allocate for housing development</b></p> <p><b>The land north of Revells Rough to remain outside the development boundary and be safeguarded for future development</b></p>

<p><b>Reasoning</b></p>	<p>Site SHF023 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site has environmental qualities worthy of protection, the land does not form part of the Green Belt, now lies close to the built edge of the town and was previously indicated as land suitable for future development. The woodland known as Revell's Rough separates this site into two discrete areas with further safeguarded land to the north. Revell's Rough therefore presents a development challenge to bring the land forward and to incorporate the woodland into the development scheme in a manner that would permit the land to the north to be made available for development. The area of the site on the A464 frontage is suited to housing use and lies in an area currently preferred by the housing market with significant existing investment in infrastructure to support further development. The evidence for developing this smaller area of safeguarded land on the A464 frontage is sufficient to justify specifically allocating this land for housing use to contribute to the residual requirement for housing in Shifnal. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>around 100 dwellings with SHF022</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>These two sites SHF022 and SHF023 (south) should ideally be developed together, or the two development sites should have inter-related development schemes. The two sites require a suitable joint highway access to serve both sites and inter-related drainage solutions that remediate for surface water issues on SHF023. The two sites both include the significant wooded area of Revell's Rough which must be appropriately managed within the developments but should address the physical separation of these sites from the further safeguarded land to the north. Other relevant supporting studies should be undertaken particularly transport assessments, ecology, tree and hedgerow surveys, flood risk and drainage with their recommendations clearly reflected in the proposed development scheme. Careful consideration will need to be given to the creation of an effective urban edge to the settlement and the strengthening of the Green Belt boundary adjoining site SHF023.</p>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
<b>Strategic Considerations:</b>	<p>This brownfield site is currently in a productive use as a retail vehicular sales places and repair workshop in the retail core of the town with direct access to the highway network from a service road on the frontage to Cheapside/Bradford street and a secondary access to Shrewsbury Road. The current use would indicate the need for investigation of possible ground contamination with treatment during any redevelopment of the land. The site has no known watercourse flooding risk and only a small peripheral risk of surface water flooding in severe conditions. The site has the potential for a small scale redevelopment opportunity but residential use would reduce the floorspace in the retail core. The location in the retail core on a principal junction between Shrewsbury Road and Bradford Street would require a noise assessment of highway traffic movements. This assessment may require appropriate mitigation measures in the layout, design, materials and landscaping of any built development particularly to provide satisfactory standards of residential amenity in an housing redevelopment. The site will require a heritage impact assessment as it lies within the medieval core of Shifnal and partially within and adjacent to the Shifnal Conservation Area and in the setting of a number of listed buildings. The assessment should consider impacts on the character and appearance of the Conservation Area, investigation of the archaeological potential of the site and the presence of non-designated heritage assets on the site. Any redevelopment will require strengthening of the Green Infrastructure network including the protection of hedgerows on the western boundary. The site lies over a Source Protection Zone covering Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Land within existing Shifnal development boundary</b>

<p><b>Reasoning</b></p>	<p>This small site should continue in its current use provided the site and location remain viable for this business use. The redevelopment of the site has the potential to contribute to the range of uses and the vitality and viability of the retail core of the town. The redevelopment potential of the land requires further detailed assessment but the land lies within the development boundary, forms an integral part of the urban form and retail area with direct access to the highway network and is well served by the footway network. The detailed assessments may reveal the site has ground contamination but forms a significant part of the heritage of this historic town.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>

<i>Tree Comments Opportunities:</i>	limited opportunity for small scale tree planting to enhance urban tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land investigation required, noise assessment for Shrewsbury and Victoria Road.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located in the centre of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.
<b>Strategic Considerations:</b>	<p>This brownfield site accommodates a former industrial works but is a relatively high quality sandstone building with the potential to be a non-designated heritage asset worthy of retention and conversion to a new use to conserve and enhance the character and structure of the building . The site will require a heritage impact assessment as it lies within the medieval core of Shifnal and partially within and adjacent to the Shifnal Conservation Area and in the setting of a number of listed buildings. The assessment should consider impacts on the character and appearance of the Conservation Area, investigation of the archaeological potential of the site and the presence of non-designated heritage assets on the site. The site has direct access to the highway network from a generous drop kerb access on Shrewsbury Road with the potential for a secondary rear access to Victoria Road subject to traffic flows and on street parking constraints on these accesses. The previous industrial use of the site indicates the need for investigation of possible ground contamination with treatment during any redevelopment of the land. The site has no known watercourse flooding risk and no known surface water flooding even in severe conditions. The site has the potential for a small scale redevelopment opportunity but residential use would require a noise assessment of highway traffic movements with appropriate mitigation measures in the layout, design, materials and landscaping of any built development to provide satisfactory standards of residential amenity. Any redevelopment will require strengthening of the Green Infrastructure network including the protection of hedgerows on the southern boundary and trees within the site which contribute to the character of the Conservation Area. The site lies over a Source Protection Zone covering Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Land within existing Shifnal development boundary</b>

<p><b>Reasoning</b></p>	<p>This small redevelopment opportunity requires a new productive use for these historical industrial buildings. They are of substantial construction and could offer attractive accommodation for either a contemporary employment or residential use. The redevelopment of the site for residential use has the potential to contribute to the range and choice of housing types and sizes in the town and is located close to the central retail area. The redevelopment potential of the land requires further detailed assessment but the lies within the development boundary, forms an integral part of the urban form, is close to the principal Five Ways Junction and is readily accessible to the strategic routes into/out of town on the A4169 and the A464 to M54 Junction 4. The site is well served by the urban highway network and footway network to the front and rear of the site. The detailed assessments may reveal ground contamination but the site has the potential to be confirmed as a significant element of the industrial heritage of this historic town.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site forms an Env. Network corridor and is covered by a TPO. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. There are GCN breeding ponds adjacent to the site. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. This site looks like excellent quality GCN and reptile terrestrial habitat. Requires botanical survey, ECLA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible earthwork remains of ridge and furrow (HER PRN 21024) present across much of the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + ?Level 2 earthwork survey).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	mature trees may be under TPO
<i>Tree Comments Other Constraints:</i>	mature trees and scrub around site boundaries. Mature tree at tight site access may be a constraint
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover on the site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	Good site with no notable constraints identified.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 962 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This generally flat, small brownfield site (1.4ha) is situated on the south-eastern edge of Shifnal next to the current development by Redrow Homes. The site adjoins Park Lane where highway access would be constrained by roadway capacity and the limited opportunity for highway improvements. The developability of the land would rely on a suitable access onto the A464 Wolverhampton Road. The proximity to the built form of the town reduces its landscape sensitivity (medium-low) but increase the visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1) but the land may be prone to inundation which requires a detailed flood risk assessment. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of known priority habitat including grassland and ponds within and surrounding the site may reduce the developable area to permit the restoration and enhancement of this habitat. The mature hedgerows and trees within and around the site should be retained especially where protected by a Tree Preservation Order. The site has some heritage value which would require an archaeological appraisal through a Heritage Assessment. The site has a Fair sustainability rating reflecting its accessibility to recreational facilities and services which help to offset the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>Yes</b>
<b>Potential for Allocation?</b>	<b>Yes</b>
<b>Recommendation</b>	<b>Include this previously safeguarded land within the development boundary and allocate for housing development</b>

Reasoning	<p>Site SHF029 has been safeguarded for future development and the evidence of the developability of the site provides positive indications of the suitability and availability of the land. Although the site would be better suited to housing use the open land on the site has environmental qualities worthy of protection. The evidence for developing this small area of safeguarded land is not sufficient to justify specifically allocating this land for housing but it might form a suitable windfall site subject to an appropriate development proposal that conserved the value of the site. This land is not suited to employment development because of the smaller size of the areas, close proximity to existing housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	around 65 dwellings with SHF015
If proposed for Allocation Design Requirements:	<p>Site SHF029 to be developed as a single scheme in conjunction with site SHF015 to provide a broad range of housing types to meet local needs. Development site excludes Beech House (non-designated heritage asset HER PRN 34751) with garden, curtilage building and frontage walling to A464. Beech House forms part of urban land and no longer safeguarded for future development. Consideration may be given to sympathetic restoration/conversion of house and curtilage buildings. Existing northern access to Beech House to be closed and sealed with existing gates retained. Beech House to be serviced from existing southern access. Highway junction to be situated at northern point on A454 frontage to provide safe junction with good visibility and appropriate measures to manage traffic speeds and highway safety. The development should provide access to the footway and cycling network along the A464 to improve access to local services using 'active travel' options to walk, 'wheel' or cycle to local services.</p> <p>The need to conserve Beech House, protect the setting from effects of development and to deliver a safe and visible highway junction to A464 may require removal of mature trees on A464 frontage with complementary planting within the site. Consideration to be given to internal highway layout within the site to make effective use of the developable land and to improve the accessibility of the dwellings to the main and secondary accesses to encourage 'active travel' options to reach local services. Development of site SHF029 to give consideration to secondary access to Park Lane through access strip from backland boundary of site. Secondary access to provide pedestrian and cycling access to Park Lane offering a potentially safer access to local services including the local primary school and with emergency vehicular access into the site only. Green Infrastructure network to be enhanced to strengthen existing woodland mature trees around site, provide SUDs drainage system along boundary to safeguarded land to exclude built development and protect site from surface water flooding, open space with equipped play space to be provided, allow foraging and passage of species through the site and use of habitat at site margins. Heritage impact assessment to consider the heritage value of Beech House and the effect of development on the setting of the heritage asset and to investigate the archaeological potential of the site. Noise assessment required due to proximity to A464 with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity.</p>

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. The woodland and adjacent hedgerows will need to be retained and appropriately buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Probable impact on setting of Grade II* listed Aston Hall (NHLE ref. 1308059) and cluster of associated Grade II LBs. HER indicates site within the former park to Aston Hall (HER PRN 07504).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs + archaeological DBA ).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	block of woodland adjacent north-west boundary and hedgerow and trees to west and southern boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the existing and any future woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the west of the site creating a noise source. School to west which will create some noise however not anticipated to impact on the development in a detrimental way due to hours of operations etc.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This smaller, gently sloping greenfield site (3ha) is situated to the north-east of Shifnal adjoining Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Coppice Green Lane served from Stanton Road would provide an appropriate highway access subject to widening improvements to the Lane to increase highway and parking capacity. However, development of SHF032 will produce some increase in vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has some flood risk (Flood Zone 1) from a significant surface water risk in severe conditions. The site requires Ecological Assessment and Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows to the west and south and woodland to the north-west which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>Site SHF032 is situated on the edge of Shifnal adjoining the mixed use developments along Coppice Green Lane and close to the building conversions within the Aston Hall complex. SHF032 offers the potential to enclose some of these mixed use developments and to create a 'sense of place' by consolidating the built urban form along Coppice Green Lane. This sense of place is intended to settle the preferred use of SHF032 to further consolidate the open spaces and recreational uses within the campus of Idsall School and to create an opportunity to improve the highway and cart parking capacities along Coppice Green Lane. This land is not suited to employment development because the sensitivities to landscape and visual impacts (both medium-high) are greater than for housing use.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	<p>Whilst Shifnal's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Strategic Considerations:</b>	<p>Site SHF033 lies in the setting of the Grade II* listed Aston Hall and is the walled garden that supplied the former kitchens to the Hall. The site could be accessed along the access lane into the Aston Hall complex but development of the site would have some affect on the surrounding highway network and principal junctions. The site is in the Green Belt adjoining the boundary with the town along Coppice Green Lane. The release of the land for development would have a high level of harm on the Green Belt arising from the weakening of the role of the Green Belt in separating adjoining towns and the encroachment into the setting of the town. The site would require detailed ecological assessment and protection of the trees and hedgerows around the site and the Tree Protection order to the south-east boundary. The need to protect trees and hedgerows and to enhance the Green Infrastructure network in this part of town would constrain the site capacity although there are only limited opportunities to enhance the tree cover across the site. The site has no known watercourse flooding risk and no known surface water flooding even in severe conditions. The site will require a heritage impact assessment as it lies within the setting of Aston Hall and its curtilage listed structures. The assessment should consider impacts on the significance and setting of the Hall and investigate the archaeological potential of the site. The site lies over a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the east.</p> <p>The site is situated in Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>This small curtilage listed feature should be protected as part of the history and interpretation of Aston Hall. The site forms part of the Green Belt containing the town on its north-eastern edge where the wall, tree and hedgerow boundary help to strengthen the edge of the Green Belt along Coppice Green Lane. The development potential of the land would require further detailed assessment but the release of this small site from the Green Belt to deliver windfall residential development would require evidence of very special circumstances.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within three Green Belt parcels which have moderate and strong performance against purposes 2 and 4; and moderate performance against purpose 3. The Green Belt Review undertaken for Shropshire indicates that these Green Belt parcels, if released for development, would have a moderate-high and high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. One of the Green Belt parcels covering the site contains a sub-parcel (representing the entirety of the site within this particular parcel) which would have a moderate level of harm on the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High and High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Via a strategic link between Priorslee Road (link under railway bridge), A4169 and A464 but vehicular access onto Park Lane would be restricted.
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. With appropriate junctions and speed limit reviews and extension and traffic calming on the radial routes.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y.

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Assuming checks are made on any adverse impact on Innage Road and Church Street and associated junctions and mitigation provided if necessary.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	19
<i>Ecology Comments Significant Constraints:</i>	Protection of ponds, Env. Network and GCNs will reduce the no. of houses possible.
<i>Ecology Comments Other Constraints:</i>	Northern section: The northern boundary forms and Env. Network corridor (due to the presence of a vegetated railway line). This corridor should be buffered and enhanced. Southern section: Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. Part of the north-western and south-western boundaries contain or are adjacent to Env. Network corridors and priority habitat (woodland) - these will also need to be appropriately buffered. There are GCN breeding ponds adjacent to the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible. Given the number of known GCN breeding ponds in the area, a large amount of mitigation land is likely to be required, particularly in the south-eastern section of the site. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds. Hedgerows, trees and ponds will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147), setting of Grade II listed house known as The Terrace (NHLE ref. 1053636) and cluster of associated Grade II LBs at Shifnal Manor. Site itself includes putative, but now largely discounted, site of Idsall (pre-1590 Shifnal - HER PRN 00757) and site of a 17th century mill pond. Site also includes a former brickworks (HER PRN 01825). Site includes non-designated historic buildings at Lodgehill Farm. Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPOs adjacent site
<i>Tree Comments Other Constraints:</i>	belt of woodland to north of site along railway and group of trees in semi-natural habitat along watercourse in centre of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Expand woodland cover along northern boundary and expand buffer along watercourse with a development stand-off
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Multiple noise sources including A4169 which will require noise assessment to ensure internal standards with windows open are achieved and impact on and from existing farm business off Park Lane marked as Lodghill farm. Brook known to flood.
<i>Public Protection Comments Management of Constraints:</i>	Noise survey, orientation, layout, standoff and working with existing business. Farm building use will likely be disturbing to residents.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This extended greenfield site comprises individual sites to the east with SHF019 (10ha) as a gently sloping greenfield site that runs into the western portion of site P15b of similar character running to Park Lane. The site then comprises individual sites to the west with P16 forming the land around the south of Lodgehill Farm and on the lower slopes of Lodge Hill and site SHF017 (south) forming the land around the north of Lodgehill Farm and along the woodland boundary to the urban edge of town, crossing the corridor of the Wesley Brook and fronting the A4169. Site SHF07 (north) continues to the north of the A4169 forming a gently sloping, open greenfield site adjoining the open urban edge of town and the green corridor along the railway embankment to the west of the town. of the west. These combined sites provide an extended development opportunity between the A464 Wolverhampton Road and the A4169 and would present a future opportunity to under pass the railway and link to the A464 west. These sites are located in the Green Belt where they serve to prevent urban development encroaching into the countryside and separate Shifnal from adjoining towns. The release of this land from the Green Belt would have a moderate-high harm to the Green Belt for sites SHF017 and P16. The local topography screens sites SHF019 and P15b west behind a ridgeline where the harm of release would be moderate. The landscape effects on the western parcels are medium-high lying below Lodge Hill but this screens the sites where the visual impact would be medium. To the east, the landscape impacts are medium and the visual impacts are medium-high where the land is open to views from the south and east but sites SHF019 and P15b west have the benefit of concealment behind the ridgeline. The land area is affected by the flood risks around the Wesley brook with its constrained watercourse through he town capable of being addressed by a roadway viaduct across the river channel and the creation of a Green Infrastructure network along the watercourse potentially to include public open space with equipped play space. There is a further risk of surface water flooding through local channels to the north-west and north- east within the site which are capable of being addressed through a SuDS system again to form part of the Green Infrastructure network. This would be supported by Ecological Assessment, Arboricultural Assessment and a Botanical Survey with the presence of protected or priority species requiring appropriate conservation, retention, mitigation and enhancement to sustain these as part of the Green Infrastructure network. This would consider the woodland boundary to the urban area, Tree Protection Order along the A4169 and strengthening of the green buffer along the rail line to the north. The site lies in the setting of a number of listed buildings requiring a Heritage Assessment including archaeological assessment to assess the historical significance. Proximity to the A464, A4169, rail line and to Lodgehill Farm would require a noise assessment with appropriate mitigation measures provided in the layout, design, materials and landscaping of the built development to provide satisfactory standard of residential amenity. Evidence of an infilled historical pond may suggest some ground contamination. The site has a Good sustainability rating due to the accessibility to some of Shifnal's out of centre facilities and the reasonable accessibility to the town centre. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	<p style="text-align: center;"><b>Protect the land north of the rail line within the Green Belt</b></p> <p style="text-align: center;"><b>The extended area of land south of the rail line and extending though the A4169 and up to the A464 (south) to be removed from the Green Belt and safeguard for future development</b></p>

<p><b>Reasoning</b></p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal that combine these sites to form SHF034 and contribute to a large scale housing development to meet the future needs of Shifnal. This would create a continuous link road between the two principal highways at A4169 and A464 to reduce congestion on the highway network through the town and locally on the constrained country lane at Park Lane. The release of SHF034 is considered to be justified to provide for the future needs of Shifnal delivering new strategic infrastructure investment, new housing opportunities, new community facilities and commercial services for the residents of the town and building on proposed highway improvements at Five Ways and Innage Road. The provision of new strategic highway to the A4169 and into site SHF017 (north) north of the A4169 Bridgnorth Road will facilitate the longer term provision of a roadway underpass linking the A464 west to create the potential for a one way gyratory system via the underpass onto the A464 and to return through the 'sister' under-pass at Innage Road. These land parcel may accommodate employment development within the broad range of land uses on site SHF034 however, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option for SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	<p>Within the Green Belt Assessment undertaken for Shropshire this site is considered within two Green Belt parcels (P15 and BA2). The assessment indicates that these parcels make no contribution against purposes 1a and 1b; perform moderately against purpose 2 and purpose 4; and performs either moderately or strongly against purpose 3.</p> <p>Within the Green Belt Review undertaken for Shropshire the element of the site located within P15 is considered, however Parcel BA2 (which contains a large portion of the site) was not specifically assessed. The review of parcel P15 indicates that there would be moderate-high harm to the Green Belt resulting from release (although a sub-parcel containing a small portion of this site would have moderate harm to the Green Belt if released).</p> <p>Within the Green Belt Review, the element of the site within parcel P15 is also considered within sub-opportunity area (Sh-1 and Sh-2), furthermore a sub-area of the parcel is also considered within opportunity area Sh-1a. The review of opportunity areas Sh-1 and Sh-2 indicates that there would be high harm to the Green Belt resulting from release. The review of sub-opportunity areas Sh-1a indicates that there would be moderate harm to the Green Belt resulting from release.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site has three existing highway access points. Two of the existing accesses are on to minor roads, Lamledge Lane and Upton Lane with restricted width and forward visibility. Therefore, access to the site without improvements to Lamledge Lane and Upton Lane would need to be via the A464. The Development would provide an opportunity to upgrade the existing Junction on to the A464. Upton Crossroads is an Accident Cluster site due to the high approach speeds and restricted visibility for vehicles emerging on to the A464. The site appears to include land that would enable these improvements to be delivered if needed.</p> <p>If developed as a strategic site it is assumed that local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities. The nearest schools is St Andrews Primary School which is approximately 2km from the centre of the site and are linked by a continuous footway, which would require upgrading. The nearest convenience store and GP is in Shifnal Town Centre are approximately 2.5km from the centre of the site and are linked by a continuous footway.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for any employment use that generates airborne pollution or road traffic including HGVs. Detailed emissions modelling would be required due to proximity of designated wildlife sites. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	There is a patch of priority habitat woodland on the site that is TPO'd and within the Env. Network. This area should be retained and appropriately buffered. The eastern and southern boundaries form Env. Network corridors. There is a pond within the woodland and many others within 500m Requires an Kecia and surveys for bats, GCN (ponds within 500m), badgers and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential. Site detached from existing built edge of town, so development likely to be incongruous in relation to the semi-rural character of the immediate surroundings.
<i>Heritage Comments Other Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees and groups of trees and hedgerows associated with large ponds to the west of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure appropriate development stand-off from trees and woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure. Look to connect to / expand block of woodland to the west of the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to south and rail to north. Potential contaminated land (not had access to systems to check on this aspect). Possible odour from farm buildings close to edge of site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be available for contaminated land. Appropriate assessments will be necessary. Noise mitigation likely to be available. As a first option it is recommended that noise sensitive receptors (residential properties) are provided with sufficient distance from noise sources to avoid issues. Where this is not possible good design and layout including orientation and layout of development, glazing barriers including fencing and bunding, mechanical ventilation. Odour concerns can be reduced by having separation distance from odour sources and where possible not placing residential down wind from odour sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This extended greenfield site comprises two Green Belt land parcels at P15 and Broad Area 2 (BA2) which comprise an open ridgeline running north towards the rail line enclosing two large man made but naturalising ponds within parcel P15 and open land sloping downwards to the east into the Green Belt as part of BA2. This second area includes a third agricultural pond with a dedicated highway access from Upton Lane which itself is located in the centre west of the land. Parcel P15 adjoins proposed housing allocations SHF023 and SHF022 on the south west boundary will become part of the built form of the town. To the north up to the rail line, the land is partially separated from the built form of Shifnal by the exclusion of sites P15a and SHF023(north) with the important local route of Lamledge Lane that forms a local road viaduct over the rail line and leads into the north and centre of the town and passes Shifnal Industrial Estate. This route, more than Upton Lane, provides direct access to the town by means other than private motor vehicles. The two areas of P15 and BA2 combined provide an extended development opportunity served from the A464 to provide for the future housing needs of Shifnal. This proposed areas for housing would have direct access to the proposed new employment area on Upton Lane to the north of the rail line to help create a sustainable development option to the east of Shifnal. The road viaduct of Upton Lane over the rail line is proposed to be closed with the development of an employment area on sites SHF018b and SHF018d and to maintain this road route would require investment in Upton Lane and the road viaduct over the rail line. The sites are located in the Green Belt where they serve to prevent urban development encroaching into the countryside and help protect the setting to this historic town. The release of this land from the Green Belt would have a moderate-high harm to the Green Belt for parcel P15. This has a more complicated set of relationships when considering sub-opportunity areas and the fact that BA2 was not assessed in the Green Belt Review. The assessment of sub-opportunity areas indicates land in the west has a lower, moderate harm from release but in the east the impact is moderate-high at least and may have a high harm as the land extends east into the Green Belt. Evidence submitted by the site promoter does not alter this conclusion. The ridgeline in the local topography forms a local horizon in the centre west of the site and screens the western land and Shifnal from distant views. East of the ridgeline, the land is open to the distant views from the east. The downward slope of the topography here, means the landscape impacts are medium-low but the open aspect means the visual impacts are medium-high. The land area has limited flood risks focused around the third agricultural pond in the north, to the north-east along the rail line and to the south-east along the A464. These peripheral effects are capable of being addressed by SuDS and the creation of a Green Infrastructure network which in turn seeks to create strong, structural landscaping boundaries to the Green Belt. The release of this land would need to be supported by Ecological Assessment, Arboricultural Assessment and a Botanical Survey with the presence of known protected woodland and priority species including Great Crested Newts requiring appropriate conservation, retention, mitigation and enhancement to sustain these as part of the Green Infrastructure network. The site contains the non-designated heritage asset of the former windmill on the ridgeline proposed to be conserved as a local landmark and focus for the Green Infrastructure Network. The land would require a Heritage Assessment to investigate the archaeological significance of the land. Proximity to the A464, rail line and local farm enterprises require a noise assessment with appropriate mitigation measures in the layout, design, materials and landscaping of any development to offer satisfactory residential amenity. Evidence suggests some ground contamination to be addressed. The site has a Good sustainability rating due to the accessibility to some of Shifnal's out of centre facilities and the reasonable accessibility into the town centre but this relates to highway linkages outside the proposed area for future development. The site is in a Source Protection Zone around Shifnal but is some distance from the core zone on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the future development needs of the community than this greenfield land in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF035 would extend the settlement well beyond its current built form and layout extending directly into the Green belt and with a partial separation from the built form of the town. The release of this land would have significant impacts on the town's setting and the protection of the Green Belt. These reasons indicate that SHF035 should not be preferred as the safeguarded land to meet the future development needs of Shifnal.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3</b>	
<b>Site Reference:</b>	<b>SHF037</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two Green Belt parcels which have moderate performance against purpose 2; moderate and strong performance against purpose 3; and weak and no contribution against purpose 4. The Green Belt Review undertaken for Shropshire indicates that these Green Belt parcels, if released for development, would have a moderate-high and high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road and Coppice Green Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit on Stanton Road but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout. This site should not have highway (vehicular) access onto Coppice Green Land unless major improvements can be delivered in the wider network.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. As the impact of this development Coppice Green Lane, Aston Street and Curriers Lane and associated junctions would not be accommodated and only reduced by the establishment of a strategic circular road to provide alternative access routes. This would be prevented by existing development to the north west and the need to secure agreements with third party landowners to the south.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Protection of adjacent ponds and Env. Network will reduce the no. of houses possible.
<i>Ecology Comments Other Constraints:</i>	The site contains patches of woodland (Env. Network and potential priority habitats). These areas should be retained and appropriately buffered. There are ponds adjacent to the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. Hedgerows, trees and ponds will need to be buffered.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	Land N of Stanton Lane likely to have substantial negative impact on setting of Grade II* Aston Hall (NHLE ref. 1308059) and associated cluster of GII LBs.
<i>Heritage Comments Other Constraints:</i>	For land S of Stanton Rd this area also has a poor relationship with existing built form of settlement. No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO adjacent site
<i>Tree Comments Other Constraints:</i>	site contains numerous hedgerows and trees and a strip of mature woodland along the northern boundary. Site adjoins several blocks of mature woodland
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Seek to expand adjoining woodlands with new woodland creation as part of open space within the development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Multiple noise sources including main roads out of Shifnal and M54, rail line and Lamledge lane industrial site (the latter being a source of other dis-amenity issues). Potential contaminated land close to Lamledge lane industrial site. The area close to M54 more appropriate for employment.
<i>Public Protection Comments Management of Constraints:</i>	Areas close to M54 unsustainable for housing. Multiple noise assessments required. All should be assessed for windows open which will lead to thoughtful orientation, glazing and positioning of habitable rooms. Consider flatted developments near rail line.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 982 Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the north-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This extended greenfield site comprises three sites including SHF018a and SHF018b with SHF018d. These comprise an arc of open greenfield sites spanning the land around the north and north east of Shifnal within the Green Belt and seeking to provide a sustainable extension to Shifnal to meet the future development needs for housing on site SHF018a whose proposed development is addressed below. The sustainable extension also addressed the employment needs of Shifnal on sites SHF018b and SHF018d and the evidence for these sites was accepted they are now proposed to be allocated for employment use. Site SHF018a proposed for housing development is a very large, elevated greenfield site (80ha) is situated to the north-east of Shifnal adjoining Stanton Road (south) and Coppice Green Lane (west). The land is located within the Green Belt with a high harm caused by its release. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018c would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity which may be difficult to achieve. The site lies in the countryside but has few significant features which influences its landscape sensitivity to medium and but is elevated with a number of open aspects providing medium-high visual sensitivity. The site has no flood risk (Flood Zone 1). The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees and hedgerows within and around the site with woodland at its southern boundary which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including an archaeological assessment. The site has a Good sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone encompassing Shifnal town close to but outside the core zone that lies further to the east along Stanton Road. This is not the preferred location for the safeguarding of land to meet the long term development needs of Shifnal. There are more preferable opportunities for the release of Green Belt to provide for future development that provide better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF018a would extend the settlement well beyond its current built form and layout and would have significant impacts on the setting of important heritage assets and this historic town and on the infrastructure of Shifnal particularly its highway network whilst potentially compromising the open character and environmental values of SHF018a.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>Yes - southern portion only to be removed from the Green belt and allocated for employment development</b>
<b>Recommendation</b>	<p style="text-align: center;"><b>Protect the land north of Stanton Road within the Green Belt</b></p> <p style="text-align: center;"><b>The land to the south around Upton Lane from Stanton Road (north) to the rail line (south) to be removed from the Green Belt and allocated for employment development</b></p>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the future development needs of the community than this greenfield land in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site SHF037 would extend the settlement well beyond its current built form and layout removing a strong boundary to the Green Belt at Coppice Green Lane. The land is elevated above and visible from the built form of the town and forms the setting and backdrop to the Grade II* listed Aston Hall. The release of this land would have significant impacts on the setting of the town and its key heritage assets, the protection of the Green Belt and the capacity of the highway network in the north-east and retail core of the town. These reasons indicate that SHF037 should not be preferred as the safeguarded land to meet the future development needs of Shifnal.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Priorslee Road, Haughton Lane and unnamed road to the west of Haughton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes that the site would fund any necessary improvements along the three frontage roads, including speed limits and footways.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	If developed as a strategic site then a review of several major junctions would be needed, including M54 junction 4 and the Priorslee Road / Victoria Road / Shrewsbury Road roundabout and any necessary improvements funded.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Significant reduction in no. of houses due to presence of Env. Network/potential priority habitats/woodland/protected species.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority grassland and woodland habitats - botanical survey required. If priority habitats are present then these areas should not be developed. There are otter, water vole and badger records on the site. Wesley Brook runs through this site and a large buffer of riparian habitat forms an Env. Network corridor. An appropriately sized buffer will be required from the Env. Network with no development within. This could be POS. If GCNs are present in the on-site ponds, a min. 50m buffer is likely to be required. Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish, invertebrates and nesting birds. There are a number of TPOs on the site.
<i>Ecology Comments Management of Constraints:</i>	If priority habitats are present, these areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site partially within Haughton Conservation Area. Probable impact on setting of Grade II* listed Haughton Hall. Site includes non-designated parkland for Haughton Hall (HER PRN 07526). Site includes cluster of non-designated historic buildings at Banks Farm. Very large size and numerous metal detectorist finds suggests it has archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA and non-designated parkland; setting of LBs ; Level 2 Historic Buildings Assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	surrounds Haughton village conservation area. Numerous tree, group, area and woodland TPO designations in southern half of site. Large linear woodland and water features run through central part of site , linking to Haughton Hall
<i>Tree Comments Other Constraints:</i>	hedgerows and trees within and around site boundaries
<i>Tree Comments Management of Constraints:</i>	due to size of site - full EIA and landscape character assessment and VIA. At a smaller scale - Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site. large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat. Expand woodland where feasible.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north and south and noise from service station to the west. Historic landfill on site. Possible noise from events at Haughton Hall(?)
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Con land remediation may be available. Suggest stay away from western tip of the site.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the north-west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, gently sloping greenfield site is situated to the west of Shifnal adjoining the A464 Priorslee Road (south) and Haughton Lane (east). The land is located within the Green Belt with a high harm caused by its release where the primary objectives are to protect the setting of the town and the separation from Telford, more than encroachment into the countryside. Accessibility to Haughton Lane would provide an appropriate highway access subject to detailed assessment of further highway improvements at the Five Ways roundabout and Priorslee Road. The site adjoins the edge of the built form of the town which influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The site has significant tree and woodland cover recognised through Tree Protection Orders requiring detailed assessment of the value of the site. The site lies in / close to Haughton Village Conservation Area and in the setting of listed and non-designated heritage assets requiring a detailed Heritage Assessment.</p> <p>The site would have a Fair sustainability rating for housing use only (both in the context of the settlement and accommodating a contribution to the Black Country). The limited accessibility to Shifnal's facilities gives a poor rating for employment use (in the context of the settlement), although it achieves a fair rating in the context of accommodating a contribution to the Black Country. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this greenfield site in the open countryside that makes an important contribution to the Green Belt. These other sites have a better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site P10 would extend the settlement well beyond its current built form and layout and would have significant impacts on the town's setting and its infrastructure particularly its highway network whilst potentially compromising the open character and environmental values of site P10. These reason would suggest that P10 should not be developed and the degree of harm from employment uses would be even greater than that likely to be caused by housing use.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes

<b>Site Assessment - Stage 3</b>	
<b>Site Reference:</b>	<b>P14</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	0%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs moderately against purpose 2; moderately against purpose 3; and weakly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel where the release of the land would have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purposes 2 and 3. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Stanton Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Outside 30mph limit but this can be extended with traffic calming / gateway feature. Consideration should be given to a shared main road junction possibly roundabout with SHF018c.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The collective impact of the developments off Stanton Road will have an unacceptable impact on Aston Street and Curriers Lane and associated junctions which are already at or close to capacity.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present, development is not recommended. Developable area greatly reduced due to presence of ponds/woodland/Env. Network.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority woodland and grassland habitats - botanical survey required. If priority habitats are present then the site should not be developed. There are ponds on and in close proximity to the site. If GCNs are present in any of the ponds, a min. 50m buffer will be required. If GCNs aren't present, the ponds (priority habitat) and associated habitats should be retained and enhanced, with connectivity maintained, which will greatly reduce the developable area available. The site lies forms an Env. Network corridor. Requires Ecla and surveys for bats (trees, buildings and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	If priority habitats are present, these areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II* listed Aston Hall (NHLE ref. 1308059) and cluster of associated Grade II LBs. Site includes a former 19th century brick field (HER PRN 07291), and otherwise of a large size, so has archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	large blocks of woodland to centre and south of site restrict developable space to fields to north and east of site
<i>Tree Comments Other Constraints:</i>	hedges and trees around site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	Ensure development stand-off from existing woodland and expand if possible, linking the woodland areas.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Commercial/industrial to the south. Road to the north. Potential con land from infilled ponds on site.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation.
<i>Public Protection Comments Opportunities:</i>	Advise stay away from commercial/industrial to south leaving good distance to stop interference with the existing site. Con land remediation likely to be available.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, undulating greenfield site (14ha) is situated to the east of Shifnal adjoining Stanton Road (north) and Shifnal Industrial Estate (south). The land is located within the Green Belt with a moderate-high harm caused by its release however, Green Belt parcels to the north would have a higher impact on the remaining Green Belt land. Stanton Road would provide an appropriate highway access subject to the provision of a suitable junction, extension of the restricted speed zone (30mph) and traffic calming measures. However, development of SHF018b would need to restrict vehicle movements into Aston Street, Curriers Lane and highway junctions close to/exceeding their capacity. The site lies in the countryside which influences its landscape sensitivity to medium-high and despite its enclosed nature has medium-high visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site would require an Ecological Assessment, Arboricultural Assessment and Botanical Survey. The presence of protected or priority species would require appropriate conservation, retention, mitigation and enhancement to help sustain the site character and its function as part of the Environmental Network. The presence of any priority habitat may reduce the developable area to permit the restoration and enhancement of the habitat. The site has large blocks of woodland restricting development in the centre and south of the site. Possible impact on setting of Grade II* listed Aston Hall and cluster of associated Grade II Listed Buildings. The site also includes a former 19th century brick field and is large, so has archaeological potential. As such a Heritage Assessment will be required. The site would have limited accessibility to Shifnal's facilities to redress the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and safeguard for future development</b>

<p><b>Reasoning</b></p>	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. Site P14 offers the potential to safeguard land to support the long term growth of a large scale, new employment area to the east of Shifnal. This potential employment area would have the benefit of access to Stanton Road and the potential to route commercial traffic away the town and towards the M54 at Junction 3 and the secondary route along the A41. The safeguarding of site P14 (with SHF018a), in proximity to existing and newly allocated employment activities around Stanton Road / Lamledge Lane has the capacity to support the employment needs of the town in combination with sites SHF108b and SHF18d.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which has a moderate performance against each of purpose 2; purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would also have a moderate-high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. However, Site P15a has an identified sub-parcel which would have a moderate level of harm if released from the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Lamledge La and Upton La
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	N. This site (540 homes) should not have highway (vehicular) access onto Lamledge Lane or Upton Road unless major improvements can be delivered along the whole length of both lanes and this would require significant amount of third party land.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	15
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs and Env/ Network/woodland. If priority habitats are present, development is not recommended.
<i>Ecology Comments Other Constraints:</i>	The site forms an Env. Network corridor. The site may contain priority grassland habitat - botanical survey required. If priority habitats are present then the site should not be developed. This site looks like it contains some excellent quality GCN and reptile terrestrial habitat. There are GCN breeding ponds 100-150m from the boundary. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds. The woodland and hedgerows will need to be retained and appropriately buffered.
<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes a widening of the railway cutting (HER PRN 29639) opposite the former Coalport China and Wire Works (HER PRN 07289). No other known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	block of woodland and group of trees to northern edge of site and mature trees and hedges around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the existing and any future woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Factory on site to the north east creating possible noise etc and possible contamination to the land. Rail to the north with industrial estate to the opposite side.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road. However, due to the nature of the industrial estate to the north significant stand off may be necessary.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 994 Poor

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This larger, relatively flat greenfield site is situated on the south-eastern edge of Shifnal adjoining the railway line east of the town and opposite Shifnal Industrial estate. The site is served from the north by Lamledge Lane across a narrow road bridge over the railway and from the east by the country lane of Upton Lane. These two highways are not suitable to serve development on P15a unless improved along the entire length of the roadways serving the site. The site would therefore benefit from an alternative access such as might be achieved through the development of the entire area of the adjoining site SHF023. The site lies close to the built form of the town principally comprising the employment area of Shifnal Industrial Estate to the north across the rail line. The land area comprises a sub-parcel of Green Belt land considered for release with a moderate effect on its release on the remaining Gren Belt land. The land has some evidence of use in connection with the railway which influences its landscape sensitivity (medium-low) but the land has an open aspect with a higher visual sensitivity (medium-high). The site has little known flood risk (Flood Zone 1) but a nominal surface water risk in severe conditions. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area to a degree. The site requires an archaeological assessment to explore the scale of the site including known historical railway excavations on the land. The site has mature tree and hedgerow boundaries and mature trees and woodland to the north which should be retained or any removal mitigated by compensatory planting. Proximity to the railway and Shifnal Industrial Estate indicates the potential for nuisances requiring a design solution in any development with a stand from any nuisance uses. The site has a Poor sustainability rating for housing and employment in the context of the settlement, due to the relative isolation of the land in combination with the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this more isolated greenfield site in the Green Belt. It is recognised that the site makes only a moderate contribution to the Green Belt but it is currently situated in a relatively inaccessible location along with northern portion of adjacent site SHF023. There other sites with better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In contrast site P15a and the northern section of SHF023 would extend the settlement well beyond its current built form and layout. This land may become more accessible and suitable for development should the proposed development of land at SHF022 and SHF023(south) provide an access solution across the Revell's Rough woodland but this is not likely to happen for some time. This land is not suited to employment development despite the proximity to Shifnal Industrial Estate as the land lies in a relatively isolated location with very poor accessibility via the existing highway network, the close proximity to some existing and newly proposed housing development and the sensitivities to landscape (medium) and visual (high) impacts which are greater than for housing development.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Western Portion: Onto Park Lane. Eastern Portion: Onto A464
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Western Portion: N. Unless access can be gain access to A464 via SH015 and/or SHF019. Eastern Portion: Y. Outside 30mph limit but this can be extended but will need traffic calming / gateway feature. Consideration should be given to a shared main road junction with other sites off the A464.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	Western Portion: 16 Eastern Portion: 18
<i>Ecology Comments Significant Constraints:</i>	Reduction in no. of houses due to presence of GCNs.
<i>Ecology Comments Other Constraints:</i>	There is a pond on the site in which GCNs are likely to be present. There is a GCN breeding pond adjacent to the north-east boundary. A buffer of at least 50m around the ponds are likely to be required, but this may be higher given the number of known GCN breeding ponds in the area. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal. Opportunity to greatly increase habitat available and connectivity for GCNs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Probable impact on setting of Grade II listed house known as The Terrace (NHLE ref. 1053636). Site also includes a former brickworks (HER PRN 01825). Large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedges, mature trees and groups of trees within and around site. Unnatural block of plantation in centre of south-eastern part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and use good site layout and design to ensure significant trees are successfully incorporated into and add value to the development. Opportunity to create larger area of publicly accessible woodland, extending and reshaping existing block of woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the north and southwest of the site creating a noise source. Possible contamination to north west of site from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and Contamination likely to be able to be remediated. Orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Page 998 Poor

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Poor
<b>Relationship to the Black Country</b>	<p>The site is located to the south-east of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This split greenfield site (18ha) is situated to the south-east of Shifnal adjoining the A464 Wolverhampton Road but the main part of the site is poorly related to the built form of the town. However, the smaller parcel located to the west on Park Lane offers the potential to conduct an access road tot he A464 from other parcels to the west to reduce traffic impacts on the constrained Park Lane. The land is located within the Green Belt with a moderate-high harm caused by its release. However, the eastern parcel may have a lower moderate harm due to its relative position adjacent to the ridgeline south of the site. The western site adjoins the built form of the town with a lower landscape sensitivity (medium-low) but the land retains a higher visual sensitivity (medium-high). The site has no known flood risk (Flood Zone 1). The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature tree and hedgerow cover within and around the site which should be retained or any removal mitigated by compensatory planting. Possible impact on Grade II listed building. The site also includes a former brickworks and due is large so has archaeological potential. As such a Heritage Assessment will be required. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development. The site has a Poor sustainability rating (both in the context of the settlement and a contribution to the Black Country for housing and employment) for the eastern parcel due to the distance from Shifnal's facilities and the environmental values of the site, the western parcel might be considered more sustainable and in combination with site SHF019 with good accessibility to the A464 this smaller sub-parcel has a Fair sustainability rating under site SHF019VAR. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect the land east up to Hinington Road within the Green Belt but release the western land between SHF019 (north) and Park Lane (south) from the Green Belt and safeguard for future development</b>

Reasoning	<p>The main part of P15b located to the east comprises a greenfield site in the open countryside that makes an important contribution to the Green Belt as it largely forms a ridgeline that is visible to the wider Green Belt but serves to enclose Shifnal from these long distance views. In relation to the larger part of P15b, there are more preferable sites available within Shifnal offering better opportunities to meet the needs of the community.</p> <p>A marginal part of P15b located to the west and closer to the built form of the town, has potential with SHF019 to provide a highway access to Park Lane from the A464 (south). In this way, P15b (west) could contribute to a larger scale release of land from the Green Belt with sites P16 and SHF017 (excluding P17b). This would create a continuous link road between the two principal highways at A464 and A4169 to remove traffic from the highway network through the town and from the country lane at Park Lane. This would require related highway improvements at Five Ways and Innage Road but it would permit the provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. SHF034 might accommodate employment development within the larger scale land release in SHF034 to the south and west of the town. However, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to P15b (west) as part of the combined sites that form SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	
If proposed for Allocation Design Requirements:	

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Seek to link to / expand offsite woodland to the west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to east. Possible con land.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation. Con land remediation may be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the south of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This large, undulating greenfield site is situated to the south of Shifnal adjoining SHF017 and Park Lane which is severely constrained by current traffic usage. The land is located within the Green Belt with a moderate-high harm caused by its release however, of the parcels considered in the Green Belt Review the release of P16 has a lower impact on the remaining Green Belt land. Accessibility to the land from the west via SHF017 from the B4169 would be acceptable but an alternative eastern link would be required to intersect Park Lane. The site partly adjoins the built form of the town which influences its landscape sensitivity to medium-low however the land remains visible in the wider landscape with medium-high visual sensitivities. The site has little flood risk (Flood Zone 1) except for the corridor of the Wesley Brook and has a nominal surface water flood risk in severe conditions however, the topography may expose the land to inundation which requires a detailed flood risk assessment. The site requires Ecological Assessment, Arboricultural Assessment and a Botanical Survey. The presence of protected or priority species close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain its function in the Environmental Network. The presence of priority habitat may also reduce the developable area of the land. The site has woodland at its western end which should be retained or any removal mitigated by compensatory planting. The site lies in the setting of listed buildings (Grade II) requiring a Heritage Assessment including archaeological assessment. Proximity to the A464 indicates a potential noise nuisance requiring a design solution in any development. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>

<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Remove land from Green Belt and safeguard for future development</b>

Reasoning	<p>A number of Green Belt sites when taken in combination may provide a strategic opportunity to meet the longer term development needs of Shifnal. Site P16 has the potential to provide an access from SHF017 to the A464 (south) and contribute to a large scale housing development with sites SHF015b(west), SHF019. This would create a continuous link road between the two principal highways at A4169 and A464 and remove any traffic burden on the country road at Park Lane. P16 has the benefit of having medium to medium-low landscape sensitivity but this has to be balanced with the medium to medium-high visual sensitivity and moderate-high harm to the Green Belt from its release for development. This balance relates to the potential benefits of delivering a new strategic link from the A4169 to the A464(south) in combination with sites SHF017, SHF15b(west) and SHF019, related highway improvements at Five Ways and Innage Road, provision of a range of housing opportunities to meet local needs and to improve the provision of community facilities and commercial services for existing and new residents of the town. The provision of a strategic highway junction to the A4169 is also considered to present the opportunity to develop site P17b north of Bridgnorth Road in combination with site P17a (Priorslee Road) north of the rail line however, releasing these land parcels would cause high harm to the Green Belt. This will further contribute to the long term provision of new housing and create the opportunity for a one way gyratory system via the railway under-pass between these two land parcels and using the separate under-pass on Innage Road. SHF034 might accommodate employment development within the larger scale land release in SHF034 to the south and west of the town. However, the release of sites SHF018b and SHF018d will meet the longer term needs for employment in the town and so, employment is not currently recommended as an option in relation to P15b (west) with SHF034.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This smaller, gently sloping greenfield site is situated to the west of Shifnal between the A464 Priorslee Road and the railway embankment and comprises a field that previously included the existing cemetery extension and allotments. The land is located within the Green Belt with a high harm caused by its release where the primary objectives are to protect the setting of the town and the separation from Telford, more than encroachment into the countryside. Accessibility to the A464 would provide an appropriate highway access subject to detailed assessment of further highway improvements at M54 J4, Five Ways roundabout and Priorslee Road including the provision of additional footways. The site adjoins the complementary developments on the edge of the built form of the town which influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has little flood risk (Flood Zone 1) and a nominal surface water flood risk in severe conditions. The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has mature trees, hedgerows and tree lines especially around the cricket club and cemetery which should be retained where possible. The site lies in the setting of listed and non-designated heritage assets and require a Heritage Assessment including an archaeological assessment due to the scale of the site. Proximity to the A464 and railway indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this more isolated greenfield site in the Green Belt. It is recognised that the site makes a moderate-high contribution to the Green Belt and is situated in a relatively inaccessible location to the west of the town. There other sites with better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In future site P17a might serve to extend the settlement beyond its current built form and layout should it be possible to underpass the rail line at site SHF017 (north) to form a new highway link to the A464 (west) but this is not likely to happen for some time. This land is also not suited to employment development as the land lies in a relatively isolated location some distance from the current employment focus to the east of the town.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3</b>	
<b>Site Reference:</b>	<b>P17b</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site identified on the national reservoir inundation mapping:</i>	0%
<i>Percentage of the site benefitting from defence:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs strongly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel where the release for development would have a high level of harm on the Green Belt due to the weakening of the role of adjoining areas with regard to purpose 2 to separate adjoining towns and the level of encroachment on the setting of the town under purpose 4. No sub-parcels were identified which would have less harm.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Shaw Lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes the development funds improvements to Shaw Lane along the frontage, including widening, introduction of speed limit and footways.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Page 1009 N

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject the development securing improvements along Shaw Lane from the south east corner of the site to the A4169 junction, including speed limit and footways and a speed limit extension on the A4169 and an assessment of the impact on Innage Rd and Church St and associated junctions and delivery of any necessary improvements.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	16
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	There are ponds in close proximity to the western boundary. If GCNs are present in these ponds, a min. 50m buffer will be required. The southern boundary forms an Env. Network corridor. This should be enhanced. Requires Ecla and surveys for bats (trees, buildings and transects), GCNs (ponds within 500m), badgers and nesting birds. A PROW runs along the western boundary.
<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to increase the amount of POS available in Shifnal.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II* listed Houghton Hall associated non-designated parkland (HER PRN 07526). Site includes possible deserted medieval settlement (HER PRN 03342) and large size suggests it may otherwise have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Impact on setting of LBs and non-designated parkland; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and scattered trees around and within site. Belts of trees adjacent northern boundary and woodland with pools adjacent the west.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Seek to link to / expand belt of trees along railway embankment to north and woodland to the west.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north. Agricultural to the northwest.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment although not much room to provide separation.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	<p>The site is located to the west of Shifnal. Shifnal is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country.</p> <p>Shifnal benefits from strong road links to the Black Contry (around 8 miles to the east) via both the M54/A5 corridor and the A41 corridor.</p> <p>Shifnal benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.</p>
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shifnal's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.
<b>Strategic Considerations:</b>	<p>This smaller, gently sloping greenfield site (part of SHF017 at 36ha) is situated to the west of Shifnal north of the A4169 (Bridgnorth Road) and adjoining the railway embankment. The land is located within the Green Belt with a high harm caused by its release. However, the release of SHF017 (excluding P17b) has a lower impact on the remaining Green Belt land. Accessibility to the B4169 would provide an appropriate highway access subject to the provision of a suitable junction possibly from the release of SHF017, extension of the restricted speed zone (30mph) and an assessment of the impacts on Innage Road and Church Street. The site adjoins the built form of the town with an open boundary in need of strengthening. The varying topography influences its landscape sensitivity to medium and despite its open aspect, forms part of a parcel with medium visual sensitivity. The site has no flood risk (Flood Zone 1) and no surface water flood risk. The site requires some Ecological Assessment and an Arboricultural Assessment. The presence of protected or priority species within or close to the site would require appropriate conservation, retention, mitigation and enhancement to sustain the site character and its function in the Environmental Network. The site has significant woodland around the railway and cover should be retained where possible. The site lies close to the Shifnal Conservation area and may require a Heritage Assessment including an archaeological assessment of the history of the site. Proximity to the A4169 and railway indicate potential noise nuisance within any development, requiring a design solution. The site has a Fair sustainability rating due to the accessibility to many of Shifnal's facilities which mitigates for potential effects on the environmental values of the site. The site lies in a Source Protection Zone that encompasses Shifnal town but is some distance from the core zone located on Stanton Road to the north.</p> <p>The site is situated at Shifnal, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	<b>No</b>
<b>Potential for Allocation?</b>	<b>No</b>
<b>Recommendation</b>	<b>Protect land within the Green Belt</b>

<p><b>Reasoning</b></p>	<p>There are more preferable sites available within Shifnal which offer better opportunities to meet the needs of the community than this very isolated greenfield site in the Green Belt to the west of Shifnal. It is recognised that the site makes a moderate-high contribution to the Green Belt and is situated in a relatively inaccessible location on the A4169 Bridgnorth Road. There other sites with better relationships to the built form of the settlement, offer greater opportunities for planning gain, have better access to the local highway network and may create more attractive gateways into the town. In future site P17b might serve to extend the settlement beyond its current built form and layout should the proposed development of site SHF017 (north) provide links to site P17b further to the west. This is not likely to happen for some time since site SHF017 (north) is only proposed to be released from the Green Belt as safeguarded land. This land is also not suited to employment development as the land lies in a relatively isolated location some distance from the current employment focus to the east of the town.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	
<p><b>If proposed for Allocation Design Requirements:</b></p>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

# Shropshire Local Plan

## Additional Sustainability Appraisal Report: Appendix 9

Updated Stage 3 Site Assessment:  
Shrewsbury Strategic Centre

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>BIT026</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	4%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	10%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	6%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	B4380
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Subject to the introduction of a suitable access junction and review and extension of the existing speed limit. Potentially 457 homes
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. The B4380 at this location still has the appearance of a high speed inter urban main road. Significant changes to the appearance of the section of B4380 between Bicton Village and Shrewsbury will be necessary before this and a number of other sites along the B4380 are developed.
<i>Ecology Comments Significant Constraints:</i>	Developable area reduced by possible presence of priority habitats, hedgerows and Env. Network. Possible HRA required due to road emissions from increased traffic (in-combination) of Hencott Pool Ramsar. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	The southern sections of the site (Calcott Moss and associated water course, previously LWS) are within the Env. Network, connected to the core area of Oxon Pool LWS. If priority habitats are present then these areas will need to be retained and appropriately buffered, along with the hedgerows and trees. Requires botanical survey, Ecla and surveys for bats, GCNs (records in ponds within 500m), badgers, reptiles, water voles, otters and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Potential to restore priority habitats of Calcott Moss and maintain key arm of the Environmental Network. See accompanying document.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with significant field and boundary trees and hedgerows.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of existing mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the settlement.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north creating noise. Agricultural building (?) on the west boundary. Commercial to east.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment. Additional separation away from agricultural and commercial activities on the site perimeter to ensure no impacts on existing buildings.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury, but it is some distance from the built form. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Significant site located between Shrewsbury and Bicton. Could accommodate 300+ dwellings. 10% of site in 1,000 year surface flood risk zone.</p> <p>New access required off Holyhead Road.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Whilst the site is relatively free of on-site constraints and safe access is considered achievable, the site is considered to be divorced from the urban edge of Shrewsbury and represents a fairly isolated countryside location. As such there are significant concerns over the site's overall sustainability, particularly in relation how the site could encourage the use of sustainable transport modes. In addition the site's proximity to Bicton, along with the scale of growth proposed, raises concern as to the site's impact on the character of the village. It is envisaged the allocated SUE West situated to the south of the proposed site will be developed over the next 15 years and therefore it is not envisaged the site's proximity to Shrewsbury's urban edge will improve until much later in the plan period. It is considered there are far more sustainable options closer to the urban edge capable of delivering major sustainable greenfield land releases.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR011</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Not assessed
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 27 homes with access onto Belvidere Avenue. The site includes sufficient land to create an appropriate standard estate road junction and access link from the existing highway.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). The woodland here may be priority habitat or corridor in the Network Map that would require consideration under MD12 and CS17. The grassland would also require survey to determine if it has value. If it is of interest there isn't likely to be enough land available for development to make this a viable site.
<i>Ecology Comments Other Constraints:</i>	Ecia required. Woodland, boundary trees and buildings may support protected species like bats and birds. Badger may have setts here. Several trees on site and on the borders are protected by TPOs. Grassland may also have interest. The woodland is already used as informal accessible natural greenspace and accessed from the path to the south.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required. Buffers to the woodland replacement planting for any trees removed.
<i>Ecology Comments Opportunities:</i>	Retained woodland be retained and could be enhanced by selective thinning and understory planting. Better routes through the wood could be provided that link to the path to the south of the site.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Likely impact on setting of Grade II Listed The Elms, particularly as site includes its former park-like grounds
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Many mature trees on site (TPO)
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Very low density with retention of mature trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No notable constraints.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	The site is located in the eastern part of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>The site is within the existing and proposed development boundary and as such has potential to be considered as windfall development. However, the site assessment has raised concern over the impact on both Grade II listed building (the Elms) and mature trees on site.</p> <p>The site is approximately 500m from the nearest supermarket and regular bus service and 1.0km from the nearest primary school. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Heritage assessment required. Mature trees should be retained. Lower density development likely to be required to make development acceptable.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>Yes</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site can be considered on its merits through a planning application as part of the windfall allowance.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p> <p>It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR015</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	No

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 30 homes or more if apartments are developed. Existing access link onto Monkmoor Road would benefit from some improvement which would be necessary if it was to become adopted highway. There may be some historical constraints on improvements.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Bats are likely in the buildings and perhaps nesting birds. Swifts in particular should be checked for. A scarce plant associated with brownfield sites has been recorded on site.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required. Mature tree on boundaries should be retained.
<i>Ecology Comments Opportunities:</i>	Green roofs should be required that also incorporate 'brown-roof' (very thin soils or rubble) aspects that help replace the conditions needed for the rare plant found here.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Highly sensitive site that falls wholly within Shrewsbury Conservation Area and includes Grade II* Listed Whitehall mansion (NHLE ref. 1254660), together with the associated Grade II Listed dovecote (NHLE ref. 1270676) & outbuildings (NHLE ref. 1270688). Also within setting of Grade II* Listed Whitehall Gatehouse (NHLE ref. 1254671) and attached Grade II listed boundary wall. Site considered to have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	Any scheme should include conservation of dovecote. High quality, well designed scheme has potential to enhance the character and appearance of the CA and settings of LBs over existing 1960s/ 70s office building.
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Occasional mature trees and adjacent trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land from past building uses on site but site not recorded as a site with possible contamination.
<i>Public Protection Comments Management of Constraints:</i>	Assessment of the site past uses may suggest no likely con land. If not remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Improve amenity for surrounding residential properties.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	The site is located in the eastern part of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Site considered a potential windfall site.  No significant constraints identified.  The site is less than 500m from the nearest convenience store, 1.0km from the nearest primary school and adjacent the Monkmoor Road where regular bus services can be accessed. There is a good pedestrian and cycle network in the vicinity. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>Yes</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site is within the defined development boundary and therefore can be considered on its merits through a planning application as part of the windfall allowance.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Site has potential to deliver around 650 dwellings. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The potential new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts in-combination on Hencott Pool Ramsar. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A small pond is present on the eastern boundary with the road which would need checking for GCN and other protected species. An ephemeral pool not marked on Ordnance Survey is present to the west and beyond this at 170m is a large more permanent water body. Standing water is occasional in the lower lying north eastern end of the site. Infield and boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. A thin band of woodland is present on the western side. This is corridor habitat that is protected under MD12 and CS17 and could be home to protected species including badgers, reptiles and amphibians</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees should be retained. The hedge could feasibly be moved to the northern boundary of this site.
<i>Ecology Comments Opportunities:</i>	The damp northern area could provide a useful open water and / or wetland area. The woodland area could be enhanced to improve the
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). No known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	Poultry Farm to the west only 215m away from the site. This may cause significant odour and noise issues particularly in summer months.
<i>Public Protection Comments Other Constraints:</i>	Road noise from the A528 to the east and road to the south.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>This is a large greenfield site and would represent a major expansion of the town to the north west. However, ahead of the development of the proposed NWRR it is considered the current highway network has major constraints, especially in relation to the level of traffic on Ellesmere Road and the A49 by-pass north of Sundorne Road roundabout.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Strategic and local highway considerations.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Not appropriate to allocate land ahead of the development of the NWRR due to significant levels of congestion on Ellesmere Road.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If the grassland is of interest the area available for development may be too small to make this viable. Similarly if significant populations of newts are present this will reduce the amount of land available for development.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Large areas of the pasture are labelled as 'semi-improved grassland' and therefore close to priority / core habitat. Two ponds are present on site with two more ponds found within 125m of the site. These could support GCN. Bats and birds are likely to use in-field and boundary trees in addition to the buildings. Badgers, reptiles and other protected species are also reasonably likely.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees should be retained. If the grassland is of interest the area available for development may be significantly smaller
<i>Ecology Comments Opportunities:</i>	Opportunities should be sought to create large areas of greenspace using contributions from other development proposals nearby. Ponds and in-field trees should be buffered and enhanced for biodiversity and public access. Remaining areas of grassland should not be re-turfed but enhanced with green hay strewing and management as traditional hay meadow.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site includes, and would potentially impact on the setting of, the Grade II Listed Newton farmhouse (NHLE ref. 1176148). Site crossed by the projected line of a possible Roman road (HER PRN 00057). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of LB; DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise from the A5 to the south and additional road to the north west. Noise, odour and dusts a potential from farm on site. Some historic features on site that may require contaminated land investigation.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and farm if it is retained. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site has potential to be part of a large strategic allocation, although it is recognised further heritage assessment is necessary. Improvement to local highway network required and impact on Strategic road network will need to be assessed. Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly in the context of the Black Country Contribution for housing (although fair for employment) within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Strategic and local highway considerations, heritage assessment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038, and in isolation this site is divorced from the existing built edge of the town. Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a significant level of development (potentially 3,000 homes) in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Two ponds are present nearby. One to the north in woodland, and more importantly one in the open field to the south. Grassland may be of interest (on some aerial photos it appears to have ridge and furrow that historic environment should check out). Boundary trees are likely to support bats and birds.</p>

<i>Ecology Comments Management of Constraints:</i>	EclA required. Grassland would require survey between May and August. Some level of mitigation may be required if GCN are found in the ponds. The existing good hedges and boundary trees should be retained and a good buffer provided.
<i>Ecology Comments Opportunities:</i>	Hedges could be turned into thin woodland to enhance the environmental network.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Mature Curtilage trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retain existing trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land off site which may impact on the site (small landfill area).
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be available if required.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The site is divorced from the settlement and should only come forward if other sites to the south are also preferred. There are also outstanding concerns relating to the heritage impact on the Registered Battlefield and the impact to the on-site dense woodland to the north of the site.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site is divorced from the settlement and should only come forward if other sites to the south are also preferred. There are also outstanding concerns relating to the heritage impact on the Registered Battlefield and the impact to the on-site dense woodland to the north of the site.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and for possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclIA required. Corridor habitat that is protected under MD12 and CS17 runs around all sides of this side except the western boundary. This is partly due to a water course that runs along the north and east boundaries. A pond is present near the southern boundary which would need checking for GCN and other protected species - including Tubular Water-dropwort, a UK Priority Species. Infield and boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. Polecat, a UK Priority Species, has been recorded on site. These species like the cover of hedgerows and scrub.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees infield and the boundary should be retained.
<i>Ecology Comments Opportunities:</i>	A feature could be made of the pond, the water course to the east and the hedgerow that links the pond to the eastern edge.
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Listed Albright Hussey (NHLE ref. 1295586) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retain existing trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from roads to west and south. Potential noise from commercial estate to the south of road to the south of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site could come forward with SHR186 as a comprehensive development. However, the site is to the north of the A5 and therefore this would establish a direction of growth beyond a current defined and defensible boundary.</p> <p>In addition there are significant heritage concerns raised over the impact of development on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey. The Shrewsbury Battlefield Heritage Assessment shows that this site makes a strongly positive contribution to the significance of the Registered Battlefield. In this respect, the site's sensitivity to change is high and it is unlikely that development could take place without causing substantial harm to the designated heritage asset.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Impact on setting of Registered Battlefield and listed building.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site would establish a direction of growth beyond a current defined and defensible boundary.</p> <p>In light of more sustainable options to the west of the town it is not felt necessary to breach the by-pass in this direction in this plan period.</p> <p>In addition there are significant highway and heritage concerns, in particular on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey. The Shrewsbury Battlefield Heritage Assessment shows that this site makes a strongly positive contribution to the significance of the Registered Battlefield. In this respect, the site's sensitivity to change is high and it is unlikely that development could take place without causing substantial harm to the designated heritage asset.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If the grassland (pasture) in the northern half is of interest the area available for development may be too small to make this viable. The existing woodland is core habitat so this would also reduce the overall area available</p>
<i>Ecology Comments Other Constraints:</i>	<p>Woodland to north is priority / core habitat and protected by MD12 and CS17. Grassland in northern block may also be priority / core habitat. The two ponds to the west of the railway line would require assessment for GCN. GCN have been recorded in two ponds to the east. The road barrier may mean they don't forage on the site but a rail line is less of a barrier and some land set aside for mitigation may be required. A small water course runs along the far southern boundary.</p>

<i>Ecology Comments Management of Constraints:</i>	EcIA required. Grassland would require survey between May and August. The arable portion in the south does not require survey. Some level of mitigation may be required if GCN are found in the ponds over the rail line. The existing good hedges and boundary / in-field trees should be retained and a good buffer provided. Water course to the south should be buffered and ideally opened up, increasing it's capacity.
<i>Ecology Comments Opportunities:</i>	The woodland in the north could be enhanced the rail line could be buffered to enhance this existing environmental corridor.
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Battlefield Church (NHLE ref. 1246192) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Northern third of site is dense woodland
<i>Tree Comments Other Constraints:</i>	Lower site has screen of trees to railway only
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to the east and rail to the west.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and rail. However the northern end of the site is so slender it may not be practicably useable for residential with mitigation.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	A large portion of this site is a breeding pool for GCN. The area of mitigation land required for GCN is likely to mean the viability of this site is questionable
<i>Ecology Comments Other Constraints:</i>	GCN - medium population is present in the pool on site. Reptiles like grass snake are also likely. Badgers may use areas just off site. Grassland may be of interest and if core or corridor habitat would require consideration under CS17 and MD12.

<i>Ecology Comments Management of Constraints:</i>	EclA required
<i>Ecology Comments Opportunities:</i>	Enhancements to the pool and potentially to any remaining grassland areas
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	Site on edge of historic suburb of Greenfields
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	Appropriate design necessary
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Few trees - ponds present on western side
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east is a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The site was granted permission for 36 dwellings at appeal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Ecological mitigation resulting from GCN population.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site was granted permission for 36 dwellings at appeal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would either be via existing private lane (to Pimley Manor) which would need to be improved to estate road standards, or by using existing access through the Shrewsbury Club. The simple T-junction onto Sundorne Road would also need to be improved to the relevant visibility standards which may not be possible without securing third party land.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Corridor habitat of the Environmental Network surrounds this site on 3 sides and includes the woodland planting along the eastern boundary with the road. An aquatic feature just past the northern boundary may support protected species including Great Crested Newts - unless this is a flowing ditch. Boundary and in-field trees may support bats and nesting birds. Badger may also have setts in the woodland strip to the east and south. The woodland to the south and south west corner is designated as Sundorne Canal (Great Crested Newt Site) Local Wildlife Site.</p>

<i>Ecology Comments Management of Constraints:</i>	EclA required - in particular to check the more mature trees and the water feature to the north. Other checks for ponds in the vicinity should be made considering the internationally important population of GCN not far to the west.
<i>Ecology Comments Opportunities:</i>	The existing environmental network could be buffered and enhanced
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site adjacent to former Shrewsbury Canal to south (HER PRN 03410)
<i>Heritage Comments Management of Constraints:</i>	Address canal through appropriate design.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	occasional tree on site important belts of trees adjacent to east and south curtilages
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east is a noise source. Some potential noise from sports ground and facilities to the north.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road and sports ground.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good

<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Shropshire Council's landscape sensitivity assessment considers this site to be of medium/high sensitivity for residential use. The site promoter has provided additional site specific landscape sensitivity considerations which considers the site within its immediate context, as a well contained option within the wider landscape parcel. It is considered the site's containment mitigates the wider impact on the integrity of the assessed parcel.</p> <p>The site promoter has also clarified access arrangements, with the potential to include a vehicular access through the car park of the Shrewsbury Club.</p> <p>Whilst the site is located on the periphery of the town, the location offers the opportunity to provide a pedestrian route from the Shropshire Way footpath to Sundorne Road as part of the site's green infrastructure contribution.</p> <p>Landscape buffering with the Shrewsbury Canal will be required, and there are more sustainable options to allocate, particularly to the west on the town.</p> <p>The site offers a moderately scaled option, which would complement the other proposed development options for the town. There is potential for early delivery.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Identify the site as a residential allocation</p>
<p><b>Reasoning</b></p>	<p>Shropshire Council's landscape sensitivity assessment considers this site to be of medium/high sensitivity for residential use. The site promoter has provided additional site specific landscape sensitivity considerations which considers the site within its immediate context, as a well contained option within the wider landscape parcel. It is considered the site's containment mitigates the wider impact on the integrity of the assessed parcel.</p> <p>The site promoter has also clarified access arrangements, with the potential to include a vehicular access through the car park of the Shrewsbury Club. Whilst the site is located on the periphery of the town, the location offers the opportunity to provide a pedestrian route from the Shropshire Way footpath to Sundorne Road as part of the site's green infrastructure contribution.</p> <p>Landscape buffering with the Shrewsbury Canal will be required, and there are more sustainable options to allocate, particularly to the west on the town. However, the site offers a moderately scaled option, which would complement the other proposed development options for the town. There is also potential for early delivery.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	60
<b>If proposed for Allocation Design Requirements:</b>	Appropriate access from Sundorne Road. Potential for compensatory car parking at the Shrewsbury Club if required. Improvements to local highway network. Pedestrian access to Shrewsbury Way and appropriate buffering with former Shrewsbury Canal and the environmental network surrounding it.

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access onto A49 bypass or B5062 would be close to the existing Sundorne Roundabout so a review of this junction would be needed to determine the most appropriate junction arrangement for this site and SHR054c. There are existing congestion problems at the A49 bypass Sundorne Roundabout which would need to be addressed by this and other developments in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Sundorne Pool Local Wildlife Site (and Env. Network core area) lies adjacent to the eastern (and part of the southern) boundary. The northern boundary lies adjacent to the northern boundary. Sufficient buffers from the boundaries will be required.</p> <p>Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on settings of Grade II listed Gatehouse to Sundorne Castle (NHLE ref. 1177292) and Chapel to Sundorne Castle (NHLE ref. 1366956). Site also located in former historic parkland for Sundorne Castle (HER PRN 07706). No known archaeology but large size of site suggests it may have wider archaeological potential. Site detached from existing built edge of town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB; impact on character and appearance of former parkland; archaeological DBA +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Large field site with good boundary hedges (appear to be excluded?) Wooded area to east
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Development density and layout needs to be considered so that it allows room for sustainable planting of large trees along the boundaries to integrate this prominent site into the landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to west. Air quality concerns close to road, particularly junction. Possible con land issues due to off site contamination nearby.
<i>Public Protection Comments Management of Constraints:</i>	Air quality mitigation through stand off distances to the road (assessment will show distance required).
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA. If priority habitats are present then the site should not be developed. If priority habitats not present, the Env. Network will require a significant buffer, vastly reducing the developable area.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The majority of the site is Env. Network corridor and may contain priority habitats - botanical survey required. Requires botanical survey, Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters, water voles and nesting birds. A PROW crosses the site.</p>

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. An important arm of the Env. Network covers at least the southern half of the site.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by outlet channels from Sundorne Pool, a former ornamental lake (HER PRN 08283) that formed part of the historic parkland for Sundorne Castle (HER PRN 07706). Medium size of site suggests it may otherwise have archaeological potential. Site detached from existing built edge of town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application archaeological DBA +?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Part open field part heavily tree'd site
<i>Tree Comments Other Constraints:</i>	Open areas
<i>Tree Comments Management of Constraints:</i>	B55837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement.
<i>Tree Comments Opportunities:</i>	Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the west and north. Poss. con land to north and south from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Site to the east of A49 by pass and would be a major new direction of growth for the town.  Site part of the Environmental Network.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site would represent a new direction of growth for the town to the east of the A49 by-pass, which is considered to cause a significant degree of physical and perceived severance from the main urban area.  Concern has also been raised regarding the impact on the highway network given existing levels of congestion on the A49/A53, and over the ecological impact of the site given its location within part of the Environmental Network.  It is not considered necessary to grow the town in this new direction, especially in the light of the availability of more sustainable options to the west of the town.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclIA required to check all ponds on site for full range of protected species in addition to mature trees, buildings, badger Setts, hedgerows, water course. Pasture may be species rich grassland that would be Core or corridor habitat. The Bowbrook runs through this area with much of this being in Flood Zones 2 or 3. GCN have been recorded in the area including a pond directly adjacent to the eastern side at Earl's View. Several Badger records have been made in the area so setts are likely in the area. Otters are known to use the Bowbrook as a corridor and a number of otter deaths have been recorded on the A5 bypass as a result of insufficiently large culverts under the road. There are a large number of mature trees within and bordering this site. Tree Preservation Orders are listed for several trees along the eastern boundary.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network that crosses and surrounds much of site in accordance with CS17 Environmental Networks and MD12. The Bowbrook should be fully buffered.
<i>Ecology Comments Opportunities:</i>	A feature should be created of the Bowbrook. Safe passage for otters under or over the A5 should be installed or a means of preventing them from crossing the road. This could also provide a better crossing for people. A green bridge.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes two potential prehistoric cropmark enclosures (HER PRNs 02126 & 04233).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A5 to the west and other road along south boundary are noise sources with the junction of these two roads creating a possible air quality concern. Potential contaminated land from past land uses a potential.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road to avoid noise issues and stand off distance to road junction to avoid air quality impacts. Con land likely to have remediation available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site represents a major opportunity for greenfield release on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of the promoted land consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road).</p> <p>The site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network. The site can provide a suitable access into SHR177 from Mytton Oak Road.</p> <p>Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road.</p> <p>There are no overriding site constraints identified.</p> <p>Whilst a small portion of the site is in Flood Zone 2 it is considered this can be mitigated due to the scale of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>There are no overriding infrastructure constraints identified as part of this assessment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Identify part of the site as a proposed residential allocation alongside SHR057</p>
<p><b>Reasoning</b></p>	<p>The site represents a major opportunity for greenfield release on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of the promoted land consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road). The site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network.</p> <p>The site can provide a suitable access into SHR177 from Mytton Oak Road.</p> <p>Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road.</p> <p>There are no overriding site constraints identified. Whilst a small portion of the site is in Flood Zone 2 it is considered this can be mitigated due to the scale of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	<p style="text-align: center;">SHR057 (part) / SHR177 combined capacity of 400 dwellings</p>
<b>If proposed for Allocation Design Requirements:</b>	<p style="text-align: center;">Development to come forward as part of a comprehensive scheme to enable the delivery of sustainable residential development.</p> <p style="text-align: center;">Vehicular access will be from Mytton Oak Road.</p> <p style="text-align: center;">Development will be expected to reflect the key objectives of the Big Town Plan.</p> <p>Development will be expected to contribute to the delivery of enhancements to green infrastructure and wherever possible create green linkages with other existing and planned development sites in the west of the town.</p> <p>Green infrastructure to be planned to link into future planned green network to land south of Mytton Oak Road (proposed allocation SHR158/060/161).</p>

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR060</b>
<i>Coal Authority Reference Area?</i>	No

<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	Ecia required. Large pool to the east is core / priority habitat. A small pond is present 112m from the north west boundary. Another large pond has been created as part of other development 87m east from the north east side. The grassland may also be core / priority habitat. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite pond would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The entire area beyond this development should be master-planned - in part to ensure that adequate greenspace provision is provided for people and wildlife. The main pool here could be enhanced in many ways and a large buffer should be the part of any plans. The environmental network along the northern boundary should be enhanced to link existing corridor.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to south is a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road to avoid noise issues
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR161 and SHR060. Whilst these sites are being promoted separately, it is understood there is good opportunity to deliver a comprehensively planned development.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well.</p> <p>The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. This site is over 1.5km to the nearest primary school and convenience store. Frequent bus service operate along Mytton Oak Road and Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Identify the site as part of a mixed use sustainable urban extension allocation alongside sites SHR158 &amp; SHR161. This sustainable urban extension is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p><b>Reasoning</b></p>	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR158 and SHR161. These sites are being promoted jointly and it is understood this is underpinned by a land promotion agreement. This will ensure the site is developed in a comprehensive manner, through a master planned approach.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well. The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. Given the proximity of services it would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. It is recognised there is potential for new education provision within the existing allocated site to the east which could also serve this site. The mix of uses on the site has evolved since the Preferred Options consultation in November 2018, reflecting early urban design work being carried out by the site promoter, alongside the consideration of opportunities for park and ride provision and a more focussed and consolidated employment provision.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>This sustainable urban extension presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 300 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. This is considered to constitute sustainable development.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications required:</b></p>	

<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>This sustainable urban extension of SHR060, SHR158 &amp; SHR161 is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>This is a significant additional Sustainable Urban Extension (SUE) development opportunity for the town. Development will be progressed in a comprehensively planned way, subject to an agreed masterplan reflecting the objectives of the Big Town Plan. This will include a mix of uses, including substantial residential development, commercial land and potentially additional community, leisure and retail uses, where these would not impact on the viability of the town centre.</p> <p>Due to the scale of the site it is likely delivery will continue beyond 2038 into the next plan period.</p> <p>The total site area of land proposed is around 100 hectares. However, to ensure a suitable balance of development it is considered around 50 hectares will be required for residential purposes (to deliver around 1,500 dwellings) and a minimum of 5 hectares will come forward for employment purposes, alongside the potential for new park and ride provision. There are significant opportunities to enhance infrastructure as part of this development.</p> <p>Vehicular access will be served from both Mytton Oak Road and Hanwood Road and will support the creation of a circular link road sufficient to sustain a bus route. Where necessary improvements to the Local and Strategic Road Networks will be funded through the development.</p> <p>Development will support the creation of and enhancements to existing green corridors as part of the Big Town Plan's wider strategy to improve the town's green network. This will also support enhancements to pedestrian and cycle links in this area of town.</p>

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR063</b>
<i>Coal Authority Reference Area?</i>	Yes

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). If GCN are present in the pool and / or the grassland is priority / core habitat, then the reduced area available for development after adequate mitigation has been provided may make this site unviable.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Ecia required. Two large ponds onsite, a large pond in the garden to the west and others nearby would require GCN surveys. Grassland may be of interest. The combination of pools, scrub and hedgerows forms interesting environmental network habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite ponds would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network on site and to south in accordance with CS17 Environmental Networks and MD12. The field to the east has far fewer lower ecological interest. Leaving the field to the west may work.
<i>Ecology Comments Opportunities:</i>	Work to enhance the western field would provide good greenspace for any development in the field to the east. Tree planning along the southern boundary would boost the environmental network. Or just letting the hedge grow wide. Another pool could be dug in the western pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes 19th century brickyard (HER PRN 28270) and small, non-designated field barn
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA and Level 2 historic building assessment of field barn).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	BS 5837: 2012 Arboricultural impact assessment must be undertaken and the tree constraints and opportunities used to inform site layout design.
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential contaminated land due to past land uses. Road is a noise source to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Noise can be mitigated via stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site has potential to be part of a large strategic allocation.</p> <p>Improvements to local highway network required and impact on Strategic road network will need to be assessed.</p> <p>Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation..</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038.</p> <p>Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<i>Highway Comments - Direct Access to Highway Network?</i>	Directly onto Shillingston Drive. The site has sufficient frontage to be able to deliver a suitable form of junction.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). A large part of the area appears to be Environmental Network - Core Habitat and/or Corridor. There is not likely to be space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Other Constraints:</i>	Ecia required. Most of the many mature trees on this sites are have TPOs. The habitat appears to be overgrown grassland / scrub in one part, overgrown garden in another and woodland to the east. Several protected species could be found here. The most likely include nesting birds, bats and badgers. It may be that not all the site would qualify as Environmental Network. But it is likely that a big proportion would be which leaves little space for mitigation measures

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if found. The hedgerows and mature trees should be retained. In particular the TPO trees
<i>Ecology Comments Opportunities:</i>	It may still be the former grassland on site retains interest that could be restored. Woodland enhancement may be possible.
<i>Heritage Comments Significant Constraints:</i>	N/A

<i>Tree Comments Other Constraints:</i>	Mature Oak trees on site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retention of mature tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No significant constraints noted.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The site is within the existing development boundary, without any overriding constraints.  Care will need to taken to retain trees on site.  Windfall opportunity.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site is within the existing development boundary and therefore has windfall potential.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.  It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would access the highway directly onto the new route of Pulley Lane with the exception of SHR185 which is promoted with access to the old route of Pully Lane south of Lower Pulley Cottages - this section of old Pulley Lane in not suitable for new development traffic and improvements could not be achieved without third party land. The left only turn onto Hereford road (from new Pully Lane) works for the current users of the new Pulley Lane route as this accommodates Bayston Hill traffic that wants to access Shrewsbury. If these sites were developed those wanting to access the A5 bypass would need to take a detour to the Meole Brace retail park roundabout - this is not ideal.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are present on the borders of this site and perhaps within. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The grassland may be of interest.

<i>Ecology Comments Management of Constraints:</i>	Grassland would require survey between May and August but an experienced surveyor as pastures are difficult to assess.
<i>Ecology Comments Opportunities:</i>	Good existing hedgerows could be enhanced or thickened to create think woodland and ecological network.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site close to projected line of Roman road (HER PRN 00098).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Some significant trees on and adjacent to the boundaries of the site, level of important tree cover may limit developable area.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>

<b>Relationship to the Black Country</b>	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Site is on potential line of Roman Road.  Small site in its own right, but could come forward with adjoining land to form a strategic location.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution..</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site itself is free of many constraints, although heritage assessments would need to be carried out. However, the site is small in its own right, and although adjoining land to east is also being promoted, at this stage there is no certainty as to the delivery of this combined site.  In addition, it is considered that significant land release to the west of the town is preferable in order to meet the town's guideline up to 2038.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Access onto Mount Pleasant and Lancaster Road. Dual access to the site will minimise impact on highway network. Impact on existing congestion on Mount Pleasant linked to Mount Pleasant / Ditherington Road junction needs to be assessed and mitigated.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss (possibly others) and possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A Tree Preservation Order is listed for one tree on the north western corner. The thin woodland strips and scrubby area in the south is environmental network that requires protection in accordance with CS17 Environmental Networks and MD12. A pond is present 162m to the north east. The grassland, despite regular mowing, may hold interest.

<i>Ecology Comments Management of Constraints:</i>	Pond to NE would need survey for GCN. Other protected species mitigation may be required. Bats and nesting birds are most likely. Survey the grassland between May and August.
<i>Ecology Comments Opportunities:</i>	This area is one of the few areas of greenspace in this area. Any provision of greenspace should be publicly available and ideally enhance existing habitats.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees to North and West curtilages screen site from existing residential
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retention of mature tree cover
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential noise from commercial to the north and east of the site where there is also noise from railway line. Possible contaminated land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Brownfield site, potential windfall opportunity.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site is predominantly brownfield and is located within the existing and proposed development boundary for the town. The site has no overarching constraints, although highway impact on Mount Pleasant linked to Mount Pleasant / Ditherington Road junction needs to be assessed. Potential windfall opportunity.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>

<i>Highway Comments - Direct Access to Highway Network?</i>	Difficult to access the Strategic Road Network as no direct link to A5 from Longden Road
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EcIA required. The eastern boundary is environmental network on account of the water course. This requires protection in accordance with CS17 Environmental Networks and MD12. A small pond is present on site at the southern end. A new pond appears to be present in the new development to the east (27m away) and another pool 165m to the west. There are several mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Water Voles are possible on this water course and otter are likely to use it as corridor.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to east in accordance with CS17 Environmental Networks and MD12. A large buffer to the water course should be provided.
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Post-medieval coal workings present on site (HERPRN 06776) Site would reduce/remove spatial separation between built edge of town and Nobold, harming its historic character.
<i>Heritage Comments Management of Constraints:</i>	Site subject to full archaeological DBA and evaluation in 2014. Further round of evaluation and mitigation would be secured by condition. Design would need to ensure that a distinct spatial separation is maintained with Nobold
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Trees and hedgerows on the boundaries of the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential for some impacts from commercial to the east however noted there are closer residential properties therefore no likely issues. Possible contamination of land from mining and quarrying operations in the southern part of the site.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site has been subject to a planning appeal against refusal in 2015 with the Inspector dismissing the proposal (SC ref: 14/01983/OUT).</p> <p>It is recognised there are no overarching landscape and visual impact considerations identified as part of the Local Plan Review assessment with the site scoring medium/low. However, there are heritage concerns relating to potential removal of the gap between the existing built form to the east and the historic hamlet of Nobold. On this it is worth noting that this issue of local character was raised in a planning appeal at Inquiry in 2015, with the inspector concluding that Nobold has a distinctive, rural character and its own separate identity and is that these characteristics are worthy of protection. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site represents a strategic gap between the urban form and the historic hamlet of Nobold; its potential erosion would impact adversely on the character of the area.</p> <p>Whilst current site assessment evidence suggests there are no other overarching on-site constraints, it is felt that the preferred site/s offers more strategic benefit to the town in meeting the identified housing need up to 2038.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Potentially 34 homes. Access arrangements onto Woodcote way will need to be carefully assessed due to the close proximity of the A5112 roundabout and the new Redwings development access. Modifications to the roundabout may be required or access could be incorporated into a modified roundabout. Access should be linked with SHR218. The site is approximately 1.0km from the nearest supermarket, 1.5km from the nearest school. Regular bus services operate along Woodcote Way which is adjacent to the site. There is a good pedestrian and cycle network in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others).
<i>Ecology Comments Other Constraints:</i>	Requires EclA and surveys for GCNs (ponds within 500m), badgers and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A

<i>Tree Comments Opportunities:</i>	Net gain for biodiversity - retain existing features and join green corridors
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from Telford Way Road.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment required to consider impact on road noise to meet internal standards with windows open.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Generally, vehicular and wider sustainable access links are considered good.  Site has medium to high landscape sensitivity.  Currently outside the development boundary.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	
<b>Known Infrastructure Opportunities:</b>	
<b>Potential for Windfall?</b>	no
<b>Potential for Allocation?</b>	no
<b>Recommendation</b>	Do not allocate
<b>Reasoning</b>	<p>It is considered there are more sustainable options in the town to deliver planned growth over the plan period.  The site is considered to have a relatively high sensitivity to landscape change.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.  It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	No

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will be required for impacts on Hencott Pool Ramsar Site part of which is within the area indicated. Impacts include recreational impacts in-combination and direct run-off into site. Part of the area is also in the catchment of Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) may be required to address potential impact identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>3 ponds are present within 50m of the site. There are a few damp hollows / pools on site. These and others further away may support GCN. Tree Preservation Orders are listed for several trees and area TPOs both within the sites and on the boundaries. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Much of the northern area is likely to be too close to the Ramsar site and not possible to develop. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and west in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation to the north of the site could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site detached from built edge of town. Site includes an a possible prehistoric cropmark enclosure (HER PRN 04415). Very large size suggests there may also be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	Future proposals for a north west relief road would run through this land making it undesirable to develop if this removes the potential for such a road in future.
<i>Public Protection Comments Other Constraints:</i>	Rail noise to the west.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for rail noise.
<i>Public Protection Comments Opportunities:</i>	Site considered unacceptable on the basis it removes future potential for NWRR. Without this constraint this is a good site.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Poor
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly for employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal, although fair for housing.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Access onto Whitchurch Road at a signal controlled T-junction should continue to be via the roundabout the site currently shares with Morrisons supermarket.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required as potential for bats and nesting birds in the buildings. Potential for reptiles alongside the railway line.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement if required.
<i>Ecology Comments Opportunities:</i>	The Environmental Network along the railway line could be improved. Much more permeable surfaces should be provided.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Includes historic Sentinel Works buildings (HER PRN 06782)
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic buildings assessment of historic sentinel works buildings). Seek to retain historic works buildings on Battlefield road frontage.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Site is brownfield and devoid of trees
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to east - area designated a noise action zone therefore significant noise mitigation likely to be necessary. Potential for noise from Morrisons supermarket, car park and petrol filling station to the south. Contaminated land a potential from existing and past land use on site and
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Suggest standoff from main road is the best option to reduce impacts and ensure no air quality issues are raised. Remediation for contaminated land likely to be available
<i>Public Protection Comments Opportunities:</i>	Residential to north may get a betterment in noise environment by removal of commercial that currently exists.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Brownfield site within the current and emerging Development Boundary.  Site within a Source Protection Zone.  Potential need for increased open space requirements to mitigate the possible recreation impact on Hencott Pool.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The brownfield site has no identified overarching constraints and is located within the defined development boundary. Considered to offer a good opportunity to respond to the objectives of the Big Town plan by virtue of its edge of centre location. Potential windfall opportunity.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Access would be directly onto Monkmoor Road via a new estate road access.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required as potential for bats and nesting birds in the buildings. Mature trees border this site to the south west. The trees may support bats and nesting birds as well as being habitat in their own right. Hedgerow, present along part of the south east border is Core / Priority Habitat.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement if required.
<i>Ecology Comments Opportunities:</i>	Retain and widen the border of trees to the SW.
<i>Heritage Comments Significant Constraints:</i>	Site includes WWI aircraft hangars from former RAF Monkmoor (HER PRN 06783). Planning appeal to demolish and replace with housing refused in 2017 - now seen by Historic England as model case for protecting non-designated heritage assets.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment produced for applications in 2016.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Site is brownfield and devoid of trees
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination from past and existing commercial operations. Possible noise from commercial to the northeast
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be possible.
<i>Public Protection Comments Opportunities:</i>	Would remove noise sources from existing commercial activities on existing residential properties providing a betterment.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located in the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The brownfield site is approximately 1.0km from the nearest supermarket, 1.5km from the nearest school. Regular bus services operate along Woodcote Way which is adjacent to the site. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Whilst the site is brownfield, significant concern has been raised as to the potential impact on the former WW1 aircraft hangers, identified as a non-designated heritage asset.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Percentage of the site within 20m of an historic flood event:</i>	8%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would be accessed from Longden Road. It is more strategically beneficial to consider the site alongside the cluster of sites to the north of Longden Road as there is no vehicular access to the A5 from Longden Road and therefore there would be benefits from establishing a spine road between Hanwood Road and Longden Road. However this site could be delivered independently with some local highway improvements.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A water course runs along the north eastern boundary and this - with a buffer - forms part of the Environmental Network. The network requires protection in accordance with CS17 Environmental Networks and MD12. The band of trees alongside the railway line to the east is protected as an area TPO and it also forms part of the network. This should also be adequately buffered. There are a large number of mature trees bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A pond is present about 85m north of the site however the barriers (like the road) and the poor apparent condition of this pond (very overgrown) would mean GCN are unlikely to be harmed by development at this site (unless other ponds are found).</p>

<i>Ecology Comments Management of Constraints:</i>	Buffers to the water course to the north and TPO trees to the east are required. Hedgerows should be retained and mature boundary trees given a good buffer to protect their roots.
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes an area of former coal workings (HER PRN 06776). Site would potentially remove separation of historic hamlet of Nobold from the built edge of Shrewsbury, resulting in harm to its historic character
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + evaluation). Design would need to ensure that a distinct spatial separation is maintained with Nobold
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Few boundary trees of some significance
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from rail to south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site is over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site represents a strategic gap between the urban form and the historic hamlet of Nobold; its potential erosion would impact adversely on the character of the area. Whilst current site assessment evidence suggests there are no other overarching on-site constraints, it is felt that the preferred site/s offers more strategic benefit to the town in meeting the identified housing need up to 2038.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Highway Comments - Direct Access to Highway Network?</i>	Potentially 174 homes. Access would be via a new signal controlled junction onto Hereford Road. Direct access to the Meole Brace retail park should be maintained for vehicles as well as pedestrians and cyclists.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	Mature trees border this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Grassland may be of interest and would require a survey between May and August.

<i>Ecology Comments Management of Constraints:</i>	Retain and enhance all hedgerows/tree lines on boundaries. If the grassland is of interest then the area available may be reduced.
<i>Ecology Comments Opportunities:</i>	Extend the young woodland on the south west all the way along the western boundary to create ecological network and also help reduce traffic noise / air pollution. Consider soil stripping to create areas of interest.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Number of Bronze Age ring ditches (HER PRNs 00014).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA). NB. Site previously subject to archaeological evaluation and archaeological mitigation would be dealt with by condition.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Field site with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise from commercial to the north and certainly from road to the west - area designated a noise action zone therefore significant noise mitigation likely to be necessary.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site is a greenfield site situated between the Meole Brace Retail Park to the north and the Park and Ride to the south. The site has previously been promoted for an extension to the Retail Park, but is now being promoted for residential purposes.</p> <p>The site is adjacent to the existing development boundary, and therefore offers a good strategic opportunity to develop within the existing urban envelope of the town, promoting cycling and walking given the site is within 500 meters of existing services and regular bus provision and 1km from the nearest primary school.</p> <p>It is not considered necessary to protect any of this area for the expansion of the retail park.</p> <p>Development of the site presents opportunities to improve vehicular access into the Park and Ride through a new signal controlled junction on Hereford Road, although it is preferred that the vehicular/pedestrian/cycle access between the site and the Retail Park is maintained.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>New signal controlled junction on Hereford Road. Maintain existing access point to Retail Park, including vehicular. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Yes</p>
<b>Recommendation</b>	<p>Identify the site as a residential allocation</p>
<b>Reasoning</b>	<p>The site is a greenfield site situated between the Meole Brace Retail Park to the north and the Park and Ride to the south. The site has previously been promoted for an extension to the Retail Park, but is now being promoted for residential purposes.</p> <p>The site is adjacent to the existing development boundary, and therefore offers a good strategic opportunity to develop within the existing urban envelope of the town, promoting cycling and walking given the site is within 500 meters of existing services and regular bus provision and 1km from the nearest primary school.</p> <p>It is not considered necessary to protect any of this area for the expansion of the retail park.</p> <p>Development of the site presents opportunities to improve vehicular access into the Park and Ride through a new signal controlled junction on Hereford Road, although it is preferred that the vehicular/pedestrian/cycle access between the site and the Retail Park is maintained.</p> <p>This site benefits from an extant planning permission.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	<p style="text-align: center;">150 dwellings</p>
<b>If proposed for Allocation Design Requirements:</b>	<p style="text-align: center;">Development to provide residential development with the potential for extra care / assisted living facilities.  Development to be served by a new access from Hereford Road.  Whilst there is a preference to retain an access into the retail park, it is envisaged the current road alignment will be remodelled to avoid 'rat running' and to support an improved road layout.  Signal controlled junction on Hereford Road. Maintain vehicular/pedestrian/cycle links to Retail park.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site would be accessed from Longden Road. It is more strategically beneficial to consider the site alongside the cluster of sites to the north of Longden Road as there is no vehicular access to the A5 from Longden Road and therefore there would be benefits from establishing a spine road between Hanwood Road and Longden Road. However this site could be delivered independently with some local highway improvements.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Area of core habitat that needs to be retained and perhaps buffered would restrict the area available for development potentially to the point where viability is impacted. There does remain lots of arable land of little biodiversity interest however.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A significant proportion of the site is made up of wet woodland / swamp which is almost certainly core / priority habitat. It is also likely to support protected species such as GCN, otter, badger, bats, nesting birds and potentially rare plants and invertebrates. Mature trees are in the border of this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Wet woodland block needs to be retained and a significant buffer created the size of which depends on what protected species might be found there. This will impact on the number of dwellings possible on this site which may impact the viability. Hedgerows and boundary trees should be retained.
<i>Ecology Comments Opportunities:</i>	The wet woodland could be improved for wildlife and potentially for people with a boardwalk through the area created. A full survey would be required first. Woodland planting along the southern boundary would help the network here and also reduce road noise.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site located immediately south of the projected line of a Roman road (HER PRN 00098). No other known archaeological interest but large size of site and proximity to the Roman road suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant group of trees / area of emerging woodland within the site. Hedgerows on site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Significant noise from road to south and rail to east. Potential contaminated land in the area already noted to have been developed in the southeast corner of the site.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site is over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PROW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site in its own right is significantly divorced from the town and there are concerns about how the site would be accessed except through third party land.</p> <p>There are also heritage concerns regarding potential impact on the Roman Road, and noise impacts from the A5 and rail line.</p> <p>The site could form part of a much wider extension to the town when combined with other promoted land between Hanwood Road and Longden Road, but it is not considered this scale of growth is necessary in this plan period. There is also no evidence of joint land promotion.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	This potential employment site lies beyond the A5 bypass and would access the A488 south west of its roundabout junction with the A5 bypass. A new junction to the west of Two mile Houses would be needed as the existing field access is too close the bypass junction.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	There are 3 ponds on the site and a number of ponds within 500m. Mitigation land required for GCN may impact the area of land available for development The woodland to the southern border and alongside the A5 is Env. Network and would require protection in accordance with MD12 and CS17. The block of trees to the south is TPO'd. Requires botanical survey, Ecla and surveys for bats, GCNs (ponds within 500m), badgers (records on the site), reptiles and nesting birds. The ponds, woodland and hedgerows will need to be retained and appropriately buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and ponds. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. Site crossed by the projected line of a Roman roads (HER PRN 00098). No other known archaeological interest but very large site size suggests and scatter of metal detectorist finds suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LB; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with small copse, scattered field trees and hedgerows, area of TPO woodland adjacent to the site, opposite railway line.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A5. Landfill on site but likely to be inert however as on site may require checks.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EciA required. To check all ponds on site (only one obvious pond but others may be present) for full range of protected species in addition to mature trees, buildings, badger setts, hedgerows and the water course. Pasture in northern fields may be species rich grassland that would be Core / priority or corridor habitat. Environmental Corridor buffers a long ditch that runs through this area. GCN have been recorded in the area including a pond 66m away from the north eastern field (to the west of this field). There are a large number of mature trees within and bordering this site. One is protected by a TPO. Otters are known likely to use the ditch as a corridor and a number of otter deaths have been recorded on the A5 bypass as a result of insufficiently large culverts under the road. Two semi-natural areas at the northern ends of the two north east fields should be surveyed.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network that crosses the site in accordance with CS17 Environmental Networks and MD12. In particular the ditch should be fully buffered.
<i>Ecology Comments Opportunities:</i>	The entire area beyond this development should be master-planned - in part to ensure that adequate greenspace provision is provided for people and wildlife. The ditch could be re-naturalized and its capacity increased with in-line pools to made a feature for people and wildlife. De-culvert this where possible. Enhancement of the two semi-natural areas at the northern ends of the two north east fields. Save passage for otters under or over the A5 should be installed or a means of preventing them from crossing the road. This could also provide a better crossing for people. A green bridge.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes, and has the potential to effect the setting of, Grade II listed Upper Edgebold farmhouse (NHLE ref. 1055682). Also includes the associated historic farmstead (HER PRN 40903) and medieval moated site (HER PRN 02968). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of LB; Level 2 historic buildings assessment if any demo proposed at Upper Edgebold Farm; DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road to the west and south. Existing farm on site which if it remains may cause concerns (noise, odour, dusts) and of this area were to be developed may have contaminated land due to past activity.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available. Should the farm remain I would suggest that good stand off distance to first residential properties is proposed to ensure the business does not get hampered by development and vice versa.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site represents a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR161 and SHR060. Whilst these sites are being promoted separately, it is understood there is good opportunity to deliver a comprehensively planned development.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site has no overarching constraints identified.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. These sites (158, 060, 161) are over 1.5km to the nearest primary school and convenience store. Frequent bus service operate along Mytton Oak Road and Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	<p>The site's scale offers significant opportunity to develop additional services and facilities and to mitigate out identified constraints.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	Yes
<b>Recommendation</b>	<p>Identify the site as part of a mixed use sustainable urban extension allocation alongside sites SHR060 &amp; SHR161. This sustainable urban extension is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<b>Reasoning</b>	<p>The site represents part of a major opportunity for significant greenfield land release to the west of the town, within the A5. The site is currently predominantly used for grazing.</p> <p>In following good master planning principles it is considered this site should be considered alongside adjoining sites SHR060 and SHR161. These sites are being promoted jointly and it is understood this is underpinned by a land promotion agreement. This will ensure the site is developed in a comprehensive manner, through a master planned approach.</p> <p>The site offers the opportunity to extend the green networks in the west of the town - a key objective of the Big Town Plan. The site is considered to meet strategic needs well. The site has no overarching constraints.</p> <p>The sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road and would need to provide a new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p> <p>It has a medium/low landscape sensitivity, is considered to be a good location for development by the majority of other service area - ecology, public protection, trees. Heritage have identified the site as an acceptable location, whilst acknowledging the Grade II listed building on the site. It is considered this can be managed through the proposed masterplan process.</p> <p>Whilst the site scores poorly against the SA, it should be recognised that this is predominantly due to the proximity to services and the presences of the Grade II listed Farmhouse at Upper Edgebold, both of which can be mitigated through the masterplan process. Given the proximity of services it would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. It is recognised there is potential for new education provision within the existing allocated site to the east which could also serve this site. The mix of uses on the site has evolved since the Preferred Options consultation in November 2018, reflecting early urban design work being carried out by the site promoter, alongside the consideration of opportunities for park and ride provision and a more focussed and consolidated employment provision.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>This sustainable urban extension presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 300 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. This is considered to constitute sustainable development.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications required:</b>	<p>Yes:</p> <p>Draft Policies SP2 and S16 to be amended to reflect the fact that 300 of the dwellings proposed across SHR060, SHR158 and SHR161 form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>

<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>This sustainable urban extension of SHR060, SHR158 &amp; SHR161 is to include around 1,500 dwellings (300 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 5ha employment land, green spaces, community uses and other on-site infrastructure.</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>This is a significant additional Sustainable Urban Extension (SUE) development opportunity for the town. Development will be progressed in a comprehensively planned way, subject to an agreed masterplan reflecting the objectives of the Big Town Plan. This will include a mix of uses, including substantial residential development, commercial land and potentially additional community, leisure and retail uses, where these would not impact on the viability of the town centre.</p> <p>Due to the scale of the site it is likely delivery will continue beyond 2038 into the next plan period.</p> <p>The total site area of land proposed is around 100 hectares. However, to ensure a suitable balance of development it is considered around 50 hectares will be required for residential purposes (to deliver around 1,500 dwellings) and a minimum of 5 hectares will come forward for employment purposes, alongside the potential for new park and ride provision. There are significant opportunities to enhance infrastructure as part of this development.</p> <p>Vehicular access will be served from both Mytton Oak Road and Hanwood Road and will support the creation of a circular link road sufficient to sustain a bus route. Where necessary improvements to the Local and Strategic Road Networks will be funded through the development.</p> <p>Development will support the creation of and enhancements to existing green corridors as part of the Big Town Plan's wider strategy to improve the town's green network. This will also support enhancements to pedestrian and cycle links in this area of town.</p>

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR160</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	7%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-Low
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-Low
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Woodland to the north is Plantation Ancient Woodland and would need to be buffered from the effects of development under NPPF and MD12 (15 - 50m) reducing area available for development. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>GCN have been recorded in the pond in the garden to the south. Boundary trees may support bats and birds and should be assessed. The hedgerows are core / priority habitat and should be retained. The thin woodland on the northern boundary is protected under an area TPO.</p>

<i>Ecology Comments Management of Constraints:</i>	Some land may be required near this pool for mitigation. A large buffer would be required along the northern boundary to protect the TPO trees.
<i>Ecology Comments Opportunities:</i>	Woodland planting along the north and east boundaries should be encouraged to enhance the environmental network. A pond should be created near the southern boundary. SUDS features should be suitable for GCN.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Possible archaeological interest relating to the battle archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Scattered mature curtilage trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise to the west from road. Small landfill to north, commercial to the north as a noise and dust source.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north-east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site is divorced from the settlement and should only come forward if SHR195 is preferred.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. It also performs poorly for housing in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal, although fair for employment.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site is divorced from the settlement and site SHR195 is not preferred.</p> <p>There are also outstanding concerns relating the impact to the on-site dense woodland to the north of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR161</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclIA required. At least one pond is present on site. Two ponds found within 50m of the site are known to have GCN. Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Tree Preservation Orders are listed for several trees on site and in the boundary - mostly the eastern side. The created landscape may have already developed biodiversity interest. Some species of interest have been found in the SUDS feature near the entrance.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. This is likely to involve setting aside terrestrial habitat near the pond in the garden to the north of the site. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field with large buffers for the TPO trees in particular. Protect, enhance and restore Env. Network that runs down the eastern side in accordance with CS17 Environmental Networks and MD12. This would also take into consideration the TPO trees.
<i>Ecology Comments Opportunities:</i>	Environmental Network could be enhanced in many places. In particular the eastern side. The side would serve well as a country park given the infrastructure has already been installed.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Archaeological features identified through archaeological work in 2012 -13.
<i>Heritage Comments Management of Constraints:</i>	Archaeological mitigation can be secured by condition.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows, some TPO trees on and adjacent to the site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No notable constraints
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low and High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	SHR162 is part of SHR216 which has the potential to deliver 694 homes. Access would be onto Holy Head Road. Land would need to be protected to deliver the Shrewsbury North West Relief Road across the southern part of the site.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. A large garden pond is found 40m to the west of this area. Shelton Rough Local Wildlife Site is directly adjacent to the eastern boundary and northern corner. The grassland may be species rich and could be defined as Core / Priority Habitat and therefore be considered in accordance with CS17 Environmental Networks and MD12. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A block of woodland to the north west is at least Corridor Habitat and likely Core Habitat. Several protected species are likely to be found on or near the site including birds, bats, badgers

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement - in particular if the pond is found to support breeding GCN. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network borders the site on most sides in accordance with CS17 Environmental Networks and MD12. In particular a wider buffer should be in place adjacent to the Local Wildlife Site woodland.
<i>Ecology Comments Opportunities:</i>	The woodland to the east and the block to the west could be enhanced by further tree planting adjacent to it.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees and woodlands on the boundaries of the site, level of important tree cover may limit developable area.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	See assessment for SHR216.
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	N/A
<b>Potential for Allocation?</b>	N/A
<b>Recommendation</b>	N/A
<b>Reasoning</b>	See site assessment for SHR216
<b>Further Main Modifications required:</b>	No

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have the potential to deliver 4,958 homes. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for other impacts on Hencott Pool Ramsar Site part of which is directly adjacent and within the surface water catchment. Issues include recreational impacts in-combination and direct run-off into site. More than the minimum 30m per bedroom (SAMDev Policy MD2) may be required to address potential recreational impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>One pond is found in this area and 2 ponds are present within 50m. These and others further away may support GCN. The outflow from Hencott Pool flows through this area. Mature trees are within and bordering this site - most of which are protected under TPOs. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Much of the area is arable with little biodiversity interest.</p>

<i>Ecology Comments Management of Constraints:</i>	Much of the northern area is likely to be too close to the Ramsar site and not possible to develop. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and through the site in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation to the north of the site could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges borders woodland to the NW
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	NWRR location likely to run through the site. Road on southeast boundary a noise source. Poss. con land from unknown filled ground to the northwest.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Consideration of any future NWRR should be given.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good

<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<b>Relationship to the Black Country</b>	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>61% of site in flood zones 2 and 3 which will reduce the potential numbers of dwellings. Within the existing development boundary.</p> <p>The site is approximately 500m from the nearest supermarket and regular bus service and less than 1.5km from the nearest primary school. There is a good pedestrian and cycle network in the vicinity.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site is a greenfield location within the development boundary capable of safe access. However, flood risk is a major constraint which could undermine viability as the scale of delivery will need to be significantly reduced.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	This employment site has direct access onto the A49 bypass and appropriate junction(s) could be achieved along the site frontage.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	North west and south west corners of this area are within the Environmental Network due to the proximity to the flood plain. These parts are in flood zone two and three. Requires EclA and surveys for bats (transects), GCNs (ponds within 500m), badgers and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12
<i>Ecology Comments Opportunities:</i>	A useful habitat corridor could be created to the west and also along the line of the power cables. See accompanying document.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site may effect settings of Scheduled Monuments of Haughmond Hill hillfort (NHLE ref. 1021282) and Queen Eleanor's Bower ringwork (NHLE ref. 1021281). Site contains majority of large Roman marching camp (HER PRN 00124) so has significant archaeological potential. Site detached from existing built edge of Shrewsbury
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of SMS; archaeological DBA + field evaluation). NB Part of Roman marching camp excavated in advance of construction of A49 bypass.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Treeless field site - would need buffer zone to the river and screening to the A49
<i>Tree Comments Management of Constraints:</i>	N/A
<i>Tree Comments Opportunities:</i>	Retain existing trees and Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A49 and rail.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site is well contained between the A49 to the east, the River Severn to the west and north, and the railway line to the south. Highway access can be achieved from the A49.</p> <p>The scale of the site allows for the opportunity for a self contained employment site appropriate for a range of class B uses north of the strategic A49/A5 junction.</p> <p>The prospects of sustainable travel to / from this location are extremely limited unless a new cycle / footbridge could be constructed across the river Severn to Crowmere Road. There are no footways along the existing bypass routes from housing in Sundorne to the north or London Road to the south, both of which are over 2km away. Therefore not suited to residential use.</p> <p>The site is physically separated from the existing built form of the town and therefore is not considered to offer opportunities for mixed use.</p> <p>The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and fair for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>It is recognised the site has been identified as having high landscape and visual sensitivity, however, this is in relation to the larger land use parcel also covers land to the east of the A49 into an area of less self containment.</p> <p>The site is currently identified as having potential for a Parkway Station in the adopted Core Strategy.</p> <p>Much of the site contains a newly designed Scheduled Monument. The site is also in the setting of Scheduled Monuments on Haughmond Hill.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>7% of the site is in Flood risk zone 2 and 3 and therefore must be mitigated through the design and layout of the any future proposal.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Access from the A49 offers the potential to attract investment.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Maintain the site as a proposed employment allocation whilst proactive discussions with the landowner are undertaken to inform the eventual decision regarding the proposed status of this site.</p>
<p><b>Reasoning</b></p>	<p>The site is well contained but divorced from the existing residential built form of the town, and therefore not considered appropriate for housing development. However, the site's strategic access point from the A49 offers a good opportunity to develop a strategically important employment location.</p> <p>Much of the site contains a newly designed Scheduled Monument. This matter is currently being given due consideration, informed by ongoing engagement with the site promoter.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	<p>45ha of employment land</p>
<b>If proposed for Allocation Design Requirements:</b>	<p>This site offers the opportunity for a significant new employment area to the east of the town. Access is proposed from the A49, which also provides a defined boundary to the site.</p> <p>It is envisaged this site could be development for a wide range of employment uses including B1, B2 and B8.</p> <p>A small proportion of the site is within Flood Zones 2 and/or 3 and this will need to be considered in the layout and design of development.</p>

**Site Assessment - Stage 3 Updated**

<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High and Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would be onto Corporation Lane some 200m north of the Nursery Meadows junctions. This section of Corporation Lane is a single track lane with no pedestrian facilities and unsuitable for the traffic associated with the proposed development. Third party land would be required to improve the lane. Also the access route onto the Berwick Road (Corporation Lane and Coton Crescent) are narrow residential streets.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others.) and for possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. Entire area may be Environmental Network - Core Habitat and/or Corridor. There is no space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The grassland habitat has been identified as potentially of interest and if so this would mean the entire site is core habitat in the environmental network and requires protection in accordance with CS17 Environmental Networks and MD12. There is a large pool just over the railway line which has recently been shown to support a medium population of Great Crested Newts. If the grassland isn't of interest then much of the boundary of the site is corridor in the Env. Network. Mature trees border this site. One mature tree is protected with a TPO. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Survey may reveal that not all the site is Environmental Network but where this is present it should be protected, enhanced and restored in accordance with CS17 Environmental Networks and MD12. Area of mitigation required is likely to reduce the area available for development.
<i>Ecology Comments Opportunities:</i>	Corridor to the east and west could be enhanced

<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Curtilage trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to east as noise source.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Around 10% of the site is brownfield.</p> <p>The site is over 1.0km to the nearest shops and primary school on Ellesmere Road. The route would be via Corporation Lane which has no footways albeit lightly trafficked.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site's access is not considered suitable, and there are more sustainable options elsewhere.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	Access via a new priority junction onto Berwick Road which is subject to the national speed limit. Would only be appropriate if it could be demonstrated that the existing 40mph speed limit could be appropriately extended.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Western third of site is Environmental Network Corridor as it is within Flood zone 2. There is little space left on site for development which may make this area unviable. The network requires protection in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Other Constraints:</i>	Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A Tree Preservation Order is listed for the block of trees to the north.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries and infield.
<i>Ecology Comments Opportunities:</i>	Enhance Environmental Network by additional tree planting.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would be via Shelton Lane to Holy Head Road. Shelton Lane is very narrow and not suitable for regular vehicular traffic and would need to be upgraded from bridleway to estate road standards if this development were to go ahead and third party land may be required.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Entire area is Environmental Network - Core Habitat and/or Corridor. There is no space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. The site may have once been species-rich grassland but now appears to be a mix of scrub and woodland. Being semi-natural in character the entire site creates good corridor habitat - perhaps Core Habitat in places. Several protected species could use this habitat. In particular, nesting birds, bats, badgers, reptiles, and otter.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Survey may reveal that not all the site is Environmental Network but where this is present it should be protected, enhanced and restored in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	It may still be possible to restore the former species-rich grassland. Woodland enhancement may be possible.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Significant woodland across site, could not be developed without the loss of a significant area of high value woodland.
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible off site contamination migration possible.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>his site is isolated from the other sites being promoted between the Mytton Oak Road and the Radbrook Road. It would therefore need to be developed as a stand alone site with access assumed to be via the existing private lane to Ley Grange. The junction of this lane with the Mytton Oak Road would need to be improved. If the lane is to be adopted it would need to be improved to highway estate road standards. Alternatively the site could be accessed via a new roundabout junction replacing the existing Gains Park Way / Mytton Oak Road ghost island right turn junction.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. The area required may impact the viability of any development here. If the grassland is priority / core habitat, then the reduced area available for development after adequate mitigation has been provided may make this site unviable</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Eastern part of site is in Flood Zone 2 and 3 and also the Environmental Network on account of the buffered area from the Bowbrook. A pond is present and GCN are known from the area. Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. Another large pond is present to the east which may also support GCN. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Buffer to the Bowbrook could provide useful enhancement to this corridor if large enough (at least 10m). In-line pools could also act as a flood mitigation measure.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees on and adjacent to the site, may limit developable area and access.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>10% of site in flood zones 2 and 3.  Site is a Source Protection Zone.  18% of site in 1000 years surface water flooding zone.  The site can easily be linked into existing pedestrian and cycle infrastructure and there is a frequent bus service on Mytton Oak Road (less than 400m away). It is approximately 1 km from a local shopping centre Oxon Primary School.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site could form part of a wider allocation with other promoted sites between Mytton Oak Road and Hanwood Road, but this would be reliant on additional land being promoted to the east.  Other site preferable at this stage to accommodate need.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.  It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This is part of a cluster of site options (along with SHR179 and SHR180) SHR173 has the potential to deliver 700 homes. Access would be via a new junction onto Ellesmere Road. The traffic generated by such a large development - as high as 500 trip in the peak hour - would create significant congestion on Ellesmere Road. It is very unlikely that the congestion can be mitigated. Development of this scale on Ellesmere Road is unlikely to be acceptable in highway terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere, Hencott Pool and Clarepool Moss(possibly others) and possible recreation impacts on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. North western corner is within a Local Wildlife Site (Core Habitat in the Env. Network) and a wide border of the north and west are Env. Network corridor on account of the grassland which may be of interest. The trees in the LWS are also protected under an area TPO. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Some areas look a little like dry ponds. These could require checking.</p>

<i>Ecology Comments Management of Constraints:</i>	Grassland would require survey between May and August but an experienced surveyor as pastures are difficult to assess. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12. Reduced area of development likely due to mitigation land required for Environmental Network.
<i>Ecology Comments Opportunities:</i>	Environmental Network could be enhanced in many places. In particular the western side along the railway and the northern side next to the Local Wildlife Site.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges borders woodland to the NW
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east, rail to west creating noise sources. Possible contamination from off site sources. Any large scale development on this side of town will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Development of the NWRR would remove the highway objection to this site.</p> <p>If allocated developer contributions should be sought towards the creation of a NWRR.</p> <p>Large site on the edge of Shrewsbury's urban area, within easy walking distance of the town centre and train station and on a public transport.</p> <p>Opportunity for biodiversity gain as part of buffering to the north and east/south-east of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Yes</p>
<b>Recommendation</b>	<p>Identify the site as a proposed residential allocation</p>
<b>Reasoning</b>	<p>The proposal for the North West Relief Road (NWRR) is central to the inclusion of this site as an allocation. Currently, traffic between areas to the north and west of Shrewsbury has to pass through the town centre, through unsuitable roads west of the town or take the significantly longer route around the A5 / A49 bypass. As a result, there are unacceptably high levels of traffic including heavy vehicles on residential roads, including Ellesmere Road, approaching the town centre and within the centre itself where there is only limited highway capacity. This leads to problems of congestion, delays and journey unreliability for road users, and problems of noise, poor air quality and reduced accessibility, public transport services are also affected by congestion.</p> <p>At the time of the original Preferred Options consultation in November 2018, Shropshire Council did not have agreed funding for this road and it was therefore not considered as a viable opportunity to include within the Local Plan review. In February 2019 it was agreed the Council would received £54m of funding towards the construction of the NWRR. A Planning Application for the NWRR is currently being considered by Shropshire Council.</p> <p>Without the NWRR it is not considered the highways access to SHR173 is achievable without unacceptable impact on existing road network and amenity value of local residents. It is therefore considered the allocation should not come forward until the completion of the NWRR.</p> <p>The scheme has the potential to support funding for the NWRR through community infrastructure levy (CIL) funding.</p> <p>The scheme is considered to be in a sustainable location within a 15/20min walk of the town centre, and can support biodiversity gain through the creation of a green infrastructure buffer to the north of the site, adjacent to the Old River Bed SSSI and to the east/south-east adjacent to the railway line. There are also opportunities to deliver local facilities at the scale of housing proposed which increases the self-containment of the proposal and reduces the need to travel.</p> <p>The option represents a complementary area of growth with land to the west of the town. This supports a balanced approach to growth in the town in the long term.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	<p style="text-align: center;">450</p>
<b>If proposed for Allocation Design Requirements:</b>	<p>Dependent upon the delivery of the NWRR, and phasing should reflect this with no occupation before the road's operation.          Opportunity to deliver the scheme through a master planned approach, focussing on design quality, layout and mix.          Opportunity to support key objectives of the Big Town Plan.</p>

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR174</b>
<i>Coal Authority Reference Area?</i>	No

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have the potential to deliver 4,958 homes. The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for impacts on Hencott Pool Ramsar Site, which is entirely within this allocation. Clearly the Ramsar will not be possible to build on but it may well be impossible to develop much of the rest of this area. Impacts directly and indirectly on the Ramsar would also include destruction of habitats, recreational impacts in-combination, damage to the water catchment and direct run-off into site. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address potential recreation impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRP passes through the middle of this site. Lies in 'rural' setting. SHR200 is part of this site but there is no entry in this spreadsheet. Similar reservations would apply.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (in ponds adjacent), Reptiles, Badgers (known), Bats (buildings could require survey if being altered / destroyed), nesting birds, vascular plants. Environmental Network, including several areas of core / priority habitat would require survey. TPO trees are throughout.</p>

<i>Ecology Comments Management of Constraints:</i>	The HRA - informed by the EclA - will have to assess how much of this area might be available for development. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network - mostly to west and north but also through site - in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation close to the Ramsar could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Site includes historic farmstead of Cross Hill Farm (HER PRN 26966) and possible prehistoric cropmark enclosure (HER PRN 04241).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; Level 2 historic buildings assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	This site has 2 important Heavily wooded or plantation of trees on to the NW and Hencott pool Ramsar site
<i>Tree Comments Other Constraints:</i>	Remainder of site is agricultural with hedges and scattered trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature woodlands
<i>Tree Comments Opportunities:</i>	Part of site suitable part of site not suitable
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to east creating noise sources. Any large scale development on this side of time will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively. Poss. contaminated land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	Would be better site if air quality concerns for town centre were not so pronounced.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and fair for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access is proposed onto Preston Street. In the interests of highway safety and to protect the amenity of residents in the vicinity of Preston Street, the new development south this site was given permission based on a 150 occupancy limit (with access onto Preston Street only) before a through route to London Road (south of Shrewsbury College) is in place. This through route has been designed to be attractive for those living in the new development to travel in both direction but is not direct and would not be attractive for those from SHR176 to use to gain access the strategic highway network at the A5 Emstrey Roundabout. Therefore it is unlikely that SHR176 would be acceptable due to the impact on Preston Street.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network which may impact the viability of this area as a whole. Fields to the west are arable and outside the network so less likely to have issues.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12. The River Severn along the eastern boundary and a buffer to this is also designated as a Local Wildlife Site. To the north a former quarry in the woodland is also protected as a Local Geological Site. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Two ponds are found in this area and 2 ponds are present within 210m. These and others further away may support GCN. Otter will use the River corridor but may also shelter in the woodland / scrub near the pond and drain and other areas. Badger are likely. Bats and birds are likely to use the buildings.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries and woodland block. Environmental Network and both Local designated sites should be protected, enhanced and restored in accordance with CS17 Environmental Networks and MD12. Area of mitigation required is likely to reduce the area available for development.
<i>Ecology Comments Opportunities:</i>	The field to the far east should be planted up as a mix of woodland and ephemeral pools. The line of the drain with the pool should be extended on both ends to enhance this corridor and perhaps coupled with an access route. The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools and 'leaky dams' should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site contains non-designated historic farmstead of Weirhill (HER PRNs 15145 & 27842) and site of Preston Ferry (HER PRN 02759). No other known archaeological interest but very large site size suggests there may be wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application ( Level 2 historic building assessment of historic farmstead if demo proposed or setting assessment to provide suitable stand-off from farm ; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Remainder of site is agricultural with hedges and scattered trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north creating noise. Possible con land.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites have good access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the SRN. SHR177 could deliver 1,545 homes and SHR177 is promoted as a small employment site. Land would be available from the sites to deliver a series of appropriate type junctions and pedestrian and cycle infrastructure that connects to the existing network in the area.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>A large proportion of this area is Environmental Network - Core Habitat and/or Corridor. Partly because much of it is in flood zones 2 and 3. There is little space on site to mitigate for the loss of the network which may impact the viability of this area as a whole.</p>
<i>Ecology Comments Other Constraints:</i>	<p>A water course runs along the northern and eastern boundary. This and a 50m buffer into the site is within the Env. Network. The coarse grassland may be of interest. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Two trees just north of this area protected under TPO. Hedgerow is Core / Priority Habitat. Birds and bats may also use the buildings present on site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north and east in accordance with CS17 Environmental Networks and MD12. This is likely to leave very little room for development.
<i>Ecology Comments Opportunities:</i>	Network could be enhanced alongside the water course in particular but also down west border.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes medieval historic farmstead of Oak Farm (HER PRNs 13055 & 27846).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Level 2 historic buildings assessment if demo at Oak Farm proposed, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant trees along east boundary of the site, hedgerows on other boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Residential; to the north west and opposite Gains Park Way.
<i>Public Protection Comments Management of Constraints:</i>	Separation distances primarily with good layout and orientation, abatement technologies and boundary treatment or a combination of the above could be employed to reduce any noise, odour and dust impacts on residential properties.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good

<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site represents a major opportunity for greenfield release alongside SHR057 on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of this combined site consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2036. The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road). The combined site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network. Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road. There are no overriding site constraints identified.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Identify the site as a proposed residential allocation alongside part of SHR057</p>
<p><b>Reasoning</b></p>	<p>The site represents a major opportunity for greenfield release alongside SHR057 on the edge of Shrewsbury between the existing built form (Gains Park) and the A5, consisting of around 25ha. The full extent of this combined site consists of over 50ha, but it is not considered all this land is necessary to meet development needs up to 2038.</p> <p>The site is well contained to the west (A5), east (Gains park) and south (Mytton oak Road).</p> <p>The combined site has good potential for access onto Gains Park Way which connects with the Welshpool Road to the north and the Mytton Oak Road to the south and onto the Strategic Road Network.</p> <p>Development in this location offers the opportunity to deliver the objectives of the Big Town Plan, in particular the potential to develop green infrastructure between this site and land south of Mytton Oak road.</p> <p>There are no overriding site constraints identified.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	<p style="text-align: center;">SHR057 (part) / SHR177 combined capacity of 500 dwellings</p>
<b>If proposed for Allocation Design Requirements:</b>	<p style="text-align: center;">Development to come forward as part of a comprehensive scheme to enable the delivery of sustainable residential development.</p> <p style="text-align: center;">Vehicular access will be from Mytton Oak Road.</p> <p style="text-align: center;">Development will be expected to reflect the key objectives of the Big Town Plan.</p> <p>Development will be expected to contribute to the delivery of enhancements to green infrastructure and wherever possible create green linkages with other existing and planned development sites in the west of the town.</p> <p>Green infrastructure to be planned to link into future planned green network to land south of Mytton Oak Road (proposed allocation SHR158/060/161).</p>

**Site Assessment - Stage 3 Updated**

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	Access would be onto Albert Road. Estate road access with associated pedestrian facilities can be achieved within the site frontage.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	EclA required. Mature trees are within and bordering this site. One tree in the south east corner is protected with a TPO. The trees, hedgerows and buildings may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. This area has very low availability of Public Open Space (POS). Loss of this area to housing would represent the loss of potential POS.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	occasional adjacent mature tree
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No constraints noted.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located in the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Site is the existing Reman Services Sports and Social Club with approx. 20% is brownfield.  Site within the main urban form with opportunities to connect to existing services and facilities.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Part of the site is currently in use.  No overarching constraints identified. Windfall opportunity.  Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.  It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR179</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This is part of a cluster of site options (along with SHR179 and SHR180) SHR173 has the potential to deliver 700 homes. Access would be via a new junction onto Ellesmere Road. The traffic generated by such a large development - as high as 500 trip in the peak hour - would create significant congestion on Ellesmere Road. It is very unlikely that the congestion can be mitigated. Development of this scale on Ellesmere Road is unlikely to be acceptable in highway terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others) and possible recreation impacts in-combination on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The areas is bordered to the north and west with Env. Network. The small separate field to the south may contain grassland of interest that qualifies as Core/Priority Habitat. Some areas look a little like dry ponds or small areas of interesting habitat. These could require checking.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Build on the existing small blocks of non-arable land to create accessible natural greenspace. Consider soil stripping to help create biodiverse habitat.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges and 2 "islands" of trees one central one to the south
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Poss. contaminated land. Road noise to the east. Any large scale development on this side of town will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively.
<i>Public Protection Comments Management of Constraints:</i>	Con land remediation likely to be available. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	Would be a better site if no air quality issues in the town centre on this side of town.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). HRA will also be required for additional impacts on Hencott Pool Ramsar Site part of which is directly adjacent including recreational impacts in-combination and direct run-off into site. Part of the area is also in the catchment of Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address potential residential impacts identified in the HRA. These issues would greatly reduce the amount of development possible and would need additional detailed research to inform the HRA of the LPR and at planning application stage. Suggest do not allocate this site. Planned route of the NWRR passes through the middle of this site. Lies in 'rural' setting.</p>
<i>Ecology Comments Other Constraints:</i>	<p>Two ponds are found in this area and 3 ponds are present within 50m. These and others further away may support GCN. Mature trees are within and bordering this site - with some boundary trees to the south protected under TPOs. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Most of the area is arable farmland with little biodiversity interest. Otter has been recorded in the small copse near the north west.</p>

<i>Ecology Comments Management of Constraints:</i>	South west part of this area is directly adjacent to Hencott Pool Ramsar site. Much of the area is likely to be too close to the Ramsar site for development. The HRA will have to assess whether the rest is possible. For other considerations; protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north west and adjacent to the Ramsar in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The woodland block with pools to the north west could form the core of public open space. The buffer to Hencott Pool needs to be significant. Much of the land surrounding Hencott pool has been farmed as arable and likely to be overly fertile. Soil stripping and pool creation near the Hencott Pool could result in very species-rich habitat being created with the possibility of species migrating from Hencott Pool.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). Site includes possible prehistoric cropmark enclosure (HER PRN 04241).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; Level 2 historic buildings assessment; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	NWRR location likely to run through the site. Any large scale development on this side of time will need to consider the impact on air quality of the future development on the town centre, particularly the AQMA. Any additional vehicles entering town from this direction will impact negatively. Road to north and east noise sources. Possible air quality constraints by road junction to northeast.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Separation distance from northeast to ensure no residents exposed to unacceptable air pollution. Air quality monitoring likely to be required for at least a year by any developer to show air pollution concentrations and highlight what mitigation is necessary.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>This is a significant site dependent upon the delivery of the proposed NWRR.</p> <p>Other major concerns over the ecological impacts on Hencott Pool Ramsar Site, and the noise impact from the rail line. The site is over 1.0km to the nearest primary school and 1.5km to the nearest convenience store. Frequent bus service operate along Mount Pleasant Road approximately 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services. A masterplan for these sites would need to include new facilities such as a school and local centre (to be delivered alongside adjoining site options).</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Highway access directly onto the new route of Pulley Lane with the exception of SHR185 which is promoted with access to the old route of Pully Lane south of Lower Pulley Cottages - this section of old Pulley Lane in not suitable for new development traffic and improvements could not be achieved without third party land. The left only turn onto Hereford road (from new Pully Lane) works for the current users of the new Pulley Lane route as this accommodates Bayston Hill traffic that wants to access Shrewsbury. If these sites were developed those wanting to access the A5 bypass would need to take a detour to the Meole Brace retail park roundabout - this is not ideal.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Mature trees are present on some site boundaries. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Retain and enhance all hedgerows/tree lines on boundaries.
<i>Ecology Comments Opportunities:</i>	Existing young woodland on boundaries could be expanded with additional planting. Accessible Natural Greenspace provision in the area is poor. This large area could also provide benefit to existing residents if greenspace were provided near the northern boundary
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by projected line of Roman road (HER PRN 00098) and also possible that the nearby Roman roadside settlement (HER PRN 00002) extends onto the site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Hedgerows on boundaries
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Roads to south and east causing noise and air pollution.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Separation distances to road to ensure no air pollution issues. Monitoring necessary ideally for a period of a year prior to any thorough assessment being possible.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Site covers area from A5 to the south to Pulley Lane to the north.  Northern part of the site (SHR185) is being promoted independently, but it is understood the two landowners are collaborating over promotion. A joint site option (SHR066, 082 and 085) would be preferred if proposed for allocation. Whilst north of the A5 the site is considered to make a contribution to the gap between Bayston Hill and Shrewsbury. Development of this site would extend development to the by-pass which, aside from the Meole Brace Park and Ride, is beyond the extent of the current built form.  Noise mitigation required as a buffer to the A5.  Access to the by-pass from the site would need to use the Meole Brace junction because of the left turn only onto Hereford Road.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Concern that development onto the site could erode the gap between Bayston Hill and Shrewsbury. Development of this site would extend development to the by-pass which, aside from the Meole Brace Park and Ride, is beyond the extent of the current built form.  Access to the by-pass from the site would need to use the Meole Brace junction because of the left turn only onto Hereford Road.  Other sites are considered more sustainable to contribute to the development needs of Shrewsbury up to 2038. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access would be via an improved existing private track onto Longden Road adjacent to the Monumental Mason. Track would need to be improved to estate road standards and it is questionable whether the track is wide enough for this or whether suitable visibility can be achieved within controlled land at Longden Road. The development of the site with two or three homes would allow a private access road to be maintained which is likely to be achievable.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Almost entire area may be Environmental Network - Core Habitat and/or Corridor. There is no space on site to mitigate for the loss of the network. The network requires protection in accordance with CS17 Environmental Networks and MD12.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. The grassland may be of interest and qualify as Core/Priority Habitat. A buffer of the core habitat along the Radbrook is also required and the lower area is in Flood Zone 2 and 3. Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The Radbrook is used by otters. Badgers are likely to use this site. Reptiles are possible here. In particular grass-snake.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. In particular a wide buffer to the water course. Survey site between May and August to determine grassland interest.
<i>Ecology Comments Opportunities:</i>	Every opportunity should be made to provide public access along the Radbrook. This corridor could be improved in many ways for biodiversity and people. Some shelter must be retained for otters on this route.
<i>Heritage Comments Significant Constraints:</i>	Site located within an area of open amenity space within the Shrewsbury Conservation Area.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance of CA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Field site with mature trees and woodland to the north
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Retain mature trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No sig constraints identified.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>

<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Corridor habitat that is protected under MD12 and CS17 runs around the southern and the south western boundary. This is in the form of woodland that would require survey. A pond is present just over the A528. It would need checking for GCN and other protected species - including Tubular Water-dropwort, a UK Priority Species that is recorded nearby. Boundary trees would require assessment for breeding birds and bats. Hedgerows are a priority habitat and would also support nesting birds. Polecat, a UK Priority Species, has been recorded on site and badgers may use the woodland. These species like the cover of hedgerows and scrub.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees in the boundary should be retained. The woodland on the southern boundary should be retained.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site likely to harm setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) and Grade II* Listed Albright Hussey (NHLE ref. 1295586) . May have archaeological interest relating to the battle.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield and LBs; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with curtilage hedges
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Roads to west and east creating noise and air pollution. Road junction to southwest needs consideration for air quality.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. <b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site could come forward with as a comprehensive development with adjoining sites. However, the site is to the north of the A5 and therefore this would establish a direction of growth beyond a current defined and defensible boundary. In addition there are significant heritage concerns raised over the impact of development on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey.</p> <p>The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site would establish a direction of growth beyond a current defined and defensible boundary. In light of more sustainable options to the west of the town it is not felt necessary to breach the by-pass in this direction in this plan period.</p> <p>In addition there are significant highway and heritage concerns, in particular on the setting of the Registered Battlefield and to the Grade II* listed Albright Hussey. The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Northern two fields are arable and are likely to have less ecological interest. The permanent pasture to the south may have grassland of interest. EclA required to assess this and the boundary and onsite trees for nesting birds and bats. A pond is indicated on OS maps in the southern field and on some aerial photos but other aerial photos suggest this is often dry. This will require confirmation. Ponds to the east including the one immediately adjacent in the garden and a small pond on the boundary, in the young woodland, would require survey for GCN and, if found, some mitigation for loss of terrestrial habitat may be required.</p>

<i>Ecology Comments Management of Constraints:</i>	The grassland would require survey between May and August by a very experienced botanist as pastures are difficult to assess. The on-site and nearby ponds will require assessment. The onsite ponds would require a good buffer in accordance with CS17 Environmental Networks and MD12. Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network on site and to south in accordance with CS17 Environmental Networks and MD12. The fields to the north are of lower ecological interest. Leaving the field to the south may work.
<i>Ecology Comments Opportunities:</i>	The environmental network and small pond to the east of this area could be enhanced by opening up the pond and perhaps extending it onto the site but planting trees elsewhere along the boundary with the woodland.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town. No other known archaeological interest but very large site size suggests there may archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows, area of woodland on the boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to north. Poss. landfill impacts from off site to northeast and east.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Con land remediation likely to be available where necessary.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site has potential to be part of a large strategic allocation, although it is recognised further heritage assessment is necessary. Improvement to local highway network required and impact on Strategic road network will need to be assessed. Promoted land to the south of Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known joint promotion agreement in place.</p> <p>These sites are over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Whilst the site has potential to be part of a frontage into a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038, and in isolation this site is divorced from the existing built edge of the town. Land to the north between Hanwood Road and Mytton Oak road is preferred for a major expansion of the town in order to meet a significant proportion of development needs up to 2038. It is felt the preferred site offers greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>The site has potential to be part of a large strategic allocation, however in isolation this site is divorced from the existing built form of the town and would not represent sustainable development.</p> <p>Improvements to local highway network required and impact on Strategic road network will need to be assessed.</p> <p>Promoted land to the south, north and east between Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>These sites are over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>The site performs poorly for employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair for housing in the context of the settlement and fair for housing and employment in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Whilst the site has some potential to form part of a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered the site in isolation does not represent sustainable development, largely by virtue of its physical separation from the existing built form.</p> <p>In addition heritage concerns have been raised as to potential impacts on listed buildings on site.</p> <p>In the context of the site to the north between Hanwood Road and Mytton Oak Road being preferred for significant and comprehensively planned new development, there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038. The preferred land to the north is considered to offer greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>Ecia required. One large pond and a few smaller ponds are situated within the site and another large pond appears to have recently destroyed by this may appear in wet weather. The ponds may support breeding GCN and other protected species. The area of development may be reduced by any mitigation required for GCN. To the north there are another 3 large pools that may also support protected species like GCN. All are within 200m and one is within 35m. There are several mature trees within and bordering this site. The trees and hedgerows are likely to support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees in the boundary and within the site should be retained. The hedgerow that has recently been removed should be re-instated as a useful corridor has been removed for agricultural reasons that do not apply to development. The pools should have a significant buffer and be enhanced even if GCN are not present.
<i>Ecology Comments Opportunities:</i>	The footpath should form part of a significant green corridor that links this site to sustainable transport routes into town. This could take in the pond. Woodland planting should be considered adjacent to the woodland block to the south west.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II Listed Nobold Hall (NHLE ref. 1270731) and Nobold Grange (NHLE ref. 1254531). Site would be detached from existing built edge of town and would potentially also impact on the setting of the historic hamlet of Nobold. Site includes the projected line of a Roman road (HER PRN 00098) and two cropmark enclosure of likely Iron Age/ Roman date. (HER PRNs 00006 & 00009)
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No sig constraints identified.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site has potential to be part of a large strategic allocation, however in isolation this site is divorced from the existing built form of the town and would not represent sustainable development.</p> <p>Significant potential heritage impacts raised and further assessment will need to be carried out.</p> <p>Improvements to local highway network required and impact on Strategic road network will need to be assessed.</p> <p>Promoted land to the south, north and east between Hanwood Road up to Longden Road offers the opportunity to consider a strategic comprehensive proposal in this direction, although it is acknowledged there are a number of different landowners and there is no known promotion agreement.</p> <p>These sites are over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>Whilst the site has some potential to form part of a much larger strategic allocation between the Hanwood Road and Longden Road, it is considered the site in isolation does not represent sustainable development, largely by virtue of its physical separation from the existing built form.</p> <p>In addition heritage concerns have been raised as to potential impacts on listed buildings on site.</p> <p>In the context of the site to the north between Hanwood Road and Mytton Oak Road being preferred for significant and comprehensively planned new development, there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038. The preferred land to the north is considered to offer greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site represents a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Two large pools are present on site. One pond if found just north of the site near Newton Farm. These may support breeding GCN. A large proportion of the area may Environmental Network - Core Habitat and/or Corridor as the grassland is indicated as possibly being of interest. If the grassland is of interest only the north eastern arable field would be available for development. The network requires protection in accordance with CS17 Environmental Networks and MD12. There are a large number of mature trees within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. Any buildings being removed or altered should be checked for bats, birds and other protected species.</p>

<i>Ecology Comments Management of Constraints:</i>	If the grassland is of interest there is very space on site to mitigate for the loss of the network. If newts are present mitigation would be required for the loss of terrestrial habitat. Protected species mitigation may be required if GCN or other protected species are found. The hedgerows and mature trees in the boundary should be retained. The pools should have a significant buffer even if GCN are not present.
<i>Ecology Comments Opportunities:</i>	Work to enhance the ponds and the grassland if it isn't already of high value
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site would be detached from existing built edge of town and includes historic farmstead of Day House (HER PRN 27747). Possible impact on setting of Grade II Listed Newton farmhouse (NHLE ref. 1176148). Site crossed by the projected line of a Roman roads (HER PRN 00098) and bounded to the north by a second possible Roman road (HER PRN 00057). Includes part of a cropmark enclosure of likely Iron Age/ Roman date (HER PRNs 00006).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs; Level 2 historic building appraisal if demo of Day House farm proposed; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows small copse.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible contaminated land around existing farm. Noise from road to southwest.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Contaminated land remediation likely.
<i>Public Protection Comments Opportunities:</i>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. GCN have been recorded in a pond in the south west corner. GCN have also been recorded in the garden pond to the north of this site. Boundary and in-field trees may support bats and birds and should be assessed. The hedgerows are core / priority habitat and should be retained. Reptiles may be present including grass snake.</p>

<i>Ecology Comments Management of Constraints:</i>	Potentially large areas may be require here to mitigate for the loss of foraging habitat for GCN. EclA would be required. Boundary and in-field trees should be retained.
<i>Ecology Comments Opportunities:</i>	This entire area has been considered for use as a major SUDS scheme that would help free up development land further south and east and also reduce the risk of flooding of the main road (A5124). Large scale SUDS that are favourable for GCN should be considered here whatever the outcome.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). May have archaeological interest relating to the battle.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA). NB. Heritage Assessment for site completed in 2018.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Occasional field tree
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise from west, possible noise from commercial to the south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>

<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>This site is part of a group of sites to the north of A49/A53 Battlefield Roundabout in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site is divorced from the settlement and should only come forward if SHR195 is preferred.</p> <p>There are also outstanding concerns relating to the heritage impact on the Registered Battlefield and the impact to the dense woodland to the north of the site. The Shrewsbury Battlefield Heritage Assessment shows that all or part of this site makes a positive contribution to the significance of the Registered Battlefield. In this respect, its sensitivity to change is moderate and whilst development is likely to cause harm to the designated heritage asset, this could be reduced or avoided through careful siting and sensitive design.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites would access the highway directly onto the new route of Pulley Lane with the exception of SHR185 which is promoted with access to the old route of Pully Lane south of Lower Pulley Cottages - this section of old Pulley Lane in not suitable for new development traffic and improvements could not be achieved without third party land. The left only turn onto Hereford road (from new Pully Lane) works for the current users of the new Pulley Lane route as this accommodates Bayston Hill traffic that wants to access Shrewsbury. If these sites were developed those wanting to access the A5 bypass would need to take a detour to the Meole Brace retail park roundabout - this is not ideal.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Protection and enhancement of Environmental Network likely to reduce the developable area of the site. Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. The River Rea is environmental network and core habitat. It is used by otters and a wide range of other wildlife such as Kingfishers which could nest nearby. Hedgerow and some mature trees are present on the northern boundary with the River Rea.</p>

<i>Ecology Comments Management of Constraints:</i>	A large buffer (at least 50m) is require along the river with public access along the entire length. Trees and hedgerows should be retained. Surface water run-off needs to be carefully cleaned using effective SUDS features.
<i>Ecology Comments Opportunities:</i>	Significant river corridor enhancements could be made which could result in less sediments and agri-chemicals entering the water. Sustainable transport routes should be created by installing bike friendly bridges over the River Rea.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by projected line of Roman road (HER PRN 00098) and site of coal workings towards its W end. NB DBA and walkover survey completed for part of site in 2008
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation). NB DBA and walkover survey completed for part of site in 2008
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with scattered field trees and hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south is a noise source.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The variation proposal represents a moderately scaled level of development in a location where the local highway network is close to capacity at peak times. Whilst the development of a 9ha employment site would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road, it is considered likely that at the level of development proposed, and resulting trip generation, any additional congestion can be mitigated through localised highway improvements. The development of the Shrewsbury North West Relief Road will further support this mitigation. This sites are over 2.5km to the nearest primary school and 1.0km to the nearest supermarket. Frequent bus service operate along the A49 and A53 and are less than 400m from the centre of the sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>

<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north and west all noise sources. Road junction poss. air pollutant concern.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Air quality assessment following suitable monitoring by land owner/applicant to verify any assessment. Likely to result in stand off distances to the junction.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The proposal is for a 9ha employment site solely.</p> <p>This variation on SHR197 therefore does not include any element of residential.</p> <p>An updated Transport Statement (TS) has been prepared for the site by the site promoters on the basis of this revised site option, indicating a less than severe impact. Appropriate access can be achieved from the A53, although it is considered there will be a need for localised highway improvements. The TS also highlights the potential for non-car journeys, citing the presence of bus provision to the site.</p> <p>The site is located to the east of the A49 and would therefore represent a new direction of growth for the town. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Localised highway improvements will be required, but it is considered in principle these can be achieved given the scale and nature of the proposal. A heritage assessment will be required to inform the design and layout of the development.</p>
<b>Known Infrastructure Opportunities:</b>	
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site would represent a major new direction of growth for the town to the east of the A49 by-pass, which is considered to cause a significant degree of physical and perceived severance from the main urban area.</p> <p>It is not considered necessary to grow the town in this major new direction, especially in the light of the availability of more sustainable options to the west of the town.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR198</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes

<i>Percentage of the site in the 30 year surface flood risk zone:</i>	3%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	4%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	10%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium and Medium-Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium and Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-Low and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-Low and Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a significant level of development in a location where the local highway network is close to capacity at peak times. Specifically the development would add to the existing congestion on the A49 bypass between the A53 and Sundorne Road. It is unlikely that the congestion can be mitigated. Development of this scale in the location is unlikely to be acceptable in highways terms until the Shrewsbury North West Relief Road has been completed.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Much of this area is arable farmland with few ecological constraints. The ponds (of which there are at least 9 on site and others nearby) are likely to be core / priority habitat and at least two support GCN. Grassland just north of Astley Park may be priority / core habitat. In-field and boundary trees are of interest. A few small blocks of woodland are likely to be core / priority habitat and may also support protected species like bats, birds, badgers, etc. The small block on the far west with the pools is protected under an area TPO. The area available for development could be restricted by the need to mitigate for GCN.</p>

<i>Ecology Comments Management of Constraints:</i>	EclA would be required early on for this site. All pools would require survey including for species like Tubular Water-dropwort which is UK Priority.
<i>Ecology Comments Opportunities:</i>	A site of this scale would have significant opportunities and could make the most of the existing features.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). May have archaeological interest relating to the battle and other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land one copse of mature trees central to site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Commercial to south-west and east. Road to the south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Poor
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Site is divorced from the town.  Potential for employment use.  The site performs poorly for housing and employment in the context of the settlement and the Black Country Contribution within the Stage 2a Sustainability Appraisal.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site would represent a major new direction of growth for the town to the north east of the A49 by-pass, which is considered to cause a significant degree of physical and perceived severance from the main urban area.  There is concern the site is not self contained.  Concern has also been raised regarding the impact on the highway network given existing levels of congestion on the A49/A53.  It is not considered necessary to grow the town in this major new direction, especially in the light of the availability of more sustainable options to the west of the town. There is some potential for the site to be considered for employment purposes, although the landscape and visual impact considerations will need to be managed through design and layout.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Landscape Considerations (Employment) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	This employment site has potential for direct access onto the A5 bypass at Preston Boats roundabout. An new junction onto the A5 south of the roundabout might be difficult to achieve and unacceptable to Highways England. A scheme to create a new 4th arm at the roundabout could be very costly.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	Mature trees are within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. The northern field is surrounded by the Env Network - buffer to the river to the west, line of trees alongside the A5 and the water course that runs through the site. The water course running through the site is buffered by the network. The majority of the site is arable which has low biodiversity interest but the buffers forming the network still require consideration under CS17 and MD12. Otters are very likely to use the water course. Development should not impact this.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north, west and through the site in accordance with CS17 Environmental Networks and MD12
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools and 'leaky dams' should be considered.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site contains part of a rectangular cropmark enclosure of possible prehistoric/ Roman date (HER PRN 04472)
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land divided by a liner group of trees or hedgerow
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	No significant constraints assuming farm would be developed.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Available for employment uses only.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Access is a significant concern, with a new arm from the Preston Boats roundabout potentially undermining viability. Not considered a good location for mixed-use development which further undermines the viability of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	<p>part of a group of promoted sites to the east of Ellesmere Road. Current levels of traffic on Ellesmere Road and on the A49 bypass north of Sundorne Road roundabout constrain major development in the north of Shrewsbury and these sites should only be brought forward once the Shrewsbury North West Relief Road has been secured. The scheme provide alternative routes for existing traffic which reduce the current pressures on Ellesmere Road and the A49 bypass creating additional capacity for major development in north Shrewsbury. The new road will also provide a strategic access route through these sites.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA will be required due to road emissions from increased traffic (in-combination), possible drainage and recreational impacts on Hencott Pool Ramsar. See LPR HRA. Potentially on route of NWRR?</p>
<i>Ecology Comments Other Constraints:</i>	<p>Requires Ecla and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles and nesting birds. There are TPO'd trees in the northern boundary.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Large field site some scattered mature curtilage hedge trees a number on TPO's to the north
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Retain existing trees and Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the east.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Would form part of a new area of growth to the west of Ellesmere Road.  In its own right the site is separated from the main built form on the west of Ellesmere Road.  Significant highway constraints.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>In time this site may have some potential alongside the delivery of the proposed NWRR. However, ahead of this a sustainable access is not considered achievable and there are other ecological and noise impacts which make this site unsustainable.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Highway Comments - Direct Access to Highway Network?</i>	Direct access onto the Battlefield Road in the vicinity of the Shillingston Drive Ghost Island Right Turn junction. The developer would need to be able to demonstrate that a staggered GIRT T-junction operated safely or provide a new roundabout junction to serve Shillingston Drive and the new development.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	The lower part of the site is within the flood zones 2 and 3 and therefore in the environmental network. The western border along the rail line is also corridor. Significant in-field trees are likely to support birds and bats. The hedgerows / lines of trees and scrubby area near the entrance may also support nesting birds and perhaps reptiles. A pond 85m to the north west supports GCN.

<i>Ecology Comments Management of Constraints:</i>	EclA required. In-field and boundary trees should be retained. A GCN licence and some mitigation is likely due to the presence GCN in the nearby pond. The water course along the southern boundary should be opened up and the carrying capacity increased.
<i>Ecology Comments Opportunities:</i>	The Environmental Network could be enhanced around the western boundary and in particular on the southern boundary by making better use of the water course. SUDS features should consider the needs of GCN and may be required as mitigation.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033) . .
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Scattered field trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Odour and noise potential from commercial to the south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>

<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No for housing</p>
<b>Recommendation</b>	<p>Retain as an employment allocation - 'saved site allocation'</p>
<b>Reasoning</b>	<p>The site is currently allocated for employment in the SAMDev Plan and there is no overarching need to move away from this position given the availability of other sites.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<i>Percentage of the site within 20m of an historic flood event:</i>	3%
<i>Percentage of the site within 20m of a detailed river network:</i>	1%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Direct access onto Battlefield Road. Achieving a safe access onto Battlefield Road so close to the A49/A53 Battlefield Roundabout might be challenging.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	The woodland block to the south is protected by and area TPO. Environmental corridor runs around most of the other boundaries. The grassland may be of interest and would require survey between May and August. A footpath runs across the site. The ponds south of the site may contain GCN.

<i>Ecology Comments Management of Constraints:</i>	EciA required. In-field and boundary trees should be retained. A buffer would be needed to the TPO trees as well as the in-field tree. Some mitigation may be required if the pond to the south of the site has GCN.
<i>Ecology Comments Opportunities:</i>	The Environmental Network could be enhanced around the boundary by additional woodland planting. In particular on the southern boundary.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effect on setting of Shrewsbury Registered Battlefield (NHLE ref. 1000033). May have archaeological interest relating to the battle.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (settings of Battlefield; archaeological DBA + evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Well established hedges and occasional field trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise and air pollution from roads to the northwest through to southeast.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources. Due to small site may be difficult to sort through separation. Separation likely to be required to ensure no air pollution concerns. Thorough assessment following air quality monitoring a prerequisite.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the north of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Site is currently allocated for employment development.</p> <p>Significant distance from town centre and residential use is not considered to offer opportunity to meet objectives of the Big Town Plan.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Noise and air quality mitigation needed which will be difficult to achieve due to the scale of the site.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No for housing</p>
<b>Recommendation</b>	<p>Retain as an employment allocation - 'saved site allocation'</p>
<b>Reasoning</b>	<p>The site is currently allocated for employment in the SAMDev Plan and there is no overarching need to move away from this position given the availability of other sites. This site benefits from an extant planning permission.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

<i>Ecology Comments Other Constraints:</i>	EclA required. At least one pond is present on site. Two ponds are found on the site and these may support breeding GCN. Mitigation land required for GCN may impact the area of land available for development - in particular if GCN are found on site. The area required may impact the viability of any development here. Mature trees are present within and bordering this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. The grassland may be species rich and could be defined as Core / Priority Habitat and therefore be considered in accordance with CS17 Environmental Networks and MD12.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network around most of the site in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The north east corner of this area has already been developed. The opportunity should be taken to create a wide buffer alongside the planned route of the road which would incorporate the existing hedge lines and also build in sustainable transport routes. Pools should be created along this route and topsoil stripping would improve biodiversity and also help reduce maintenance costs.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II Listed Oxon Hall (NHLE ref. 1366918).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (setting of LB). NB. DBA produced in 2013. Archaeological evaluation can be secured by condition.

<i>Highway Comments - Direct Access to Highway Network?</i>	These site are part of the Western Sustainable Urban Extension and vehicular access will be provided through the new Oxon Link Road and associated local highway network modifications.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	
<i>Ecology Comments Other Constraints:</i>	EclA required. A few mature trees bordering this site may support bats and nesting birds as well as being habitat in their own right. A large pond is present 80m to the north and another in a garden 105m to the east. These may support GCN.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement is likely to be limited if at all. Retain and enhance all hedgerows/tree lines on boundaries. Enhance Env. Network to the south of the site in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhance Environmental Network by additional tree planting. Creating pools, or designing SUDS feature, that are suitable for GCN.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Occasional tree on site, shelter belt and hedgerows around site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	Close to new proposed road.
<i>Public Protection Comments Other Constraints:</i>	Road noise to west and south (noise and air quality due to proximity to busy junction).
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation through stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources however may significantly constrain the site. Air quality assessment following monitoring by developer necessary and a prerequisite to any planning application being brought forward.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. Site is currently allocated for employment development as part of Shrewsbury West SUE.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Not for housing</p>
<b>Recommendation</b>	<p>Retain as an employment allocation - 'saved site allocation'</p>
<b>Reasoning</b>	<p>Site is currently allocated for employment development as part of Shrewsbury West SUE. The site has a resolution for approval for employment use. Good employment location and important to the balanced development within the allocated SUE. No requirement to allocate for housing in light of other available options.</p> <p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR210</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	The site is directly south of the town's Western Sustainable Urban Extension and vehicular access will be provided through the new Oxon Link Road and associated local highway network modifications.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Otherwise none
<i>Ecology Comments Other Constraints:</i>	GCN may breed in a large pool (reedbed filter) 90m to the south. The woodland, scrub and individual trees to the south and east may be of significance for biodiversity and is protected by CS17 Environmental Networks and MD12. Existing vegetation (course grassland?) may retain some interest.

<i>Ecology Comments Management of Constraints:</i>	EclA required. Retain the environmental network and individual mature trees along the southern and eastern boundary. Provide mitigation for protected species if any found. Grassland / or tall herb vegetation currently present could be enhanced in areas left.
<i>Ecology Comments Opportunities:</i>	Enhancement of env. Network by tree planning alongside the southern or eastern boundary. For any areas of open space consider removing fertile topsoil to create low fertility conditions. Existing vegetation may have some value that could be enhanced by regular management.
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	NB. DBA produced in 2013. Archaeological evaluation can be secured by condition.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Significant shelter belt on boundary, some scattered trees across site and hedgerow boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of exiting mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	On site/near of proposed new road.
<i>Public Protection Comments Other Constraints:</i>	New road would place sig constraints and noise.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation through stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. Available for employment only.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>yes - for employment</p>
<b>Potential for Allocation?</b>	<p>No for housing</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>The site could present a windfall opportunity to extend the existing commercial area of the towns West SUE. Whilst Shrewsbury's functional relationship and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Access arrangements onto Woodcote way will need to be carefully assessed due to the close proximity of the A5112 roundabout and the new Redwings development access. Modifications to the roundabout may be required or access could be incorporated into a modified roundabout.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others). Only a small area of this site is outside Flood Zone 3 (and, by definition, the Env Network) so very little of this area is likely to be viable.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The north east boundary of this area is Local Wildlife Site and Priority habitat / Core Habitat in the Environmental Network. Mature trees and hedgerow border much of this site. The trees and hedgerows may support bats and nesting birds as well as being habitat in their own right. Hedgerow is Core / Priority Habitat. A water course runs along the south eastern boundary and would require a large buffer.</p>

<i>Ecology Comments Management of Constraints:</i>	Being in the flood plain would be difficult to mitigate for without having impacts further downstream. Buffers would be needed to the river and the water course to the south east. The small area outside the floodplain could be developed with few ecological impacts.
<i>Ecology Comments Opportunities:</i>	The water course could be enhanced to make a feature and its capacity increased to help address flooding issues. In-line pools and 'leaky dams' should be considered. For any areas of open space consider removing fertile topsoil to create low fertility conditions. Soil can be used elsewhere on site where amenity planting is required or to create interesting topography for kids and biodiversity features like hibernacula.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Agricultural land with trees next to river creating a buffer
<i>Tree Comments Management of Constraints:</i>	
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to increase woodland cover and integrate the development into the broader landscape
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Nationally modelled Noise Action Zone to the south.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation through stand off distance, glazing and ventilation consideration and layout and orientation of dwellings and combinations thereof to mitigate for all noise sources however may significantly constrain the site.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High and Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	SHR216 has the potential to deliver 694 homes. Access would be onto Holy Head Road. Land would need to be protected to deliver the Shrewsbury North West Relief Road across the southern part of the site.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA. If priority habitats are present then the site should not be developed. If priority habitats not present, the LWS, hedgerows and adjacent woodland will reduce the developable area.
<i>Ecology Comments Other Constraints:</i>	Part of the northern section of the site is within Shelton Rough Local Wildlife Site (and Env. Network core areas). The LWS is directly adjacent to the eastern boundary. The site may contain priority habitats - botanical survey required. Appropriate buffers from the LWS and adjacent woodland will be required. The central hedgerow should be retained and enhanced. Requires botanical survey, ECLA and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters and nesting birds. PROWS cross the site.

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential impact on setting of Registered Park and Garden of Berwick Park (NHLE ref. 1001706) No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of RPG; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Numerous scattered mature field trees adjacent to good woodland screening boundary to the river
<i>Tree Comments Other Constraints:</i>	Open field areas
<i>Tree Comments Management of Constraints:</i>	B55837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement.
<i>Tree Comments Opportunities:</i>	Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible road noise to southwest of the site and commercial noise to the south.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor

<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site offers an opportunity for a greenfield land release on the edge of Shrewsbury. It is recognised the site falls within Bicton parish. Access would be onto Holyhead Road. If allocated land would need to be protected to deliver the Shrewsbury North West Relief Road across the southern part of the site. The site performs poorly for housing and employment in the context of the settlement and the Black Country Contribution within the Stage 2a Sustainability Appraisal. It is recognised the site has a high visual sensitivity rating and a medium/high landscape sensitivity rating. Impact at Spring Coppice and to the east of the site at Shelton Rough adjacent to the River Severn are particular concerns. Some ecological concerns. Impact on Groundwater Source Protection Zone highlighted by EA as significant. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Land to the south to the south of the site should be protected for the potential future alignment of the NWRR. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>This site was included as a proposed allocation for 300 dwellings in the Preferred Options document in November 2018. However, the site was subject to substantial objection, and in particular significant concern was raised by the Environment Agency regarding the potential impact from development on the Source Protection Zone in the area, and associated impacts on the quality of water supply for the town. Therefore whilst the site does offer some locational benefits, especially in terms of its broadly sustainable location on the edge of Shrewsbury, the weight of material objections weighing negatively in the balance of considerations alongside landscape concerns, and the fact there are other options in the town to deliver housing in a more sustainable manner, it is now considered this site should no longer be proposed for allocation and remain open countryside. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>

<i>Tree Comments Other Constraints:</i>	Large central open areas
<i>Tree Comments Management of Constraints:</i>	BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement.
<i>Tree Comments Opportunities:</i>	Well screened site - retain to existing trees and create sustainable juxtaposition of houses and trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from roads and commercial in close proximity. Possible air quality issues due to close proximity to t significant junction.
<i>Public Protection Comments Management of Constraints:</i>	Mitigate noise by location (separation distances to the road) of dwellings, orientation and room layout as well as glazing and boundary treatment. Air quality monitoring on site required and assessment done using the information.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	This site is located to the south of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p> <p>Site no longer available for residential development.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Site no longer available for residential development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>Potentially 116 homes. Access arrangements onto Woodcote way will need to be carefully assessed due to the close proximity of the A5112 roundabout and the new Redwings development access. Modifications to the roundabout may be required or access could be incorporated into a modified roundabout. Access should be linked with SHR099. The site is approximately 1.0km from the nearest supermarket, 1.5km from the nearest school. Regular bus services operate along Woodcote Way which is adjacent to the site. There is a good pedestrian and cycle network in the vicinity.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others).
<i>Ecology Comments Other Constraints:</i>	Requires botanical survey, EclA and surveys for GCNs (ponds within 500m), bats, badgers, reptiles and nesting birds. Hedgerows and trees will need to be buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes historic farmstead of Underdale Hall Farm (HER PRN 26952), where both the farm house and the principal range of farm buildings survive. No other known archaeological interest but medium size suggests site may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (buildings assessment; archaeological DBA + ?evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Scattered mature trees and groups of trees on site
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement.
<i>Tree Comments Opportunities:</i>	Low density houses retaining existing trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Flood risk. Currently site of employment. Noise assessment required for road.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Relationship to the Black Country</b>	This site is located to the east of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Site would represent a significant growth area for the town.  Highway access considered achievable.  Landscape sensitivity considered high.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>It is considered more sustainable options exist elsewhere in the town to accommodate the planned level of growth to 2038. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.  Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.  The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>These sites represent a partial fill of the remaining undeveloped land between the Mytton Oak Road and the Radbrook Road. The majority of Nobold Lane (north of Mousecroft Lane) is not fronted by one of these sites so no improvements could be delivered without third party land. Together they would need to provide an new circular link road, between the existing radial roads, in order to facilitate public transport services to the new developments and improve accessibility by car. This is particular important as there is not direct access to the A5 bypass from Longden Road and there level of development that could be accommodated by the Longden Road route going north east to Roman Road will be limited by existing highway capacity. These sites are over 2.0km to the nearest primary school and convenience store as third party land would be required to make suitable improvements to the existing PRoW access to Radbrook Green. Frequent bus service operate along Hanwood Road but these are around 800m from the centre of the sites. It would therefore be preferable for this area to be developed as a sustainable urban extension to include local facilities and through route public transport services.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>If priority habitats are present then these areas should not be developed.</p> <p>HRA may be required for NOx pollution from increased traffic, in-combination with other sites on White Mere, Sweatmere and Crose Mere and Clarepool Moss, Hencott Pool (possibly others).</p> <p>Protection of ponds on the site will reduce the no. of houses possible.</p>
<i>Ecology Comments Other Constraints:</i>	<p>The site may contain priority habitats - botanical survey required.</p> <p>There are ponds on the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible.</p> <p>A significant proportion of the site is made up of wet woodland / swamp which is almost certainly core / priority habitat. A large proportion of the area may Env. Network core habitat and/or corridor as the grassland is indicated as possibly being of interest. If the grassland is of interest, only the north eastern arable field would be available for development.</p> <p>Requires EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.</p> <p>Hedgerows, trees and ponds will need to be buffered.</p>

<i>Ecology Comments Management of Constraints:</i>	If priority habitats are present, those areas of the site should not be developed. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	The wet woodland could be improved for wildlife and potentially for people with a boardwalk through the area created. Woodland planting along the southern boundary would help the network here and also reduce road noise. The footpath should form part of a significant green corridor that links this site to sustainable transport routes into town. Woodland planting should be considered adjacent to the woodland block to the south west.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II Listed Nobold Hall (NHLE ref. 1270731) and Nobold Grange (NHLE ref. 1254531). Site detached from built edge of town and would potentially impact on the setting of the historic hamlet of Nobold and includes historic farmstead of Day House (HER PRN 27747). Potential impact on setting of Grade II Listed Newton farmhouse (NHLE ref. 1176148). Site crossed by the projected line of possible Roman road (HER PRN 00057) and includes the projected line of a Roman road (HER PRN 00098) and two cropmark enclosure of likely Iron Age/ Roman date. (HER PRNs 00006 & 00009). The site is also bounded to the north by a second possible Roman road (HER PRN 00057). No other known archaeological interest but large size of site and proximity to the Roman road suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA; Level 2 historic building appraisal if demo of Day House farm proposed; and archaeological DBA + field evaluation). NB part of the site previously used as site compound during A5 construction.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Hedgerows and mature hedgerow trees, scattered mature field trees and areas of woodland around seasonal pond and adjacent to highway.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement.
<i>Tree Comments Opportunities:</i>	tree planting across the site, increase area of woodland along highway.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from road, assessment required, more suitable for employment. Odours from cattle market.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Poor
<b>Relationship to the Black Country</b>	This site is located to the north-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site is significant in scale and therefore could offer an opportunity as an alternative to other large scale site options. The site has high landscape sensitivity and medium-high visual sensitivity for residential use. The site performs poorly for housing and employment in the context of the settlement and the Black Country Contribution within the Stage 2a Sustainability Appraisal. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Do not allocate</p>
<p><b>Reasoning</b></p>	<p>The site has a high landscape sensitivity and medium-high visual sensitivity for residential use. It is considered there are more appropriate options elsewhere in the town to accommodate significant growth. Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions. Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications required:</b></p>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

**Site Assessment - Stage 3 Updated**

<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	SHR223 is part of SHR216 which has the potential to deliver 694 homes. Access would be onto Holyhead Road. Land would need to be protected to deliver the Shrewsbury North West Relief Road across the southern part of the site.
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool Ramsar. See LPR HRA. If priority habitats are present then the site should not be developed. If priority habitats not present, the LWS, hedgerows and adjacent woodland will reduce the developable area.
<i>Ecology Comments Other Constraints:</i>	Part of the northern section of the site is within Shelton Rough Local Wildlife Site (and Env. Network core areas). The LWS is directly adjacent to the eastern boundary. The site may contain priority habitats - botanical survey required. Appropriate buffers from the LWS and adjacent woodland will be required. The central hedgerow should be retained and enhanced. Requires botanical survey, ECLA and surveys for bats (trees and transects), GCNs (ponds within 500m), badgers, reptiles, otters and nesting birds. PROWS cross the site.

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat. See accompanying document
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Potential impact on setting of Registered Park and Garden of Berwick Park (NHLE ref. 1001706) No known archaeological interest but large size of site suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of RPG; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Numerous scattered mature field trees adjacent to good woodland screening boundary to the river
<i>Tree Comments Other Constraints:</i>	Open field areas
<i>Tree Comments Management of Constraints:</i>	BSS837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement.
<i>Tree Comments Opportunities:</i>	Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Site proposed for retirement living accommodation is considered to be medium-high landscape and visual sensitivity. The entirety of the site is in source protection zone 2 and parts are in source protection zone 3, although it is noted that the extent of built form could avoid elements of the site in source protection zone 3.</p> <p>The site performs poorly for housing and employment in the context of the settlement within the Stage 2a Sustainability Appraisal. However, it performs fair in the context of the Black Country Contribution within the Stage 2a Sustainability Appraisal.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Do not allocate</p>
<b>Reasoning</b>	<p>Landscape and visual sensitivity is medium/high. It is considered there are more appropriate options elsewhere in the town to accommodate growth.</p> <p>Any future retirement residential proposals on this site, including affordable, can be considered against relevant policies of the Local plan.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modifications required:</b>	<p>No</p>

<b>If proposed for Allocation, Potential Capacity:</b>

**Site Assessment - Stage 3 Updated**

<b>Site Reference:</b>	<b>SHR224</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	1%
<i>Percentage of site in Flood Zone 2:</i>	7%
<i>Percentage of site in Flood Zone 1:</i>	93%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	5%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	7%
<i>Percentage of the site within 20m of an historic flood event:</i>	63%
<i>Percentage of the site within 20m of a detailed river network:</i>	1%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium-Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site benefits from direct access onto the A528. It is assumed development will utilise existing access off A528 - Ellesmere Road. Depending on scale of development, consideration may need to be given to pedestrian facilities within close proximity to the site.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<i>Ecology Comments Significant Constraints:</i>	<p>Site is partly within a LWS and Env. Network. These will need to be retained and appropriately buffered. This will reduce the housing numbers.</p> <p>HRA will be required for NOx pollution from increased traffic, in-combination with other sites, on Hencott Pool, White Mere, Sweatmere and Crose Mere and Clarepool Moss (possibly others). HRA will also need to consider recreation impacts on Hencott Pool. More than the minimum 30m per bedroom (SAMDev Policy MD2) would be required to address recreation issues in the HRA which could reduce numbers of dwellings possible. See LPR HRA.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA and botanical survey required and surveys for badgers, bats, nesting birds, GCNs and reptiles</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Protect, enhance and restore Env. Network in accordance with CS17 and MD12.
<i>Ecology Comments Opportunities:</i>	Enhance Env. Network
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Find spot of a Roman brooch on site (HER PRN 04207). No other known archaeological interest but large size suggests it may have potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Site adjacent to important protected woodland to the south
<i>Tree Comments Other Constraints:</i>	Scattered trees and hedges on site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 Tree Survey / Arb Impact Assessment and Tree Protection Plan. Development density and layout needs to be considered so that it allows room for retention of existing mature trees
<i>Tree Comments Opportunities:</i>	Tree planting opportunities across the site to ensure that development can meet tree cover targets in planning policy framework and help to improve urban forest resource within the town.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise (proximity to licensed premises and holiday venue).
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	This site is located to the south-west of Shrewsbury. Shrewsbury is located in the centre of Shropshire, with a functional relationship to the Black Country. Shrewsbury benefits from being located on the A5/M54 corridor which provides links to the Black Country (which is some 22 miles away). Shrewsbury also benefits from a railway station which offers regular train services to the Black Country via the Shrewsbury to Wolverhampton line.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>A large strategic site located within and beyond the extent of the A5 by-pass.  Site consists of numerous smaller sites: SHR025, SHR027, SHR157, SHR149, SHR188, SHR190 and SHR192. See strategic considerations for these sites.  Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Known Infrastructure Opportunities:</b>	Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.
<b>Potential for Windfall?</b>	No
<b>Potential for Allocation?</b>	No
<b>Recommendation</b>	Do not allocate
<b>Reasoning</b>	<p>The extent of the site goes beyond the extent of the A5 by-pass, which is considered to cause a significant degree of physical and perceived severance from the main urban area. It is not considered necessary to grow the town beyond the A5 by-pass at this stage, especially in the light of the availability of more sustainable options to the west of the town.</p> <p>With regard to the remainder of the site, the site to the north between Hanwood Road and Mytton Oak Road is preferred for significant and comprehensive planned new development, there is no requirement to release this land at this time in order to meet the proposed development needs of the town up to 2038. The preferred land to the north is considered to offer greater potential benefits to the town and can support the objectives of the Big Town Plan and to achieve a comprehensively planned development.</p> <p>Given Shrewsbury's functional relationship and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation. However, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire. The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>If proposed for Allocation Design Requirements:</b>	

# Shropshire Local Plan

## Additional Sustainability Appraisal Report: Appendix 10

Updated Stage 3 Site  
Assessment: Potential Strategic  
Sites including Strategic  
Settlements

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>BWU001</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	2%
<i>Percentage of site in Flood Zone 2:</i>	3%
<i>Percentage of site in Flood Zone 1:</i>	97%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	3%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	4%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	9%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	4%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations (from the GB Assessment/Review):</i>	The site is not located within the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Not Assessed
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Not Assessed
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Not Assessed
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Not Assessed
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>If 66% of the site was housing this site could accommodate 2,713 homes. The site does not have highway frontage but it appears that links could be made across neighbouring land to the B4380 and B5061. If this land was available to make these links, of approximately 500m each then two suitable highway access junctions should be achievable.</p> <p>If developed as a strategic site it is assumed that some local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities. However, in the initial phases of the development it is likely that facilities and services from outside the locality will need to be used. The nearest convenience store of any significance would be in Wellington, over 8km from the site. The nearest bus service is on the A5061 around 800km from the centre of the site. It is unlikely that the scale of development would support a school or GP surgery and the nearest GP &amp; School are over 6km from the site in Cressage via the B4380 which has no footways.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool. See LPR HRA. Protection of the woodland, ponds and Env. Network will reduce the no. of houses possible.
<i>Ecology Comments Other Constraints:</i>	<p>Patches of woodland on the site (possibly priority habitats) will need to be retained and buffered.</p> <p>There is a watercourse along the northern boundary which forms an Env. Network corridor.</p> <p>There are ponds on the site. Retention and protection of the ponds (with appropriate buffers) will reduce the no. of houses possible.</p> <p>Requires EclA and surveys for bats, GCNs (ponds within 500m), otters, white-clawed crayfish, water voles, badgers and nesting birds.</p> <p>Trees, hedgerows, woodland, watercourse and ponds will need to be buffered.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site likely to have a substantial negative impact on setting of the Scheduled Monument of Site of Roman town of Wroxeter (Viroconium) (NHLE ref. 1003705). Number of known cropmark sites which may be associated with the Roman city situated within site boundary, whilst very large size of site and proximity to Wroxeter suggests it otherwise has high archaeological potential.
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	Do not allocate.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	Important green corridor on northern curtilage two blocks of woodland and scattered trees and hedgerows between fields
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement.
<i>Tree Comments Opportunities:</i>	Net gain for biodiversity - retain existing features and join green corridors
<i>Public Protection Comments Significant Constraints:</i>	Distant noise source to north. No apparent history of contamination.
<i>Public Protection Comments Other Constraints:</i>	Distant noise source to north. No apparent history of contamination.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<i>Fair</i>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<i>Fair</i>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<i>Fair</i>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<i>Fair</i>
<b>Relationship to the Black Country</b>	Located in central Shropshire, an area with a functional relationship to the Black Country. Located south of but some distance from the A5 / M54 corridor from Shrewsbury to Wolverhampton. The site is linked to this corridor by rural roads. Nearest railway station providing direct links to the Black country is some distance away at Wellington.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is sufficiently large that it could form a strategic settlement.  The site is located between Shrewsbury and Telford, south of the A5.  The site is located in proximity to but some distance from the M54/A5 strategic corridor and any connection to it would be via B roads. Given the distance from the strategic corridor and nature of potential connections, it is unclear whether the site would be attractive as a centre for employment or whether it would be sustainable or attractive as a location to accommodate all or part of the proposed contribution to the unmet housing and/or employment contributions forecast to arise within the Black Country.  The site does not have a highway frontage but it appears that links could be made across neighbouring land to the B4380 and B5061. If this land was available to make these links, of approximately 500m each then two suitable highway access junctions should be achievable.  Around half of the site is located within a source protection zone (primarily zone 3, however part of the north-west of the site is located in zone 2).  Possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool.  The site contains woodland, mature trees, ponds and the stream brook along the northern boundary forms an environmental network corridor. Site likely to have a substantial negative impact on setting of the Scheduled Monument of Site of Roman town of Wroxeter (Viroconium). There are a number of known cropmark sites which may be associated with the Roman city situated within site boundary and due to its very large size and proximity to Wroxeter it is likely to have high archaeological potential.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Ensuring future occupiers have appropriate access to services and facilities and employment opportunities.  Ensuring appropriate pedestrian and cycle links and connections to public transport.  Ensuring necessary works to the highway network are undertaken (including achieving appropriate site accesses and improvements to Tern Hill roundabout).  Provision of green infrastructure.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Formation of a new settlement through a mixed used development to provide local services and facilities; employment land; new homes; and extensive green infrastructure.  Infrastructure provision on and to support the site.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Countryside</p>

<p><b>Reasoning</b></p>	<p>The site is located in proximity to but some distance from the M54/A5 strategic corridor. Given the distance from the strategic corridor, it is unclear whether the site would be attractive as a centre for employment.</p> <p>The site is located in proximity to but some distance from the M54/A5 strategic corridor and any connection to it would be via B roads. Whilst the site is large, given the distance from the strategic corridor and nature of potential connections, it is unclear whether the site would be attractive as a centre for employment or whether it would be sustainable or attractive as a location to accommodate all or part of the proposed contribution to the unmet housing and/or employment contributions forecast to arise within the Black Country. Development of alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site likely to have a substantial negative impact on setting of the Scheduled Monument of Site of Roman town of Wroxeter (Viroconium). There are a number of known cropmark sites which may be associated with the Roman city situated within site boundary and due to its very large size and proximity to Wroxeter it is likely to have high archaeological potential.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>N/A</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>N/A</p>

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P26 (Amended)</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	2%
<i>Percentage of site in Flood Zone 2:</i>	2%
<i>Percentage of site in Flood Zone 1:</i>	98%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	3%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt Considerations (from the GB Assessment/Review):</i>	<p>Within the Green Belt Assessment undertaken for Shropshire this site is considered within three Green Belt Parcels (P4, P8 and P25). The assessment indicates that these parcels make no contribution against purposes 1a and 1b; make no contribution or perform weakly against purposes 2 and 4; and perform either moderately or strongly against purpose 3.</p> <p>Within the Green Belt Review undertaken for Shropshire elements of this site is considered within the two parcels (Parcel P4 was not specifically assessed) and the majority is also considered within opportunity area (J3-1).</p> <p>The review of the relevant parcels indicates that there would be either moderate-high or high harm to the Green Belt resulting from release (it is considered likely that there would be high harm to the Green Belt resulting from release, associated with Parcel P4). Release would lead to significant encroachment on the countryside; could affect the integrity of neighbouring Green Belt land; and would also lead to the creation of a new area inset into the Green Belt.</p> <p>The review of the relevant opportunity area indicates there would be high harm to the Green Belt resulting from release.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site is adjacent to the A41 immediately north of junction 3 of the M54 and the views of Highways England would need to be sought. This section of the A41 is subject to the national speed limit. The site controls sufficient land to facilitate new and/or improved access points onto the A41 together with appropriate speed limits and pedestrian crossing facilities.</p> <p>If this site was developed as a strategic settlement it is assumed that local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities. However, in the initial phases of the development it is likely that facilities and services from outside the locality will need to be used. In these circumstances the nearest schools are over 4.0km from the site in Shifnal or Albrighton to which school transport would need to be provided. The nearest GP surgeries are also in Shifnal or Albrighton and a similar distance away. The site is adjacent to the A41 which has no pedestrian crossing facilities. An hourly bus service (891) operates along the A41 and Stanmore Lane between Shifnal (Telford) and Albrighton (Wolverhampton) but some parts of these sites would be 3.0km from the existing service route. The site is not linked to Albrighton or Shifnal by a continuous footway or cycle route.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	<p>Only reduced numbers of housing possible as protection of Environmental Network (two water courses and south eastern tip unlikely to be fully possible in open space provision). Due to the large size of the proposed development area, HRA may be required for recreational impacts, particularly on Cannock Chase - this will need to be checked with NE. HRA may also require bespoke modelling for traffic emissions and water cycle.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (in ponds on site and within 500m), Dormice, Badgers (known records), Bats (records on site), nesting birds, vascular plants, reptiles, Otters, Water Voles and White-clawed Crayfish (many records along watercourse). Hedges, tree lines and water courses provide valuable ecological networks. Environmental Network crosses the site and lies adjacent to it.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance all hedgerows/tree lines within the site and on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Wooded corridors along the streams, including Church Pool, are to be retained, protected and buffered. Retain good quality habitat within the south-eastern tip. Maintenance of dark commuting routes, linked to water courses. Protection/mitigation for White-clawed crayfish if any drainage connections to the water courses. Pollution prevention including oil and silt interceptors.
<i>Ecology Comments Opportunities:</i>	Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Include major footpaths within connections. Provide a network of open space and green corridors connecting with the Env. Network and buffer the wooded banks of the streams to minimise recreational and other impacts.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Very large site that incorporates numerous designated (7 GII Listed Buildings) and non-designated heritage assets (including those with archaeological interest). Site also in close proximity to the Boundary of the Tong Conservation Area which contains a further cluster of listed buildings (including 1 GI and 1 GII* LB), and site also has some potential to affect the setting of the Grade II* Registered Park and Garden and Conservation Area of Weston Park/Weston-under-Lizard. Substantial number of metal detectorists finds. Development will potentially directly and indirectly impact on the significance of a range of these assets.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs; impacts on non-designated parklands and historic landscape character; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	Well designed development might offer opportunities to improve/ restore the non-designated parkland settings of some LBs. S106 agreements could be used to secure enhancements (including management, access and interpretation) for SMs and other heritage assets.
<i>Tree Comments Significant Constraints:</i>	TPO trees to rear of the Bell Inn / filling station.
<i>Tree Comments Other Constraints:</i>	Corridor of mature woodland runs north / south through site and block of woodland to southern corner. Connectivity to the south interrupted by M54. Numerous trees, groups of trees and hedgerows around and within site. Large water body and areas of mature woodland within south-eastern corner of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure reasonable development stand-off from woodland. Development stand-offs required from the water and woodland habitats.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure. Extend woodland cover and create suitable buffer with built development. Look to connect to large block of woodland to the north / west of the site. Seek to expand woodland cover by new planting to extend and link existing woodland where suitable.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible land contamination where land has been previously developed. Noise and air quality concerns where the site adjoins the M54 and A41.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be available for contaminated land. Appropriate assessments will be necessary. Noise mitigation likely to be available. As a first option it is recommended that noise sensitive receptors (residential properties) are provided with sufficient distance from noise sources to avoid issues. Where this is not possible good design and layout including orientation and layout of development, glazing barriers including fencing and bunding, mechanical ventilation. Air quality concerns can be removed by ensuring there is appropriate distance between proposed residential properties and main roads.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Poor</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Poor</b>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. Located on the A5 / M54 corridor from Shrewsbury to Wolverhampton and as such benefits from good links onto this corridor and into the Black Country. The site is in proximity of railway stations at Cosford, Albrighton and Shifnal, although all are separated from the site by the M54 corridor (it is noted that there are underpasses that could service such movements) and would likely require some other form of transport to access them (it is noted that the site promoters have proposed a number of mechanisms to facilitate this, including a shuttle bus).
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is sufficiently large that it could form a strategic settlement.  The site is located on the M54/A5 strategic corridor.  The site has been promoted for the formation of a planned settlement containing around 50ha (or 75ha) of employment, around 3,000 dwellings, and a local centre to provide services, facilities and infrastructure. It is understood the site is also available for a smaller scale development and/or only housing or employment development.  It is understood that extensive areas of land within the site promotion are not proposed for development but represent opportunity areas for providing public benefit - this includes land to the east of the A41 and land at and in proximity to Lizard's Hill, relevant proposals for this land could occur whilst it remains in the Green Belt. As such the extent of the site promotion for development/release from the Green Belt is substantially smaller than the total site area, being around 370ha. This has been recognised within the assessment as has the potential for a smaller scheme and/or a single form of development.  The opportunity associated with this corridor is recognised within the Economic Growth Strategy for Shropshire and the M54 corridor study. The M54 corridor benefits from good access to transport infrastructure; its proximity to existing international businesses dominant in growth sectors such as advanced manufacturing and engineering; and proximity to higher education and training institutions including key assets such as RAF Cosford, Wolverhampton University and Harper Adams University.  The sites location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country.  All or part of the site is located within a source protection zone.  The site is located within the Green Belt. The review of the relevant parcels indicates that there would be either moderate-high and/or high harm to the Green Belt resulting from release, dependent on the extent of release - if the total site promoted were released it would result in high harm to the Green Belt.  It is considered that the site controls sufficient land to provide an access onto the A41. There is also a need to consider pedestrian crossing facilities and speed limits. Furthermore, Highways England views will be required on the relationship between the site and Junction 3 of the M54 / the M54 itself.  Services and facilities would need to be provided on the site to create a sustainable community.  The site performs poorly for residential and employment within Stage 2a: Sustainability Appraisal in the context of potential strategic sites/settlements and the contribution to the Black Country. It is acknowledged that this in part relates to the fact that the site promotion includes land which is not proposed for development but to provide wider public benefit, this has informed overarching conclusions. It is also acknowledged that release of a smaller component of the site could have a different overall impact, which has also informed overarching conclusions. Furthermore, it is acknowledged that this rating is also in part as a result of the limited access to services and facilities, which could of course be provided on the site, this has also informed overarching conclusions.  HRA will be required due to site size.  Parts of the site are within an environmental network (two watercourses and the southern tip of the site).  The site contains hedgerows, mature trees, wooded corridors, a large water body and blocks of woodland (some of these trees are subject to TPO protection). The site may also contain protected species and priority habitats.  The site contains and/or is in proximity of many designated and non-designated heritage assets including listed buildings, scheduled monuments, a conservation area and a registered park.  The site is also of archaeological interest and there is a need to consider non-designated parkland and historic landscape character.  Elements of the site may be subject to contamination.  Noise and air quality will need to be considered due to proximity to the M54 and A41.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Ensuring future occupiers have appropriate access to services and facilities and employment opportunities.  Ensuring appropriate pedestrian and cycle links and connections to public transport.  Ensuring necessary works to the highway network are undertaken (including achieving appropriate site accesses and improvements to Tern Hill roundabout).  Provision of green infrastructure.  Relevant supporting studies should be undertaken and their recommendations implemented.  Infrastructure capacity assessment to identify key impacts and investment requirements.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Formation of a new community focused on a 50ha strategic employment site and supported by a skills hub and a series of residential neighbourhoods.  Provision of local services and facilities.  Infrastructure and a range of on-site facilities would be provided as part of the site.  Significant amount of Open Space.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>

Reasoning	<p>In weighing up the site specific considerations, both positive and negative, and giving consideration to the consultation responses on this matter, it is considered there is insufficient justification to progress an exceptional circumstances argument for the release of this land from the Green Belt.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that:</p> <ul style="list-style-type: none"> <li>-There are non-Green Belt locations that are also more appropriate to accommodate the proposed contributions to unmet housing needs forecast to arise within the Black Country.</li> <li>-There are other Green Belt locations that are more appropriate to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.</li> </ul> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

\*Green Belt Purposes (where applicable):

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Poor</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Poor</b>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. Located on the A5 / M54 corridor from Shrewsbury to Wolverhampton and as such benefits from good links onto this corridor and into the Black Country. The site is in proximity of railway stations at Cosford, Albrighton and Shifnal, although all are separated from the site by the M54 corridor (it is noted that there are underpasses that could service such movements) and would likely require some other form of transport to access them (it is noted that the site promoters have proposed a number of mecnahsims to facilitate this, including a shuttle bus).
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is sufficiently large that it could form a strategic settlement.  The site is located on the M54/A5 strategic corridor.  The site has been promoted for a strategic employment site of around 50ha or 75ha. It is understood the site is also available for a smaller scale development.  The opportunity associated with this corridor is recognised within the Economic Growth Strategy for Shropshire and the M54 corridor study.  The M54 corridor benefits from good access to transport infrastructure; its proximity to existing international businesses dominant in growth sectors such as advanced manufacturing and engineering; and proximity to higher education and training institutions including key assets such as RAF Cosford, Wolverhampton University and Harper Adams University.  The sites location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country.  All or part of the site is located within a source protection zone.  The site is located within the Green Belt. The review of the relevant parcels indicates that there would be either moderate-high and/or high harm to the Green Belt resulting from release, dependent on the extent of release - if the total site promoted were released it would result in high harm to the Green Belt.  It is considered that the site controls sufficient land to provide an access onto the A41. There is also a need to consider pedestrian crossing facilities and speed limits. Furthermore, Highways England views will be required on the relationship between the site and Junction 3 of the M54 / the M54 itself.  Services and facilities would need to be provided on the site to create a sustainable community.  The site performs poorly for residential and employment within Stage 2a: Sustainability Appraisal in the context of potential strategic sites/ settlements and the contribution to the Black Country. It is acknowledged that this in part relates to the fact that the site promotion includes land which is not proposed for development but to provide wider public benefit, this has informed overarching conclusions. It is also acknowledged that release of a smaller component of the site could have a different overall impact, which has also informed overarching conclusions. Furthermore, it is acknowledged that this rating is also in part as a result of the limited access to services and facilities, which could of course be provided on the site, this has also informed overarching conclusions.  HRA will be required due to site size.  Parts of the site are within an environmental network (two watercourses and the southern tip of the site).  The site contains hedgerows, mature trees, wooded corridors, a large water body and blocks of woodland (some of these trees are subject to TPO protection). The site may also contain protected species and priority habitats.  The site contains and/or is in proximity of many designated and non-designated heritage assets including listed buildings, scheduled monuments, a conservation area and a registered park.  The site is also of archaeological interest and there is a need to consider non-designated parkland and historic landscape character.  Elements of the site may be subject to contamination.  Noise and air quality will need to be considered due to proximity to the M54 and A41.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Ensuring appropriate pedestrian and cycle links and connections to public transport.  Ensuring necessary works to the highway network are undertaken (including achieving appropriate site accesses and improvements to Tern Hill roundabout).  Provision of green infrastructure.  Relevant supporting studies should be undertaken and their recommendations implemented.  Infrastructure capacity assessment to identify key impacts and investment requirements.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Formation of a 50ha/75ha strategic employment site and supported by a skills hub.  Provision of appropriate supporting local services, facilities and infrastructure.  Significant amount of Open Space.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>

<p><b>Reasoning</b></p>	<p>In weighing up the site specific considerations, both positive and negative, and giving consideration to the consultation responses on this matter, it is considered there is insufficient justification to progress an exceptional circumstances argument for the release of this land from the Green Belt.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that:</p> <ul style="list-style-type: none"> <li>-There are non-Green Belt locations that are also more appropriate to accommodate the proposed contributions to unmet housing needs forecast to arise within the Black Country.</li> <li>-There are other Green Belt locations that are more appropriate to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.</li> </ul> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modifications Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	<p>N/A</p>
<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>N/A</p>

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P28 and parts of P30 and P40</b>
Coal Authority Reference Area?	No
Mineral Safeguarding Area?	Yes
Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:	Yes
Percentage of site in Flood Zone 3:	0%
Percentage of site in Flood Zone 2:	1%
Percentage of site in Flood Zone 1:	99%
Percentage of the site in the 30 year surface flood risk zone:	1%
Percentage of the site in the 100 year surface flood risk zone:	2%
Percentage of the site in the 1,000 year surface flood risk zone:	7%
Percentage of the site identified on the EA Historic Flood Map:	0%
Percentage of the site within 20m of an historic flood event:	0%
Percentage of the site within 20m of a detailed river network:	1%
All or part of the site within a Source Protection Zone:	Yes
<b>Green Belt Considerations (from the GB Assessment/Review):</b>	<p>Within the Green Belt Assessment undertaken for Shropshire this site is considered within three Green Belt parcels (P28, P30 and P40). The assessment indicates that these parcels make no contribution against purposes 1a and 1b; perform either weakly or moderately against purpose 2 and purpose 3; and make no contribution or perform weakly against purpose 4.</p> <p>Within the Green Belt Review undertaken for Shropshire this site is considered within the same three parcels and the majority is also considered within opportunity area (Co-1b).</p> <p>The review of the relevant parcels indicates that there would be either low or low-moderate harm to the Green Belt resulting from release.</p> <p>The review of the relevant opportunity area indicates that there would be low-moderate harm to the Green Belt resulting from release.</p>
<b>Landscape Considerations (Residential) (from the LVSS):</b>	Low and Medium
<b>Landscape Considerations (Employment) (from the LVSS):</b>	Low and Medium High
<b>Visual Impact Considerations (Residential) (from the LVSS):</b>	Low and Medium
<b>Visual Impact Considerations (Employment) (from the LVSS):</b>	Low and Medium High
<b>Highway Comments - Direct Access to Highway Network?</b>	
<b>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</b>	
<b>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</b>	The sites lie either side of the A41, but primarily to the west. The section of the A41 is subject to a 40mph speed limit and existing development on either side of the A41 is served by a major traffic signal controlled junction. The sites control sufficient land to facilitate new and/or improved access points onto the A41. The sites are immediately south of junction 3 of the M54 and the views of Highways England would need to be sought.
<b>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</b>	If these sites were developed as a strategic settlement it is assumed that additional local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities. These sites already benefits from a convenience store. However, in the initial phases of the development it is likely that other facilities and services from outside the locality will need to be used. In these circumstances the nearest school is over 4.0km from the site in Albrighton to which school transport would be provided. The nearest GP is also in Albrighton and a similar distance away. The site is divided by the A41 which benefits from a controlled pedestrian crossing to cater for pedestrian movements across the A41. An hourly bus service (891) operates along the A41 between Telford and Wolverhampton but some parts of these sites would be 2.0km from the A41. The sites are linked to Albrighton by National Cycle Route 81.
<b>Highway Comments - Could the Development Occur Without Off-Site Works?</b>	
<b>Highway Comments - Are Envisaged Off-Site Works Achievable?</b>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<b>Ecology Comments Significant Constraints:</b>	<p>Reduction in no. of houses due to presence of GCNs in ponds on site. Mitigation land will be required. Env Network crosses the site and lies immediately adjacent, particularly in the south and west. need to buffer, protect and enhance the Network may reduce the number of dwellings possible.</p> <p>Due to the large size of the proposed development area, HRA may be required for recreational impacts, particularly on Cannock Chase - this will need to be checked with NE. HRA may also require bespoke modelling for traffic emissions and water cycle.</p>
<b>Ecology Comments Other Constraints:</b>	EclA required. Surveys for GCN (known records for GCN on site and ponds within 500m), Badgers, Bats (presence recorded on site), nesting birds, vascular plants, reptile, otters, water vole, white clawed crayfish (recorded in stream at southern end of site). Partly within and adjacent to Env. Network. Priority habitats are likely to be present on site, particularly grasslands around buildings and runways and possibly on hangers. Full phase 2 botanical survey required to assess presence of priority habitat. General conclusion is based on little or no priority grassland being present.

<i>Ecology Comments Management of Constraints:</i>	Protected species mitigation and enhancement. Retain and enhance hedgerows/tree lines on boundaries. Retain mature trees on site. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Reduced numbers of housing as protection of Environmental Network and any priority habitat unlikely to be fully possible in open space provision. Protection of ponds and provision of mitigation land for GCN. Either protection of bat roosts or compensation roosts provided, together with maintenance of dark commuting routes. Protection/mitigation for White-clawed crayfish if any drainage connections to the southern water course.
<i>Ecology Comments Opportunities:</i>	Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Protect and enhance any priority habitat, particularly species-rich grassland if present. Provide a network of open space and green corridors connecting with the Env. Network and buffer the wooded banks of the stream to the south to minimise recreational and other impacts.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site incorporates the majority of the expansion period airfield of RAF Cosford (HER PRN 08519), including the Grade II listed Fulton Building (NHLE ref. 1407287) and a range of other military buildings which are considered to be non-designated heritage assets.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on LBs and non-designated heritage assets [including their settings]).
<i>Heritage Comments Opportunities:</i>	Good quality, well planned and designed develop could better reveal and enhance the significance of the heritage assets on the site.
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	numerous trees and groups of woodland within developed area north of railway line. Trees within museum site and a linear belt of woodland at extreme south of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure reasonable development stand-off from woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees. Extend woodland cover and create suitable buffer with built development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Contaminated land due to past military land use. Noise from A41 (including a Noise Action Zone found on the boundary of the site) and railway. Possible odour sources close to site. E.g. sewage works to south of the site.
<i>Public Protection Comments Management of Constraints:</i>	Remediation likely to be available for contaminated land. Appropriate assessments will be necessary. Noise mitigation likely to be available. As a first option it is recommended that noise sensitive receptors (residential properties) are provided with sufficient distance from noise sources to avoid issues. Where this is not possible good design and layout including orientation and layout of development, glazing barriers including fencing and bunding, mechanical ventilation. Odour mitigation through separation distances to odour sources.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<i>Fair</i>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<i>Fair</i>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<i>Fair</i>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<i>Fair</i>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. Located on the A5 / M54 corridor from Shrewsbury to Wolverhampton and as such benefits from good links onto this corridor and into the Black Country. The site contains the Cosford railway station and as such benefits from direct access to it.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst a large site, it is already occupied by the Ministry of Defence and a range of other organisations including the Midland Air Ambulance and RAF Museum Cosford. Remaining land at the site is more limited in scope and directly associated with the future aspirations of the existing occupiers. As such, it is unlikely that this site would be suitable for accommodating all or part of the proposed contributions to the unmet needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is sufficiently large that it could form a strategic site.</p> <p>RAF Cosford is located on the M54/A5 strategic corridor. The opportunity associated with this corridor is recognised within the Economic Growth Strategy for Shropshire and the M54 corridor study.</p> <p>RAF Cosford is a major part of the Defence College of Technical Training (DCTT). It has been identified as being at the centre of the RAF mission to deliver flexible, affordable, modern and effective technical training now and in the future. Cosford Air Museum has also outlined plans to intensify and expand the museum on the site.</p> <p>Whilst the sites location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the range of existing occupiers and land uses and the known aspirations for the site from these occupiers, it is not considered that the site would be suitable for accommodating all or part of the proposed contributions to the unmet needs of the Black Country.</p> <p>It is a predominantly brownfield site.</p> <p>The site is located within a source protection zone, mainly zone 3, however small parts to the west of the site are located within zone 2.</p> <p>The site is located within the Green Belt. The review of the relevant parcels indicates that there would be either low or low-moderate harm to the Green Belt resulting from release. If the entirety of the site was released it would result in low-moderate harm to the Green Belt.</p> <p>Majority of the site is located within the low landscape and visual sensitivity area. Only a small portion of the site is medium landscape and visual sensitivity.</p> <p>Highways England views will be required on the relationship between the site and Junction 3 of the M54 / the M54 itself.</p> <p>Services and facilities are currently available on the site, these would need to be retained and/or enhanced to create a sustainable community.</p> <p>HRA will be required due to the large site size.</p> <p>An environmental network crosses and is immediately adjacent to the site.</p> <p>The site contains hedgerows and mature trees/wooded corridors. It also contains protected species (Great Crested Newts) and may contain priority habitats.</p> <p>The site contains listed buildings and non-designated heritage assets including expansion period airfield and military buildings.</p> <p>The site is likely to contain contaminated land associated with past military uses.</p> <p>Potential noise associated with the A41, railway and airfield.</p> <p>Possible odour sources in proximity to the site e.g. sewage works.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Upgrade of Cosford railway station facilities and parking.</p> <p>Necessary upgrades to highway services.</p> <p>Provision of green infrastructure.</p> <p>Any necessary decontamination of the site undertaken.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Existing sustainable site offering homes, employment and services and facilities. Potential to enhance these offers.</p> <p>Opportunity to upgrade Cosford railway station facilities and parking.</p> <p>Upgrades to highway services.</p> <p>Decontamination.</p> <p>Green infrastructure provision.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Continue to identify the built form of RAF Cosford as a major developed site within the Green Belt. Define the extent of the major developed site within the Green Belt as including part of CFD001, part of P28, part of P30 and part of P40.</p>

Reasoning	<p>This conclusion is responsive to the Interim Findings of the Planning Inspectors within document ID28. Within ID28 the Planning Inspectors concluded that exceptional circumstances do not exist for the release of RAF Cosford from the Green Belt. This was at least in part informed by the fact that this status has not prevented development in a manner consistent with its use as an RAF base or indeed related activities such as training facilities and domestic accommodation.</p> <p>Continued identification of RAF Cosford as a major developed site within the Green Belt will ensure that the sites Green Belt status is considered in a manner consistent with that currently undertaken. The aspirations of the existing sites occupiers that require new development will therefore be facilitated where they are able to demonstrate that very special circumstances exist for such development or occur within the Green Belt. When determining if very special circumstances exist within the extent of the RAF Cosford major developed site, positive consideration will be given to the sites predominantly brownfield nature and any contribution proposals make to the long-term sustainability of the complementary uses of the site.</p>
Further Main Modifications Required	<p>Yes: Draft Policy S21 and its explanation will need to be deleted. Other draft Policies and associated explanations (including SP11 and S1) will need to be amended to reflect the changed proposed status of RAF Cosford from a Strategic Site inset within the Green Belt to a major developed site within the Green Belt.</p>
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. Located on the A5 / M54 corridor from Shrewsbury to Wolverhampton and as such benefits from good links onto this corridor and into the Black Country. The site contains the Cosford railway station and as such benefits from direct access to it.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst a large site, it is already occupied by the Ministry of Defence and a range of other organisations including the Midland Air Ambulance and RAF Museum Cosford. Remaining land at the site is more limited in scope and directly associated with the future aspirations of the existing occupiers. As such, it is unlikely that this site would be suitable for accommodating all or part of the proposed contributions to the unmet needs of the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site is sufficiently large that it could form a strategic site.</p> <p>This site consists of RAF Cosford and part of an agricultural field located to the north-west of the site, promoted for a new headquarters for the Midlands Air Ambulance Charity (MAAC) one of the current occupiers of the RAF Cosford site.</p> <p>RAF Cosford is located on the M54/A5 strategic corridor. The opportunity associated with this corridor is recognised within the Economic Growth Strategy for Shropshire and the M54 corridor study.</p> <p>RAF Cosford is a major part of the Defence College of Technical Training (DCTT). It has been identified as being at the centre of the RAF mission to deliver flexible, affordable, modern and effective technical training now and in the future. Cosford Air Museum has also outlined plans to intensify and expand the museum on the site. The MAAC require a new headquarters in order to combine two of their existing airbases (one of which is located at RAF Cosford) and integrate supporting and ancillary services.</p> <p>Whilst the sites location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the range of existing occupiers and land uses and the known aspirations for the site from these occupiers, it is not considered that the site would be suitable for accommodating all or part of the proposed contributions to the unmet needs of the Black Country.</p> <p>It is a predominantly brownfield site. The area of the site identified as a potential location for the new MAAC headquarters is a greenfield site.</p> <p>The site is located within a source protection zone, mainly zone 3, however small parts to the west of the site are located within zone 2.</p> <p>The site is located within the Green Belt.</p> <p>The review of the relevant parcels indicates that the release of the existing RAF Cosford site would have either low or low-moderate harm to the Green Belt. If the entirety of the existing RAF Cosford site was released it would result in low-moderate harm to the Green Belt.</p> <p>The review of the relevant parcels indicates that the release of the MAAC element of the site would have moderate-high harm to the Green Belt.</p> <p>The majority of existing RAF Cosford Site (including the entirety of the existing site proposed for release from the Green Belt as part of the RAF Cosford Strategic Site) has low landscape and visual sensitivity to housing and employment development. The MAAC element of the RAF Cosford Strategic Site has medium-high landscape sensitivity to housing and employment and medium visual sensitivity to housing and employment.</p> <p>Highways England views will be required on the relationship between the site and Junction 3 of the M54 / the M54 itself.</p> <p>Services and facilities are currently available on the site, these would need to be retained and/or enhanced to create a sustainable community.</p> <p>HRA will be required due to the large site size.</p> <p>An environmental network crosses and is immediately adjacent to the site.</p> <p>The site contains hedgerows and mature trees/wooded corridors. It also contains protected species (Great Crested Newts) and may contain priority habitats.</p> <p>The site contains listed buildings and non-designated heritage assets including expansion period airfield and military buildings.</p> <p>The site is likely to contain contaminated land associated with past military uses.</p> <p>The site is likely to be impacted in parts by security requirements.</p> <p>Potential noise associated with the A41, railway and airfield.</p> <p>Possible odour sources in proximity to the site e.g. sewage works.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Upgrade of Cosford railway station facilities and parking.</p> <p>Necessary upgrades to highway services.</p> <p>Provision of green infrastructure.</p> <p>Any necessary decontamination of the site undertaken.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Existing sustainable site offering homes, employment and services and facilities. Potential to enhance these offers.</p> <p>Opportunity to upgrade Cosford railway station facilities and parking.</p> <p>Upgrades to highway services.</p> <p>Decontamination.</p> <p>Green infrastructure provision.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Continue to identify the built form of RAF Cosford as a major developed site within the Green Belt. Define the extent of the major developed site within the Green Belt as including part of CFD001, part of P28, part of P30 and part of P40.</p>

Reasoning	<p>This conclusion is responsive to the Interim Findings of the Planning Inspectors within document ID28. Within ID28 the Planning Inspectors concluded that exceptional circumstances do not exist for the release of RAF Cosford from the Green Belt. This was at least in part informed by the fact that this status has not prevented development in a manner consistent with its use as an RAF base or indeed related activities such as training facilities and domestic accommodation.</p> <p>Continued identification of RAF Cosford as a major developed site within the Green Belt will ensure that the sites Green Belt status is considered in a manner consistent with that currently undertaken. The aspirations of the existing sites occupiers that require new development will therefore be facilitated where they are able to demonstrate that very special circumstances exist for such development or occur within the Green Belt. When determining if very special circumstances exist within the extent of the RAF Cosford major developed site, positive consideration will be given to the sites predominantly brownfield nature and any contribution proposals make to the long-term sustainability of the complementary uses of the site.</p>
Further Main Modifications Required	<p>Yes: Draft Policy S21 and its explanation will need to be deleted. Other draft Policies and associated explanations (including SP11 and S1) will need to be amended to reflect the changed proposed status of RAF Cosford from a Strategic Site inset within the Green Belt to a major developed site within the Green Belt.</p>
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

\*Green Belt Purposes (where applicable):

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>IRN001</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	12%
<i>Percentage of site in Flood Zone 2:</i>	16%
<i>Percentage of site in Flood Zone 1:</i>	84%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	3%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	8%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	12%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	3%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt Considerations (from the GB Assessment/Review):</i>	The site is not located within the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Low, Medium and Medium-High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Low, Medium and Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Low, Medium-Low and Medium-High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Low, Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site has two existing highway access points. A simple priority junctions onto the A4169 Wenlock Road and a simple priority junction with acceleration and deceleration lanes onto the Buildwas Road. These junction may need to be upgraded to Ghost Island right turn and/or roundabout junctions. The site appears to include land that would enable these improvements to be delivered if needed. The site also has frontage onto the A4169 south of the existing junction opposite Hill view Farm.</p> <p>If developed as a strategic site it is assumed that local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities.</p> <p>However, in the initial phases of the development it is likely that facilities and services from outside the locality will need to be used. In these circumstances the nearest schools is in Buildwas less than 2km from the centre of the site and are linked by a continuous footway. The nearest convenience store and GP is in Coalbrookdale are approximately 1.7km from the centre of the site and are linked by a continuous footway.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	<p>Buildwas Sand Quarry SSSI and Local Geological Site is partly on the site.</p> <p>Adjacent to Tick Wood and Benthall Edge SSSI and Ancient Woodland.</p> <p>Adjacent to River Severn Local Wildlife Site.</p> <p>Protection of these sites and priority habitats will reduce the developable area available.</p> <p>May trigger Natural England's SSSI IRZ.</p>
<i>Ecology Comments Other Constraints:</i>	<p>This site supports a large population of GCNs, a number of bat roosts and priority habitats. There are a number of Env. Network corridors on the site.</p> <p>Requires botanical survey, Kecia and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish and nesting birds.</p> <p>PP10106 cross the site.</p>

<i>Ecology Comments Management of Constraints:</i>	Priority habitats must not be developed. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Habitats could potentially be restored as priority habitat .
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site adjacent to boundary, and within settings, of Ironbridge Gorge World Heritage Site (NHLE ref. 1000090) and The Gorge Conservation Area. Also has potential to affect settings of the Scheduled Monument of Buildwas Abbey (NHLE ref. 1015813) and possibly also a range of listed buildings within the wider vicinity of the site. Grade II listed Albert Edward railway bridge (NHLE ref. 1054151) on site boundary, Buildings and structures associated with the Ironbridge A interwar power station (HER PRN 06710) will be retained on site.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of designated heritage assets including WHS; Level 2 recording of historic buildings recording of retained structures from Ironbridge A). Site master planning with high quality design approach that addresses sites relationship with designated heritage assets around it necessary. Redevelopment should also adaptively reuse retained structures from Ironbridge A.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	abuts ancient woodland to south
<i>Tree Comments Other Constraints:</i>	numerous belts of trees and areas of woodland within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees. Development stand-off from woodland around the site
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate internal trees and woodland in open space and plant to connect to / expand adjoining wooded areas.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Con land noise.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Poor</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Poor</b>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. The site is located on the A4169 which links to the A5 / M54 corridor and the A458 corridor. However, the site is some distance from these corridors. Nearest railway stations providing direct links to the Black Country is at Telford and Wellington and would likely require some other form of transport to access them (it is noted that the site contains a former railway station and active investigations are ongoing regarding establishing a passenger service).
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site consists of the Former Ironbridge Power Station site and greenfield land located to the west of the Power Station. Ironbridge Power Station closed in 2017. The site contains a large area of brownfield land, some of which is heavily contaminated. It is understood that the former quarry located to the east of the site is no longer promoted as part of the site.</p> <p>Outline Planning Permission has been granted for the formation of a new strategic settlement on the site. Reserved Matters Applications for first phases have subsequently been received.</p> <p>The Former Ironbridge Power Station is located in close proximity to the village of Buildwas.</p> <p>The Economic Growth Strategy for Shropshire identifies the opportunity to "capitalise on opportunities arising from the redevelopment of the former Ironbridge Power Station".</p> <p>The site is sufficiently large that it could form a strategic settlement.</p> <p>Whilst the site does not directly adjoin the A5 / M54 or A458 strategic corridors it is connected to them by an A road (A4169). There is also an opportunity to provide railway links to Telford, which would allow onward connections to the Black Country and even without this Telford station is accessible via A roads. As such, given the sites location (proximity to the Black Country) and connectivity it could be an appropriate location to meet cross-boundary needs arising in the Black Country.</p> <p>Elements of the site are located within flood zones 2 and/or 3 and within the 1,000 year surface flood risk zone. Some of the site is also located within an area identified on the EA Historic Flood Map.</p> <p>Part of the site is located within an area of high visual sensitivity for employment uses.</p> <p>Existing access points may need to be upgraded to Ghost Island right turn and/or roundabout junctions. It is considered that the site includes sufficient land to achieve this.</p> <p>Services and facilities would need to be provided on the site to create a sustainable community.</p> <p>The site performs poorly for residential and employment both within the context of a potential strategic site/settlement and the Black Country Contribution, within Stage 2a of the Sustainability Appraisal.</p> <p>The site contains a SSSI and RIG. It contains also numerous belts of trees and areas of woodland and is in proximity of a SSSI, ancient woodland and a Local Wildlife Site.</p> <p>There are a number of environmental network corridors on the site. The site also contains priority habitats and species (including Great Crested Newts and bat roosts).</p> <p>The site) particularly the greenfield element) is in proximity of the Shropshire Hills AONB.</p> <p>The site contains listed buildings and other buildings considered non-designated heritage assets.</p> <p>The site is within the setting of the Ironbridge Gorge World Heritage Site and the Gorge Conservation Area. It is also in proximity of a scheduled monument and listed buildings.</p> <p>The site contains contaminated land.</p> <p>The retained National Grid and Western Power Distribution substations.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Ensuring future occupiers have appropriate access to services and facilities and employment opportunities.</p> <p>Provision of a new nursery, primary school and community facilities/buildings.</p> <p>Need to retain the National Grid and Western Power Distribution substations and utilities infrastructure over and under the site.</p> <p>Necessary decontamination of the site undertaken.</p> <p>Necessary works to the highway network undertaken.</p> <p>Provision of green infrastructure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Opportunity to provide a railway station and re-use the existing rail link from the site.</p> <p>Opportunity to provide enhancements to the leisure offer and support the visitor economy (including linking to uses on the River).</p> <p>Provision of a park and ride facility.</p> <p>Provision of new medical facilities.</p> <p>Decontamination.</p> <p>Green infrastructure provision.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Majority of the Site is allocated as a new Strategic Settlement.</p> <p>Site to meet needs arising in Shropshire and provide 600 dwellings as part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.</p>

Reasoning	<p>Much of the site is vacant and brownfield land. Extensive areas of this brownfield land is also subject to contamination. The Economic Growth Strategy for Shropshire and the current Local Plan (Core Strategy) identified the opportunity to capitalise on the significant strategic opportunity arising from the redevelopment of the Former Ironbridge Power Station site.</p> <p>Whilst the site does not directly adjoin the A5 / M54 or A458 strategic corridors it is connected to them by an A road (A4169). There is also an opportunity to provide railway links to Telford, which would allow onward connections to the Black Country and even without this Telford station is accessible via A roads. As such, given the sites location (proximity to the Black Country), connectivity, scale and status it would be an appropriate location to meet a component of the cross-boundary needs arising in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Outline Planning Permission has been granted for the formation of a new strategic settlement on the site. Reserved Matters Applications for first phases have subsequently been received. The mixed-use redevelopment of the Former Ironbridge Power Station site presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 600 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country. It also provides the opportunity to sympathetically remediate the site and as such represents a sustainable option for its future use.</p> <p>It is therefore considered appropriate to identify the Former Ironbridge Power Station site (apart from the former quarry area which it is understood no longer forms part of the site and will create a buffer to Buildwas Abbey) as a strategic settlement, the redevelopment of which will contribute to meeting the development needs of Shropshire and accommodate 600 dwellings of the proposed contribution to the unmet housing need forecast to arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Further Main Modifications Required	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S20 to be amended to reflect the fact that 600 of the dwellings proposed on the site form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>
If proposed for Allocation, Potential Capacity:	<p>Formation of a new settlement through a comprehensive mixed-use redevelopment of the site to provide a range of local services and facilities, around 1,000 dwellings, around 6ha of employment land and extensive green infrastructure. Of these 1,000 dwellings, 600 dwellings form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>
If proposed for Allocation Design Requirements:	<p>a. The quantity, quality, design, mix and layout of housing provided on the site will be informed by site constraints and opportunities, identified local needs and relevant policies of this Local Plan.</p> <p>b. Employment provision will represent an intrinsic element of the site's redevelopment, occurring alongside the provision of housing. Employment provision will be of an appropriate quantity and quality to contribute towards the objectives of the Shropshire Economic Growth Strategy.</p> <p>c. The village centre will comprise of an appropriate range of commercial uses to serve the new settlements community. As the local centre will ensure future occupiers of the site benefit from access to local facilities, its timely provision is an important consideration and will be directly linked to provision of housing on the site.</p> <p>d. Green infrastructure provision will be of an appropriate quantity and quality. Its location will protect and enhance key green infrastructure corridors and networks on and around the site and existing areas of public open space. Existing playing fields should be retained.</p> <p>e. Appropriate community facilities and buildings will be provided on the site, such as a community hall, art gallery and heritage centre. 2ha of land will be provided for a primary school to serve the needs of the new community on the site. If required by the relevant CCGs, a medical centre will also be provided on the site. These facilities and buildings will tap-into the heritage of the site.</p> <p>f. A suitable number of appropriately designed and constructed pedestrian, cycle and vehicular access/egress points will be provided. If current access/egress points to the site are retained, they may need to be upgraded to ghost island right turn and/or roundabout junctions, as determined through appropriate modelling and engagement.</p> <p>g. Appropriate pedestrian and cycle links will be provided to and through the site, particularly to the proposed nursery, primary school and village centre.</p> <p>h. Site design and layout will be high-quality, reflecting and respecting the sites proximity to the Shropshire Hills Area of Outstanding Natural Beauty and minimising landscape and visual impact. This is particularly important to the development of the greenfield elements of the site.</p> <p>i. The high-quality design and layout of the site will also reflect and respect the sites heritage, heritage assets on the site and its relationship with heritage assets within the wider area, including the Ironbridge Gorge World Heritage site, Buildwas Abbey Scheduled Monument, the Severn Gorge Conservation Area and Listed Buildings.</p> <p>j. The Grade II listed Albert Edward railway bridge on the sites boundary and buildings and structures associated with the Ironbridge A interwar power station will be sympathetically retained, enhanced/maintained and adaptively reused.</p> <p>k. Natural environment assets on and in proximity of the site, including Buildwas Sand Quarry Site of Special Scientific Interest (SSSI), Local Wildlife Site and Local Geological Site, Buildwas River Section SSSI, Tick Wood and Benthall Edge SSSI, three areas of ancient woodland, other Local Wildlife Sites and any priority habitats will be retained and appropriately buffered. A sustainable juxtaposition will be created between built form and trees.</p> <p>l. Acoustic design, layout and appropriate building materials (including where necessary appropriate glazing, ventilation and acoustic barriers) will be used to appropriately manage noise associated with retained National Grid and Western Power Distribution substations and equipment and nearby roads.</p> <p>m. A sustainable juxtaposition will be created between built form and trees. Where possible trees and woodland should be incorporated into areas of open space and planting should occur to connect to / expand adjoining wooded areas.</p> <p>n. The site supports a large population of Great Crested Newts; bat roosts and is likely home to other protected species. Appropriate assessment and provision on the site will be required for these species.</p> <p>o. Any contaminated land on the site will be appropriately managed.</p> <p>p. Mineral extraction opportunities associated with the site will be investigated and where appropriate extraction works undertaken.</p> <p>q. The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Development will also be excluded from the small portions of the site located in Flood Zones 2 and/or 3. Flood and water management measures must not displace water elsewhere.</p>

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>Madeley</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No

<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Direct access onto A442.
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Direct access on to A442, however consultation would be required with neighbouring Highway authority, Telford and Wrekin.
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Mitigation works are likely to be required, depending on the scale of development. Consideration should also be given to the sustainability of the site and connectivity with adjacent settlements.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	The woodland (and ponds) should be retained and appropriately buffered. A buffer of at least 50m will be required for any ponds that contain GCNs, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	EclA and botanical survey required and surveys for badgers, bats, nesting birds, GCNs and reptiles

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Protect, enhance and restore Env. Network in accordance with CS17 and MD12.
<i>Ecology Comments Opportunities:</i>	Enhance Env. Network
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes historic farmstead of Sutton Hill (HER PRN 26358). No known archaeological interest but large size suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on Sutton Hill, including the setting of the farmhouse; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Patchy network of hedgerows and field trees within site. Block of mature plantation to northern boundary that connects to T&WC woodland extending northwards.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover approach to enhance tree cover in association with future development. Incorporate good trees as part of open space within development and plan strategically for a network of connected green infrastructure. Extend woodland cover and create suitable buffer with built development. Look to connect to large block of woodland to the north of the site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A442 Road noise.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and ProPG design.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Good</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Fair</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Good</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Fair</b>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. The site is located on the A442 which links to the A5 / M54 corridor and the A458 / A454 corridors. However, the site is some distance from these corridors. Nearest railway station providing direct links to the Black country is at Telford and would likely require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site lies adjacent to the built form of Telford.</p> <p>The site is sufficiently large that it could form a strategic site.</p> <p>Whilst the site does not directly adjoin the A5 / M54, A458 or A454 strategic corridors it is connected to them by an A road (A442). Telford railway station is also accessible via A roads. As such, given the sites location (proximity to the Black Country) and connectivity it could be an appropriate location to meet cross-boundary needs arising in the Black Country.</p> <p>The site is located within the Green Belt and performs an important role against purpose 1, checking the unrestricted sprawl of large built-up areas.</p> <p>Site includes the historic farmstead of Sutton Hill and may have archaeological potential.</p> <p>Development of the site would likely require off-site highway works/mitigation, depending on the scale of development.</p> <p>The site contains woodland and ponds. The site may also contains priority habitats and/or protected species.</p> <p>The site contains a patchy network of hedgerows and field trees. The block of mature plantation to the sites northern boundary connects to woodland extending northwards.</p> <p>Noise associated with the A442 requires due consideration and mitigation.</p> <p>Consideration should also be given to the sustainability of the site and connectivity with adjacent settlements.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Necessary improvements to the highway network.</p> <p>Provision of green infrastructure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>

Reasoning	<p>Whilst the sites size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that:</p> <ul style="list-style-type: none"> <li>-There are non-Green Belt locations that are also more appropriate to accommodate the proposed contributions to unmet housing needs forecast to arise within the Black Country.</li> <li>-There are other Green Belt locations that are more appropriate to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.</li> </ul> <p>The site lies adjacent to the built form of Telford.</p> <p>The site is located within the Green Belt and performs an important role against purpose 1, checking the unrestricted sprawl of large built-up areas. As such it is considered important to retention the site within the Green Belt.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

\*Green Belt Purposes (where applicable):

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>SHF024</b>
<i>Coal Authority Reference Area?</i>	Yes
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	2%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	6%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	4%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt Considerations (from the GB Assessment/Review):</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which perform strongly against purposes 1a and 2; perform moderately against purposes 1b and 3; and perform weakly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this Green Belt parcel, if released for development would have a high level of harm to the Green Belt.</p> <p>The Green Belt Review also considers this parcel within opportunity area (J4-1). The review of the relevant opportunity area indicates that there would be high harm to the Green Belt resulting from release.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium-High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	A464 & Priorslee Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Preferred access option would be to replace the existing service area roundabout on Priorslee road with a new roundabout junction that also served SHF024.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	HRA may be required for any employment use that generates airborne pollution or road traffic including HGVs. Detailed emissions modelling would be required due to proximity of designated wildlife sites. See LPR HRA.
<i>Ecology Comments Other Constraints:</i>	<p>There is a patch of priority habitat woodland on the site that is TPO'd and within the Env. Network. This area should be retained and appropriately buffered. The eastern and southern boundaries form Env. Network corridors. There is a pond within the woodland and many others within 500m</p> <p>Requires an Ecia and survey for bats, CN (ponds within 500m), badgers and nesting birds.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	block of mature TPO woodland to centre western side of site
<i>Tree Comments Other Constraints:</i>	hedgerows within and around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	utilise and perhaps extend blocks of existing woodland to screen development and provide useable amenity space for employees. Create 15m development stand-off with the existing and any future woodland
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Landfill within 250 to the east.
<i>Public Protection Comments Management of Constraints:</i>	Contaminated land remediation likely to be available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Poor</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Poor</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Fair</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Fair</b>
<b>Relationship to the Black Country</b>	Located in eastern Shropshire, an area with a functional relationship to the Black Country. Located on the A5 / M54 corridor from Shrewsbury to Wolverhampton and as such benefits from good links onto this corridor and into the Black Country. The site is in proximity of railway station at Telford.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The site lies adjacent to the built form of Telford.  The site is sufficiently large that it could form a strategic site.  The site is located within the Green Belt and forms an important component of the gap between the settlements of Telford and Shifnal. The review of the relevant parcels indicates that there would be high harm to the Green Belt resulting from release of this site.  The site is located on the M54/A5 strategic corridor. The opportunity associated with this corridor is recognised within the Economic Growth Strategy for Shropshire and the M54 corridor study. Telford railway station is also in close proximity. As such, given the sites location (proximity to the Black Country) and connectivity it could be an appropriate location to meet cross-boundary needs arising in the Black Country.  A HRA may be required for employment uses that generate airborne pollution or road traffic.  The site contains a pond, hedgerows and woodland (identified priority habitat which is also subject to TPO protection). The site also contains areas within an environmental network.  The site may be of archaeological interest.  The site may contain contaminated land.  The site performs poor for housing within the context of a potential strategic site/settlement and the Black Country Contribution, within Stage 2a Sustainability Appraisal. However, it performs fair for employment in the context of a potential strategic site/settlement and the Black Country Contribution</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Necessary improvements to the highway network.  Provision of green infrastructure.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>

Reasoning	<p>Whilst the sites size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that:</p> <ul style="list-style-type: none"> <li>-There are non-Green Belt locations that are also more appropriate to accommodate the proposed contributions to unmet housing needs forecast to arise within the Black Country.</li> <li>-There are other Green Belt locations that are more appropriate to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.</li> </ul> <p>The site is located within the Green Belt and forms an important component of the gap between the settlements of Telford and Shifnal. As such it is considered that the retention of this site within the Green Belt is important to avoid the actual or perceived coalescence of these two settlements.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	N/A
If proposed for Allocation Design Requirements:	N/A

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);  
 Purpose 2 (merging of neighbouring towns);  
 Purpose 3 (safeguarding countryside from encroachment);  
 Purpose 4 (preserving setting/character of historic towns); and  
 Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

\*Green Belt Purposes (where applicable):

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>BNT002</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt Considerations (from the GB Assessment/Review):</i>	The site is not located within the Green Belt.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Low
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Low
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Low
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Low
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>The site is divided into two parts one to the northeast of the A41 and one to the southwest. The section of A41 between the two parts is subject to a 40mph. The sites controls sufficient land to facilitate new and/or improved access points onto the A41.</p> <p>If developed as a strategic site it is assumed that additional local services / facilities would be provided within a master plan that gave priority to sustainable modes of transport for local trips to these facilities.</p> <p>However, in the initial phases of the development it is likely that other facilities and services from outside the locality will need to be used. In these circumstances the nearest convenience store is approximately 1.5km from the site at Tern Hill Roundabout and is linked by a continuous footway. The nearest GP is in Hodnet or Market Drayton over 5km away. Two existing uncontrolled refuge crossings cater for pedestrian movements across the A41. The site already benefits from an hourly bus service (64) to Shrewsbury and Market Drayton via the A53. There is a more direct road link to Market Drayton but this is private road with no continuous PRoW access.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	
<i>Ecology Comments Significant Constraints:</i>	<p>There is a patch of Ancient Woodland on the site.</p> <p>Adjacent to River Tern and RAF Tern Hill Local Wildlife Sites.</p> <p>Protection of these sites and priority habitats will reduce the developable area available.</p>
<i>Ecology Comments Other Constraints:</i>	<p>There are Env. Network core areas on and adjacent to the site and corridors on the site. There may be priority habitats on the site - if so, these areas must not be developed.</p> <p>Requires botanical survey, Kacia and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles, white-clawed crayfish and nesting birds.</p>

<i>Ecology Comments Management of Constraints:</i>	Priority habitats must not be developed. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Habitats could potentially be restored as priority habitat .
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Scheduled Monument of Ringwork and bailey castle 390m west of Buntingsdale Hall (NHLE Ref. 1019659) and Grade II* listed Buttingsdale Hall (NHLE ref. 1293695). Site includes The site of the former RAF Ternhill now Clive Barracks (HER PRN 29121).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of SM and LBs; Level 2 recording of historic buildings recording of WWII and pre-1960s military buildings). Site master planning with high quality design approach that addresses sites relationship with designated heritage assets around it necessary. Site should also seek to adaptively reuse any significant 20th century military buildings identified where possible.
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	The former barracks are set in well tree'd landscaped grounds with linear groups along access roads scattered individual trees and 2 significant woodland copses - one central west and one far NE of site
<i>Tree Comments Other Constraints:</i>	
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	Development density and layout needs to be low so that it is sustainably integrated into and compliments existing natural environment features and mature trees and woodlands retained
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible con land and noise from sources on site and road running through middle.
<i>Public Protection Comments Management of Constraints:</i>	Remediation available. Noise mitigation possible. Need to look at on a detailed basis once plans come in but possible to have residential.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	<b>Fair</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	<b>Poor</b>
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	<b>Fair</b>
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	<b>Fair</b>
<b>Relationship to the Black Country</b>	This site is located in north Shropshire and as such it has a limited relationship to the Black Country.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	As a large potentially strategic site/settlement, it has capacity to accommodate a significant quantity of housing and employment, sufficient to contribute to the needs of both Shropshire and/or the Black Country.

<p><b>Strategic Considerations:</b></p>	<p>The Ministry of Defence (MOD) have announced plans to relocate the regiment based at Clive Barracks, Tern Hill and dispose of the Barracks for redevelopment. The site contains a large area of brownfield land, some of which is contaminated.</p> <p>The Economic Growth Strategy for Shropshire identifies the opportunity associated with Clive Barracks, Tern Hill, which is located on the A41 strategic corridor. The site is sufficiently large that it could form a strategic settlement.</p> <p>The site is located near to Market Drayton.</p> <p>This site is located in north Shropshire and as such it has a limited relationship to the Black Country.</p> <p>The site is divided into two components by the A41.</p> <p>Services and facilities would need to be provided on the site to create a sustainable community.</p> <p>The site is located within a landscape parcel with low landscape and visual sensitivity.</p> <p>The sites is considered to control sufficient land to facilitate new and/or improved access points onto the A41. Improvements may also be required to the A41/A53 roundabout.</p> <p>The site contains ancient woodland. It is also in proximity of Local Wildlife Sites.</p> <p>The site is well tree'd and landscaped.</p> <p>The site contains and is in proximity of environmental network core areas and corridors. The site may also contain priority habitats and protected species.</p> <p>The site contains Clive Barracks, a non-designated heritage asset.</p> <p>The site performs fair for housing and employment within the context of a potential strategic site/settlement within Stage 2a Sustainability Appraisal. It also performs fair for employment in the context of the Black Country Contribution, but poor for housing in the context of the Black Country Contribution.</p> <p>The site is in proximity of designated and non-designated heritage assets - including listed buildings and scheduled monuments.</p> <p>The site may contain contaminated land associated with past military uses.</p> <p>Noise associated with the A41 and nearby airfield.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Ensuring future occupiers have appropriate access to services and facilities and employment opportunities.</p> <p>Provision of a new primary school. This will enable Buntingsdale School and Stoke on Tern Primary School to merge on the site and ensure future residents have access to a primary school.</p> <p>Ensuring necessary works to the highway network are undertaken (including achieving appropriate site accesses and improvements to Tern Hill roundabout).</p> <p>Pedestrian and cycle connectivity through the site and in particular between the north-eastern and south-western portions of the site - through enhancement of an underpass of the A41.</p> <p>Provision of green infrastructure.</p> <p>Any necessary decontamination of the site undertaken.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Formation of a new settlement through a mixed used development to provide local services and facilities; employment land; new homes; and extensive green infrastructure.</p> <p>Provision of a new primary school to serve future residents of the site.</p> <p>Improvements to Tern Hill roundabout.</p> <p>Pedestrian and cycle connectivity through the site and in particular between the north-eastern and south-western portions of the site.</p> <p>Decontamination.</p> <p>Green infrastructure provision.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>The Site is allocated as a new Strategic Settlement</p>

Reasoning	<p>Much of the site is brownfield land and will be vacated during the Local Plan Review period (2016-2038). Areas of this brownfield land are subject to contamination.</p> <p>The Economic Growth Strategy for Shropshire identifies an objective to prioritise investment along strategic corridors and growth zones, including the A41 corridor.</p> <p>The mixed-use redevelopment of Clive Barracks, Tern Hill will provide a productive use for a large brownfield site which will be vacated during the Local Plan Review period (2016-2038). The site is on a strategic corridor and will provide economic opportunities in the form of local employment. It will also provide social and environmental opportunities resulting from the provision of additional new homes, local services and facilities and extensive green infrastructure.</p> <p>As such, Shropshire Council considers that emerging proposals for the mixed-use redevelopment of Clive Barracks, Tern Hill represent a sustainable option for the future use of a large predominantly brownfield site on a strategic corridor.</p> <p>It is therefore considered appropriate to identify Clive Barracks, Tern Hill as a proposed strategic site, the redevelopment of which will contribute to meeting the development needs of Shropshire in the medium to long term.</p> <p>Whilst the site is large, it is located in north Shropshire and as such it has a limited relationship to the Black Country, as such it is not considered an appropriate location to accommodate any of the proposed contribution to the unmet needs forecast to arise within the Black Country.</p>
Further Main Modifications Required	No
If proposed for Allocation, Potential Capacity:	Formation of a new settlement through a comprehensive mixed-use redevelopment of the site to provide a range of local services and facilities, around 750 dwellings, around 6ha of employment land and extensive green infrastructure.
If proposed for Allocation Design Requirements:	<p>a. The quantity, quality, design, mix and layout of housing provided on the site will be informed by site constraints and opportunities, identified local needs and relevant policies of this Local Plan.</p> <p>b. Employment provision will represent an intrinsic element of the site's redevelopment, occurring alongside the provision of housing. Employment provision will be of an appropriate quantity and quality to contribute towards the objectives of the Shropshire Economic Growth Strategy.</p> <p>c. The local centre will comprise of an appropriate range of commercial uses (likely to include a family pub plus convenience store and a small number of modest retail units) to serve the new settlements community on land fronting the A41. The local centre will ensure future occupiers of the site benefit from access to local facilities, as such its timely provision is an important consideration and will be directly linked to provision of housing on the site.</p> <p>d. Green infrastructure provision will be of an appropriate quantity and quality. Its location will integrate and enhance key green infrastructure corridors and networks on and around the site. Existing playing fields should be retained.</p> <p>e. 1ha of land will be provided for a primary school. This will enable Buntingsdale School and Stoke on Tern Primary School to merge on the site and crucially serve the needs of the new development.</p> <p>f. Any necessary improvements will be undertaken in order to achieve appropriate access points into both the eastern and western portions of the site. Any necessary improvements to the A41/A53 Tern Hill roundabout will also be undertaken including any recommendations from an air quality assessment of the impact of increased vehicular movements from this development on Tern Hill roundabout.</p> <p>g. Appropriate pedestrian and cycle links will be provided to and through the site, particularly to the proposed primary school and local centre. This will include enhancement of an underpass of the A41, to ensure pedestrian and cycle connectivity between the north-eastern and south-western portions of the site.</p> <p>h. Acoustic design, layout and appropriate building materials (including where necessary appropriate glazing, ventilation and acoustic barriers) will be used to appropriately manage noise arising from the adjacent airfield and nearby roads.</p> <p>i. Any contaminated land on the site will be appropriately managed.</p> <p>j. The nearby River Tern and RAF Tern Hill Local Wildlife Sites will be appropriately buffered. Ancient woodland and priority habitats on the site will be retained and an appropriately buffered. A sustainable juxtaposition will be created between built form and trees.</p> <p>k. Site design and layout will reflect and respect the sites heritage and heritage assets within the wider area.</p> <p>l. The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Development will also be excluded from the small portions of the site located in Flood Zones 2 and/or 3. Flood and water management measures must not displace water elsewhere.</p>

## 2. Executive Summary

### *Overview*

- 2.1. This Topic Paper provides a summary of the housing and employment land needs and requirements in Shropshire. This updated position responds to the Inspectors comments in their interim findings, and reflects updated Sustainability Appraisal work.

### *Housing Need*

- 2.2. The 2020 base date assessment of Local Housing Need (EV069) concluded that local housing need in Shropshire was some **25,894 dwellings** over the 22-year plan period from 2016-2038. This equates to an annual average **of 1,177 dwellings**.

### *Unmet Housing Need in the Black Country*

- 2.3. Shropshire Council has undertaken extensive duty-to-cooperate discussions with the Black Country Authorities. Through this process it is understood that an unmet housing need is forecast to arise in the Black Country.
- 2.4. Two reasonable options for contributing to this unmet housing need were considered within the Updated Additional Sustainability Appraisal (SA), Option 1: No Contribution and Option 2: 1,500 dwelling contribution.
- 2.5. The SA process concluded that **Option 2: 1,500 dwelling contribution** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded that this was the most appropriate option for inclusion within the draft Shropshire Local Plan.

### *Reasonable Options for the Housing Requirement*

- 2.6. Consistent with ID28, ID36 and ID37 issued by the Planning Inspectors, the reasonable options for the housing requirement have been **updated and re-assessed** through the updated additional SA work undertaken.
- 2.7. **Three** updated reasonable options for the housing requirement were identified and re-assessed within the SA process. In summary:
- a. The baseline for these options was the 2020 base date assessment of local housing need.
  - b. Consistent with the methodology previously utilised, three percentage uplifts (5%, 10% and 15%) above the identified baseline were applied.

- c. Each reasonable option was then considered with and without the proposed contribution of 1,500 dwellings towards the unmet housing need forecast to arise in the Black Country.
- 2.8. The SA process concluded **Option 3b: High Growth plus a 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded that this was the most appropriate option for inclusion within the draft Shropshire Local Plan.

### ***The Proposed Housing Requirement***

- 2.9. The proposed housing requirement is therefore a **minimum of 31,300 dwellings between 2016 and 2038**, which equates to an **annual average of around 1,423 dwellings**. This represents:
- a. A **continuation of the 'High Growth' option** for the housing requirement previously identified and contained in the submission version of the draft Shropshire Local Plan (15% uplift to local housing need);
  - b. An uplift of 500 dwellings on the housing requirement proposed in the submission version of the Plan; and
  - c. A **continuation of the specific contribution of 1,500 dwellings** towards the unmet housing need forecast to arise in the Black Country proposed within the submission version of the draft Shropshire Local Plan. This is however now achieved through a further specific uplift of 1,500 dwellings, rather than having these dwellings 'blended' into the housing requirement as proposed in the submission version of the Local Plan.

### ***Reasonable Options to Accommodate the Proposed 500 Dwelling Uplift to the Housing Requirement***

- 2.10. Four reasonable options for accommodating the uplift were identified and assessed through the Updated Additional SA. These are:
- a. Option 1: Increasing Settlement Guidelines and Windfall Allowances.
  - b. Option 2: Densification of Proposed Site Allocations.
  - c. Option 3: Increasing Site Allocations.
  - d. Option 4: A Combination of Two or More of the Other Options.
- 2.11. The SA process concluded that **Option 1: Increasing Settlement Guidelines and Windfall Allowances** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded that this was the most appropriate option for inclusion within the draft Shropshire Local

Plan. **Therefore, it is not considered necessary to identify any further site allocations to accommodate this proposed uplift.**

- 2.12. Through planning judgement, it was concluded that the most appropriate adjustments to settlement guidelines and windfall allowances to accommodate the proposed uplift are:
- a. Shrewsbury (Strategic Centre): 350 dwelling increase to the proposed housing guideline to some 8,975 dwellings between 2016 and 2038.
  - b. Whitchurch (Principal Centre): 75 dwelling increase to the proposed housing guideline to some 1,675 dwellings between 2016 and 2038.
  - c. Former Ironbridge Power Station (Strategic Settlement): 75 dwelling increase to the proposed housing guideline to some 1,075 dwellings between 2016 and 2038.

### ***Reasonable Options to Accommodate the Proposed 1,500 Dwelling Contribution to the Black Country***

- 2.13. Within ID28 the Planning Inspectors concluded that any proposed contribution to the unmet housing need forecast to arise in the Black Country would need to be provided on a specific site or sites. To inform identification of site(s) to accommodate the proposed 1,500 dwelling contribution, updated additional SA and site assessment work was undertaken.
- 2.14. Through the updated SA site assessment process, a series of sites have been identified to accommodate the proposed 1,500 dwelling contribution to the Black Country. These are:
- a. BRD030 - Tasley Garden Village, Bridgnorth: 600 dwellings.
  - b. SHR060, SHR158 & SHR161 - Land between Mytton Oak Road and Hanwood Road, Shrewsbury: 300 dwellings.
  - c. IRN001 - Former Ironbridge Power Station: 600 dwellings

### ***Housing Land Supply***

- 2.15. The Council has re-assessed its housing land supply based on the updated proposed housing requirement (March 2023 base date).
- 2.16. With regard to the five year period from 2023/24-2027/28, the assessment concludes a **6.86 years' supply of deliverable housing land is available.**
- 2.17. With regard to the proposed plan period from 2016-2038, the assessment concludes that given completions of 11,761 dwellings between 2016/17 and 2022/23, **sufficient deliverable or developable housing land is available to deliver 34,874 dwellings over the proposed plan period.**

2.18. This identified housing land supply is therefore sufficient to **achieve the proposed housing requirement of a minimum of 31,300 dwellings** and allow for **around 10% flexibility** in the overall housing land supply.

### ***Employment Land Need***

2.19. This 'labour demand' jobs growth scenario derived from the Economic Development Needs Assessment (EDNA) identifies an adjusted baseline employment land need for **250ha at an annual rate of 11.5ha/yr**. This baseline employment land need provides the starting point for identifying reasonable employment land options for the employment land requirement.

### ***Unmet Employment Land Need in the Black Country***

2.20. Two reasonable options for contributing to this unmet employment land need were considered within the Updated Additional Sustainability Appraisal (SA), Option 1: No Contribution and Option 2: 30 hectare contribution.

2.21. The SA process concluded that **Option 2: a 30 hectare contribution** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded that this was the most appropriate option for inclusion within the draft Shropshire Local Plan.

### ***Reasonable Options for the Employment Land Requirement***

2.22. Consistent with ID28, ID36 and ID37 issued by the Planning Inspectors, the reasonable options for the employment land requirement have been **updated and re-assessed** through the updated additional SA work undertaken.

2.23. **Three** updated reasonable options for the employment land requirement were identified and re-assessed within the SA process. In summary:

- a. The baseline for these options was the 'labour demand' jobs growth identifies an adjusted baseline employment land need for 250ha at an annual rate of 11.5ha/yr.
- b. Consistent with the methodology outlined in ID37 and the Updated Additional Sustainability Appraisal, three percentage uplifts (0%, 10% and 15%) above the identified baseline employment land need were applied.
- c. Each reasonable option was then considered with and without the proposed contribution of 30 hectares towards the unmet employment land need forecast to arise in the Black Country.

2.24. The SA process concluded **Option 3b: High Growth (15%) plus a 30 hectare contribution to the unmet employment land need forecast to arise in the Black Country** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded this was the most appropriate option for inclusion within the draft Shropshire Local Plan.

### ***Proposed Employment Land Requirement***

- 2.25. The proposed employment land requirement is therefore a **minimum of 320 hectares between 2016 and 2038**, which equates to an **annual average of around 14.5 hectares per year**. This represents:
- a. A **continuation of the 'High Growth' option** for the employment land requirement previously identified and contained in the submission version of the draft Shropshire Local Plan;
  - b. An uplift of 20 hectares on the employment land requirement proposed in the submission version of the Plan; and
  - c. A **continuation of the specific contribution of 30 hectares** towards the unmet employment land need forecast to arise in the Black Country proposed within the submission version of the draft Shropshire Local Plan. This is achieved through a further specific uplift of 30 hectares, rather than this provision being 'blended' into the employment land requirement as proposed in the submission version of the Local Plan.

### ***Reasonable Options to Accommodate the Proposed 20 hectare Uplift to the Employment Land Requirement***

- 2.26. Four reasonable options for accommodating the uplift were identified and assessed through the Updated Additional SA. These are:
- a. Option 1: Utilising settlement guidelines and windfall allowances for the identified employment land supply.
  - b. Option 2: Densification of proposed site allocations.
  - c. Option 3: Extensions to current proposed site allocations or the allocation of additional sites.
  - d. Option 4: A combination of two or more of the above Options.
- 2.27. The SA process concluded that **Option 1: Utilising Settlement Guidelines and Windfall Allowances** is the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded this was the most appropriate option for inclusion within the draft Shropshire Local Plan.
- 2.28. This found that the identified existing employment land supply was sufficient to provide for the uplift of 20ha to deliver the proposed

'minimum' employment land requirement of 320ha. **Therefore, it is not considered necessary to identify any further site allocations to accommodate this proposed uplift.**

### ***Reasonable Options to Accommodate the Proposed 30 hectare Contribution to the Black Country***

- 2.29. Within ID28 the Planning Inspectors concluded that any proposed contribution to the unmet employment land need forecast to arise in the Black Country would need to be provided on a specific site or sites.
- 2.30. Through the updated SA site assessment process, a series of sites were considered in the centre and east of the County as summarised in this Topic Paper. It is concluded that the proposed 30 hectare contribution to the Black Country should be accommodated at:

SHF018b & SHF018d – Land east of Shifnal Industrial Estate, Upton Lane, Shifnal: 39 hectares to achieve 16 hectares of floorspace.

### ***Employment Land Supply***

- 2.31. This Topic Paper identifies a total employment land supply of 413 hectares. This provides significant flexibility in seeking to deliver the proposed employment requirement of 320ha over the whole plan period.

### ***Aligning Proposed Employment with Housing Growth***

- 2.32. Aligning employment and housing growth means identifying suitable opportunities for growth in the future labour supply. This topic paper provides information on the various strands of the future labour supply, with new housing growth being the most significant, but not sole expected source.
- 2.33. This Topic Paper identifies the sources of a future labour supply in Shropshire of 25,420 persons to meet a projected jobs growth of 21,400 jobs including 8,440 Class B or equivalent jobs.

### ***Strategic Distribution of Development***

- 2.34. Following identification of the proposed housing and employment land requirement, it was considered appropriate to assess updated reasonable options for the strategic distribution of development. These being:
- a. Option A: Rural Rebalance
  - b. Option B: Urban Focus
  - c. Option C: Balanced Growth

- 2.35. The SA process concluded that **Option B: Urban Focus** was the most sustainable option. The subsequent planning judgement exercise (summarised within this Topic Paper) also concluded that this was the most appropriate option for inclusion within the draft Shropshire Local Plan.
- 2.36. As such, the proposed strategic distribution of planned development within the draft Shropshire Local Plan **remains 'Urban Focus'**.

### ***Spatial Strategy***

- 2.37. Reflecting the conclusions summarised within this Topic Paper, the revised spatial strategy for the level and distribution of development across Shropshire proposed to be set out in draft Policy SP2 includes:
- a. A housing requirement of a minimum of 31,300 dwellings between 2016 and 2038, of which 1,500 dwellings are a contribution towards the unmet housing needs forecast to arise within the Black Country.
  - b. An employment land requirement of a minimum of 320ha between 2016 and 2038, of which 30ha is a contribution towards the unmet employment land needs forecast to arise within the Black Country.
  - c. An urban focussed strategy for the strategic distribution of development, by which development will be focused in the 'urban areas', which consist of Strategic Centre of Shrewsbury, proposed Principal Centres, proposed Key Centres and proposed Strategic Settlements. This will be complemented by appropriate development within Community Hubs and to a lesser extent Community Clusters. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.
- 2.38. This revised spatial strategy:
- a. **Continues the principle of high growth** which underpinned the housing and employment land requirements within the submission version of the draft Shropshire Local Plan.
  - b. **Retains the 1,500 dwelling and 30ha of employment land contributions** towards the unmet needs forecast to arise in the Black Country.
  - c. **Continues the urban focused approach** to the strategic distribution of development.

### 3. Introduction

- 3.1. The submission version of the draft Shropshire Local Plan proposed that over the period from 2016 to 2038:
  - a. Around 30,800 dwellings would be delivered. This was based on the principle of '**High Growth**', (15% uplift above local housing need), which incorporated a specific contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country.
  - b. Around 300ha of employment land would be developed, incorporating a specific contribution of 30ha of employment land towards the unmet employment land needs forecast to arise in the Black Country.
  - c. An 'urban focused' strategy for the distribution of development. This entails a significant proportion of development being directed towards urban settlements that have the infrastructure available to best support development. This is complemented by development in rural areas (particularly the larger rural settlements) to maintain and enhance sustainability.
- 3.2. On 15<sup>th</sup> February 2023, the Planning Inspectors examining the draft Shropshire Local Plan issued an Interim Findings document (ID28). This followed completion of Stage 1 Hearing Sessions, which focused on legal, procedural and strategic issues (including strategic policies). These Hearing Sessions were primarily undertaken in July 2022, with a further session specifically regarding the Duty to Cooperate in January 2023.
- 3.3. ID28 addresses a range of matters, including a number related to housing and employment. This included:
  - a. The housing and employment land needs of Shropshire.
  - b. Proposed contributions to unmet housing and employment land needs forecast to arise within the Black Country.
  - c. The proposed housing and employment land requirements within the draft Shropshire Local Plan.
- 3.4. ID28 requested that the Council undertake additional Sustainability Appraisal (SA), in relation to these issues. It also requested that the Council prepare a "*Topic Paper that unambiguously sets out the need for housing over the plan period and the local plan's housing requirement and the same for employment land.*"

#### ***Responding to the Interim Findings***

- 3.5. Following receipt of ID28, Shropshire Council undertook additional SA work (GC29) and prepared a new Housing and Employment Topic Paper (GC28) with the intention of positively responding to ID28.

### ***Updating the Response to the Interim Findings***

- 3.6. After consideration of the additional SA work (GC29) undertaken by Shropshire Council, the Planning Inspectors issued correspondence (ID36) on the 4<sup>th</sup> October 2023. This raised some soundness concerns with the additional SA work undertaken and as such requested further updated SA work and an updated Housing and Employment Topic Paper.
- 3.7. Following consideration of ID36, Shropshire Council sought clarification regarding the concerns raised and the assessment work necessary to resolve them, within correspondence on the 16<sup>th</sup> November 2023 (GC41). On the 16<sup>th</sup> January 2024, the Planning Inspectors issued correspondence (ID37) which addressed the questions raised by the Council within GC41.
- 3.8. Shropshire Council has now undertaken updated additional SA work and prepared an updated Housing and Employment Topic Paper (this document), in order to positively respond to the information requested by the Planning Inspectors in ID28, ID36 and ID37.

## **4. Purpose of this Document**

- 4.1. The purpose of this document is to positively respond to the Planning Inspectors' request for a clear and unambiguous Topic Paper regarding the housing and employment land needs and requirements in Shropshire. In doing so it draws a clear distinction between defined housing and employment need and requirements.
- 4.2. In seeking to positively respond to the conclusions of the Planning Inspectors within ID28, ID36 and ID37, Shropshire Council has also undertaken updated additional SA assessment work regarding the housing and employment land requirement. This updated additional SA assessment work has directly informed the preparation of this updated Topic Paper.
- 4.3. A range of previously published material prepared by the Council has also informed this updated Topic Paper, including the Local Housing Need Assessment (EV069), the Strategic Housing Market Assessment (EV097.01 and EV097.02), the Housing Topic Paper (GC4i), the Five Year Housing Land Supply (GC33), the Housing Trajectory (GC4p), Productivity Growth Forecasts (EV090), the Economic Development Needs Assessment (EV043), the Economic Growth Strategy (EV044), the Employment Topic Paper (EV112), the Strategic Employment Topic Paper (GC4n), the Authority Monitoring Report (EV012); and the Local Plan Viability Study (EV115.01).
- 4.4. **For the avoidance of doubt, this document supersedes document GC28.**
- 4.5. **Similarly, the updated additional SA work supersedes document GC29.**

## 5. Local Housing Need

- 5.1. The National Planning Policy Framework (NPPF) 2021 specifies that *"To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals..."*<sup>1</sup>
- 5.2. The Local Housing Need Assessment (2020 base date) utilises Government's standard methodology and underpinned the housing requirement when the Regulation 19: Pre-Submission Consultation Draft Shropshire Local Plan was prepared, at the time of the Regulation 19 Consultation, and when Shropshire Council made the decision to submit the draft Shropshire Local Plan for examination.
- 5.3. This calculation of local housing need is summarised within the Local Housing Need Assessment (2020) (EV069). In summary, this assessment concludes that local housing need for Shropshire was some **25,894 dwellings** over the 22-year plan period from 2016-2038. This equates to an annual average **of 1,177 dwellings**.

---

<sup>1</sup>DLUHC (formerly MHCLG), (2021), The NPPF – Paragraph 61 (Reference retained to NPPF (2021) due to transitional arrangements for plan making).

## **6. Unmet Housing Need Forecast to Arise in the Black Country**

- 6.1. Shropshire Council has undertaken extensive duty to cooperate discussions with the Black Country Authorities regarding housing issues, including their local housing needs and approach to identifying existing and future housing land supply. Through these discussions and associated processes, it is understood that an unmet housing need is forecast to arise in the Black Country. It was also established that it may be appropriate for a contribution to this forecast unmet housing need to be accommodated in Shropshire.
- 6.2. Within paragraph 13 of ID28, the Planning Inspectors specified that *"the Council's intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire's housing need to meet some of this externally derived unmet need."*

### ***Reasonable Options for Any Contribution to Unmet Housing Need Forecast to Arise in the Black Country***

- 6.3. Within the updated additional SA assessment work, two reasonable options for any contribution to unmet housing needs forecast to arise in the Black Country were identified. These were:
  - a. **Option 1:** No contribution towards the unmet housing needs forecast to arise within the Black Country.
  - b. **Option 2:** Contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country.
- 6.4. This updated additional SA Assessment work is an important consideration when undertaking the planning judgement regarding which reasonable option for any contribution to the unmet housing needs forecast to arise in the Black Country should be identified within the draft Shropshire Local Plan. However, a range of other evidence/factors also requires due consideration when undertaking this planning judgement.
- 6.5. As such, key evidence/factors given due consideration within the planning judgement included:
  - a. The updated additional SA assessment of reasonable options for any contribution to unmet housing needs forecast to arise in the Black Country.

- b. The extensive duty to cooperate process undertaken by Shropshire Council with the Black Country Authorities.
  - c. The various factors considered in determining the extent of the relationship between Shropshire and the Black Country and whether it may be appropriate for a contribution to forecast unmet housing need to be accommodated in Shropshire, as summarised within the Housing Topic Paper (GC4i).
  - d. Agreements reached within the Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV041).
- 6.6. In conclusion, it is considered **Option 2**: contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country is the most appropriate. This conclusion was reached as this option:
- a. Presents an opportunity to achieve a strongly positive effect on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - b. Presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - c. Whilst posing a potential negative impacts against other sustainability objectives, it is considered that mitigation can reduce these impacts. Mitigation opportunities include consideration of the interplay between this contribution and the total level of development proposed in Shropshire and the strategic distribution/location of site allocations.
  - d. Positively responds to the relationship between Shropshire and the Black Country – geographic, infrastructure links, migration patterns and commuting patterns.
  - e. Positively responds to the Duty to Cooperate process and signed Statement of Common Ground between Shropshire Council and the Black Country Authorities.
  - f. Would result in an appropriate contribution to the unmet housing need forecast to arise in the Black Country, supporting the ability to meet housing need beyond the Shropshire area. Conversely, Option 1: No Contribution would result in no contribution to the unmet housing need forecast to arise in the Black Country and as such would not support the ability to meet housing need beyond the Shropshire area.
- 6.7. **However, it is also considered that any decision on this matter is ultimately most appropriately considered in the context of reasonable options for the housing requirement.**

## 7. The Housing Requirement

### ***Reasonable Housing Requirement Options***

- 7.1. During preparation of the draft Shropshire Local Plan, three reasonable options for the housing requirement were identified within the Issues and Strategic Options Consultation Document (EV003.01). These options were based on percentage uplifts (around 5%, 10% and 15%) against defined housing need at that time.
- 7.2. In response to ID28, ID36 and ID37 the reasonable options for the housing requirement have been **updated and re-assessed** through the updated additional SA work undertaken.
- 7.3. The baseline for these updated reasonable options is the Local Housing Need Assessment (2020), which underpins the housing requirement in the draft Shropshire Local Plan.
- 7.4. Within paragraph 2 of ID36, the Planning Inspectors confirmed that in ID28 *"we found that the Council's approach to identifying the housing and employment land needs derived within Shropshire itself to be sound"* whilst paragraph 3 noted that *"The housing requirement figure in policy SP2 is based on the Local Housing Need figure (LHN) assessed in 2020"*.
- 7.5. Within paragraph 5.7 of ID37, the Planning Inspectors specified that the updated additional SA assessment of housing growth options should be *"based on the 2020 baseline"*.
- 7.6. Consistent with the methodology previously utilised to identify reasonable options for the housing requirement, percentage uplifts (5%, 10% and 15%) above the identified baseline were then applied to identify reasonable alternative options to assess.
- 7.7. These uplifts ensure local housing need is achieved, whilst also providing some flexibility to respond to changes to local housing need over the plan period and opportunities to:
  - a. Respond positively to specific sustainable development opportunities;
  - b. Increase the delivery of family and affordable housing to meet the needs of local communities and support new families coming into Shropshire;
  - c. Support the delivery of specialist housing for older people, people with disabilities and the needs of other groups within the community;
  - d. Support the diversification of the labour force; and
  - e. Support wider aspirations, including increased economic growth and productivity.

7.8. Furthermore, reflecting the outcomes of duty to cooperate discussions undertaken with the Black Country Authorities, each reasonable option is assessed with and without a further specific uplift of 1,500 dwellings to reflect reasonable options for any proposed contribution to unmet housing need forecast to arise within the Black Country.

7.9. This approach positively responds to the Planning Inspectors guidance in paragraph 5.7 of ID37.

7.10. As such, **three reasonable options for the housing requirement (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country)** were identified and assessed within the updated additional SA assessment work.

**Updated Reasonable Housing Requirement Options**

7.11. The three reasonable options for the housing requirement (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) identified using the methodology summarised in paragraphs 7.1-7.10, are:

**Table 7.1: Reasonable Housing Requirement Options**

Option	Baseline Local Housing Need	Percentage Uplift Above Local Housing Need	1,500 Dwelling Contribution to Black Country
Housing Requirement <b>Option 1a: Moderate Growth</b>	2020 Assessment of Local Housing Need.	Around a 5% uplift	No
<p><b>Summary:</b> This option represents around a 5% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). This option represents a total minimum housing requirement of <b>27,200 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,236 dwellings as an annual average.</p>			
Housing Requirement <b>Option 1b: Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs</b>	2020 Assessment of Local Housing Need.	Around a 5% uplift	Yes
<p><b>Summary:</b> This option represents around a 5% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further 1,500 dwelling uplift as a contribution toward unmet housing need forecast to arise in the Black Country. This option represents a total minimum housing requirement of <b>28,700 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,305 dwellings as an annual average.</p>			
Housing Requirement <b>Option 2a: Significant Growth</b>	2020 Assessment of Local Housing Need.	Around a 10% uplift	No
<p><b>Summary:</b> This option represents around a 10% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). This option represents a total minimum housing requirement of <b>28,500 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,296 dwellings as an annual average.</p>			

Option	Baseline Local Housing Need	Percentage Uplift Above Local Housing Need	1,500 Dwelling Contribution to Black Country
Housing Requirement <b>Option 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs</b>	2020 Assessment of Local Housing Need.	Around a 10% uplift	Yes
<p><b>Summary:</b> This option represents around a 10% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further 1,500 dwelling uplift as a contribution toward forecast unmet housing need in the Black Country. This option represents a total minimum housing requirement of <b>30,000 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,364 dwellings as an annual average.</p>			
Housing Requirement <b>Option 3a: High Growth</b>	2020 Assessment of Local Housing Need.	Around a 15% uplift	No
<p><b>Summary:</b> This option represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). The total minimum housing requirement would equate to <b>29,800 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,355 dwellings as an annual average.</p>			
Housing Requirement <b>Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs</b>	2020 Assessment of Local Housing Need.	Around a 15% uplift	Yes
<p><b>Summary:</b> This option represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further 1,500 dwelling uplift as a contribution toward forecast unmet housing need in the Black Country. This option represents a total minimum housing requirement of <b>31,300 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,423 dwellings as an annual average.</p>			

### ***Identifying the Proposed Housing Requirement***

- 7.12. The decision regarding which of these options should form the basis for the proposed housing requirement within the draft Shropshire Local Plan is ultimately one of planning judgement.
- 7.13. There is however an extensive range of information/factors to inform this planning judgement, including:
- a. Local housing need in Shropshire.
  - b. Updated additional SA assessment of reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country.
  - c. Updated additional SA assessment work regarding reasonable housing requirement options.
  - d. The ability to positively contribute to local issues and opportunities, including:
    - i. Providing flexibility to respond to changes to local housing need over the proposed plan period.

- ii. Responding positively to specific sustainable development opportunities.
  - iii. Increasing delivery of family and affordable housing to meet needs of local communities and support new families coming into Shropshire.
  - iv. Supporting delivery of specialist housing for older people, people with disabilities and meet the housing needs of other groups within the community.
  - v. Support diversification of our labour force.
  - vi. Support wider aspirations, including increased economic growth and productivity.
- e. The ability for some of the Black Country's unmet need to positively contribute towards Shropshire's Local Plan vision and strategy.
- f. Deliverability.
- g. Responses to Regulation 18 consultations undertaken to inform the draft Shropshire Local Plan and representations received during the Regulation 19 consultation on the draft Shropshire Local Plan.
- h. The Planning Inspectors conclusion in ID28 that the housing requirement should be expressed as 'a minimum' rather than 'around'.

7.14. Dealing with each in turn:

*Local Housing Need*

7.15. As each of the reasonable options for the housing requirement include a percentage uplift above baseline housing need, all are sufficient to meet local housing need.

*Updated Additional SA Assessment Work: Reasonable Options - Contribution to Unmet Housing Need Forecast to Arise in the Black Country*

7.16. The updated additional SA assessment work included a specific consideration of reasonable options for Shropshire making a contribution to the unmet housing need forecast to arise in the Black Country.

7.17. The reasonable options identified were:

- a. **Option 1:** No contribution towards the unmet housing need forecast to arise within the Black Country.
- b. **Option 2:** Contribution of 1,500 dwellings towards the unmet housing need forecast to arise within the Black Country.

- 7.18. This SA assessment provides a crucial source of information to inform the planning judgement regarding the approach to any contribution to unmet housing needs forecast to arise in the Black Country, within the housing requirement of the draft Shropshire Local Plan.
- 7.19. This work assessed each option against the SA objectives and in this way informs judgements about their relative sustainability. It concluded that on balance, **Option 2:** Contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country, is the most sustainable of the two options identified. Further detail on the outcomes of this updated additional SA assessment work is provided within the updated Additional SA Report.
- 7.20. Furthermore, the planning judgement exercise summarised within paragraphs 6.1-6.7 of this Topic Paper, also concluded that **Option 2:** Contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country, was the most appropriate of these options. However, it also concluded this matter was best considered in the context of the proposed Housing Requirement.

*Updated Additional SA Assessment Work: Reasonable Housing Requirement Options*

- 7.21. The updated additional SA assessment work included assessment of the three reasonable options for the housing requirement (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country).
- 7.22. This updated additional SA assessment work provides a crucial source of information to inform the planning judgement regarding which of the reasonable housing requirement options should form the basis for the proposed housing requirement within the draft Shropshire Local Plan.
- 7.23. This work assessed each option against the SA objectives and in this way informs judgements about their relative sustainability.
- 7.24. In general terms, the updated additional SA assessment work can be summarised as concluding that the greater the level of housing proposed within the option, the greater the likelihood of positive impacts on social and economic factors. Conversely the greater the level of housing proposed within the option, the greater the potential of negative impacts on environmental factors. It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.
- 7.25. The updated additional SA assessment work concluded that none of the options are likely to result in a strongly negative effect.

- 7.26. It also concluded that only one option is likely to result in a strongly positive effect. This is Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs, which is likely to result in a strongly positive effect in the short, medium and long term on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society, and potentially in the long term on SA objective 4: promoting access to services for all sections of society.
- 7.27. The updated additional SA assessment work ultimately concluded that on balance, **Option 3b**: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs represented the most sustainable of the reasonable options for the level of housing growth identified. Further detail on the outcomes of this updated additional SA assessment work is provided within the Updated Additional SA Report.

*Ability to Respond to Identified Issues and Support Identified Opportunities*

- 7.28. The evidence base and consultation responses that have informed preparation of the draft Shropshire Local Plan identified a range of issues and opportunities in Shropshire. Key issues and opportunities identified include:
- a. Providing flexibility to respond to changes to local housing need over the proposed plan period.
  - b. Responding positively to specific sustainable development opportunities.
  - c. Increasing delivery of family and affordable housing to meet needs of local communities and support new families coming into Shropshire.
  - d. Supporting delivery of specialist housing for older people, people with disabilities and meet the housing needs of other groups within the community.
  - e. Support diversification of our labour force.
  - f. Support wider aspirations, including increased economic growth and productivity.
- 7.29. Key evidence which informed identification of these issues and opportunities include assessments of local housing need (including EV069), the various iterations of the Authority Monitoring Report (including EV012), the Strategic Housing Market Assessment (EV097.01 and EV097.02), Productivity Growth Forecasts (EV090), the Economic Development Needs Assessment (EV043), the Economic Growth Strategy (EV044), and the Local Plan Viability Study (EV115.01).

- 7.30. The material prepared to facilitate and subsequent responses / representations to consultations undertaken as part of the preparation of the draft Shropshire Local Plan also informed identification of these issues and opportunities. This includes the Issues & Strategic Options Consultation (EV003.01 and EV003.02), the Preferred Scale and Distribution of Development Consultation (EV004.01 and EV004.02), the Regulation 18: Pre-Submission Consultation (EV007.01 and EV007.03), and the Regulation 19: Pre-Submission Consultation (SD002, SD014.01-SD014.02; representations A0001-A0682 and GC4o).
- 7.31. Each of the reasonable options for the housing requirement include a percentage uplift above local housing need in order to support addressing identified issues and achievement of identified opportunities.
- 7.32. In general terms, the greater the level of uplift above local housing need proposed within the option, the greater the ability to support addressing the identified issues and the achievement of the identified opportunities.
- 7.33. Furthermore the level of development proposed must also be deliverable – this is considered in further detail in the deliverability section.
- 7.34. It is also important to note that level of housing is only one mechanism within the scope of the draft Shropshire Local Plan to contribute to delivering the overall vision and strategy. Policies that address the resultant location, type, tenure, and quality of housing, to ensure new housing is responsive to identified issues and opportunities is equally if not more important. These policies have all been subject to SA.

*Relationship between identified issues and opportunities in Shropshire and a proposed contribution to unmet housing need forecast to arise in the Black Country.*

- 7.35. It is considered that a proposed contribution to unmet housing needs forecast to arise in the Black Country is complementary to and will facilitate achievement of wider issues and opportunities identified in Shropshire. As:
- a. The ability to positively respond to sustainable development opportunities generally increases as the amount of development proposed rises. This includes to provide a contribution to unmet housing need forecast to arise in the Black Country.
  - b. Increasing overall housing numbers is one mechanism available to provide more family and affordable housing, adaptable and

specialist housing for older people and people with disabilities, and housing to meet the needs of other groups in Shropshire communities, as such housing generally forms a portion of total housing provision.<sup>2</sup> Increased levels of housing to provide a contribution to unmet housing need forecast to arise in the Black Country would facilitate this mechanism.

- c. The Black Country is one location from which new families can be attracted into Shropshire. Established migration patterns between the two areas support this conclusion<sup>3</sup>.
- d. One way to supplement and diversity the Shropshire labour force is retaining and attracting more working-aged people into Shropshire, including through provision of appropriate housing to meet their needs<sup>4</sup>. Increased levels of housing to provide a contribution to unmet housing need forecast to arise in the Black Country, would facilitate this mechanism.
- e. The Black Country is a potential source of labour supply for Shropshire. Established migration and commuting patterns between the two areas support this conclusion<sup>5</sup>.
- f. A means of supporting wider aspirations for Shropshire, including increased economic growth and productivity, is provision of appropriate housing opportunities, particularly for working-aged people. Increased housing provision as a contribution to unmet housing need forecast to arise in the Black Country would facilitate this mechanism.

7.36. Three of the reasonable options for the housing requirement include both a percentage uplift above local housing need and a further specific 1,500 dwelling contribution to the unmet housing need forecast to arise within the Black Country. Both these adjustments can support the ability to address wider identified issues and achieve identified opportunities in Shropshire. This 'overlap' must be appropriately considered when determining an appropriate housing requirement for inclusion in the draft Shropshire Local Plan.

---

<sup>2</sup> Increased housing provision is only one mechanism available to provide the types of housing required to meet the needs of families, older people and other groups within our communities. The draft Shropshire Local Plan includes a range of draft policies that address the location, type, tenure, and quality of housing, to ensure new housing effectively supports the ability to meet the needs of our communities and all the groups within them.

<sup>3</sup> These migration patterns informed consideration of the relationship between Shropshire and the Black Country, as documented within the Housing Topic Paper GC4i. These migration patterns also directly inform sub-national population projections and associated sub-national household projections which underpin calculations of local housing need.

<sup>4</sup> It is important to note that increased housing provision is only one of the mechanisms available to supplement and diversity the labour force. Provision of appropriate employment opportunities and lifestyles that people aspire to are other such mechanisms.

<sup>5</sup> Migration and commuting patterns informed consideration of the relationship between the two areas, as documented within the Housing Topic Paper GC4i.

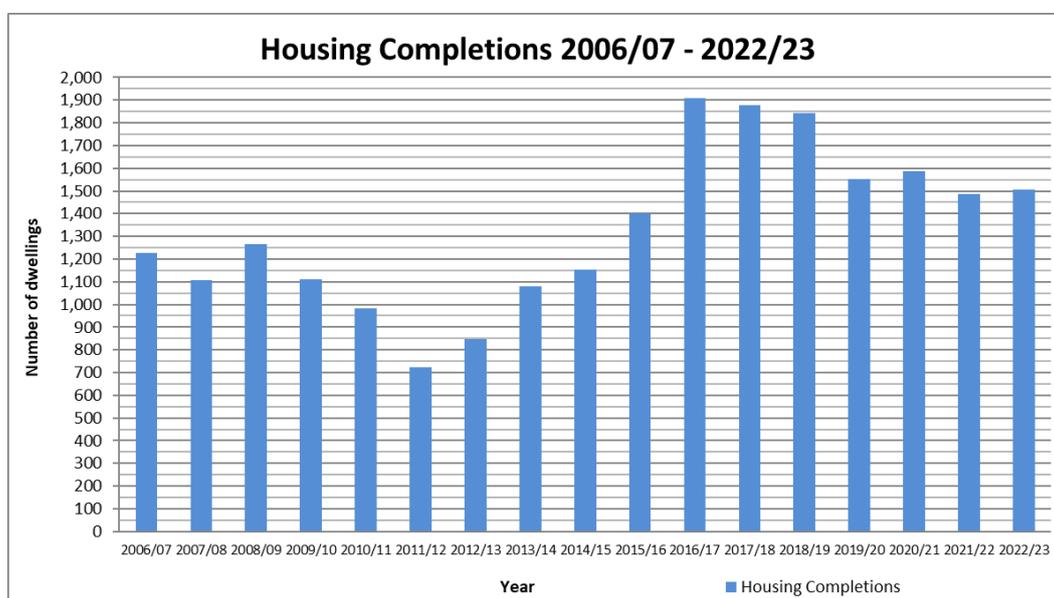

## Deliverability

7.37. It is essential that the proposed housing requirement is deliverable. Whilst past trends on housing completions are inevitably influenced by a range of factors, they form a useful indicator of potential future deliverability.

7.38. Figure 7.1 summarises annual housing completion rates over the current plan period thus far (from 2006/07-2022/23).

**Figure 7.1: Housing Completions in Shropshire for 2006/07-2022/23**

<b>Financial Year</b>	2006 / 07	2007 / 08	2008 / 09	2009 / 10	2010 / 11	2011 / 12	2012 / 13	2013 / 14	2014 / 15
<b>Housing Completions</b>	1,228	1,106	1,265	1,112	984	724	847	1,079	1,155
<b>Financial Year</b>	2015 / 16	2016 / 17	2017 / 18	2018 / 19	2019 / 20	2020 / 21	2021 / 22	2022 / 23	
<b>Housing Completions</b>	1,402	1,910	1,876	1,843	1,554	1,586	1,485	1,507	

7.39. It illustrates that over this period, housing completions experienced both significant peaks (with a particular 'spike' of completions in 2016/17-2018/19 as part of a wider peak in 2016/17-2022/23) and significant troughs (particularly 2009/10-2014/15). This is not surprising and is a common pattern within the housing market, reflecting the range of known and unknown local, regional, national and international factors that influence it.

7.40. Over the longer term period (2006/07-2022/23), the annual average housing completion rate was some 1,333 dwellings, which is higher than the annual average associated with Option 1a, Option 1b and Option 2a; but lower than the annual average associated with Option 2b, Option 3a and Option 3b.

7.41. Over the shorter term (most recent five year period from 2018/19-2022/23) which represents a part of a peak in the housing market,

the annual average housing completion rate was some 1,595 dwellings, which is higher than the annual average of all the reasonable options for the housing requirement.

- 7.42. This past trend data indicates that it is possible, in an individual year, to achieve/exceed the annual average housing requirement associated with all of the reasonable options for the housing requirement. However, it also suggests that ensuring consistent achievement of the annual average housing requirement associated with all the reasonable options (particularly Option 2b, Option 3a and Option 3b) over the proposed plan period, will require proactive implementation of the draft Shropshire Local Plan by Shropshire Council and the effective operation of the housing market.
- 7.43. It is recognised that there are a myriad of known and unknown local, regional, national and international factors that will influence the housing market and housing completion rates in Shropshire. These factors will inevitably result in fluctuations to housing completion rates over the proposed plan period – similar to those identified within the past delivery trends. It is important that the proposed housing requirement is responsive to the potential for such fluctuations and the potential for peaks and troughs in the housing market and associated housing completion rates.
- 7.44. It is also acknowledged that the higher the annual average housing requirement, the more challenging it becomes to ensure delivery over the entirety of the proposed plan period. However, it is important that caution regarding deliverability is balanced with aspiration to support the ability to contribute to addressing identified issues and opportunities in Shropshire.
- 7.45. It is also acknowledged that the higher the annual average housing requirement, the greater the potential for investment in supporting infrastructure. Throughout the preparation of the submission version of the draft Shropshire Local Plan, Shropshire Council have proactively engaged with infrastructure providers. These discussions have provided confidence regarding the deliverability of infrastructure necessary to support the housing requirement proposed within the submission version of the draft Shropshire Local Plan.
- 7.46. Given the level of housing growth associated with the reasonable options for the housing requirement, Shropshire Council has confidence regarding the deliverability of infrastructure necessary to support all the growth options. This is informed by the engagement previously undertaken with infrastructure providers.

7.47. Identification of a robust housing land supply to provide confidence regarding deliverability of the proposed housing requirement is also important.

#### *Consultation Responses*

7.48. As documented within paragraph 7.30, consultation material and responses/representations directly informed identification of key issues and opportunities in Shropshire, which can be contributed to through the proposed housing requirement.

7.49. Consultation responses/representations also directly informed identification of the housing requirement proposed within the draft Shropshire Local Plan (at the point of submission).

7.50. The responses/representations received during the various consultations undertaken to inform the draft Shropshire Local Plan have been given due consideration when undertaking the planning judgement regarding an appropriate housing requirement for inclusion within the draft Shropshire Local Plan.

#### *Expression of the Housing Requirement*

7.51. Throughout preparation of the draft Shropshire Local Plan, reasonable options for the housing requirement and the proposed housing requirement within the draft Shropshire Local Plan were expressed as 'around'.

7.52. Within ID28, the Planning Inspectors concluded that the housing requirement should be expressed as 'a minimum' "*for both monitoring and effectiveness.*"

7.53. Shropshire Council accepts this principle. However, the implications do require careful consideration in the context of identifying which of the reasonable housing requirement options should form the basis for the proposed housing requirement within the draft Shropshire Local Plan.

#### ***The Proposed Housing Requirement***

7.54. In exercising planning judgement regarding which of the reasonable options should form the basis for the housing requirement within the draft Shropshire Local Plan, Shropshire Council has carefully considered the extensive range of information available.

7.55. In conclusion, Shropshire Council considers **Option 3b** should form the basis for the proposed housing requirement within the draft Shropshire Local Plan.

7.56. **Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further 1,500 dwelling uplift as a contribution toward forecast unmet housing need in the Black Country.

7.57. The resultant proposed housing requirement is **31,300 dwellings** over the proposed plan period from 2016-2038. This equates to an **annual average of around 1,423 dwellings**.

### ***Reasons for the Proposed Housing Requirement***

7.58. As documented within paragraph 7.53, in undertaking the planning judgement exercise to determine which of the reasonable should form the basis for the housing requirement proposed within the draft Shropshire Local Plan, careful consideration of available information has been undertaken.

7.59. Key considerations included:

- a. The level of housing associated with Option 3b is sufficient to **meet local housing need (2020 base date)**, whilst also providing a buffer above local housing need. This provides significant confidence that need will be achieved and allows flexibility to respond to changes to need over the proposed plan period.
- b. The level of housing associated with Option 3b is sufficient to allow for **a significant positive contribution** to the various identified **issues and opportunities in Shropshire** (when considered in the context of specific policies to positively influence the location, type, tenure, and quality of housing).
- c. The level of housing associated with Option 3b **achieves the principle of and will deliver High Growth**, which underpins the level of growth proposed within the spatial strategy of the draft Shropshire Local Plan.
  - i. This option more than meets evidenced housing need and offers significant opportunities to meet the requirements of all sections of society in terms of location, affordability and adaptability.
  - ii. It is likely to support existing services such as schools, doctor's surgeries, shops and play areas in the medium to long term and to create a balanced supply of employment land and/or more or higher value jobs.
  - iii. It also is likely to support new leisure, recreational and cultural activities in the medium to long term and economies of scale may offer opportunities to increase the provision of energy from

- renewable sources, support reductions in energy consumption and promote energy efficiency.
- d. Option 3b includes a **specific contribution of 1,500 dwellings towards the unmet housing need forecast to arise in the Black Country**. This is consistent with the option considered most sustainable in the updated additional SA assessment work regarding options for any contribution to unmet housing needs forecast to arise in the Black Country. It is also consistent with the conclusions of the planning judgement regarding the most appropriate approach to this matter – summarised earlier in this document.
  - e. Option 3b is considered **ambitious but deliverable**, having regard to available information (including consultation responses from site promoters and the evidence base prepared to inform the draft Shropshire Local Plan) on short and longer term delivery trends and recognising there is likely to be a myriad of known and unknown local, regional, national and international factors that can influence the housing market and housing completion rates in Shropshire and the need to provide sufficient flexibility to respond to these factors.
  - f. It is considered that the **infrastructure** necessary to support the housing growth associated with Option 3b is **deliverable**, informed by engagement previously undertaken with infrastructure providers during the preparation of the draft Shropshire Local Plan.
  - g. Based on the updated additional SA assessment work undertaken, it is considered that Option 3b presents an opportunity to:
    - i. Achieve a **strongly positive effect** on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
    - ii. In the long-term, achieve a **strongly positive effect** on SA objective 4: promoting access to services for all sections of society.
    - iii. Achieve **positive impacts** against a range of other identified sustainability objectives.
  - h. Based on the updated additional SA assessment work undertaken, it is considered that Option 3b is **unlikely to result in any strongly negative effects on any SA objectives**. Whilst a potential risk of achieving negative impacts against a range of identified sustainability objectives is acknowledged, it is considered that opportunities exist to **mitigate** the extent of such impacts. This includes through careful consideration of the locations of site allocations and the identification of appropriate policies to manage resultant development.

- i. Based on the updated additional SA assessment work undertaken, it is considered that Option 3b strikes an appropriate balance across the three pillars (social, economic, and environmental) of **sustainable development** and will contribute towards the achievement of the **long term sustainability** of Shropshire.
  - j. Whilst Options 1b and 2b would: ensure local housing need is achieved; result in a contribution to the unmet housing need forecast to arise in the Black Country; and provide opportunities to respond to the identified issues and opportunities in Shropshire, there would be fewer opportunities to respond to the identified issues and opportunities in Shropshire compared to Option 3b.
  - k. Whilst Options 1a and 2a would ensure that local housing need is achieved and provide opportunities to respond to the identified issues and opportunities in Shropshire, the opportunities to respond to the identified issues and opportunities in Shropshire would be less than those associated with Option 3b. Furthermore, these options would result in no contribution to the unmet housing need forecast to arise in the Black Country.
  - l. Whilst Options 3a would ensure that local housing need is achieved and provide opportunities to respond to the identified issues and opportunities in Shropshire, it would result in no contribution to the unmet housing need forecast to arise in the Black Country.
  - m. A series of consultations have been undertaken regarding the proposed housing requirement of the draft Shropshire Local Plan (as summarised within paragraph 7.30). Having carefully reflected upon **consultation responses** received, Shropshire Council considers the level of housing associated with Option 3b responds to and balances the range of issues, considerations and differing perspectives raised.
  - n. Option 3b is considered sufficiently **responsive to the 'overlap'** between uplifts to local housing need to support achievement of identified issues and opportunities in Shropshire, and contributions to the achievement of identified issues and opportunities in Shropshire associated with a contribution to the unmet housing need forecast to arise within the Black Country.
  - o. As documented in ID28, the proposed housing requirement is to be expressed as a 'minimum' rather than as 'around'. This means there is significantly more certainty about the minimum level of housing to be provided.
- 7.60. In conclusion, having considered available evidence, responses to previous consultations, the results of technical assessment, and other relevant information in applying planning judgement, Shropshire Council considers the housing requirement within the draft

Shropshire Local Plan should be based on **Option 3b** of the reasonable options identified.

- 7.61. **The proposed housing requirement is therefore a minimum of 31,300 dwellings between 2016 and 2038, which equates to an annual average of around 1,423 dwellings. This represents:**
- a. A continuation of the 'High Growth' option for the housing requirement previously identified and contained in the submission version of the draft Shropshire Local Plan (15% uplift to local housing need); and**
  - b. A continuation of the specific contribution of 1,500 dwellings towards the unmet housing need forecast to arise in the Black Country proposed within the submission version of the draft Shropshire Local Plan. This is however achieved through a further specific uplift of 1,500 dwellings.**

### ***Implications of the Proposed Housing Requirement***

- 7.62. The submission version of the draft Shropshire Local Plan proposed a housing requirement of 30,800 dwellings between 2016 and 2038. This equates to an annual average of around 1,400 dwellings.
- 7.63. Following careful consideration of the updated reasonable options for the housing requirement, both through the updated additional SA assessment process and the planning judgement exercise (as summarised within this document), it is proposed that the housing requirement within the draft Shropshire Local Plan increases to some 31,300 dwellings between 2016 and 2038. This equates to an annual average of around 1,423 dwellings.
- 7.64. This would result in an increase to the housing requirement of some **500 dwellings** over the period from 2016 to 2038. This equates to an annual average increase of **around 23 dwellings**.
- 7.65. Main modifications would be required to the draft Shropshire Local Plan to reflect this proposed change – including to draft Policy SP2 and its supporting text and the explanation to draft Policy SP7.
- 7.66. Main modifications would also be required to draft Policy SP2 to expressly state the proposed housing requirement includes a 1,500 dwelling contribution to the unmet housing need forecast to arise within the Black Country. Furthermore, it is also necessary to:
- a. Consider through the SA process reasonable options and subsequently identify appropriate main modifications in order to accommodate the proposed 500 dwelling uplift to the proposed housing requirement.

- b. Consider through the SA site assessment process, reasonable sites to accommodate the proposed contribution to the unmet housing need forecast to arise in the Black Country<sup>6</sup> and subsequently identify appropriate main modifications in order to support the accommodation of the proposed 1,500 dwelling contribution to the unmet housing needs forecast to arise in the Black Country.

---

<sup>6</sup> Consistent with Paragraph 21 of ID28 which specified that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.

## **8. Accommodating the Proposed Uplift to the Housing Requirement**

### ***Options to Accommodate the Proposed Uplift to the Housing Requirement***

- 8.1. Having carefully considered the range of mechanisms available to ensure delivery of the proposed housing requirement and in particular the proposed 500 dwelling uplift to the housing requirement, four reasonable options have been identified.
- 8.2. Each option could facilitate provision of more housing. Either through densification of development on proposed allocations (which would not constitute an additional site or extend the developed area); extension to site allocations (this does not constitute an additional site but does extend the area developed); or facilitation of development on additional sites (windfall sites or site allocations, as suggested may be necessary in paragraph 22 of ID28).
- 8.3. These options are:
  - a. **Option 1: Increasing Settlement Guidelines and Windfall Allowances.**
  - b. **Option 2: Densification of Proposed Site Allocations.**
  - c. **Option 3: Increasing Site Allocations.**
  - d. **Option 4: A Combination of Two or More of the Other Options.**

#### *Option 1: Increasing Settlement Guidelines and Windfall Allowances*

- 8.4. Settlement housing guidelines constitute the level of residential development specifically planned for at a settlement within the draft Shropshire Local Plan. Draft Policy SP7: Managing Housing Development summarises key considerations in circumstances where either the proposed settlement housing guideline appears either likely to be exceeded or unlikely to be achieved.
- 8.5. Windfall allowances are in effect the difference between the settlements housing guideline and the capacity of completions already achieved in the proposed plan period / identified commitments (sites with planning permission or prior approval, 'saved' SAMDev allocations and proposed allocations). This allowance can be achieved through the emergence of additional dwellings on windfall sites (sites not specifically planned for but facilitated by the draft Shropshire Local Plan) and/or other sources of additional dwellings that emerge in a settlement.
- 8.6. It is considered likely that opportunities exist to increase settlement guidelines and associated windfall allowances for one or more

Strategic, Principal, Key Centres and/or Strategic Settlements to provide additional capacity for windfall development.

- 8.7. Settlement guidelines and associated windfall allowances in the draft Shropshire Local Plan were considered reasonable when proposed, and there is flexibility within the draft Shropshire Local Plan for settlement guidelines to be exceeded. However, there is evidence that in some instances settlement guidelines and associated windfall allowances have been overly cautious.
- 8.8. Additional capacity associated with any increased windfall allowances would need to be deliverable within the proposed plan period and support delivery of necessary supporting infrastructure.

*Option 2: Densification of Proposed Site Allocations*

- 8.9. There are likely opportunities to increase the density and thereby the capacity of one or more proposed site allocations. Particularly in circumstances where further assessment work / masterplanning has been undertaken regarding capacity by site promoters since submission of the draft Shropshire Local Plan and / or where a development is expected to include a form of housing which is of a higher density, such as smaller properties and specialist housing for older people - including in response to wider policies in the draft Shropshire Local Plan.
- 8.10. However, a cautious approach would be required to ensure that the increased density would still result in an appropriate form of development, as such this exercise would need to be undertaken on a site by site basis.
- 8.11. Additional capacity associated with densification of site allocations would need to be deliverable within the proposed plan period and support delivery of necessary supporting infrastructure.

*Option 3: Increasing Site Allocations*

- 8.12. There may be opportunities to extend the site area of proposed allocations to increase their capacity and/or opportunities to identify additional site allocations (including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements in order to provide additional capacity).
- 8.13. Additional capacity associated with increasing site allocations would need to be deliverable within the proposed plan period and support delivery of necessary supporting infrastructure.

*Option 4: A Combination of Two or More of the Other Options*

8.14. It may be appropriate to consider utilising a combination of all or a selection of mechanisms from the other reasonable options for accommodating the uplift to the proposed housing requirement.

***Identifying the Preferred Option to Accommodate the Proposed Uplift to the Housing Requirement***

8.15. The decision regarding which of the reasonable options to accommodate the proposed uplift to the housing requirement should be utilised within the draft Shropshire Local Plan is ultimately one of planning judgement.

8.16. There is however an extensive range of information/factors that informs this planning judgement. This includes:

- a. The updated additional SA assessment work regarding options to accommodate a proposed uplift to the housing requirement.
- b. Compatibility with the wider vision, strategy and spatial framework of the draft Shropshire Local Plan.
- c. Feasibility and deliverability, including through consideration of whether there are actual opportunities to achieve the proposed uplift and whether these opportunities would be deliverable within the proposed plan period.

8.17. Dealing with each in turn:

*Updated additional SA assessment work regarding options to accommodate a proposed uplift to the housing requirement*

8.18. The updated additional SA assessment work included assessment of the four reasonable options to accommodate a proposed uplift to the housing requirement.

8.19. This updated additional SA assessment work provides an important source of information to inform the planning judgement regarding the approach to accommodate the proposed uplift to the housing requirement within the draft Shropshire Local Plan. It assesses each option against the SA objectives, and in this way informs judgements about their relative sustainability.

8.20. In general terms, the updated additional SA assessment work can be summarised as concluding that options that provide greater certainty about the proportion of the uplift to the housing requirement direct to urban areas achieve more positive impacts on social, economic and environmental factors.

8.21. It is important to note that the housing needs of Shropshire's rural communities must be recognised and appropriately planned for within any strategic distribution of planned development incorporated

into the draft Shropshire Local Plan. However, this component of the updated additional SA assessment work considers only the accommodation of the proposed uplift to the housing requirement.

- 8.22. On balance, the updated additional SA assessment concludes that **Option 1**: increasing settlement guidelines and windfall allowances, represents the most sustainable of the reasonable options for accommodating an uplift to the proposed housing requirement. This is because:
- a. It presents an opportunity to achieve a strongly positive effect on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - b. It presents an opportunity to achieve a strongly positive effect on SA Objective 4: promotion of access to services for all sections of society in the short, medium and long term.
  - c. It presents an opportunity to achieve a strongly positive effect on SA objective 14: promotion of efficient use of natural resources in the short, medium and long term.
  - d. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - e. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through identification of appropriate policies to manage resultant development.
  - f. This option would ensure that the proposed uplift to the proposed housing requirement is accommodated within the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development.
- Option 2: densification of proposed site allocations would also achieve this outcome. However, on balance it is considered that the positive sustainability outcomes associated with Option 1 are more significant than Option 2 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 2 – primarily due to the increased certainty regarding the urban focus of development. Furthermore, it is important to note that the reason for the Council’s cautious approach to site densities is to both provide confidence in deliverability of the proposed housing requirement and avoid risk of over-development which can have negative impacts on a number of SA objectives.
- Option 3: increasing site allocations would also achieve the proposed uplift to the proposed housing requirement. However, on balance it is considered that the positive sustainability outcomes

associated with Option 1 are more significant than Option 3 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 3 – primarily due to the increased certainty regarding the urban focus of development.

-Option 4: a combination of the other options would also achieve the proposed housing requirement uplift. However, the effects against each SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must reflect the 'worst case' scenario from each of the other reasonable options.

8.23. Further detail on the outcomes of the updated additional SA assessment work is provided within the Updated Additional SA Report.

*Compatibility with the wider vision, strategy and spatial framework of the draft Shropshire Local Plan*

8.24. It is important that any option to accommodate the proposed uplift to the housing requirement is compatible with the wider vision, strategy and spatial framework proposed within the draft Shropshire Local Plan. However, it should also be recognised the level of uplift to the proposed (500 dwellings) is unlikely to result in significant change to the overall distribution of development.

8.25. On balance, it is considered all of the reasonable options to accommodate the proposed uplift to the housing requirement have the potential to be compatible with the wider vision, strategy and spatial framework proposed within the draft Shropshire Local Plan.

8.26. In particular they all have the potential to support the proposed 'urban focus' approach to the strategic distribution of planned development.

- a. Option 1: aligns with the principle of urban focus, directing additional windfall development towards the Strategic, Principal, Key Centres and/or Strategic Settlements.
- b. Option 2: would likely continue to align with the principle of 'urban focus' as the majority of proposed allocations are associated with urban settlements. However, there are those associated with rural settlements. As such, this is somewhat dependent on the allocations selected (although the level of uplift to the proposed housing requirement in the context of the total proposed housing requirement is unlikely to result in a significant change to the overall distribution of development).
- c. Option 3: would likely continue to align with the principle of 'urban focus' if it entailed an extension to one or more proposed allocations, as the majority are associated with urban settlements.

However, there are those associated with rural settlements. as such, this is somewhat dependent on the allocations selected. It could also continue to align with the principle of 'urban focus' if it entailed identification of one or more additional site allocations, however this would to be dependent on the location/characteristics of such proposed allocations.

d. Option 4: Is directly linked to the other identified options.

### *Feasibility and Deliverability*

8.27. The intention of this exercise is to consider feasibility and deliverability of the reasonable options to achieve the uplift to the proposed housing requirement.

#### **Option 1: Increasing Settlement Guidelines and Windfall Allowances**

8.28. Windfall development has traditionally constituted a significant proportion of total residential development occurring in Shropshire. This is perhaps unsurprising, given the characteristics of Shropshire.

8.29. It is a large and diverse rural county containing the Strategic Centre of Shrewsbury; five Principal Centres (Bridgnorth, Ludlow, Market Drayton, Oswestry and Whitchurch); 11 Key Centres (Albrighton, Bishop's Castle, Broseley, Church Stretton, Cleobury Mortimer, Craven Arms, Ellesmere, Highley, Much Wenlock, Shifnal and Wem); numerous rural settlements identified as Community Hubs and Community Clusters; hundreds of other rural villages and hamlets; and a significant rural hinterland.

8.30. Consequently, there is a consistent and significant recycling of previously developed land; significant numbers of infill developments; high numbers of conversions of barns and other rural buildings; and high uptake of affordable housing exception sites of varying sizes. Development of such sites often represents windfall development.

8.31. This is also likely to be facilitated over the proposed plan period through recent/future changes to permitted development rights.

8.32. The prevalence of windfall development, particularly of small scale windfall development, was noted within the Strategic Land Availability Assessment (SLAA) (EV106.01). The SLAA included an assessment of past completions achieved on small scale windfall sites of less than 5 dwellings and noted that these rates "*supported the conclusions that windfall development does and will continue to represent an important part of the housing land supply.*"

- 8.33. The Housing Topic Paper (GC4i) also included analysis of windfall development in Shropshire. It concluded that "*consistent with paragraph 71 of the NPPF, there is compelling evidence available to justify and support the inclusion of an appropriate windfall allowance within the sources of supply identified to achieve the proposed housing requirement for Shropshire – both in the next five years and the entirety of the proposed plan period.*"
- 8.34. Best available data on past completions continues to support the importance of windfall sites as a significant and appropriate source of supply for residential development. Specifically, over the last five years (2018/19-2022/23), **some 4,683 dwellings** (net) have been completed on windfall sites in Shropshire (1,669 dwellings on small scale windfall sites of less than 5 dwellings and 3,014 dwellings on medium and large scale windfall sites of 5 or more dwellings), equating to a net annual average of 937 dwellings.
- 8.35. This equates to around 59% of total completions achieved within this period (and in each of these five years windfall completions equated to in excess of 50% of total completions achieved). This information is summarised within Figure 8.1 below:

**Figure 8.1: Net Dwellings Completed on Windfall Sites 2018/19-2022/23**

Year	Small Windfall Site Completions	Medium and Large Windfall Site Completions	All Windfall Site Completions	Total Completions	Proportion of Total Completions on Windfall Sites
2018/19	390	893	1,283	1,843	69.61%
2019/20	328	596	924	1,554	59.46%
2020/21	269	642	911	1,586	57.44%
2021/22	290	509	799	1,485	53.80%
2022/23	392	374	766	1,507	50.83%
<b>Total</b>	<b>1,669</b>	<b>3,014</b>	<b>4,683</b>	<b>7,975</b>	<b>58.72%</b>
<b>Average</b>	<b>334</b>	<b>603</b>	<b>937</b>	<b>1,595</b>	<b>58.72%</b>

- 8.36. Existing commitments on sites with Planning Permission or Prior Approval provide further endorsement of the importance of windfall sites in Shropshire. Specifically, as at 31st March 2023, 3,971 net dwellings were committed on windfall sites with Planning Permission or Prior Approval (consisting of 1,272 dwellings on small scale windfall sites of less than 5 dwellings and 2,699 dwellings on medium and large scale windfall sites of 5 or more dwellings).
- 8.37. It is considered the proposed policies in the draft Shropshire Local Plan would also facilitate residential development occurring on appropriate windfall sites. This includes:
- a. The strategy for the level and distribution of development across Shropshire in draft Policy SP2 facilitates windfall development on appropriate sites to complement proposed allocations.

- b. Draft Settlement Policies (S1-S18) identify proposed development strategies for Strategic, Principal and Key Centres; Community Hubs; and Community Clusters. In addition to existing and proposed allocations, these strategies specifically allow for appropriate and complementary windfall development.
  - c. Draft Policy SP7 allows positive consideration of sustainable housing development, including on appropriate windfall sites, where they comply with wider requirements within this draft policy and other relevant draft policies in the Local Plan.
  - d. Draft Policy SP8 provides the policy framework for permitting windfall development within the development boundaries of proposed Community Hubs.
  - e. Draft Policy SP9 facilitates a range of forms of appropriate windfall development within Community Clusters, where they comply with specified criteria within the policy and other relevant draft policies in the draft Shropshire Local Plan.
  - f. Draft Policy SP10 identifies the forms of residential development appropriate within the 'countryside'. It includes a range of forms of affordable housing, conversions of appropriate permanent buildings, sympathetic and appropriate subdivision of existing dwellings, and essential rural workers dwellings.
  - g. Draft Policy SP11 identifies the limited forms of residential development appropriate within the 'Green Belt'.
  - h. Affordable housing policies (DP4-DP7) allow for various forms of affordable housing where they comply with relevant draft policies in the draft Shropshire Local Plan.
- 8.38. Through comparison of windfall allowances identified within Appendix 5 of the draft Shropshire Local Plan (data as at 31<sup>st</sup> March 2019) and at 31<sup>st</sup> March 2023, it is apparent that in many of the urban areas (Strategic, Principal and Key Centres), these windfall allowances have significantly reduced. This is as a result of increases to completions and commitments identified to contribute to the achievement of proposed settlement guidelines. In some instances this reduction is very significant and in others it has resulted in the windfall allowance for some settlements already being exceeded.
- 8.39. The settlement guidelines for proposed strategic settlements in the draft Shropshire Local Plan do not include a specific windfall allowance. However, it is apparent that the Planning Permission granted on the Former Ironbridge Power Station (19/05560/OUT) site exceeds the 1,000 dwelling proposed settlement guideline identified in draft Policy S20 of the draft Local Plan.

**Table 8.1: Residential Guidelines, Supply and Windfall Allowances: Strategic, Principal and Key Centres and Strategic Settlements**

Settlement	Draft Local Plan Proposed Guideline (2016-2038)	Completions (2016/17 to 2022/23)	Commitments			Windfall Data

Clive Barracks, Tern Hill**	350	0	0	0	350	0	0
Former Ironbridge Power Station	1,000	0	1,075	0	0	0	-75

\*Includes Neighbourhood Plan Allocations.

\*\*The total capacity of Clive Barracks, Tern Hill is 750 dwellings, however it is forecast that 350 dwellings will be completed on the site by 2037/38 with the remainder of the dwellings completed beyond the plan period.

- 8.40. It is apparent from Table 8.1 that in a number of settlements, the windfall allowances proposed have reduced considerably over the past four years, and in some areas have already been exceeded. This suggests that in some instances windfall allowances in these settlements have either been set overly cautiously or there has been a disproportionate windfall delivery in the early part of the plan period. In reality, it is likely that a number of factors have impacted this, but the end result remains that there are now clearly opportunities to amend them to provide additional capacity for windfall development in the remaining part of the plan to 2038.
- 8.41. As such, it is considered there are feasible opportunities to increase settlement guidelines and associated windfall allowances to reflect changes to windfall commitments/understanding of likely windfall supply since submission of the draft Shropshire Local Plan in 2021.
- 8.42. It is also considered this evidence provides confidence that such amendments to settlement guidelines and associated windfall allowances would be deliverable within the proposed plan period. In addition, it is considered that it would support the delivery of necessary supporting infrastructure. This would need to be informed by an updated SA assessment of the strategic distribution of development.

### ***Option 2: Densification of Proposed Site Allocations***

- 8.43. Generally a cautious approach has been taken to the identification of approximate site capacities for proposed site allocations. In doing so, this provides confidence that proposals will result in an appropriate form of development that is complementary to its setting, proposed settlement guidelines are deliverable, and the proposed housing requirement for Shropshire is deliverable. These assumptions are informed by a proportionate and robust site assessment process.
- 8.44. Table 8.2 summarises approximate site capacities, net site densities and net site densities for the proposed residential allocations:

**Table 8.2: Proposed Residential Allocations – Approximate Site Capacity, Site Area and Site Area Density**

*\*Net Site Area adjusted to exclude any employment land that forms part of the proposed allocation and standard assumptions regarding developable area following on-site infrastructure and open space provision. Please Note: Proposed allocations may be subject to further requirements which further reduce the net developable area available. Particularly open space requirements, biodiversity net gain and infrastructure requirements.*

*\*\*Where planning permission is for less than the approximate site guideline for a proposed allocation, this is reflected within the commitments for a settlement.*

- 8.45. It is apparent from Table 8.2 that net site densities for proposed site allocations vary considerably. This is perhaps unsurprising given:
- a. The different characteristics of proposed site allocations.
  - b. The diverse characteristics of settlements across Shropshire and the intention that proposed allocations should positively respond to the characteristics of their setting.
  - c. The varied design considerations and requirements for proposed allocations. This includes requirements for larger sites to provide greater on-site infrastructure to support the development, reducing net developable area.
  - d. The differing types of constraints relevant to proposed allocations.
- 8.46. The data in Table 8.2 suggests there may be some feasible opportunities to increase the density of proposed site allocations. This is particularly the case given policy expectations regarding housing mix and provision of specialist housing. It is also recognised that further assessment work/masterplanning undertaken regarding site capacity by site promoters since submission of the draft Shropshire Local Plan may also identify opportunities for densification of proposed site allocations.
- 8.47. However, a cautious approach would be required to ensure any increase to a site's density would still result in an appropriate form of development. This would therefore require consideration on a site-by-site basis through a targeted update to the additional SA assessment work.
- 8.48. It is also important to ensure there is sufficient confidence that any development resulting from 'densification' of a proposed site allocation and accounted for within the total housing land supply is deliverable within the proposed plan period.
- 8.49. The Council forecast delivery timescales for proposed allocations when preparing the draft Shropshire Local Plan (documented within Appendix 7 of the draft Shropshire Local Plan). These assumptions were informed by careful consideration of site-specific evidence and other local factors relevant to each site; past delivery rates for similar projects across Shropshire; local market absorption rates and other known market factors; consideration of 'standard' assumptions applied by the Council when analysing housing land supply; proactive discussions with relevant landowners, land promoters and developers; and professional judgement.
- 8.50. These assumptions have been reviewed annually as part of the preparation of the Five Year Housing Land Supply Statement for the draft Shropshire Local Plan. The most recent assumptions are presented within Table 8.3:

\*Where relevant site capacities have been amended to reflect the implications of planning permissions.

\*\*60 dwellings on this site were completed before the 1<sup>st</sup> April 2023.

- 8.51. On balance, it is considered the evidence in Table 8.3 suggests that feasible opportunities for densification of proposed allocations could be identified. However, the draft Shropshire Local Plan already provides a level of flexibility for appropriate 'densification' of site allocations to occur. Specifically, draft settlement policies S1-S20 are clear that site provision figures are approximate, rather than a rigid requirement. Any such proposal would be subject to careful consideration at the planning application stage.
- 8.52. Where such 'densification' occurs through the planning application process, any additional delivery beyond the approximate provision figure on a site within the draft Shropshire Local Plan would contribute to the achievement of any windfall allowance for the settlement. As such, there is a level of synergy between this option and option 1.

### ***Option 3: Increasing Site Allocations***

- 8.53. A significant volume of potential site allocations were identified and assessed (in excess of 2,000) and subsequently a range of proposed residential/residential-led mixed use allocations (around 70) were selected for inclusion within the draft Shropshire Local Plan.
- 8.54. Identified sites and summaries of the various stages of the site assessment process are provided within the SLAA (EV106.01-EV106.10); the appendices of the Sustainability Appraisal and Site Assessment Environmental Report (SD006.03-SD006.22); and the appendices of the updated additional SA assessment work.
- 8.55. In light of the proposed uplift to the housing requirement, having reflected on the range of sites identified through the site assessment process and the conclusions reached within it, it is considered there are potential opportunities to:
- a. Extend the site area of some of the proposed allocations to increase their capacity; and/or
  - b. Identify additional site allocations, including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements.
- 8.56. To ensure identification of sustainable and feasible opportunities for the extension of the site area of a proposed allocation and/or identification of additional site allocations, this process would need to be informed by a targeted update to the additional SA site assessment work. This would also need to be informed by an updated SA assessment of the strategic distribution of development. Before this happens, the Council must first determine if this is an

appropriate option to accommodate some or all of the proposed uplift to the housing requirement.

- 8.57. With regard to opportunities to extend the site area of some of the proposed allocations, it is apparent from the data in Table 8.3 that the majority of proposed allocations would have some capacity for the delivery of additional dwellings resulting from any extension to the site area, within the proposed plan period. However, this data also illustrates this is not necessarily the case for all proposed allocations.
- 8.58. Dependent on their scale, any new site allocation proposed are likely to be deliverable within the proposed plan period. This conclusion is informed by the Council's evidence from its call for sites process early in plan preparation, and experience of forecasting timescales for the delivery of development sites.
- 8.59. However, final judgement on deliverability would require consideration on a site-by-site basis, informed by careful consideration of site-specific evidence and other local factors relevant to each site; past delivery rates for similar projects across Shropshire; local market absorption rates and other known market factors; consideration of 'standard' assumptions applied by the Council when analysing housing land supply; proactive discussions with relevant landowners, land promoters and developers; and professional judgement.
- 8.60. As such, on balance it is considered this evidence suggests that through a targeted update to the additional SA site assessment work, feasible opportunities to extend the site area of proposed allocations in order to increase their capacity and/or feasible opportunities to identify additional site allocations (including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements in order to provide additional capacity) represent a reasonable option for accommodating the proposed uplift to the housing requirement.

#### ***Option 4: A Combination of Two or More of the Other Options***

- 8.61. Option 4 is directly linked to the other identified options. Given this assessment concludes each of the other options could be feasible and deliverable, it is considered this option could be similarly feasible and deliverable.

### ***The Mechanism to Accommodate the Proposed Uplift to the Housing Requirement***

8.62. In conclusion, following consideration of the above factors and exercising planning judgement, Shropshire Council considers **Option 1** should form the basis for accommodating the proposed uplift to the housing requirement for inclusion within the draft Shropshire Local Plan.

8.63. **Option 1: Increasing Settlement Guidelines and Windfall Allowances** entails identifying opportunities to increase settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements to provide additional capacity for windfall development sufficient to achieve the proposed uplift to the housing requirement.

### ***Reasons for the Proposed Mechanism to Accommodate the Proposed Uplift to the Housing Requirement***

8.64. Key considerations that informed this decision included:

- a. The updated additional SA assessment of the reasonable options to accommodate a proposed uplift to the housing requirement concluded that on balance Option 1: increasing settlement guidelines and windfall allowances represented the **most sustainable** of the reasonable options for accommodating the uplift to the proposed housing requirement.
- b. Based on the updated additional SA assessment work undertaken, it is considered that Option 1: increasing settlement guidelines and windfall allowances, presents an opportunity to:
  - i. Achieve a **strongly positive effect** on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - ii. Achieve a **strongly positive effect** on SA Objective 4: promotion of access to services for all sections of society in the short, medium and long term.
  - iii. Achieve a **strongly positive effect** on SA objective 14: promotion of efficient use of natural resources in the short, medium and long term.
  - iv. Achieve **positive impacts** against a range of other identified sustainability objectives.
- c. Based on the updated additional SA assessment work, it is considered Option 1: increasing settlement guidelines and windfall allowances is **unlikely to result in any strongly negative effects on any SA objectives**. Whilst it is acknowledged it poses a potential risk of achieving negative impacts against a range of

identified sustainability objectives, it is considered opportunities exist to **mitigate** the extent of such impacts.

- d. Based on the updated additional SA assessment work undertaken, it is considered that Option 1: increasing settlement guidelines and windfall allowances strikes an appropriate balance across the three pillars (social, economic, and environmental) of **sustainable development** and will contribute towards the achievement of the **long term sustainability** of Shropshire.
- e. Option 1: increasing settlement guidelines and windfall allowances **aligns with the principle of urban focus**, directing additional windfall development towards the Strategic, Principal, Key Centres and/or Strategic Settlements and **positively responds to changes to completions and commitments** across these settlements since the submission of the Local Plan in 2021. As such this option best reflects the agreed spatial strategy.
- f. Option 1 **positively responds** to the potential for proposed settlement guidelines and windfall allowances to be exceeded.
- g. It is considered the amendments to settlement guidelines and associated windfall allowances would be **deliverable within the proposed plan period** and would **support the delivery of necessary supporting infrastructure**.
- h. Whilst Option 2 would also present opportunities to accommodate the proposed uplift to the housing requirement, there are **already mechanisms to allow for appropriate 'densification' of proposed allocations**, and any such densification would contribute to the achievement of any windfall allowance for the settlement where it exceeds the level of development planned for on the proposed allocation.
- i. Whilst Option 3 would also present opportunities to accommodate the proposed uplift to the housing requirement, based on available data on changes to completions and commitments and the potential for proposed settlement guidelines and windfall allowances to be exceeded / potential for further windfall opportunities to arise, it is considered that **this mechanism is unnecessary to ensure certainty of delivery**.

**8.65. The proposed mechanism for accommodating the proposed uplift to the housing requirement is therefore Option 1: Increasing Settlement Guidelines and Windfall Allowances.**

8.66. This option entails identifying opportunities to increase settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements to provide additional capacity for windfall development sufficient to achieve the proposed uplift to the housing requirement.

### ***Increasing Settlement Guidelines and Windfall Allowances in Strategic, Principal, Key Centres and/or Strategic Settlements***

- 8.67. In order to identify appropriate Strategic, Principal, Key Centres and/or Strategic Settlements within which to increase settlement guidelines and windfall allowances, the Council carefully considered:
- a. Remaining windfall allowances in Strategic, Principal, Key Centres and/or Strategic Settlements as at the 1<sup>st</sup> April 2023.
  - b. Known potential windfall opportunities within Strategic, Principal, Key Centres and/or Strategic Settlements.
  - c. The likelihood of further windfall opportunities arising within Strategic, Principal, Key Centres and/or Strategic Settlements, based on past trends.
  - d. Other relevant considerations.

- 8.68. Dealing with each in turn:

*Remaining windfall allowances in Strategic, Principal, Key Centres and/or Strategic Settlements as at the 1<sup>st</sup> April 2023.*

- 8.69. Windfall allowances are in effect the difference between the settlements housing guideline and the capacity of completions already achieved in the proposed plan period / identified commitments (sites with planning permission or prior approval, 'saved' SAMDev allocations and proposed allocations).
- 8.70. As a result they inevitably fluctuate over time as additional dwellings are completed/committed either on windfall sites (sites not specifically planned for but facilitated by the draft Shropshire Local Plan) and/or other sources of additional dwellings that emerge in a settlement.
- 8.71. Table 8.2 above summarises windfall allowances for each Strategic, Principal, Key Centre and Strategic Settlement as identified within Appendix 5 of the draft Shropshire Local Plan (based on data as at 31st March 2019) and the windfall allowance for each settlement as at 31st March 2023.

8.72. An extract is provided below in Table 8.4:

**Table 8.4: Windfall Data for Strategic, Principal, Key Centre and Strategic Settlements**

Settlement	Windfall Data	
	Proposed Windfall Allowance: Appendix 5 of the Draft Shropshire Local Plan (at 31st March 2019)	Current Windfall Allowance Reflecting Commitments & Completions (at 31st March 2023) <sup>7</sup>
Albrighton	48	21
Bishops Castle	40	35
Bridgnorth	160	7
Broseley	50	-17
Church Stretton	121	84
Cleobury Mortimer	120	-5
Craven Arms	94	86
Ellesmere	170	130
Highley	31	9
Ludlow	82	57
Market Drayton	206	60
Much Wenlock	27	7
Oswestry	105	62
Shifnal	92	68
Shrewsbury	505	-81
Wem	89	94
Whitchurch	82	-55
Clive Barracks, Tern Hill	0	0
Former Ironbridge Power Station	0	-75

8.73. Notable changes to windfall allowances (either where the allowance has already been exceeded or more than 50% of the allowance has been committed over the past 4 years) include:

- a. Shrewsbury: The windfall allowance of 505 dwellings has already been exceeded, by 81 dwellings. As such, over the past 4 years windfall development opportunities committed at Shrewsbury have increased by 586 dwellings (around 150 per annum). It also means that currently within the draft Shropshire Local Plan there is no planned capacity for further windfall development at Shrewsbury, the proposed Strategic Centre of Shropshire.
- b. Whitchurch: The windfall allowance of 82 dwellings has already been exceeded, by 55 dwellings. As such, over the past 4 years windfall development opportunities committed at Whitchurch have increased by 137 dwellings (around 35 per annum). It also means that currently there is no planned capacity within the draft Shropshire Local Plan for further windfall development at Whitchurch, one of the proposed Principal Centres.

<sup>7</sup> Negative numbers reflect development levels already exceeding identified windfall allowance.

- c. Broseley: The strategy for achieving proposed residential development guideline for Broseley is established in the recently 'made' Broseley Neighbourhood Plan. The strategy for this settlement includes identification of a residential site allocation (with capacity for around 20 dwellings).
  - d. Cleobury Mortimer: The strategy for achieving the proposed residential development guideline for Cleobury Mortimer is established in the recently 'made' Cleobury Mortimer Neighbourhood Plan. The strategy for this settlement includes identification of a residential site allocation (with capacity for around 120 dwellings).
  - e. The Former Ironbridge Power Station: No specific windfall allowance was provided, rather the site's capacity aligned with the approximate settlement guideline set out in Policy S20 of the draft Local Plan. However, outline planning permission has subsequently been granted (19/05560/OUT) which allows for 1,000 dwellings and a retirement village (viability assessment work assumes 75 dwellings). As such, the capacity of the outline planning permission exceeds the approximate site provision figure in the draft Shropshire Local Plan.
  - f. Bridgnorth: The windfall allowance of 160 dwellings has reduced by 153 dwellings to 7 dwellings. As such, over the past 4 years windfall development opportunities committed at Bridgnorth have increased by around 38 dwellings per annum and the remaining windfall allowance is less than 1 dwelling per annum.
  - g. Market Drayton: The windfall allowance of 206 dwellings has reduced by 146 dwellings to 60 dwellings. This means that over the past 4 years, windfall development opportunities committed at Market Drayton have increased by around 37 dwellings per annum and the remaining windfall allowance is around 4 dwellings per annum.
  - h. Albrighton, Highley and Much Wenlock: Have also demonstrated notable reductions to windfall allowances over the past 4 years. They constitute smaller Key Centre settlements and Albrighton is inset within and therefore surrounded by Green Belt, which is a relevant constraint to further windfall development opportunities.
- 8.74. It is therefore considered that a number of the Strategic, Principal, Key Centres and/or Strategic Settlements have some potential to accommodate amendments to settlement guidelines and windfall allowances proposed within the draft Shropshire Local Plan.

*Known potential windfall opportunities within Strategic, Principal, Key Centres and/or Strategic Settlements*

- 8.75. It is difficult or event impossible to identify potential windfall development opportunities before they arise.
- 8.76. As such, the fact potential windfall development opportunities are not specifically identified **does not mean that they will not arise**, as evidenced since 2019 in Table 7.4. Notably, through consideration of the evidence base that informs the draft Shropshire Local Plan and other available information, it is possible to identify some potential windfall development opportunities.
- 8.77. For the purpose of this assessment, consideration has been given to:
- The SLAA (EV106.01-EV106.10).
  - The appendices of the Sustainability Appraisal and Site Assessment Environmental Report (SD006.03-SD006.22).
  - The appendices of the updated additional SA assessment work.
  - The Council’s Housing Delivery Framework which informs the annual Five Year Housing Land Supply Assessment.
  - The Council’s Planning Application Register.
  - Discussions with landowners, site promoters and/or developers (where not confidential).
  - Any other relevant information on potential windfall development opportunities.
- 8.78. Table 8.5 summarises significant potential windfall development opportunities identified within the Strategic, Principal, Key Centres and Strategic Settlements following consideration of these sources.

**Table 8.5: Known Significant Potential Windfall Development Opportunities: Strategic, Principal and Key Centres and Strategic Settlements**

It is considered this site would have capacity for around <b>10 dwellings</b>.</li> <li>• Part of site SHR178 was identified as a potential windfall opportunity within the Site Assessment process. Planning Permission (20/05217/FUL) granted in May 2023 for <b>26 affordable dwellings</b>.</li> <li>• SHR211 identified as a potential windfall opportunity within the Site Assessment process. It is considered this site would have capacity for around <b>9 dwellings</b>.</li> <li>• Site SHR217 was initially identified as a potential windfall site within the SLAA, although it was later understood to be unavailable for residential development within the wider site assessment process. Subsequently Full Planning Permission (22/03877/FUL) was granted in August 2023 for a mixed-use development on part of the site, including an 80 bedroom care home. The site includes the formation of C2 care home facilities, as such the ratio applied to communal accommodation is applied consistent with the Housing Delivery Test. This ratio is based on the national average number of adults in all households, with a ratio of 1.8. <math>80/1.8 = 44</math> <b>dwellings</b>.</li> <li>• Planning Permission (23/01592/FUL) granted in June 2023 for conversion of upper floors of No 12&amp;13 Mardol Head <b>8 apartments</b>.</li> <li>• Prior Approval (23/01889/PA3MA) received in June 2023 for conversion of upper floors of Talbot House on Market Street to <b>13 apartments</b>.</li> <li>• Planning Permission (23/03503/FUL) granted in November 2023 for conversion of the Former HSS Hire Shop on St Michaels Street to <b>8 apartments</b>.</li> <li>• Planning Permission (23/03843/FUL) granted in February 2024 for a <b>78 dwelling</b> affordable housing scheme (68 extra-care apartments and 10 bungalows) following demolition of William Farr House on Mytton Oak Road.</li> </ul>

Settlement	Known Significant Windfall Development Opportunities
	<ul style="list-style-type: none"> <li>• Planning Application for a <b>14 dwelling</b> affordable housing scheme at Sandhurst Meadows currently being 'worked up'.</li> <li>• Planning Application for a <b>5 dwelling</b> affordable housing scheme replacing 2 existing dwellings, at Weston Court, Featherbed Lane currently being 'worked up'.</li> <li>• Planning Permission (17/02809/OUT) granted for redevelopment of the Former HM Prison Shrewsbury on The Dana. Part of the scheme was subject to Reserved Matters Approval and implemented and other parts were superseded by a commercial use. However a portion of the site is retained for redevelopment. It is considered that this component of the site has capacity for around <b>40 dwellings</b>.</li> <li>• Planning Permission (18/03206/FUL) previously granted but subsequently lapsed for erection of <b>9 dwellings</b> on the Car Park at The Dana.</li> <li>• Planning Permission (13/00022/OUT) previously granted but subsequently lapsed for erection of <b>10 dwellings</b> on land at 66 Spring Gardens.</li> <li>• Planning Permission (14/04383/FUL) previously granted but subsequently lapsed for conversion of office space and an extension to form <b>50 dwellings</b> at Princess House, The Square.</li> <li>• Planning Permission (14/01530/REM) previously granted but subsequently lapsed for redevelopment for <b>6 dwellings</b> at 67 Aston Street.</li> <li>• Shropshire Council is progressing the Smithfield Riverside masterplan which entails regeneration of the area between The Darwin Shopping Centre and the River Severn in Shrewsbury town centre. Planning Application (23/05402/FUL) currently pending consideration for enabling works, which will be facilitated by around £19million of Levelling Up Funding awarded to the project by the Government. Redevelopment would result in formation of a new council headquarters, hotels, restaurants, a transport hub, offices and up to <b>270 dwellings</b>. Due to the complexity of this scheme, the extent of enabling works, and associated lead-in timescales, it may be that some of this delivery does not occur until beyond the proposed plan period.</li> </ul>
Wem	<ul style="list-style-type: none"> <li>• WEM018 identified as a potential windfall opportunity within the Site Assessment process. It is considered this site would have capacity for around <b>38 dwellings</b>.</li> <li>• Full Planning Permission (23/00059/FUL) granted in April 2023 for part redevelopment of the Old Post Office and Buildings to Rear of No 25 High Street to form an additional <b>7 dwellings</b>.</li> </ul>
Whitchurch	<ul style="list-style-type: none"> <li>• WHT005 identified as a potential windfall opportunity within the Site Assessment process. It is considered this site would have capacity for around <b>9 dwellings</b>.</li> <li>• Full Planning Permission (23/01684/FUL) granted in October 2023 for conversion of a former doctors surgery at No29 Dodington into <b>5 apartments</b>.</li> </ul>
Clive Barracks, Tern Hill	<ul style="list-style-type: none"> <li>• No known significant windfall opportunities identified.</li> </ul>

Settlement	Known Significant Windfall Development Opportunities
Former Ironbridge Power Station	<ul style="list-style-type: none"> <li>Outline Planning Permission (19/05560/OUT) granted in September 2022 which allows for 1,000 dwellings and a retirement village (viability assessment work assumes <b>75 dwellings</b>). Planning Permission therefore exceeds the approximate site provision figure of 1,000 dwellings in the draft Shropshire Local Plan.</li> </ul>

*Please Note:*

*-Potential windfall development opportunities identified are limited to those considered consistent with the content of the draft Shropshire Local Plan.*

*-Not all potential windfall development opportunities identified will necessarily come forward, but this list is limited to opportunities considered deliverable/developable within the proposed plan period.*

*-Inclusion of potential windfall development opportunities in this analysis is without prejudice to the ongoing examination of the draft Shropshire Local Plan and any future Planning Application process.*

*Likelihood of further windfall opportunities arising within Strategic, Principal, Key Centres and/or Strategic Settlements*

8.79. Table 8.6 summarises the windfall completions that have occurred in each of the Strategic, Principal and Key Centres over the last 5 and 10 years. It also identifies total completions over these same periods and the proportion of total completions that occurred on windfall sites.

**Table 8.6: Completions on Windfall Sites in Strategic, Principal and Key Centres: Last 5 and 10 Years**

Settlement	Last 5 Years			Last 10 Years		
	Windfall Site Completions 2018/19-2022/23	Total Completions 2018/19-2022/23	Proportion of Total Completions on Windfall Sites 2018/19-2022/23	Windfall Site Completions 2013/14-2022/23	Total Completions 2013/14-2022/23	Proportion of Total Completions on Windfall Sites 2013/14-2022/23

Whitchurch	139	202	68.81%	305	454	67.18%
<b>Total</b>	<b>2,418</b>	<b>5,093</b>	<b>47.48%</b>	<b>5,502</b>	<b>10,033</b>	<b>54.84%</b>

Please Note:

- The data in Table 8.6 relates only to completions on windfall sites and not other sources of additional dwellings that emerge in a settlement.
- The proposed Strategic Settlements do not have relevant past windfall completion data.

- 8.80. It is apparent from Table 8.6 that windfall development has constituted a significant component of development that has occurred in the Strategic, Principal and Key Centres over the past 5 and 10 years.
- 8.81. Whilst it is recognised that windfall development rates in a settlement can be subject to change, particularly where influenced by a large development opportunity that occurred and may not arise again in the future, this data:
- a. Provides significant confidence regarding the ability to achieve windfall allowances associated with proposed settlement guidelines.
  - b. Indicates that a number of Strategic, Principal and Key Centres have potential to accommodate additional windfall development, through appropriate amendments to settlement guidelines within the draft Shropshire Local Plan.

*Other relevant factors*

- 8.82. There are a range of other relevant factors which need to be considered. One consideration is the characteristics of a settlement. A settlement's character is likely to influence the potential for small-scale windfall development opportunities and the potential for larger scale windfall redevelopment opportunities. The Market Town Profiles (EV073.01-EV073.17) provide succinct summaries of each of the Strategic, Principal and Key Centres, demonstrating the unique character of each settlement.
- 8.83. The categorisation of settlements within the draft Shropshire Local Plan recognises this diversity, and provide an indicator of potential for windfall development. Larger settlements, with greater levels of services and facilities and associated built form generally generate greater potential for windfall development.
- 8.84. Another consideration is the presence of significant known constraints that may or may not limit their potential to accommodate additional windfall development. For instance:
- a. Albrighton and Shifnal are inset within the Green Belt
  - b. Church Stretton is located within the Shropshire Hills National Landscape (formerly known as the Area of Outstanding Natural Beauty (AONB)).
- 8.85. It is also important to recognise that for Broseley, Bishop's Castle and Cleobury Mortimer, the proposed settlement strategy is linked to the production of a Neighbourhood Plan. Neighbourhood Plans have subsequently been 'made' in both Broseley and Cleobury Mortimer and the examination is ongoing for the Bishop's Castle

Neighbourhood Plan. As such, it may not be appropriate to amend proposed settlement strategies and associated windfall allowances in these locations, other than to reflect additional windfall development which has happened to date.

- 8.86. Other Neighbourhood Plans are currently in production and seeking to align with the proposals of the draft Shropshire Local Plan, including at Church Stretton, and Tasley (near Bridgnorth).
- 8.87. It should also be noted that Neighbourhood Plans have also been 'made' in both Much Wenlock (where a review of the Plan has recently commenced) and Shifnal. These Neighbourhood Plans cover the period to 2026 (consistent with the adopted Development Plan), and therefore there was a need for the Council to plan effectively for a further 12 years to the end of the proposed plan period to 2038. In these cases, the Shropshire Local Plan provides a development strategy for these areas.

***Proposed Amendments to Settlement Guidelines and Associated Windfall Allowances***

- 8.88. In summary, the following factors have been considered in determining the most appropriate settlements to accommodate an uplift to their settlement guidelines and associated windfall allowance:
- a. Remaining windfall allowances in Strategic, Principal, Key Centres and/or Strategic Settlements as at the 1<sup>st</sup> April 2023.
  - b. Known potential windfall opportunities within Strategic, Principal, Key Centres and/or Strategic Settlements.
  - c. Likelihood of further windfall opportunities arising within Strategic, Principal, Key Centres and/or Strategic Settlements, based on past trends.
  - d. Other relevant factors.

8.89. Table 8.7 shows the Council's conclusions.

***Table 8.7: Proposed Amendments to Settlement Guidelines and Associated Windfall Allowances to Accommodate the Proposed Uplift to the Housing Requirement***

<b>Settlement</b>	<b>Submission Draft Local Plan Proposed Guideline (2016-2038)</b>	<b>Proposed Uplift</b>	<b>Updated Draft Local Plan Proposed Guideline (2016-2038)</b>	<b>Submission Draft Windfall Allowance (at 31st March 2023)</b>	<b>Updated Proposed Windfall Allowance (at 31st March 2023)</b>
Shrewsbury	8,625	350	8,975	-81	269
Whitchurch	1,600	75	1,675	-55	20
Former Ironbridge Power Station	1,000	75	1,075	-75	0

***Reasons for Proposed Amendments to Settlement Guidelines and Associated Windfall Allowances to Accommodate the Proposed Uplift to the Housing Requirement***

- 8.90. Key considerations that informed this decision included:
- a. It is considered proposed increases to settlement guidelines and associated windfall allowances at Shrewsbury, Whitchurch and the Former Ironbridge Power Station are complementary to and support the proposed vision and spatial strategy within the draft Shropshire Local Plan – particularly the principle of **urban focus**.
  - b. It is considered proposed increases to settlement guidelines and associated windfall allowances at Shrewsbury, Whitchurch and the Former Ironbridge Power Station are **feasible and deliverable** within the proposed plan period.
  - c. **Outline Planning Permission** (19/05560/OUT) was granted for redevelopment of the Former Ironbridge Power Station in September 2022. This consent allows for **1,000 dwellings and a retirement village** (viability assessment work assumes 75 dwellings in the retirement village). This exceeds the settlement guideline proposed within the draft Shropshire Local Plan.
  - d. Within the settlements of Shrewsbury and Whitchurch, completions already achieved in the proposed plan period (2016/17-2022/23) and commitments at 31<sup>st</sup> March 2023 **exceed the proposed housing guideline**.
  - e. There is currently **no planned capacity** for further windfall development at Shrewsbury or Whitchurch despite 15 years remaining within the proposed plan period.
  - f. There are significant known potential windfall opportunities at Shrewsbury, this includes around 180 dwellings granted planning permission since the 31<sup>st</sup> March 2023; and further opportunities for residential provision within the town centre.
  - g. Past windfall completion trends in Shrewsbury and Whitchurch provide significant confidence about potential to accommodate proposed increases to settlement guidelines and associated windfall allowances.
  - h. The characteristics of Shrewsbury and Whitchurch provide significant confidence about potential to accommodate proposed increases to settlement guideline and associated windfall allowances.
  - i. Whilst other Strategic, Principal, Key Centres and/or Strategic Settlements could potentially accommodate proposed uplifts to settlement guidelines and associated windfall allowances, it is considered proposals for Shrewsbury, Whitchurch and the Former Ironbridge Power Station positively respond to available

information regarding remaining windfall allowances (at 1<sup>st</sup> April 2023); known potential windfall opportunities; past trends on windfall provision; and other relevant information.

- 8.91. In conclusion, having considered available evidence when applying planning judgement, it is considered appropriate settlements within which to increase settlement guidelines and windfall allowances to accommodate the proposed uplift to the housing requirement are:

- a. Shrewsbury (Strategic Centre): 350 dwelling increase to the proposed housing guideline to some **8,975 dwellings** between 2016 and 2038.
- b. Whitchurch (Principal Centre): 75 dwelling increase to the proposed housing guideline to some **1,675 dwellings** between 2016 and 2038.
- c. Former Ironbridge Power Station (Strategic Settlement): 75 dwelling increase to the proposed housing guideline to some **1,075 dwellings** between 2016 and 2038.

***Implications of the Proposed Amendments to Settlement Guidelines and Associated Windfall Allowances to Accommodate the Proposed Uplift to the Housing Requirement***

- 8.92. Main modifications would be required to the draft Shropshire Local Plan to reflect these proposed changes – including to draft Policy SP2 and its supporting text; draft Policy S16.1 and its supporting text; draft Policy S18.1 and its supporting text; draft Policy S20; Appendix 5; and Appendix 7.

## **9. Accommodating the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country**

### ***Introduction***

- 9.1. Paragraph 21 of ID28 specified that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.
- 9.2. Specifically, it states "*...the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.*"
- 9.3. As the proposed housing requirement includes a proposed contribution of 1,500 dwellings towards the unmet housing need forecast to arise in the Black Country, there is a need to identify appropriate site or sites to accommodate this proposed contribution.

### ***Options to Accommodate the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country***

- 9.4. To inform identification of the site or sites to accommodate the proposed contribution of 1,500 dwellings towards unmet housing needs forecast to arise within the Black Country, Shropshire Council has undertaken updated additional SA and site assessment work.
- 9.5. First, an appropriate geography within which reasonable options for sites to accommodate the proposed contribution to the unmet housing need forecast to arise within the Black Country may be located, was identified. This was informed by consideration of:
  - a. Geographic proximity and the location and quality of main road and rail transport links between Shropshire and the Black Country.
  - b. Migration patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - c. Commuting patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - d. The extent to which Travel to Work Areas (TTWA's) associated with the Black Country penetrate into Shropshire and vice versa.
- 9.6. In summary, this assessment concluded that reasonable options for sites to accommodate the proposed contributions to unmet housing need forecast to arise within the Black Country are in the east and central parts of Shropshire at the larger settlements where housing growth is proposed, and potential strategic settlements/sites.

9.7. Following identification of this reasonable assessment geography, the Council re-assessed **all available sites within it** through the updated additional SA site assessment. This re-assessment was informed by:

- a. The continued use of the stage 1 assessment, which involved a high-level strategic assessment of sites across Shropshire, with more detailed assessment undertaken in later stages of the process.
- b. A targeted update to stage 2a of the site assessment process in order to allow for comparison of **all sites within the relevant assessment geography** identified.
- c. The continued use of the stage 2b filters<sup>8</sup>, which were considered suitable in the context both the consideration of sites to accommodate the needs and objectives of Shropshire and the needs of the Black Country.
- d. The update of the stage 3 site assessment process, considering **all sites within the relevant assessment geography that proceeded to stage 3 of the site assessment process**, both within the Green Belt and non-Green Belt sites, and not just those sites that are proposed for allocation within the draft Shropshire Local Plan. This assessment also explicitly considered the outcome of the Green Belt assessment and review and specifically assessed the relationship of sites with the Black Country.

9.8. This process therefore involved assessment of around 450 sites as part of the targeted update to Stage 2a and around 230 sites at Stage 3, as potential locations to accommodate proposed contributions to unmet housing needs forecast to arise in the Black Country.

9.9. The scope and conclusions of this assessment work are explained within the updated additional SA and site assessment work.

---

<sup>8</sup> The three filters applied in Stage 2b are:

a. Size: Sites were 'filtered out' of the site assessment process where they were less than a specified size (unless there was potential for allocation as part of a wider site). The site size 'filters' applied are 0.2ha in Community Hubs and Strategic/Principal/Key Centres within/partly within the Green Belt or Shropshire Hills AONB, and 0.5ha for other Strategic/Principal/Key Centres. No other filters on size were applied.

b. Availability: Sites were 'filtered out' of the site assessment process where there remained uncertainty about whether the site is available for relevant forms of development, despite best efforts to ascertain site availability.

Strategic Suitability: Sites were 'filtered out' of the site assessment process where they were identified as being subject to a significant physical, heritage and/or environmental constraint (identified within the Strategic Land Availability Assessment). These constraints are such that it was considered they were unsuitable for development.

-Significant physical constraints include where the site is landlocked (cannot be accessed); some distance from the built form (unless it could represent a potential strategic site); or the majority of the site is in flood zones 2/3, an identified open space, or has a severely adverse topography.

-Significant environmental/heritage constraints include where the majority of the site has been identified as a heritage or natural environment asset.

***Sites Proposed to Accommodate the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country***

- 9.10. Through the updated SA site assessment process, a series of sites have been identified to accommodate the proposed contribution of 1,500 dwellings towards the unmet housing need forecast to arise within the Black Country. These sites and the quantity of the proposed contribution it is proposed they accommodate are:
- a. BRD030 - Tasley Garden Village, Bridgnorth: 600 dwellings.
  - b. SHR060, SHR158 & SHR161 - Land between Mytton Oak Road and Hanwood Road, Shrewsbury: 300 dwellings.
  - c. IRN001 - Former Ironbridge Power Station: 600 dwellings.

***Reasoning: Sites Proposed to Accommodate Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country***

- 9.11. The updated additional SA assessment summarises the conclusions of this assessment work, including the reasons these sites are proposed to accommodate the proposed contribution to the unmet housing need forecast to arise in the Black Country. A brief summary of these reasons is documented within Table 9.1.

**Table 9.1: Sites Identified to Accommodate the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country**

Site Reference	Site Name	Draft Policy	Total Capacity	Black Country Contribution	Summary
BR030 Page 1472	Tasley Garden Village, Bridgnorth	S3.1	1,050 dwellings 16ha employment land New local centre 20ha of green infrastructure and a 19ha linear park	600 dwellings	<p>Bridgnorth is located in south-east Shropshire with a functional relationship to the Black Country. It benefits from strong road links to the Black Country via the A454 corridor.</p> <p>Bridgnorth is a principal centre and performs a strategic role in the east of Shropshire.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt). Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
SHR060, SHR158 & SHR161	Land between Mytton Oak Road and Hanwood Road, Shrewsbury	S16.1	1,500 dwellings 5ha of employment land	300 dwellings	<p>Shrewsbury is located in central Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 / A5 corridor and Shrewsbury-Wolverhampton railway line. Shrewsbury is the strategic centre of Shropshire and the primary focus for new development in the County.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p>

Site Reference	Site Name	Draft Policy	Total Capacity	Black Country Contribution	Summary
					<p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt). Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<p>Page 1473</p> <p>IRN001</p>	Former Ironbridge Power Station	S20	<p>Range of local services and facilities</p> <p>Around 1,075 dwellings</p> <p>Around 6ha of employment land</p> <p>Extensive green infrastructure</p>	600 dwellings	<p>The Former Ironbridge Power Station is located in east Shropshire with a functional relationship to the Black Country. It benefits from road access to the M54 / A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.</p> <p>The Former Ironbridge Power Station is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt). Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

***Implications of the Proposed Sites Identified to Accommodate the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country***

- 9.12. The submission version of the draft Shropshire Local Plan included a proposed contribution of 1,500 dwellings to the Black Country, but proposed that this would be achieved through the spatial strategy for the level and distribution of development across Shropshire.
- 9.13. In responding to the Inspector’s Interim Findings (ID28) and to ensure the effectiveness of the draft Shropshire Local Plan, specific sites have been identified to accommodate this proposed contribution to the unmet housing need forecast to arise in the Black Country.
- 9.14. Main modifications will be required to the draft Shropshire Local Plan to reflect this proposed change – including to draft Policy SP2 and its supporting text; draft Policy S3.1 and its supporting text; draft Policy S16.1 and its supporting text; and draft Policy S20 and its supporting text.

## 10. Housing Land Supply

- 10.1. This latest assessment of housing land supply, both over the next five year period and over the proposed plan period, is summarised within the **Five Year Housing Land Supply Statement (2023) - Draft Shropshire Local Plan**.
- 10.2. With regard to the five year period from 2023/24-2027/28, the assessment concludes a **6.86 years' supply of deliverable housing land is available**.
- 10.3. With regard to the proposed plan period from 2016-2038, the assessment concludes that given completions of 11,761 dwellings between 2016/17 and 2022/23, **sufficient deliverable or developable housing land is available to deliver 34,874 dwellings over the proposed plan period**.
- 10.4. This identified housing land supply is therefore sufficient to **achieve the proposed housing requirement of a minimum of 31,300 dwellings** and allow for **around 10% flexibility** in the overall housing land supply.
- 10.5. The identified housing land supply is summarised within Table 10.1.

**Table 10.1: Housing Land Supply across the Proposed Plan Period**

Category	Housing Land Supply				
	Complete	Years 1-5	Years 6-10	Years 11-15	Total
(A) Completions (2016/17-2022/23):	11,761	N/A	N/A	N/A	<b>11,761</b>
(B) Dwellings on sites with Planning Permission*	N/A	5,958	1,428	628	<b>8,009</b>
(C) Dwellings on sites with Prior Approval*	N/A	72	7	1	<b>80</b>
(D) Dwellings on selected sites with a 'resolution to grant'* Planning Permission	N/A	10	1	0	<b>11</b>
(E) Dwellings on 'saved' site allocations*	N/A	1,274	1,478	510	<b>3,262</b>
(F) Dwellings proposed for allocation within the Draft Shropshire Local Plan *	N/A	1,491	3,294	2,145	<b>6,930</b>
(G) Dwellings on SLAA sites*	N/A	111	379	132	<b>622</b>
(H) Dwellings on emerging affordable housing sites*	N/A	247	25	2	<b>274</b>
(I) Dwellings on lapsed Planning Permissions*	N/A	0	302	30	<b>332</b>
(J) Dwellings on windfall sites**	N/A	598	1,495	1,495	<b>3,588</b>
<b>Total: (A) + (B) + (C) + (D) + (E) + (F) + (G) + (H) + (I) + (J)</b>	<b>11,761</b>	<b>9,761</b>	<b>8,409</b>	<b>4,943</b>	<b>34,874</b>

\*An assumption that 10% of deliverable dwellings on sites with Planning Permission; Prior Approval; 'resolution to grant' Planning Permission; 'saved' site allocations within the adopted Local Plan; proposed allocation within the draft Local Plan; identified within the SLAA; and identified as an Emerging Affordable Housing Site will not be delivered in each five year period has been applied to figures in this table.

\*\*Based on historic delivery rates and expected future trends.

- 10.6. The spatial distribution of this supply is summarised within Table 10.2 which addresses the Strategic, Principal and Key Centres and Strategic Settlements, Table 10.3 which addresses Community Hubs, and Table 10.4 which addresses Community Clusters and the wider rural area.
- 10.7. It should be noted that the windfall allowance to achieve proposed settlement guidelines and the windfall allowance within the housing land supply differ in that the allowance within the housing land supply is responsive to and informed by past trends rather than being limited to that specifically required to achieve proposed development guidelines. Furthermore, the windfall allowance within the housing land supply is not identified to specific locations, rather it is across the entirety of the Shropshire geography.
- 10.8. Ultimately, it is considered that sufficient housing land supply exists to provide significant confidence regarding the deliverability of the proposed housing requirement for inclusion within the draft Shropshire Local Plan, including the proposed 500 dwelling uplift.

**Table 10.2: Residential Guidelines and Residential Supply within the Strategic Centre, Principal Centres and Key Centres and Strategic Settlements**

## 11. Summary: Housing Need, Requirement and Supply

11.1. Figure 11.1 provides a summary of local housing need, the components of the proposed housing requirement, and the identified housing land supply:

**Figure 11.1: Overarching Summary of the Identified Local Housing Need, Proposed Housing Requirement and Identified Housing Land Supply**

## 12. Employment Land Need

- 12.1. National Planning Practice Guidance (NPPG) advises strategic policy making authorities: *"to develop an idea of future [employment land] needs on a range of data which is current and robust, such as:*
- *sectoral and employment forecasts and projections which take account of likely changes in skills needed (labour demand);*
  - *demographically derived assessments of current and future local labour supply (labour supply techniques);*
  - *analysis based on the past take-up of employment land and property and/or future property market requirements."*
- [NPPG Paragraph: 027 Reference ID: 2a-027-20190220]
- 12.2. Shropshire Council's early forecasting of jobs growth in 2016, provided by Oxford Economics, was considered to underestimate Shropshire's economic performance. This early forecasting subsequently informed the commission for the Economic Development Needs Assessment (EDNA) (EV042) in 2020. The EDNA identifies five potential growth scenarios including 'labour supply' from new housing delivery and an Economic Baseline Forecast (Experian 2020 base date) for 'labour demand' from the anticipated jobs growth.
- 12.3. The EDNA assessed 'labour supply' need to be 140.9 hectares to balance the housing need in the Government's Standard Methodology. The EDNA assessed 'labour demand' need from forecast investment and business growth to be 161.9ha.
- 12.4. These assessments of the employment land needs in the County were lower than anticipated from past trends in Shropshire. This reflected an assumption in the EDNA that in Shropshire, employment land would be built at the market standard 40% density per site (gross to net). The Employment Topic Paper (EV112 in paragraphs 5.24 to 5.36) used county wide trend data to adjust this density assumption to 26% based on the recorded delivery of employment land to 2020 in the Shropshire Authority Monitoring Report (EV012).
- 12.5. This use of local evidence to increase the accuracy of forecasted data is supported in the NPPG<sup>9</sup>. The EDNA (EV043 in paragraph 9.8) also advocated this approach, stating: *'The EDNA finds the Council's own evidence from monitoring past take up and delivery of developed land and floorspace provide an equally strong method for assessing the further employment land needs of the [County]'*.

---

<sup>9</sup> NPPG Paragraph: 025 Reference ID: 2a-025-20190220

- 12.6. The Employment Topic Paper (EV112) therefore concluded The 'labour supply' need scenario therefore increased to 217ha, and the 'labour demand' need scenario increased to 250ha.
- 12.7. The baseline employment land need for the Plan should consider the baseline jobs growth forecast from the performance of the local economy. The 'labour demand' jobs growth need provides this data which identifies an adjusted baseline employment land need for 250ha at an annual rate of 11.5ha/yr.
- 12.8. The baseline employment land need of 250ha therefore provides the basis for identifying reasonable employment land options to help determine the appropriate employment land requirement for the draft Shropshire Local Plan. This baseline need does not include any contribution towards unmet employment land needs in the Black Country.

### **13. Unmet Employment Land Need Forecast to Arise in the Black Country**

13.1. Shropshire Council has undertaken extensive duty to cooperate discussions with the Black Country Authorities regarding employment land issues. Through these discussions and associated processes, it is understood that an unmet employment land need is forecast to arise in the Black Country. It was also established that it may be appropriate for a contribution to this forecast unmet employment land need to be accommodated in Shropshire.

#### ***Reasonable Options for Any Contribution to Unmet Employment Land Need Forecast to Arise in the Black Country***

13.2. Within the updated additional SA assessment work, two reasonable options for any contribution to unmet employment land need forecast to arise in the Black Country were identified. These were:

- a. **Option 1:** No contribution towards the unmet employment land need forecast to arise within the Black Country.
- b. **Option 2:** Contribution of 30 hectares towards the unmet employment land need forecast to arise within the Black Country.

13.3. The updated additional SA Assessment work is an important consideration in the planning judgement about which option to include in the draft Shropshire Local Plan to address the unmet employment land need in the Black Country. This planning judgement considered a range of other evidence or factors.

13.4. The key evidence or factors considered in the planning judgement included:

- a. The updated additional SA assessment of options to contribute to unmet employment land need in the Black Country.
- b. The extensive duty to cooperate process undertaken between Shropshire Council and the Black Country Authorities.
- c. The various factors considered in the Employment Topic Paper (GC4n) to determine:
  - i. the extent of the relationship between Shropshire and the Black Country and
  - ii. whether it is appropriate to make a contribution in Shropshire towards unmet employment land need in the Black Country;
- d. Agreements in the Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV041).

- 13.5. In conclusion, it is considered **Option 2**: contribution of 30 hectares towards the unmet employment land need in the Black Country is the most appropriate because Option 2:
- a. Positively responds to the relationship between Shropshire and the Black Country – geographic, infrastructure links, and commuting patterns.
  - b. Delivers an appropriate contribution to the unmet employment land need in the Black Country and supports growth across the west of the region by:
    - i. Accommodating investment and business growth on new strategic employment land;
    - ii. Providing employment opportunities for the growing labour force;
    - iii. Improving the functional relationship and sustainability of Shropshire and the Black Country Authorities.
  - c. Presents an opportunity to achieve positive impacts against a range of identified sustainability objectives in particular:
    - i. To achieve a strongly positive effect on SA objective 2: to encourage a strong and sustainable economy throughout Shropshire.
  - d. Whilst posing potential negative impacts against other sustainability objectives, it is considered that mitigation can reduce these impacts including:
    - i. Consideration of the interplay between this contribution and the total level of development proposed in Shropshire; and
    - ii. The strategic scale and distribution of site allocations proposed in the draft Local Plan.
  - e. Positively responds to the Duty to Cooperate process and signed Statement of Common Ground between Shropshire Council and the Black Country Authorities.
  - f. Conversely, Option 1: No Contribution would result in no contribution to the unmet employment land need in the Black Country which would not support the ability to meet the need for employment beyond the Shropshire area.
- 13.6. **However, it is also considered that any decision on this matter is ultimately most appropriately considered in the context of reasonable options for the employment land requirement.**

## 14. Employment Land Requirement

### *Reasonable Employment Land Requirement Options*

- 14.1. The initial direction for the employment land requirement for the draft Shropshire Local Plan came from the Issues and Strategic Options Consultation. This set out three broad growth options for Productivity Growth, Significant Growth and High Growth to help define the employment land requirement to 2038.
- 14.2. In ID37, paragraph 5.8, it is noted that 'The original SA [SD006.01] did not ascribe land amounts to the different growth options it tested and so it is not as straightforward to compare as housing'. Although these Economic Growth Options were not quantified in the original SA, the anticipated scales of development for these options were indicated by the Council, as part of the proposed 20 year plan period at that time (the plan period was extended to 2038 in 2019):
- a. Issues and Strategic Options Consultation (January 2017) (EV003.01) identified Significant Growth to be **290ha, delivered over 20 years at a rate of 14.5ha/year.**
  - b. Scale and Distribution of Development Consultation (October 2017) (EV004.01) identified High Growth to be **300ha, delivered over 20 years at a rate of 15ha/year.**
  - c. Issues and Strategic Options Consultation (January 2017) identified Productivity Growth as a lower employment requirement which would provide more 'higher value' jobs. The expectation is this option would not require an percentage uplift in baseline need, and would therefore be around **249ha, delivered over 20 years at a rate of 12.45ha/year.**
- 14.3. It is recognised in ID37, paragraph 6.1, that comparing the original Economic Growth Options to contemporary employment land options, requires some reasonable adjustments to the original 2017 options, whilst maintaining their overarching approach to defining levels of growth. These adjustments recognise the:
- a. Extension of the Plan period from 20 years to 22 years at 2038;
  - b. Contribution of 30ha towards unmet employment land needs in the Black Country, formally agreed by Shropshire Council in December 2020 and agreed with the Black Country Authorities in July 2021 as part of the Statement of Common Ground (EV041);
  - c. Contemporary assessment of employment land need based on forecast jobs growth in the EDNA (EV043) published in 2020;
  - d. Application of percentage uplifts for employment land need to provide for growth options consistent with housing growth options.

### ***Extension to the Plan Period***

- 14.4. This adjustment was made after the initial Issues and Options consultation in 2017, and therefore needs to be reflected in this updated assessment of options. However, it is important to recognise that this adjustment was already reflected in the contemporary employment land scenarios in the EDNA which recognises the Plan period is now 22 years from 2016 to 2038, and which provides a more up to date baseline 'need' position for the full 22 year plan period.
- 14.5. When the Plan period was extended to 22 years, the scales of growth indicated in the Economic Growth Options (2017) were maintained at their previously proposed figures. This re-aligned the annual requirements in these growth options to the pattern of employment development in the County. This recognised that the baseline employment land need in Shropshire should be re-assessed in relation to changing economic circumstances since the previous need assessment was undertaken in 2012. These changing circumstances included: the County's economic experiences from the start of the millennium, the UK departure from the European Union and the Covid-19 downturn.

### ***Contemporary economic needs assessments of Shropshire***

- 14.6. The original growth options in the Consultation document EV003.01 (Issues and Strategic Options) provided three options for strategic economic growth - 'Productivity', 'Significant' and 'High' Growth - but did not ascribe a land requirement to each option. In response to ID37 and in particular paragraphs 5.3, 5.4, 5.7, 5.8, 6.1, 6.4 and 6.5, the Council have identified contemporary employment land options for: 'Productivity', 'Significant' and 'High' Growth which are consistent in principle with the economic growth options in EV003.01 after making the reasonable adjustments noted here.
- 14.7. The important consideration in determining these contemporary employment land options is that, like the housing options, the baseline position for employment land need has changed since 2017. The updated need assessment is an important component of these reasonable employment land options for this updated SA.
- 14.8. As described above, The needs assessment is now underpinned by the EDNA with adjustments made to plot rations detailed in the Employment Topic Paper (EV112). This contemporary evidence identifies the appropriate employment land need for Shropshire to be assessed in this updated SA.

**Percentage uplifts for employment land options consistent with housing options**

- 14.9. In ID37, paragraph 5.8 seeks to provide consistent advice on confirming the employment land options to the advice provided for the housing options. Further, in paragraph 5.8, the importance of aligning the employment growth with housing growth is recognised.
- 14.10. Whilst it is considered appropriate to maintain the 'productivity' growth option at 0% uplift to align with the original principle of this option in the 2017 Issues and Options document, it is considered appropriate to apply consistent percentage uplifts against the baseline need to the 'significant' growth and 'high' growth options as applied to the housing options, i.e. 10% uplift for 'significant' growth and 15% for 'high' growth.

Considerations	Productivity Growth	Significant Growth	High Growth
Contemporary Shropshire Employment Land Requirement Options	250	275	290
	11.5 ha/yr.	12.5 ha/yr.	13 ha/yr.
	0%	10%	15%

**Contribution to unmet need in the Black Country**

- 14.11. Shropshire Council intends to contribute 30ha towards unmet employment needs in the Black Country, as agreed through the Duty to Cooperate process. This contribution should be considered in each of the employment land growth options, and is set out below:

Considerations	Productivity Growth	Significant Growth	High Growth
Contemporary Shropshire Employment Land Requirement Options	250 hectares	275	290
	11.5 ha/yr.	12.5 ha/yr.	13 ha/yr.
	0%	10%	15%
Contemporary Shropshire & Black Country Employment Land Requirement Options	280 hectares	300	320
	12.75 ha/yr.	14 ha/yr.	14.5 ha/yr.
	0%	7%	14%

**Updated Reasonable Employment Land Requirement Options**

- 14.12. Using the methodology described above, the reasonable adjustments to the Economic Growth Options from the Issues and Strategic Options become three reasonable employment land requirement options, all with or without a contribution towards unmet needs in the Black Country which are shown in Table 14.1.

**Table 14.1: Reasonable Employment Land Options**

Option	Percentage Uplift Above Minimum Employment Land Need	30 hectare Black Country Contribution
<b>Employment Land Option 1a: Productivity Growth</b>	<b>No Uplift</b>	<b>No</b>
<p>This option represents the baseline employment land forecast over the 22-year plan period from 2016-2038. The baseline employment land forecast for Shropshire is identified in the Shropshire Economic Development Needs Assessment for 161.91 hectares and has been adjusted to 250 hectares to take account of the lower density of development in Shropshire. This option represents a <b>total minimum employment land requirement of 250 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 11.5 hectares/year.</b></p>		
<b>Employment Land Option 1b: Productivity Growth with Black Country Contribution</b>	<b>No Uplift</b>	<b>Yes</b>
<p>This option represents the adjusted baseline employment land forecast of 250 hectares which equates to an annual average of around 11.5 hectares/year over the 22-year plan period from 2016-2038. This option provides a further 30 hectare contribution to the Black Country Authorities which represents a <b>total minimum employment land requirement of 280 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 12.75 hectares/year.</b></p>		
<b>Employment Land Option 2a: Significant Growth</b>	<b>Uplift around 10%</b>	<b>No</b>
<p>This option represents a 10% uplift on the adjusted baseline employment land forecast of 250 hectares over the 22-year plan period from 2016-2038 (annual average 11.5 hectares/year). This option represents a <b>total minimum employment land requirement of 275 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 12.5 hectares/year.</b></p>		
<b>Employment Land Option 2b: Significant Growth with Black Country Contribution</b>	<b>Uplift around 10%</b>	<b>Yes</b>
<p>This option represents the adjusted baseline employment land forecast of 250 hectares (annual average 11.5 hectares/year) with a 10% uplift to 275 hectares at an annual average of 12.5 hectares/year over the 22 year period from 2016 to 2038. This option provides a further 30 hectare contribution to the Black Country Authorities which represents a <b>total minimum employment land requirement of 300 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 14 hectares/year.</b></p>		
<b>Employment Land Option 3a: High Growth</b>	<b>Uplift around 15%</b>	<b>No</b>
<p>This option represents a 15% uplift on the adjusted baseline employment land forecast of 250 hectares over the 22-year plan period from 2016-2038 (annual average 11.5 hectares/year). This option represents a <b>total minimum employment land requirement of 290 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 13 hectares/year.</b></p>		
<b>Employment Land Option 3b: High Growth with Black Country Contribution</b>	<b>Uplift around 15%</b>	<b>Yes</b>
<p>This option represents the adjusted baseline employment land forecast of 250 hectares (annual average 11.5 hectares/year) with a 15% uplift to 290 hectares at an annual average of 13 hectares/year over the 22 year period from 2016 to 2038. This option provides a further 30 hectare contribution to the Black Country Authorities which represents a <b>total minimum employment land requirement of 320 hectares over the 22 year period from 2016 to 2038 which gives an annual average of around 14.5 hectares/year.</b></p>		

### ***Identifying Proposed Employment Land Requirement***

- 14.13. The Council has reached a planning judgement to determine which employment land option should become the updated employment land requirement in the draft Shropshire Local Plan as required by the Examination process and in particular the Inspectors comments in ID28, ID36 and ID37.
- 14.14. An extensive range of information has informed this planning judgement including the:
- a. Economic spatial strategy objectives to:
    - i. Support an expanding business base to deliver an increasing range and type of investment and employment opportunities;
    - ii. Provide greater choice and competition for employment sites;
    - iii. Provide greater efficiency in the development of employment land;
    - iv. Modernise the commercial building stock and employment floorspace across the County;
    - v. Deliver a greater proportion of higher value employment;
    - vi. Provide a broader range of employment generating uses;
    - vii. Support the growth and diversification of our labour force;
    - viii. Deliver a 'step change' in the growth and productivity of the local economy;
  - b. Identification of key opportunities and challenges in Shropshire;
  - c. Formal agreement between Shropshire Council and the Black County Authorities, through ABCA, to make a 30ha contribution towards unmet employment land needs in the Black Country;
  - d. employment land needs and other conclusions reached in the EDNA;
  - e. Conclusion that the employment land requirement should be expressed as 'a minimum' rather than 'around';
  - f. Responses to the Regulation 18 consultations to inform the draft Shropshire Local Plan and representations to the Regulation 19 consultation on the draft Shropshire Local Plan;
  - g. Updated additional SA assessment of reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country;
  - h. Updated additional SA assessment work regarding reasonable employment land requirement options; and
  - i. Deliverability of the employment land requirement including matters set out in the Employment Topic papers (EV112/GC4n).

14.15. Dealing with each in turn:

### ***Economic Spatial Strategy***

14.16. The consultation responses that informed the preparation of the draft Shropshire Local Plan identified a range of issues and opportunities which helped to inform the Economic Growth Strategy (2017).

14.17. The Economic Growth Strategy captured the broad spectrum of activity required to improve the performance and productivity of the local economy. The strategy also considered how growth might be delivered through the provision of housing, improving the communications and transport networks, support from the public sector and utilities providers and through the promotion of Shropshire as a good location for investment and enterprise.

14.18. The Economic Growth Strategy is recognised as the pathway for Shropshire to deliver qualitative improvements to the local economy through the Submission Local Plan. To achieve this objective, the employment land requirement should provide a sufficient scale of employment land, offer choice and competition for employment sites and premises and be realistic and deliverable in relation to the local plan evidence base.

14.19. The Economic Growth Strategy has subsequently been updated in 2022 after the submission of the Local Plan, but continues to provide a consistent overarching strategy by supporting key sectors to target new growth opportunities and to address labour skills gaps in order to improve the employability and upskilling of the workforce available to businesses in Shropshire.

### ***Opportunities and Challenges in Shropshire***

14.20. The Employment Strategy Topic Paper (GC4n in Economic Spatial Strategy paragraph 4.14) captures the material considerations for the economic spatial strategy including the delivery of:

- a. **'Step change' in growth and productivity** – to achieve a 'step change' in Shropshire's economic performance by offering higher quality investment opportunities and improving the quality of the employment offer to retain skilled and qualified people;
- b. **Supporting unmet needs in neighbouring areas** – to help address unmet needs within the appropriate scale of planned development to satisfy national policy especially to deliver sustainable development. Improvements in employment generation in centre, east and south of the County will improve Shropshire's economic profile, investment offer and potential to deliver economic growth and productivity improvements;

- c. **Expanding business base of investment and employment** – to improve Shropshire’s economic investment potential particularly in significant commuting locations from vibrant urban markets with higher concentrations of labour, skills and qualifications offering opportunities for higher quality investment and employment uses;
- d. **Growth and diversification of labour force** - to balance new economic development and employment generation with the delivery of new housing and unmet needs for employment especially in urban centres, to help deliver a growing and diverse labour force and support improving rates of economic growth and productivity;
- e. **Range of employment generating uses** – to reflect the changes to the Use Classes Order and the introduction of Class E to capture the broader contribution to the employment offer in the County;
- f. **Delivery of more higher value employment** - to support the working age population especially professionals and key workers to live and work in Shropshire by offering good quality job opportunities with career advancements and to reduce the under-employment of skilled people;
- g. **Choice and competition for employment sites** – to deliver an employment land requirement that improves Shropshire’s investment potential and job opportunities, shaping an employment land supply offering a range, choice and quality of locations and opportunities;
- h. **Greater efficiency in the development of employment land** - to deliver more effective planning of development on employment land to improve the density of land use, delivery of floorspace and out-turn of jobs to meet Shropshire’s economic needs;
- i. **Modern supply of commercial premises** - to replenish the building stock with modern premises and reduce the loss of good quality employment land and floorspace to other uses.

***Purpose and Strategy for Co-operating with Unmet Need***

- 14.21. The two previous Employment Topic Papers prepared to support the Local Plan - (GC4n: Section 6 and EV112: section 7) explain that Shropshire Council recognises the need to counter the labour market effects of an ageing population along with the significant movement of older migrants into Shropshire.
- 14.22. The unmet employment needs in the four, centrally located Black Country Authorities would create a surplus supply of labour in the accessible and vibrant economic heart of the region. These unmet needs may potentially change the supply, availability and movement of labour from this combined population of over 1 million persons.

- 14.23. Shropshire's response seeks in time, to retain more of the resident working population of the County, by managing out-commuting, in order to drive its economic growth strategy. A key step towards this, is to reach a 'net commuting balance' by securing 'equilibrium' with in-commuting. Progress can be made towards this interim objective, by increasing the number of in-commuters entering Shropshire from neighbouring areas including the Black Country.
- 14.24. Whilst the Black Country has a shortfall in the availability of land for employment development. The significant demand for employment opportunities in the Black Country, combined with the proximity of Shropshire, and the connectivity between the two areas, contribute to the impacts of the unmet employment land need in the Black Country. Shropshire considers that helping to relieve these commuting pressures will have longer term benefits both for Shropshire and for the Black Country Authorities.
- 14.25. A further matter to be considered in this relationship, was addressed by the Examining Authority for the West Midlands Interchange (WMI) in South Staffordshire. The Examining Authority accepted that the Black Country "*labour pool should support the scale of growth at [the] WMI including residents who are unemployed and those who are not currently economically active but want a job*". However, the Examining Authority wished to ensure: "*there would be an adequate labour pool to support the Proposed Development without a significant adverse effect on the ability of existing businesses [in the Black Country] to fulfil their employment needs*".
- 14.26. In seeking to assist the Black Country Authorities with their unmet need, Shropshire still wishes to support their capacity to continue to meet their own labour needs. This objective meets the obligations in NPPF, paragraph 85 to "*allow each area to build on its strengths, counter any weaknesses and address the challenges of the future*".
- 14.27. To achieve this outcome, Shropshire is seeking to support unmet employment needs in the Black Country by influencing commuting patterns between Shropshire and the Black Country. This would be in addition to support for the migration of some labour to new housing in Shropshire. This means managing the scale of the contributions to the Black Country Authorities to the proposed 1,500 dwellings and 30ha of employment land, to effectively '*share*' an element of the Black Country labour pool.
- 14.28. This approach sought primarily to meet the duty to cooperate in satisfying unmet needs across the region and also to ensure each participating authority still has the resources to deliver effective planning strategies for their administrative areas.

### ***Employment Land Need and Options in the EDNA***

- 14.29. As described above, the conclusions of the EDNA, and the subsequent adjustment to likely plot ratios have provided the baseline employment land needs of the County to 2038
- 14.30. One of the intentions for the preferred employment land requirement is to respond effectively to paragraph 85 of the NPPF, where significant weight should be given to need to support economic growth and productively. To achieve this, it is necessary to meet the employment needs of the growing population and demand from those seeking employment in the County in response to forecast growth in the size and performance of the business base.

### ***Expression of the 'minimum' Employment Land Requirement***

- 14.31. Throughout the preparation of the draft Local Plan, it was expected that the scale of development to be delivered would be 'around' the scale of the proposed employment land requirement in the draft Shropshire Local Plan.
- 14.32. In ID28, the Planning Inspectors concluded that the employment land requirement should actually be expressed as 'a minimum' "*for both monitoring and effectiveness*" of the Local Plan.
- 14.33. Shropshire Council accepts this principle. However, the implications require careful consideration in the context of identifying which of the reasonable employment land requirement options should form the basis for the proposed requirement in the draft Shropshire Local Plan.
- 14.34. Where the employment land requirement is expressed as 'around', this would not provide a definitive minimum or a definitive maximum, but rather, a general target for the scale of development to be delivered. Where the requirement is expressed as a definitive 'minimum' it would provide for both the achievement of the Shropshire need and for the delivery of development to meet the unmet need in the Black Country.
- 14.35. The assumption would follow that, the scale of development to be delivered would meet the requirement but may reasonably exceed this requirement where the functional relationship with the Black Country proved to be a strong influence on Shropshire.
- 14.36. This would be subject to the economic circumstances that prevailed through the Plan period. However, this approach is supported by Shropshire Council and the scale of employment development would be supported by the Shropshire Economic Growth Strategy.

### ***Consultation Responses and Identification of Opportunities***

- 14.37. The evidence base and consultation responses that informed the preparation of the draft Shropshire Local Plan identified a range of issues and opportunities in Shropshire including:
- a. Promoting the County at national and regional levels to capture greater investment, support key growth sectors and deliver a 'high growth' strategy;
  - b. Delivering sustainable economic growth which increases the size and diversification of the business base and delivers improvements to economic performance and productivity;
  - c. Delivering an urban focused strategy to locate opportunities where investment is most likely to be delivered;
  - d. Delivering balanced, mixed use developments in key locations to manage travel patterns and promote sustainable travel options;
  - e. Providing a good range and choice of suitably located and deliverable employment land and premises with attractive and accessible strategic investment sites;
  - f. Improving the highway and public transport networks especially along the Strategic Corridors including the A49, A5, A458;
  - g. Delivering high quality education and training opportunities in further education (FE), higher education (HE) and vocational training;
  - h. Delivering good quality housing to meet the full range of housing needs supported by modern retail and leisure services.
- 14.38. Key evidence to inform these issues and opportunities includes the local housing need assessments (with EV069), Authority Monitoring Reports (including EV012), Strategic Housing Market Assessment (EV097.01 and EV097.02), Productivity Growth Forecast (EV090), Economic Development Needs Assessment (EV043), Economic Growth Strategy (EV044), Employment Land Review (EV046) and Local Plan Viability Study (EV115.01).

### ***Updated additional SA assessment of reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country***

- 14.39. The updated additional SA assessment work has included a specific consideration of reasonable options for Shropshire making a contribution to the unmet employment land need forecast to arise in the Black Country.

- 14.40. The reasonable options identified were:
- a. **Option 1:** No contribution towards the unmet employment land need forecast to arise within the Black Country.
  - b. **Option 2:** Contribution of 30ha towards the unmet employment land need forecast to arise within the Black Country.
- 14.41. This SA assessment provides an important source of information to inform the planning judgement. This work considers the implications of making a contribution to unmet employment land need forecast to arise in the Black Country as part of the employment land requirement of the draft Shropshire Local Plan. This is contrasted with the implications of not making this contribution to support neighbouring unmet employment land needs.
- 14.42. This work assessed each option against the SA objectives and in this way informs judgements about their relative sustainability. It concluded that on balance, **Option 2:** Contribution of 30ha towards the unmet employment land need forecast to arise within the Black Country, is the most sustainable of the two options identified. Further detail on the outcomes of this updated additional SA assessment work is provided within the updated Additional SA Report.
- 14.43. The planning judgement exercise summarised within paragraphs 6.1-6.7 of this Topic Paper, also concluded that **Option 2:** Contribution of 30ha towards the unmet employment land need forecast to arise within the Black Country, was the most appropriate of these options.

***Updated additional SA assessment work regarding reasonable employment land requirement options***

- 14.44. The updated additional SA assessment work included assessment of the three reasonable options for the employment land requirement to meet the needs and demands of the Shropshire economy. Each of these three options then had a further proposed option to make an additional contribution of 30ha towards the unmet employment land need forecast to arise in the Black Country.
- 14.45. The updated additional SA assessment considered each of these options against the SA objectives (comprising 16 sustainability outcomes) for the assessment. This assessment work is an important source of information for the planning judgement about which reasonable employment land requirement options should provide the proposed employment land requirement for the Local Plan.
- 14.46. The updated additional SA assessment work concluded that the greater the level of employment land proposed within an option, the greater the likelihood of positive impacts on social and economic

sustainability outcomes. Conversely the greater the level of employment land proposed, the greater the potential for negative impacts on environmental factors. The purpose of the SA assessment is to explore the principle of sustainable development and to achieve an appropriate balance across all the three pillars for sustainability– for the social, economic, and environmental implications of development.

- 14.47. It is important to recognise that, the updated additional SA assessment work concluded that none of the options are likely to result in a strongly negative effect on any of the sustainability outcomes.
- 14.48. Further, it concluded that only one option is likely to result in strongly positive effects on any of the sustainability outcomes. This is Option 3b: High Growth Plus a 30 hectare contribution to the Black Country Authorities Unmet Employment Land Needs.
- 14.49. This is likely to result in a strongly positive effect in the short, medium and long term on SA objective 2: to encourage a strong and sustainable economy and also throughout the plan period, a strongly positive effect on SA objective 5: to encourage the use of sustainable means of transport.
- 14.50. The updated additional SA assessment work concluded that on balance, **Option 3b**: High Growth Plus a 30 hectare Contribution to the Black Country Authorities Unmet Employment Land Need represented the most sustainable of the reasonable options for the proposed 'minimum' employment land requirement. Further detail on the outcomes of this updated additional SA assessment work is provided within the Updated Additional SA Report.

### ***Deliverability***

- 14.51. The proposed employment land requirement should meet local need and facilitate the contribution towards unmet needs in the Black Country. In addition, the requirement should accommodate the aspirations of the business community and the need to improve Shropshire's economic performance and productivity.
- 14.52. In Employment Topic Paper (EV112), the Shropshire Authority Monitoring Report (2020) was found to indicate that the:
- a. Average development rate in Shropshire from 2016 to 2020 has increased and regained the historical rate of 12.5 ha each year only previously achieved from 1989 to 2006;
  - b. Employment development in Shropshire from 2016 continued to fluctuate with a lower level of 10.5ha in 2016-17 and 6.8ha in 2018-19 reflecting changes in the regional and national economy;

- c. However, development in 2017-18 (15.2ha) and particularly in 2019-20 (17.4ha) significantly exceeded any historical records and on average saw the rate of development in Shropshire return to rates only previously experienced before 2006. This occurred despite the anticipated effects of Brexit and the emergence of the coronavirus Covid-19. Indeed, since 2016, Shropshire has seen the average rate of development increase by +30% from 9.6ha each year to 12.5ha each year;
- d. This positive response in Shropshire to the recent economic circumstances, coincided with the publication of the first Shropshire Economic Growth Strategy (2017). The experience of the business community in Shropshire since 2016, supported by their partnership with the public sector, appears to be encouraging investment confidence;
- e. The evidence of recent, higher annual completions in Shropshire, would indicate the deliverability of a higher aspirational option for the employment land requirement.

### ***The Proposed Employment Land Requirement***

14.53. Shropshire Council considers **Option 3b** should provide the employment land requirement for the draft Shropshire Local Plan.

14.54. **Option 3b: High Growth PLUS 30ha contribution to Black Country Authorities Unmet Employment Land Need** represents 15% uplift on the forecast economic baseline need of 250ha over the 22 year period (annual average of 11.5ha/yr) plus a further 30ha uplift as a contribution toward forecast unmet employment land need in the Black Country.

14.55. The resultant proposed employment land requirement is 320ha over the proposed plan period from 2016 – 2038. This equates to an annual average of around 14.5ha/yr.

### ***Reasons for the Proposed Employment Land Requirement***

14.56. Key considerations included:

- a. The level of employment land associated with Option 3b is sufficient to meet the employment land need for the forecast baseline economic growth (2020 base date), whilst providing a significant buffer above this local need. This provides significant confidence that the level of need will be achieved and allows sufficient flexibility to respond to changes to need and to market demands over the proposed plan period.
- b. The level of employment development associated with Option 3b is sufficient to allow for **a significant positive contribution** to the

various identified **opportunities and challenges in Shropshire** (when considered in the context of specific policies to positively influence the location, type, size, quality and choice of employment sites and premises in Shropshire).

- c. The level of employment development associated with Option 3b **achieves the principle of and will deliver High Growth**, which underpins the level of growth proposed within the spatial strategy of the draft Shropshire Local Plan.
  - i. This option more than meets the evidenced employment land need with flexibility to provide significant opportunities to meet the requirements of an expanding business base in terms of location, type, size and quality.
  - ii. This will help to achieve a 'step change' in Shropshire's economic performance by offering higher quality investment opportunities and improving the quality of the employment offer to support improving rates of economic growth and productivity;
  - iii. This will help balance new economic development and employment generation with the delivery of new housing and with unmet needs for employment especially in urban centres to help deliver a growing and diverse labour force.
  - iv. This is also expected to support the use of energy from renewable sources particularly in production processes, support reductions in energy consumption and promote energy efficiency in the move towards a 'net zero carbon' economy.
  - v. This will support the delivery of a sustainable pattern of development in Shropshire.
  - vi. A series of consultations have been undertaken regarding the proposed housing requirement of the draft Local Plan. Reflecting on the **consultation responses** received, Shropshire Council considers the level of employment land associated with Option 3b responds to and balances the issues, considerations and differing perspectives raised through these consultations.
- d. Option 3b will also include a specific contribution of 30ha towards the unmet employment land needs in the Black Country. This is considered to be appropriate and will support further co-operation between Shropshire and neighbouring Functional Economic Market Areas (FEMA) to strengthen strategic relationships with neighbouring authorities.
- e. Shropshire and the Black Country recognise their mutual objectives under paragraph 26 of the NPPF in proposing Option 3b, that:
  - i. Shropshire and the Black Country have mutual objectives for their emerging Local Plans and these strategic policy-making authorities are working towards the "production of a positively

- prepared and justified strategy” for their respective administrative areas;
- ii. This ‘mutuality’ seeks to counter the challenges created by the more limited development capacity of the Black Country through:
    - Facilitating the Black Country Authorities to further access the strategic corridors, principal settlements and land resources in the adjacent sub-regional area; and
    - Using the land resource capacity of Shropshire to support the sustainable growth of their local economy and to support the Black Country Functional Economic Market Area;
    - Helping to meet some of the Black Country investment demands in the business markets and some of the employment needs of their labour markets in Shropshire.
  - f. Option 3b is considered sufficiently responsive to the ‘overlap’ between uplifts to local employment land need to support the objectives of the Shropshire strategy, and the contribution to address issues and opportunities in the Black Country to further support the achievement of the Shropshire strategy.
  - g. Based on the updated additional SA assessment work undertaken, it is considered that Option 3b presents an opportunity to:
    - iv. Achieve a **strongly positive effect** on SA objective 2: encouraging a strong and sustainable economy throughout Shropshire.
    - v. In the long-term, achieve a **strongly positive effect** on SA objective 5: encouraging the use of sustainable means of transport.
    - vi. Achieve **positive impacts** against a range of other identified sustainability objectives including SA Objective 13: to promote the adaptation and mitigation to climate change.
  - h. Based on the updated additional SA assessment work undertaken, it is considered that Option 3b is **unlikely to result in any strongly negative effects on any SA objectives**. Whilst a potential risk of achieving negative impacts against a range of identified sustainability objectives is acknowledged, it is considered that opportunities exist to mitigate the extent of such impacts. This includes through careful consideration of the scale and locations of new site allocations, the identification of appropriate policies to manage this development and the requirement to masterplan the proposed development schemes.
  - i. Whilst Options 1b and 2b would ensure the employment land need would be met, and result in a contribution to unmet employment land need forecast to arise in the Black Country, with further opportunities to respond to identified opportunities and challenges

in Shropshire; the opportunities to deliver the preferred strategy for Shropshire would be less significant than those with Option 3b.

- j. As documented in ID28, the proposed employment land requirement is to be expressed as a 'minimum' rather than as a figure 'around' the requirement. This means there is significantly more certainty about the minimum level of employment development to be provided, Shropshire Council considers Option 3b **positively responds to the employment land requirement as a 'minimum' level of delivery.**

14.57. In conclusion, considering the available evidence, responses to previous consultation and the results of technical assessments, other relevant information in applying the planning judgement, Shropshire Council considers the employment land requirement in the draft Shropshire Local Plan should be based on **Option 3b** of the identified reasonable employment land requirement options.

**14.58. The proposed employment land requirement is a minimum of 320ha which equates to an annual average of 14.5ha/yr. This reflects a continuation of the High Growth option previously identified and presented in the Submission Local Plan (at 15% above the identified employment land need) and includes a specific contribution of 30ha towards unmet employment land need forecast to arise in the Black Country.**

### ***Implications of Proposed Employment Land Requirement***

14.59. The draft Submission Local Plan proposed an employment land requirement of 300ha between 2016 and 2038. This equates to an annual average of around 14 hectares per year (actually 13.6ha/yr rounded upwards) over the 22 year plan period.

14.60. The updated reasonable options for the employment land requirement, when considered through the updated additional SA assessment process and the planning judgement exercise (as summarised within this document) has concluded **Option 3b**: 'High Growth Plus a 30 hectare Contribution to the Black Country Authorities' to be the most appropriate and sustainable strategy for Shropshire.

14.61. The employment land requirement in the draft Local Plan should therefore be **increased to 320 hectares between 2016 and 2038**. This equates to a higher annual average of around 14.5 hectares per year over the 22 year plan period.

14.62. Main modifications would be required to the draft Submission Local Plan to reflect this proposed change – including to draft Policy SP2

and its supporting text and to draft Policy SP13 and its supporting text.

- 14.63. Main modifications would also be required to draft Policy SP2 to expressly state the proposed employment land requirement includes a 30 hectare contribution to the unmet employment land need forecast to arise within the Black Country. Furthermore, it is also necessary to:
- a. Consider through the SA process reasonable options and subsequently identify appropriate main modifications in order to accommodate the proposed 20 hectare uplift to the proposed employment land requirement.
  - b. Consider through the SA site assessment process, reasonable sites to accommodate the proposed 30 hectare contribution to the unmet employment land need forecast to arise in the Black Country<sup>10</sup>.
  - c. Identify appropriate main modifications to support the accommodation of the proposed 30 hectare contribution to the unmet employment land need forecast to arise in the Black Country.

---

<sup>10</sup> Consistent with Paragraph 21 of ID28 which specified that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.

## **15. Accommodating the Proposed Uplift to the Employment Land Requirement**

### ***Options to Accommodate the Proposed Uplift to the Employment Land Requirement***

- 15.1. The new proposed employment land requirement of 320ha requires the delivery of an additional 20ha of employment land compared with the current submitted version of the Plan. The Council has considered four reasonable options to deliver this uplift.
- 15.2. These options set out how the requirement for additional employment land may be provided in relation to the scale and distribution of development in the employment strategy in the draft Local Plan.
- 15.3. These options are:
  - a. Option 1: Utilising settlement guidelines and windfall allowances.
  - b. Option 2: Densification of proposed site allocations.
  - c. Option 3: Extensions to current proposed site allocations or the allocation of additional sites.
  - d. Option 4: A combination of two or more of the above options.

### ***Option 1: Utilising Settlement Guidelines and Windfall Allowances***

- 15.4. Within the draft Local Plan, Shrewsbury and the identified Principal and Key Centres have proposed settlement employment land guidelines.
- 15.5. The employment settlement guidelines and associated windfall allowances proposed in the submission Local Plan provide significant flexibility, principally in order to allow for choice and competition in the market. This is different to the housing requirements for settlements, as described in the options considered in section 7 of this report, where this same flexibility in how settlement guidelines are presented is not considered necessary.
- 15.6. The intention of this approach to employment guidelines is to provide additional confidence regarding the deliverability of the overall proposed employment requirement. It is therefore appropriate to assess utilising this existing position to accommodate the proposed uplift. This option needs to take into account whether the identified employment land supply is sufficient to deliver the proposed employment land requirement.

### ***Option 2: Densification of Proposed Site Allocations***

- 15.7. The Council considered the densification of development in some detail in the Employment Requirement Topic Paper (EV112). This discussion identified that the lower average density of development in Shropshire necessitated a higher employment land requirement than suggested by the growth scenarios in the Economic Development Needs Assessment (EV043).

### ***Option 3: Increasing Site Allocations***

- 15.8. There may be opportunities to extend the site area of proposed allocations to increase their capacity and/or opportunities to identify additional site allocations (including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements in order to provide additional capacity).
- 15.9. Additional capacity associated with increasing site allocations would need to be deliverable within the proposed plan period and support delivery of necessary supporting infrastructure.

### ***Option 4: A Combination of Two or More of the above Options***

- 15.10. It may be appropriate to consider utilising a combination of all or a selection of mechanisms from the other reasonable options for accommodating the uplift to the proposed housing requirement.

### ***Identifying the Preferred Option to Accommodate the Proposed Uplift to the Employment Requirement***

- 15.11. The decision regarding which of the reasonable options to accommodate the proposed uplift to the employment requirement should be utilised within the draft Local Plan is ultimately one of planning judgement.
- 15.12. There is however an extensive range of information/factors that informs this planning judgement. This includes:
- a. The updated additional SA assessment work regarding options to accommodate a proposed uplift to the housing requirement.
  - b. Compatibility with the wider vision, strategy and spatial framework of the draft Shropshire Local Plan.
  - c. Feasibility and deliverability, including through consideration of whether there are actual opportunities to achieve the proposed uplift and whether these opportunities would be deliverable within the proposed plan period.

15.13. Dealing with each in turn:

*Updated additional SA assessment work regarding options to accommodate a proposed uplift to the employment land requirement*

15.14. The updated additional SA assessment work included assessment of the above four reasonable options to accommodate a proposed uplift to the employment land requirement.

15.15. This updated additional SA assessment work is an important source of information for the planning judgement on the approach to accommodate the proposed uplift to the employment land requirement in the draft Submission Local Plan. The updated additional SA assesses each option against the SA objectives to reach a judgement about their relative sustainability.

15.16. An important consideration would remain to be addressed, that the employment needs of Shropshire's rural communities also must be recognised. The strategic scale and distribution of planned development should also deliver employment opportunities of an appropriate scale and within accessible locations in the rural areas of the County. It is considered that this matter has already been addressed in the identified employment land supply which is proposed for the draft Submission Local Plan.

15.17. The updated additional SA assessment concludes the following (the updated SA provides detailed summaries of each option):

**Option 1:** *Utilising Settlement Guidelines and Windfall Allowances* - the updated additional SA assessment indicates that this option has a strongly positive impact on the SA objective to encourage a strong and sustainable economy. It presents an opportunity to achieve a strongly positive effect on the SA objective to promote an efficient use of natural resources in the short, medium and long term. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through identification of appropriate policies to manage resultant development (assessed separately within the SA process).

**Option 2:** *Densification of Proposed Site Allocations* - This option also has a strongly positive impact on the SA objective to encourage a strong and sustainable economy. This option would also likely support a positive effect on the promotion of access to services for all sections of society, encouragement of the use of sustainable modes of transport, reduction of reliance on travel by car, and reducing carbon dioxide emissions. This is because proposed employment land

allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as densification of proposed allocations is likely to increase the potential for impact on landscape character and change to the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.

**Option 3:** *Increasing site allocations (including proposing one or more additional allocations)* – this option would also likely support the encouragement of a strong and sustainable economy throughout Shropshire, although the extent of this impact would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. There are a number of SA objectives against which this option has the potential for a positive impact, although there is some uncertainty as well given there is a dependence upon the location of additional or increased site allocations. Given this option would entail additional allocations in one form or another, this option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness. Again, whilst this is dependent upon the location and nature of any extensions to existing proposed allocations/new proposed allocations, any development is still likely to change the character of those places where the majority of people currently live and harm to visual amenity is possible with all forms of development, regardless of location.

**Option 4:** *A Combination of Two or More of the Other Options* - In relation to the updated SA assessment, the effects on each SA objective in this option would also align with the best and the worst of the sustainability outcomes of the other three options. In conclusion, the precautionary principle would indicate that this reasonable option would be likely to provide the 'worst case' scenario from each of the other reasonable options.

*Compatibility with the wider vision, strategy and spatial framework of the draft Shropshire Local Plan*

- 15.18. It is important that any option to accommodate the proposed uplift to the employment land requirement is compatible with the wider vision, strategy and spatial framework proposed within the draft Local Plan.
- 15.19. On balance, it is considered all of the reasonable options to accommodate the proposed uplift to the employment land

requirement have the potential to be compatible with the wider vision, strategy and spatial framework proposed within the draft Shropshire Local Plan.

- a. Option 1: aligns with the principle of urban focus, by utilising settlement guidelines and windfall allowances in the submitted Local Plan. Given the 'in built' flexibility contained in the settlement guidelines, which provides a total land supply in excess of the requirement figure, it is considered maintaining these guidelines would both be entirely compatible with the wider vision, strategy and spatial framework, and would deliver the housing requirement, including the proposed uplift.
- b. Option 2: would be likely to align with the principle of urban focus as the majority of proposed allocations are associated with urban settlements. However, the evidence of development in the County indicates that the environment around many of the main settlements and the character of their townscapes may place some restrictions on the capacity to increase the density of employment development in Shropshire.
- c. Option 3: would likely continue to align with the principle of urban focus if it entailed an extension to one or more proposed allocations, as the majority are associated with urban settlements. It may also continue to align with the principle of urban focus if it entailed identification of one or more additional site allocations, but this is dependent on the location/characteristics of any potential new employment land allocations. It is considered that whilst the identification of new site allocations or extensions to currently identified allocations may have a significant impact on particular settlements, the relatively modest increase in the proposed 'minimum' employment land requirement would be unlikely to result in a significant change to the overall distribution of employment development.
- d. Option 4: is directly linked to the other identified options.

15.20. It is considered that a continued reliance on the on the current identified settlement guidelines would have the most compatible approach.

15.21. The uplift would instead provide for a further 20ha of development to be drawn down from the identified employment land supply in response to market demands for employment development. The spatial focus for delivering the uplift would be determined by the scale and distribution of demand for investment and development opportunities in the County. This outcome has already been planned for in the settlement guidelines and the identified employment land supply for the draft Submission Local Plan.

## *Feasibility and Deliverability*

### *Option 1: Utilising Settlement Guidelines and Windfall Allowances*

- 15.22. Shropshire is a large and diverse rural county containing the Strategic Centre of Shrewsbury; five Principal Centres (Bridgnorth, Ludlow, Market Drayton, Oswestry and Whitchurch); 11 Key Centres (Albrighton, Bishop's Castle, Broseley, Church Stretton, Cleobury Mortimer, Craven Arms, Ellesmere, Highley, Much Wenlock, Shifnal and Wem); numerous rural settlements identified as Community Hubs and Community Clusters; hundreds of other rural villages and hamlets; and a significant rural hinterland.
- 15.23. The County also has a network of established employment areas across the County located with the hierarchy of settlements identified above and in locations adjoining or close to many of these settlements or in rural locations within the Place Plan areas around these settlements. There is also an established pattern of employment development within or adjoining agricultural enterprises or within individual or groups of rural buildings in suitably accessible locations.
- 15.24. Consequently, there is a constant and significant recycling of previously developed land, existing employment floorspace and suitable rural premises for employment uses. Development of such sites often represents windfall employment development and settlement guidelines provide for this development. This may also capture the potential for development within the wider Place Plan area to supplement the development potential of main settlements.
- 15.25. The identified settlement employment guidelines across the Principal and Key Centres of the County have sought to reflect the significant capability of the County to deliver small scale employment development in addition to more significant allocated sites identified in the Plan. This outcome seeks to ensure that the provision of guidelines for settlements does not itself become a constraint on the development potential of the County and recognises the capacity of certain Place Plan areas to bring forward both urban and rural employment development.
- 15.26. The proposed settlement employment land guidelines seek to ensure that the employment land requirement may be achieved as a minimum provision. This also seeks to ensure that the spatial distribution of employment development in relation to market demands will not be unduly restricted across Shropshire as a result of the settlement employment land guidelines.
- 15.27. Particular regard has been given to locations where demand is most likely to be expressed. In these areas, proposed settlement

employment land guidelines have been identified which will facilitate an appropriate level of employment development and in some instances, development has been permitted and sites have been proposed for allocation to ensure the proposed settlement employment land guidelines can be met. This is illustrated in Table 15.1.

**Table 15.1: Proposed Settlement Guidelines and Urban Land Supply**

Location			Policy Designation	Proposed Settlement Guidelines	Urban Land Supply	Windfall Capability
Place Plan Area	Strategic Corridors	Settlement				
				hectares		
Shrewsbury	Yes	Shrewsbury	Strategic Centre	100	105	
Oswestry	Yes	Oswestry	Principal Centre	57	47	10
Ellesmere		Ellesmere	Key Centre	9	9.5	
Bridgnorth	Yes	Bridgnorth	Principal Centre	49	39	10
Albrighton	Yes	Albrighton	Key Centre	5		5
Broseley		Broseley	Key Centre	3	2	
Highley		Highley	Key Centre	3	1	2
Much Wenlock	Yes	Much Wenlock	Key Centre	2	1.5	0.5
	Yes	Ironbridge	Strategic Settlement	6	6	
Shifnal	Yes	Shifnal	Key Centre	41	41	
Market Drayton	Yes	Market Drayton	Principal Centre	35	31	4
	Yes	Clive Barracks, Tern	Strategic Settlement	6	6	
Whitchurch	Yes	Whitchurch	Principal Centre	20	26	
Wem		Wem	Key Centre	6	9	
Ludlow	Yes	Ludlow	Principal Centre	11	12	
Bishop's Castle		Bishop's Castle	Key Centre	3	3

Cleobury Mortimer		Cleobury Mortimer	Key Centre	2	1	1
Craven Arms	Yes	Craven Arms	Key Centre	15	15	
<b>TOTALS</b>				<b>375</b>	<b>357</b>	<b>33</b>

15.28. Table 15.1 shows how the identified settlement employment guidelines provide for a generous identified employment land supply in each of the Principal and Key Centres. In settlements where investment demand is likely to be expressed, sites have been allocated to meet the guideline figures to provide surety of supply. In other locations, the guideline figure provides for further employment windfall capability both in the settlement, in adjoining locations or in the Place Plan area.

15.29. The Council considers that the employment land supply currently identified in the draft Submission Local Plan is significantly generous and sufficient to support the range of reasonable employment land options considered in the updated additional Sustainability Appraisal.

15.30. **The Council have an identified employment land supply which totals 413ha of land and includes proposed 'saved'**

**allocations, proposed new allocations and smaller scale windfall development which comprises both brownfield and greenfield land and the redevelopment of premises on established employment areas, within settlements and in rural locations.** The Council have identified this employment land supply in (GC4n) Employment Strategy Topic Paper in Table 4 on pages 11 – 16.

- 15.31. The Council considers the identified employment land supply provides a generous scale of employment land providing a range and choice of sites and premises. This offers a variety of types, sizes and quality of investment and development opportunities. The scale of employment land provided at 413ha is significantly greater than the proposed employment land requirement at 320ha.
- 15.32. The buffer provided by the identified employment land supply is considered to provide sufficient flexibility to respond to changing circumstances through the plan period to 2038.
- 15.33. The Council also considers the identified employment land supply provides a robust spatial distribution of opportunity across the County. The identified employment land supply is distributed through the settlement hierarchy and into the rural areas. The proposed new employment allocations have also refreshed the identified employment land supply in key areas of the County most notably in the centre, east and south. This required the identification of proposed new employment allocations totalling 134ha. This provision of new land for economic investment and development represents 42% of the proposed employment land requirement for 320ha.
- 15.34. In conclusion, the Council consider the identified employment land supply, which would include the 134ha of new employment allocations in the draft Local Plan, capable of accommodating the proposed 20ha uplift to the proposed 'minimum' employment land requirement.

*Option 2: Densification of Proposed Strategic Site Allocations*

- 15.35. The Council considered the densification of development in some detail in the Employment Requirement Topic Paper (EV112). This discussion identified that the lower average density of development in Shropshire (at 26%) necessitated a higher employment land requirement than suggested by the growth scenarios in the Economic Development Needs Assessment (EV043). These growth scenarios were assumed to deliver employment development at 40% of the land area under development but this plot ratio is considered to be too high in Shropshire.

15.36. The Council has considered the matter of density in the preparation of a number of the proposed site allocations comprising:

- a. Shifnal, Land east of Shifnal Industrial Estate (SHF018b & SHF018d) – this 39ha site has a recommended plot ratio of 40% to deliver over 15ha of built development. This seeks to optimise the development potential of this important strategic site to deliver high quality development opportunities and to deliver a high ratio of new employment with a significant proportion of higher quality jobs.

The densification of the employment allocation on Land east of Shifnal Industrial Estate also seeks to satisfy the obligations of NPPF paragraph 146. This requires that proposals should optimise the density of development to make effective use of land especially in sensitive locations including the Green Belt.

- b. Ludlow, Land south of The Sheet on the A49 (LUD052) – this 5 hectare site forms a continuous extension to saved employment allocation ELR058 for 3.5ha. The proposed allocation LUD052 would extend the existing allocation ELR058 to a continuous area of over 8ha where development is due to commence through the development of a primary plot for retail development to access and service the larger allocation. This proposed 5 hectare site is expected to provide around 2ha of built development to meet the employment needs of Ludlow and to protect the setting of this important historic town.

15.37. The Council has not currently set this objective into policy due to the difficulty of achieving a standard plot ratio for the County. The Council would wish to work with the development industry towards this objective, starting by developing an understanding of how to achieve this outcome by testing design solutions key new allocations. It is expected that further density improvements may be achieved on the remaining proposed employment allocations located at Bridgnorth on both the Tasley Garden Village and Stanmore Industrial Estate. However, this is not considered to be a suitable means of accommodating the proposed uplift to the proposed employment land requirement given the uncertainty about its delivery.

*Option 3: Proposed Site Allocation extensions or identification of additional sites*

15.38. Through the proportionate and robust site assessment process undertaken by Shropshire Council a significant volume of potential site allocations were identified.

15.39. A range of proposed new employment allocations have been identified comprising:

Location	Settlement	Site	Designation	Employment Land
				hectares
East	Bridgnorth	Tasley Garden Village	Employment Allocation	16
		North of Stanmore Industrial Estate	Employment Allocation	7
		Adjoining Hickman Road,	Employment Allocation	4.5
	Shifnal	East of Shifnal Industrial Estate	Employment Allocation	39
	Ironbridge	Former Power Station	Strategic Settlement	6
Centre	Shrewsbury	Preston Island	Employment Allocation	45
		Land between Mytton Oak Road and Hanwood Road	Mixed Use Urban Extension	5
South	Ludlow	South of The Sheet on A49	Employment Allocation	5
North-East	Tern Hill	Clive Barracks	Strategic Settlement	6
			<b>TOTAL</b>	<b>134</b>

15.40. The Council has already utilised and proposed extensions to a number of existing employment sites and 'saved' allocations as part of the proposed allocation of new sites in the submitted Local Plan. These include:

- a. Bridgnorth, Stanmore Industrial Estate (P58a & STC002) – employment allocations already propose to extend the existing and successful Stanmore Industrial to extend the lifespan and investment offer of this significant employment area.
- b. Ludlow, Land south of The Sheet on the A49 (LUD052) – 5ha site forms a continuous extension to saved employment allocation ELR058 for 3.5ha. The proposed allocation LUD052 would extend the existing allocation ELR058 to a continuous area of over 8ha.
- c. Shifnal, Land east of Shifnal Industrial Estate (SHF018b & SHF018d) – whilst not considered an extension this proposal does benefit from being co-located with the existing employment area to consolidate this investment location.

15.41. Identified sites and summaries of the various stages of the site assessment process are provided within the SLAA (EV106.01-EV106.10); the appendices of the Sustainability Appraisal and Site Assessment Environmental Report (SD006.03-SD006.22); and the appendices of the updated additional SA assessment work.

15.42. Having reflected on the range of sites identified through the site assessment process and the conclusions reached within it, it is considered there are feasible opportunities to:

- a. Extend the site area of some of the proposed allocations to increase their capacity.
- b. Identify additional site allocations, including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements.

- 15.43. To ensure identification of sustainable and feasible opportunities for the extension of the site area of a proposed allocation and/or identification of additional feasible and sustainable site allocations, this process would need to be informed by a targeted update to the additional SA site assessment work.
- 15.44. It should also be informed by recognition that during the 'call for sites'; the various consultations undertaken to inform the draft Shropshire Local Plan, and the ongoing examination, promoters of many of these sites have provided information regarding deliverability of sites during the proposed plan period.
- 15.45. However, final judgement on deliverability would require consideration on a site-by-site basis, informed by careful consideration of site-specific evidence and other local factors relevant to each site; past delivery rates for similar projects across Shropshire; local market absorption rates and other known market factors; consideration of 'standard' assumptions applied by the Council when analysing employment land supply; proactive discussions with relevant landowners, land promoters and developers; and professional judgement.

*Option 4: A Combination of Two or More of the Other Options*

- 15.46. Option 4 is directly linked to the other identified options. Given this assessment concludes each of the other options could be feasible and deliverable, it is considered this option could be similarly feasible and deliverable.

***The Mechanism to Accommodate the Proposed Uplift to the Employment Land Requirement***

- 15.47. In conclusion, the Council considers the basis for accommodating the proposed uplift to the employment land requirement for the draft Shropshire Local Plan is Option 1 – to utilise the existing settlement guidelines and windfall allowances, which provide for an employment land supply in excess of the proposed employment requirement of 320ha. This is therefore considered sufficient to provide for the uplift of 20ha to deliver the proposed employment land requirement of 320ha.

- 15.48. **Utilising existing settlement guidelines and windfall allowances** would allow the current range, choice and distribution of sites, premises and development opportunities and committed proposals to meet the needs of the Shropshire economy and to provide for an appropriate balance between urban and rural employment development across the County to achieve the proposed uplift to the employment land requirement.

## **16. Accommodating the Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country**

### ***Introduction***

- 16.1. Paragraph 21 of ID28 specified that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.
- 16.2. Specifically, it states "*...the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.*"
- 16.3. As the proposed employment land requirement includes a contribution of 30ha of employment land towards the unmet employment land need forecast to arise in the Black Country, there is a need to identify appropriate site or sites to accommodate this proposed contribution.

### ***Options to Accommodate the Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country***

- 16.4. To inform identification of the site or sites to accommodate the proposed contribution of 30ha of employment land towards unmet employment land needs forecast to arise within the Black Country, Shropshire Council has undertaken updated additional SA and site assessment work.
- 16.5. First, an appropriate geography within which reasonable options for sites to accommodate the proposed contribution to the unmet employment land need forecast to arise within the Black Country may be located, was identified. This was informed by consideration of:
  - a. Geographic proximity and the location and quality of main road and rail transport links between Shropshire and the Black Country.
  - b. Migration patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - c. Commuting patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - d. The extent to which Travel to Work Areas (TTWA's) associated with the Black Country penetrate into Shropshire and vice versa.

- 16.6. In summary, this assessment concluded that reasonable options for sites to accommodate the proposed contributions to unmet employment land need forecast to arise within the Black Country are in the east and central parts of Shropshire at the larger settlements where employment growth is proposed and potential strategic settlements/sites.
- 16.7. Following identification of this reasonable assessment geography, the Council re-assessed all available sites within it through the updated additional SA site assessment. This re-assessment was informed by:
- a. The continued use of the stage 1 assessment, which involved a high-level strategic assessment of sites across Shropshire, with more detailed assessment undertaken in later stages of the process.
  - b. A targeted update to stage 2a of the site assessment process in order to allow for comparison of all sites within the relevant assessment geography identified.
  - c. The continued use of the stage 2b filters<sup>11</sup>, which were considered suitable in the context both the consideration of sites to accommodate the needs and objectives of Shropshire and the needs of the Black Country.
  - d. The update of the stage 3 site assessment process, considering all sites within the relevant assessment geography that proceeded to stage 3 of the site assessment process. This included both Green Belt and non-Green Belt sites, and not just those sites that are proposed for allocation within the draft Shropshire Plan. This assessment also explicitly considered the outcome of the Green Belt assessment and review undertaken to inform the preparation of the draft Shropshire Local Plan. It also specifically assessed the relationship of sites with the Black Country.

---

<sup>11</sup> The three filters applied in Stage 2b are:

a. Size: Sites were 'filtered out' of the site assessment process where they were less than a specified size (unless there was potential for allocation as part of a wider site). The site size 'filters' applied are 0.2ha in Community Hubs and Strategic/Principal/Key Centres within/partly within the Green Belt or Shropshire Hills AONB, and 0.5ha for other Strategic/Principal/Key Centres. No other filters on size were applied.

b. Availability: Sites were 'filtered out' of the site assessment process where there remained uncertainty about whether the site is available for relevant forms of development, despite best efforts to ascertain site availability.

Strategic Suitability: Sites were 'filtered out' of the site assessment process where they were identified as being subject to a significant physical, heritage and/or environmental constraint (identified within the Strategic Land Availability Assessment). These constraints are such that it was considered they were unsuitable for development.

-Significant physical constraints include where the site is landlocked (cannot be accessed); some distance from the built form (unless it could represent a potential strategic site); or the majority of the site is in flood zones 2/3, an identified open space, or has a severely adverse topography.

-Significant environmental/heritage constraints include where the majority of the site has been identified as a heritage or natural environment asset.

- 16.8. This process therefore involved assessment of around 350 sites as part of the targeted update to Stage 2a and around 160 sites at Stage 3, as potential locations to accommodate proposed contributions to unmet housing needs forecast to arise in the Black Country.
- 16.9. The scope and conclusions of this assessment work are explained within the updated additional SA and site assessment work.

***Sites Proposed to Accommodate the Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country***

- 16.10. Through the updated SA site assessment process, a site has been identified to accommodate the proposed contribution of 30ha of employment land towards the unmet employment land need forecast to arise within the Black Country.
- 16.11. **This site is SHF018b & SHF018d - Land east of Shifnal Industrial Estate, Upton Lane, Shifnal: 30ha employment land.**
- 16.12. As the site is located within the Green Belt, consistent with paragraph 146 of the NPPF, it was necessary to consider 'all other reasonable alternatives' before considering whether exceptional circumstances existed to justify this release.
- 16.13. This process was undertaken as part of the updated additional SA and site assessment work undertaken. This also responds to paragraphs 15-22 of ID36 and paragraph 7.3 of ID37.

***Reasoning: Why the Site Proposed to Accommodate Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country is Located in Shifnal***

*Introduction*

- 16.14. The site SHF018b & SHF018d is located at Shifnal, in the east of the County. This site and the town of Shifnal is considered ideally suited to accommodate the proposed contribution to the unmet employment land need forecast to arise in the Black Country. This is for a number of reasons, including:

*Role within the draft Shropshire Local Plan*

- 16.15. Within the draft Shropshire Local Plan, the proposed spatial strategy for the distribution of development is underpinned by the principle of 'urban focus', whereby the majority of development is directed towards the larger urban settlements (complemented by appropriate development within rural areas).

- 16.16. Shifnal is identified as a Key Centre within both the adopted Development Plan and the draft Shropshire Local Plan, due to its size and the level of services, facilities and infrastructure available. Key Centres form part of the urban area.
- 16.17. As such, Shifnal is identified as a focus for investment, employment, housing and development in the east of the County. To this end, draft Policy S15.1 proposes that around 1,500 dwellings will be delivered and around 41ha of employment land made available for development during the proposed plan period (2016-2038). This role was informed by constraints present and identified issues and opportunities. This growth will help maintain and enhance the town's role, support key services and facilities and maximise its economic potential.
- 16.18. Due to Shifnal's role within the draft Local Plan, it constitutes a settlement that is well-suited to accommodate employment development. Indeed, accommodating the proposed contribution to the unmet employment land forecast to arise in the Black Country could support the achievement of Shifnal's role within the draft Shropshire Local Plan.

#### *Sustainability of the Settlement*

- 16.19. Shifnal benefits from a range of services, facilities and infrastructure (which informed its role within the proposed spatial strategy for the distribution of development).
- 16.20. These services, facilities and infrastructure are key contributors to the current and future sustainability of Shifnal. They also support the ability of the town to sustainably accommodate well-designed new employment development. Furthermore, such development can in turn support the maintenance and enhancement of the town's services and facilities and therefore the town's long term sustainability.
- 16.21. Due to the sustainability of Shifnal, it is considered that it constitutes a settlement that is well-suited to accommodate employment development. Indeed, accommodating the proposed contribution to the unmet employment land forecast to arise in the Black Country could, through the support for existing and provision of new associated services and infrastructure, enhance the sustainability of Shifnal.

#### *Location*

- 16.22. Shropshire does not directly adjoin the Black Country. Furthermore, due to geographic size, the proximity of settlements in Shropshire to the Black Country varies considerably.

- 16.23. Shifnal is located in the east of the County and as such is one of the Shropshire settlements in closest proximity to the Black Country. This proximity means that it is well-suited to accommodate an employment land contribution to the Black Country.
- 16.24. Geographic proximity is considered to be particularly important in the context of identifying an appropriate location for the provision of a contribution in Shropshire to the unmet employment land need forecast to arise in the Black Country.
- 16.25. This is because an employment land contribution to an unmet need, is intended to:
- a. Provide land for organisations that would have previously sought such opportunities in the location where the need had arisen, i.e. the Black Country.
  - b. Provide employment opportunities for those that would previously have sought such opportunities in the location the need had arisen.
- 16.26. For both these considerations, for a contribution to be an attractive alternative to meeting the need in its original location, it must be within a location that meets their geographic needs, and is in a location considered commutable, preferably by sustainable means.
- 16.27. In the context of a contribution to the unmet employment land need forecast to arise in the Black Country, such employees include residents within the Black Country itself and residents of other locations that considered the Black Country an acceptable commuting location (which includes residents in east Shropshire). As such, geographic proximity to the Black Country is likely a key factor when determining if a contribution is appropriately located.
- 16.28. This is an important distinction to accommodating a contribution to unmet housing needs, where occupiers migrate to this provision and associated employment opportunities are also provided (as is the case in the context of the proposed Shropshire contribution to the unmet housing need forecast to arise in the Black Country).

#### *Connectivity*

- 16.29. The considerations around connectivity are similar to that of general proximity, although it is recognised that due to the size and diverse geography of Shropshire, the connectivity of settlements in Shropshire to the Black Country varies very significantly.
- 16.30. Shifnal is located on the M54/A5 strategic corridor and on the Shrewsbury-Wolverhampton railway line corridor. As such, it benefits from direct road and rail links to the Black Country. This connectivity

means that Shifnal is well-suited to accommodate an employment land contribution to the Black Country.

#### *Scale of Development*

- 16.31. For a contribution to the unmet employment land need forecast to arise in the Black Country to be effective, it needs to be attractive to those organisations seeking employment space within the Black Country and those seeking employment in the Black Country.
- 16.32. On balance, it is considered that larger scale employment sites are generally better able to meet the needs of those seeking employment in the Black Country than smaller scale employment sites. This is because they normally offer a range of employment opportunities (often within a particular sector, thereby providing enhanced career progression opportunities) and ancillary services and facilities which can support commuting.
- 16.33. Due to the scale of the development proposed at Shifnal and the location of the settlement, it is considered well placed to support a larger employment site that meets both local and regional employment needs.
- 16.34. Such provision is considered likely to align with the profile of unmet employment land needs forecast to arise in the Black Country; be attractive to organisations seeking employment land within the Black Country; and be attractive to those seeking employment in the Black Country. This supports the conclusion that the town is well-suited to accommodate an employment land contribution to the Black Country.

#### *Supporting the Achievement of the Shropshire Economic Growth Strategy*

- 16.35. The Shropshire Economic Growth Strategy (EV044) identifies an ambitious vision and strategy for the economic growth of Shropshire. This includes focusing new employment provision onto strategic corridors such as the M54/A5 and maximising the potential of employment provision in east Shropshire – such as at Shifnal.
- 16.36. It is considered that accommodating the proposed contribution to the unmet employment land need forecast to arise in the Black Country at Shifnal, a Key Centre on the M54/A5 corridor in the east of Shropshire, will directly support the achievement of this strategy.

#### *Proximity to Growth Sectors*

- 16.37. Due to Shifnal's location on the M54 strategic corridor, it benefits from proximity to a number of strategic employment centres with concentrations of employment in target growth sectors for Shropshire (as identified within the Shropshire Economic Growth Strategy

(EV044)). Such locations include RAF Cosford; t54 at Telford; i54 at Junction 2 of the M54; and the emerging West Midlands Interchange.

- 16.38. As such, it is considered that employment provision in Shifnal has the potential to capitalise on this proximity and connectivity, attracting a complementary offer within these sectors and/or associated supply chain. Such provision is considered well placed to meet the aspirations of organisations seeking employment space within the Black Country. It is also considered a suitable alternative for those seeking employment in the Black Country.

*Demand for Employment Sites*

- 16.39. The evidence base prepared to inform the draft Local Plan concludes Shifnal is a location that is particularly attractive to the employment market – both for local and strategic employment sites (Employment Land Review (EV046) and M54 Strategic Options Study (EV072)). This evidence therefore provides confidence that a contribution at Shifnal to the unmet employment need forecast to arise in the Black Country would be attractive to the market and deliverable.

*Opportunity to Support the Role of Shifnal*

- 16.40. Shifnal has experienced significant growth over recent years, much of which has occurred during the period addressed within the draft Shropshire Local Plan.
- 16.41. However, there has been an imbalance in this growth, which has primarily consisted of residential development, with only minimal additional employment development. This is acknowledged in the explanatory text to Policy S15 of the SAMDev Plan which identifies that *"It is important that this scale of residential development is balanced by the provision of employment opportunities' but that 'Green Belt around Shifnal limits the opportunities for suitable employment sites."*
- 16.42. As a result, this has created a significant and growing labour pool, with more limited local employment opportunities. It has also meant that opportunities for local employers to expand and for new employers to locate into Shifnal have been limited.
- 16.43. Addressing this imbalance, through the provision of a significant new local/strategic employment offer provides a range of opportunities for the town. This includes:
- a. Providing opportunities for local employers to expand.
  - b. Providing opportunities for new employers to locate into Shifnal, with its growing labour pool and location on a key strategic corridor.

- c. Reversing the trend of out-commuting from the town - including to the Black Country.
- d. Increasing economic activity rates within the town, which will also support the intention of increasing economic activity rates across Shropshire and nationally.
- e. Supporting the ability for Shifnal to provide an employment offer to its surrounding rural hinterland. This will enhance the town's role as a Key Centre and could further support the intention of increasing economic activity rates across Shropshire and nationally.
- f. Increasing the vibrancy of the community and local economy – particularly during the day.
- g. Supporting the provision of services, facilities and infrastructure associated with employment development.

16.44. Conversely, accommodating the proposed contribution to the unmet employment land need forecast to arise in the Black Country at Shifnal also has the potential to support plan making within the Black Country. Providing a significant new local/strategic employment offer in the town provides opportunities to reverse the process of out-commuting Shifnal (including to the Black Country), which will reduce the pressure to provide equivalent employment offer in the Black Country.

16.45. As such, it is considered that there is the potential for a symbiotic relationship between the aspirations of providing employment at Shifnal in order to address imbalances in provision and to ensure the town's long-term sustainability; and accommodating the proposed contribution to the unmet employment land need forecast to arise in the Black Country and thereby supporting plan making in the Black Country.

16.46. This further supports the conclusion that Shifnal is well placed to accommodate the proposed contribution to the unmet employment land need forecast to arise in the Black Country.

*Supporting the Vision and Spatial Strategy of the Draft Local Plan*

16.47. It is considered that accommodating the proposed contribution to the unmet employment land need forecast to arise in the Black Country at Shifnal also has the potential to support the wider vision and strategy of the Shropshire Local Plan.

16.48. It will enhance the labour supply available at Shifnal and support promotion of the new local/strategic employment offer at the town as a new strategic location, thereby increasing the ability to attract new

employers. Such provision aligns with the vision and spatial strategy within the draft Local Plan.

### ***Assessment of All Other Reasonable Options***

#### *Introduction*

- 16.49. The consideration of alternatives to the proposed release of Green Belt at Shifnal has been undertaken as a multi-stage process.
- 16.50. The first stage involved identification of a specific 'area of search' for potential location(s) to accommodate the proposed contributions to the 'unmet' needs forecast to arise in the Black Country. This was undertaken in the updated additional SA Report.
- 16.51. As the detail of how specific settlements or strategic locations were decided upon is summarised within paragraphs 12.17 to 12.41 of the updated additional SA assessment, this is not repeated here.
- 16.52. The locations ultimately identified as reasonable options to accommodate the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country are summarised in paragraph 12.39 of the updated additional SA assessment. These are:
- a. Sites associated with the settlement of Bridgnorth.
  - b. Sites associated with the settlement of Shifnal.
  - c. Sites associated with the settlement of Shrewsbury.
  - d. Potential strategic settlements/sites within Albrighton Place Plan Area.
  - e. Potential strategic settlements/sites within Bridgnorth Place Plan Area.
  - f. Potential strategic settlements/sites within Broseley Place Plan Area.
  - g. Potential strategic settlements/sites within Highley Place Plan Area.
  - h. Potential strategic settlements/sites within Much Wenlock Place Plan Area.
  - i. Potential strategic settlements/sites within Shifnal Place Plan Area.
  - j. Potential strategic settlements/sites within Shrewsbury Place Plan Area.
- 16.53. In effect the reasonable options for sites to accommodate the proposed contributions to unmet housing and employment land need forecast to arise within the Black Country are in the eastern and central parts of Shropshire at the larger settlements where growth is proposed or potential strategic settlements/ other sites.

- 16.54. These reasonable options therefore constitute the geography within which 'reasonable alternatives' to SHF018b & SHF018d site, to accommodate the proposed 30ha employment land contribution to the Black Country, could be located.
- 16.55. The second stage involved assessment of the strategic role and capacity of those locations to accommodate the proposed unmet need. (as well as 'home grown' Shropshire growth needs), taking into account quantitative and qualitative requirements and considerations, as well as the availability of sites. This also involved the specific assessment of identified sites.
- 16.56. Through this process, all 'reasonable alternatives' to SHF018b & SHF018d site, to accommodate the proposed 30ha employment land contribution to the Black Country, were considered.
- 16.57. It can be noted that where undertaking the assessment of reasonable alternatives to accommodate the proposed 30ha employment land contribution to the Black Country:
- a. As with accommodating the proposed 1,500 dwelling contribution, an option considered from the outset was the possibility of disaggregating the proposed employment land contribution to multiple sites. However, through the SA and site assessment process, it was ultimately concluded that the most effective and sustainable means of accommodating the proposed 30ha employment land contribution was a single site (SHF018b & SHF018d).
  - b. There was no assumption that the proposed contributions to employment and housing needed to be accommodated in the same location(s). This provided further flexibility in accommodating the proposed contributions to the unmet housing and employment land needs forecast to arise in the Black Country and provided an opportunity to minimise Green Belt release, given a number of the potential locations were outside Green Belt.
  - c. There was no assumption that the proposed employment land contribution needed to be accommodated at an existing settlement – equal consideration was given to sites associated with existing settlements and potential strategic settlements within the assessment geography that contained the 'reasonable options' for site(s) to accommodate the proposed contribution to the unmet housing and employment land needs forecast to arise in the Black Country. This provided further flexibility in accommodating these contributions and again provided an opportunity to minimise Green Belt release, given a number of the potential locations were outside Green Belt.

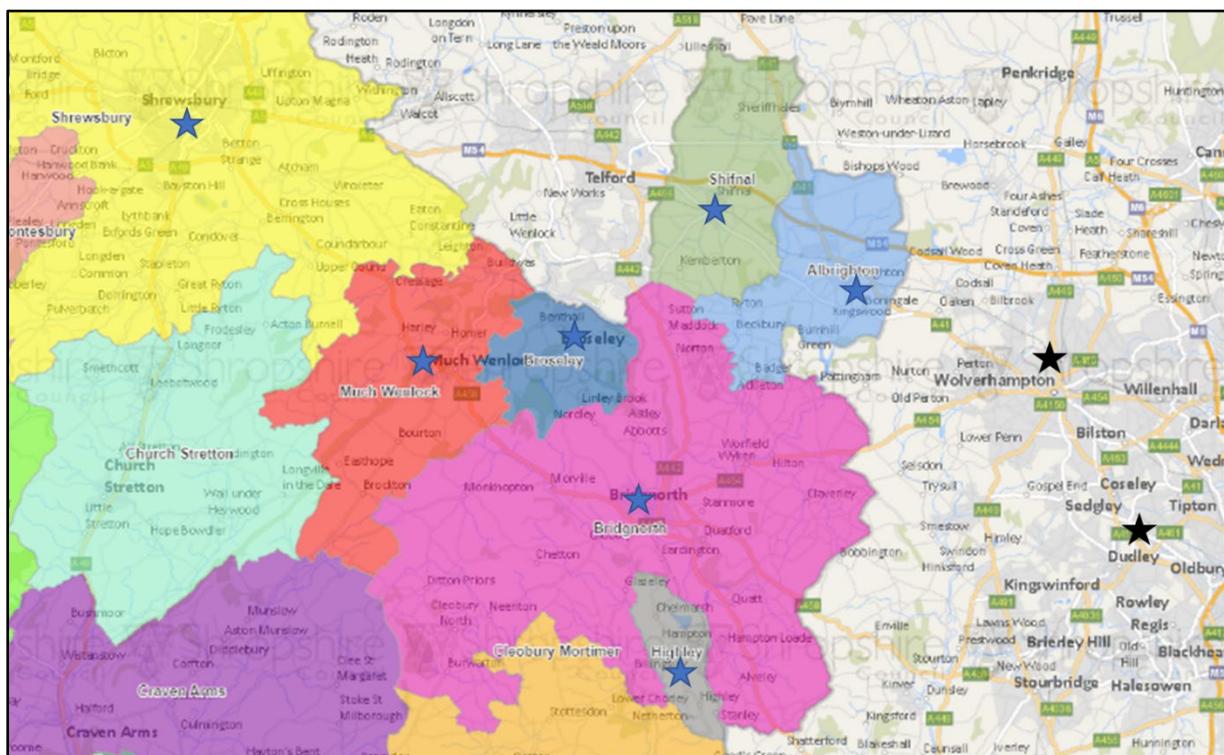

Ultimately, the sustainability benefits of a location more closely associated with a settlement was favoured. This reflected the presence of an established community and labour force; existing infrastructure, services and facilities to support new provision; and opportunity for any new infrastructure, services and facilities required to support the development.

16.58. For the avoidance of doubt, it is recognised that sites which are not closely linked to a settlement can also provide necessary supporting infrastructure, services and facilities which can also benefit the wider hinterland. As such, these sites were not discounted when considering sites to accommodate the proposed 30ha employment land contribution to the Black Country.

*Other Reasonable Options*

16.59. Before concluding Shifnal was the most appropriate location to accommodate the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country, all 'reasonable alternative options' within the identified assessment geography (as summarised within Paragraph 16.64) were considered.

**Figure 16.1 General location and extent of the Place Plan Areas 'in scope' (illustrated by blue stars) in Shropshire relative to Wolverhampton & Dudley (illustrated by black stars)**

### *Albrighton Place Plan Area*

- 16.60. The Albrighton Place Plan area generally has a strong functional relationship to the Black Country, due to its geographical location and the presence of the M54/A5 strategic corridor which runs from east-west through it. It contains the Key Centre of Albrighton and a number of smaller settlements. Outside of Albrighton, the majority of the Place Plan area is designated Green Belt.
- 16.61. Due to the characteristics of the settlements in the Albrighton Place Plan Area, the draft Shropshire Local Plan identifies only Albrighton itself as a specific location to accommodate development, which will contribute towards strategic growth objectives in the east of the County. Proposed development guidelines envisage the delivery of around 500 dwellings and 5ha of employment land in Albrighton between 2016 and 2038.
- 16.62. In formulating this strategy, the sustainability of the settlement and the benefits of its location on the M54/A5 road corridor and Shrewsbury-Wolverhampton railway line have been recognised. It is also recognised that it has the closest proximity to the Black Country of all the 'urban' settlements in Shropshire, as illustrated by Figure 16.1. However, the characteristics and constraints present which constrain the ability to accommodate significant development have also been carefully considered.
- 16.63. Whilst a Key Centre, it is functionally a larger village with a corresponding range of services and infrastructure supporting that role. Furthermore, there are a number of physical, heritage and environmental constraints present. For example:
- a. The conservation area focused on Donington and the Donington and Albrighton Local Nature Reserve along the village's northern development boundary.
  - b. The proximity to RAF Cosford which is in proximity to the north-west (maintenance of an appropriate gap between Albrighton and RAF Cosford forms part of the proposed strategy for the settlement and is considered important to ensure the successful operation of RAF Cosford and reduce potential public protection conflicts).
  - c. The A41 and railway line to the north-east and east, which create a physical barrier separating the area beyond from the services and facilities available within the settlement.
- 16.64. The settlement of Albrighton is also inset within and therefore surrounded by the Green Belt and remaining available non Green Belt development opportunities are therefore extremely limited:
- a. Within the existing defined development boundary it is considered only small-scale windfall opportunities exist. Whilst sites that could

deliver some small scale infill development have been identified, it is not considered that they are suitable to accommodate employment development of a type to accommodate the proposed employment land contribution to the Black Country. Such sites are also intended to support the achievement of the proposed strategy for Albrighton.

- b. Whilst the settlement currently has safeguarded land, the draft Local Plan proposes to allocate this in its entirety for residential development to meet the housing needs of Albrighton and its hinterland. This development is intended to redress previous low housing completion rates, which has been assessed to be a higher priority requirement than employment delivery in this location (as summarised in paragraph 5.15 of EV051).
- c. Maximising site density and using infill sites has been a consideration with regard to existing and proposed allocations at Albrighton (as set out in paragraphs 5.35-5.38 of EV051). It is considered that there is no realistic scope to further maximise land supply to address employment requirements by increasing development density and using brownfield and other infill in this location.

16.65. These same characteristics and constraints mean it is not considered a suitable location to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country. Furthermore, any allocation to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country would be located within the Green Belt.

16.66. It is acknowledged that within the proposed strategy, land is proposed to be removed from the Green Belt and safeguarded for future development. However, it is considered important to provide safeguarded land for future development beyond the proposed plan period. Furthermore, whilst these sites are considered suitable to be safeguarded for future development it is not considered that they could accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.

16.67. Whilst no other settlements in the Albrighton Place Plan area are identified as specific locations to accommodate development, a number of potential strategic settlements/sites were identified and considered as 'reasonable options' to accommodate the proposed contribution to the unmet employment land.

16.68. Cosford, including RAF Cosford and the range of non-military uses grouped with it, lies wholly in Green Belt within Albrighton Place Plan area. It was identified as both a Strategic Site and a Community Hub

addressed through Policy S21 of the submission version of the draft Shropshire Local Plan.

- 16.69. The intention of this status was to facilitate the existing military and charitable activities that occur on the site. Through the examination process, the Planning Inspectors have concluded (within ID28) that the site does not need to be removed from the Green Belt in order to facilitate these activities and as *'exceptional circumstances do not exist to justify the removal of this site from the Green Belt'*.
- 16.70. Whilst this site, as a potential strategic site/settlement, was considered as a location to accommodate all or part of the proposed 30ha contribution to the unmet employment land needs forecast to arise in the Black Country, given it is a predominantly developed site with very specific access constraints (given the significant military presence) and it is known that the existing occupiers have long term plans to remain and increase the functions at the site, it is not considered available for such uses.
- 16.71. Following the Inspector's Interim Findings, the Council are now proposing that the site is identified as a major developed site in the Green Belt (as within the adopted Development Plan), with the intention of continuing to support existing military and charitable activities on the site.
- 16.72. Land north of Junction 3 (various iterations of site P26) is also partly located within the Albrighton Place Plan area. It is understood that this site is available for various forms of development including a mixed-use development (with an employment element) and stand-alone employment development.
- 16.73. As such, the site was given full consideration by the Council through the SA and site assessment process, as a potential location to accommodate all or part of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country (in addition to consideration as a potential option to accommodate all or part of the proposed 1,500 dwelling contribution to the unmet housing need forecast to arise in the Black Country).
- 16.74. This consideration and the conclusions reached are documented in the site assessment that form part of the updated additional SA assessment and as such are not duplicated here.
- 16.75. However, it is important to note that this site is itself located within the Green Belt. Within the Green Belt Review undertaken to inform the draft Shropshire Local Plan, the release of relevant parcels that contain the site are considered to result in either moderate-high or high harm to the Green Belt (it is considered likely that there would

be high harm to the Green Belt resulting from release, associated with Parcel P4 which was not specifically assessed).

- 16.76. The site is also detached from any significant existing settlements and as such would lead to significant encroachment on the countryside; could affect the integrity of neighbouring Green Belt land; and would also lead to the creation of a new area inset into the Green Belt.
- 16.77. Furthermore, due to its location, when compared to sites associated with significant existing settlements, this option is considered to have a reduced opportunity to capitalise on existing infrastructure, services and facilities and for new infrastructure, services and facilities to directly serve existing communities (although it is acknowledged that those in its hinterland would be able to access them, as would those willing and able to travel).
- 16.78. It is considered this site offers more limited opportunities, especially when compared to the option of delivering a new employment site at Shifnal, in particular the aspiration of rebalancing the town's housing and employment opportunities, as described above. As such, on balance it is considered that SHF018b & SHF018d constitute a more appropriate location to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.
- 16.79. With respect of other large sites in more rural locations removed from Albrighton these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as utilise sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.
- 16.80. No other potential strategic sites/settlements other than those associated with Albrighton itself were identified within the Albrighton Place Plan Area.

*Bridgnorth Place Plan Area*

- 16.81. The Bridgnorth Place Plan area is located in east Shropshire and is considered to have a functional relationship to the Black Country.
- 16.82. Bridgnorth is the third largest settlement in Shropshire (by population) with corresponding infrastructure to meet the needs of the town and its rural hinterland. As a result, it is proposed to be identified as a Principal Centre within the draft Local Plan. Such centres constitute a particular focus for development, which will contribute towards strategic growth objectives in the east of the

County, meeting local needs and those of the town's significant hinterland.

- 16.83. Three further settlements are proposed to be identified as specific locations to accommodate development in the draft Shropshire Local Plan, these are the Community Hub villages of Alveley and Ditton Priors; and the Community Cluster at Neenton.
- 16.84. The levels of development proposed for Bridgnorth in the draft Shropshire Local Plan reflect the scale and sustainability of the settlement and the proposed strategic role intended. It includes the delivery of around 1,800 dwellings and making available around 49ha of employment land to create choice and competition in the market.
- 16.85. The town is in close road proximity to the Black Country with Wolverhampton some 16 miles in distance and is connected to the West Midlands via the A4169/A458/A454 network. However, it has no rail service or close motorway access.
- 16.86. Given this role and the location of Bridgnorth, it was considered that it formed a potential reasonable alternative location to accommodate all or part of the proposed 30ha employment land contribution to the Black Country.
- 16.87. There are a number of physical, heritage and environmental constraints that require due consideration when determining appropriate locations for development at Bridgnorth. This includes:
  - a. Bridgnorth is a historic market town with in parts a medieval street pattern, a conservation area, and many listed buildings.
  - b. Bridgnorth is bounded on its eastern side by the Green Belt.
  - c. Significant topographic changes and areas of landscape sensitivity exist in the surrounding area – particularly to the north.
  - d. Whilst Bridgnorth benefits from 'A road' links to many larger surrounding settlements, these roads do not form part of the strategic road network.
  - e. Rock outcrops restrict capacity to improve exit roads from the town towards Telford and the M54 corridor, although the Bridgnorth bypass provides less constrained access towards Wolverhampton and Stourbridge and other directions.
  - f. There is no main line railway station at Bridgnorth, only a heritage railway (Severn Valley Railway) linking to Kidderminster.
  - g. There are significant areas of land subject to flood risk, particularly in association with the River Severn which runs through the town.
  - h. The relationship and potential impact on adjoining settlements such as Oldbury village with its own conservation area.

- 16.88. Following due consideration of these constraints, a suitable non-Green Belt site to the west of Bridgnorth (Tasley Garden Village – BRD030) has been identified which provides sufficient capacity to bring forward a large housing and employment allocation in the form of a sustainable urban extension expected to deliver 1,050 dwellings 16ha employment land supported by a new local centre and extensive open space/ green infrastructure.
- 16.89. Through the updated additional SA and site assessment work, it has been determined (as previously set out) that there is scope to accommodate a contribution (600 dwellings) towards the unmet housing needs forecast to arise in the Black Country.
- 16.90. Whilst the site also includes employment provision, given the constraints to connectivity to the motorway and main line railway network, it is considered that this site does not constitute an appropriate location to accommodate any of the proposed 30ha contribution to the unmet employment land needs forecast to arise in the Black Country.
- 16.91. This connectivity is particularly important in the context of the provision of a contribution to the unmet employment land forecast to arise in the Black Country. This is because an employment land contribution to an unmet need, is intended to:
- a. Provide land for organisations that would have previously sought such opportunities in the location the need arises.
  - b. Provide employment opportunities for those that would previously have sought such opportunities in the location the need arises.
- 16.92. For both these considerations, to be an attractive alternative to meeting the need in its original location, it must be within a location that meets geographic needs and is in a location considered commutable, preferably by sustainable means. As such, connectivity, ideally by sustainable forms of transport, to the Black Country is a key factor when determining if a contribution is appropriately located.
- 16.93. This is an important distinction to accommodating a contribution to unmet housing needs, where occupiers migrate to this provision and associated employment opportunities are also provided (as is the case in the context of the proposed Shropshire contribution to the unmet housing need forecast to arise in the Black Country).
- 16.94. Furthermore, whilst employment provision represents an intrinsic element of the proposed development, it is expected to be cross-subsidised by the provision of housing. Given the interrelationship with housing and expectations regarding the types of employment uses and design and layout reflecting the sensitivity of the location

(including physical, heritage and ecology constraints), this restricts flexibility and impacts on the suitability of the site for a strategic employment site to meet the needs of the Black Country.

- 16.95. This would also represent a 'lost opportunity' to achieve many of the various benefits associated with accommodating this contribution at Shifnal – in particular addressing the imbalances in delivery at Shifnal, as described elsewhere in this paper.
- 16.96. As this proposed site allocation is a non-Green Belt site associated with a settlement that is bounded on one side by the Green Belt, it is intended that it would be developed at an appropriate density which considers both the need to use land effectively and taking into account the character and development requirements of the location (as detailed in the development guidelines in the draft Shropshire Local Plan). It is therefore not considered that there is significant scope for additional land use efficiencies to create additional development delivery capacity to address the Black Country contribution.
- 16.97. Stanmore Industrial estate is an existing strategic employment area which is inset in the Green Belt in a location to the east of Bridgnorth. It is proposed that two parcels of land, totalling around 11.5ha, would be released from the Green Belt in order to support the long-term sustainability of this strategic employment location.
- 16.98. The consideration of 'alternative options' and exceptional circumstances for this proposed release are documented within the Green Belt Exceptional Circumstances Statement (EV051) and Green Belt Topic Papers (GC4g and the newly submitted document).
- 16.99. Ultimately, the same considerations applied to BRD030 regarding connectivity to the Black Country, particularly via sustainable modes of transport, are applicable to sites associated with the proposed allocations at Stanmore Industrial Estate, other potential development sites associated with Stanmore Industrial Estate, and other potential development sites associated with Bridgnorth.
- 16.100. As such, these sites are not considered appropriate locations to accommodate any of the proposed 30ha contribution to the unmet employment land needs forecast to arise in the Black Country.
- 16.101. As rural settlements the Alveley and Ditton Priors Community Hubs and Neenton Community Cluster have more limited infrastructure. The expectation as set out in the draft Shropshire Local Plan's strategic approach is that these smaller village settlements would accommodate more modest levels of development focused on meeting local need and maintaining settlement sustainability, rather than accommodating contribution to Black Country needs.

- 16.102. The settlement of Alveley, together with an industrial estate which is detached from the village, are inset within the Green Belt (with no existing safeguarded land). Therefore proposed allocations to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country would themselves be within the Green Belt.
- 16.103. Green Belt release, for allocation and safeguarding is proposed to service the existing and likely future needs of Alveley. Allocations focus on meeting residential development requirements and making provision for community facilities as set in the exceptional circumstances paper EV051. However, due to the size, character and proposed role of the settlement within the draft Shropshire Local Plan, it was not considered to be a suitable location to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.104. The small industrial estate at Alveley was developed at the site of the former pithead buildings and lies close to the Severn Valley Country Park created by a reclamation scheme following the cessation of mining activity on the site. Access to the industrial estate from the A442 is through Alveley village and narrow rural roads. This sensitive and attractive rural location is therefore also not considered suitable as a location for significant expansion of employment use.
- 16.105. The settlements of Ditton Priors and Neenton are geographically some distance from the Black Country conurbation. Both are also relatively remote, being located to the far south west of the Bridgnorth Place Plan Area and accessed by a network of rural roads with no direct road or rail linkage to the Black Country. Furthermore, with regard to Ditton Priors, it is also constrained by being partly located within the Shropshire Hills National Landscape. These settlements therefore have capacity issues not only related to its identified strategic function, but also available infrastructure, accessibility and environmental constraints.
- 16.106. As such, these settlements are not considered suitable locations to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.107. With respect of large sites in more rural locations removed from Bridgnorth these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as utilise sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.

16.108. No potential strategic sites/settlements other than those associated with Bridgnorth itself were identified within the Bridgnorth Place Plan Area.

*Broseley Place Plan Area*

16.109. The Broseley Place Plan area is located in east Shropshire in close proximity of the settlements of Ironbridge and Telford within the Telford and Wrekin administrative area, and is considered to have a functional relationship to the Black Country. It contains the Key Centre of Broseley and a number of smaller settlements. The Place Plan Area lies outside the Green Belt.

16.110. Due to the characteristics of the settlements in the Broseley Place Plan Area, the draft Shropshire Local Plan identifies only Broseley itself as a specific location to accommodate development. This growth is intended to contribute towards strategic growth objectives in the east of the County with proposed development guidelines envisaging the delivery of around 250 dwellings and 3ha of employment land in Broseley between 2016 and 2038.

16.111. The levels of development proposed for Broseley in the draft Shropshire Local Plan reflect the scale and sustainability of the settlement but also the known constraints. As such, Broseley is intended to deliver sufficient housing and employment land to meet local needs, rather than performing a more significant strategic role.

16.112. Broseley is a relatively small town and is in close proximity to the settlements of Ironbridge and Telford. It is subject to physical, environmental, infrastructure and other constraints that need to be considered when bringing forward development. For example:

- a. It is an historic settlement containing a large conservation area, archaeological interest and many listed buildings.
- b. It is in proximity of other significant heritage and environmental assets. This includes the Ironbridge Gorge World Heritage Site; areas of ancient woodland; and several designated wildlife sites/areas of geological interest.
- c. Due to its mining and industrial heritage, ground conditions and potential for subsidence are important considerations.
- d. Whilst in geographical terms it is close to Telford and the M54 corridor beyond, it lacks a railway station and main road links to both. The most direct road links to Telford and the M54 corridor being via B roads crossing the Ironbridge Gorge.
- e. The road network in the town is characterised by narrow lanes and streets which do not reflect modern highway standards.

- 16.113. These same characteristics and constraints mean it is not considered a suitable location to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.114. Furthermore, the detailed strategy for achieving the proposed development guidelines for Broseley are established in the recently 'made' Broseley Neighbourhood Plan. The Neighbourhood Plan includes a small residential site allocation (for some 20 dwellings) and provision for local employment needs, through the saved SAMDev Plan employment allocation and an additional (under 1 ha) site allocated by the Neighbourhood Plan. The Neighbourhood Plan thus provides for a level of development which is of an insufficient scale to make a significant contribution to meeting Black Country development needs.
- 16.115. With respect of large sites in more rural locations removed from Broseley these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as utilise sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.
- 16.116. No potential strategic sites/settlements other than those associated with Broseley itself were identified within the Broseley Place Plan Area.

*Highley Place Plan Area*

- 16.117. The Highley Place Plan area is located in east Shropshire and is considered to have a functional relationship to the Black Country. Highley is the only significantly sized settlement within the Place Plan Area, other settlements are small and as such the character of the areas is predominately rural. The Place Plan Area lies outside the Green Belt.
- 16.118. Due to the characteristics of the settlements in the Highley Place Plan Area, the draft Shropshire Local Plan identifies only Highley itself as a specific location to accommodate development, which will contribute towards strategic growth objectives in the east of the County. Proposed development guidelines envisage the delivery of around 250 dwellings and 3ha of employment land in Highley between 2016 and 2038.
- 16.119. The levels of development proposed for Highley in the draft Shropshire Local Plan reflect the scale and sustainability of the settlement but also the known constraints. As such, Highley is

intended to deliver sufficient housing and employment land to meet local needs, rather than performing a more significant strategic role.

- 16.120. Highley is a relatively small settlement and is subject to physical, environmental and other constraints that need to be considered when bringing forward development. For example:
- a. Road connectivity between Highley and other settlement is via B roads or other minor roads and there is no main line rail station, only a heritage railway (Severn Valley Railway) linking to Bridgnorth.
  - b. The River Severn directly adjoins the settlement and forms a significant physical barrier restricting connectivity to the east (including to the Black Country). The nearest vehicular river crossings are at Bridgnorth and Bewdley which are linked by B roads.
  - c. It has an historic core to the settlement containing a conservation area, archaeological interest and listed buildings.
  - d. Due to its mining and industrial heritage, ground conditions and potential for subsidence are important considerations.
- 16.121. Due to the character of the Highley and its associated Place Plan Area, it is somewhat isolated and therefore considered less suitable to absorb a strategic or larger employment allocation, particularly as part of a contribution to the unmet employment land needs forecast to arise in the Black Country. Indeed Highley (and the Highley Place Plan Area) are considered the most remote location from the main road and rail network of all the locations being considered, with connectivity to the Black Country slow and indirect.
- 16.122. The same characteristics and constraints mean it is not considered a suitable location to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.123. With respect of large sites in more rural locations removed from Highley these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as utilise sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.
- 16.124. No potential strategic sites/settlements other than those associated with Highley itself were identified within the Highley Place Plan Area.

### *Much Wenlock Place Plan Area*

- 16.125. The Much Wenlock Place Plan Area is located in east Shropshire and is considered to have a functional relationship to the Black Country. The entirety of the Place Plan Area is located outside the Green Belt.
- 16.126. Much Wenlock is a small town and the only Key Centre within the Place Plan Area. The other settlements within the Place Plan identified as specific locations to accommodate development in the draft Shropshire Local Plan are the Community Hub village of Cressage and the Buildwas Community Cluster.
- 16.127. Proposed development guidelines for Much Wenlock envisage the delivery of around 200 dwellings and 2ha of employment land in Highley between 2016 and 2038.
- 16.128. The levels of development proposed for Much Wenlock in the draft Shropshire Local Plan reflect the scale and sustainability of the settlement but also the known constraints. As such, Much Wenlock is intended to deliver sufficient housing and employment land to meet local needs, rather than performing a more significant strategic role.
- 16.129. Furthermore, it is expected that much of the employment development to meet local needs will be delivered via the employment allocation within the Much Wenlock Neighbourhood Plan, which was to meet local needs.
- 16.130. Much Wenlock is a relatively small settlement and is subject to physical, infrastructure, environmental and other constraints that need to be considered when bringing forward development. For example:
- a. Much Wenlock is a historic settlement containing a large conservation area, archaeological interest and many listed buildings.
  - b. The town catchment has been designated as a highest category Flood Rapid Response Catchment and flood risk is a very significant local consideration, which impacts on the identification of development sites. The proposed housing allocation is underpinned by a strategy which seeks to manage flood risk to the site and existing built form within the settlement.
  - c. It is located on the A458 corridor linking to the Black Country, but it lacks a rail connection and the nearest railway stations to Much Wenlock (and its Place Plan area) are located in Telford and Shifnal.
- 16.131. The scale of Much Wenlock and the constraints to development present mean that it is not considered a suitable location to

accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.

- 16.132. As rural settlements the Cressage Community Hub and Buildwas Community Cluster have more limited infrastructure. The expectation as set out in the draft Shropshire Local Plan's strategic approach is that these smaller village settlements would accommodate more modest levels of development focused on meeting local need and maintaining settlement sustainability, rather than accommodating contribution to Black Country needs. As such, they are not considered suitable locations to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.133. Also within the Much Wenlock Place Plan Area is the large part brownfield site at the former Ironbridge Power Station, which has been identified as a new strategic settlement to contribute towards strategic growth aspirations within the draft Shropshire Local Plan.
- 16.134. This site has the capacity to accommodate a significant volume of development. Specifically, the draft Shropshire Local Plan development guidelines indicate that the new settlement will include a range of local services and facilities, around 1,000 dwellings, 6ha of employment land, and extensive green infrastructure. Extensive site remediation and new infrastructure will be required and this will shape suitable end uses.
- 16.135. Outline Planning Permission (19/05560/OUT) has subsequently been granted and a series of association Reserved Matters approved / pending consideration to facilitate this re-development. *Notably, aligning the site guideline with the capacity demonstrated by the Outline Planning Permission results in a 75 dwelling increase to the proposed housing guideline to some 1,075 dwellings between 2016 and 2038.*
- 16.136. The location benefits from road access to the M54 / A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442. It has no direct rail connection, although opportunities to re-establish rail services are being investigated. Furthermore, Telford station is accessible to the site.
- 16.137. This scale of development provides an opportunity to sympathetically remediate the site which has extensive areas of brownfield land and is also subject to contamination. It has been determined through the updated additional SA and site assessment process (as previously set out) that there is scope to accommodate a contribution (600 dwellings) towards the unmet housing needs forecast to arise in the Black Country.

- 16.138. The site was also considered as a potential 'reasonable alternative' to accommodate a portion of the proposed 30ha employment land contribution to the unmet employment land needs forecast to arise in the Black Country. However, it is considered that the type and amount of employment land available on the site would not offer enough flexibility of use furthermore it would only be sufficient to accommodate a proportion of the 30ha proposed contribution.
- 16.139. With respect of other large sites in more rural locations removed from Much Wenlock these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as utilise sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.
- 16.140. No other potential strategic sites/settlements other than those associated with Much Wenlock itself were identified within the Much Wenlock Place Plan Area.

*Shifnal Place Plan Area*

- 16.141. The Shifnal Place Plan area generally has a strong functional relationship to the Black Country, due to its geographical location and the presence of the M54/A5 strategic corridor which runs from east-west through it. It contains the Key Centre of Shifnal and a number of smaller settlements. Outside of Shifnal, the majority of the Place Plan area is designated Green Belt.
- 16.142. Due to the characteristics of the settlements in the Shifnal Place Plan Area, the draft Shropshire Local Plan identifies only Shifnal itself as a specific location to accommodate development, which will contribute towards strategic growth objectives in the east of the County.
- 16.143. Also reflecting the characteristics of the Shifnal Place Plan Area, the majority of the potential strategic sites/settlements are associated with the town itself. As such, these were considered as potential alternatives to SHF018b and SHF018d when considering the most appropriate site in the settlement to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.144. One exception is the site at Madeley, which adjoins the built form of Telford. Whilst the sites size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, its location adjoining the built form of Telford means that it would likely be reliant upon it from an infrastructure perspective.

- 16.145. Furthermore, the site is wholly located within the Green Belt and performs an important role against purpose 1, checking the unrestricted sprawl of large built-up areas. As such it is considered important to retention the site within the Green Belt.
- 16.146. It is considered this site offers more limited opportunities, especially when compared to the option of delivering a new employment site at Shifnal, in particular the aspiration of rebalancing the town's housing and employment opportunities, as described above.
- 16.147. As such, on balance it is considered that SHF018b & SHF018d constitutes a more appropriate location to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.

*Shrewsbury Place Plan Area*

- 16.148. The Shrewsbury Place Plan Area is located in central Shropshire and is considered to have a functional relationship to the Black Country. It contains the town of Shrewsbury and a significant number of smaller settlements. The Place Plan Area lies outside the Green Belt.
- 16.149. Shrewsbury is the largest town in Shropshire and offers a significant array of infrastructure. The town is at the hub of the road and rail network in the County and is identified in the draft Shropshire Local Plan as the Strategic Centre of Shropshire and the primary focus for new development.
- 16.150. A significant number of other smaller settlements are proposed to be identified as specific locations to accommodate development in the draft Shropshire Local Plan. These are the Community Hubs of Baschurch, Bayston Hill, Bicton, Bomere Heath, Cross Houses, Dorrington, Ford, Hanwood, Longden and Nesscliffe; and three Community Clusters consisting of Albrighton; Grafton and Newbanks; and Montford Bridge West.
- 16.151. The levels of development proposed for Shrewsbury in the draft Shropshire Local Plan reflect the scale and sustainability of the settlement and the proposed strategic role intended. It includes the delivery of around 8,625 dwellings (proposed to be increased to 8,975 dwellings – see Chapter 8 of this document) and making available around 100ha of employment land to create choice and competition in the market. This new housing and employment development seeks to make provision for the existing needs of the town and its rural hinterland and attract inward investment.
- 16.152. Employment land to be made available consists of existing allocations, provision on new allocations and windfall development opportunities.

- 16.153. Proposed new employment land allocations consists of a minimum of 5ha on the land between Mytton Oak Road and Hanwood Road, Shrewsbury (SHR060, SHR158 & SHR161) sustainable urban extension; and around 45ha on a dedicated employment allocation to the west of the A49, Shrewsbury (SHR166).
- 16.154. SHR166 is intended to perform a strategic employment role, being capable of delivering a range of employment uses, including B2 and B8 uses. Flexibility to deliver the whole range of employment uses on this site has however subsequently been impacted by heritage considerations raised by Historic England and the designation of the site of a temporary Roman marching camp as a Scheduled Monument. It is acknowledged that this issue is yet to be discussed fully at the Examination and is likely to form part of the considerations for Stage 2 hearing sessions.
- 16.155. The strategy also reflects the potential development opportunities presented by the delivery of the North West Relief Road (NWRR). It is identified that there is potential for additional windfall commercial development between the development boundary and the NWRR once constructed, where an appropriate access can be achieved.
- 16.156. It is acknowledged that Shrewsbury as a strategic settlement on the M54/A5 corridor offers a potential alternative location to Shifnal to deliver a strategic site to contribute to meeting Black Country employment need.
- 16.157. However, the town is sited centrally in Shropshire and therefore lies further to the west on the corridor and a significantly greater distance than Shifnal from the Black Country. Distance is a significant factor in meeting unmet employment land need forecast to arise in the Black Country. This is because an employment land contribution to an unmet need, is intended to:
- c. Provide land for organisations that would have previously sought such opportunities in the location the need arises, i.e. the Black Country; and
  - d. Provide employment opportunities for those that would previously have sought such opportunities in the location the need arises.
- 16.158. For both these considerations, to be an attractive alternative to meeting the need in its original location, it must be within a location that meets geographic needs and is in a location considered commutable, preferably by sustainable means. As such, connectivity, ideally by sustainable forms of transport, to the Black Country is a key factor when determining if a contribution is appropriately located.

- 16.159. This is an important distinction to accommodating a contribution to unmet housing needs, where occupiers migrate to this provision and associated employment opportunities are also provided (as is the case in the context of the proposed Shropshire contribution to the unmet housing need forecast to arise in the Black Country).
- 16.160. As a result, it is considered that Shrewsbury does not constitute an appropriate location to accommodate any of the proposed 30ha contribution to the unmet employment land needs forecast to arise in the Black Country.
- 16.161. By way of comparison between Shrewsbury and Shifnal:
- a. Unsurprisingly travel times and costs from Shrewsbury to the Black Country are greater than at Shifnal by both road and rail. For example, rail journey times from Shifnal to Wolverhampton are in the range of 23 to 25 minutes by rail for a cost of around £7 to £9 for an open return. Whereas rail journey times from Shrewsbury to Wolverhampton are in the range of 39 to 51 mins at a cost ranging between around £13 to £17 (standard fares identified as of March 2024).
  - b. Distances and accessibility to Shrewsbury railway station vary significantly across potential employment sites in and around the town. However, since Shifnal is a compact settlement there is generally good proximity to the station and for example, from the proposed strategic employment area to the station which is within a 20 minute walking distance.
  - c. Research suggests that representative road travel times from Shifnal to Wolverhampton centre (around 14 miles) vary from around 30 minutes to 55 minutes and travel to Dudley centre (20 to 22 miles) around 40 minutes to 1 hour 20 minutes dependent on route and time of travel. Whereas Shrewsbury town centre to Wolverhampton (about 31 miles) is approximately 45 minutes to 1hour 25 minutes and to Dudley (37 miles approximately) 1 hour to 1hour 50 minutes.
  - d. Shifnal is also closely located for access to Telford as well as the larger centres of population within the West Midlands. Considering wider logistics efficiency, the journey distances set out above would equally apply to companies servicing the employment delivered on any strategic site where these have journeys originating and /or terminating the wider West Midlands and further afield to London and the south-east.
- 16.162. The additional preference of Shifnal over Shrewsbury to accommodate the proposed 30ha contribution to the unmet employment land need reflects the Council's intention to grasp the unique opportunity to deliver an employment site which addresses

the structural needs of Shifnal as well as, being in the Council's opinion, best placed to serve employment land requirements of the Black Country. In doing so the settlement offers a 'dual role' in being best placed to serve both local employment needs, but also offering the opportunity to support cross boundary needs in a measured and sustainable manner.

- 16.163. As described in preceding paragraphs, the allocation of a large strategic employment site at Shifnal would have a hugely significant role in addressing the imbalances between housing and employment opportunities in Shifnal described and set out further within the Green Belt Exceptional Circumstances paper (EV051). This is considered to constitute a unique opportunity to achieve planned employment growth to balance recent housing growth, much of which was granted permission due to the consequences of the Council not being able to demonstrate a five year housing land supply in 2013/14.
- 16.164. As rural settlements the Community Hub and Community Cluster settlements in the Shrewsbury Place Plan area have more limited infrastructure – with significant differences in provision within these settlement. The expectation as set out in the draft Shropshire Local Plan's strategic approach is that these smaller village settlements would accommodate more modest levels of development focused on meeting local need and maintaining settlement sustainability, rather than accommodating contribution to Black Country needs.
- 16.165. As such, these settlements are not considered suitable locations to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.166. A range of strategic scale sites around Shrewsbury and in locations detached from the town have been promoted and considered by the Council. The merits of these sites have been fully assessed and documented in the site assessments that form part of the updated additional SA and site assessment. The Council considers that the issue identified with regard to proximity for sites associated with Shrewsbury, equally apply to strategic sites within the Shrewsbury Place Plan Area. As such, these sites are not considered suitable locations to accommodate any of the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.167. With specific regard to site BWU001 which is a potential strategic sites/settlement located between Shrewsbury and Telford, south of the A5, there are a number of significant constraints which mean that the Council consider it is an inappropriate location to accommodate

the proposed 30ha contribution to the unmet employment land need forecast to arise in the Black Country. This includes:

- a. The site is located in proximity to but some distance from the M54/A5 strategic corridor and any connection to it and the Black Country beyond would be via B roads.
- b. Given the distance from the M54/A5 strategic corridor and nature of potential connections it is unclear whether the site would be attractive as a centre for employment.
- c. Around half of the site is located within a source protection zone (primarily zone 3, however part of the north-west of the site is located in zone 2).
- d. There are possible HRA required due to road emissions from increased traffic (in-combination) on Hencott Pool.
- e. The site contains woodland, mature trees, ponds and the stream/brook along the northern boundary forms an environmental network corridor.
- f. The site likely to have a substantial negative impact on setting of the Scheduled Monument of Site of Roman town of Wroxeter (Viroconium).
- g. There are a number of known cropmark sites which may be associated with the Roman city situated within site boundary and due to its very large size and proximity to Wroxeter it is likely to have high archaeological potential.

16.168. Additionally in respect of large sites in more rural locations removed from Shrewsbury these generally lack transport and other suitable infrastructure restricting capacity to directly access services and facilities as well as sustainable modes of transport. In these locations therefore significant improvement of local infrastructure would be required to improve site sustainability to a level that is considered appropriate to support a strategic employment site.

#### *Strategic Sites*

16.169. As documented within the SA and site assessment environmental report (SD006.01), potential strategic sites/settlements are large sites of more than 25ha in size, which are not associated with meeting the growth needs of any particular settlement and contribute to achieving the aspirations of the Economic Growth Strategy for Shropshire.

16.170. For completeness, the Council considered all potential strategic sites/settlements when assessing potential 'alternative options' to Green Belt release. However, for the reasons documented within this topic paper and the site assessments which form the appendices to the updated additional SA and site assessment work, the Council

does not consider that any of these sites constitute an appropriate location / or more appropriate location (including with regard to implications for the Green Belt) to accommodate the proposed contributions to unmet employment land needs forecast to arise within the Black Country.

### **Shifnal Proposed Release of Green Belt- Consideration of Reasonable Options**

- 16.171. The draft Shropshire Local plan has considered the requirements in Chapter 11 of the NPPF in relation to 'Making effective use of land' and this is embedded in strategic, site and detailed development management policies. The development guidelines identified for sites proposed for allocation in the draft local plan are individually tailored to seek to deliver development densities which reflect site constraints, the local context, and deliver an appropriate range of housing and employment types to meet need and support the sustainability of Shropshire as informed by the strategic approach and a range of supporting evidence.
- 16.172. The main considerations relevant to each site are identified in the SA site assessments. This has resulted in proposed allocations with a range of development densities as considered appropriate to reflect each site and its local context. Whilst there has been a generally cautious approach to the identification of expected scale of delivery on individual sites, in the event these are exceeded, additional delivery will positively contribute to windfall requirements across the County. It is not however considered that greater efficiencies in land use, should they be forthcoming, would negate the need for Green Belt release to provide a specific strategic employment to meet the dual needs of providing employment for Shifnal and which is proposed to contribute to the employment land need for the Black Country.
- 16.173. The Council have also, as required by paragraph 146 of the NPPF, considered and made as much use as possible of suitable brownfield sites and underutilised land. Potential brownfield sites are considered in the SA site assessments. Indeed, two substantial strategic brownfield sites have been identified for allocation at Clive Barracks, Tern Hill (Policy S19) and the Former Ironbridge Gorge Power Station (Policy S20).
- 16.174. The Council, having initially identified Shifnal as requiring employment development and, latterly, the most suitable location to accommodate the contribution to meeting the Black Country employment contribution, have also given due consideration to whether there are specific opportunities to accommodate the

required scale of employment development on safeguarded land, brownfield sites or otherwise within the existing built form of Shifnal, including through densification, rather than amending the Green Belt boundary and releasing land for development at Shifnal. This is set out in EV051.

16.175. Paragraphs 8.64 to 8.72 of EV051 set out an Assessment of All Other 'Reasonable Options' focused on Shifnal. This included consideration of scope to use existing safeguarded land and the availability of brownfield and non-Green Belt sites at Shifnal. The conclusion reached is that these are either not available or not viable options.

16.176. The proposals for Green Belt release have also been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development. This is set out in paragraphs 8.82 to 8.87 in relation to Shifnal and it is concluded that this is not an appropriate option.

### **Green Belt Performance**

16.177. Given the lack of alternative reasonable options to accommodate the significant employment requirement identified at Shifnal, Green Belt release options were considered.

16.178. Green Belt assessment and review studies were commissioned at an early stage of Plan preparation to support site assessment work and identification of preferred options. This evidence, produced by the Council's consultants LUC, provided an independent, robust and transparent assessment of the role and performance of Green Belt across Shropshire and identified what level of harm to Green Belt might result from any specific release.

16.179. The Stage 1 study - Green Belt Assessment divided all of the Green Belt within Shropshire into 85 discrete land areas and assessed the extent to which they serve the Green Belt purposes (as defined by the NPPF). The aim of this was to assess the relative performance of the Green Belt within the whole of Shropshire.

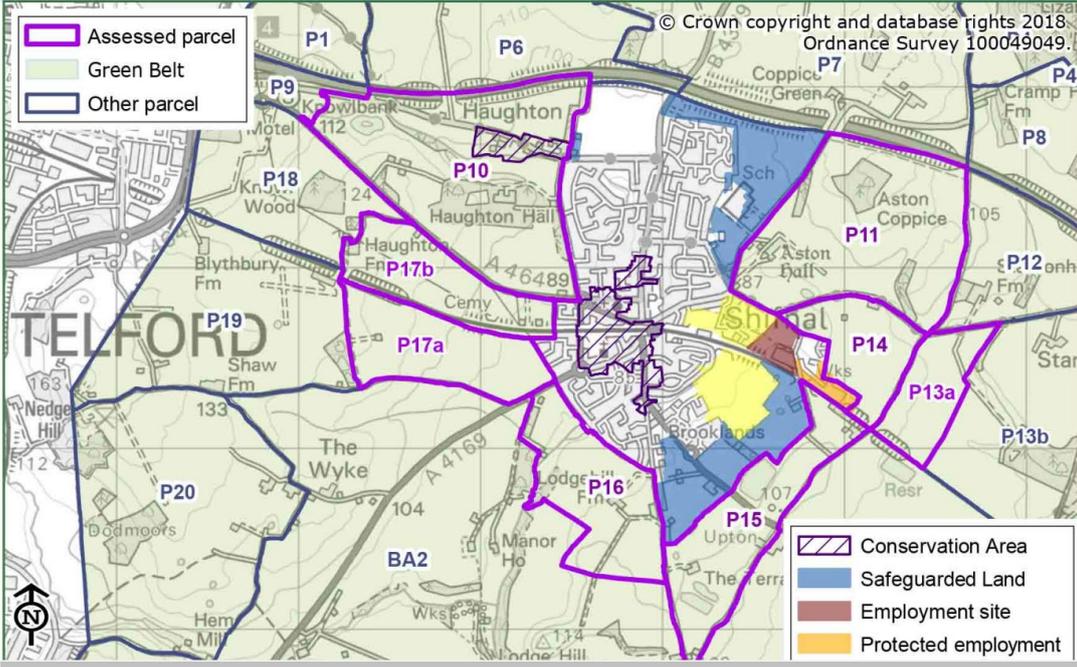

16.180. The Stage 2 Green Belt Study took the findings of the Stage 1 Assessment regarding the contribution of parcels to the Green Belt purposes and with this knowledge considered the potential harm of removing area from the Green Belt, taking into account the impact on the integrity of the remaining Green Belt land and the strength of the remaining Green Belt boundaries.

16.181. The Stage 2 Green Belt Study built on the foundation of the Stage 1 Green Belt assessment work. It looked in greater detail at more focused areas around existing Green Belt settlements (Albrighton, Alveley, Bridgnorth and Shifnal) , as well as around Cosford village

and military base, and Junctions 3 and 4 of the M54 motorway, these having been identified as potential strategic geographical locations to meet development needs and support a sustainable pattern of future growth in the County.

- 16.182. The Stage 2 Green Belt Study quantifies as part of that assessment not only the degree of potential 'harm' to the Green Belt of releasing each individual parcel but identifies any sub-areas where harm may be lower than the release of the parcel as a whole. This is presented in tables and maps summarising the harm of release of parcels or any sub-parcels. Additionally the Stage 2 Study considers scope for suitable alternative Green Belt boundaries and any potential mitigation / boundary enhancement measures that could be implemented to minimise harm to the Green Belt.
- 16.183. All this information has been considered and reflected in the relevant SA Site assessment.
- 16.184. Shifnal Green Belt assessment outcomes from the two LUC studies are set out in paragraphs 8.42 to 8.53 of EV051 and main other planning considerations summarised in paragraphs 8.54 to 8.63.
- 16.185. The areas of land proposed for release from the Green Belt, specifically to allow for the growth and expansion of the employment area around Shifnal (together with an adjoining area of safeguarded land) comprise land identified as P13a and P14 in the LUC Green Belt review study. This land which lies east of Shifnal Industrial Estate is around 53ha.

**Figure 16.1 Extract LUC Green Belt Review Study:  
Appendix 7 – Shifnal**

16.186. Ultimately, it is considered the Council's existing evidence presented in the Green Belt Assessment (EV049); Green Belt Review (EV050); the Exceptional Circumstances Statement (EV051) and Site Assessments (SD006) have fully presented the rationale for the proposed release of Green Belt in Shifnal on the proposed employment allocation (SHF018b and SHF018d) having considered all reasonable options for accommodating development on non-Green Belt options. It is also acknowledged this proposed release of Green Belt land at Shifnal is yet to be subject to examination.

***Reasoning: Why the Site Proposed to Accommodate Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country***

16.187. The updated additional SA assessment summarises the conclusions of this assessment work, including the reasons this site is proposed to accommodate the proposed contribution to the unmet employment land need forecast to arise in the Black Country.

*Exceptional Circumstances*

16.188. In broad summary, the council's exceptional circumstances argument recognised the following key considerations in support of proposed allocation of SHF018b and SHF108d. These considerations are equally applicable to the identification of this site for the purposes of accommodating Black Country unmet need:

- a. Supports addressing dormitory status of Shifnal – and in particular reduces out commuting to Black Country.
- b. Strategically located on the M54 Corridor.
- c. Supports aspirations of the Economic Growth Strategy, including having potential to attract inward investment.
- d. Supports strategic role, function and sustainability of Shifnal (including infrastructure delivery).
- e. Improves existing provision of employment at Shifnal, and rebalances the town's recent growth profile.
- f. Meets the needs of Shifnal businesses.
- g. Acknowledges the site's Green Belt performance.

16.189. In addition to the site's strategic role to attract inward investment, the Council are aware of a proactive landowner and prospective developer for the proposed employment site. Publicly available information provides evidence of the intention to bring forward the site promoted by Harrow Estates for employment development, and it was reported in January 2023 that property developer Stofords have been appointed as the specialist delivery partner to support the proposals for strategic employment land.

**Table 16.1: Site Identified to Accommodate the Proposed Contribution to the Unmet Employment Land Need Forecast to Arise in the Black Country**

Site Reference	Site Name	Draft Policy	Total Capacity	Black Country Contribution	Summary
<p style="writing-mode: vertical-rl; transform: rotate(180deg);">Page 151 of 151</p> <p>SP018b &amp; SP018d</p>	Land east of Shifnal Industrial Estate, Upton Lane, Shifnal	S15.1	39 hectares (15.6ha net development)	30ha employment land	<p>Shifnal is located in east Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shifnal is a key centre and a focus for investment, employment, housing and development on the M54/A5 strategic corridor.</p> <p>The site constitutes a proposed strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre.</p> <p>The site can accommodate a sizeable contribution towards the unmet employment land needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints.</p> <p>Whilst the site is located within the Green Belt, it is considered that consideration of all other reasonable options has been undertaken and exceptional circumstances exist to justify the release of this land for employment, as documented within the new Housing &amp; Employment Topic Paper and Green Belt Topic Paper.</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

***Implications of the Proposed Site Identified to Accommodate the Proposed Contribution to the Unmet Housing Need Forecast to Arise in the Black Country***

- 16.190. The submission version of the draft Shropshire Local Plan included a proposed contribution of 30ha of employment land to the Black Country, but proposed that this would be achieved through the proposed spatial strategy for the level and distribution of development across Shropshire.
- 16.191. To ensure the effectiveness of the draft Shropshire Local Plan, specific sites have been identified to accommodate this proposed contribution to the unmet employment land need forecast to arise in the Black Country.
- 16.192. Main modifications will be required to the draft Shropshire Local Plan to reflect this proposed change – including to draft Policy SP2 and its supporting text; and draft Policy S15.1 and its supporting text.

## 17. Employment Land Supply

- 17.1. The employment land supply is summarised in EV012 Shropshire Authority Monitoring Report (2020). This identifies an employment land supply of 413 hectares(ha) to meet the needs of the County and the demands of the local economy to 2038.
- 17.2. The employment land supply comprises a committed supply (102ha) and 'saved' employment allocations (128ha) with proposed, new allocations (134ha) in the centre, east and south of the County.
- 17.3. Figure 17.1 identifies the strategic distribution of employment land through the settlement hierarchy.

**Figure 17.1: Distribution of Employment Land Supply**

Location	Hectares	%
<b>Urban Focus</b>	<b>344</b>	<b>83</b>
Strategic Centre	105	25
Principal Centres	155	38
Key Centres	84	20
<b>Rural Development</b>	<b>70</b>	<b>17</b>
Strategic Settlements	12	3
Community Hubs	10	2
Community Clusters	4	1
Rural Areas	44	11
<b>SHROPSHIRE</b>	<b>413</b>	<b>100</b>

- 17.4. The detailed scale and distribution of the employment land supply for the plan period 2016 to 2038 is shown in Table 17.1. In the first four years of the plan period from 2016 to 2020, employment development of just below 50ha was completed in the County.
- 17.5. If the 50ha of completed employment land is discounted from both the available supply and the proposed requirement, it can be concluded there is **sufficient deliverable or developable employment land supply of 363ha of employment development for the period 2020 to 2038 to support a residual requirement of 270ha (comprising 320ha minus 50ha).**
- 17.6. The remaining employment land supply of 363ha would exceed the remaining employment land requirement of 270ha by **around 35%**.

**Table 17.1: Strategic Employment Land Supply (31<sup>st</sup> March 2020)**

Location	Completions	Permissions	Allocations		SUMMARY OF SUPPLY
			Saved Sites without Permission	Proposed in Draft Plan

## ***Aligning Employment with Housing and the Population of Shropshire***

- 17.7. A key step towards sustaining the growth of the local economy and achieving the levels of employment growth is the provision of labour within or accessible to businesses within Shropshire.

### ***Evidence on Labour Supply***

- 17.8. This seeks to align the employment land requirement to the housing requirement to secure balanced growth through the strategy in the draft Submission Local Plan. This assessment supports the Council's submissions on labour supply for Matter 4 of the Stage 1 Examination Hearings. This supports evidence presented in (EV043) Shropshire Economic Development Needs Assessment, (EV112) Employment Requirement Topic Paper and (GC4n) Employment Strategy Topic Paper. This matter was first explored in (EV003.01) Issues and Strategic Options Consultation and (EV004.01) Preferred Scale and Distribution of Development Consultation.

### ***Jobs Growth and Housing & Employment Requirements***

- 17.9. The Experian Baseline Forecast presented in the (EV043) EDNA (Tables 8.1 and 8.3 pages 98 and 100) projected a baseline jobs growth forecast for 16,700 jobs in Shropshire from 2016 to 2038. This forecast for the adjusted baseline employment land need of 250ha would deliver around 67.07jobs/ha at the average density for development recorded in Shropshire.
- 17.10. An uplift of 15% to the baseline employment land need from 250ha to 290ha would require a further 40ha of employment land. This would provide a further 2,683 jobs (40 x 67.07jobs/ha) increasing the jobs growth forecast to 19,383 jobs.
- 17.11. A contribution of 30ha of employment land towards unmet employment land needs in the Black Country would provide a further 2,012 jobs (30 x 67.07jobs/ha) increasing the baseline jobs growth forecast to 21,395 jobs as shown in Table 17.2.

***Table 17.2: Projected Jobs Growth in Shropshire to 2038***

<b>Components of Employment Land Requirement</b>	<b>Employment Land (hectares)</b>	<b>Jobs per hectare</b>	<b>Projected Jobs (number)</b>
<b>Experian Baseline Forecast</b>	<b>249</b>	<b>67.07</b>	<b>16,700</b>
<b>Uplift to Requirement 15%</b>	<b>40</b>		<b>2,683</b>
<b>Contribution to Black Country</b>	<b>30</b>		<b>2,012</b>
<b>TOTALS</b>	<b>320</b>		<b>21,400</b>

- 17.12. The primary employment land uses for Class B and equivalent land uses identified in Draft Policy SP13, will require the greater proportion of the employment land supply but comprise only part of this jobs growth forecast.
- 17.13. The baseline forecast for 16,700 jobs indicates 6,590 jobs would be provided in Class B or equivalent jobs. This is equal to 39.46% where 6,590 jobs are divided by 16,700 jobs. An uplift of 15% to the employment land need for a further 40ha of land would deliver a total of 2,683 jobs with 1,058 jobs in Class B or equivalent jobs. This would deliver 7,648 jobs in Class B or equivalent uses.
- 17.14. A contribution of 30ha of land towards unmet employment land needs in the Black Country would provide a total of 2,012 jobs with 794 jobs in Class B or equivalent uses.
- 17.15. Class B or equivalent land uses would provide for around 8,440 jobs from the overall jobs growth forecast as shown in Table 17.3.

**Table 17.3: Projected Class B & Equivalent Jobs Growth in Shropshire to 2038**

Components of Employment Land Requirement	Projected Jobs (number)	Proportionate Provision (%)	Projected Class B Jobs
Experian Baseline Forecast	16,700	39.46	6,590
Uplift to Requirement 15%	2,683		1,059
Contribution to Black Country	2,012		794
<b>TOTALS</b>	<b>21,400</b>		<b>8,440</b>

### **Labour Force Growth**

- 17.16. The EDNA (EV043) identifies in Table 8.11 the demographic population modelling outputs for the three future labour supply scenarios tested in the needs assessment.
- 17.17. These three scenarios assessed the:
- 2014-based Sub-National Population Projections (SNPP) which anticipated the provision of 19,975 dwellings to increase the labour supply by +1,979 persons seeking employment in Shropshire.
  - Standard Methodology to calculate the local housing need anticipated +5,919 dwellings would be provided to deliver 25,894 dwellings to increase the labour supply by +7,538 persons seeking employment in Shropshire.
  - Proposed housing requirement in the draft Submission Local Plan for 30,800 dwellings would provide +4,906 dwellings and increase the labour supply by +12,145 persons seeking employment in Shropshire.

17.18. The Council now propose to uplift the housing requirement to 31,300 dwellings to provide an additional +500 dwellings. Table 17.4 shows how the projected labour supply increases to +12,615 persons who are seeking employment in Shropshire.

**Table 17.4: Projected Labour Supply to 2038**

EDNA Future Labour Supply Scenarios	Dwelling Provision 2016 - 2038	Net Dwelling Growth	Net Dwellings to Net Labour	Net Labour Growth	Projected Labour Growth
2014-based SNPP	19,975				1,979
Local Housing Need from Standard Methodology	25,894	5,919	0.94	5,559	7,538
Housing Requirement 2022	30,800	4,906	0.94	4,607	12,145
Updated Housing Requirement 2024	31,300	500	0.94	470	12,615

17.19. The proposed employment land requirement for 320ha would now seek to deliver a jobs growth forecast for 21,400 jobs to 2038. This reflects the aspirations in the (EV044) Shropshire Economic Growth Strategy to deliver a 'step change' in the performance and productivity of the local economy, as set out in (GC4n) Employment Strategy Topic Paper. These objectives are important, although projected labour force growth at +12,615 persons would not entirely support the jobs growth forecast at 21,400 jobs.

17.20. The EDNA (paragraphs 8.47 – 8.57) recognised this challenge to align jobs growth and projected labour force growth. The EDNA recognised that in-migration would largely drive population growth in Shropshire. Further, the 2014-based SNPP indicated this would attract significant numbers in the 65+ age cohorts. This would mean that increasing the housing supply would offer limited returns to the size of the working age population in Shropshire.

17.21. In recognising the challenge to align jobs growth with future labour supply, the Council consider this challenge cannot simply be addressed through managing the number, size, type and mix of dwellings delivered by the housing requirement in the hope of attracting more working age migrants.

17.22. In Shropshire, the means to address this challenge will extend to the existing resident and working populations and the ageing demography of the County. In turn, this also captures broader challenges with the ageing population of the United Kingdom.

## ***Ageing Demography of the United Kingdom***

- 17.23. In December 2022, the House of Lords Economic Affairs Committee published their report *'Where have all the workers gone'*. This addressed the impacts of the pandemic on economic inactivity, with an additional 565,000 persons leaving the national workforce. This Report highlighted the four key causes of increasing sickness, changes in the structure of migration, increasing early retirement and the ageing UK population. This showed how the increase in worklessness among older people reversed the pre-2020 UK trend.
- 17.24. The House of Lords report followed preceding reports on the economic implications of the ageing population of the UK:
- UK Government - Fuller Working Lives (2017):
    - a. This identified around 1 million people aged 50 – 64 years were workless but were willing to work but this 'missing million' were not being 'encouraged' to seek employment nor 'enabled' to enter the workplace.
  - CIPD (Chartered Institute of Personnel and Development) - Megatrends Report: *'Ageing Gracefully: the opportunities of an older workforce'* (2019):
    - a. Identified that in 2019, the 'missing million' aged 50 – 64 years reduced by 175,000 persons to 825,000 persons as a result of these age cohorts taking a disproportionate number of jobs within the increasingly tighter labour market from 2017.
    - b. Identified a longer term trend for a greater contribution of labour from older age cohorts of 65+ years. By 2019, an additional 570,000 older people entered employment and 65+ years contribute up to 400,000 persons. This indicated the 'missing million' were likely part of a group that was three times larger.
    - c. In benchmarking strategic objectives for developing people and employer organisations, the CIPD conclude that an ageing population may be a good problem to have, offering experienced, knowledgeable and qualified people able to bring a premium to the performance, productivity and value of a local economy.
- The House of Lords report indicates the Covid pandemic slowed the effects of the changes identified by the CIPD. An additional 565,000 persons have become workless and the CIPD have set out the challenge of capturing the potential of the existing labour supply.

## ***Managing Shropshire's Labour Force – the resident population***

- 17.25. Shropshire is the largest local authority in the West Midlands and whilst it has an ageing population, the County also has a significant

'economically active' resident population of 154,421 people with a significant number of qualified workers at NVQ3+ levels.

17.26. A challenge for the County is to retain more resident workers within the employment market and to address key areas of worklessness that reduce the economic activity of the resident population. Table 17.3 briefly describes these opportunities.

**Table 17.3: Worklessness by Age Cohort in Shropshire**

Worklessness Categories	Worklessness by Age Cohort (persons)					TOTALS
	16-24	25-34	35-49	50-64	65+	
Unemployed	1,548	1,161	1,190	1,660	184	5,743
Students	8,565	547	328	174	73	9,687
Carers	462	1,792	2,865	3,703	992	9,814
Retired Persons	12	13	104	8,556	68,868	77,553
Long Term Sick	454	1,117	2,268	4,373	1,363	9,575
Other Reasons	1,115	1,327	1,553	2,129	588	6,712
<b>TOTALS</b>	<b>12,156</b>	<b>5,957</b>	<b>8,308</b>	<b>20,595</b>	<b>72,068</b>	<b>119,084</b>

**Census 2021.**

*Economic Activity - Unemployment*

17.27. Census 2021 records unemployment at 5,743 persons or 3.72% of the resident working age population of 154,421 people. These people are seeking work and waiting to enter the workforce in the County. Although this is a low rate of unemployment, it is high for Shropshire. This compares with a 3.0% rate recorded in the NOMIS Labour Market Profile 2021. The current rate of 3.72% at 5,743 persons would be expected to fall to 3.0% at 4,633 persons as the local economy recovers its stability. This fall in unemployment from 3.7% to 3.0% would be expected to release around 1,110 resident workers to the local labour supply.

*Economic Inactivity – Mature Students*

17.28. Census 2021 records a robust student population totalling 9,687 persons in Shropshire. This covers a broad range of age cohorts including 1,050 mature students of working age from 25 to 64 years and over 70 mature students of 65+ years. Mature students are considered to be largely seeking retraining and re-employment opportunities and largely resident in the County. Where mature students of working age return to the local labour market or defer their retirement this would deliver around 1,050 workers back into the local labour supply.

### *Economic Inactivity – Young Carers*

- 17.29. Census 2021 records an extensive resident 'carer' population of 9,814 persons from 16 to 65+ years. In later life, many people adopt caring roles in the home or for dependents as a lifecycle choice or responsibility. For young carers, the role of caring should be a temporary life choice leading on to employment in due course. Young carers from 16 to 34 years would be expected to follow this pathway during the period to 2038, returning up to 2,250 people back into the local labour supply.

### *Economic Inactivity – Early Retirees*

- 17.30. Census 2021 records 8,556 persons in early retirement in Shropshire aged between 50 – 64 years, despite national policy to defer the state pension age to 67 years. Whilst early retirement may arise for a number of reasons, including occupational restrictions on the length of careers or structural changes with the business sector, the proposed employment growth in Shropshire may offer some people an opportunity to continue their career in a different business sector or occupation. Where only 10% of early retirees return to work in this way, this would return around 850 persons back into the local labour supply.

### *Economic Inactivity – Deferred Retirement: extending the state pension age in an ageing population*

- 17.31. Census 2021 records a significant retired population of 68,868 persons 65+ years in Shropshire. This reflects the significant ageing population in Shropshire. This is a significant issue and financial burden on both the public sector and family resources as people enter retirement, old age and make later life choices.
- 17.32. For younger age cohorts in retirement from 65 - 74 years, opportunities may still exist to seek alternative occupations and remain active in the local economy. This is expected to be an increasingly popular choice through the period to 2038. The current levels of inactivity in these age groups where individuals had worked within the last 12 months indicates the possible levels of deferred retirement in Shropshire.
- 17.33. Individuals aged 65 – 69 years who had worked in the last 12 months but were currently economically inactive were found to number around 1,223 persons. Individuals aged 70 – 74 years who had worked in the last 12 months but were currently economically inactive were found to number around 655 persons. From the total economically inactive retired population of 68,868 persons the proportion of deferred retirees likely to seek further employment would be around 1,880 persons equal to 2.73%.

### ***Managing Shropshire's Commuting Relationships – the working population of Shropshire***

- 17.34. Shropshire is the largest local authority in the West Midlands and provides housing, employment and service opportunities that support communities within and beyond the County boundary. This includes the Black Country with the West Midlands region and across the English border into Wales within the area known as 'The Marches'.
- 17.35. These extensive functional relationships bring a significant working population into the County to complement the working population. Shropshire Council particularly recognises the importance of this strong functional relationship between the County and the Black Country Local Authorities.
- 17.36. In seeking to assist the Black Country Authorities with their unmet employment needs, it will be important to sustain the capacity of the Black Country to continue to meet their own labour needs in accordance with NPPF, paragraph 81. Seeking to support their employment need through commuting to Shropshire, in addition to migration, will help to achieve this important objective. This seeks to relieve the pressures on the Black Country, from businesses in need of development opportunities and from labour in need of employment, without causing an irreversible migration of labour into neighbouring areas to the detriment of the Black Country economy.
- 17.37. Shropshire Council considers there are two closely related scenarios to encourage changes to the commuting patterns from the Black Country to achieve this outcome: Scenario 1 - Encouraging an increase in the rate of out-commuting from the Black Country to Shropshire currently of 2,200 persons by achieving a doubling of this rate through the provision of sufficient employment land to provide a further +2,200 jobs in Shropshire; Scenario 2 - Encouraging an increase in the rate of out-commuting from the Black Country to Shropshire currently of 2,200 persons to achieve an equilibrium with the out-commuting from Shropshire into the Black Country currently of 4,615 persons through the provision of sufficient employment land to provide a further +2,400 jobs in Shropshire.
- 17.38. Shropshire Council would intend that the commuting relationship between Shropshire the Black Country Authorities would move towards an equilibrium in these two counter flows by Shropshire attracting or retaining around +2,300 commuters. Indeed, data from the Council's Strategic Housing Market Assessment (SHMA) Part 1 (EV097) (page 16) would indicate this is a general trend already occurring in Shropshire, with a notable reduction to the level of net out migration occurring between 1991 and 2011.

*Marches Forward Partnership – cooperation and functional relationships across national borders*

17.39. Shropshire Council has now formed a partnership with Herefordshire Council, Powys and Monmouthshire County Councils to seek investment and co-ordinated policy and initiatives within The Marches. This partnership will help to support our functional relationships these other authorities and with their communities who use the services of Shropshire or work in this County.

17.40. These four local authorities enclose the national border between England and Wales. This captures different regulatory and policy frameworks but the partnership has formed around shared interests and common issues in challenging times, where Covid-19 among other influences calls for new ways of working.

17.41. The landscapes, communities, functional market areas and common experiences of living in The Marches provides a mutuality which is advocated in NPPF paragraph 81 to build strong and competitive economies where (our emphasis):

***"Planning policies and decisions should help to create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future."***

17.42. Shropshire has strong relationships with Welsh Authorities through the availability of employment and labour. This commuting relationship provides 4,651 persons from Shropshire working in Wales and 6,883 persons working in Shropshire from Wales.

17.43. The Council considers that the aspiration in the strategy for the Submission Local Plan will help to support this functional relationship. It is considered that this support will help to balance Shropshire's commuting relationships with the capacity to increase in-commuting from Wales to Shropshire.

17.44. A reasonable growth in this relationship of +15% would bring an additional labour supply of 1,030 working age people to Shropshire.

***Conclusion***

17.45. Shropshire's future labour force will be derived from a number of sources to 2038; housing growth being one area but likely to be complemented by structural changes to the county's existing resident

population and continuing trends towards providing an 'equilibrium' in commuting patterns.

17.46. Table 7.4 summarises this considered position using the reasonable adjustments outlined above to identify a future labour supply of up to 25,420 persons to meet a projected jobs growth of 21,400 jobs including Class B or equivalent jobs of around 8,440 jobs.

**Table 7.4: Shropshire Labour Supply Balance 2024**

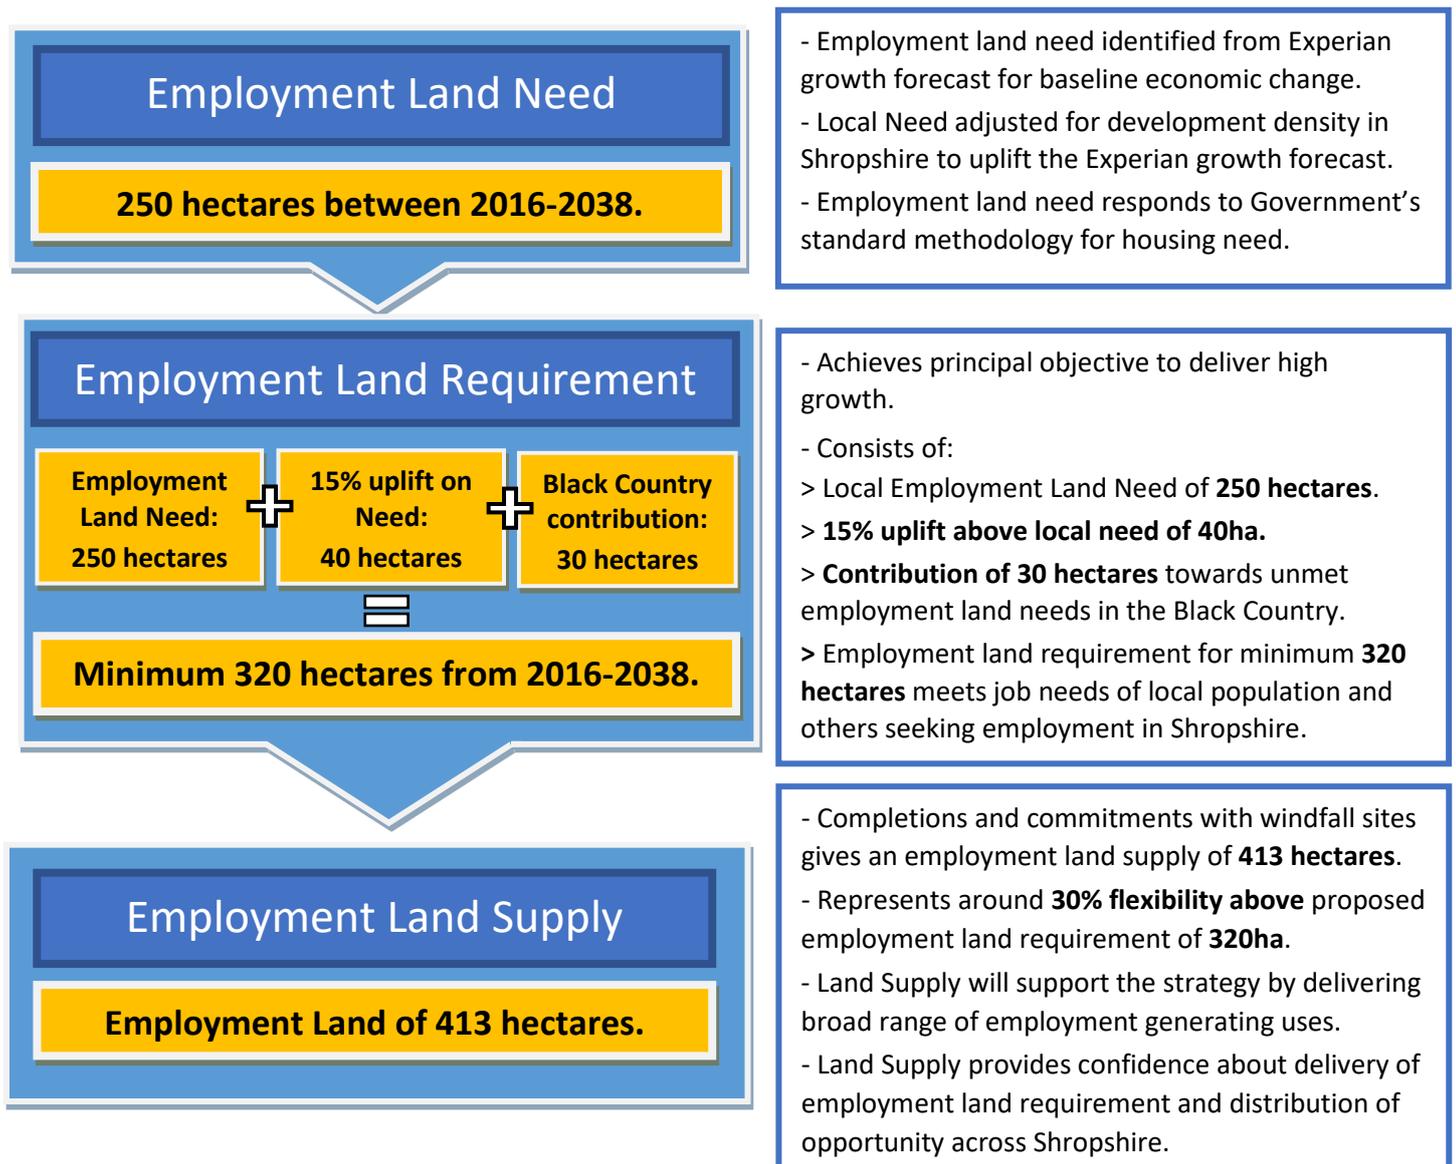

Factors	Influences	Experian Baseline uplifted 15% PLUS 30ha
		numbers
PROJECTED EMPLOYMENT GROWTH	Overall Employment Generation	21,400
	- Office, Industrial, warehousing/logistics	8,440
PROJECTED LABOUR FORCE GROWTH Migrant Labour Force Growth	- working age migrants from anticipated trends including: in-migration from ABCA through meeting 1,500 dwellings of unmet housing need	12,615
Managing Shropshire's Commuting Relationships with Neighbouring and Closely Related Authorities	- to influence commuting patterns by 5,665 persons towards equilibrium	2,335
	- PLUS commuting between Shropshire and ABCA through meeting 30 hectares of unmet employment land need	2,300
	- PLUS commuting from Wales by +15% from current 6,883 persons through the Marches Forward Partnership	1,030
Managing Unemployment and Economic Inactivity	- Unemployment 2021 reduced by 0.7% (5,743 persons at 3.72% reduced to 4,633 persons at 3.0%)	1,110
Census 2021	- Mature Students 25 - 64 years seeking employment (from total of 9,687 persons)	1,050
	- Young Carers 16 - 34 years seeking employment (from total of 9,844 persons)	2,250
	- Early Retirees 50 - 64 years seeking employment (8,556 persons at 10%)	850
	- Retirees 65 - 74 years seeking employment (68,868 persons at 2.73%)	1,880
Labour Force Premium	- employment growth attracting more in-commuters	
	- improving housing choice attracting more working migrants	
<b>TOTAL LABOUR SUPPLY</b>		<b>25,420</b>

Page 1561

## 18. Summary: Employment Land Need, Requirement and Supply

18.1. Figure 18.1 summarises employment land need, a contribution towards unmet employment land need in the Black Country and an uplift of 15% in the proposed employment land requirement above need. Figure 18.1 also identifies the total employment land supply.

**Figure 18.1: Summary of Employment Land Need, the proposed Employment Land Requirement and Employment Land Supply**

## **19. Strategic Distribution of Planned Development**

### ***Introduction***

19.1. This section of the updated Topic Paper addresses the proposed strategic distribution of planned development, which establishes the overarching approach to the distribution of development across Shropshire. The proposed strategic distribution of planned development forms an important component of the proposed spatial strategy.

### ***Initial Identification: Reasonable Options for the Strategic Distribution of Planned Development and the Preferred Option***

- 19.2. Within the Issues and Strategic Options Consultation Document prepared to inform the draft Local Plan, three reasonable options for the strategic distribution of planned development were identified: 'Rural Rebalance'; 'Urban Focus'; and 'Balance Growth'.
- 19.3. These reasonable options were identified based on various approaches to the distribution of the total proposed development between three broad 'settlement categories'. In effect, category 1 consisted of Shrewsbury; category 2 consisted of the other urban settlements; and category 3 consisted of the rural settlements and wider rural area.
- 19.4. These options and the associated SA assessment of these options informed identification of the proposed approach to the strategic distribution of planned development within the draft Shropshire Local Plan: 'urban focus'.
- 19.5. 'Urban focus' constitutes a significant proportion of development being directed towards the urban settlements that have the infrastructure available to best support development. This is complemented by development in rural areas (particularly the larger rural settlements) to maintain and enhance rural sustainability.
- 19.6. The overall process undertaken to identify the strategic distribution of planned development proposed within the draft Shropshire Local Plan is summarised within the Housing Topic Paper (GN4i) and the Strategic Employment Topic Paper (GC4n).

### ***Updated Identification: Reasonable Options for the Strategic Distribution of Planned Development***

19.7. It is acknowledged that the decision to propose an increase to the housing requirement and the proposed mechanism for accommodating this increase should be considered in the context of the strategic distribution of planned development.

- 19.8. It is also acknowledged that the identification of sites to accommodate the proposed contribution to the unmet needs forecasts to arise in the Black Country should be considered in the context of the strategic distribution of planned development.
- 19.9. As such, as part of the updated additional SA assessment work undertaken in order to positively respond to ID28, ID36 and ID37 the reasonable options for the strategic distribution of planned development were re-appraised.
- 19.10. This updated additional SA assessment applies a methodology consistent with that utilised to identify reasonable options for the strategic distribution of planned development within earlier stages of the SA assessment already undertaken to inform the draft Local Plan. Thus, identified reasonable options for the strategic distribution of planned development within this updated additional SA assessment work were based on variations of the distribution of the total development between three identified 'settlement categories'.
- 19.11. It is important to note that the SA assessment of these options was entirely independent of conclusions reached regarding the proposed housing requirement and the mechanism for accommodating the proposed increase to the housing requirement.
- 19.12. It was similarly independent of conclusions reached regarding the proposed sites to accommodate the proposed contributions to unmet needs forecast to arise in the Black Country.

***Updated Reasonable Options for the Strategic Distribution of Planned Development***

- 19.13. The three reasonable options for the strategic distribution of planned development assessed were:

***Table 19.1: Reasonable Strategic Distribution of Planned Development Options***

Option	Strategic Distribution of Planned Development	Summary
<b>Option A: Rural Rebalance</b>	Around 25% of housing in the Strategic Centre of Shrewsbury. Around 40% of housing in the Principal Centres, Key Centres and Strategic Settlements. Around 35% of housing in the rural area. Employment development to reflect the principles of this distribution, with a significant component in the rural areas.	'Rural rebalance' is underpinned by the principle of allowing a high proportion of planned development within the rural area (particularly the larger rural settlements) to enhance the sustainability of rural settlements.  This is complemented by development within 'urban areas'.

Option	Strategic Distribution of Planned Development	Summary
<b>Option B: Urban Focus</b>	Around 29% of housing in the Strategic Centre of Shrewsbury. Around 45% of housing in the Principal Centres, Key Centres and Strategic Settlements. Around 26% of housing in the rural area. Employment development to reflect the principles of this distribution, with the majority concentrated in urban areas.	'Urban focus' is underpinned by the principle of accommodating a significant proportion of development within the urban settlements that have the infrastructure available to best support development. This is complemented by development in 'rural areas' (particularly the larger rural settlements) to maintain and enhance sustainability.
<b>Option C: Balanced Growth</b>	Around 30% of housing in the Strategic Centre of Shrewsbury. Around 40% of housing in the Principal Centres, Key Centres and Strategic Settlements. Around 30% of housing in the rural area. Employment development to reflect the principles of this distribution, approximately balancing provision across the three broad categories.	'Balanced growth' is underpinned by the principle of seeking to evenly distribute development across all categories of settlement in Shropshire in order to support their long term sustainability.

***The Proposed Strategic Distribution of Planned Development***

19.14. The decision regarding which of the reasonable options for the strategic distribution of planned development should form the basis for the distribution of development within the spatial strategy of the draft Shropshire Local Plan is ultimately one of planning judgement.

19.15. Shropshire Council has carefully considered the extensive range of information available in undertaking this planning judgement, including the evidence base produced to inform the draft Shropshire Local Plan (particularly the updated additional SA assessment work) and consultation responses received during the various stages of consultation undertaken to inform preparation of the draft Local Plan.

19.16. In conclusion, the Council considers the proposed strategic distribution of planned development within the draft Shropshire Local Plan should continue be underpinned by: **Option B: 'Urban Focus'**.

19.17. 'Urban focus' means the majority of development is directed towards urban areas. Urban areas consist of the Strategic Centre of Shrewsbury, proposed Principal Centres, proposed Key Centres and proposed Strategic Settlements.

19.18. Development within urban areas is complemented by appropriate development within rural areas.

19.19. Appropriate development in rural areas will primarily be directed towards proposed Community Hubs, which represent significant rural service centres, and to a lesser extent proposed Community Clusters, which consist of settlements with aspirations to maintain or enhance sustainability.

19.20. Other development in rural areas will consist of specific forms of development within the wider rural area, which constitutes 'countryside' for planning policy purposes.

### ***Reasons for the Proposed Strategic Distribution of Planned Development***

19.21. The proposed approach is considered appropriate for a number of reasons, including:

- a. It positively responds to the Council's understanding of housing needs across the area, with development being concentrated within those settlements considered to form part of the 'urban area' that have the largest populations and availability of services, facilities and infrastructure, whilst also allowing complementary development within settlements considered to form part of the 'rural area' that have smaller populations.
- b. It is considered this option responds to the Council's understanding of need; the size and characteristics of our settlements; and the need to support availability of services, facilities and infrastructure across the range of communities in Shropshire.
- c. It is responsive to and aligns with the Council's understanding of the economic growth needs and opportunities in Shropshire, as well the economic aspirations identified in the Council's Economic Growth Strategy
- d. It is considered responsive to the geographic size, diversity, demographics and characteristics of Shropshire (including the presence of the Shropshire Hills National Landscape and West Midlands Green Belt).
- e. It is responsive to cross-boundary relationships and interactions with adjacent and closely related areas. In particular, it allows for an appropriate level of development in sustainable locations in central and eastern parts of Shropshire – supporting proposed contributions to unmet housing and employment land needs forecast to arise in the Black Country.
- f. It is considered to align with the principles and requirements of the National Planning Policy Framework (NPPF).

- g. It is positively responsive to past housing delivery trends and existing housing commitments.
  - h. It is responsive to the various policy objectives and opportunities identified during preparation of the draft Shropshire Local Plan.
- 19.22. Importantly, the proposed approach to the strategic distribution of planned development is supported by the conclusions of the updated additional SA assessment, which concluded that *"focusing a higher proportion of development within urban areas achieves more positive impacts on social, economic and environmental factors."*
- 19.23. Furthermore, it also concluded that *"On balance, it is considered that Option B: Urban Focus is the most sustainable of the three reasonable options for the strategic distribution of planned development."*
- 19.24. Option B (Urban Focus) was considered unlikely to result in any strongly negative effect on SA objectives, but conversely was *"likely to result in a strongly positive effect on SA objectives:*
- 2: Encouraging a strong and sustainable economy throughout Shropshire.*
  - 3: Providing a sufficient amount of good quality housing which meets the needs of all sections of society.*
  - 4: Promoting access to services for all sections of society.*
  - 5: Encouraging the use of sustainable means of transport.*
  - 6: Reducing the need of people to travel by car.*
  - 7: Supporting active and healthy communities."*

### ***Implications of the Proposed Approach to the Strategic Distribution of Planned Development***

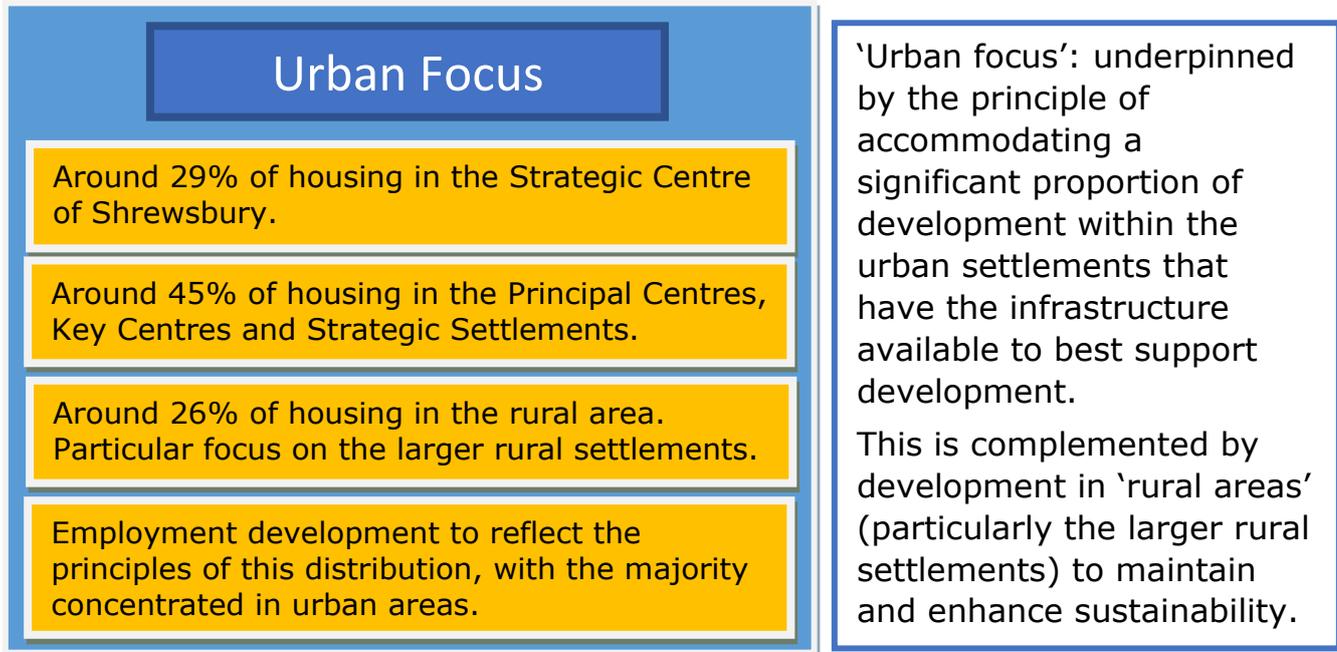

- 19.25. This proposed approach to the strategic distribution of planned development is generally consistent with that which was previously proposed within the draft Shropshire Local Plan.
- 19.26. The only distinctions are:
- a. The proposed modifications to settlement guidelines and windfall allowances at Shrewsbury; Whitchurch; and the Former Ironbridge Power Station, sufficient to accommodate the proposed uplift to the housing requirement.
  - b. The proposed modifications to site guidelines for proposed allocations BRD030; SHF018b & SHF018d; SHR060, SHR158 & SHR161; and IRN001 to specifically indicate that they accommodate proposed contributions to unmet housing need forecast to arise in the Black Country.

- 19.27. It is not considered that these distinctions significantly affect the principle of urban focus; indeed all these locations are classified as urban. No other main modifications are required to support the achievement of the proposed approach to the strategic distribution of planned development.
- 19.28. The housing and employment land supply identified to achieve the proposed housing and employment land requirements are also summarised within this Topic Paper. It is considered the housing and employment land supply is consistent with the proposed approach to the strategic distribution of planned development.

## 20. Summary: Proposed Strategic Distribution of Planned Development

20.1. Figure 20.1 provides a summary of the proposed approach to the strategic distribution of planned development:

**Figure 20.1: Overarching Summary of the approach to the strategic distribution of planned development:**

## 21. Spatial Strategy

### *Overview*

- 21.1. The spatial strategy provides a high-level spatial framework for achieving the vision and objectives of an area. It therefore underpins and is in turn achieved by the policies within the Local Plan.
- 21.2. The proposed spatial strategy for the level and distribution of development across Shropshire is primarily captured within draft Policy SP2 of the draft Shropshire Local Plan, which is then expanded upon within wider draft Policies.
- 21.3. The key components of any spatial strategy are the level and distribution of development.

### *The Proposed Spatial Strategy*

- 21.4. Earlier sections of this Topic Paper address the proposed housing and employment land requirements, which form the basis for the proposed level of development within the spatial strategy.
- 21.5. This Topic Paper also addresses the proposed strategic distribution of planned development, which establishes the overarching approach to the distribution of development within the spatial strategy.
- 21.6. Reflecting the conclusions summarised within this Topic Paper, the revised spatial strategy for the level and distribution of development across Shropshire proposed to be set out in Draft Policy SP2 includes:
  - a. Over the proposed plan period from 2016 to 2038, a minimum of 31,300 new dwellings and a minimum of 320 hectares of employment land will be delivered, of which 1,500 dwellings and 30ha of employment land are to contribute towards the unmet needs forecast to arise within the Black Country. The proposed housing and employment land requirements equate to around 1,423 dwellings and around 14.5ha of employment land per annum.**
  - b. To achieve a sustainable and appropriate pattern of development which also maximises investment opportunities, new development will be focused in the 'urban areas', which consist of Strategic Centre of Shrewsbury, proposed Principal Centres, proposed Key Centres and proposed Strategic Settlements.**
  - c. Recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in 'urban areas' will be complemented**

**by appropriate new development within Community Hubs, which are considered significant rural service centres; and to a lesser extent Community Clusters, which consist of settlements with aspirations to maintain or enhance their sustainability. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.**

- 21.7. This proposed spatial strategy is generally consistent with that previously proposed within the draft Shropshire Local Plan. The key distinctions are:
- a. The proposed uplift of 500 dwellings to the proposed housing requirement from 30,800 dwellings to 31,300 dwellings over the proposed plan period from 2016 to 2038.
  - b. The associated proposed uplift to the settlement housing guidelines and associated windfall allowances in Shrewsbury (from 8,625 dwellings to 8,975 dwellings); Whitchurch (from 1,600 dwellings to 1,675 dwellings); and the Former Ironbridge Power Station (from 1,000 dwellings to 1,075 dwellings) over the proposed plan period from 2016 to 2038.
  - c. The proposed uplift of 20ha to the proposed employment land requirement from 300ha to 320ha over the proposed plan period from 2016 to 2038.
  - d. Reference is included to the proposed housing (1,500 dwellings) and employment land (30ha) contributions to the unmet housing and employment land needs forecast to arise within the Black Country (already referenced within the explanation to the policy) in order to provide greater clarity.
  - e. The associated identification of specific sites to accommodate the proposed contributions to the unmet needs of the Black Country. These are BRD030 - Tasley Garden Village, Bridgnorth: 600 dwellings; SHF018b & SHF018d - Land east of Shifnal Industrial Estate, Upton Lane, Shifnal: 30ha of employment land; SHR060, SHR158 & SHR161 - Land between Mytton Oak Road and Hanwood Road, Shrewsbury: 300 dwellings; and IRN001 - Former Ironbridge Power Station: 600 dwellings.
- 21.8. As such, Shropshire Council considers that:
- a. The proposed spatial strategy is consistent and complementary to the draft policies within the submitted draft Local Plan.
  - b. The policies within the draft Local Plan will contribute to the achievement of the proposed spatial strategy.

- c. The proposed spatial strategy establishes an appropriate framework for the achievement of the vision and spatial objectives for Shropshire within the draft Shropshire Local Plan.

**Summary:**

21.9. Table 21.1 provides a summary of the level and distribution of development across Shropshire:

**Table 21.1: Distribution of Development Resulting from the Proposed Spatial Strategy**

Settlement Category	Residential Development Guidelines	Employment Land Allowances*
Strategic Centre:	8,975 dwellings (around 29.0% of the proposed Housing Requirement)	100ha (around 33.0% of the proposed Employment Land Requirement)
Principal Centres:	7,575 dwellings (around 24% of the proposed Housing Requirement)	172ha (around 46.0% of the proposed Employment Land Requirement)
Key Centres:	5,150 dwellings (around 16.5% of the proposed Housing Requirement)	91ha (around 24.0% of the proposed Employment Land Requirement)
Strategic Settlements:	1,425 dwellings (around 4.5% of the proposed Housing Requirement)	12ha (around 3.0% of the proposed Employment Land Requirement)
Community Hubs**	4,988 dwellings (around 16.0% of the proposed Housing Requirement)	0ha (no specific allowance)
Community Clusters & Wider Rural Area**	No specific guidelines (around 10.0% of the proposed Housing Requirement)	0ha (no specific allowance)

*Please Note: Percentages are approximate and rounded.*

*\*The approach to settlement employment land allowances varies dependent on the role and function of a settlement in Shropshire, the nature of existing employment opportunities, and the nature of the employment land supply in a settlement. Specifically:*

*-Larger settlements which perform a strategic role in Shropshire include an indication of land made available for employment uses, rather than specific development guidelines as exist in smaller settlements which perform a less strategic role.*

*-Settlements with large employers with potential growth aspirations include allocations solely for their future expansion. Such land will be retained for this purpose and as such is not available for other employment opportunities.*

*-Employment land allowances in some instances include land to offset anticipated future losses, meaning net employment land provision is lower than the specified allowance.*

*\*\*No specific employment land allowances are made in Community Hubs, Community Clusters or the wider rural area. However, the draft Shropshire Local Plan provides flexibility for appropriate employment provision to meet local needs.*

## 2. Introduction

### ***Interim Findings***

- 2.1. On 15<sup>th</sup> February 2023, the Planning Inspectors examining the draft Shropshire Local Plan issued an Interim Findings document (ID28). This followed the completion of the Stage 1 Hearing Sessions, which focused on legal and strategic issues (including strategic policies). These Hearing Sessions were primarily undertaken in July 2022, with a further session specifically regarding the Duty to Cooperate in January 2023.
- 2.2. Within ID28, the Planning Inspectors requested a further Green Belt Topic Paper to document the exceptional circumstances for releasing Green Belt to meet Shropshire needs and separately the exceptional circumstances for releasing Green Belt to accommodate any of the proposed contributions to the housing and employment needs forecast to arise within the Black Country.
- 2.3. Specifically, paragraph 23 of ID28 stated *"Given the Council were planning on releasing Green Belt land to meet its own needs, it seems unlikely that the unmet needs of the Black Country could be met without the release of Green Belt land. Can the Council please provide a revised Green Belt Topic Paper setting out the exceptional circumstances for releasing Green Belt land to meet its own needs and as a separate exercise the exceptional circumstances for releasing land to meet the unmet needs of the Black Country."*

### ***Responding to the Interim Findings***

- 2.4. Following receipt of ID28, Shropshire Council undertook additional SA work (GC29) and prepared a new Green Belt Topic Paper (GC30) with the intention of positively responding to ID28.

### ***Updating the Response to the Interim Findings***

- 2.5. After consideration of the additional SA work (GC29) undertaken by Shropshire Council, the Planning Inspectors issued correspondence (ID36) on the 4<sup>th</sup> October 2023. This raised some soundness concerns with the additional SA work undertaken and as such requested further updated SA work and, if necessary, an updated Green Belt Topic Paper.
- 2.6. Following consideration of ID36, Shropshire Council sought clarification regarding the concerns raised and the assessment work necessary to resolve them, within correspondence on the 16<sup>th</sup> November 2023 (GC41). On the 16<sup>th</sup> January 2024, the Planning Inspectors issued correspondence (ID37) which addressed the questions raised by the Council within GC41.

2.7. Shropshire Council has now undertaken updated additional SA work. Informed by this updated additional SA work, the Council also reviewed and has prepared targeted update of the Green Belt Topic Paper (this document) consistent with ID28, ID36 and ID37.

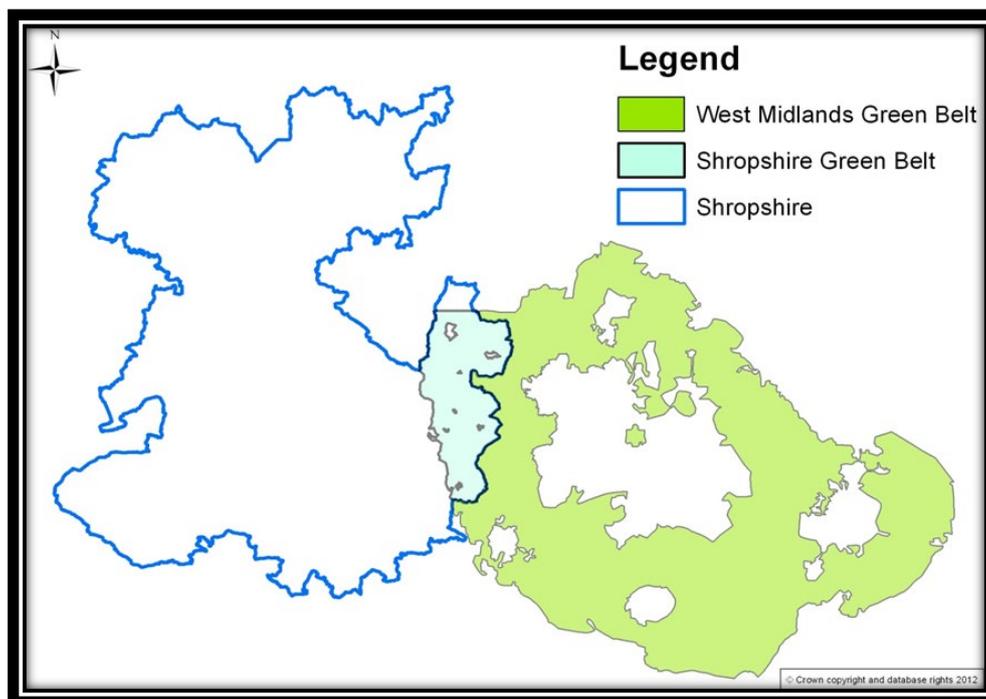

### ***Purpose of this Document***

- 2.8. The purpose of this document is to summarise the exceptional circumstances identified for releasing Green Belt to meet Shropshire housing and employment land needs and identify the exceptional circumstances for releasing Green Belt to accommodate any of the proposed contributions to the housing and employment needs forecast to arise within the Black Country.
- 2.9. Importantly and in order to avoid duplication, this document seeks to summarise and heavily cross-references the extensive evidence base prepared to support the draft Shropshire Local Plan in the context of proposed Green Belt release. In particular the:
- a. Green Belt Assessment (EV049.01-EV049.02).
  - b. Green Belt Review (EV050.01-EV050.08).
  - c. Green Belt Revised Exceptional Circumstances Statement (EV051).
  - d. Initial Green Belt Topic Paper (GC4g).
  - e. Housing Topic Paper (GC4i).
  - f. Employment Strategy Topic Paper (GC4n).
- 2.10. This Topic Paper has also been directly informed by other work and associated conclusions resulting from ID28, ID36 and ID37. In particular with regard to the proposed housing and employment land requirements and the strategic distribution of development, which together form the basis for the proposed spatial strategy within the draft Shropshire Local Plan.
- 2.11. Another important conclusion relevant to this Topic Paper is the updated additional SA and site assessment work undertaken to identify the sites considered appropriate to accommodate proposed contributions to the unmet need forecast to arise within the Black Country.
- 2.12. Relevant documents which address these issues include:
- a. The Updated Additional Sustainability Appraisal (SA) Assessment.
  - b. The Updated Housing and Employment Topic Paper.

### 3. Green Belt in Shropshire

3.1. The Green Belt in Shropshire lies in the south-east of the County, to the east of the River Severn and south of the A5. It forms part of the wider West Midlands Metropolitan Green Belt which surrounds the West Midlands conurbation and Coventry. Figure 3.1 shows the general location and extent of the West Midlands Green Belt.

**Figure 3.1: General Location and Extent of the West Midlands Green Belt**

3.2. Further information on the Green Belt in Shropshire is provided within paragraphs 1.2-1.13 of the Green Belt Revised Exceptional Circumstances Statement (EV051) and paragraphs 2.1-2.6 of the initial Green Belt Topic Paper (GC4g).

## **4. Background**

### ***National Policy***

- 4.1. The National Planning Policy Framework (NPPF) provides information on the overall importance of Green Belts; their characteristics and purposes; and the conditions needed to justify alterations to existing Green Belt boundaries. This is comprehensively summarised within paragraphs 3.1-3.7 of the Green Belt Revised Exceptional Circumstances Statement (EV051)<sup>1</sup> and paragraphs 3.1-3.6 of the initial Green Belt Topic Paper (GC4g).

### ***The Need for a Green Belt Review***

- 4.2. The adopted Development Plan includes a commitment to undertake a Green Belt Review to inform the next review of the Local Plan. This is explained in detail within paragraphs 6.1-6.9 of the initial Green Belt Topic Paper (GC4g).

### ***Green Belt Assessment and Review***

- 4.3. Responding to the commitment to undertake a Green Belt Review, important components of the evidence base prepared to inform the draft Shropshire Local Plan are the Green Belt Assessment (EV049.01-EV049.02) and Green Belt Review (EV050.01-EV050.08).
- 4.4. An effective summary of these evidence base documents is provided within paragraphs 7.1-7.32 of the initial Green Belt Topic Paper (GC4g). The Green Belt Revised Exceptional Circumstances Statement (EV051) provides information on these evidence base documents and how they informed the identification of proposed site allocations, on a settlement by settlement basis (including paragraphs 5.20-5.28 (Albrighton); 6.12-6.22 (Alveley); 7.41-7.48 (Bridgnorth); and 8.45-8.53 (Shifnal)).

### ***The Proposed Spatial Strategy***

- 4.5. Following the additional Sustainability Appraisal work and the updated Housing and Employment Topic Paper prepared in response to ID28, ID36 and ID37, the Council is proposing some amendments to the proposed spatial strategy within the draft Shropshire Local Plan.

---

<sup>1</sup> Please Note: The NPPF has been updated since the Green Belt Revised Exceptional Circumstances Statement (EV051) was prepared. As such paragraph referencing is not consistent with the latest version of the NPPF. However, the general principles remain the same.

- 4.6. This is summarised within the updated Housing and Employment Topic Paper. **However, crucially, the underlying principles remain the same.**
- 4.7. The proposed spatial strategy **continues to be underpinned by the principles of 'high growth' and 'urban focus'.**
- 4.8. Furthermore, it **continues to include specific contributions of 1,500 dwellings and 30ha of employment land** towards the unmet needs forecast to arise in the Black Country.
- 4.9. 'High growth' consists of a significant uplift above local housing and employment needs in order to contribute to the achievement of wider objectives.
- 4.10. 'Urban focus' means that the majority of development is directed towards urban areas, which consist of the proposed Strategic Centre of Shrewsbury, proposed Principal Centres, proposed Key Centres and proposed Strategic Settlements. These settlements have the most extensive range of services, facilities and infrastructure to support new development.
- 4.11. However, recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in 'urban areas' will be complemented by appropriate new development within Community Hubs, which are considered significant rural service centres; and to a lesser extent Community Clusters, which consist of settlements with aspirations to maintain or enhance their sustainability. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.
- 4.12. A comprehensive summary of the development of the proposed spatial strategy within the submission version of the draft Shropshire Local Plan is provided within the Housing Topic Paper (GN4i), the Strategic Employment Topic Paper (GC4n).
- 4.13. A comprehensive summary of the reasoning and nature of proposed amendments to this spatial strategy, in response to ID28, ID36 and ID37, is provided within the updated Housing and Employment Topic Paper.
- 4.14. The proposed spatial strategy constituted the starting point for determining the role and levels of development necessary and appropriate within settlements across Shropshire. This then informed decisions regarding potential site allocations. This process is effectively summarised within the diagram in Chapter 5 of the initial Green Belt Topic Paper (GC4g).

***Sites to Accommodate Proposed Contributions to Unmet Needs Forecast to Arise in the Black Country***

- 4.15. Within ID28, the Planning Inspectors concluded that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country. This should be informed by additional SA and site assessment work.
- 4.16. Specifically, paragraph 21 of ID28 states "*...the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.*"
- 4.17. Consistent with this conclusion, and subsequent conclusions in ID36 and ID37, Shropshire Council has undertaken updated additional SA and site assessment work, as summarised within the Updated Additional SA Assessment. Through this work, four sites have been identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country.
- 4.18. It is considered that accommodating the proposed contributions upon these sites represents sustainable development and will contribute to the achievement of the proposed spatial strategy within the draft Shropshire Local Plan. Further information on the process undertaken and the conclusions reached is provided within the Updated Additional SA Assessment.
- 4.19. These sites and whether they require Green Belt release to allow for their development is summarised within Table 4.1:

***Table 4.1: Sites Identified to Accommodate the Proposed Contributions to the Unmet Needs Forecast to Arise in the Black Country***

<b>Site Name</b>	<b>Total Capacity</b>	<b>Black Country Contribution</b>	<b>Green Belt Release Required</b>
Tasley Garden Village, Bridgnorth (BRD030)	1,050 dwellings 16ha employment land New local centre and other infrastructure	600 dwellings	No
Land east of Shifnal Industrial Estate, Shifnal (SHF018b & SHF018d)	39 hectares employment land (15.6ha net development)	30ha of employment land	<b>Yes</b>
Land between Mytton Oak Road and Hanwood Road, Shrewsbury (SHR060, SHR158 & SHR161)	1,500 dwellings 5ha of employment land New local centre and other infrastructure	300 dwellings	No
Former Ironbridge Power Station	1,000 dwellings 6ha of employment land New local centre and other infrastructure	600 dwellings	No

- 4.20. It is apparent from Table 4.1 that only one of the proposed site allocations identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is located within the Green Belt – SHF018b & SHF018d.
- 4.21. SHF018b & SHF018d has been identified to accommodate the entirety of the proposed 30ha contribution towards the unmet employment land needs forecast to arise within the Black Country.

## 5. Green Belt Release Proposed within the draft Shropshire Local Plan

### Overview

5.1. Table 5.1 provides a succinct summary of the Green Belt release proposed within the draft Shropshire Local Plan. This is presented as hectares of land and number of sites by both location and type.

**Table 5.1: Green Belt Release by Location and Type**

Location	Housing		Mixed Use		Employment		Safeguarded Land		Total	
	Ha	Sites	Ha	Sites	Ha	Sites	Ha	Sites	Ha	Sites
Albrighton	-	-	-	-	-	-	19.9	3	<b>19.9</b>	<b>3</b>
Alveley	1.4	1	2.4	1	-	-	3.6	1	<b>7.4</b>	<b>3</b>
Shifnal	-	-	-	-	39.0	1	82.4*	5*	<b>121.4</b>	<b>6</b>
Stanmore (Bridgnorth)	-	-	-	-	11.4	2	-	-	<b>11.4</b>	<b>2</b>
<b>Total</b>	<b>1.4</b>	<b>1</b>	<b>2.4</b>	<b>1</b>	<b>50.4</b>	<b>3</b>	<b>105.9</b>	<b>9</b>	<b>160.1</b>	<b>14</b>

\*A further 10.4ha of safeguarded land which was previously removed from the Green Belt is located at Shifnal on the site identified as 'Land between Revells Rough, Lamledge Lane and the eastern rail line' which consists of part of SHF023.

5.2. It is important to note that Table 5.1 reflects the conclusions reached by the Planning Inspectors, as summarised within ID28, with regard to the RAF Cosford site.

5.3. Specifically, within ID28 the Planning Inspectors' concluded that exceptional circumstances did not exist to justify the proposed release of the RAF Cosford site from the Green Belt. ID28 explains in paragraphs 29-32 that this conclusion has been informed by three key factors:

- a. The numerous and complementary uses occurring on the site can, based on past activity at the site, occur whilst the site remains in the Green Belt.
- b. The potential harm to the openness of the surrounding Green Belt if undeveloped land within the site is developed.
- c. The reduced ability to control future non-military use on the site if it is removed from the Green Belt.

5.4. It is also important to note that Table 5.1 reflects the conclusions reached by Shropshire Council following the completion of the additional work requested by the Planning Inspectors within ID28, ID36 and ID37.

- 5.5. In particular with regard to the housing and employment land requirements and the strategic distribution of development, which together form the basis for the proposed spatial strategy within the draft Shropshire Local Plan. Amendments proposed to the spatial strategy in response to ID28, ID36 and ID37, are summarised within:
- a. The Updated Additional Sustainability Appraisal (SA) Assessment.
  - b. The Updated Housing and Employment Topic Paper.
- 5.6. For context, according to the 2022/23 Green Belt Statistics released by the Department for Levelling Up, Housing & Communities (DLUHC)<sup>2</sup>, there were 24,480ha of land designated as Green Belt in Shropshire at 31<sup>st</sup> March 2023 (with no net change recorded from the previous year). As such, the proposed releases totals around 6.5% of the total Green Belt in Shropshire.
- 5.7. It is apparent from Table 5.1 that 6 of the 14 sites proposed to be removed from the Green Belt (equating to 66.2% of the total hectareage of Green Belt release proposed within the draft Shropshire Local Plan), is in order to 'safeguard' land for future development.
- 5.8. Of the remaining proposed Green Belt releases, 3 sites (31.5% of the total hectareage) is for employment development; whilst just 2 sites (2.4% of the total hectareage) is for residential or residential-led mixed use development.

### ***Assessment of Reasonable Alternatives***

- 5.9. In determining an appropriate proposed spatial strategy and identifying appropriate proposed site allocations there was a careful consideration of reasonable alternatives.
- 5.10. Such consideration represents an important component of plan making. The Sustainability Appraisal and Site Assessment Environmental Report (SD006.01-SD006.22) and the updated additional Sustainability Appraisal Assessment work undertaken provide an effective summary of the consideration of reasonable alternatives.
- 5.11. Consistent with paragraph 141 of the NPPF, the assessment of reasonable alternatives is also an important part of the process of determining whether Green Belt release is appropriate. Specifically, paragraph 141 states "*Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the*

---

<sup>2</sup> DLUHC (2023), <https://gov.uk/government/statistics/local-authority-green-belt-statistics-for-england-2022-to-2023>

*strategic policymaking authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development...”*

- 5.12. In so doing, consideration should be given to whether the plan “...a) *makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development...; and c) has been informed by discussions with neighbouring authorities...”*
- 5.13. Consistent with this requirement, before concluding that exceptional circumstances exist to justify the release of any site from the Green Belt, Shropshire Council comprehensively considered alternative options.
- 5.14. This is documented on a settlement by settlement basis, in a manner that is responsive to the requirements of paragraph 141 of the NPPF, within the Green Belt Revised Exceptional Circumstances Statement (EV051).
- 5.15. Specifically with regard to the proposed site to accommodate the 30ha contribution to the unmet employment land need forecast to arise in the Black Country, the consideration of reasonable alternatives is comprehensively summarised within the updated Housing and Employment Topic Paper.

### ***Exceptional Circumstances for Proposed Green Belt Releases***

- 5.16. Paragraph 140 of the NPPF states “*Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans...*” This paragraph goes on to state “*...where a need for changes to Green Belt boundaries has been established through strategic policies, detailed amendments to those boundaries may be made through nonstrategic policies, including neighbourhood plans.*”
- 5.17. The following sections of this Topic Paper summarise the Exceptional Circumstances for the Green Belt releases proposed within the draft Shropshire Local Plan.
- 5.18. The presentation of these exceptional circumstances is undertaken on a settlement by settlement basis, as the role of each settlement within the proposed spatial strategy is an important component of the exceptional circumstances justification for all sites.

### ***Meeting Shropshire Housing and Employment Land Needs***

- 5.19. Where a settlement includes Green Belt release to meet Shropshire housing and employment land needs, the Green Belt Revised Exceptional Circumstances Statement (EV051) and the initial Green

Belt Topic Paper (GC4g) already provides a comprehensive explanation of the exceptional circumstances identified.

- 5.20. As such, this Topic Paper provides a high-level summary and should be read alongside the Green Belt Revised Exceptional Circumstances Statement (EV051) and the initial Green Belt Topic Paper (GC4g).

*Accommodating Contributions to the Unmet Needs Forecast to Arise in the Black Country*

- 5.21. Where a settlement also includes Green Belt release to accommodate part of the proposed contribution to the unmet needs forecast to arise within the Black Country (as documented within Table 4.1 of this Topic Paper, this only applies to Shifnal) a clear distinction is drawn between the exceptional circumstances which apply to meet Shropshire housing and employment land needs and the exceptional circumstances which apply to accommodate part of the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 5.22. Again, the consideration of reasonable alternatives to this release is comprehensively summarised within the updated Housing and Employment Topic Paper.

*The Role of Safeguarded Land*

- 5.23. As already documented within paragraph 5.7 above, the vast majority of the land proposed to be released from the Green Belt within the draft Shropshire Local Plan is to be 'safeguarded' for future development. This land is associated with the settlements of Alveley, Albrighton and Shifnal.
- 5.24. This land is not allocated for development within the draft Shropshire Local Plan, rather it is removed from the Green Belt and 'safeguarded' from development, so that it can provide future development opportunities beyond the time period addressed within the draft Shropshire Local Plan.
- 5.25. Consistent with paragraph 143(d) of the NPPF, "*planning permission for the permanent development of safeguarded land should only be granted following an update to a plan which proposes the development*". In effect safeguarded land should only be developed once allocated for development within a future Local Plan.
- 5.26. Such land is therefore not intended to be developed in order to achieve the proposed vision, objectives and spatial strategy within the draft Shropshire Local Plan. However, the release of such land is considered important in order to provide future development opportunities and ensure the long term sustainability of the associated settlements and their communities.

5.27. At this time, it is expected that any future development on the 'safeguarded' land (which should only occur once it is allocated for development within a future Local Plan) would be to meet the needs of Shropshire. The exceptional circumstances identified within the Green Belt Revised Exceptional Circumstances Statement (EV051) and summarised within this Topic Paper reflect this position.

## 6. Albrighton

### ***Introduction***

- 6.1. Albrighton is a large urban village located within the M54/A5 corridor, a key road and rail transport corridor, linking Shropshire to the West Midlands. It is inset within the West Midlands Metropolitan Green Belt, meaning it is surrounded by Green Belt (with the exception of an area of land on the eastern edge of the settlement which was previously removed from the Green Belt and safeguarded for future development).
- 6.2. Within the draft Shropshire Local Plan, Albrighton is proposed to be identified as a Key Centre (this is in effect a continuation of the role that the settlement plays within the adopted Development Plan).
- 6.3. Reflecting on the wider proposed spatial strategy, the role of Albrighton within this spatial strategy and in east Shropshire, constraints present, and identified issues and opportunities; draft Policy S1.1 of the draft Shropshire Local Plan which establishes the proposed settlement strategy for Albrighton proposes to deliver *"around 500 dwellings and around 5 hectares of employment development."* It also indicates that *"New housing and employment development will respond to local needs."*
- 6.4. The proposed settlement strategy seeks to support Albrighton's long-term sustainability and ensure that local housing and employment need is achieved, whilst also respecting the settlement's location in the Green Belt and other known constraints.

### ***Green Belt Release Proposed***

- 6.5. Having reflected on the proposed spatial strategy, the strategic role of the settlement, known development constraints, identified issues and opportunities, and having reviewed the site promotions received within the settlement, the draft Shropshire Local Plan proposes that in Albrighton:
  - a. New residential development will primarily be delivered through existing commitments (including the proposed 'saved' SAMDev Plan allocations which now either benefit from Planning Permission or are subject to a current Planning Application) and a further residential allocation (ALB017 & ALB021), consisting of the remaining safeguarded land to the east of the settlement. This will be complemented by any appropriate small-scale windfall residential development within the Albrighton development boundary and appropriate exception development.

b. New employment development will primarily be delivered at the nearby RAF Cosford major developed site. This will be complemented by appropriate small-scale windfall employment development within the Albrighton development boundary shown on the draft Policies Map, where it is consistent with relevant policies of the Local Plan.

**6.6. As such, for the avoidance of doubt, no land is proposed to be removed from the Green Belt at Albrighton in order to achieve the proposed settlement strategy for the settlement or the proposed spatial strategy for Shropshire within the draft Shropshire Local Plan.**

6.7. However, it is recognised that the proposed allocations within the draft Shropshire Local Plan will exhaust the supply of safeguarded land that exists around the settlement.

6.8. As such, 3 areas of land totalling some 19.9ha are proposed to be removed from the Green Belt and 'safeguarded' for future development (ALB014, P32a and part of P35). Further information on these areas is provided within paragraph 5.19 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

### ***Accommodating Proposed Contributions to the Unmet Needs Forecast to Arise Within the Black Country***

6.9. Albrighton was identified as one location where it may be appropriate to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.

6.10. This was informed by a comprehensive consideration of the functional relationship between the Black Country and sub-geographies within Shropshire, as summarised within the additional Sustainability Appraisal assessment work.

6.11. This conclusion was reached as Albrighton is located in east Shropshire and has a functional relationship to the Black Country. It also benefits from strong road links to the Black Country via the M54/A5 corridor and the Shrewsbury-Wolverhampton Railway line.

6.12. Whilst proximity and connectivity to the Black Country could suggest that Albrighton is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the settlement's size and role within the proposed spatial strategy, it is unlikely that it could make a significant contribution.

6.13. Through the additional SA and site assessment work, it was ultimately concluded that there were more appropriate locations and

sites upon which to accommodate proposed contributions to the unmet needs forecast to arise within the Black Country.

- 6.14. It is considered that accommodating the proposed contribution to the Black Country in these alternative locations and on these alternative sites will contribute to the achievement of the wider spatial strategy for Shropshire.
- 6.15. Further detail on this consideration of reasonable alternatives to accommodate proposed contributions to the unmet needs forecast to arise within the Black Country is provided within the updated Housing and Employment Topic Paper.

### ***Assessment of All Other Reasonable Alternatives***

- 6.16. Consistent with paragraph 141 of the NPPF, before concluding that exceptional circumstances existed, consideration of all other reasonable alternatives was undertaken. This is comprehensively documented within paragraphs 5.34-5.47 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

### ***Exceptional Circumstances: Green Belt Releases to Contribute to Meeting Shropshire Housing and Employment Land Needs***

- 6.17. It is considered that there are a number of exceptional circumstances which support the proposed release of 3 areas of land from the Green Belt at Albrighton, to be 'safeguarded' for future development beyond the draft Shropshire Local Plan period.
- 6.18. **These are comprehensively documented within paragraphs 5.48-5.63 of the Green Belt Revised Exceptional Circumstances Statement (EV051) and paragraphs 8.30-8.37 of the initial Green Belt Topic Paper (GC4g).**
- 6.19. In summary, these exceptional circumstances include:

#### **a. Supporting the Role and Function of Albrighton in the Future:**

- i. Albrighton is a Key Centre in Shropshire and benefits from a highly sustainable location on the M54/A5 strategic road corridor and with a station on the Shrewsbury-Wolverhampton Railway Line.
- ii. There is a need to ensure future development opportunities in order to support the settlement to continue to effectively perform its role as a Key Centre; ensure the long-term sustainability of its services and facilities; and meet the economic, social and environmental needs of its community and those within its extensive hinterland in the future.

- iii. This cannot be achieved without providing further safeguarded land. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.
- iv. This issue is responsive to Paragraph 143c) of the NPPF includes "*When defining Green Belt boundaries, plans should:... c) where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;... "*

**b. Meeting Local Needs in the Future:**

- i. Given the location of Albrighton and its distance from any 'urban area' in a Shropshire context, it is considered that there are limited other locations beyond Albrighton where the economic, social and environmental needs of its community and those of its rural hinterland can be met.
- ii. These needs will, in the future, require additional development beyond that planned for within the draft Shropshire Local Plan.
- iii. This cannot be achieved without providing further safeguarded land. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.
- iv. This issue is again responsive to Paragraph 143c) of the NPPF.

**c. Sustainable Patterns of Development**

- i. Paragraph 142 of the NPPF recognises the need to "*...promote sustainable patterns of development...*" when reviewing Green Belt boundaries. It is considered unsustainable to restrict the potential for new development in Albrighton, beyond the proposed plan period.
- ii. Further safeguarded land in sustainable locations is required in order to provide for development options beyond the proposed plan period. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.

**d. Ensuring Long-Term defensible Green Belt Boundaries**

- i. Paragraph 143e) of the NPPF specifies that "*when defining Green Belt boundaries, plans should... e) be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period*".
- ii. Given the role and function of Albrighton, it is not considered that this can be achieved without identifying safeguarded land for future development beyond the proposed plan period at the settlement.

**e. Green Belt Performance**

- i. In identifying proposed safeguarded land, the performance against Green Belt purposes and the harm to the remaining Green Belt was given due consideration.
- ii. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

***Site Boundaries and Compensatory Improvements to the Green Belt***

- 6.20. In identifying the three proposed areas of safeguarded land to be removed from the Green Belt, due consideration was given to resultant Green Belt boundaries and the ability to provide for compensatory improvements to the Green Belt. This is consistent with the requirements of paragraphs 142 and 143 of the NPPF.
- 6.21. These matters are addressed within paragraphs 5.64-5.69 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

## **7. Alveley**

### ***Introduction***

- 7.1. Alveley is a large village located to the south-east of Bridgnorth, off the A442. It is inset within the West Midlands Metropolitan Green Belt, meaning it is surrounded by Green Belt.
- 7.2. Within the draft Shropshire Local Plan, Alveley is proposed to be identified as a Community Hub. Community Hubs are considered significant rural service centres, where appropriate new development that complements the proposed 'urban focus' will occur. This development will contribute to the long-term sustainability of rural communities.
- 7.3. Reflecting the proposed spatial strategy and the role of Alveley within it, constraints present, and identified issues and opportunities including the limited development that has occurred in the settlement over recent years; draft Policy S3.2 of the draft Shropshire Local Plan which establishes the proposed settlement strategies for Community Hubs in the Bridgnorth Place Plan Area (including Alveley) proposes to deliver "*around 130 dwellings*".
- 7.4. The proposed settlement strategy seeks to support Alveley's long-term sustainability and ensure that local housing need is achieved, whilst also respecting the settlement's location in the Green Belt and other known constraints.

### ***Green Belt Release Proposed***

- 7.5. Having considered the role of the village as a Community Hub, known development constraints, identified issues and opportunities, and having reviewed the site promotions received, the draft Shropshire Local Plan proposes the following Green Belt release in Alveley in order to contribute to the achievement of the proposed settlement strategy:
  - a. Mixed use allocation with provision for community sports and recreation facilities and around 35 dwellings, at Land north of Daddlebrook Road and West of A442 (ALV006/ALV007).
  - b. Residential allocation with provision for around 35 dwellings, on Land Adjacent to The Cleckars, Alveley (ALV009).
- 7.6. This will be complemented by any appropriate small-scale windfall residential development within the Alveley development boundary and appropriate exception development.
- 7.7. The proposed strategy for Alveley does not include any specific guideline for employment provision, simply acknowledging that if a

local need arises it will be delivered through appropriate small-scale windfall employment development within the settlement's development boundary.

- 7.8. **As such, for the avoidance of doubt, two sites are proposed to be removed from the Green Belt in order to contribute to the achievement of the proposed settlement strategy for Alveley and the proposed spatial strategy for Shropshire within the draft Shropshire Local Plan.**
- 7.9. **These sites consist of a residential allocation and a residential-led mixed use allocation.**
- 7.10. It is recognised that to provide longer term development opportunities beyond the period addressed within the draft Shropshire Local Plan and ensure that the Green Belt boundaries will not require further amendment within the next review of the Local Plan, one area of land totalling some 3.6ha (ALV002) is also proposed to be removed from the Green Belt and 'safeguarded' for future development.
- 7.11. Further information on the two proposed site allocations and the proposed area of safeguarded land is provided within paragraphs 6.32-6.36 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

***Accommodating Proposed Contributions to the Unmet Needs Forecast to Arise Within the Black Country***

- 7.12. Alveley was not identified as a location where it may be appropriate to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 7.13. This was informed by a comprehensive consideration of the functional relationship between the Black Country and sub-geographies within Shropshire, as summarised within the additional Sustainability Appraisal assessment work.
- 7.14. Whilst the settlement is located within an area with a functional relationship to the Black Country, it was considered that given the scale and role envisioned for the settlement within the proposed spatial strategy, it would not be appropriate or sustainable to accommodate any of the proposed contribution to unmet needs forecast to arise in the Black Country at Alveley.
- 7.15. It is considered that accommodating the proposed contribution to the Black Country in alternative locations will contribute to the achievement of the wider spatial strategy for Shropshire.

7.16. Further detail on this consideration of reasonable alternatives to accommodate proposed contributions to the unmet needs forecast to arise within the Black Country is provided within the updated Housing and Employment Topic Paper.

***Assessment of All Other Reasonable Alternatives***

7.17. Consistent with paragraph 141 of the NPPF, before concluding that exceptional circumstances existed, consideration of all other reasonable alternatives was undertaken. This is comprehensively documented within paragraphs 6.28-6.31 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

***Exceptional Circumstances: Green Belt Releases to Contribute to Meeting Shropshire Housing and Employment Land Needs***

7.18. It is considered that there are exceptional circumstances which support the proposed release of 2 sites from the Green Belt at Alveley for residential and residential mixed-use development respectively, and the release of 1 area of land from the Green Belt at Alveley to be 'safeguarded' for future development beyond the draft Shropshire Local Plan period.

7.19. In summary, these exceptional circumstances include:

**a. Meeting Existing Local Development Needs:**

- i. Alveley village is a highly performing Community Hub in the settlement hierarchy assessment process, reflecting good access to a number of services and facilities, yet it has had relatively low levels of residential development over many years (notably from 2006-2019). It is considered that this reflects constraints on development opportunities as set out in paragraphs 6.5 and 6.6 and also 6.28 and 6.29 of the Green Belt Revised Exceptional Circumstances Statement (EV051).
- ii. Evidence also suggested unmet need for local housing, which includes affordable housing and the provision of accommodation types which are not readily available in the village as set out in para 6.7 of the Green Belt Revised Exceptional Circumstances Statement (EV051).
- iii. To ensure long-term sustainability of rural communities (in line with strategic aim of draft Policy SP2), there is an expectation that growth in urban areas will be complemented by appropriate new development in Community Hubs, such as Alveley.
- iv. Given the location of Alveley and its distance from Bridgnorth, the closest town in Shropshire (or other 'urban area'), it is

considered that there are local community development needs which are required to be met by development within the settlement itself rather than further afield. This includes opportunities to provide for the development of a range of house types, including smaller lower cost homes, with supporting infrastructure, to help to provide choice and support community sustainability.

- v. The proposed Green Belt releases for two separate site allocations provide for a choice of delivery options in locations which are both well connected to Alveley.
- vi. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.

**b. Meeting Local Needs in the Future:**

- i. Given the location of Alveley and its distance from any 'urban area' in a Shropshire context, it is considered there are limited other locations beyond Alveley where the local housing and supporting local infrastructure needs of its community can be met.
- ii. The draft Shropshire Local Plan proposes allocations which provide for a for a level of residential development which is relatively modest in housing numbers but of a scale which can be assimilated into the village within the timescale provided for by the draft Shropshire Local Plan. The allocations also provide for additional sports and leisure provision which could support any future growth. However, given that the village is inset in the Green Belt with limited scope for new development within its settlement boundary, residential development needs will, in the future, require additional development beyond that planned for within the draft Shropshire Local Plan.
- iii. This cannot be achieved without providing further safeguarded land. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.
- iv. This issue is also responsive to Paragraph 143c) of the NPPF.

**c. Community benefit of the proposed mixed use allocation:**

- i. Alveley provides a rural service centre within a Green Belt location that lies between the larger settlements of Bridgnorth and Kidderminster (outside Shropshire) which provide the higher-level services and facilities.
- ii. Bridgnorth, the closest town is about 7 miles away and the Key Centre of Highley, with some services including leisure facilities, is around 1.5 miles away. Although geographically closer the Key Centre of Highley, lies across the River Severn

and there is no vehicular access from the Alveley side. Therefore, facilities in Highley are not easily accessible to serve the local needs of Alveley and the associated rural area.

- iii. The Green Belt Revised Exceptional Circumstances Statement (EV051) sets out that there is scope for additions and improvements to existing leisure facilities and activities to target the needs of a wider range of people so that as many residents as possible have access to appropriate and attractive leisure opportunities within the area.
- iv. It is intended that the site that has been identified at Daddlebrook Road (Proposed allocation ALV006 /ALV007 in the draft Shropshire Local Plan) which constitutes a residential-led mixed-use allocation would help deliver improved community facilities for sports and recreation, replacing and enhancing the more limited provision that currently exists at Alveley Sports Club. This would be a valuable community benefit which would help to support social sustainability and this forms part of the exceptional circumstances case.
- v. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

**d. Supporting the Role and Function of Alveley Now and in the Future:**

- i. Alveley is a proposed Community Hub and as such is considered a significant rural service centre. To ensure the settlement continues to fulfil its role as a Community Hub and remains sustainable (including by supporting the long-term sustainability of services and facilities), there is a need for appropriate quantities of the right types, tenures and quality of residential development over the short, medium and long term.
- ii. Such development will also meet the economic, social and environmental needs of Alveley's community and those within its rural hinterland.
- iii. The amount and type of development will in the short and medium term be constrained without providing further site allocations and in the longer term without further safeguarded land. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.
- iv. This issue is also responsive to Paragraph 143c) of the NPPF which includes, "*When defining Green Belt boundaries, plans should:... c) where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to*

*meet longer-term development needs stretching well beyond the plan period;... ”.*

**e. Sustainable Patterns of Development**

- i. Paragraph 142 of the NPPF recognises the need to “*...promote sustainable patterns of development...*” when reviewing Green Belt boundaries. It is considered unsustainable to restrict the potential for new development in Alveley, both during and beyond the proposed plan period.
- ii. Further site allocations and safeguarded land in sustainable locations is required in order to provide for development options during and beyond the proposed plan period. As such, it is considered this represents an exceptional circumstance to justify releasing the land from the Green Belt.

**f. Ensuring Long-Term defensible Green Belt Boundaries**

- i. Paragraph 143e) of the NPPF specifies that “*when defining Green Belt boundaries, plans should... e) be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period*”.
- ii. Given the role and function of Alveley, it is not considered this can be achieved without identifying safeguarded land for future development beyond the proposed plan period.

**g. Green Belt Performance**

- i. In identifying proposed allocations and safeguarded land, the performance against Green Belt purposes and the harm to the remaining Green Belt was given due consideration.
- ii. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

**7.20. Further information is provided within the Green Belt Revised Exceptional Circumstances Statement (EV051) and paragraphs 8.30-8.37 of the initial Green Belt Topic Paper (GC4g).**

***Site Boundaries and Compensatory Improvements to the Green Belt***

7.21. In identifying the three proposed areas of safeguarded land to be removed from the Green Belt, due consideration was given to resultant Green Belt boundaries and the ability to provide for compensatory improvements to the Green Belt. This is consistent with the requirements of paragraphs 142 and 143 of the NPPF.

7.22. These matters are addressed within paragraphs 6.37-6.42 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

## 8. Bridgnorth

### *Introduction*

- 8.1. Bridgnorth is an attractive market town located in the east of Shropshire on the junction of the A458 and A442. It has an unusual relationship to the West Midlands Green Belt in that the town is not fully inset within the Green Belt, rather it wraps around the eastern built form of the settlement (known as the Low Town).
- 8.2. Stanmore Business Park (formerly known as Stanmore Industrial Estate) is a significant employment site associated with Bridgnorth, located to the east of the Low Town and inset within the Green Belt. It constitutes a 'centre of excellence for engineering and advanced manufacturing' and a key employment location in Shropshire.
- 8.3. Within the draft Shropshire Local Plan, Bridgnorth is proposed to be identified as a Principal Centre (this is in effect a continuation of the role that the settlement plays within the adopted Development Plan).
- 8.4. Reflecting on the wider proposed spatial strategy, the role of Bridgnorth within this spatial strategy and in east Shropshire, constraints present, and identified issues and opportunities; draft Policy S3.1 of the draft Shropshire Local Plan which establishes the settlement strategy for Bridgnorth proposes to deliver "*around 1,800 dwellings*" and make available "*around 49ha of employment land to create choice and competition in the market.*"
- 8.5. It also indicates that "*New housing and employment will make provision for the needs of the town and surrounding hinterland, including attracting inward investment and allowing existing businesses to expand.*"
- 8.6. The proposed settlement strategy seeks to support Bridgnorth's role as a Principal Centre and strategic focus in east Shropshire; the long-term sustainability of the settlement; ensure that the housing and employment needs of Bridgnorth's community and those within the wider rural area (including a proportion of the unmet housing need forecast to arise within the Black Country) is achieved; whilst also respecting the settlement's location relative to the Green Belt and other known constraints.

### ***Green Belt Release Proposed***

- 8.7. Having reflected on the proposed spatial strategy, the strategic role of the town, known development constraints, identified issues and opportunities, and having reviewed the site promotions received within the settlement, the draft Shropshire Local Plan proposes that in Bridgnorth:
- a. New residential development will be delivered through:
    - i. Existing commitments (including proposed saved SAMDev Plan allocations which are the subject of a current Planning Application with a resolution to grant Planning Permission).
    - ii. A further significant mixed-use sustainable urban extension allocation (BRD030) which is located outside of the Green Belt.
    - iii. Complementary small-scale windfall residential development considered appropriate within the town's development boundary and appropriate exception development outside town's development boundary.
  - b. New employment development will be delivered through:
    - i. Existing commitments (including proposed saved SAMDev Plan allocations which are the subject of a current Planning Application with a resolution to grant Planning Permission)<sup>3</sup>.
    - ii. The previously referenced mixed-use sustainable urban extension allocation (BRD030) which is located outside of the Green Belt.
    - iii. Two extensions to the successful Stanmore Business Park (P58a and STC002). These extensions total some 11.4ha and comprise land that is currently located within the Green Belt.
    - iv. Complementary windfall employment development, where it is considered appropriate and consistent with relevant policies of the Shropshire Local Plan.
- 8.8. **As such, for the avoidance of doubt, two sites are proposed to be removed from the Green Belt in order to contribute to the achievement of the proposed settlement strategy for Bridgnorth and the proposed spatial strategy for Shropshire within the draft Shropshire Local Plan.**

---

<sup>3</sup> Please Note: Around 6.6 hectares of proposed saved SAMDev Plan employment allocations are specifically for the relocation of the existing Livestock Market. These allocations also include substantial areas for landscaping.

- 8.9. **Both these sites are for employment uses and seek to facilitate expansion of the strategically important Stanmore Business Park.**
- 8.10. Further information on the two sites proposed to be removed from the Green Belt is provided within paragraph 7.39 of the Green Belt Revised Exceptional Circumstances Statement (EV051).
- 8.11. It is recognised that there is also a need to consider whether longer term development opportunities beyond the period addressed within the draft Shropshire Local Plan exist and to ensure that the Green Belt boundaries will not require further amendment within the next review of the Local Plan.
- 8.12. Having reflected on this matter, given the unique relationship that Bridgnorth has with the Green Belt, it is considered that sufficient development options exist at the town without the need to identify areas of safeguarded land. This is supported by the identification of a potential future direction of growth associated with the proposed mixed-use sustainable urban extension allocation (BRD030).

***Accommodating Proposed Contributions to the Unmet Needs Forecast to Arise Within the Black Country***

- 8.13. Bridgnorth was identified as one location where it may be appropriate to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 8.14. This was informed by a comprehensive consideration of the functional relationship between the Black Country and sub-geographies within Shropshire, as summarised within the additional Sustainability Appraisal assessment work.
- 8.15. This conclusion was reached as Bridgnorth is located in south-east Shropshire and has a functional relationship to the Black Country. It also benefits from strong road links to the Black Country via the A454/A458 corridors.
- 8.16. Through the additional SA and site assessment work, the proposed allocation at Bridgnorth (BRD030) was identified as one site upon which it is considered appropriate to accommodate 600 dwellings of the proposed contribution towards the unmet housing need forecast to arise in the Black Country.
- 8.17. This conclusion was informed by a range of factors, including:
- a. Bridgnorth has a functional relationship to the Black Country and strong road links via the A454 and A458 corridors.

- b. Bridgnorth is a Principal Centre and performs a strategic role in the east of Shropshire.
- c. The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development, including a range of house types to meet different needs.
- d. The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.
- e. Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).
- f. Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.

**8.18. Importantly in the context of this Topic Paper, the proposed Sustainable Urban Extension at BRD030 is not located within the Green Belt.**

8.19. However, it was considered that given the connectivity of the settlement to the Black Country (particularly by sustainable forms of transport) and the importance of such connectivity for commuting and therefore in the context of any contribution to the unmet employment land need forecast to arise in the Black Country, alongside other relevant considerations, it would not be appropriate to accommodate any of the proposed contribution to unmet employment land needs forecast to arise in the Black Country at Bridgnorth.

8.20. It is considered that accommodating the proposed contribution to the Black Country in alternative locations will contribute to the achievement of the wider spatial strategy for Shropshire.

8.21. Further detail on this consideration of reasonable alternatives to accommodate proposed contributions to the unmet needs forecast to arise within the Black Country is provided within the updated Housing and Employment Topic Paper.

***Assessment of All Other Reasonable Alternatives***

8.22. Consistent with paragraph 141 of the NPPF, before concluding that exceptional circumstances existed, consideration of all other reasonable alternatives was undertaken. This is comprehensively documented within paragraphs 7.53-7.65 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

8.23. This is structured around two key components, alternative options to the expansion of Stanmore Business Park and alternative options for the expansion of Stanmore Business Park.

***Exceptional Circumstances: Green Belt Releases to Contribute to Meeting Shropshire Housing and Employment Land Needs***

8.24. It is considered that there are a number of exceptional circumstances which support the proposed release of 2 areas of land from the Green Belt at Stanmore Business Park, Bridgnorth, to be allocated for employment development in order to allow for the expansion of this important employment site, to contribute to the achievement of the proposed settlement strategy for Bridgnorth and to contribute to the proposed spatial strategy for Shropshire within the draft Shropshire Local Plan.

8.25. **These are comprehensively documented within paragraphs 7.66-7.94 of the Green Belt Revised Exceptional Circumstances Statement (EV051) and paragraphs 8.30-8.37 of the initial Green Belt Topic Paper (GC4g).**

8.26. In summary, these exceptional circumstances include:

**a. Supporting the Role of Stanmore Business Park**

- i. Stanmore Business Park represents a 'centre of excellence for engineering and advanced manufacturing', hosting a range of businesses within and associated with engineering and advanced manufacturing that benefit from their co-location on the site<sup>4</sup>.
- ii. The Business Park is a key employment location for Bridgnorth and Shropshire. It also represents a regionally significant site which strongly complements the wider engineering and advanced manufacturing sector in the West Midlands.
- iii. To ensure Stanmore Business Park continues to perform and expand on its role as a 'centre of excellence for engineering and advanced manufacturing', there is a need to provide appropriate opportunities for the expansion of existing businesses and the co-location of other businesses, particularly those within the engineering and advanced manufacturing sector.

---

<sup>4</sup> *The Marches Centre for Manufacturing and Technology CIC (MCMT) has now left the Business Park. However, this unit has been granted Planning Permission to facilitate the installation and operation of innovative processing plant to recover high value metals from small end of life electronic equipment. This use is similar in character to 'advanced manufacturing' uses.*

- iv. Given the high-occupancy rates on the site and the limited remaining land for development within the existing site, it is considered critical to provide further opportunities for the expansion of the site in the short, medium and long term in order to allow for this to occur.
- v. As such, facilitating the expansion of the Business Park in order to ensure that it continues to perform and expand its role as a 'centre of excellence for engineering and advanced manufacturing' is considered an exceptional circumstance that contributes to the justification for the release of the two parcels of land from the Green Belt, specifically for the expansion of the Business Park itself.

**b. Supporting the medium- and long-term needs of existing businesses on Stanmore Business Park**

- i. Stanmore Business Park is host to a significant number of businesses, including a particular concentration within and associated with engineering and advanced manufacturing.
- ii. In order to support the medium- and long-term needs of the site occupiers', appropriate opportunities are required for any necessary expansion – particularly as the operation from a single site brings many efficiency benefits, to an organisation.
- iii. Given the high-occupancy rates on the site and the limited remaining land for development within the existing site, it is considered critical to provide further opportunities for the expansion of the site, to allow for the expansion of existing businesses in the medium- and long-term.
- iv. As such, facilitating expansion of the Business Park to provide opportunities for existing businesses on the site to expand in the medium- and long-term is also considered an exceptional circumstance that contributes to the justification for the release of the two parcels of land from the Green Belt, specifically for the expansion of the Business Park itself.

**c. Attracting new businesses, particularly those in the 'engineering and advanced manufacturing' sector**

- i. As a locally and regionally significant site and a 'centre for excellence for engineering and advanced manufacturing', Stanmore Business Park provides an opportunity to attract other businesses into Shropshire, particularly those in the engineering and advanced manufacturing sectors that will benefit from 'clustering' on the site.
- ii. Given the high-occupancy rates on the site and the limited remaining land for development within the existing site, to provide opportunities to accommodate new businesses there

is a need to provide further opportunities for the expansion of the site.

- iii. As such, facilitating expansion of the Business Park to provide opportunities to attract new businesses onto the site, which will benefit from the 'cluster' of business within the engineering and advanced manufacturing sectors, is considered an exceptional circumstance that contributes to the justification for the release of the two parcels of land from the Green Belt, specifically for the expansion of the Business Park itself.

**d. Supporting the Strategic Role of Bridgnorth**

- i. Bridgnorth is a Principal Centre and performs a strategic role in the east of Shropshire.
- ii. Within the proposed spatial strategy of the draft Shropshire Local Plan, Bridgnorth constitutes a significant focus for development.
- iii. The two sites proposed for release from the Green Belt would allow for the expansion of Stanmore Business Park, a key location for engineering and advanced manufacturing. This expansion will support the strategic role of the town in east Shropshire by enhancing employment opportunities and in this way contribute to the achievement of the proposed settlement strategy for Bridgnorth and the wider spatial strategy for Shropshire.
- iv. This is considered an exceptional circumstance that contributes to the justification for the release of the two parcels of land from the Green Belt, specifically for the expansion of the Business Park itself.

**e. Supporting the Aspirations of the Economic Growth Strategy for Shropshire and the Marches Local Enterprise Partnership (LEP)**

- i. Advanced manufacturing (including engineering, agri-food and agri-tech) is one of the key growth sectors for the Shropshire economy identified within the Economic Growth Strategy.
- ii. Stanmore Business Park is a key location for engineering and advanced manufacturing within Shropshire and the West Midlands.
- iii. Furthermore, the Marches LEP identifies Bridgnorth as an 'opportunity town' linked to its "*large manufacturing sector with supply chain links into the West Midlands*" within its Strategic Economic Plan (EV109).
- iv. It is considered that facilitating the expansion of Stanmore Business Park, will contribute towards the achievement of the

aspirations of both the Economic Growth Strategy for Shropshire and the Strategic Economic Plan for the Marches.

- v. This is considered an exceptional circumstance that contributes to the justification for the release of the two parcels of land from the Green Belt, specifically for the expansion of the Business Park itself.

**f. Green Belt Performance**

- i. In identifying proposed employment land allocations, the performance against Green Belt purposes and the harm to the remaining Green Belt was given due consideration.
- ii. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

***Site Boundaries and Compensatory Improvements to the Green Belt***

8.27. In identifying the three proposed areas of safeguarded land to be removed from the Green Belt, due consideration was given to resultant Green Belt boundaries and the ability to provide for compensatory improvements to the Green Belt. This is consistent with the requirements of paragraphs 142 and 143 of the NPPF.

8.28. These matters are addressed within paragraphs 7.95-7.104 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

## 9. Shifnal

### ***Introduction***

- 9.1. Shifnal is a town located on the M54/A5 corridor, a key road and rail transport corridor, linking Shropshire to the West Midlands. The town has experienced significant growth over recent years, much of which has occurred during the period addressed within the draft Shropshire Local Plan.
- 9.2. Shifnal is inset within the West Midlands Metropolitan Green Belt, meaning it is surrounded by Green Belt (with the exception of areas of land on the towns north-eastern and south-eastern edges, which were previously removed from the Green Belt and safeguarded for future development).
- 9.3. Within the draft Shropshire Local Plan, Shifnal is proposed to be identified as a Key Centre (this is in effect a continuation of the role that the settlement plays within the adopted Development Plan). Indeed, the settlement represents the largest of the proposed Key Centres in Shropshire.
- 9.4. Reflecting on the wider proposed spatial strategy, the role of Shifnal within this spatial strategy and in east Shropshire, constraints present, and identified issues and opportunities; draft Policy S15.1 of the draft Shropshire Local Plan which establishes the proposed spatial strategy for Shifnal proposes that: *"the town will deliver around 1,500 dwellings and make available around 41 hectares of employment land to provide choice and competition in the market."* It also indicates that *"New housing and employment will provide for the needs of the town and surrounding hinterland, including attracting inward investment, allowing existing businesses to expand and encouraging new businesses to establish in Shifnal."*
- 9.5. The nature and scale of development within the proposed settlement strategy is designed to maintain and enhance Shifnal's role as a Key Centre and ensure that local housing and employment land needs (and a contribution to unmet employment need forecast to arise in the Black Country) are achieved, whilst also respecting the settlement's location in the Green Belt and other known constraints. It is also responsive to past trends and existing commitments.

### ***Green Belt Release Proposed***

- 9.6. Having reflected on the proposed spatial strategy, the strategic role of the town, known development constraints, identified issues and opportunities, and having reviewed the site promotions received

within the settlement, the draft Shropshire Local Plan proposes that in Shifnal:

- a. New residential development will be delivered through:
  - i. Existing commitments (including proposed saved SAMDev Plan allocations which benefit from Planning Permission).
  - ii. Three further residential allocation (SHF013; SHF015 & SHF029; and SHF022 & SHF023) all of which are located outside of the Green Belt on land that was previously 'safeguarded' for future development.
  - iii. Complementary small-scale windfall residential development considered appropriate within the town's development boundary and appropriate exception development outside town's development boundary.
- b. New employment development will be delivered through:
  - i. A new strategic employment allocation (SHF018b & SHF018d), which due to its size and location will represent a significant new investment opportunity and has the potential to form both a locally and regionally important employment centre.
  - ii. Existing commitments and complementary windfall employment development within the settlement's development boundary, where it is considered appropriate and consistent with relevant policies of the Shropshire Local Plan.

**9.7. As such, for the avoidance of doubt, one site is proposed to be removed from the Green Belt in order to contribute to the achievement of the proposed settlement strategy for Shifnal and the proposed spatial strategy for Shropshire within the draft Shropshire Local Plan.**

**9.8. This site is for employment uses and seeks to establish a new investment opportunity with the potential to form both a locally and regionally important employment centre.**

9.9. It is also recognised that the proposed allocations within the draft Shropshire Local Plan will exhaust much of the remaining supply of safeguarded land that exists around the settlement.

9.10. As such, to complement the 1 remaining area of 'safeguarded land' which totals some 10.4ha located at Land between Revells Rough, Lamledge Lane and the eastern rail line (part of SHF023); 5 further areas of land totalling some 82.4ha are proposed to be removed from the Green Belt and 'safeguarded' for future development (SHF018a; P14; SHF019 & part of P15b; part of SHF017 & P16 and another part of SHF017).

9.11. Further information on each of the sites proposed to be removed from the Green Belt for employment purposes and to form new areas of 'safeguarded' for future development is provided within paragraph 8.44 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

***Accommodating Proposed Contributions to the Unmet Needs Forecast to Arise Within the Black Country***

9.12. Shifnal was identified as one location where it may be appropriate to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.

9.13. This was informed by a comprehensive consideration of the functional relationship between the Black Country and sub-geographies within Shropshire, as summarised within the additional Sustainability Appraisal assessment work.

9.14. This conclusion was reached as Shifnal is located in east Shropshire and has a functional relationship to the Black Country. It also benefits from strong road links to the Black Country via the M54/A5 corridor and strong rail links to the Black Country via the Shrewsbury-Wolverhampton railway line.

9.15. Through the additional SA and site assessment work, the proposed allocation at Shifnal (SHF018b & SHF018d) was identified as the site upon which it is considered appropriate to accommodate the entirety of the 30ha proposed employment land contribution towards the unmet employment land need forecast to arise in the Black Country.

9.16. This conclusion was informed by a range of factors, including:

- a. Shifnal has a functional relationship to the Black Country and strong road and rail links via the M54/A5 corridor and Shrewsbury-Wolverhampton railway line respectively.
- b. Shifnal is a Key Centre and a focus for investment, employment, housing and development on the M54/A5 strategic corridor.
- c. The site constitutes a proposed strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre.
- d. The site can accommodate a sizeable contribution towards the unmet employment land needs forecast to arise in the Black Country.
- e. Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that exceptional

circumstances exist to justify the release of this land for employment, as documented within this Green Belt Topic Paper.

- f. Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.
- 9.17. Further detail on the consideration of reasonable alternatives to accommodate proposed contributions to the unmet needs forecast to arise within the Black Country is provided within the updated Housing and Employment Topic Paper.
- 9.18. **Importantly in the context of this Topic Paper, the proposed Strategic Employment Allocation SHF018b & SHF018d is currently located within the Green Belt.**

### ***Assessment of All Other Reasonable Alternatives***

- 9.19. Consistent with paragraph 141 of the NPPF, before concluding that exceptional circumstances existed, consideration of all other reasonable alternatives was undertaken. This is comprehensively documented within paragraphs 8.64-8.87 of the Green Belt Revised Exceptional Circumstances Statement (EV051).
- 9.20. In the context of accommodating the proposed contribution to the unmet employment land need forecast to arise within the Black Country, consideration of all other reasonable alternatives is documented within the updated Housing and Employment Topic Paper and the updated additional Sustainability Appraisal assessment work.

### ***Exceptional Circumstances: Green Belt Releases to Contribute to Meeting Shropshire Housing and Employment Land Needs***

- 9.21. It is considered that there are a number of exceptional circumstances which support the proposed release of 3 areas of land from the Green Belt at Shifnal, to be 'safeguarded' for future development beyond the draft Shropshire Local Plan period.
- 9.22. **These are comprehensively documented within paragraphs 8.88-8.149 of the Green Belt Revised Exceptional Circumstances Statement (EV051) and paragraphs 8.30-8.37 of the initial Green Belt Topic Paper (GC4g).**
- 9.23. In summary, these exceptional circumstances include:
- a. Sustainable Patterns of Development**
    - i. Paragraph 142 of the NPPF recognises the need to "...*promote sustainable patterns of development...*" when reviewing Green

Belt boundaries. In Shropshire, the Green Belt Review offers the potential to respond to the circumstances, character, needs and opportunities in the east of the County.

- ii. Proposals to release Green Belt land for development seek to achieve the preferred spatial strategy which seeks to deliver an urban focussed distribution of development.
- iii. This has enabled the spatial strategy to focus development opportunities particularly to deliver new employment into the most sustainable settlements in the east of the County.
- iv. This also enables the safeguarding of land to provide options for the future development of these settlements beyond the current plan period, as advised in NPPF paragraph 143(c) "When defining Green Belt boundaries, plans should:... c) where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;...".
- v. These opportunities help to meet the needs of these key communities and their hinterlands during the proposed plan period and into the future.
- vi. This strategy also helps to deliver a 'step change' in the performance and productivity of the Shropshire economy.
- vii. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**b. Supporting the Role and Function of Shifnal:**

- i. Shifnal is the largest Key Centre in Shropshire and benefits from a highly sustainable location on the M54/A5 strategic road and rail corridor. Shifnal provides a station on the Shrewsbury-Wolverhampton Railway Line in the town and is close to stations in Telford and at Cosford and Albrighton.
- ii. Shifnal performs a key role within the east of the County. Shifnal supports the role of the principal market town at Bridgnorth and complements the function of the adjacent 'built up area' of Telford.
- iii. The strategy for Shifnal should support the role and function of the town as an important Key Centre. This should increase the self-containment and sustainability of the community; ensure the longer-term sustainability of its services and facilities; and deliver housing and employment to meet the needs of the town and other communities in the Green Belt.
- iv. This cannot be achieved without delivering new development opportunities particularly to provide new employment to

reduce the 'dormitory' character of the settlement and to deliver new investment in critical infrastructure to continue to meet the needs of the community.

- v. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**c. Supporting the Community Vitality of Shifnal:**

- i. Shifnal has a lower average age profile than the Shropshire average, but has some sensitivities that affect the robustness of the community particularly a smaller cohort of young people.
- ii. Due to the settlement's location within the Green Belt, past Development Plans have planned for only limited levels of development which have constricted the ability to address identified sensitivities. The adopted Development Plan and draft Shropshire Local Plan seek to redress this imbalance by promoting significant levels of growth with periods of assimilation.
- iii. This provides for progressive growth to improve the vitality of the community with some assimilation of these changes rather than sudden and unexpected growth of the settlement, community and local economy.
- iv. The draft Shropshire Local Plan proposes a significant allocation of land for employment development to 2038 and to safeguard land beyond 2038 as future option for mixed housing and employment growth. The continued enclosure of the town in the Green Belt without any future provision for growth may prevent Shifnal sustaining its community and its economic potential.
- v. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**d. Improving Employment Opportunities in Shifnal:**

- i. Improving the employment land offer is an important component of changing the economy in Shifnal and sustaining its role in Shropshire's settlement hierarchy. This will sustain Shifnal as a key settlement in the strategic corridor which is accessible to the M54 and rail network despite being 'inset' into the Green Belt.
- ii. This objective is identified in the draft Shropshire Local Plan evidence where Shifnal is identified as a key investment location in the M54 Strategic Corridor where it is:
  - Located between Shrewsbury to the west and Wolverhampton to the east within the West Midlands

conurbation offering opportunities as part of the Midlands Engine growth strategy;

- Located close to the international investment site at i54 occupied by key growth sector industries for the West Midlands in advanced manufacturing;
- Accessible to higher education and training institutions including key assets like RAF Cosford, Harper Adams University and University Centre Shrewsbury;
- Expected to benefit from critical local infrastructure investment and strategic investment in the road and rail networks.

iii. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**e. Changing the Dormitory Character of Shifnal:**

- i. Shifnal has the opportunity to manage and improve the vitality of the community and the performance and productivity of the local economy. This can be achieved through the settlement strategy for the town and the scale and delivery of development opportunities.
- ii. The settlement strategy for Shifnal should achieve three key objectives to achieve these benefits:
  - To manage the delivery of new housing and meet the needs of local communities for affordable homes and to enable people to live and work in Shifnal;
  - To create new employment opportunities to improve the performance of the local economy, reduce out-commuting and improve the vitality of the local community;
  - To increase demand for retailing, services and facilities within the town and to improve the service offer and capacity to meet the needs of the town and other communities in the Green Belt.

iii. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**f. Improving the Investment Programme for Shifnal:**

- i. Shifnal has been constrained by its location within the Green Belt. This constraint to development has also limited investment in the infrastructure of the town and in the range and quality of the retailing, services and facilities available to the resident population.
- ii. Shifnal requires a progressive and steady rate of growth to permit the infrastructure of the town to be improved in

response to the requirements of new development. This will refresh and upgrade the infrastructure of the settlement to the benefit of the whole community.

- iv. The enclosure of the town in the Green Belt without further provision for future growth will prevent Shifnal from benefitting from these objectives. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

#### **g. Investment Potential and Business Needs**

- i. The need to refresh and improve the employment land offer is an important component of changing the capacity of Shifnal to fulfil the role of the town in the settlement hierarchy of Shropshire in particular to enable the town to function as a key settlement within the M54 strategic corridor.
- ii. This objective has been addressed in the evidence for the Local Plan in the M54 Strategic Corridor Study which concluded this location should be considered for investment due to:
  - the strategic corridor location between Wolverhampton to the east and Shrewsbury to the west closely related to the West Midlands conurbation and the associated opportunities of the Midlands Engine;
  - the adjacent international occupiers in target growth sectors for Shropshire i.e. advanced manufacturing / automotive / engineering;
  - the accessible infrastructure network and the benefits of pipeline infrastructure investment in road/rail over the coming years; and
  - the higher education and training institutions including key assets like RAF Cosford, Harper Adams University, University Centre Shrewsbury.
- iii. Employment in Shifnal is limited by the reliance of the town on 'service' industries. Employment opportunities therefore provide a limited choice for economically active people of working age who commute out of town to work in other areas.
- iv. A key limiting factor in the employment offer is the quality and quantity of land available to businesses wishing to settle or to expand in the town. The employment areas that exist have operated for many decades and these commercial premises no longer meet modern businesses requirements.
- v. The Local Plan review seeks to address these shortfalls through the release of Green Belt land to create a new

employment area with high quality, modern business floorspace. This land release seeks to provide commercial development to meet the needs of strategic and local business demands.

- vi. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

#### **h. Green Belt Performance**

- i. In identifying the proposed employment allocation and safeguarded land, the performance against Green Belt purposes and the harm to the remaining Green Belt was given due consideration.
- ii. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

#### ***Exceptional Circumstances: Green Belt Releases to Accommodate Contributions to the Unmet Needs Forecast to Arise in the Black Country***

9.24. In summary, these exceptional circumstances include:

##### **a. Functional Relationship with the Black Country**

- i. The Employment Topic Paper (GC4n) examined the strategic relationships between Shropshire and the Black Country considering the geography of adjoining Functional Economic Market Areas (FEMA), the close proximity of strategic investment opportunities and the strategic road and rail network.
- ii. This assessment identified the following conclusions:
  - the proximity and connectivity to the Black Country Authorities would enable Shropshire to support the strategic planning objectives of these four authorities;
  - there are significant strategic employment developments and proposals on the M54/A5/A41 and A458/A454 through Shropshire and extending into the Black Country area;
  - these corridors link together the Shropshire Functional Economic Market Area (FEMA) with the Black Country / Southern Staffordshire FEMA, connecting to the M6 on the national motorway network within the Black Country area;
  - the proximity of the two FEMA and the focus of investment into the strategic corridors that link them together enhances the strategic relationships between Shropshire Council and

the Black Country Authorities in the discharge of their duties as 'strategic policy making authorities'.

- iii. Whilst this in and of itself is not considered a defining exceptional circumstance, it does complement the wider exceptional circumstances identified.

#### **b. Meeting the Needs of the Black Country**

- i. In accordance with paragraph 26 of the NPPF, Shropshire and the Black Country Authorities recognise a 'mutuality' between the objectives of their Local Plans that will assist each of the strategic policy-making authorities in the "production of a positively prepared and justified strategy" for their respective Local Authority areas.
- ii. This 'mutuality' seeks to counter the challenges created by the more limited development capacity of the Black Country Authority areas. This is proposed to be achieved in Shropshire by further facilitating the Black Country Authorities to access the strategic corridors, principal settlements and land resources in the adjacent subregional area.
- iii. Shropshire Council seeks to use the land resource capacity of the County to support the sustainable growth of the Shropshire economy. This will be achieved in part, by helping to meet both the investment demands in the business markets and the employment needs in the labour markets within the Black Country. This will help to deliver a larger, relatively younger and more reliable supply of labour to meet the needs of businesses operating within the Shropshire functional economic market area.
- iv. The authority seeks to ensure their strategy will build a strong and competitive economy in Shropshire and will also facilitate its neighbours to achieve the same objectives in their own administrative areas.
- v. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

#### **c. Strategic Matter for Shropshire**

- i. The Employment Topic Paper (GC4n) examined the strategic relationships between Shropshire and the Black Country. These functional relationships established that the unmet need in the Black Country is a relevant strategic matter for Shropshire Council.
- ii. The assessment of these relationships concluded that assisting the Black Country Authorities would meet the objectives of NPPF paragraphs 24 and 25 that: '*Local planning*

*authorities...are under a duty to cooperate with each other..., on strategic matters that cross administrative boundaries', and to 'collaborate to identify relevant strategic matters which they need to address in their plans'.*

- iii. In seeking to assist the Black Country Authorities, Shropshire Council wished to ensure they retained the capacity to meet their own labour needs. This objective would meet the obligation in NPPF, paragraph 81 to "*allow each area to build on its strengths, counter any weaknesses and address the challenges of the future*".
- iv. Shropshire will support the Black Country Authorities by seeking to influence commuting between Shropshire and the Black Country. This would be achieved in addition to accommodating the migration of some labour to new housing in Shropshire. The scale of the contributions to the Black Country Authorities at 1,500 dwellings and 30ha of employment land would both redistribute some labour and also share an element of the Black Country labour pool.
- v. This approach sought to both meet the duty to cooperate by satisfying unmet needs in the region and also to ensure each participating authority would have the resources to deliver effective planning strategies for their administrative areas.
- vi. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

#### **d. Shropshire Economic Growth Strategy**

- i. Shropshire set out its economic growth vision in the Shropshire Economic Growth Strategy (2021 – 2025). Shifnal, located on the M54/A5 strategic corridor through Shropshire, has the potential to make a significant contribution to this strategy:
  - Shifnal can build on its strategic location and accessibility from its two junctions with the M54 motorway and its rail links into the metropolitan area. This indicates the investment potential of the town with the provision of new employment land to support existing businesses and to attract new investment into the town.
  - Shifnal can perform a key role in support of Bridgnorth as the principal centre in east Shropshire. The town can support supply chain companies for key growth sectors in the County and become an important source of labour by improving the self-containment of the town,
  - Shifnal might also provide support for further growth at key locations on the M54 corridor through the provision of

strategic employment land to attract significant inward investment, linked to future housing provision.

- ii. A strategy to deliver more sustainable development with an improving level of self-containment, would help Shifnal to support strategic investment locations including i54 and the proposed West Midlands Interchange and to support key urban centres at Shrewsbury, Telford, Wolverhampton, Dudley and Walsall.
- iii. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

**e. Premium Value for Investors**

- i. The designation of employment allocation SHF018b & SHF018d in Shifnal as the preferred location to satisfy the unmet need in the Black Country places a premium value on this investment location.
- ii. This premium value arises from its location on the M54, the proximity to the Black Country, the size and capability of the investment site to accommodate both strategic and local business investment and the recognition of the allocation as the preferred location to support the unmet needs in the Black Country.
- iii. The sensibility of the location, the scale of the land provision, the character and setting of the site and the strategic function of the proposed development constitute a sound and marketable investment prospect in a regional, commercial property market, that is experiencing a growing demand for new, higher quality, business locations.
- iv. It is considered this represents an exceptional circumstance to justify the release of land from the Green Belt.

***Site Boundaries and Compensatory Improvements to the Green Belt***

- 9.25. In identifying the two proposed areas of safeguarded land to be removed from the Green Belt and the remaining safeguarded land, due consideration was given to resultant Green Belt boundaries and the ability to provide for compensatory improvements to the Green Belt. This is consistent with the requirements of paragraphs 142 and 143 of the NPPF.
- 9.26. These matters are addressed within paragraphs 8.150-8.161 of the Green Belt Revised Exceptional Circumstances Statement (EV051).

## Draft Preventing Homelessness and Rough Sleeping Strategy

<b>Responsible Officer:</b>	Mark Barrow		
email:	Mark.barrow@shropshire.gov.uk	Tel:	01743258919
<b>Cabinet Member (Portfolio Holder):</b>	Dean Carroll, Portfolio Holder for Housing and Assets		

### 1. Synopsis

- 1.1 Approval is sought for an eight-week public and stakeholder consultation on the draft Preventing Homelessness and Rough Sleeping strategy which sets out how Shropshire Council will prioritise the prevention of homelessness and ending of rough sleeping, covering the period 2024 to 2029.

### 2. Executive Summary

2.1 The homelessness strategy is a strategy for:

- preventing homelessness
- securing that sufficient accommodation (of a range of types) is available for people who are or may become homeless
- providing satisfactory support for people who are or may become homeless, or who need support to prevent them becoming homeless again.

2.2 The draft Preventing Homelessness and Rough Sleeping Strategy emphasises the importance of early intervention and prevention measures to address homelessness and rough sleeping effectively. It proposes a policy framework that encompasses

various initiatives aimed at preventing homelessness, providing support to at-risk individuals, and ensuring access to suitable accommodation options. In so doing, it will draw upon and build from existing housing policy endeavours.

- 2.3 It aligns with the Shropshire Plan 2022-20251 “Healthy People”, which centres on priorities promoting healthy living, a robust economy, a sustainable environment, and an efficient organisation, all of which are connected to the Strategy.

*Healthy People: We will tackle inequalities, including rural inequalities, and poverty in all its forms; providing early support and interventions that reduce risk and enable children, young people, adults and families to achieve their full potential and enjoy life.*

- 2.4 The strategy also recognises that homelessness and rough sleeping cannot be tackled by the Council alone. The success of delivering our priorities relies on strong and effective partnership working with other organisations in the public, private and voluntary sectors. This is essentially the ‘golden thread’ that runs throughout the strategy.

- 2.5 The draft Preventing Homelessness and Rough Sleeping strategy has four strategic priorities:

**A. Develop a community and partnership approach to homeless prevention and early intervention.**

The strategy focuses on embedding upstream prevention measures within the Housing Options Service. This includes implementing early intervention programmes, alongside collaborating with housing associations and community partners. We aim to establish new approaches aimed at reducing evictions from both social housing and supported accommodation and ensure adequate access to services.

**B. Meet the complex and unique needs of our customers to prevent rough sleeping and repeat homelessness.**

We aim to minimise the duration and recurrence of rough sleeping, to ensure that where rough sleeping cannot be prevented, it should be brief, rare, and non-recurring. To achieve this, we will enhance our data collection methods to better understand our customers, adopt a housing first approach, explore the feasibility of an assessment centre and develop strategies to support individuals with complex and multiple needs, ultimately breaking the cycle of repeat homelessness.

**C. Develop and improve access to a suitable range of settled, supported and temporary accommodation solutions.**

The strategy focuses on minimising and, in the longer term, ending the use of unsuitable B&B accommodation by exploring alternative options. Through collaborative working efforts we want to develop and strengthen relationships and expand and consider the availability of accommodation options and develop a coordinated approach.

**D. Deliver an effective and efficient and accessible Housing Options service tailored to meet the diverse needs of our customers.**

The strategy will prioritise resources effectively within approved budgets to deliver an efficient housing options service, designed to meet the needs of our customers.

- 2.6 Following an approved consultation period, the updated strategy will be presented to the full council for consideration. This recommendation aligns with Articles of the Constitution, article 4.1 (a) of the full council policy framework, which mandates the review and approval of strategies required by law, ensuring compliance and comprehensive governance.
- 2.7 **Strategy action plan**  
The draft Strategy includes an action plan to tackle key issues identified in the review and the objectives contain “Priorities for action” sit together to form the action plan, attached at Appendix II.

### 3. Recommendations

- 3.1 To approve the draft Preventing Homelessness and Rough Sleeping Strategy, outlined in Appendix I for an 8-week public and stakeholder consultation period.

## Report

### Risk Assessment and Opportunities Appraisal

- 4.1 While it is a statutory duty under the Homelessness Act 2002 to develop and publish a Homelessness Review and Strategy at least every five years, it should be noted that the previous Homelessness Strategy lapsed in 2017. Despite this gap Shropshire Council has remained focussed with various implemented measures and interventions to support individuals experiencing homelessness.

Although these efforts may not have been formally articulated within a strategy document during this period, it's essential to recognise the proactive steps taken by our teams and partners to mitigate the negative impacts of homelessness on individuals, their families, and the wider community.

Moving forward, we are dedicated to ensuring that our approach to homelessness is both robust and formally documented through the development and publication of the upcoming Homelessness Review and Strategy, as mandated by legislation.

- 4.2 The draft “Preventing homelessness and rough sleeping Strategy” serves as a comprehensive policy framework, outlining strategies and initiatives aimed at addressing homelessness and rough sleeping within Shropshire. It enables the council to demonstrate its commitment to addressing these pressing issues and establishes a clear process and policy framework for delivery.
- 4.3 By outlining the advice and assistance that can be provided, the strategy seeks to mitigate risks to the council whilst ensuring effective support for individuals experiencing homelessness or rough sleeping.

- 4.4 The consultation will be conducted through various channels to ensure broad engagement and inclusivity. Firstly, the draft strategy will be publicised on the dedicated consultation page within the Council's website, ensuring accessibility to all interested parties. Furthermore, active engagement will be pursued with key stakeholders, to include those who participate in the Shropshire Homelessness Partnership Forum, the Social Housing Operations Forum and other relevant groups to solicit their valuable insights and perspectives. Moreover, the strategy will be cascaded to head of services across the local authority, ensuring it reaches relevant departments and colleagues across services. Additionally, efforts will be made to reach out to parish councils, recognising their integral role in local governance and community representation. By adopting a multi-faceted approach, the consultation strategy aims to ensure transparency, inclusivity and meaningful participation from diverse stakeholders, including hard to reach groups, thereby ensuring a fair and comprehensive consultation process.
- 4.5 An Equality, Social Inclusion and Health Impact Assessment (ESHIA) initial screening record has been completed; this is at Appendix IV. Following the end of the public consultation on the draft "Preventing homelessness and rough sleeping" strategy, a second screening ESHIA will be carried out, to take into account of feedback received.
- 4.6 Homelessness and poor or insecure housing have adverse effects on the overall health and wellbeing of individuals and communities. Housing inequality will also have an impact on other factors such as income, education, health and wellbeing, life experiences, behaviours and choices, along with relationships with friends and family. There is a likely positive impact accordingly across the nine Protected Characteristic groupings as set out in the Equality Act 2010. This is particularly with regard to Age, Disability and Sex and intersectionality across these groupings.
- 4.7 There will also be anticipated positive impact for women with multiple and complex needs who are struggling to escape domestic abuse situations, and for vulnerable young people, including care leavers, who are homeless or at risk of homelessness and may have also suffered trauma and hardship within their lives, potentially leading to an increased use of alcohol and illegal substances and problems with mental ill health. This grouping may be at risk of exploitation, including involvement in county lines.
- 4.8 The initial screening process ahead of the proposed consultation has also indicated likely low to medium positive impacts for those individuals and households who are considered at risk of social exclusion. In Shropshire, this includes those whom we may regard as being vulnerable, either by virtue of their circumstances as individuals or by virtue of their circumstances as households, for example, households living in fuel poverty and refugee households. In our definition of vulnerable individuals, we would also include people who experience rough sleeping, particularly over a long period. The Council will seek to maximise positive equality impacts for others we may consider to be vulnerable, including people fleeing hate crime and people with disabilities including hidden disabilities such as Crohn's disease, and neurodiverse conditions. Social Inclusion is not an Equality Act category, rather representing our efforts as a Council to consider the needs of households in Shropshire and the circumstances in which they may find themselves.

- 4.9 Being able to access an affordable dwelling which meets a household's needs is essential to health and well-being. Providing a house which is affordable, of good quality and has security of tenure to a family threatened with homelessness allows them to create a home for their children and reduces the worry of a 'no fault' eviction or of being unable to afford an increase in rent; and supported accommodation allows individuals to settle and find structure, enabling them to focus on a journey of recovery and integration back into society. In regard to homelessness, people who experience rough sleeping over a long period are more likely to die young than the general population. Rough sleepers also experience some of the most severe health inequalities. Often rough sleepers also have mental ill health, substance misuse, and physical health needs and may have experienced trauma.
- 4.10 There is therefore an anticipated impact of a fundamental improvement in societal issues through: a reduction in presentations at Accident and Emergency departments; a reduction in accessing services for mental health and substance misuse use; and a reduction in crime and ASB related to rough sleeping, homelessness and the lack of suitable supported accommodation for vulnerable young people and for the adults over 25 whom we are seeking to reach.

## 5. Financial Implications

- 5.1 Approving this draft strategy for an eight-week public and stakeholder consultation has no direct financial implications.
- 5.2 The Council is in receipt of Government funding, including Homelessness Prevention Grant and Rough Sleeper Initiative funding, to support the delivery of services to prevent and relive homelessness.

## 6. Climate Change Appraisal

- 6.1 Whilst the draft strategy is not expected to have any direct effect on energy and fuel consumption, renewable energy generation, carbon offsetting or climate change adaptation, a range of indirect effects may require attention, for example:
- More extreme weather events resulting from climate change are likely to generate a surge in numbers of people suffering displacement and homelessness because of rising costs and ill health.
  - Investment in preventative measures which deliver energy and cost savings (such as those already being managed the Council's Affordable Warmth team) may help to mitigate the impact of climate change for vulnerable households.
  - There may be opportunities to develop community funded renewable energy schemes and sustainable transport options to help reduce energy costs of temporary shelters and fuel costs.

## 7. Background

- 7.1 The Homelessness Act 2002 requires local housing authorities to carry out a review of homelessness every five years and to formulate and publish a strategy based on the results of that review.

7.2 The strategy will involve a targeted consultation approach, identifying key stakeholders, community representations, and experts through open forums, surveys and direct engagements. This inclusive process aims to gather valuable input. Following this, a thorough review will be undertaken, incorporating received feedback to refine the draft strategy, ensuring alignment with community needs. The aim is to present the post-consultation updated strategy to Council for approval in its final draft form.

## 8. Conclusions

8.1 The draft Preventing Homelessness and Rough Sleeping strategy demonstrates the critical importance of early intervention and prevention measures in effectively addressing homelessness and rough sleeping. It requires collaborative efforts with key partners, stakeholders and input from the public. Therefore, we are requesting to initiate a period of public consultation to gather diverse perspectives and insights. We firmly believe that addressing homelessness and rough sleeping is a shared responsibility that necessitates collective action and engagement from all stakeholders.

DRAFT

## Foreword

The Preventing Homelessness and Rough Sleeping Strategy sets out how Shropshire Council and partners will prioritise the prevention of homelessness and ending of rough sleeping in the county, covering the period 2024 to 2029.

The risk of homelessness stems from various structural and personal factors, constraining individuals, and families from achieving resilience and securing a positive future. Without addressing these underlying issues, individuals' risk being trapped in a cycle of homelessness, impacting all aspects of their lives. Homelessness goes beyond just lacking shelter, affecting physical and mental health, educational attainment, employment prospects, and straining personal and familial relationships.

In recent years, the situation with homelessness has faced many changes and challenges, requiring councils and public sector organisations to shoulder additional responsibilities to prevent and ease homelessness. The profound effect of homelessness warrants a collaborative effort with partners and stakeholders to prevent precarious housing situations, such as temporary accommodation, hostels, and B&Bs, and to provide support for individuals on their journey to build their lives.

The introduction of the Homelessness Reduction Act and the Domestic Abuse Act are positive steps for vulnerable groups, this has been set against a backdrop of other challenges, notably, Welfare Reform, Universal Credit, and the Covid-19 pandemic. Whilst we are all recovering from the pandemic, a national cost of living crisis has emerged. These converging factors create a challenging period, and we acknowledge the significant strain they place on individuals' ability to cope, which can increase their vulnerability to homelessness.

This strategy aims to help people as soon as possible and emphasises the importance of getting the right advice and support at the right time, maximising opportunities for early intervention and prevention work. Preventing homelessness is more cost-effective but more importantly delivers far better outcomes for the individuals concerned. The strategy sets out how the council and its partners will respond to these challenges.

Dean Carroll, Portfolio Holder for Growth, Regeneration and Housing

## 1 Introduction

- 1.1 The '*Preventing Homelessness and Rough Sleeping Strategy*' sets out the direction and priorities for Shropshire's homelessness services from 2024 to 2029, with an emphasis of working together in partnership with a wide range of partners and key stakeholders to tackle homelessness and ensure that appropriate accommodation and support solutions can be accessed. We recognise that homelessness and rough sleeping cannot be tackled by the Council alone and requires a partnership approach.
- 1.2 The strategy recognises the unprecedented circumstances presented by the Covid-19 pandemic and how we can be flexible to meet the challenges of similar emergencies in the future. Importantly, the strategy also recognises the opportunities presented by strong partnership working and collaboration to maximise resources and expertise. The success of delivering priorities depends on effective partnerships with organisations and identifying how we can work together across the public, private and voluntary sectors, aiming to make a real difference to reducing homelessness.
- 1.3 Shropshire's rural landscape poses challenges for individuals experiencing homelessness, hindering access to basic necessities such as transportation and support services. The unique rural setting often comes with higher costs and limited resources, particularly for specialist services, especially mental health support, often requiring significant travel distances. This demonstrates the need for tailored approaches to address the complexities of rural homelessness, including ensuring access to essential services and overcoming barriers posed by geographical remoteness and cost constraints.
- 1.4 This strategy has been developed following a detailed review of homelessness and rough sleeping, and the data has shaped the four priorities of the strategy, which were consulted upon with service users, the public, key partners, and stakeholders, through a series of focus groups, one-to-one meetings, and a survey, where valuable feedback has been collected. This input ensures that the strategy aligns with the aims of Shropshire Council and meets the needs of our partners.
- 1.5 To further support this strategy, a detailed action plan will be implemented, designed to flexibly evolve, and adapt in response to local and changing factors.

## 2 Strategic context

- 2.1 The implementation of the Homelessness Reduction Act 2017<sup>1</sup> represents a shift in focus towards prevention and early intervention, with an emphasis on providing better support for single people and joining up services to provide improved support for people, especially those leaving prison/hospital and other groups who have an increased risk of homelessness, such as people fleeing domestic abuse and care leavers.
- 2.2 While the Act introduced new duties and a comprehensive restructure, evidence from the review suggests that while the new approach has been fully embedded by Housing Services, there is still room to enhance the focus on prevention and positive prevention outcomes. We remain committed to delivering the service to a high standard in line with government guidance and good practice, with a continual drive for improvement.
- 2.3 The Homelessness Act 2002 requires that all Local Authorities carry out a review of homelessness in their areas and formulate and publish a strategy based on the findings of this review. It is also required that the strategy is kept under review and consultation occurs with other local or public authorities and voluntary organisations before modifying or adopting a strategy. Detailed in Appendix III, the Homelessness Review 2023 Executive Summary summarises homelessness characteristics in Shropshire from 2020 to 2023, informing the present strategy.
- 2.4 Under the Act<sup>2</sup>, the Homelessness Strategy, based on the results of the review, should consider the following objectives in the local housing authority's area:
- (a) the levels, and likely future levels, of homelessness in their district
  - (b) the activities which are carried out for any the following purposes (or which contribute to achieving any of them):
    - (i) preventing homelessness in the housing authority's district
    - (ii) securing that accommodation is or will be available for people in the district who are or may become homeless; and
    - (iii) providing support for people in the district who are homeless or who may become at risk of homelessness; or who have been homeless and need support to prevent them becoming homeless again; and,
  - (b) the resources available to the housing authority, the social services authority for the district, other public authorities, voluntary organisations and other persons for the activities outlined in (b)
  - (b) above.
- 2.5 The Domestic Abuse Act 2021 amends Part 7 of the Housing Act 1996 to strengthen the support available to victims of domestic abuse. The Act extends

<sup>2</sup> [Homelessness code of guidance for local authorities - Chapter 2: Homelessness strategies and reviews - Guidance - GOV.UK \(www.gov.uk\)](#)

priority need to all eligible victims of domestic abuse who are homeless as a result of being a victim of domestic abuse.

- 2.6 In line with the Council's corporate plan, the Preventing Homelessness and Rough Sleeping Strategy 2024-2029 outlines the key issues concerning homelessness. Homelessness prevention is integral to Shropshire's overall housing approach, prioritising across a range of services. It is intricately linked with the Council's overarching vision and ongoing commitment to its residents.
- 2.7 The Council's vision is that *"All homes are well designed decent homes of high quality, which will protect Shropshire's unique urban and rural environments and ensure it is a great place to live. That all Shropshire residents have access to the 'right home in the right place' to support and promote their health and wellbeing throughout their lives"*<sup>3</sup>
- 2.8 The vision of the Council's [Shropshire Plan 2022-2025](#) is 'Shropshire living the best life', the plan has four priorities:
- Healthy People
  - Healthy Economy
  - Healthy Environment
  - Healthy Organisation
- 2.9 All four of these priorities interlink and reinforce each other to improve the opportunities, wellbeing, and quality of life of our communities from tackling inequality, preventing homelessness to making best use of the Council's resources. Of key importance to this strategy is an objective of the Healthy People priority.

*We will tackle inequalities, including rural inequalities, and poverty in all its forms; providing early support and interventions that reduce risk and enable children, young people, adults, and families to achieve their full potential and enjoy life.*

These areas are inter-linked; employment, a safe and attractive environment, good quality housing, community safety and an active population all play a huge part in achieving a prosperous and thriving local economy, as well as being vital to good health and wellbeing.

---

<sup>3</sup> <https://www.shropshire.gov.uk/media/22599/housing-strategy-2020-2025.pdf>

2.10 This strategy aligns with the Council's various strategic, framework and policy documents.

- [Housing Strategy 2020-2025](#) key priorities align with the introduction of the Homelessness Reduction Act 2017 which encourages local authorities to intervene at an earlier stage to prevent homelessness and to improve the provision of support to anyone who is eligible and homeless, regardless of priority need or intentional homelessness.
- [Allocations Policy and Scheme](#) It sets out the criteria and procedures used to prioritise applicants for housing owned by the Council and homes owned by housing association partners in the county.
- [Shropshire Health and Wellbeing Strategy 2022-2027](#) aims to ensure that everyone, including those with physical and learning disabilities, older people, and people who may identify as lesbian, gay, bisexual, transgender, queer and other (LGBTQ+) at any life stage have equal opportunities for well-lived lives.
- The [Tenancy Strategy](#), as required under the Localism Act 2011, sets out Shropshire Council's expectations to registered providers of social housing (housing associations) when formulating their own housing policies for their own stock relating to the kind of tenancies they grant.
- The adopted [Local Plan](#) <sup>4</sup> and emerging [Shropshire Local Plan](#), 2006-2026
- [Shropshire Safe Accommodation Strategy](#) Shropshire's strategy for domestic abuse safe accommodation, as required by Part 4 of the Domestic Abuse Act 2021.
- [Empty Homes Strategy](#)
- Independent Living and Specialist Accommodation Strategy (*currently subject to an eight-week public consultation*)

### 3 Strategic partnerships

3.1 The Council has established strategic partnerships locally and across Shropshire, taking an active role as both facilitator and member in diverse forums, with a primary commitment to addressing homelessness issues.

- Shropshire Homelessness Forum Group  
Our Homelessness Forum is open to local stakeholder representatives from the statutory and voluntary sectors. The aim of the forum is to actively engage partners on the homelessness review, the strategy development process and implementation, including the monitoring of performance.
- Rough Sleeping Outreach Forum
- Domestic Abuse Local Partnership Board
- Armed Forces Covenant Board
- Mental Health Partnership Board

- Shropshire Safeguarding Community Partnership and associated subgroups.
- ASB Professional Practitioners Group
- Social Task Force
- Hardship & Poverty subgroup
- Health and Wellbeing Board
- Shropshire Independent Place Partnership (ShIPP)
- Early Help Partnership Board
- RESET (The RESET team is made up of Shropshire Council, With You at Shropshire Recovery Partnership, Midlands Partnership Foundation Trust (MPFT), Shropshire Domestic Abuse Service (SDAS), The Shrewsbury Ark, and Intuitive Thinking Skills).
- SSCP Drug and Alcohol Misuse group

## 4 Key achievements

4.1 Following the development of the last Homelessness Strategy there have been several significant achievements in delivering its overall vision and aims, these successes have been achieved through the priority placed on homelessness and prevention, and the continuing work in delivering practical homelessness solutions. Many of which have been delivered through a strong network of successful partnerships and services which have been developed to support those who are either threatened with or experiencing homelessness.

These include:

- Revised allocations policy and scheme with an enhanced emphasis on prevention and tackling homelessness, including the introduction of formal nominations.
- Improved access to family orientated temporary accommodation.
- Recent reductions in the use of bed and breakfast accommodation.
- Rates negotiated with hotels to reduce subsidy loss and overall spend on emergency accommodation.
- Launch of the Homelessness Partnership Forum.
- Maintaining lower levels of rough sleepers through Inreach/outreach work.
- The development of the Ending Rough Sleeping Plan to address rough sleeping, primarily focused on actions aimed at assisting rough sleepers and facilitating their transition off the streets.
- Creation of specialist posts within the housing options team to work with vulnerable customers.
- Armed Forces Champions Point of contact within the service, resulting in improved partnership working with the Armed Forces.
- Shropshire Council has been awarded £1.4m to provide substance misuse treatment and support services for rough sleepers and people at risk of rough

sleeping. The money is part of the Rough Sleepers Drug and Alcohol Treatment Grant provided by the Office of Health Improvement and Disparities (OHID). RESET, a multi-agency team, was launched early 2023 to provide holistic support services for rough sleeping communities.

- Streamlining and monitoring housing support workload to include establishing designated geographical areas for housing support officers to oversee and manage (largely to manage out of area placements).
- Closer partnership working with Adult Social Care and Childrens/Safeguarding to aim that no one slips through the cracks or is overlooked.
- Review of the Homeless Prevention Grant – change has expedited the payment process resulting in more prompt support for individuals in need.
- Development of a pipeline of suitable and sustainable temporary accommodation schemes and dwellings across the county
- Shropshire Council has been awarded £2.134m in capital and £1.32m in revenue funding from the Single Homelessness Accommodation Programme (SHAP) to deliver additional supported accommodation to meet gaps in the homeless pathway for vulnerable single people.

4.2 As there is still more work to do, this strategy is our commitment to further our existing approach to preventing and relieving homelessness, and to focus our efforts on identifying new and innovative ways to respond to the challenges we are likely to face over the coming years.

## 5 Summary of the homelessness review findings

5.1 The review includes data on homelessness levels in Shropshire, the demographics affected by it and the causes leading to homelessness. It considers the challenges faced by households and services, impacting both present and future homelessness levels. Furthermore, it details our approaches to preventing homelessness, securing accommodation, and providing support for homeless households.

5.2 In 2022/2023 3,443 households approached housing options and there has been an 8.5% increase in demand over the last three years. Of the 3,443 households, 2,037 were advice cases, representing 59% of customers approaching the service who are not homeless or threatened with homelessness but rather seeking advice. Over the last three years there has been an average increase of around 2,000 advice cases annually. The number of annual assessments increased by 33% since 2022/2023.

5.3 Of the 1406 homeless applications made to the council in 2022/23, 70% (991) of them were from people who were already homeless (owed the relief duty), meaning the opportunity to prevent had either passed or never existed.

- 5.4 Only 27% (384) of the 1406 homeless applications made to the council were threatened with homelessness (owed the prevention duty), giving the opportunity for prevention work.
- 5.5 Younger people under the age of 35 are experiencing increasing difficulties to secure affordable independent accommodation, particularly when on a low-income, this can be seen across both the private and social housing sectors. This age group accounted for 29.1% of approaches where the main applicant was owed a prevention or relief duty.
- 5.6 This was followed by the 35 to 44 age group, representing 23.7%, and 18 to 24 year olds, accounting for 18.8%.
- 5.7 Single people represented 64% of all customers owed a relief duty. [The strategic housing market assessment](#) report (part 1) has identified that Shropshire's housing stock is characterised by relatively low levels of flats and maisonettes (9.3%) and on- bedroom properties accounting for 7% of all local dwelling stock.
- On the last census day in March 2021, only 28 shared dwellings were recorded in Shropshire, representing just 0.02% of all Shropshire dwellings. This compares with 0.09% nationally and 0.06% regionally.
  - Single households remain the largest group presenting as homeless, making up around 41% of the total, 45% are households with children.
- 5.8 The three main reasons why people present to the housing service have remained consistent over the last three years.
- family no longer willing to accommodate them (26% in 2022/2023)
  - private rented tenancy is ending (20% in 2022/2023)
  - victims of domestic abuse (13% in 2022/2023)
- Approximately 19.5% of individuals approached the local authority for 'other' reasons falling outside of the predefined categories, indicating a variety of unique circumstances not captured.
- 5.9 As well as considering why people present as homeless, the council recognises that households are either losing their tenancies, or unable to access accommodation due to unaddressed support needs. There has been a 35.9% increase in the number of people with support needs presenting to the local authority from 2021 to 2022/2023.
- In 2022/23, 49% of clients had a support need; a total of 1,113 support needs were identified for 676 households, compared with an average of 52% nationally.
- 5.10 There is a lack of appropriate housing options for people with complex or additional support needs, including those with poor mental health, substance misuse and a history of homelessness and rough sleeping. There is a clear correlation between complex support needs and those people repeatedly

presenting as homeless. It is therefore important to secure appropriate accommodation for this group with the right level of support to prevent evictions and repeat presentations.

- 5.11 The most frequently occurring support need is mental health, accounting for 26% of all declared support needs. Other frequently occurring support needs include physical ill health, domestic abuse, and offending history.
- 5.12 There has been a 16% increase in homelessness due to domestic abuse recorded from 2021/22-2022/23. Domestic abuse is a significant reason people present as homeless in Shropshire. The number of people that moved to suitable alternative accommodation when fleeing domestic abuse has reduced by approximately 12.03% between the years 2020/21 and 2022/23. This is due to a lack of readily available affordable housing, resulting in placements into temporary accommodation, which is not a positive solution for families.
- 5.13 There are increasing pressures in the use of temporary accommodation due to the lack of council owed housing stock. This has been exacerbated by the number of people requiring placements increasing since 2019/20, resulting in increased costs to the council.

In 2022/2023

- The average length of stay in bed and breakfasts is 75 days, although the longest period a household spent in a B&B during this time was 425 days.
  - The cost of emergency accommodation was £4,585,513 up from £2,636,494 on the previous year. Expenditure on B&B has increased by 233% over the last four years.
- 5.14 These figures (*below*) demonstrate the dynamic nature of housing placements and highlight the need for ongoing efforts to address homelessness and enhance housing options for vulnerable individuals and families.

<b>Annual placements</b>	<b>2019/20</b>	<b>2020/21</b>	<b>2021/22</b>	<b>2022/23</b>
Households placed in temporary accommodation in each year	504	636	596	633
Households placed in B&B in each year	449	576	553	574

## 6 Shropshire's vision

6.1 Our vision, agreed collectively with our strategic partners and key stakeholders, is to strengthen, sustain, grow and innovate.

***Ending homelessness together with a focus on prevention and empowerment to support people towards sustainable housing solutions.***

6.2 We will achieve this vision by delivering the following strategic objectives, which are set within the context of the Homelessness Reduction Act.

- Develop a community and partnership approach to homeless prevention and early intervention.
- Meet the complex and unique needs of our customers to prevent rough sleeping and repeat homelessness.
- Develop and improve access to a suitable range of settled, supported and temporary accommodation solutions.
- Deliver an efficient, effective, and accessible housing options service tailored to meet the diverse needs of our customers.

## 7 Early intervention and prevention

- Reduce homelessness and mitigate its risk through effective intervention and prevention measures.
- Increase the number of positive outcomes achieved, before they reach the homeless relief stage.
- Enhance the effectiveness of relief interventions to minimise cases moving into the main homeless duty decision stage.

7.1 The homeless review found that 70% of individuals presented in 2022-2023 were already experiencing homelessness, it identified that the window to prevent had either passed or never existed. It highlighted a need to focus on improving the proportion of successful outcomes at the relief stage and reduce the proportion of cases moving to the main duty decision stage.

7.2 We want to ensure that an upstream approach to homeless prevention is embedded within the Housing Options Service, it is essential to integrate proactive measures and strategies that focus on addressing root causes and preventing homelessness before it occurs. This may involve implementing early intervention programmes to provide money advice, budgeting assistance, and debt management guidance. Collaborating with housing associations and the

third sector (community partners, charities, voluntary organisations and social enterprises) is crucial to address systematic issues contributing to homelessness. Additionally, we recognise the importance of embedding housing options into existing drop-in centres or other community spaces to enhance accessibility and support for those in need.

- 7.3 We will ensure that there is regular training for Housing Options staff, equipping them with the tools and techniques on upstream prevention methods to improve knowledge and expertise. Regular evaluations and feedback mechanisms can also help to refine and optimise the effectiveness of the embedded prevention strategies within the service and promote good practice.
- 7.4 We aim to prevent homelessness at the earliest opportunity by increasing awareness of the Housing Options Service and other services available to ensure that there is a buy in across all council services and wider stakeholders including landlords (social and private), criminal justice agencies, police and health services and there is a corporate approach to the prevention of homelessness. We aim to increase the awareness of the help people can expect and how to access it which is essential, to empower partners and customers to access timely help and reduce the number of people who present in crisis. Beyond urban areas, we further extend the visibility of outreach to rural communities, enhancing their understanding and tools to prevent homelessness.
- 7.5 Continuing our commitment to raising awareness, we encourage early engagement with our services, especially for single individuals, maximising opportunities for timely intervention and prevention before they face homelessness. We will identify the key triggers of homelessness and work with partners to ensure that they are equipped to prevent homelessness and/or make seamless referrals where necessary.

#### **Priorities for action**

- 7.6 **To prevent people from becoming homeless, we will work with registered providers and supported accommodation providers to establish new approaches to reduce evictions and assist people to remain in their homes.**

We aim to strengthen relationships with social housing providers in Shropshire, to build improved pathways and promote early intervention to reduce homelessness. In cases where a decision is made not to renew a tenancy or a provider plans to evict a tenant due to tenancy breaches without securing alternative housing, communication from registered providers at the earliest opportunity is a measure increasingly important, due to challenges surrounding anti-social behaviour, affordability, and arrears.

- 7.7 Development of a pre-eviction protocol for supported housing occupants will provide early housing options and advice to tenants to try and prevent homelessness or support a managed move. Alongside the development of a local pre-eviction protocol, social and supported housing providers should be encouraged to sign up to the principles of [Homes for Cathy](#).
- 7.8 We encourage partners to sign up for a nomination agreement, where we agree to work towards greater consistency in the allocation policies to maximise the use of housing stock. We will monitor and review protocols to ensure fair access for vulnerable groups and to develop coordinated pathways with key partners.
- 7.9 **Work with family and friends**
- We will enhance our efforts in pro-active prevention work, collaborating closely with friends and family at the prevention stage and promote planned moves. Shifting towards a model where the council requests reasonable notice from family members creates a window of opportunity for prevention work.
- 7.10 **Customer Service Point of Contact and Prevention toolkit**
- Our approach aims to ensure adequate access to services and increase face to face appointments for customers who would benefit most, including vulnerable customers with complex needs (currently delivered through a virtual delivery model). We are committed to ensuring that information remains up-to-date and accessible with delivery through face-to-face interactions, telephone services, and online platforms. This pro-active approach is designed to mitigate the impact of the cost-of-living crisis and enhance the customer's financial capabilities, facilitating access to education, training and employment opportunities. Furthermore, we will implement measures to support individuals potentially excluded from digital access, particularly those who may not be technically inclined or physically able to attend face to face appointments. We are committed to exploring actions such as self-assessment and self-referral, involving key partners, housing associations, charities, voluntary sectors, and all departments with Shropshire Council to provide necessary support and prevent individuals falling through the gaps in the system.
- 7.11 The current [Housing options and homelessness](#) website and [self-serve advice toolkit](#) provides a wide range of information for customers to be able to take initial steps to prevent themselves from becoming homeless and resolve their own housing situation. We will increase the range of information available via technology in order that they can self-serve, where they have the skills to do so.

**7.12 Expand membership to the Shropshire Homelessness Forum Group and seek commitment from partners to collaborate to prevent homelessness through a homelessness charter.**

We aim to introduce a homelessness charter aimed at making homelessness everyone's responsibility and identifying signs of homelessness to ensure timely referrals, thereby tackling homelessness collectively. We welcome any additional partners to include the police, social services, mental health, substance misuse services, voluntary organisations, charities, and local housing associations - but not exhaustive - to strengthen our commitment to a joined-up approach focused on developing, designing, and implementing solutions to help reduce homelessness.

**7.13 Comprehensive Homelessness Prevention and Housing Options Awareness Campaign.**

We are committed to undertaking a comprehensive awareness raising campaign focusing on homeless prevention. Additionally, our commitment extends to developing a better understanding of rural homelessness and fostering awareness with how to access relevant services, encouraging people to contact the council at the earliest possible stage to maximise opportunities for early intervention and prevention. Through these initiatives, we aim to build a more informed and engaged community to effectively tackle homelessness and ensure accessible housing options for all.

7.14 We will also enhance awareness and utilisation of the Sanctuary scheme, which provides victims of domestic abuse with a secure and safe environment within their own homes by enhancing security measures such as door braces and window locks and thereby preventing homelessness.

7.15 We will also consider the feasibility of developing creative approaches to working earlier with young people in educational settings and young people within the care system to prevent homelessness from occurring in the first place.

**7.16 Increase awareness of Duty to Refer**

Despite a significant increase in the duty to refer in 2022-23, we remain committed to emphasising the importance of duty to refer under legislation to allow for early intervention and prevention in cases, enabling pro-active measures to be implemented to prevent homelessness before it occurs. We want to increase the level of these referrals from public authorities as well as those organisations not subject to the duty to refer.

### 7.17 Explore and identify future government funding opportunities to improve outcomes for homeless households.

We will continue to actively explore funding sources to assist people who are homeless or at risk of homelessness to include rough sleepers, domestic abuse survivors and people affected by the pandemic and the cost-of-living crisis.

- Ensure registered providers of social housing notify when an eviction is planned, or a tenancy is not being renewed when alternative accommodation has not been secured.
- Develop a pre-eviction protocol for supported housing occupants.
- We encourage partners to sign up to a nomination agreement.
- Implement a model where the council requests reasonable notice from family members when approaching the Housing Options service.
- Continue to develop coordinated pathways to accommodation with key partners and monitor and review protocols.
- Enhance access to services and increase face to face appointments. Implement measures to support individuals excluded from digital access. Ensure that information remains up to date and accessible through various delivery methods.
- Increase the range of information available to the customer via technology in order that they can self-serve where they have the skills to do so.
- Expand the membership to the Shropshire Homelessness Forum Group and ensure robust attendance by key partners.
- Undertake a comprehensive homelessness prevention and housing options awareness campaign.
- Increase awareness of Duty to Refer
- Explore and identify government funding opportunities to improve outcomes for homeless households.

## 8 Addressing the complex and unique needs of our customers

- Meet the complex and unique needs of our customers to prevent rough sleeping and repeat homelessness.

8.1 We are committed to meeting the Government's objectives set out in the Rough Sleeping Strategy, which emphasises prevention, intervention, and recovery within a transparent and joined up system. Following the National Rough Sleeping Strategy (2018) and the '*Ending Rough Sleeping for Good*<sup>4</sup> Strategy, published in 2022, the Government sets out its aim to ensure that no one should have to sleep rough.

---

<sup>4</sup> [Ending Rough Sleeping for Good \(publishing.service.gov.uk\)](https://publishing.service.gov.uk)

- 8.2 As a rural county, rough sleeping and homelessness more generally, is often hidden. People who are homeless or in housing difficulty are more likely to try and make temporary arrangements with family and friends, compared with more urban areas with greater provision available. We will ensure that our rural communities are aware of the help and support that is available to people who are at risk of homelessness.
- 8.3 The Homelessness Review identifies that at any one time, there are around 30 to 40 individuals in Shropshire with high levels of support needs and long histories of rough sleeping, often linked to mental health and substance misuse issues. To address this, we will collaborate with key statutory partners to establish a multi-disciplinary team approach aimed at addressing the underlying support needs of these individuals. Additionally, we will develop supported accommodation options tailored to meet their complex needs, including 24/7 supported accommodation and adopt the Housing First model.

#### **Priorities for action**

#### **8.4 Improve data collection.**

We recognise the need to enhance our data collection methods to better understand and address the support needs of individuals experiencing rough sleeping. While the annual rough sleeping count estimate provides a snapshot of rough sleeping prevalence, we acknowledge the necessity for more detailed and ongoing data collection efforts. To achieve this, we will explore adopting a new returner flow model through our outreach team to gather demographic and support needs information. This model focuses on the profile of individuals who experience repeated instances of rough sleeping, often referred to as revolving door cases, following periods of temporary accommodation or support and those people with complex needs. Our aim is to identify underlying factors contributing to their return to rough sleeping and develop clear pathways for both men and women particularly at crisis points where the risk of rough sleeping is heightened, i.e., prison release, hospital discharge and evictions. By implementing this model, outreach teams and service providers can gather more detailed information, enabling a comprehensive understanding of their experiences and needs, thereby facilitating more targeted interventions and improvement of services.

- 8.5 We provide monthly updates on rough sleeping figures to the Department for Levelling Up, Housing and Communities (DLUHC) and will continue to analyse this data, informing adjustments in our service to meet shifting demands effectively.

#### **8.6 Develop Housing First approach.**

For individuals where existing housing and support models have not been able to meet their multiple and complex needs, there is a need to pilot a different

approach. We will adopt a Housing First approach, based upon national best practice as a potential solution to address gaps in supported accommodation provision, with a focus on gaining commitment from key partners that meets the needs of people with multiple and complex needs.

#### **8.7 Explore the feasibility of developing an assessment centre.**

Currently there is a gap in providing a rapid offer of 'off the street' accommodation, with a clear pathway to address immediate needs, so that no-one must spend a second night on the streets as highlighted in the Homeless review. Shropshire has no direct access hostels, meaning individuals cannot access accommodation without a referral. Recognising the critical importance of time limited emergency type provision, we propose establishing an assessment centre. This centre would not only offer a temporary place to stay but also serve as a hub for intensive assessment of individuals' accommodation and support requirements. This comprehensive approach ensures that immediate needs are met, and individuals receive the tailored support necessary for a successful transition from the streets to stable housing.

#### **8.8 Address the issue of revolving doors by developing strategies to support individuals with complex and multiple needs, breaking the cycle of repeat homelessness.**

We recognise a significant gap in support for individuals with complex needs who do not currently fit the current criteria of the RESET team, which primarily focuses on addressing rough sleeping and substance use. To address this issue, we are eager to establish a multi-disciplinary team to work alongside the outreach service. This collaborative approach will offer substantial benefits in meeting the diverse needs of customers facing complex challenges. Additionally, we aim to collaborate with key partners to develop services tailored to homeless families' complex needs. Our goal is to advocate for a multi-agency strategy aimed at engaging the most complex individuals experiencing rough sleeping or at risk of rough sleeping. By adopting a targeted and cohesive approach, we aim to improve health and wellbeing outcomes and prevent intergenerational homelessness.

#### **8.9 Enhancing protocols to protect Rough Sleepers during severe weather.**

We will conduct a review of the Severe Weather Emergency Protocol (SWEP) trigger points and the period of measure to ensure there is sufficient capacity and support available. We will work in collaboration with our key stakeholder partner organisation that work directly with rough sleepers. This collaborative approach ensures that the protocol remains responsive to the evolving needs of individuals experiencing homelessness in our community.

*SWEP is activated in periods of extreme high or low temperatures. SWEP is an emergency response to support people experiencing homelessness, and ultimately prevents loss of life.*

By prioritising the safety and well-being of rough sleepers, we demonstrate our commitment to preventing loss of life on the streets during periods of severe weather and addressing emerging challenges associated with such conditions.

#### **8.10 Evaluation and securing future funding for Rough Sleeping Initiative projects.**

We will assess the impact and outcomes of the Rough Sleeping Initiative (RSI) funded projects, and develop a business case to secure future funding, including a detailed cost benefit analysis.

#### **8.11 Make effective use of clients with lived experience to shape our services.**

We aim to improve services for both clients and staff and to improve engagement.

- Improve data collection and analyse data monthly based on regular outreach.
- Adopt a Housing First model for vulnerable individuals.
- Explore the feasibility of an assessment centre.
- Work in partnership to identify and address revolving door approaches to the service.
- Review the Severe Weather Emergency Protocol for Rough Sleepers (SWEP).
- Evaluate and secure future funding for Rough Sleeping Initiative projects.
- Make effective use of clients with lived experience to shape our services.

### **9 Develop and improve access to a range of suitable accommodation solutions.**

- Procure temporary accommodation at a fair price and drive down costs while achieving value for money.
- Reduce the use of nightly paid options, including B&B short term accommodation.
- Ensure the provision of temporary accommodation is sufficient to manage demand and to meet homelessness duties.
- Empower homeless applicants to find their own accommodation.
- Housing Options for single individuals.
- Deliver a balanced housing market.
- Strengthen partnership working with landlords to ensure private rented housing is a more accessible longer term housing solution.
- Develop a coordinated approach to increase provision of supported housing.

- Deliver new social housing and enable delivery of other affordable housing.

### **Priorities for action**

#### **9.1 We will end the use of unsuitable B&B accommodation by exploring alternative options for the provision of emergency nightly paid accommodation.**

In response to increased demand, the use of B&B provision for temporary accommodation has risen by 28% over the last three years. Moving forward, we aim to use B&B facilities strictly for emergencies only and for no longer than necessary. Our long-term goal is to phase out the use of B&B accommodation altogether. However, recognising the ongoing need for emergency accommodation, we will explore alternative options with the aim of completely ending the reliance on B&B facilities.

#### **9.2 We will explore the extended use of housing association properties to discharge functions under the homeless legislation.**

#### **9.3 Ensure an adequate range of monitoring arrangements, processes and performance management measures are in place to monitor and manage the use of temporary accommodation.**

In response to the high demand of temporary accommodation, our efforts are directed towards reducing the number of households placed in such arrangements and minimising their length of stay, which will improve outcomes for families and optimise resources within the Housing Options team. Continual monitoring of the household composition of those requiring temporary accommodation ensures that supply aligns with demand, while regular reviews identify future need and inform options for delivery arrangements. Additionally, we will explore how low demand or obsolete stock could be repurposed to provide temporary accommodation.

#### **9.4 We will continue to work with social housing landlords to ensure it supports prevention and relief activity and maximise access for homeless households within the allocation scheme when making formal suitable offers.**

#### **9.5 Enhanced move on plans for all households in temporary accommodation**

We will actively work with households in temporary accommodation to continue to review their housing options and plan their move into settled accommodation through individual move on plans, making sure those at risk or without a home get the support they need.

#### **9.6 Introduce weekly meetings to refocus on move-on strategies, ensuring clear priority actions are in place to address barriers. Additionally develop and implement clear, personalised move-on plans for every household in temporary accommodation, including specific actions, timescales, and responsibilities and**

support case officers in identifying suitable options at both relief and main duty stages.

- 9.7 We will consider the package of support needed to facilitate successful move-on arrangements from supported accommodation.

**9.8 Housing Options for single people across the housing sectors**

There is a need to develop a wider range of provision tailored specifically to the needs of single people, particularly those under the age of 35. We will collaborate closely with housing providers, including private landlords and registered social landlords, to expand the availability of suitable accommodation options such as lodgings and house shares. Through collaborative partnerships and targeted initiatives, we are committed to ensuring that single individuals have access to safe, stable and affordable housing solutions, thereby reducing the risk of homelessness and promoting sustainable housing outcomes.

**9.9 Deliver a balanced housing market.**

We will continue to work with Homes England and Registered Providers (housing associations) to secure funding for schemes with an emphasis on social rents. To maximise the benefits of new housing and related funding, we ensure it meets community needs. The Council's emerging [Local Plan](#) specifically DP1, *mandates that sites with five or more dwellings for residential development are expected to provide a mix of dwelling sizes, types and tenures. Additionally, it mandates that at least 25% of open market dwellings must consist of two bedrooms or less.* This influences negotiations and decision-making on site plans. Opportunities will arise to finalise new housing policies and guidance during the local plan review process, ensuring sustainable developments meeting diverse needs.

**9.10 Private rented sector**

In response to the challenges posed by the buoyant rental market and high rent levels compared to restricted local housing allowance rates, as well as substantial upfront payments and guarantor requirements, we recognise the need to enhance accessibility to the private rented sector as a sustainable long-term housing solution.

- 9.11 To address this, we have recently recruited an accommodations pathway officer dedicated to working with known rough sleepers to expand our presence in the private rented sector and building strong relationships with landlords.

- 9.12 Additionally, we will undertake a comprehensive review of potential models for assuming management responsibilities of private sector properties. This review will consider options such as direct council management, lettings arrangements, partnership with social lettings agencies, or leasing agreements. If an appropriate

model is identified, we will explore the feasibility of developing a comprehensive landlord offer to incentivise private sector lettings, with the aim of promoting active engagement and partnership with the private rented sector to enhance access to housing solutions for individuals facing homelessness or housing challenges.

9.13 Furthermore, we will assess how the private rental sector can be used more widely to assist homeless households and those threatened with homelessness. Our aim is to empower individuals to navigate the private rented sector independently and be well-prepared for tenancy agreements. We are committed to exploring innovative approaches to leverage the private rented sector effectively in both homelessness prevention and relief efforts.

9.14 **Develop a coordinated approach to increase provision of supported housing.**

We will conduct a strategic needs assessment of supported housing and develop a supported housing strategy to meet the requirements of the Supported Housing Regulatory Oversight Act of 2023. Through this process, we aim to develop a coordinated approach to increase the provision of supported accommodation and facilitate transitions to meet identified needs.

- We will continue to work with social housing landlords to ensure it supports prevention and relief activity and maximise access for homeless households within the allocation scheme when making formal suitable offers.
- We will explore the extended use of housing association properties to discharge functions under the homeless legislation.
- Introduce weekly meetings to refocus on move-on strategies.
- Facilitate discussions around a range of affordable Housing Options for single individuals, particularly those under 35 years of age.
- We will continue to work with Homes England and Registered Providers to deliver new social housing and enable the delivery of other affordable housing.
- Promote active engagement and partnership within the private rental sector. Undertake a comprehensive review of potential models for assuming management responsibilities of private sector properties.
- Conduct a strategic needs assessment of supported housing and develop a supported housing strategy.

10 **Deliver an effective and efficient Housing Options service.**

- Prioritise resources effectively within the approved budgets to deliver an efficient housing options service designed to meet the needs of our customers.
- Enhance Data Recording Practices

- 10.1 In response to findings from the Homeless Review, which highlighted missed opportunities for prevention work and emphasised the need for a greater focus on relief efforts, particularly considering the reduction in successful relief outcomes observed in 2022-23, we acknowledge the importance of prioritising resources effectively and implementing targeted initiatives.

### **Priorities for action**

#### **10.2 Detailed Operational Service Review**

To ensure a more streamlined customer experience and enhance service delivery, we will commission a detailed operational service review. This review will analyse the customer journey, service delivery model, legal compliance, and resource allocation to maximise prevention efforts while effectively managing demand. By redesigning our systems and processes, we aim to achieve positive prevention and relief outcomes and better support individuals facing homelessness.

#### **10.3 Introduction of Key Performance Indicators (KPIs)**

We will introduce KPIs to measure our performance in delivering the homeless service, highlighting areas of success and areas for improvement. These indicators will inform decision-making and help us prioritise resources effectively to meet the needs of our customers.

#### **10.4 Enhancing Data Recording Practices**

We will enhance data collection to identify individuals at risk of homelessness and design targeted interventions for prevention, accommodation and support. Adopting a reportable format for recording homeless individuals will integrate data into local development plans. Through data analytics, we will gain insights into how homelessness impacts specific demographic groups, including those with mental ill health, those with disabilities, those affected by domestic abuse, those leaving hospital, care leavers, veterans, people with an offending history, and any other disproportionately affected group.

#### **10.5 Review of Staffing Levels and Resources**

A review of staffing levels and resources has been conducted to strengthen our prevention approach. Additional staff have been recruited to reduce caseloads, shorten waiting times for appointments, and improve the accuracy and timeliness of homeless case level information submissions to government. This will ensure that we have the right resources in place to effectively respond to requests for assistance and prevent homelessness in our community.

- 10.6 To enhance our service delivery, we will focus on strengthening training, development, policies and procedures. We are committed to training our staff in

trauma-informed practice approaches, ensuring sensitivity and compassion when working with individuals experiencing homelessness, including rough sleepers and survivors of domestic abuse.

- 10.7 We will put customers at the heart of what we do, where we learn from lived experience and effective handling of complaints to achieve a resolution within our published timescales and implement continuous learning throughout the service.
- 10.8 We are prioritising regular communication with service users, providing updates on their progress and available options, including those in temporary accommodation. We recognise the importance of involving customers in service improvement initiatives and seeking feedback regularly.
- 10.9 We will continue with our open-door approach to listen to the community voice so that qualitative data and feedback can help shape future design but also benchmark our progress in this strategy.
- 10.10 Furthermore, we will ensure that the necessary resources and tools are in place to enhance the delivery of the service. This includes implementing measures such as revised notification letters, fact sheets, updated personal housing plans (PHPs), clear policies and procedures, and joint protocols.

- Commission a detailed operational service review
- Enhance data collection and introduce KPI's.
- Strengthen training, workforce development, policies and procedures.
- Regular communication with service users, including updates on progress and available options.
- Monitor the progression of the Renters (Reform) Bill 2023

## 11 [Monitoring and delivery of the strategy](#)

- 11.1 It is acknowledged that the varied circumstances of homelessness cannot be tackled by one agency or service alone. Therefore, the Council must regularly review the way it delivers services to prevent and tackle homelessness, both directly and in partnership with local agencies. As part of the ongoing review process, we will actively engage with the Shropshire Homelessness Forum group, using the existing partnership framework and expertise of its member agencies.
- 11.2 The Council will continue to strengthen and improve multi-agency responses and engagement with a wide range of partners to ensure delivery of this strategy. Recognising the valuable work undertaken by partner organisations, the council will look to support them where appropriate in funding bids that support delivery of this strategy.

- 11.3 Delivery of the actions outlined in Appendix ii to this document will be monitored through quarterly reviews. It is expected that some of the actions may evolve over the lifetime of the strategy, and any such changes agreed by the review group and reported to the management team before being incorporated into the action plan. Regular updates on delivery of the Homelessness Strategy Action Plan will be provided to elected Members, senior and corporate management teams, and other relevant boards and committees. The action plan will undergo quarterly monitoring and annual review to ensure responsiveness to emerging needs, policy and legislative changes, and achievements of contained priorities.

## 12 Acknowledgements

- 12.1 Shropshire Council would like to acknowledge and thank all service users and organisations that have contributed to the Homelessness Review and development of the Homelessness Strategy by assisting in the completion of questionnaires as well as providing valuable input throughout the consultation process.

Appendix II: Action Plan

<b>Develop a partnership approach to homeless early intervention and prevention</b>			
<b>Priority for action</b>	<b>Timescale</b>	<b>Outcome</b>	<b>Responsible service</b>
Ensure registered providers of social housing (housing associations) notify when an eviction is planned, or a tenancy is not being renewed when alternative accommodation has not been secured. ### Introduction

#### Background

The Homelessness Act 2002 requires every local authority to carry out a review of homelessness every five years, to develop and publish a homelessness and rough sleeping strategy based on this review, and to consult with other local statutory and voluntary organisations. Tackling homelessness and rough sleeping is a key priority for Shropshire Council and its partner organisations. The comprehensive homelessness review will provide a sound evidence base to inform the authority's homelessness strategy. The homelessness review will provide a basis for a strategic approach to preventing homelessness and provide the services to support and accommodate those in housing need. This executive summary provides an outline of the main findings of the review, an analysis of future trends and identifies key issues for the strategy to address.

#### Shropshire's Approach

Whilst Shropshire Council as part of its statutory duty has produced this document, it is not simply a review of the services provided by the Council. There are multiple and complex issues that can cause homelessness, therefore in compiling this review, Homeless Link together with the Council has worked closely with a variety of other statutory and voluntary agencies to gain a detailed understanding of homelessness across Shropshire. The review is a multi-agency document, which recognises that partnership working is key to preventing homelessness and developing sustainable housing and support solutions.

#### Methodology

The homelessness review is required to cover an analysis of the past, current, and future levels of homelessness, an audit of the services aimed at preventing, accommodating, and supporting people who are or may experience homelessness, and a review of the resources available to spend on homelessness within the district. The review process has drawn upon a wide range of sources – including homelessness statistics, H-CLIC data, outreach data, and a series of consultation exercises. There are many complex issues that can give rise to homelessness, therefore, in compiling this review, the Council has worked closely with a variety of other statutory and voluntary agencies. Consultation with staff, partners, and customers was critical to the review process, and will continue to inform the development of the strategy and improvements to existing Council services. We have consulted extensively with service users and stakeholders through a range of methods to ensure that the review directly

reflects the experiences of those who have experiences of homelessness and those working in the sector.

### Homelessness in Figures

<p>In 2022/23, there were</p> <p><b>3,443</b></p> <p>approaches to the housing solutions service</p>	<p>In 2022/23, there were</p> <p><b>1,400</b></p> <p>homelessness duties owed</p>	<p>Family and friends is given as the main cause of homelessness, accounting for</p> <p><b>26%</b></p> <p>of cases</p>
<p>In the last year, there has been a</p> <p><b>33%</b></p> <p>increase in homelessness assessments</p>	<p><b>Mental Health</b></p> <p>is the most prevalent support need</p>	<p><b>676</b></p> <p>households had a support need</p>
<p><b>56%</b></p> <p>of those owed a homelessness duty are single</p>	<p><b>43%</b></p> <p>had their homelessness successfully prevented</p>	<p><b>18%</b></p> <p>had their homelessness successfully relieved</p>
<p>In 2022/23,</p> <p><b>633</b></p> <p>households were placed in temporary accommodation</p>	<p>Over the last 4 years, there has been a</p> <p><b>161%</b></p> <p>increase in rough sleeping</p>	<p>There are <b>6,259</b> households on the housing register accommodation, of which <b>51%</b> have a need for one bedroom accommodation</p>

### Demand on the Housing Options Service

- In 2022/23 there were 3,443 approaches to the housing options service; there has been an 8.5% increase in demand over the last three years.
- Just over 2,000 of these approaches were for advice and assistance only; the remaining 1,400 cases were experiencing homelessness or threatened with homelessness within 56 days.
- Caseloads are very high, which impacts upon the number of successful prevention and relief outcomes that the team is able to achieve.
- The number of homelessness assessments has increased by 33% in the last year.
- In 2022/23, 1,375 homeless duties were owed to households who were either experiencing homelessness or threatened with homelessness.

**Recommendation:** Consideration should be given as to how demand can be more effectively managed, and resources focused on cases where there is a threat of homelessness.

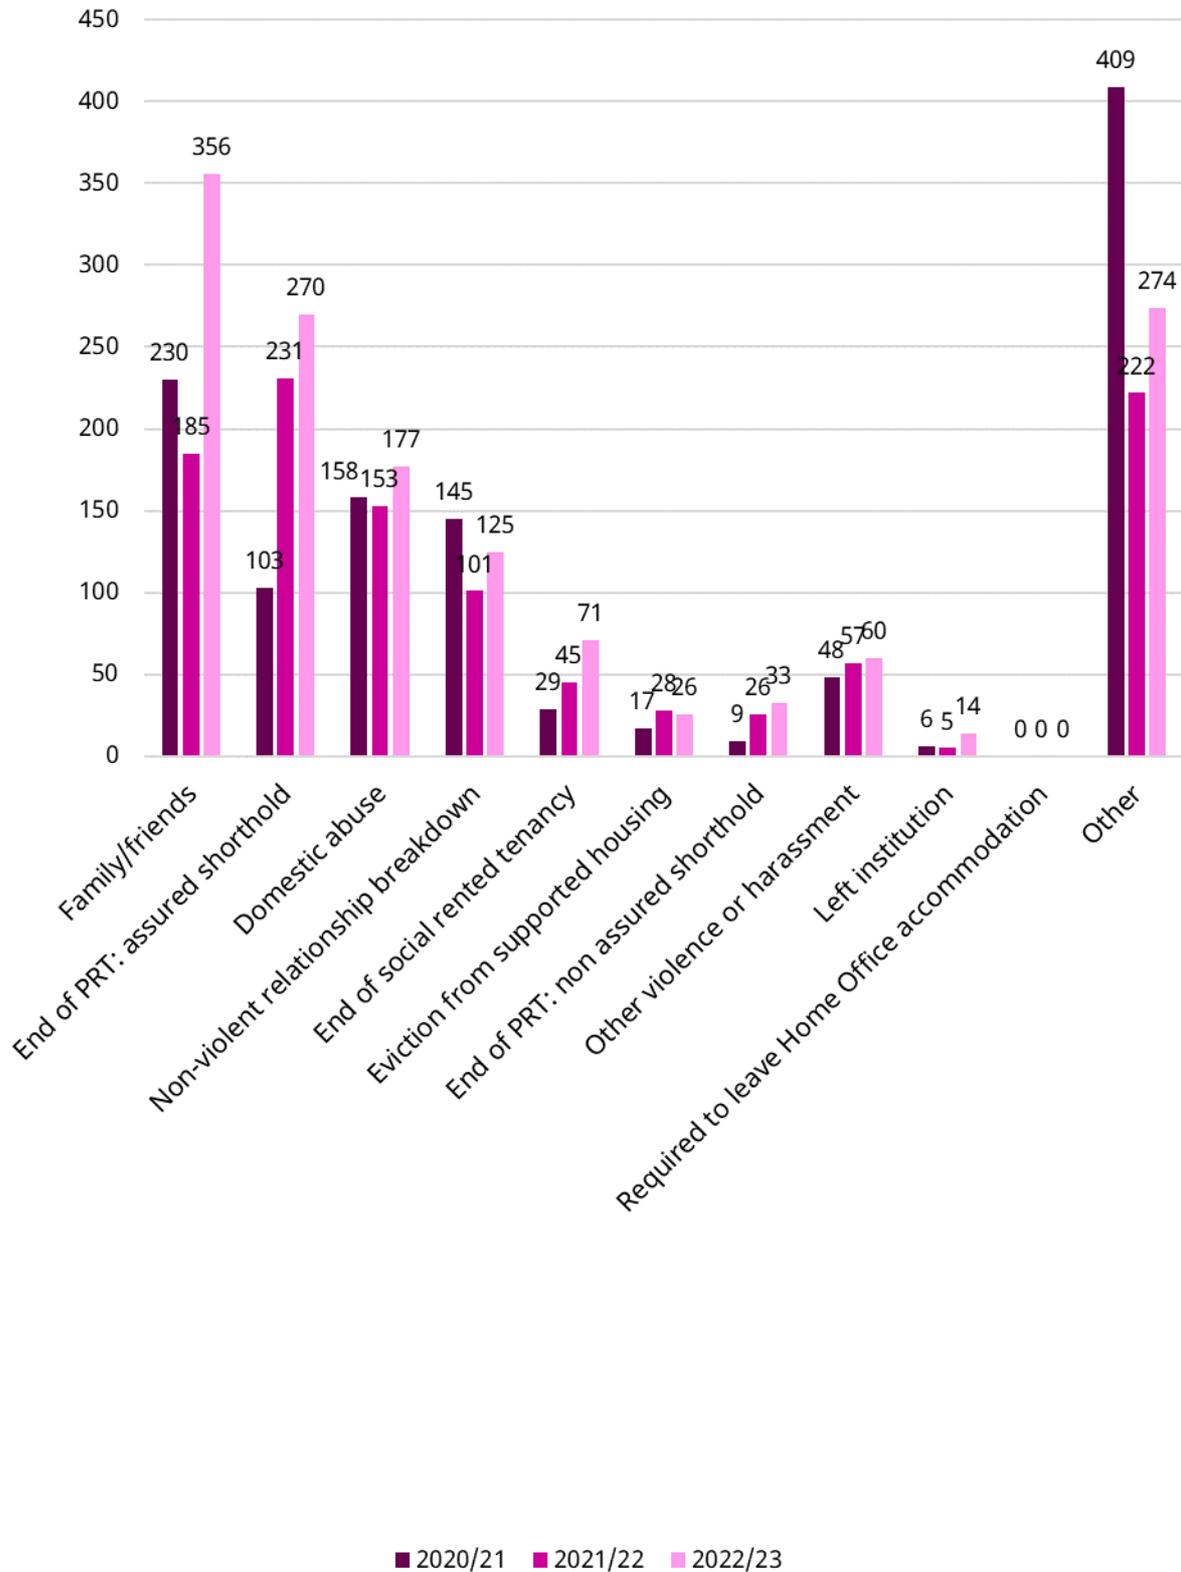

### Profile of Homelessness

- Of those owed a duty in 2022/23, a higher percentage of clients were owed a relief duty (70%) than a prevention duty (27%), suggesting that work may need to be done to encourage clients to access the service earlier to enable opportunities for prevention to be maximised.
- In total, singles account for 56% of all households owed a prevention or relief duty.
- In 2022/23, people aged 18-34 years accounted for 48% of all customers owed a duty.
- White households account for 90% of those owed a duty, and ethnicity is not known for a significant number of households each year. Moving forward, it will be essential to improve data capture in this area to have an improved understanding.
- In 2022/23, 49% of clients had a support need; a total of 1,113 support needs were identified for 676 households.
- The most frequently occurring support need is mental health, accounting for 26% of all declared support needs. Other frequently occurring support needs include physical ill health, domestic abuse, and offending history.

**Recommendation:** There is a need to raise awareness of the service with customers and partner agencies to encourage clients to access the service at an earlier point in order for opportunities for early intervention and homelessness prevention to be maximised.

## Reasons for Experiencing Homelessness

Figure 1: Reasons for Homelessness

The main reason for experiencing homelessness in 2022/23 was due to family/friends no longer willing to accommodate accounting for 26% of all cases, followed by end of private rented accommodation (20%), domestic abuse (13%), and relationship breakdown (9%).

The number of social housing evictions has increased over the last three years, accounting for 15% of all cases in 2022/23.

### **Recommendations:**

- There is a need to ensure that there is a range of prevention tools in place targeted at the main causes of homelessness.
- Close work is required with the main social housing providers in Shropshire to reduce homelessness from social housing.

### **Prevention and Relief Outcomes**

- Homelessness was successfully prevented for 43% of households threatened with homelessness, which is below the national average of 53%.
- Homelessness was successfully relieved for 18% of households who were experiencing homelessness, which is below the national average of 36.2%.
- The service is more successful at helping households to secure alternative accommodation (80%) than enabling them to remain in their existing accommodation (20%).
- The majority of prevention and relief outcomes were achieved by accessing social housing. There was some success in accessing private rented accommodation.
- It is of note that in 2021/22, of the 185 cases of family eviction, 168 of these customers were owed a relief duty and only 17 were owed a prevention duty.
- There is a need to try and work with these households at a prevention stage to focus on pro-active prevention work and planned moves. Moving to an approach where the council asks family members to give reasonable notice is likely to create a window of opportunity for prevention work to take place.
- There is a heavy reliance on social housing when preventing and relieving homelessness.

### **Recommendations:**

- There needs to be an increased focus on helping people to maintain their existing accommodation.
- There is a need to have more focused approach to preventing homelessness due to family and friends evicting.

- The council needs to make better use of the private rented sector for preventing and relieving homelessness.

### Main Duty Decisions

- In 2022/23, of the original 1,035 households owed a prevention or relief duty, 48% of households went on to have a main duty decision, and 35% a main duty owed (s193 duty). This is significantly above the national average.
- Households with dependent children make up the largest priority need group, followed by vulnerability due to mental health, physical health, and fleeing domestic abuse.
- In 2022/23, there were 274 offers of social housing to bring the main housing duty (s193 duty) to an end, this compares with 51 offers of social housing to end the prevention duty and 59 offers of social housing to end the relief duty.
- While it is acknowledged that the focus of the service has been about moving households on from temporary accommodation, consideration needs to be given as to how households can be offered social housing as a successful prevention or relief option, reducing the demand on temporary accommodation, and providing improved customer outcomes, and reducing the pressure on the team.

### Recommendations:

- There may be an opportunity to increase the use of private rented accommodation to enable the council to successfully discharge its duty and move households out of temporary accommodation.
- Consideration needs to be given as to how social housing can be used to prevent and relieve homelessness, reducing the pressure on temporary accommodation.

### Rough Sleeping

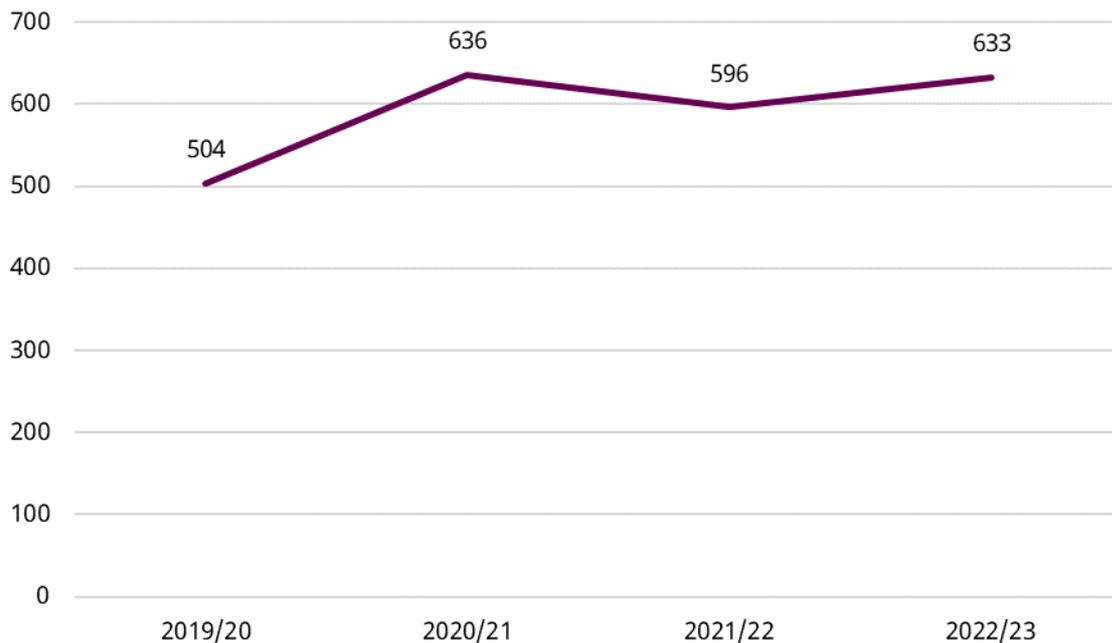

- The numbers of people experiencing sleeping rough has remained at a significant level, and only once dipped below ten. In the last five years the numbers of individuals experiencing rough sleeping has ranged between 16 – 23 households.
- The majority of people experiencing rough sleeping are found in Shrewsbury.
- There has been an increase in rough sleeping over the last ten years.
- There are an average of 21 new individuals experiencing rough sleeping each month.
- There is a significant number of revolving door cases. These individuals have complex and/or multiple needs and are stuck in a cycle of repeat homelessness. At any one-time, Shropshire has a cohort of around 30 to 40 adults with high levels of support needs and long or cyclical histories of experiencing sleeping rough.
- The scale of hidden homelessness across Shropshire is not fully understood but is thought to be a significant issue, particularly in rural areas.

**Recommendations:**

- In order to prevent rough sleeping in the first place, there is a need for an improved understanding of the causes of rough sleeping in order to ensure targeted prevention interventions are in place. There is also a need to improve data capture in relation to rough sleeping to inform future service development and interventions.
- There is a need to develop off the street accommodation, and a clear accommodation pathway, including safe accommodation for women.
- The development of a multi-disciplinary team would provide a joined-up approach to working with those with complex needs, alongside a multi-agency complex needs group to ensure a joined-up approach to working with individuals with the most entrenched experience of rough sleeping.

**Temporary Accommodation**

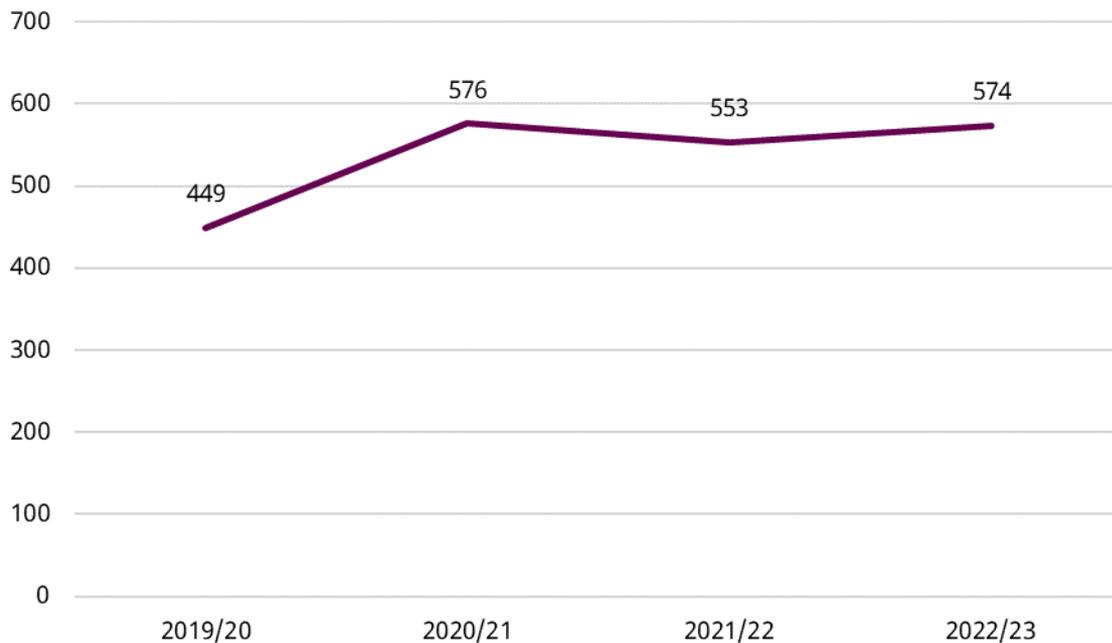

**Figure 2: Households Placed in Temporary Accommodation in Each Year**

Source: Shropshire Council

The total number of annual placements shows that placements increased in 2022/23 compared with the previous year, and the placement numbers were very close to the peak in 2020/21. This is likely to be linked to the increased number of presentations and reduced prevention outcomes being achieved.

**Figure 3: Households Placed in B&Bs Each Year**

Source: Shropshire Council

- The data demonstrates that there is a heavy reliance on bed and breakfast accommodation, suggesting that there is currently an insufficient supply of suitable temporary accommodation.
- The average length of stay in bed and breakfasts is 75 days, although the longest period a household spent in a B&B during this time was 425 days.
- Expenditure on B&B has increased by 233% over the last four years.

**Recommendations:**

- There is a need for an increased focus on move on from temporary accommodation.
- There is a need to ensure that there is a sufficient supply of temporary accommodation, of the right type and in the right place. This will be essential to avoid the high use of bed and breakfasts.

### Homelessness Prevention and Support Services

#### Housing Options Service

- The demand on the housing options service, operational practice, and available resources has meant that the service has become largely reactive, with limited opportunities for early intervention and prevention.
- An increasing number of customers contact the service when they are already experiencing homelessness, or an experience of homelessness is imminent. Where customers do present when threatened with homelessness, limited capacity within the team means that prevention and early intervention work can be limited.
- The service is seeing an increased complexity of need amongst customers.
- There are challenges associated in delivering the service over such a large rural area, both in terms of accessibility, staff time taken when travelling to undertake home visits, and the ability to find affordable housing solutions in the areas where clients have connections, including employment and schooling.

#### Recommendations:

- A more detailed operational review of the housing solutions service would help to understand what resources are needed to manage demand and how improved customer outcomes can be achieved.
- There is a need to undertake a detailed review of the current customer journey with a view to redesign the journey to ensure a streamlined customer experience, whereby customers do not need to repeat their story, and ensuring the best use of resources by removing duplication and hand offs, while effectively managing demand, and having an increased focus on homelessness prevention.
- There is a need for an enhanced focus on prevention and early intervention, including enabling clients to retain their existing accommodation.
- Given the increasing number of social housing evictions there is a need to develop a local pre-eviction protocol, social and supported housing providers should be encouraged to sign up to the principles of Homes for Cathy.
- There is a need to ensure that prevention tools are targeted at the main causes of homelessness.
- There is a need to update the website to increase the amount of information and advice available to customers, increasing the amount of self-help information available and potentially reducing the demand from advice only cases.

### Other Services

There are a wide range of services across Shropshire that provide a wide range of advice and services. Predicated increases in homelessness linked to the cost of living are likely to place increased pressure on many of these services.

### Settled and Supported Accommodation

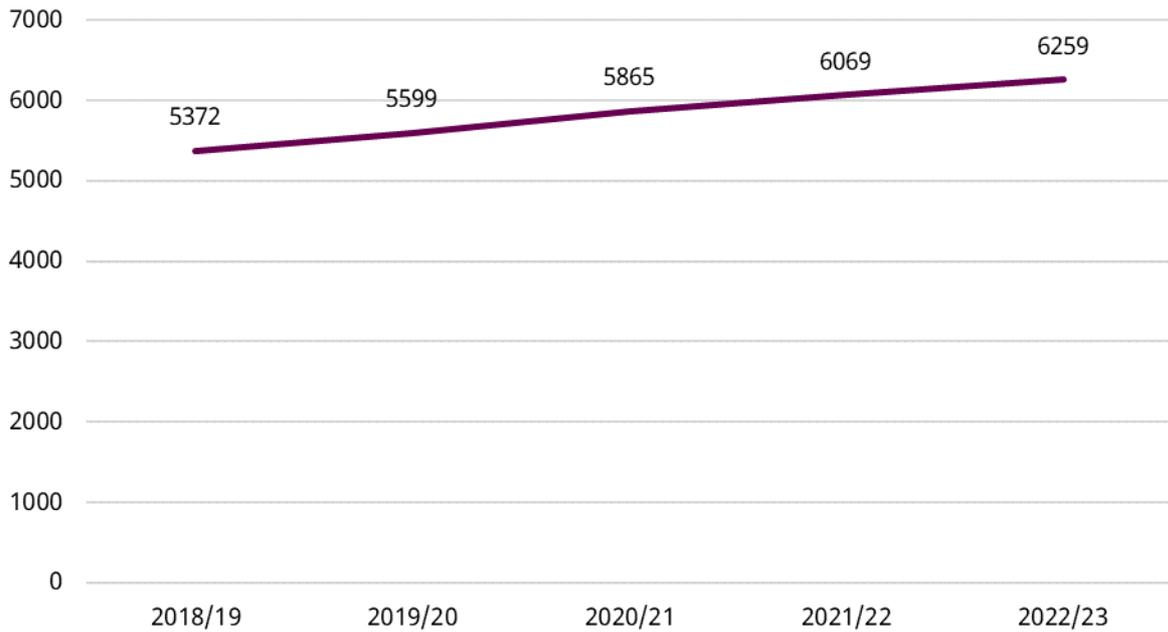

#### Supported Accommodation

- There is a gap in provision for meeting the accommodation and support needs of the most complex clients with multiple needs.
- There is a gap in the provision of supported accommodation for women.
- There is a need to develop supported accommodation provision for young people with complex and multiple needs.
- Housing first is a potential solution to meeting this gap but will require a commitment from a range of key partners to ensure its success.

#### Social Housing

- There is a total of just under 20,000 units of social housing, of which 20% are owned and managed by the council. There are 16,432 general needs units, of which 41% are three-bedroom properties and 39% is two bedroom accommodation.
- In March 2023, there were 6,259 households on the housing register, the number of households on the register has increased by 16.5% over the last five years. The greatest demand is for one bedroom accommodation, accounting for 51% of all applicants, followed by two-bedroom accommodation (30%) and three-bedroom accommodation (16%).

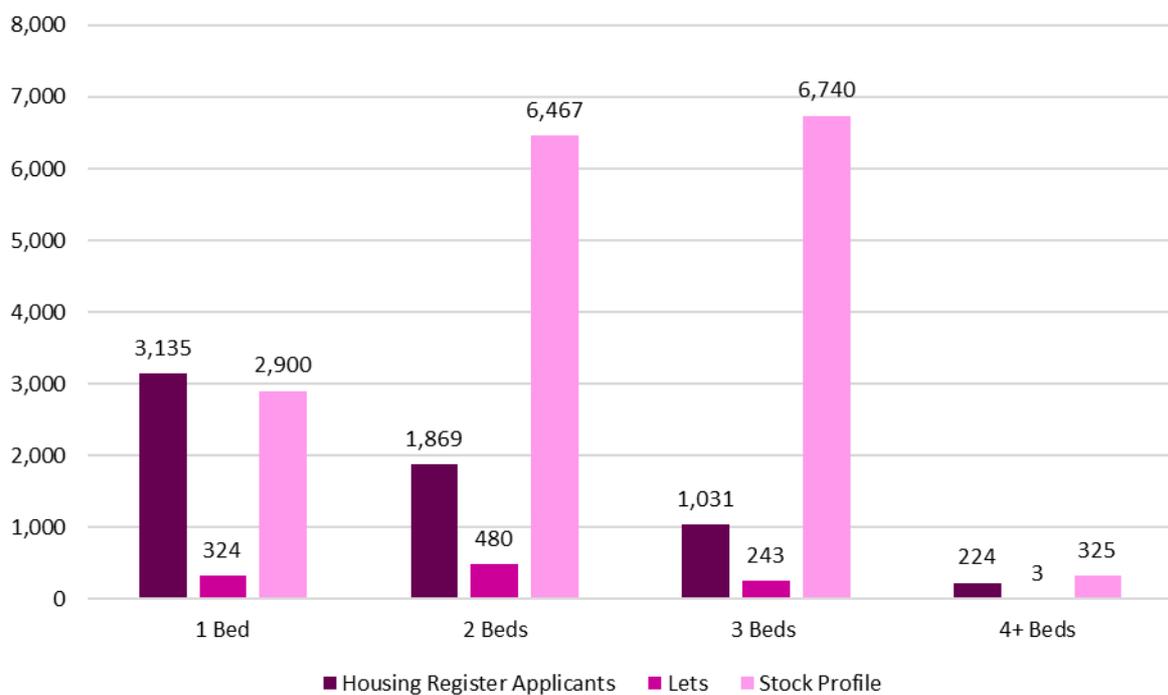

#### Figure 4: Number of Applicants on the Housing Register

Source: Shropshire Council

In 2022/23, there were 1,050 social housing lets, this represents a reduction in lets of 25.5% over the last five years. Demand exceeds supply for all property types; however, the greatest unmet need is in relation to one bedroom accommodation.

Figure 5: Comparison of Applicants, Stocks, and Lets 2022/23

Source: Shropshire Council

In total, 6.54% of the total social housing stock became void in 2022/23.

Shropshire Council do not routinely record the size of new housing completions, it is recommended that this is recorded moving forward to ensure that completions can be monitored in line with identified need.

**Recommendations:** Given the very high demand for one bedroom accommodation on the housing register, the number of new one bedroom properties being developed needs to increase or the re-designation of existing stock considered if demand is to be met.

### Private Rented Sector

The private rented sector is largely unaffordable with market rents in most areas being higher than local housing allowance. There is a need for the Council to make better use of the private rented sector to meet the needs of Housing Solutions customers.

#### Recommendations:

- A comprehensive landlord offer needs to be developed to increase access, and as part of this the Council may wish to explore leasing schemes and the development of social lettings agency, this could be explored on a sub-regional basis.
- There is a need to develop a greater range of options and provision for single people specifically for people under the age of 35.

### The Needs of Specific Client Groups

- Of all housing solutions customers who had a self-identified support need, 26% of these had a support need in relation to their mental health.
- Stakeholders identified mental health as a re-occurring issue, with a lack of supported housing provision for clients with very high and complex needs including dual diagnosis. There was a view amongst partners that many people were not getting access to mental health services and support at the point at which they need them.
- A third of housing solutions customers with a support need had a support need in relation to their physical health.
- There has been an ongoing annual reduction in the number of clients seen by the housing solutions team who have a support need in relation to a learning disability, the reasons for this are not clear.
- Young people are over-represented in the homeless population in Shropshire when compared with the population data.
- There is a gap in the provision of supported accommodation for young people with the most complex support needs.
- The service has seen an increase in the number of people who are experiencing homelessness and have a support need in relation to their older age.
- Domestic abuse was one of the main causes of homelessness in Shropshire. There will be a need to ensure that there is a range of options available to meet this increasing need.
- Homelessness amongst single people is an increasing issue, with limited affordable housing options available in the area.

- There is an increase in the complexity of issues that homeless households, both singles and families, are presenting with, and challenges in finding appropriate and sustainable solutions for these households.
- There has been an increase of 79% over the last three years in the number of customers presenting as experiencing homelessness with a support need linked to offending.
- The number of clients who are experiencing homelessness with a support need in relation to substance misuse has increased over the last three years.
- There is a need to ask the 'veteran question' to ensure that veterans can be identified in order to be able to signpost them to the wide range of help and support available to veterans and their families.
- There is no data captured to identify clients from the LGBTQ+ community by the housing solutions service.
- Ethnicity is not currently accurately captured during homelessness assessments, data capture in this area needs to improve.
- Homelessness amongst home owners has slowly begun to increase.
- Homelessness from Ukrainian guests is likely to increase, however, this client group is more likely to have their homelessness successfully relieved or prevented by accessing private rented accommodation, when compared with other customer groups.

### **The Views of Staff, Stakeholders, and Customers**

Consultation was a central component of the review, and a summary of the views of staff, stakeholders, and customers are detailed below.

#### **Views of Staff**

- Members of the housing options team feel there is a need for an enhanced focus on prevention and a need to review the customer journey.
- There is good working between the housing options service and partner agencies, with many partner agencies viewing the service positively; although it is evident that there is room for improvement in joint working arrangements with some partner agencies.

#### **Views of Stakeholders**

- Partner agencies raised concern in both their ability and that of customers to be able to access the housing options service, including challenges in accessing via the telephone line, and receiving updates.

## Homeless Link

- Partner agencies identified the need to focus more on prevention and early intervention, with the need for a more pro-active approach, alongside the need to raise awareness of the help available.
- The need for increased access to money advice and assistance with budgeting was identified.
- The issue of the lack of appropriate accommodation and support for the most complex customers was a re-occurring theme throughout consultation, including people experiencing rough sleeping.
- The need for more suitable temporary accommodation and support was a recurring theme identified through consultation.
- Stakeholders identified the need for a multi-disciplinary team to respond to homelessness, including housing, social care, substance misuse, and mental health.
- Stakeholders identified that the profile and needs of people experiencing rough sleeping and those with complex needs is not fully understood.
- Partner agencies identified the need for a return to face-to-face appointments, especially for vulnerable customer and those with complex needs.
- Partners suggested a multi-agency advice hub as a way to ensure customers can get a range of advice across the county.
- An action focused complex case group is needed to find solutions for the most complex cases.

### Views of Customers

- A number of customers didn't know who to initially approach for help with their homelessness and their feedback also indicated that opportunities for prevention were being missed by the housing options team.
- Customers indicated that they felt they needed more regular contact from the housing options team, and more information was needed in relation to temporary accommodation including an information pack.
- Customers felt that more support was required to both prevent homelessness and while in temporary accommodation.
- Customer responses indicated the need to raise awareness of the service, so that people know where to go to access help.
- Feedback from customers was very positive in relation to the quality of temporary accommodation, but less so in relation to support.

### Resources

- Expenditure on temporary accommodation and B&Bs has increased significantly.
- The service is heavily reliant on grant funding for funding a wide range of services; the impact of reductions in this funding would result in increased levels of

homelessness and rough sleeping and the associated costs to the council. A risk matrix would help to better understand this impact.

- Financial support from the government through the homelessness prevention grant has an uncertain future and the potential for further pressure on council budgets should this funding be reduced or cease.
- The cost of living crisis, increasing interest rates, and changes to the private rented sector are likely to lead to increased homelessness levels at a time when future public funding seems precarious. Investment in homelessness prevention is essential if the impact of this on homelessness levels is to be mitigated.

### Future Levels of Homelessness

- Broader pressures within the wider housing market, anticipated changes to private rented sector tenancies, the cost-of-living crisis, increasing mortgage rates, and pressure around accommodating refugees indicates that demand for homelessness services will continue to rise for the foreseeable future.
- In order to recover from the impact of the pandemic, there is the need for more supported accommodation provision in line with identified need.
- In order to mitigate the impact of changes to the private rented sector, the council with its partners should consider the development of a competitive landlord offer, including exploring opportunities for a leasing or purchasing scheme.
- To mitigate increases in homelessness associated with the cost of living there is a need for an awareness raising campaign of the help available, alongside access to timely money advice.
- There will be a need to develop a range of housing options for Ukrainian guests and other refugee households.
- In preparation for further increases in the demand for temporary accommodation the council should enter into dialogue with social housing providers to identify additional units that can be used as temporary accommodation.
- The council will need to ensure that there are adequate resources in place to meet any increased demand and should monitor data regularly to identify increases and causes.

### Homelessness Strategy Development

Following this review, the Council will produce and publish a homelessness and rough sleeping strategy. This will ensure a strategic approach to tackling homelessness and rough sleeping across Shropshire, ensuring that local solutions can be developed to meet the needs of its community. Shropshire's Homelessness Forum will be fundamental to the development of this strategy, and the implementation and monitoring of the targets agreed within the action plan.

The strategy must reflect the joint approach by agencies to tackle and prevent homelessness in the borough, and therefore it is appropriate that a multi-agency approach is taken to:

- Agreeing priorities.
- Identifying key actions.
- Agreeing an action plan.
- Jointly delivering the action plan.

The Council is committed to working with its partners to preventing homelessness and ending rough sleeping across Shropshire.

### Recommendations

No.	Section	Recommendation
1	<b>Demand on the housing options service</b>	Consideration should be given as to how demand can be more effectively managed, and resources focused on cases where there is a threat of homelessness.
2	<b>Profile of homelessness</b>	There is a need to raise awareness of the service with customers and partner agencies to encourage clients to access the service at an earlier point in order for opportunities for early intervention and homeless prevention to be maximised.
3	<b>Reasons for experiencing homelessness</b>	There is a need to ensure that there is a range of prevention tools in place targeted at the main causes of homelessness.
4		Close work is required with the main social housing providers in Shropshire to reduce homelessness from social housing.
5	<b>Prevention and relief outcomes</b>	There needs to be an increased focus on helping people to maintain their existing accommodation.
6		There is a need to have more focused approach to preventing homelessness due to family and friends evicting.
7		The Council needs to make better use of the private rented sector for preventing and relieving homelessness.
8	<b>Main duty decisions</b>	There may be an opportunity to increase the use of private rented accommodation to enable the Council to successfully discharge its duty and move households out of temporary accommodation.
9		Consideration needs to be given as to how social housing can be used to prevent and relieve homelessness, reducing the pressure on temporary accommodation.
10	<b>Rough sleeping</b>	In order to prevent rough sleeping in the first place, there is a need for an improved understanding of the causes of rough sleeping in order to ensure targeted prevention

		interventions are in place. There is also a need to improve data capture in relation to rough sleeping to inform future service development and interventions.
11		There is a need to develop off the street accommodation, and a clear accommodation pathway, including safe accommodation for women.
12		The development of a multi-disciplinary team would provide a joined-up approach to working with those with complex needs, alongside a multi-agency complex needs group to ensure a joined-up approach to working with individuals with the most entrenched experience of rough sleeping.
13	<b>Temporary accommodation</b>	There is a need for an increased focus on move on from temporary accommodation.
14		There is a need to ensure that there is a sufficient supply of temporary accommodation, of the right type and in the right place. This will be essential to avoid the high use of B&B.
15	<b>Housing options service</b>	A more detailed operational review of the housing solutions service would help to understand what resources are needed to manage demand and how improved customer outcomes can be achieved.
16		There is a need to undertake a detailed review of the current customer journey with a view to redesign the journey to ensure a streamlined customer experience, whereby customers do not need to repeat their story, and ensuring the best use of resources by removing duplication and hand offs, while effectively managing demand, and having an increased focus on homeless prevention.
17		There is a need for an enhanced focus on prevention and early intervention, including enabling clients to retain their existing accommodation.
18		Given the increasing number of social housing evictions there is a need to develop a local pre-eviction protocol, social and supported housing providers should be encouraged to sign up to the principles of Homes for Cathy.
19		There is a need to ensure that prevention tools are targeted at the main causes of homelessness.
20		There is a need to update the website to increase the amount of information and advice available to customers increasing the amount of self-help information available and potentially reducing the demand from advice only cases.
21		<b>Supported accommodation</b>

22	<b>Social Housing</b>	Given the very high demand for one bedroom accommodation on the housing register, the number of new one bedroom properties being developed needs to increase or the re-designation of existing stock considered if demand is to be met.
----	-----------------------	---

### About Homeless Link

Homeless Link is the national membership charity for organisations working with people experiencing or at risk of homelessness In England. We aim to develop, inspire, support, and sustain a movement of organisations working together to achieve positive futures for people who are homeless or vulnerably housed.

Representing over 900 organisations across England, we are in a unique position to see both the scale and nature of the tragedy of homelessness. We see the data gaps; the national policy barriers; the constraints of both funding and expertise; the system blocks and attitudinal obstacles. But crucially, we also see – and are instrumental in developing – the positive practice and ‘what works’ solutions.

As an organisation we believe that things can and should be better: not because we are naïve or cut off from reality, but because we have seen and experienced radical positive change in the way systems and services are delivered – and that gives us hope for a different future.

We support our members through research, guidance, and learning, and to promote policy change that will ensure everyone has a place to call home and the support they need to keep it.

### What We Do

Homeless Link is the national membership charity for frontline homelessness services. We work to improve services through research, guidance and learning, and campaign for policy change that will ensure everyone has a place to call home and the support they need to keep it.

## Appendix IV: Equality, Social, Health Impact Assessment

### Initial Screening Record

#### A. Summary Sheet on Accountability and Actions

<b>Name of proposed service change</b>
Draft Preventing Homelessness and Rough Sleeping Strategy

<b>Name of lead officer carrying out the screening</b>
Tami Sabanovic, Housing Strategy and Development Officer

#### **Decision, review, and monitoring**

Decision	Yes	No
Initial (part one) ESHIA Only?	✓	
Proceed to Full ESHIA or HIA (part two) Report?		✓

***If completion of an initial or Part One assessment is an appropriate and proportionate action at this stage, please use the boxes above. If a Full or Part Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.***

<b>Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality, social inclusion, and health considerations</b>
We have a strong commitment to promoting equality, tackling disadvantage and improving the life chances of our residents. We are aware that many factors combine to cause and contribute to homelessness in Shropshire. We are also aware that homelessness, and poor and insecure housing have adverse effects on the overall health and wellbeing of individuals and communities. Housing inequality will also have an impact on other areas such as income, education, health and wellbeing, life experiences, behaviours and choices, along with relationships with friends and family.
There is a likely positive impact accordingly across the nine Protected Characteristic

groupings as set out in the Equality Act 2010. This is particularly with regard to Age, Disability and Sex and intersectionality across these groupings.

There will also be anticipated positive impacts for women with multiple and complex needs who are struggling to escape domestic abuse situations, and for vulnerable young people, including care leavers, who are homeless or at risk of homelessness and may have also suffered trauma and hardship within their lives, potentially leading to an increased use of alcohol and illegal substances and problems with mental ill health. This grouping may be at risk of exploitation, including involvement in county lines.

The initial screening process ahead of the proposed consultation has also indicated likely low to medium positive impacts for those individuals and households who are considered at risk of social exclusion. In Shropshire, this includes those whom we may regard as being vulnerable, either by virtue of their circumstances as individuals or by virtue of their circumstances as households, for example, households living in fuel poverty and refugee households. In our definition of vulnerable individuals, we would also include people who experience rough sleeping, particularly over a long period. The Council will seek to maximise positive equality impacts for those we may consider to be vulnerable, including people fleeing hate crime and people with disabilities including hidden disabilities such as Crohn's disease, and neurodiverse conditions.

Social Inclusion is not an Equality Act category, rather representing our efforts as a Council to consider the needs of households in Shropshire and the circumstances in which they may find themselves.

### **Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations**

The equality, social inclusion and health impacts of the programme will be monitored as it progresses.

The strategy will have an annual review which will be based on updated information from relevant council services and partner agencies we will also undertake an annual consultation exercise to ensure continuing engagement with service users.

The authority will also seek to share approaches with comparator authorities, particularly other rural unitary authorities and other authorities in the West Midlands, to promote

good practice. Additionally, the proposed action plan will be subject to regular monitoring, building upon ongoing engagement with people in the Protected Characteristic groupings as well as working with vulnerable groupings including young people leaving care, people who are homeless or at risk of homelessness, and veterans and serving members of the armed forces and their families.

In evaluating the strategy's impact on housing stability, mental and physical health, and social inclusion, opportunities to enhance positive impacts will be at the forefront of monitoring and review, with the aim that regular monitoring and ongoing engagement will ensure such impacts are identified and adjustments made to project delivery.

## **Associated ESHIAs**

There is commonality of policy intent with ESHIAs recently undertaken for housing related strategic policy approaches, including the Housing Allocations Policy and Scheme, and Tenancy Strategy and Tenancy Policy, and more widely with ESHIAs undertaken for the Local Plan Partial Review and for the Shropshire Plan.

Following the end of the public consultation on the draft "Preventing homelessness and rough sleeping strategy," a second screening ESHIA will be carried out, to take account of feedback received.

## **Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of any other considerations. This includes climate change considerations**

### ***Climate change***

The following will help to enhance positive impacts in terms of climate change:

Embrace energy-efficient, housing solutions to reduce environmental impact and enhance long-term sustainability.

### ***Health and well being***

The most extreme form of housing inequality is homelessness; therefore, it is vital that the Council seeks to prevent homelessness and where households become homeless the Council ensures that they can access affordable dwellings which meet their needs. People experiencing homelessness, and in particular rough sleeping, face significant health inequalities and poorer health outcomes as compared to the rest of the population. The majority of people who rough sleep will have previously suffered trauma and hardship within their lives, which may often lead to an increased use of alcohol and illegal

substances. There is also often an increase in suffering with mental ill health. Individuals who have rough slept also have a significantly reduced life expectancy.

Improved mental health and stress. Individuals in supportive living environments are more likely to achieve better mental well-being. Preventing homelessness and providing supportive housing can alleviate the strain on healthcare services. Specialist accommodation schemes incorporating support services directly contributes to physical and mental well-being.

### ***Economic and societal/wider community***

*Employment and productivity, reduction in public costs associated with emergency services and health care, diverse housing supply, including specialist accommodation, can contribute to housing market stability and affordability which is important to economic growth.*

By tackling and preventing rough sleeping and homeless the Council ensures that the benefits are not limited to improving the individual health and wellbeing but can be much wider. For example, the financial cost to society through the increased use of the NHS (National Health Service) and other support services will reduce, and following resettlement once people are able to live independently, they can then contribute to society through taking up employment opportunity. Vulnerable young people, including care leavers, who are homeless or at risk of homelessness, will be provided with the foundations for being able to contribute to society through being supported to study, train, and have careers.

For example, supported accommodation not only provides a home, but also enables vulnerable young people to develop life skills, including budgeting, healthy cooking, and appropriate behaviours, giving them the foundation and confidence to undertake study or training or seek employment, with a view to sustaining independent accommodation in the longer term.

### ***Healthy Environment: Societal and Wider Community Priorities.***

*Social Inclusion, allowing individuals to actively participate in their communities, Reducing Disparities in housing access and quality, promoting social equity and reducing social inequalities.*

Health and wellbeing and economic and societal/wider community impacts will be incorporated as part of the business cases for each of these priority actions.

Being able to access an affordable dwelling which meets a household's needs is essential to health and well-being. Providing a house which is affordable, of good quality and has security of tenure to a family threatened with homelessness allows them to create a home for their children and reduces the worry of a 'no fault' eviction or of being unable to afford

an increase in rent and supported accommodation allows individuals to settle and find structure, enabling them to focus on a journey of recovery and integration back into society.

In regard to homelessness, people who experience rough sleeping over a long period are more likely to die young than the general population. Rough sleepers also experience some of the most severe health inequalities. Often rough sleepers also have mental ill health, substance misuse, and physical health needs and may have experienced trauma.

There is therefore an anticipated impact of a fundamental improvement in societal issues through: a reduction in presentations at Accident and Emergency departments; a reduction in accessing services for mental health and substance misuse use; and a reduction in crime and ASB (Anti-Social Behaviour) related to rough sleeping, homelessness and the lack of suitable supported accommodation for vulnerable young people and for the adults over 25 whom we are seeking to reach.

### Scrutiny at Part One screening stage

People involved	Signatures	Date

## **B. Detailed Screening Assessment**

<b>Aims of the service change and description</b>
<p>The vision of the <a href="#">Shropshire Plan 2022-25</a> is living the best life; the Plan has four priorities:</p> <ul style="list-style-type: none"> <li>• Healthy People</li> <li>• Healthy Economy</li> <li>• Healthy Environment</li> <li>• Healthy Organisation</li> </ul> <p>All four of these priorities link to housing: from tackling inequality, promoting independent living, and preventing homelessness; to ensuring the right mix of housing, reducing carbon emissions, and promoting affordable warmth; to making the best use of the Council's resources. Of key importance to this Strategy is an objective of the Healthy People priority:</p> <p><i>We will tackle inequalities, including rural inequalities, and poverty in all its forms; providing early support and interventions that reduce risk and enable children, young people, adults, and families to achieve their full potential and enjoy life.</i></p> <p>The vision of the <a href="#">Housing Strategy 2020-25</a> is:</p> <p><i>All homes are well designed decent homes of high quality, which will protect Shropshire's unique urban and rural environments and ensure it is a great place to</i></p>

*live. That all Shropshire residents have access to the 'right home in the right place' to support and promote their health and wellbeing throughout their lives.*

To strengthen the council's commitment to ensuring fair access to appropriate housing, the housing strategy has six key objectives. Among these, the first four focus specifically on providing specialist and supported accommodation, aligning with the broader goal of creating inclusive and supportive communities:

- To meet the overall current and future housing needs of Shropshire's growing population by addressing the housing needs of particular groups within communities.
- To ensure people whose housing needs are not met through the local open market housing can access housing that meets their needs.
- Preventing households from becoming homeless and where this is not possible ensuring they have safe, secure, and appropriate accommodation until they are able to resettle.
- To ensure people can access a mix of housing options within Shropshire's urban and rural landscape, that best meets their needs in terms of tenure, safety, size, type, design, and location of housing.
- To minimise the environmental impact of existing housing stock and future housing development in the interest of climate change. Maximise resource efficiencies and to ensure optimum use of sustainable construction techniques.
- Ensuring that there is enough housing supply to enable businesses to attract and retain the local workforce that they need.

### **Intended audiences and target groups for the service change**

The Preventing Homelessness and Rough Sleeping Strategy is intended for the public, i.e. communities and service users, and their representatives, e.g. town and parish councils, and Shropshire Council councillors as community leaders.

Stakeholders include voluntary and community sector; registered providers; owners of empty homes; housing associations; Government Departments; and developers; and partner organisations

As the Council works with a range of statutory and voluntary organisations who together support refugees from Syria, Afghanistan and Ukraine and British National (Overseas) status holders from Hong Kong, they will also be involved.

## Evidence used for screening of the service change

In developing this draft Strategy, the Council has drawn upon the evidence base already collected for current housing policy initiatives, as well as upon the evidence base of the Council e.g. Census profiles and household analyses. The Council will also draw further upon feedback emerging from the draft Independent Living and Specialist Accommodation Strategy currently itself out for public consultation. For example, following feedback we have amended and considered further measures in how we can support individuals potentially excluded from digital access, particularly those who may not be technically inclined or physically able to attend face to face appointments.

Beyond urban areas, we further extend the visibility of outreach to rural communities, enhancing their understanding and tools to prevent homelessness in line with evidence contained in the [Final Report - Homelessness in the Countryside: A Hidden Crisis - Research at Kent %](#) report, a report commissioned, funded and co-designed by a coalition of housing and homelessness organisations concerned by the growing yet unacknowledged problem of rural homelessness.

## Specific consultation and engagement with intended audiences and target groups for the service change

The proposed eight-week public consultation will include targeted consultation with town and parish councils and housing associations as well as feedback opportunity for members of the public and other partner organisations.

## Initial equality impact assessment by grouping (Initial health impact assessment is included below)

***Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.***

***Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.***

Protected Characteristic groupings and other groupings in Shropshire	High negative impact <i>Part Two ESIIA required</i>	High positive impact <i>Part One ESIIA required</i>	Medium positive or negative impact <i>Part One ESIIA required</i>	Low positive, negative, or neutral impact (please specify) <i>Part One ESIIA required</i>

<u>Age</u> (please include children, young people, young people leaving care, people of working age, older people. Some people may belong to more than one group e.g., a child or young person for whom there are safeguarding concerns e.g., an older person with disability)			Low to medium positive impact	
<u>Disability</u> (please include mental health conditions and syndromes; hidden disabilities including autism and Crohn's disease; physical and sensory disabilities or impairments; learning disabilities; Multiple Sclerosis; cancer; and HIV)			Low to medium positive impact	
<u>Gender re-assignment</u> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Low to medium positive impact	
<u>Marriage and Civil Partnership</u> (please include associated aspects: caring responsibility, potential for bullying and harassment)			Low to medium positive impact	
<u>Pregnancy and Maternity</u> (please include associated aspects: safety, caring			Low to medium positive impact	

responsibility, potential for bullying and harassment)				
<u>Race</u> (please include ethnicity, nationality, culture, language, Gypsy, Traveller)			Low to medium positive impact	
<u>Religion and belief</u> (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Zoroastrianism, and any others)			Low to medium positive impact	
<u>Sex</u> (This can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Low to medium positive impact	
<u>Sexual Orientation</u> (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)			Low to medium positive impact	
<u>Other: Social Inclusion</u> (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health			Low to medium positive impact	

inequalities; refugees and asylum seekers; rural communities; veterans and serving members of the armed forces and their families)				
--	--	--	--	--

**Initial health and wellbeing impact assessment by category**

*Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.*

*Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.*

Health and wellbeing: individuals and communities in Shropshire	High negative impact <i>Part Two HIA required</i>	High positive impact	Medium positive or negative impact	Low positive negative or neutral impact (please specify)
<p><b>Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing?</b></p> <p>For example, would it cause ill health, affecting social inclusion, independence and participation?</p>			Medium positive for individual health and well being	
<p><b>Will the proposal <i>indirectly impact</i> an individual's ability to improve their own health and wellbeing?</b></p> <p>For example, will it affect their ability to be physically active,</p>				Neutral to low positive

<p>choose healthy food, reduce drinking and smoking?</p> <p>.</p>				
<p><b>Will the policy have a <i>direct impact</i> on the community - social, economic and environmental living conditions that would impact health?</b></p> <p>For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation?</p> <p>.</p>				Neutral to low positive
<p><b>Will there be a likely change in <i>demand</i> for or access to health and social care services?</b></p> <p>For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services?</p> <p>.</p>				Neutral to low positive, as demand for some services should lessen if people are in housing that is suitable for their needs

**Identification of impact of the service change in terms of other considerations including climate change and economic or societal impacts**

Please see above. This will be kept under review as the Strategy development progresses.

## Whitchurch Swimming Pool – Agreement for CIL Funding

<b>Responsible Officer:</b>	Mark Barrow		
email:	Mark.Barrow@shropshire.gov.uk	Tel:	01743 258919
<b>Cabinet Member (Portfolio Holder):</b>	Cllr Chris Schofield		

### 1. Synopsis

This report is to seek cabinet approval to award £980,000 of CIL funding towards the design and build of Whitchurch Pool and Fitness Centre.

### 2. Executive Summary

- 2.1. The design and build of a new swimming pool and fitness centre at Whitchurch, on the site of the now derelict former pool and youth centre, is a flagship project for Shropshire Council. The new centre supports the economic growth in Whitchurch and provides the town with a modern facility that supports the health and wellbeing of the local community.
- 2.2. Whitchurch is a large market town in Shropshire, with significant growth and expansion proposed in the coming years. The new facility will support the many requirements of a growing community, alongside deriving several benefits that support all 4 of the council priorities. For example:
  - a. Healthy People- Access to fitness facilities and supporting wellbeing.
  - b. Healthy Economy – Investing in our market towns and supporting local jobs.

- c. Healthy Environment – A sustainable and low carbon building
- d. Healthy Organisation – Lower long term financial running costs.

2.3 An EOI (Expression of Interest) was submitted to IIG (Internal infrastructure Group) to request £980,000 of CIL (Community Interest Levy) funding to support the design and build of the new centre. This request for funding was essential to complete the construction phase of the project. This report was reviewed across all lead departments and discussed formally as a collective at IIG on 01/02/2024, where it was recommended to award CIL funding towards this project, based on the following provisos .

- a. To ensure that the funds are to be utilised for infrastructure and not to support fixture and fittings of the leisure centre.
- b. Due to the level of funding requested (above £500k), this application is subject to cabinet approval.

2.4 Given the value of the funding requested, this application is being brought to cabinet to approve the recommendation at IIG to approve the application and in turn adhering to the financial regulations.

2.5 To note the EOI has recently been updated to reflect the practical changes since the original EOI was submitted in November 2023, however this does not materially impact the recommendation of the IIG, and importantly the amount of CIL funding being requested.

### 3. Recommendations

- 3.1. Cabinet approves the allocation of £980,000 of CIL funding to support the design and build of Whitchurch Pool and Fitness Centre

## Report

### 4. Risk Assessment and Opportunities Appraisal

- 4.1. The predominant risk to the Council should approval not be granted, would be the inherent financial shortfall in the business case towards the completion of Whitchurch Pool and Fitness Centre. Should funding not be agreed, in order to mitigate the risk, there is a likelihood that additional borrowing will be required in order to ensure the project is fully funded.

### 5. Financial Implications

- 5.1. The project to design and build Whitchurch Pool and Fitness Centre was approved by full Council in September 2022. It was stated at this time that the Capex budget was an initial estimate, However, once full costs were finalised this application for

CIL funding was submitted, to contribute to the overall development and is essential for the completion of the Construction Phase.

- 5.2. CIL income from new development can be spent on anything that constitutes "infrastructure" as defined by Regulation 216 of the 2008 Planning Act and the CIL Regulations (as amended). This includes but is not limited to roads and other transport facilities, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces.
- 5.3. This application is deemed an appropriate use of CIL funding, as it meets the guidance of defined infrastructure, that mitigates the impacts of new development and supports the wider community.
- 5.4. This project is identified within the recently revised Place Plan for Whitchurch, as approved by Cabinet on 13/03/24 as a priority B project. A priority B project is defined as necessary to improve areas and in particular to support the growth expectations set out in the current and emerging Local Plans. There is the expectation with priority B projects that the Council may use CIL funding to support these projects.

## 6. Climate Change Appraisal

- 6.1. The approval of funding to support the new leisure facility will support several environmental and ecological outcomes which will help deliver positive climate and carbon reduction benefits. These include:
  - a. The re-use of a 0.25 hectares brown field site.
  - b. **Energy and fuel consumption:** The building will be built to BREAM excellent standard and will be the first 'all electric' leisure facility in Shropshire operating on zero carbon energy. The new centre will also support local access to leisure and fitness facilities, therefore mitigating the need for local people to travel greater distances to both exercise and socialise.
  - c. **Climate Change Adaptation:** The new layout and design will increase the amount of greenspace and increase the amount of flood plain available, helping to reduce climate-related flood risk downstream in the town, and supporting local ecology. The local availability of the centre will help improve the physical and mental wellbeing of residents in Whitchurch in the context of climate-related impacts.
- 6.2 The centre is not expected to have any direct implications for **Renewable Energy Generation** or **Carbon Offsetting** or **Mitigation**.

## 7. Background

- 7.1. A Shropshire Council flagship initiative to design and build a new swimming pool and fitness centre at Whitchurch, was given full approval at Council in September 2022.

- 7.2. Once costs for the project had been finalised, an Expression Of Interest (EOI) was submitted to IIG for review to seek CIL funding for £980,000, that would be essential to complete the construction phase of the project.
- 7.3. The project was initially reviewed by lead officers across departments, and an initial recommendation to approve was noted. This was then discussed at the formal IIG meeting on the 01/02/24, where the group recommended approval for the application, subject to ensuring that funding was allocated for infrastructure only on the build, and also that cabinet approval is required given the amount of funding sought.
- 7.4. CIL income from new development can be spent on anything that constitutes "infrastructure" as defined by section 216 of the 2008 Planning Act and the CIL Regulations (as amended). This includes but is not limited to roads and other transport facilities, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces. Shropshire Council recognises that infrastructure needs vary from place to place and priorities vary over time in response to different development pressures.
- 7.5. The Whitchurch swimming pool is included as a project within the Infrastructure Funding Statement agreed by Cabinet on 13<sup>th</sup> December 2023 where potential CIL funding would be directed subject to the Council's approval process. The project has also been included on the recently updated Whitchurch Place Plan approved by Cabinet on 13<sup>th</sup> March 2024. It is therefore considered this is a suitable project to consider the application of CIL funding. The IIG consideration recognised that this was a priority project for the area, and one which had local member support. There are sufficient CIL local funds available in the Whitchurch Place Plan area to support this project at the scale proposed.

## 8. Conclusions

- 8.1. This report seeks cabinet approval to agree the recommendation of the Council's Internal Infrastructure Group to approve £980,000 of CIL funding towards the design and build of Whitchurch Leisure and Fitness Centre.

Description of location	Former Whitchurch swimming pool and youth centre, now both derelict, at White Lion Meadow, Whitchurch SY13 1BA
Place Plan area	Whitchurch
Local Council details	Shropshire Council Whitchurch Town Council
Senior Members	<p>The project has the support of senior members who are consulted on all key decisions such as this CIL application, this includes the the Leader and current Portfolio Holder for leisure.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> <p>Lezley Picton Rob Macey</p>
Location Member details	<p>Whitchurch South Whitchurch North</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>Gerald Dakin</p> </div> <div style="text-align: center;">  <p>Thomas Biggins</p> </div> <div style="text-align: center;">  <p>Peggy Mullock</p> </div> </div>

The project has consulted the Whitchurch Town Council on the project and made presentations on the designs and progress.

## Scope of the project

<p>What is the project</p>	<p>A Shropshire Council flagship initiative to design and build a new swimming pool and fitness centre at Whitchurch – on the site of the now derelict former pool and youth centre.</p>
<p>Scope of the work</p>	<p>The project will both replace the derelict 5 x 25 m lane swimming pool with a 6 x 25m lane pool but will also provide a new leisure and fitness centre which will provide the following additional community facilities which were not available in the old pool: :</p> <ul style="list-style-type: none"> <li>• The pool will be larger than the old pool, but also have easy access steps and new wheelchair user hoist</li> <li>• new moveable floor to half of the pool to allow a greater range of uses, particularly children and school lessons.</li> <li>• New 41 station fitness gym.</li> <li>• New Large multi-purpose room - divisible into 2 studio areas for dance, fitness, and youth sessions.</li> <li>• New unisex changing village with separate male and female toilets, with separate changing rooms for school groups</li> <li>• New disabled toilet and changing facilities</li> <li>• New Changing Places facility for users with severe disabilities which will also be open for non centre users.</li> <li>• Reception and new servery with Café and vending area.</li> <li>• New 2 new electric vehicle parking spaces, improved coach accessibility and 6 additional disabled parking spaces</li> <li>• Outdoor activity area for informal sport, physical activity, and play to replace the former MUGA</li> </ul>
<p>History of the project – where was it identified from (place plan, works programme, locally identified, other SC strategies)?</p>	<p>The existing pool at Whitchurch was built by the former Whitchurch Urban District Council in 1972 and served the town and surrounding community for close to 50 years. The centre was nearing the end of its working life when the pool tank began leaking. The site was therefore closed and inspection by engineers identified that it was uneconomic to try and repair the tank. The Covid pandemic arrived in early 2020 since when the pool has remained closed. The pool and adjacent youth centre are now in a dilapidated condition and attracting antisocial behaviour, including vandalism and evidence of drinking and drug taking (eg: used NOx canisters). The project has been working closely with the adjacent Tesco store who have a long lease on the surrounding car parks some of which will need to be borrowed to complete the construction phase. The Tesco store manager is a strong supporter of the project who sees the need to redevelop</p>

the site to reduce anti-social behaviour through improving the environment and generating activities in the area, particularly during the evenings.

The Council commissioned Strategic Leisure Ltd in 2021 to undertake a strategic review of Leisure and pool provision in the County which identified that the Whitchurch pool was still required to meet the needs to th Community in North Shropshire. The Council’s Capital Programme and Leisure in Shropshire Programme identified a need for capital Investment to make new Swimming and fitness facility available in Whitchurch. The town has had a swimming pool since the late Victorian era and the existing pool was well used, particularly by local schools. A RIBA 1 feasibility study was undertaken in 2022 and put out to Public Consultation which was well received – albeit concern was expressed about conserving the Wildlife around Stagg’s Brook where there is a breeding population of Water voles.

In September 2022 the Full Council agreed an initial Capex budget of £13.1 million to design and build the new centre. The main funding to be provided by borrowing from the Public Works Loan Board repaid over 40 years with increased revenues forecast from the new and enhanced facilities. The initial budget did not include all the items required to construct and make the building available for public use and should the costs for the project exceed the capital allocation it was planned to submit a CIL application for any forecast shortfall.

In November 2022, the Council appointed Architects Robert’s Limbrick to design the new centre, and in February 2023 Pellikaan Construction Ltd were selected as the main contractors. Both firms have extensive experience of designing and building local authority pools and leisure centres across the UK.

The new Pool and fitness centre will be far more energy efficient than the old pool and Youth centre buildings and will make use of Photovoltaic cells and air source heat pumps to further reduce the carbon footprint.

The design and scope mark a significant improvement in accessibility and the range of people who can use the facility. Whilst the disused youth centre and MUGA are being removed, a new outdoor activity and play area is being provided and youth sessions will be available in the facility and elsewhere in the town. Planning permission was granted in October 2023 and Construction contracts were signed on 7<sup>th</sup> November 2023 with building work starting shortly afterwards. As of April 2024, the old pool and Youth Centre have been demolished and the foundations for the new pool and fitness centre have been completed. The project is on schedule and the new centre open to the public in Summer 2025. The revised financial estimates for the project at the time commencing construction suggest that a funding request through the CIL is required to complete the

	construction phase and fitout of the gym.
What is the link to development?	<p>A new swimming and fitness centre is an essential prerequisite for a modern town to attract development and to attract people to move to the town. As a growing market town, Whitchurch needs modern fitness and leisure facilities to support all members of the local community at all stages of their lives to support their wellbeing through fitness activities and opportunities to socialise with family and friends, including:</p> <ul style="list-style-type: none"> <li>• Young families need places to meet and socialise.</li> <li>• School age children need to be taught to swim and there is a legal duty on schools to provide swimming lessons.</li> <li>• Young people need venues to offer physical outlets and fitness activities.</li> <li>• Older residents need opportunities to stay active.</li> </ul> <p>Whitchurch is one of the major market towns in Shropshire with significant development planned in the coming years. The draft Shropshire Local Plan proposes a settlement housing guideline for Whitchurch of around 1,600 dwellings between 2016 and 2038. Latest monitoring indicates:</p> <ul style="list-style-type: none"> <li>• Between 2016/17 and 2021/22 some 325 dwellings had been completed.</li> <li>• 251 dwellings were committed on sites with Planning Permission or Prior Approval as of the 31st of March 2022.</li> <li>• 560 dwellings were located on allocations within the adopted Local Plan that did not benefit from Planning Permission, which are proposed to be ‘saved’ in order to contribute to the proposed settlement housing guideline.</li> <li>• 450 dwellings are proposed on new allocations proposed within the draft Shropshire Local Plan.</li> </ul> <p>These will be complemented by further windfall development at the town on appropriate sites that emerge during the plan period. The new facility will therefore be important for meeting the wellbeing and fitness needs of a growing community.</p> <p>The new facility will re-use 0.25 hectares of brown field site. The layout has been designed to conserve the ecological interest in Staggs Brook which is a known site for water voles. The new layout will increase the amount of greenspace and increase the amount of flood plain available, reducing flood risk downstream in the town. The building is being designed and constructed to the BREEAM Excellent standard and makes use of Photovoltaic cells on the roof and air source heat pumps. The site will use all electric for heating and lighting thus minimising the Carbon footprint and will be a flagship project for the Council’s aim to be net zero by 2030.</p>

The project is included in the latest version of the Place Plan- Project ID 205.

The project is a good match to the Council’s strategic priorities – most notably the need to promote *Healthy People*.

## Financial information

CIL amount requested – if over £500,000 application will need cabinet approval following IIG endorsement	£980,000 A 6.9% contribution to the total project costs
Other funding – match funding, grants, internal budget	£13,100,000 Provided through Council borrowing from the PWLB £57,000 Carbon Team
Total project cost	£14,137,282
If a shortfall in funding, how will it be funded? Application will not be considered without entire project funded	No shortfall is anticipated if CIL funds can be secured.

When the project was approved by full Council in September 2022 it was stated that the Capex budget was an initial estimate but did not include a number of project costs – now that all then costs to complete are known, this application for CIL funding is to contribute to the overall development and is essential to complete the Construction Phase.

The project Steering Group has been supported by finance officers from the Capital projects team. The Steering Groups meets each moth to review progress, spend to-date and the cost-to complete.

The project has been managed on a Stage-by-Stage basis – with the Executive Director for Place in consultation with the portfolio holder making the decision on whether to sign off one stage and approve the move to the next. The project has received a fixed price proposal and signed contracts to complete the Construction so is confident that the project can be delivered with CIL support. The costs to complete include a contingency of £120,000 to address any unforeseen ground risk and £25,000 for other project costs which could manifest itself to the project. If this is not required it will be used on fittings or used to reduce Council borrowing.

The cost model for the project is very detailed and includes cost estimates for all aspect of the project and includes the fixed costs to complete from the build contractor and operator. Comparison of the original financial forecast which was approved by Full Council in Sept 2022 and with current forecast which includes all the costs to complete, is summarised below:

Available CIL available in project area	Completed by CIL finance officer
Neighbourhood fund available in project area	Completed by CIL finance officer
Other potential demands in the place plan area for funding	Completed by the place plan officer

### 1. Summary of Scheme proposed

Applicant	Shropshire Council
Place Plan	Whitchurch
Project	Whitchurch Pool and Fitness Centre
Description	A Shropshire Council flagship initiative to design and build a new swimming pool and fitness centre at Whitchurch – on the site of the now derelict former pool and youth centre.
Contact	Clare Featherstone
Date of application	November 23
Project Manager	Peter Gilbertson
Total Cost	£14,137,282
CIL Local requested	£980,000
Timescale	Construction Commencement 27 Nov 2023 Practical Completion 15 May 2025 Open to the Public June 2025

### 2. Officer Considerations

**Is the project considered to be infrastructure under section 216(2) of the Planning Act 2008 and regulation 59, as amended by 2012 and 2013 Regulations. *infrastructure includes:***

- (a) roads and other transport facilities,
- (b) flood defences,
- (c) schools and other educational facilities,
- (d) healthcare and medical facilities,
- (e) cultural, sporting and recreational facilities,
- (f) play areas, open spaces, parks and green spaces

**Key Officer /PPO to complete.**

The Whitchurch Pool and Fitness Centre project is considered infrastructure;  
(e) cultural, sporting and recreational facilities

**Does the proposal support the development that has taken place in the area or will take place in the future?**

**Key Officer/PPO to complete.**

Whitchurch has taken development in the north of the of the town and has a large scale development planned at Tilstock Road in the south . The Whitchurch

**Swimming pool and fitness centre project will provide sporting, recreational, health and wellbeing facilities for those future residents as well as existing residents. The project will also support School educational requirements to provide swimming as part of the National curriculum for school age children in the area.**

**Key Officer/ Place Plan Officer to complete:**

**Is the scheme identified in the current Place Plan as an Essential Project?**

**YES/NO**

It is a Priority B project

**Are there current statutory infrastructure requirements listed in the Place Plan area potentially competing for funding?**

**YES/NO**

Currently, there are no large-scale statutory infrastructure projects competing for CIL funding. (Projects for Education, health and drainage have CIL Local funding allocated)

**3. Risk Assessment and Opportunities**

**Key Officer to complete:**

e.g. Are there any implications for Human Rights Equalities and Social Inclusion legislation listed in the EOI?

**4. Financial Implications**

**CIL funding collected/allocated/available in this Place Plan area:**

<b>CIL Officer to complete:</b>				
Exacom @ 31/12/23	Collected	Allocated	Spent	Available
Local	3,586,805	1,374,899	49,901	<b>2,162,005</b>
Neighbourhood	383,915	0.00	0.00	<b>383,915</b>
<b>Date Annual Monitoring Form received.</b>			12/10/16	

**Comment on Neighbourhood Funding:**

NF figures based upon last Annual Monitoring form received 12/10/16  
Collected figure is at 30/9/23

## 5. Response by Department

Response to the Expression of Interest attached and Officer's Input (Sections 1 to 4).  
 Comment by department with reference to this Expression of Interest and all future strategic infrastructure requirements:

<b>Education</b>	Andy Nicholls	Date 15/12/23
There are a number of primary schools (5) in the immediate Place Plan area who would welcome access to new facilities to support the delivery of a core curriculum subject. Whitchurch has been identified as an area of growth in terms of pupil population – there will be a need in the future for CiL monies to support school expansion.		

<b>Legal &amp; Democratic</b>	Miranda Garrard	Date

<b>Finance</b>	Donna Payne	Date 18/01/24
Project meets criteria of financial rules and can be supported from CIL. Are there any further large projects in the Place Plan that could compete for funding we need to be aware of?		

<b>Highways</b>	Ffion Horton	Date

<b>Procurement</b>	Neil Evans	Date 15/12/23
The proposal is for an internal transfer of funds so there will be no subsidy control implications. As the funding is to fill the total project funding shortfall it is assumed that all procurement activity in relation to the project has already been completed.		

## 6. Recommendation to Internal Infrastructure group

Following responses from officers and the relevant department leads, the following recommendation has been made:

<b>Responsible Officer to complete:</b>

Through a review of the responses, the decision has been made to **recommend APPROVAL** of the application, subject to formal cabinet approval. This is based on the following:

- The project is listed within the Annual Infrastructure Statement and supports the infrastructure need in Whitchurch.
- Project meets the criteria of financial rules and can be supported from CIL.
- The proposal is for an internal transfer of funds so there will be no subsidy control implications.

It is important to be mindful that there are several primary schools (5) in the immediate Place Plan area who would welcome access to new facilities to support the delivery of a core curriculum subject. Whitchurch has been identified as an area of growth in terms of pupil population – there will be a need in the future for CIL monies to support school expansion in the future.

**SECTIONS 1 TO 6 TO BE COMPLETED PRIOR TO CIRCULATION AT THE INTERNAL INFRASTRUCTURE GROUP**

## **7. Background**

As the CIL charging Authority Shropshire Council needs to demonstrate compliance with the national CIL Regulations. The Community Infrastructure Levy is a charge on new development which is used to support the provision, improvement, replacement, operation, or maintenance of infrastructure to support development of its area.

Local authorities must spend the levy on infrastructure needed to support the development of their area, and they will decide what infrastructure is needed. The levy is intended to focus on the provision of new infrastructure and should not be used to remedy pre-existing deficiencies in infrastructure provision unless those deficiencies will be made more severe by new development.

The levy can be used to increase the capacity of existing infrastructure or to repair failing existing infrastructure if that is necessary to support development. (section 216(2) of the Planning Act 2008 and regulation 59, as amended by the 2012 and 2013 Regulations).

### Shropshire Council CIL policy

Shropshire Council took a decision in 2012 to distribute CIL funds in the following way, which has remained unchanged:

- Administrative Fee – up to 5% of total
- Neighbourhood Fund – 15% or 25% where there is a Neighbourhood Plan or Neighbourhood Development Order

Of the remainder:

- 'Strategic' – 10%
- 'Local' – 90%

**The current position with the use of CIL 'Local' funds is also shaped by the last Cabinet decision of June 29th 2015. This agreed that priority be given to using CIL 'Local' funds to deliver appropriate critical infrastructure, or infrastructure required in order to fulfil the Council's statutory functions.**

CIL monies distribution table:

CIL Fund	Proportion of funds	Responsible	Area for spend
Administrative fee	5%	Shropshire Council	Administrative expenses incurred during the implementation and enforcement of CIL.
Neighbourhood Fund	15% 25% where there is a formal Neighbourhood Plan or Neighbourhood Development Order in place.	Town and Parish Councils	Provided directly to the local Town/Parish Council to fund locally identified infrastructure projects.  <i>Note: The Neighbourhood Fund only applies to income from development where the CIL Liability Notice has been issued since the introduction of the Amendment CIL Regulations (2013) on the 25th April 2013.</i>

Of the Remainder:			
Strategic Infrastructure Funding	10% (of remaining amount)	Shropshire Council in conjunction with infrastructure providers	Strategic infrastructure priorities across Shropshire.
Local Infrastructure Funding	90% (of remaining amount)	Shropshire Council in conjunction with Town/Parish Councils and infrastructure providers	Local infrastructure priorities to meet the infrastructure needs in the area where development takes place, as identified within the Place Plans.

**8. Recommendation to the Internal Infrastructure Group**

<b>Expression of Interest Approved</b>	<b>YES</b>
Outcome of the Recommendation Report is to <b>Approve</b> the EOI and to be endorsed at IIG.	
<b>IIG approval/rejection date</b>	1/2/24

Signed:.....E.West.....

**Planning Policy and Strategy Manager**

Dated:.....24.01.24.....

**List of Background Papers:**

**(All completed reports relating to the Expression of Interest must be attached but this does not include items containing exempt or confidential information)**

Internal Expression of Interest form

TO BE COMPLETED FOLLOWING IIG

## 9. Decision Report

Membership of the Internal Infrastructure Group includes representatives from a number of Shropshire Council departments, specifically: Finance, Legal, Planning Policy, Highways, Education, Broadband/ICT, Outdoor Partnerships, Property, Development Management and Economic Growth.

In considering all applications the Council must abide by national law and guidance relating to CIL spend. In this regard the Community Infrastructure regulations 2010 (as amended) state that the Council must: *“apply CIL to funding the provision improvement, replacement, operation or maintenance of infrastructure to support the development of its area.”*

The Government’s National Planning Policy Guidance states that:

*“local authorities must spend the levy on infrastructure needed to support the development of their area, and they will decide what infrastructure is needed. The levy is intended to focus on the provision of new infrastructure and should not be used to remedy pre-existing deficiencies in infrastructure provision unless those deficiencies will be made more severe by new development”*

Further, the Council’s Cabinet decision of 29 July 2015 must also be taken into account. It agreed that: *“priority be given to using CIL (Local) funds to deliver appropriate critical infrastructure, or infrastructure required in order to fulfil the Council’s statutory functions”*

This decision reflects the fact that there may be some instances where it will be necessary for the Council to prioritise the use of CIL funds for such infrastructure, which is not recognised by the local community as a priority through their Place Plan. The approach follows the prioritisation of critical infrastructure set out in Core Strategy Policy CS9.

**The project was discussed at IIG and the following decision has been noted**

**DECISION: APPROVED to recommend to cabinet funding of £980,000**

**Comment:** To ensure that the funds are to be utilised for infrastructure and not to support fixture and fittings of the leisure centre. Due to the level of funding requested (above £500k), this application is subject to cabinet approval
