

Shropshire Council  
Legal and Democratic Services  
Shirehall  
Abbey Foregate  
Shrewsbury  
SY2 6ND

Date: Tuesday, 9 April 2024

**Committee:**  
**Cabinet**

**Date:** Wednesday, 17 April 2024  
**Time:** 10.30 am  
**Venue:** Council Chamber, Shirehall, Shrewsbury, SY2 6ND

You are requested to attend the above meeting. The Agenda is attached

There will be some access to the meeting room for members of the press and public, but this will be limited. If you wish to attend the meeting please email [democracy@shropshire.gov.uk](mailto:democracy@shropshire.gov.uk) to check that a seat will be available for you.

Please click [here](#) to view the livestream of the meeting on the date and time stated on the agenda

The recording of the event will also be made available shortly after the meeting on the Shropshire Council Youtube Channel [Here](#)

Tim Collard Assistant Director - Legal and Governance

# AGENDA

## 1 Apologies for Absence

## 2 Disclosable Interests

Members are reminded that they must declare their disclosable pecuniary interests and other registrable or non-registrable interests in any matter being considered at the meeting as set out in Appendix B of the Members' Code of Conduct and consider if they should leave the room prior to the item being considered. Further advice can be sought from the Monitoring Officer in advance of the meeting.

## 3 Minutes (Pages 1 - 6)

To confirm the minutes of the meeting held on 13 March 2024.

## 4 Public Question Time

To receive any questions from members of the public, notice of which has been given in accordance with Procedure Rule 14. Deadline for notification is not later than 5.00 pm on Thursday 11<sup>th</sup> April 2024.

## 5 Member Question Time

To receive any questions from Members of the Council. Deadline for notification is not later than 5.00 pm on Thursday 11<sup>th</sup> April 2024.

## 6 Scrutiny Items

## 7 Parking Tariffs, Operations & Development

Supplementary report in response to the scrutiny of the call-ins of the decision made by Cabinet on 17 January 2024, **to follow**

Lead Member – Councillor Dan Morris – Portfolio Holder for Highways

Report of Andy Wilde – Assistant Director - Infrastructure

## 8 Public Space Protection Order, Dog Constraints (Pages 7 - 72)

Lead Member – Councillor Dan Morris – Portfolio Holder for Highways

Report of Andy Wilde, Assistant Director - Highways & Transport

## 9 Local Plan - Additional Material for Examination in Public (Pages 73 - 1618)

Lead Member – Councillor Chris Schofield - Portfolio Holder for Planning and Regulatory Services

Report of Eddie West - Planning Policy and Strategy Manager

**10 Preventing Homelessness and Rough Sleeping strategy 2024 - 2029 (Pages 1619 - 1694)**

Lead Member – Councillor Dean Carroll – Portfolio Holder for Housing and Assets

Report of Tami Sabanovic, Housing Strategy and Development Officer

Appendix 2 to follow

**11 Whitchurch Swimming Pool - Agreement for CIL Funding (Pages 1695 - 1720)**

Lead Member – Councillor Chris Schofield - Portfolio Holder for Planning and Regulatory Services

Report of Eddie West, Planning Policy and Strategy Manager

**12 Exclusion of Press and Public**

To resolve that, in accordance with the provisions of schedule 12A of the Local Government Act 1972 and Paragraph 10.4 [3] of the Council's Access to Information Rules, the public and press be excluded from the meeting during consideration of the following items

**13 Pyrolysis JV Proposal (Pages 1721 - 1768)**

Lead Member – Councillor Dean Carroll - Portfolio Holder for Housing & Assets

Report of Richard Macdonald, Estates Manager - Acquisitions and Disposals

**14 Date of Next Meeting**

To note that the next meeting is scheduled to take place on Wednesday 5 June 2024.

This page is intentionally left blank

## Committee and Date

Cabinet

17 April 2024

## **CABINET**

### **Minutes of the meeting held on 13 March 2024**

**In the Council Chamber, Shirehall, Abbey Foregate, Shrewsbury, SY2 6ND  
10.30am**

**Responsible Officer:** Ashley Kendrick

Email: ashley.kendrick@shropshire.gov.uk      Tel: 01743 250893

### **Present**

Councillor Lezley Picton (Chairman)

Councillors Cecilia Motley, Ian Nellins, Robert Macey, Gwilym Butler, Dean Carroll,  
Kirstie Hurst-Knight, Mark Jones, Dan Morris and Chris Schofield

### **126 Apologies for Absence**

There were no apologies for absence.

### **127 Disclosable Interests**

No declarations were received.

### **128 Minutes**

### **RESOLVED:**

That the minutes of the meeting held on 21 February 2024 as an accurate record.

### **129 Public Question Time**

There were no public questions.

### **130 Member Question Time**

Members' questions had been received from the following:

Councillor Rachel Connolly, read aloud by Councillor Julia Buckley, in relation to Bridgnorth Town Centre Parking & Public Realms Works. In response to a supplementary question regarding the business case and financing, the Portfolio Holder advised that a response would be made in writing and added to the webpage for the meeting.

Councillor Colin Taylor, in relation to insurance claims for damaged vehicles.

Councillor Julia Buckley, in relation to Keir & WSP Contracts. By way of supplementary question, Councillor Buckley requested the names and postcodes of the sub-contractors used. The Portfolio Holder advised that a response would be sent after the meeting.

Councillor Andy Boddington, in relation to household recycling centres.

Councillor Kate Halliday, read aloud by Councillor Julia Buckley, in relation to flood water samples. By way of supplementary question, Councillor Buckley asked if this information could be fed into the work of the River Quality Task and Finish Group and whether there was any baseline data over the past five years to identify any changes.

Councillor David Vasmer, in relation to the North West Relief Road. By way of supplementary question, Councillor Vasmer requested a copy of the detailed virements made by the Executive Director of Place. He was advised that he was already in receipt of this information as part of the quarterly monitoring reports.

The full questions and responses provided can be found on [130324 Cabinet - Responses to Members Questions.pdf \(shropshire.gov.uk\)](#)

### 131 Scrutiny Items

There were no scrutiny items; however a query was raised regarding a cabinet decision which had been called in and referred back to the scrutiny committee. It was felt that there had been an expectation that this item would be on the agenda for this meeting.

Members noted that the intention was for the item to be discussed at the next Cabinet meeting in April 2024 as there had not been sufficient time to collate all the required information for this meeting.

### 132 Shropshire Local Cycling & Walking Infrastructure Plan – Final Draft

The Deputy Leader and Portfolio Holder for Climate Change, Environment and Transport introduced the report which summarised the public consultation results and the subsequent amendments to the Shropshire Local Cycling and Walking Infrastructure Plan (LCWIP). The report sought approval for the amended Shropshire LCWIP to progress to adoption as Council policy.

Members welcomed the report and it was suggested that it could be strengthened with KPIs, especially with regards to public health.

Members queried the integration of the plan with other plans, and the capacity and staffing to support the plan.

Disappointment was expressed that the rural areas appeared to have been neglected and that the concentration was on the main urban areas.

It was confirmed that the plan had been widely consulted on and member briefings had also taken place.

### **RESOLVED:**

That Cabinet:

1. Noted the public consultation results and subsequent amendments made to the draft Shropshire LCWIP, and;
2. Recommended to Council to adopt the final draft of the Shropshire Local Cycling and Walking Infrastructure Plan attached to this Report as Appendix 1

### 133 **Market Position Statement**

The Portfolio Holder for Adult Social Care and Public Health presented the report which set out how the council will work with the health and social care market to manage demand and intervene early to support children, adults, and carers. Members noted that the statement had been developed in collaboration with commissioners, stakeholders, and providers, and that it would inform the council's commissioning intentions and priorities.

Members noted that the report would be taken to the People Overview and Scrutiny Committee and progress would be monitored.

Members were advised that the council topped up the government funding by £8million to support the market, and that the council was working with other providers to ensure social work training and placements were available.

#### **RESOLVED:**

That Cabinet approved the Shropshire draft Market Position Statement (MPS) 2024 -27 as set out in the attached appendix 1.

### 134 **Recommendation for Bishop's Castle Neighbourhood Plan to Proceed to Referendum**

The Portfolio Holder for Planning and Regulatory Services introduced the report which sought Cabinet approval to proceed to local referendum on the Bishops Castle Neighbourhood Development Plan. He praised the work of the volunteers and officers who had developed the plan, which captured the essence of Bishop's Castle and its future development.

#### **RESOLVED:**

That Cabinet agreed:

1. The Bishops Castle Neighbourhood Plan meets the 'Basic Conditions' and all the other legal requirements as summarised in the Independent Examiner's Report, subject to the modifications proposed in the Schedule of Modifications (Appendix 2)
2. The required modifications be agreed, and that the final 'referendum' version of the Bishops Castle Neighbourhood Development Plan (Appendix 3) proceed to local referendum.
3. The referendum area be that as defined as the designated area to which the Neighbourhood Development Plan relates, i.e. the Bishops Castle Town Council boundary.

4. The Executive Director of Place be authorised to exercise all the relevant powers and duties and undertake necessary arrangement for Bishops Castle Neighbourhood Development Plan final referendum version (Appendix 3) to now proceed to referendum and for the referendum to take place asking the question 'whether the voter wants Shropshire Council to use this neighbourhood plan for the Bishops Castle Neighbourhood Plan area to help it decide planning applications in this neighbourhood area'

### 135 **Place Plan Update**

The Portfolio Holder for Planning and Regulatory Services introduced the report which sought Cabinet approval for the extent and prioritisation of infrastructure projects to be included in Shropshire's 18 Place Plans.

Town and Parish Councils, together with volunteers and officers, were thanked for their hard work in getting vital plans in place for the future. This has enabled town and parish councils to re-look at projects and funding options.

It was felt that certain parish councils had not received an update on their local Place Plans and that expectations of projects being included had not been met. It was confirmed that the Place Plans were live documents and could be amended.

#### **RESOLVED:**

That Cabinet agreed:

- A) The extent and prioritisation of infrastructure needs identified in appendices 1 - 18 of this report as part of the full review of the Place Plans
- B) That the Place Plans are 'live' documents and that further incremental updates to them ahead of any future full review are delegated to the Assistant Director of Economy and Place, in consultation with the Internal Infrastructure Group (IIG) and the Portfolio Holder for Planning and Regulatory Services.

### 136 **Children's Social Care Improvement Plan**

The Portfolio Holder for Children and Education presented the report in which Cabinet were asked to approve the Improvement Plan prepared by the Director of People and endorsed by the Children's Improvement Board to address the issues identified by the Ofsted at their Focused Visit in November 2023.

Members were thanked for their cross party support to take action quickly.

Members noted the recruitment challenges but were advised that two new appointments had been made and work was ongoing for a localised apprenticeship offer. The Assistant Director of Children's Safeguarding and Social Care advised members that salaries were being reviewed alongside retention of staff. Retention payments were now in place plus other benefits. It was also the Council's aspiration to cap workloads.

**RESOLVED:**

That Cabinet:

1. Approved the Improvement Plan (Appendix A) and recommended to Council to approve the Terms of Reference of the Childrens Improvement Board (Appendix B). The plan will be submitted to OFSTED as required.
2. Recommended that People’s Overview Committee receive quarterly updates in relation to the plan and its progress.

**137 Date of Next Meeting**

Members noted that the next meeting is scheduled to take place on 17 April 2024.

Signed ..... (Chairman)

Cabinet 17<sup>th</sup> April 2024

Item

Public

## Public Space Protection Order, Dog Constraints

<b>Responsible Officer:</b>	Andy Wilde		
email:	Andy.wilde@shropshire.gov.uk	Tel:	01743 256401
<b>Cabinet Member (Portfolio Holder):</b>	Dan Morris		

### 1. Synopsis

The purpose of this report is to seek Cabinet Approval for the introduction of a Public Space Protection Order for Shropshire to control dog fouling, taking account of a public consultation exercise approved on 18<sup>th</sup> October 2023.

### 2. Executive Summary

- 2.1. In response to public complaints, proposals were made to Cabinet last October to introduce a Public Space Protection Order (PSPO) to address dog fouling and nuisance.
- 2.2. These proposals have been presented to the public for comment (List of consultees provided at Appendix E) and the Council has received a largely positive response. The public consultation exercise indicates the PSPO should be introduced, subject to some minor amendments as discussed in section 9 and conclusions detailed in section 10 below, and with a supporting public education/information exercise to help raise awareness necessary to encourage behaviour change with inconsiderate owners.
- 2.3. The Anti-social Behaviour, Crime and Policing Act 2014 introduced tools and powers for use by councils and their partners to address anti-social behaviour (ASB) in their local areas. These tools are to be used for tackling ASB, focussing on the impact such behaviour can have on both communities and individuals.

- 2.4. Public Space Protection Orders (PSPO) are one of the tools available under the Anti-social Behaviour Crime and Policing Act 2014. PSPOs are wide-ranging and flexible powers for local authorities, which recognise that councils are often best placed to identify the type of activities which are having a detrimental effect upon the quality of life for those who live in, work in or visit the local authority area. A PSPO identifies these activities, sets out conditions which aim to prevent or reduce their detrimental effects, defines the public space to which these conditions apply by way of a map identifying 'the restricted area'. This proposed PSPO orders anyone entering any public space in the restricted area to comply with the conditions.
- 2.5. This report sets out the rationale behind the introduction of the proposed PSPO, the proposed conditions, the findings from the recent public consultation exercise, and evidence.
- 2.6. It asks Cabinet to make a Public Space Protection Order if it is satisfied on reasonable grounds that the legal tests are met.
- 2.7. The Proposed Order proposes four prohibitions, specifically and are discussed in more detail in section 9 - Discussion:
- prohibition of dog fouling in public areas and of the failure to appropriately remove and dispose of dog waste.
  - exclusion of dogs from play areas, equipped and fenced sports areas.
  - dogs on a lead by direction.
  - dogs on a lead on a highway.
- 2.8. West Mercia Police ('the Police'), are a statutory consultee and currently would be the other main agency responsible for undertaking the day-to-day enforcement of the Order, in partnership with the Council. The Police and Crime Commissioner, and local Police have been consulted and have no comments to make at this time. In normal circumstances the Police would be engaged to agree a memorandum of understanding to take action when reports are made directly to them. Given it is intended for the Council to take action on a targeted and intelligence led basis this may not be necessary as council officers will take the bulk of enforcement action. If this proves ineffective then the Council will engage further and seek Police assistance through a memorandum.
- 2.9. **The Shropshire Plan - Implications**
- a. Healthy Living – supporting residents to take responsibility for their dogs and the health of others, and preventing ill health
  - b. Healthy Economy – ensuring that Shropshire is a healthy destination for tourists
  - c. Healthy Environment – enabling safer communities by reducing anti-social behaviours and risk of harm from stray dogs
  - d. Healthy Organisation – ensuring Shropshire's internal capacity and capability is complemented effectively and that internal resources are organised efficiently and effectively to take the necessary enforcement to encourage responsible behaviour.

2.10. The results of the public consultation exercise are shown in Appendix A.

### 3. Recommendations

That Cabinet

- 3.1. Accepts the position as set out in this report and approves a Public Space Protection Order for Shropshire with the proposed conditions in the restricted area set out in Appendix B (“the Order”) and as defined by the map with an effective commencement date of the 1st June 2024 for a period of 3 years.
- 3.2. To delegate to the Executive Director of Place to authorise officers to issue FPN’s and directions under the order and agrees that the Council use Fixed Penalty Notices (FPN), in appropriate circumstances, where there is reason to believe that an offence under the Public Space Protection Order has been committed by any person. And further that the level of the FPN is set at £100 reduced to £50 if paid within 10 days.
- 3.3. for the purpose of discharging the Order instructs the Executive Director: Place to publish and cause to be erected notices in accordance with Regulations made under the Anti-Social Behaviour, Crime and Policing Act 2014.
- 3.4. delegates authority to the Executive Director: Place to engage with any other organisation, not being part of Shropshire Council, where officers of that organisation are to be authorised by Shropshire Council to undertake enforcement responsibilities under the Order.
- 3.5. delegates authority to the Executive Director: Place to engage with any other organisation, not being part of Shropshire Council, where officers of that organisation have been authorised by Shropshire Council to undertake enforcement responsibilities under the Order (as extended), and to define those enforcement responsibilities and any other requirements within an agreed Memorandum of Understanding and, where necessary, to amend or create any further Memoranda of Understanding at any time during the period that the Order (as extended) is in force.
- 3.6. That in support of the Order a public education and information programme is implemented and as shown in Appendix C.

## Report

### 4. Risk Assessment and Opportunities Appraisal

- 4.1. It is considered appropriate to implement legal powers to take enforcement action when required to encourage responsible pet ownership. Currently the council is vulnerable to challenge about the lack of enforcement and indeed has been criticised by the public that enforcement action has not been taken. There is considerable reputational risk for the council if it does not respond to this criticism and fails to act

following the consultation exercise.

- 4.2. Under the Anti-social Behaviour, Crime and Policing Act 2014 ('the Act'), where a public spaces protection order is introduced a legal challenge over the validity of such an order is possible for a period of up to six weeks. The Order will, therefore, be subject to a six-week period in which it may be challenged.
- 4.3. In-line with the requirements of the Act, a public consultation seeking views from statutory consultees and the public on the proposals for the Order was undertaken and results are contained in Appendix A
- 4.4. The necessary consultation included the following
  - 4.4.1. As statutory consultees West Mercia Police and the Office of the Police and Crime Commissioner (OPCC), and the chief officer of police of the local policing body, for the restricted area were directly notified of the consultation.
  - 4.4.2. Normally the owners or occupiers of land within the restricted area would be directly consulted. However, given the scope and area envisaged this would be unreasonable and impracticable and because the restricted area applies to the county of Shropshire and to publicly controlled land. It was concluded therefore, that consultation with Town and Parish Councils would be sufficient.
  - 4.4.3. The council has also consulted with notable organisations with interests in dog welfare, including RSPCA and Dog's Trust.
- 4.5. Cabinet should properly consider the rights of freedom of expression and freedom of assembly set out in the European Convention on Human Rights and the Human Rights Act 1998 when making the Order. The recommendations in this report to implement the Order is unlikely to be at variance with the Human Rights Act 1998 and is also unlikely to result in any adverse Human Rights Act implications.
- 4.6. An initial screening Equality, Social Inclusion and Health Impact Assessment (ESHIA) has also been undertaken ahead of the consultation: this is attached as Appendix D. The public feedback and overall impact on equality is generally positive across the nine Protected Characteristic groupings set out in the Equality Act 2010 and across the whole county, due to health and well-being benefits for everyone in the community, if there is less dog fouling as a result of this policy being implemented.
- 4.7. There is also potential for positive equality impact for the groupings of Age, Disability, Pregnancy and Maternity, and Sex, in particular. As with other policies in relation to the public realm, this is in terms of mental well-being opportunities arising for people in these groupings to feel safer when outdoors for health benefits, education, work or leisure, or simply walking to their local shops and amenities. This is particularly so for families with young children, wheelchair users, and older people who may consider themselves to be vulnerable and less likely to venture out without pavements that can be navigated safely by them and their carers, and that are clear of detritus and dog faeces. This is also reflected in the consultation responses.
- 4.8. The grouping for whom there are positive health and well-being impacts is Age, specifically children under 5 but also children who are being encouraged to walk to school or to leisure activities and are put off from doing so due to dog fouling. For the grouping of Disability, there may also be particular distress for those with neurodiverse conditions or attachment disorder, for whom the presence of dog

fouling can cause visible and physical distress. Children (Under 5) will have less potential to be harmed by un-cleared faeces or distressed by coming into contact with it. Young children are most likely to be exposed to dog fouling through their outside play activities and potential health impacts, if personal hygiene has not fully developed.

- 4.9. Mitigation of negative impacts is also anticipated to be necessary, as for some groupings, removing dog fouling presents as a challenge. These are the groupings of Age, Disability, Pregnancy and Maternity, and people in these and other groupings who have caring responsibilities. For example, wheelchair users and mobility scooter users could be particularly affected by dog fouling on streets and pathways, due to either difficulty picking up dog faeces if it has been caused by their own dog, or to difficulty dealing with dog fouling that they encounter which may go onto the wheels of their wheelchair or mobility scooter.
- 4.10. The top theme within comments received through the consultation when asked about diversity, equality and social impact were the impacts on dog owners' mental health and ability to exercise. There were certainly views that exclusion zones should be kept to a minimum and that owners should have access to open space for their dogs to exercise.

## 5. Legal Implications

- 5.1. The relevant statutory provisions are contained in The Anti-social Behaviour, Crime and Policing Act 2014, s59 - s75
- 5.2. A local authority may make a PSPO if satisfied on reasonable grounds that two conditions are met (s59.1)
- 5.3. The first condition is that (a) activities carried on in a public place within the authority's area have had a detrimental effect on the quality of life of those in the locality, or (b) it is likely that activities will be carried on in a public place within the area that they will have such an effect. (s59.(2))
- 5.4. The second condition is that the effect, or likely effect, of the activities –
- 5.4.1. (a) is, or is likely to be, of a persistent or continuing nature
  - 5.4.2. (b) is, or is likely to be, such as to make the activities unreasonable, and
  - 5.4.3. (c) justifies the restrictions imposed by the notice.
- 5.5. The only prohibitions or requirements that may be imposed are ones that are reasonable to impose in the Order
- 5.5.1. (a) to prevent the detrimental effect referred to (5.3 above) from continuing, occurring, or recurring, or
  - 5.5.2. (b) to reduce the detrimental effect or reduce the risk of its continuance, occurrence or recurrence.
- 5.6. The decision taker should consider whether the statutory test is met, and further consider whether the nature of the incidents and ongoing public complaint have a

detrimental effect on the quality of life of people who live in or work in the restricted area. Details of the extent and nature of public complaint are detailed in the previous report to Cabinet 18<sup>th</sup> October 2023 and included 321 complaints in 21/22 and similarly 332 in 22/23.

- 5.7. There should also be careful consideration of whether the order and each condition is a proportionate and a necessary response to the presented problems and is addressed in more detail in the discussion session of this report at 9.5.

## 6. Financial Implications

- 6.1. Failing to comply with the order without reasonable excuse is a criminal offence, and the penalty is a fine (s67 of the Act).
- 6.2. An identified breach of the Order is a criminal offence (s68) and a person guilty of an offence is liable on summary conviction to a fine not exceeding Level 3 (maximum £1,000). However, the legislation enables such offences to be dealt with, where appropriate, by way of a Fixed Penalty Notice (FPN), which, if paid, would discharge an individual's liability to conviction for the offence.
- 6.3. The Consultation suggests a penalty of £100 is reasonable and sufficient to deter contravention of the order.
- 6.4. It is also common practice for such penalties to be reduced if paid promptly and a reduction to £50 if paid within 10 days is proposed and considered reasonable.
- 6.5. It should be noted there are costs associated with legal proceedings should the issue of a FPN be contested. Any costs, including officer time, associated with investigating breaches and bringing legal proceedings in the criminal courts will have to be met from service budgets. This will include back-office administrative support, additional officer time to review criminal reports and accompanying evidence, administering appropriate sanctions, undertaking investigations for cases requiring formal action and finally costs associated with bringing criminal legal proceedings. However, it is considered that revenue from FPN's will be sufficient to mitigate these impacts.
- 6.6. There are also no revenue implications expected as extra signage and staff time associated with the initiative will be contained in existing budgets and is anticipated to be offset by the positive results of behavioural change and less demand for service.
- 6.7. As indicated where enforcement is required there may be costs associated with legal action, but it is anticipated with targeted action and preceding positive publicity that these costs will be kept to a minimum and within existing service budgets.

## 7. Climate Change Appraisal

- 7.1. The introduction of a county wide Public Space Protection Order to encourage responsible dog ownership is not expected to generate any direct impacts for the generation or capture of carbon emissions, the generation of renewable energy, or for adaptation to the impacts of climate change. There may be some indirect positive

effects for carbon reduction if the mitigation of the existing negative impact of dog fouling leads to more extensive use of local open space.

## 8. Background

- 8.1. Following a series of routine audits into the Dog Warden service, public complaint and an increasing nuisance from dog fouling, a management review concluded that the service could be improved with the introduction of a county wide Public Space Protection Order (PSPO).
- 8.2. The review also considered that enforcement on its own would be insufficient to secure a change in attitudes and the behavioural change needed to address the volume of complaints about dog fouling in public areas. To meet this challenge, it was considered that a proactive public information campaign advising of health considerations, the impact of dog nuisance and the reasons for subsequent enforcement action would be needed.
- 8.3. On the 18th of October 2023 Cabinet approved proposals to consult on the introduction of a Public Space Protection Order for the council's administrative area to strengthen the Council's enforcement powers.

This will allow the service to address public perception and complaints and provide the evidence necessary to introduce a legal framework for the council to take enforcement action against pet owners who allow their animals to foul pavements and in public amenity spaces without collecting and disposing of the waste.

- 8.4. The Anti-social Behaviour, Crime and Policing Act 2014 ('the Act') introduced Public Spaces Protection Orders ('Orders'), which are intended to provide the means of preventing individuals or groups committing anti-social behaviour. Section 59 of the Act sets out the test which must be satisfied before a local authority makes an Order... "where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable".
- 8.5. The power to make an Order rest with local authorities, in consultation with the police and other relevant bodies who may be affected. A local authority can make an Order in respect of any public space within its administrative boundary. The definition of public space is wide and includes any place to which the public or any section of the public has access, on payment or otherwise, as of right or by virtue of express or implied permission.
- 8.6. An Order can be in force for any period up to a maximum of three years after which time the local authority must consider whether to extend the Order.
- 8.7. A challenge to the validity of the Order or aspects of it can be lodged by anyone who lives in, or regularly works in or visits the area in the High Court within six weeks of issue. Further challenge can only be made when an Order is varied by the local authority.
- 8.8. An order may be applied wherever there is material evidence of anti-social behaviour, for example, in reports to the police, local authorities or partner agencies.

- 8.9. Orders can be enforced by a police officer, a police community support officer, authorised council officers and employees of other delegated organisations. It is proposed that the power for Shropshire Council to authorise any other person be included.
- 8.10. In relation to a breach of a PSPO, if the PSPO relates to anti-social behaviour, then the police or 999 need to be called. For non-urgent breaches, the public can call 101 or if the breach is related to environmental crime, such as fly-tipping or dog control then public can contact Shropshire Council directly.
- 8.11. The proposals contained in this report and for the Order are intended to encourage responsible dog ownership and control of animals in public spaces and as follows:
1. To prevent public health nuisance the first prohibition is asking dog owners to clean up after their animals have defecated and to disposal of the waste in a suitable receptacle
  2. To prevent public health nuisance particularly for the young and vulnerable members of the public dog owners are being asked to exclude their animals from fenced and enclosed play, equipped and sports areas.
  3. To prevent the nuisance of uncontrolled dogs in public areas the Order provides authorised officers with the ability to ask dog owners to leash their animals 'by direction' and if required to issue fixed penalty notices if owners do not comply.
  4. The last prohibition proposed relates to animals being walked on the Highway and is asking for dogs to be 'leashed' to prevent a safety hazard for members of the travelling public, dog owners and the animals.
- 8.12. To control dogs in all public spaces throughout the county the restricted area for the purposes of the Order is proposed for the County of Shropshire as shown in the Order, detail contained in Appendix B.

## 9. Additional Information

- 9.1. There has been a good response to the public consultation exercise and as summarised below.

### 9.2. Consultation – Key Points

Good levels of response 561 online 16 written submissions from Shropshire and surrounding areas, but from predominantly an older age group, 55-64 years of age.

Approx' 2/3 found the proposals clearly presented with 63% in support of the proposals.

Strong support, over 80% for public information campaign.

Good levels of support for all proposals apart from first proposed prohibition for allowing dogs to foul, the offence supported was for not picking up and disposal.

Concerns raised included:-

Impact on owners mental and physical health

Availability of space to exercise dogs (animal welfare)

Fairness and enforceability of fines  
Need to focus on irresponsible owners  
Failure not to enforce or follow up reports  
Highest level of agreement was dog on leads by direction and failure to remove and dispose of waste (to create an improved environment)

Other comments raised:-  
Exemptions for working dogs  
Availability of bins and bags

### 9.3. **RSPCA & Dog's Trust Response - Key Take Aways**

Adequate provision of disposal points  
Rigorous, targeted and proportionate, enforcement  
Promote responsible dog ownership, education  
Exclusion areas to be kept to a minimum and to enclosed areas  
Open sport areas should be excluded so animals can exercise freely and for animal health reasons  
Support for dogs on leads by direction  
Adequate signing for exclusion and dog free areas  
Adequate Bin provision

### 9.4. **The PSPO proposal consulted on**

To implement a Public Spaces Protection Order for the prevention of dog fouling and the collection and disposal of dog waste by dog owners. This includes the following:  
The prohibitions relate to:

1. Allowing dog fouling in public areas in the restricted area.
2. Failure to appropriately remove and dispose of dog waste if a dog has been allowed to foul.
3. Dog exclusion from play areas, equipped and fenced sports areas.
4. Dogs on leads by direction.
5. Dogs on Leads on the Highway.

Orders can be enforced by a police officer, a police community support officer, authorised council officers and employees of other delegated organisations.  
A breach of the PSPO can be dealt with through the issuing of a Fixed Penalty Notice of up to £100, or a level 3 fine (max £1000) on prosecution.

Under prohibition 4 authorised officers will have the ability to direct members of the public to leash their animals where they are creating a nuisance or where they are not under control.

In establishing a PSPO, appropriate signage must be displayed in accordance with the requirements of the Act on entry points to the public area and within the said area.

### 9.5. **Discussion**

The main objection contained in the consultation responses concerned the first prohibition and that it was unfair to penalise owners for allowing their dogs to foul.

This is accepted and it is proposed to combine the 1<sup>st</sup> and 2<sup>nd</sup> prohibition into one and as follows – allowing a dog to foul and failing to appropriately remove and dispose of dog waste.

Another issue which raised comment was where dogs should be allowed to exercise and in general there was support for the exclusion of dogs from fenced, enclosed or equipped play areas. However, there are varying views about sports pitches and large open spaces, which are currently unrestricted, and a proportion of responders concerned about animal welfare and owner's mental health and wellbeing, and therefore access to suitable areas for exercise. On one hand it could be argued that the health benefits warrant exclusion from marked sport pitches, but on the other, this is an unreasonable restriction and prevents dogs exercising. It also introduces room for confusion about which areas are accessible, for example areas between pitches or walkways to and from, which may be problematic in terms of enforcement. Regardless, it could also be argued that the proposed, combined 1<sup>st</sup> and 2<sup>nd</sup> prohibition and 4<sup>th</sup>. dogs on leads by direction, provides sufficient powers for enforcement purposes. On balance it is considered that exclusions should be limited to fenced, enclosed and equipped play areas and that further restrictions only be considered for open sports areas/parks at the end of the PSPO term (3 years) and if evidence suggests this is necessary.

Concerns were raised and through the consultation about the potential impact of a PSPO on working animals and the rural economy of the county. Plainly problems of dog fouling are more acute in an urban setting, but not exclusively so, and any order introduced should not impact unduly on the ability of the farming community to go about its business. However, neither should their activity impinge significantly on the public or in public areas. Farming activity will be mostly confined to private property accept where movement is required for livestock, hunts, and possibly Shoots. In these circumstances it would be reasonable to exempt working animals albeit for organised and timed events, for example hunts to avoid abuse and to enable enforcement should it be necessary.

Exemptions for the public with disability was another point raised during the consultation, and plainly it would be unfair to penalise an individual who is unable to comply with an Order. And previous Orders, and as the norm, have excluded by exemption individuals who are registered blind. There is debate about whether the individual or the animal should be exempt, and it is suggested that it should be the individual as a guide dog could be walked by an abled bodied person who should comply with the proposed Order. This argument can be extrapolated to other forms of disability and again it is suggested it would be unreasonable to penalise those who are unable to comply and therefore it is safest to include exemption for registered disabled persons, not their animals.

The consultation indicates agreement with the proposal to direct owners to put their dogs on leads where they are being a nuisance in a public area and for the safety of the public enjoying this space. Similarly, the consultation suggests dogs should be under control on the highway and whilst there have been objections raised about this particular aspect of the proposed control the safety consideration associated with dogs straying uncontrolled into live traffic would suggest this

control is reasonable.

The value of a fixed penalty fine was also raised with varying views concerning whether it was sufficient or too much. The general view and on balance would be the value is about right (£100) to provide a deterrent without being unreasonably punitive.

The remaining points raised in the consultation related to supporting functions for the PSPO, for example adequate provision of bins, signage and indeed public education which are accepted and will be taken into account when introducing measures, so any enforcement action taken is reasonable and proportionate.

## 10. Conclusions

- 10.1. The proposal originally made to Cabinet last October has been carefully considered against the result of the public consultation and discussed in section 9 above, and the following conclusions reached, and subject to Cabinet approval will be reflected in the detail of the proposed PSPO.
- 10.2. That it is unfair to penalise individuals for the act of dog fouling, rather the act of not collecting and disposal of waste.
- 10.3. That it is reasonable to exclude, on the basis of health considerations, dogs from fenced, enclosed and equipped play areas.
- 10.4. Given concerns raised about the ability of the public to access open spaces for their own mental health considerations and for the welfare of their animals when exercising that the PSPO is sufficient at this time to control dogs and to take enforcement action where owners fail to comply or are inconsiderate of others.
- 10.5. That it is unreasonable to fine those who are unable to comply with the proposals for reasons of disability and therefore these groups should be excluded by exemption.
- 10.6. That controls for dogs on the highway and on leads by direction and for the safety of the public in these circumstances is also reasonable and proportionate.
- 10.7. That the value (£100) of the fixed penalty notice is reasonable and sufficient.
- 10.8. And finally, that the PSPO should be implemented with a support public education and information exercise, adequate bin provision and signage for enclosed exclusion zones so that any enforcement action taken is both reasonable and proportionate.

# Dog Warden Service

## Public Spaces Protection Order Consultation

### Survey Report

January 2024

# 1 Introduction and Methodology

Over recent years Shropshire Council's Dog Warden Service has seen increased reports of dog fouling and there have been growing calls from communities across Shropshire to take enforcement action against pet owners who allow their animals to foul pavements and public amenity spaces. An in-depth review of the Dog Warden Service was undertaken by Shropshire Council during the winter of 2022/23. The review highlighted the growing number of reports received by the service and concluded that action was required to address the issue.

The Anti-Social Behaviour, Crime and Policing Act 2014 introduced Public Spaces Protection Orders (PSPOs) which are intended to provide the means of preventing individuals or groups committing anti-social behaviour in a public space. Section 59 of the Act sets out the test which must be satisfied before a local authority make a PSPO, including where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable.

PSPOs create a framework that either replaces or updates existing public space restrictions such as alcohol Designated Public Place Orders and Dog Control Orders and permits local authorities to introduce new regulations.

The power to make an Order rests with local authorities, in consultation with the police and other relevant bodies who may be affected. A local authority can make a PSPO in respect of any public space within its administrative boundary. The definition of public space is wide and includes any place to which the public or any section of the public has access, on payment or otherwise, as of right or by virtue of express or implied permission.

A PSPO can be in force for any period up to a maximum of three years after which time the Local Authority must consider whether to put in place another PSPO. Appeals against a draft PSPO can be lodged by anyone who lives in, or regularly works in or visits the area in the High Court within six weeks of issue. Further appeal can be made when a PSPO is varied by the local authority.

The proposed PSPO relates to:

- **Allowing dog fouling in the public area.**
- **Failure to appropriately remove and dispose of dog waste if a dog has been allowed to foul.**
- **Dog exclusion from play areas, equipped and fenced sports areas:** Dogs are excluded from children's play areas, Multi-Use Games Areas (MUGAs) and tennis courts. For example, a children's play area that contains children's play equipment such as slides, swings, climbing frames and similar apparatus and that is enclosed on all sides by fences, gates, walls or other structures that mark the boundary of the play area. The clear boundaries of these areas make it easy for people to identify the extent of the area where dogs are not allowed.
- **Dogs on leads by direction:** This order gives authorised officers the power to ask for a dog to be put on a lead in situations where they are

not under the appropriate control of their owner or where they are causing damage or acting aggressively towards other dogs or park users.

- **Dogs on leads on the highway:** Dogs must be kept on a fixed lead (which includes a fixed extendable lead), of no more than 1 metre in length, when on or adjacent to the public highway, a footway, footpath or cycle track.

There is an exemption to any exclusion requirement for registered assistance dogs. Orders can be enforced by a police officer, a police community support officer, authorised council officers and employees of other delegated organisations. A breach of the PSPO can be dealt with through the issuing of a Fixed Penalty Notice of up to £100, or a level 3 fine (max £1000) on prosecution.

In establishing a PSPO, appropriate signage must be displayed in accordance with the requirements of the Act on entry points to the public area and within the said area. To support the enforcement action a proactive public information campaign is also proposed by Shropshire Council. This would advise of health considerations, the impact of dog nuisance and the reasons for enforcement action. The campaign would aim to educate and encourage pet owners to act responsibly.

To understand concerns about the proposals prior to implementation Shropshire Council undertook a public consultation between 26 October 2023 and 21 December 2023. The views of a range of stakeholders and key partners were encouraged in addition to public responses, and respondents offered a range of response options including an online survey, email and letter. As well as being publicly available on the Shropshire Council Get Involved pages, the survey was also widely publicised through the Shropshire Council newsroom.

A total of 577 responses were submitted during the eight weeks that the survey was open. The feedback from these responses is set out within this report. The feedback will inform the policy recommendations to be presented to Cabinet for final approval of the PSPO in February 2024.

This report proceeds in the following sections:

- Section 1 (this Introduction) provides a description of the survey background and methods.
- Section 2 outlines the profile of respondents taking part in the survey.
- Section 3 covers the overall survey feedback on the consultation.
- Section 4 details the views of survey respondents and other consultation respondents in response to the proposed PSPO.
- Section 5 provides a brief summary and conclusion of the report.

## 2 Profile of Respondents

561 respondents completed the online consultation survey and 16 provided written consultation responses. Demographic data was only collected through the survey, but this provides important information to help Shropshire Council understand the profile of respondents and whether any feedback has been missed from key groups or respondent types.

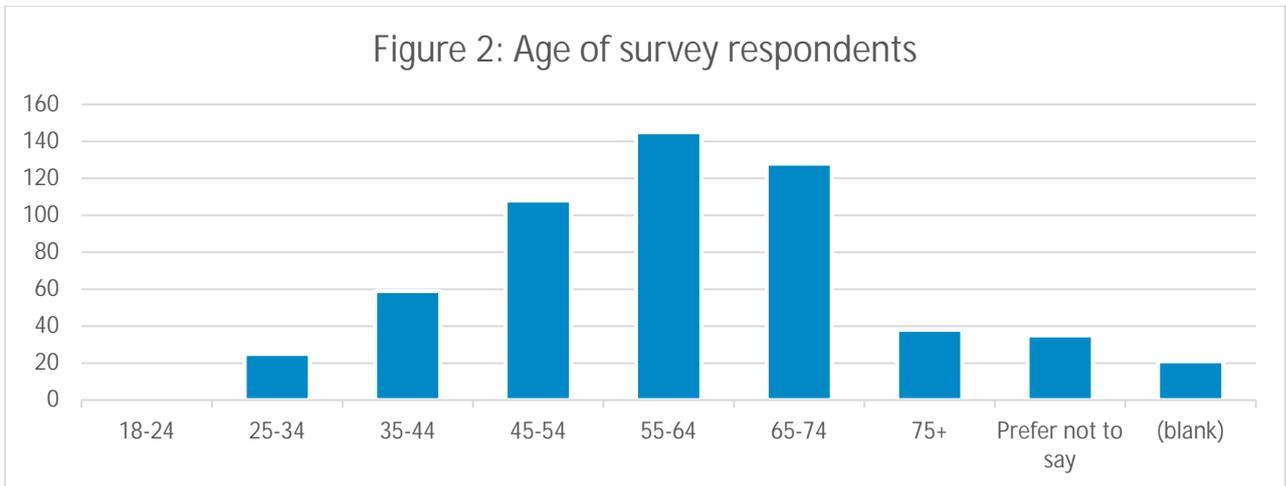

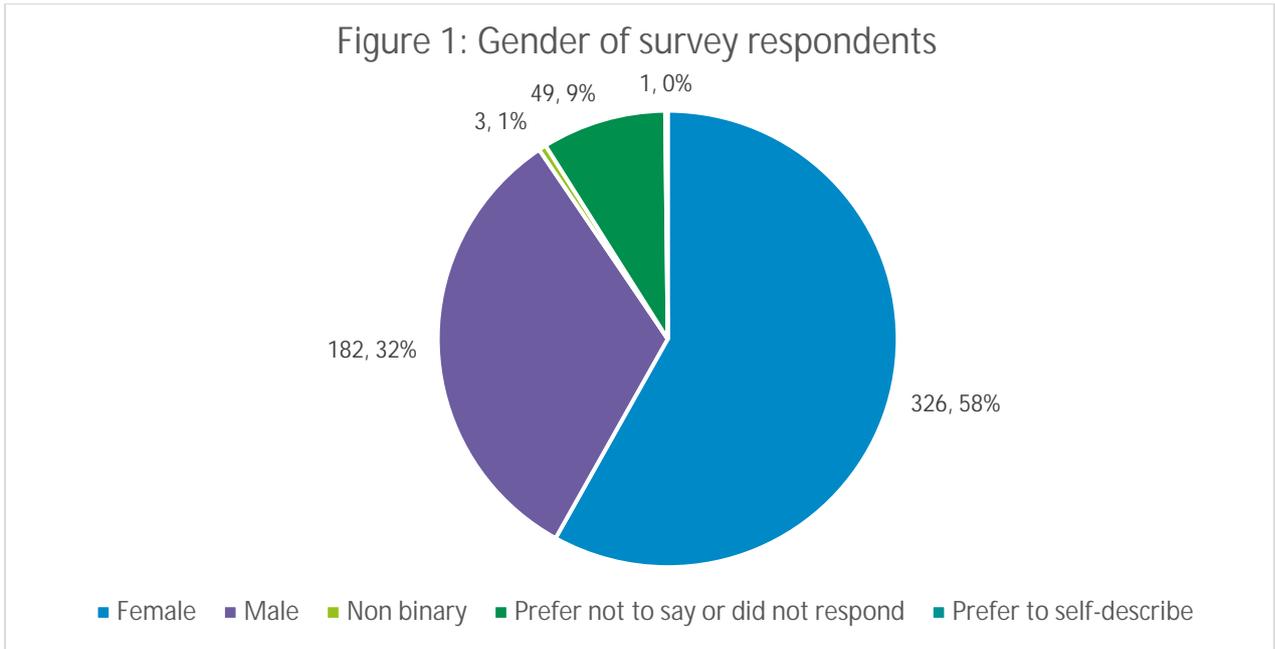

**Map 1** below illustrates the approximate location of survey responses (the approximate location is used to ensure any individual responses cannot be identified). The map, and closer analysis of the data, highlights that the responses to the consultation came from across Shropshire and beyond. All county settlements were represented in the responses with more responses from areas of higher population, as would be expected. Despite the proposals and consultation only relating to Shropshire Council administrative area, there were many responses from people living in the Telford & Wrekin area.

**Map 1 Location of survey respondents**

**Figure 1** displays that more women responded to the consultation (58%) compared to men (32%). This pattern is seen within most, but not all, types of consultation. Research suggests that women are more likely to respond when a consultation response is submitted on behalf of a household. 9% preferred not to provide a gender, 1% are non-binary and 0.2% prefer to self-describe.

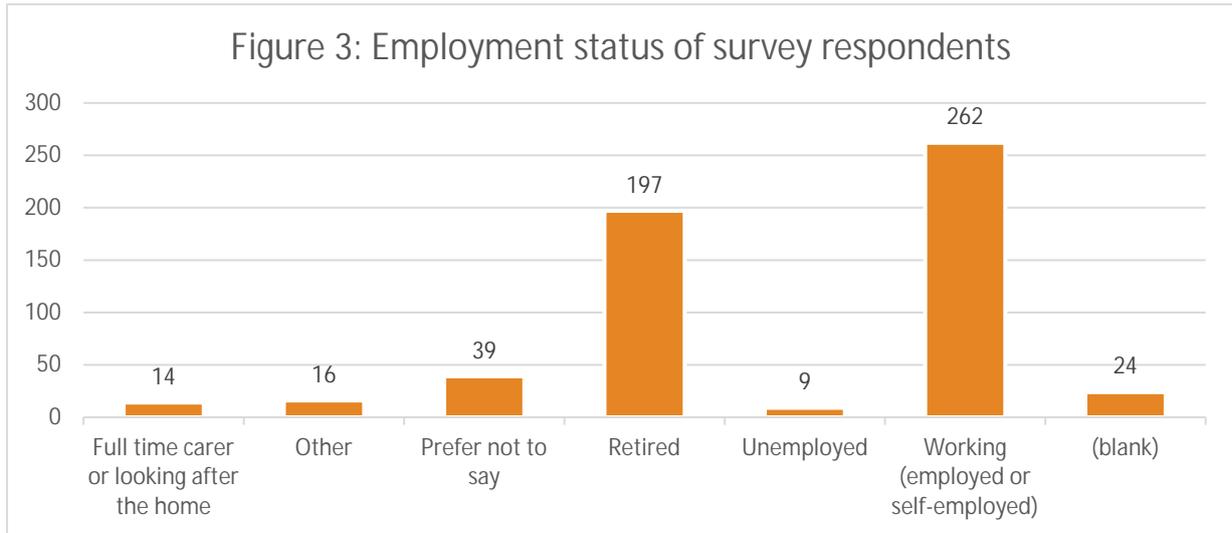

**Figure 2** illustrates the age group of survey responses and highlights that although there were few respondents under the age of 24 (2 respondents), there were more responses across the other age groups with the greatest response from those aged 55 to 64 (26%) followed by 65 to 74 year olds (23%).

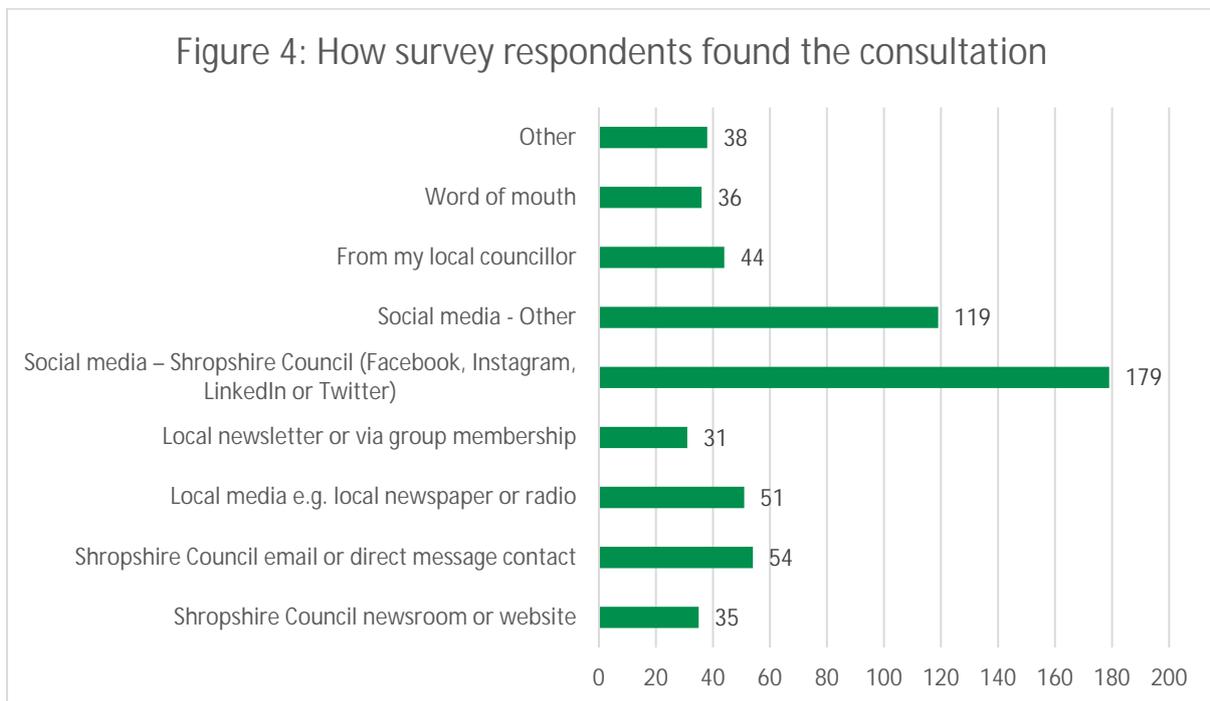

85% of survey respondents were White (British, Irish, Welsh), and 9% preferred not to say. This indicates that responses were very small from other ethnic groups. This will be noted and considered as part of Shropshire Council’s duties to assess any equality, social inclusion and health impacts.

Three questions were included in recognition of the impact of this consultation on people with disabilities. Although assistance dogs are not covered by the proposed PSPO restrictions, the consultation was designed to consider this and any potential impacts. 81 of the survey respondents are unpaid carers, and 82 have a long-standing illness or disability. These numbers should mean that a range of people with different levels of mobility and caring status are represented in the survey sample. Only 1 survey respondent has an assistance dog. This may reflect the exclusion and suggests the exclusion is understood. More feedback relating to equalities and impact is covered later in the report.

**Figure 3** displays the employment status of survey respondents. There is a good mix of working and retired survey respondents.

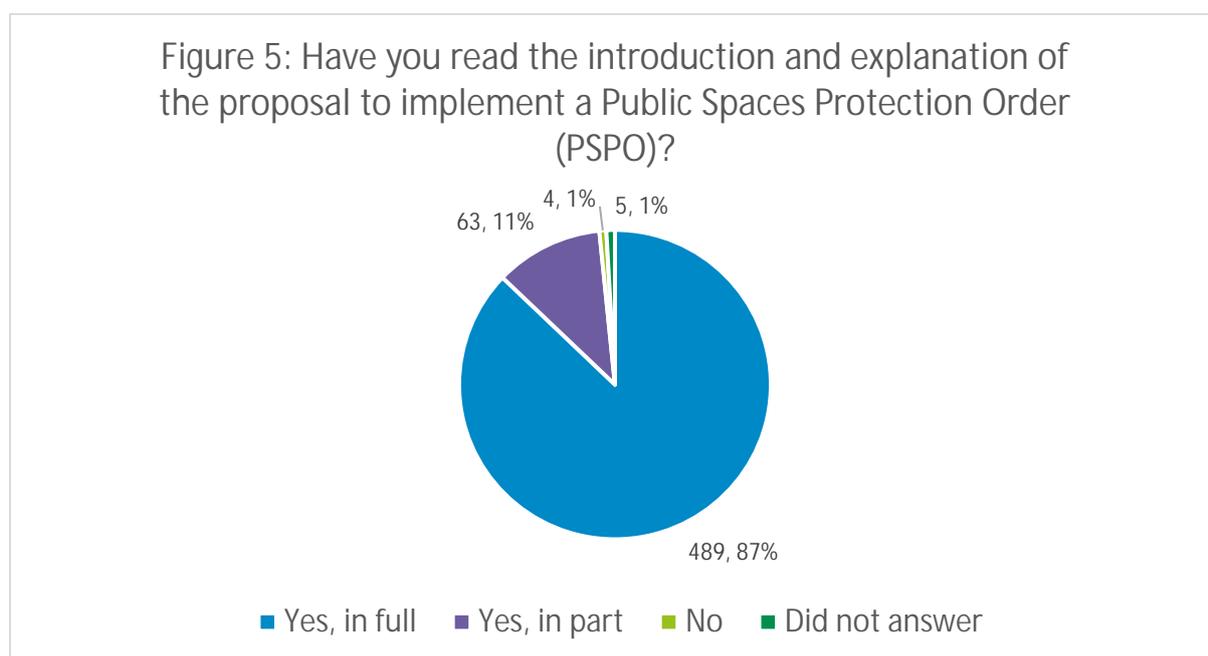

A question was included within the survey to find out how people had learned of the consultation. **Figure 4** displays the results. Social media was the way more people found the consultation compared to other communication channels. Under the other category 19 people had learned of the consultation through the 'Nextdoor' App. Some survey respondents had also learned about the consultation from local community groups or neighbours.

The next section of the report focuses on the survey respondents' views on the proposals set out for the PSPO.

### 3 Overall survey results and feedback

The 561 survey respondents, and 16 of the respondents who provided written responses, presented their views on the proposals set out within the consultation for the Public Spaces Protection Order. This section presents the responses to some overarching survey questions and the next section of the report brings the two sets of responses together to focus on the comments received. To check the basis for comments and feedback the survey respondents were asked if they had read the introduction and explanatory text before responding to the consultation. The results are shown in the **Figure 5** below. **98% of survey respondents had taken the time to read the supporting information in full or in part** (11% in part and 87% in full).

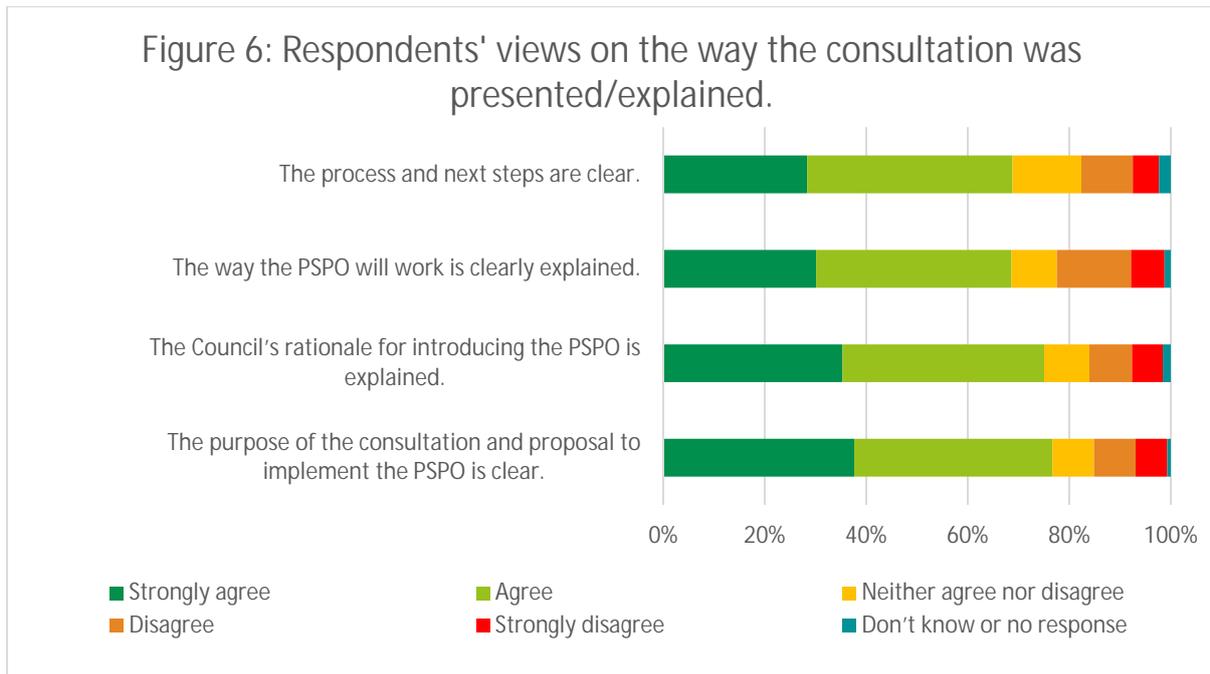

Survey respondents were then asked to provide a response against 4 statements:

- The purpose of the consultation and proposal to implement the PSPO is clear.
- The Council's rationale for introducing the PSPO is explained.
- The way the PSPO will work is clearly explained.
- The process and next steps are clear.

The results are shown in **Figure 6**. **Overall, the feedback about the way the proposals were presented was positive.** On average, 184 survey respondents strongly agreed with all the statements and an average of 221 agreed. 430 survey respondents strongly agreed or agreed that the purpose of the consultation and proposal was clear (81 disagreed/strongly disagreed). 421 felt the rationale was clearly explained (81 disagreed/strongly disagreed). 385 felt the way the PSPO will work was clearly explained but 119 disagreed/strongly disagreed. 386 agree that the process and next steps are clear but 86 disagree/strongly disagree. On average across all the statements 92 people disagree (16% of the survey respondents) and

this suggests they oppose the proposal, but this is explored in more detail in the following results.

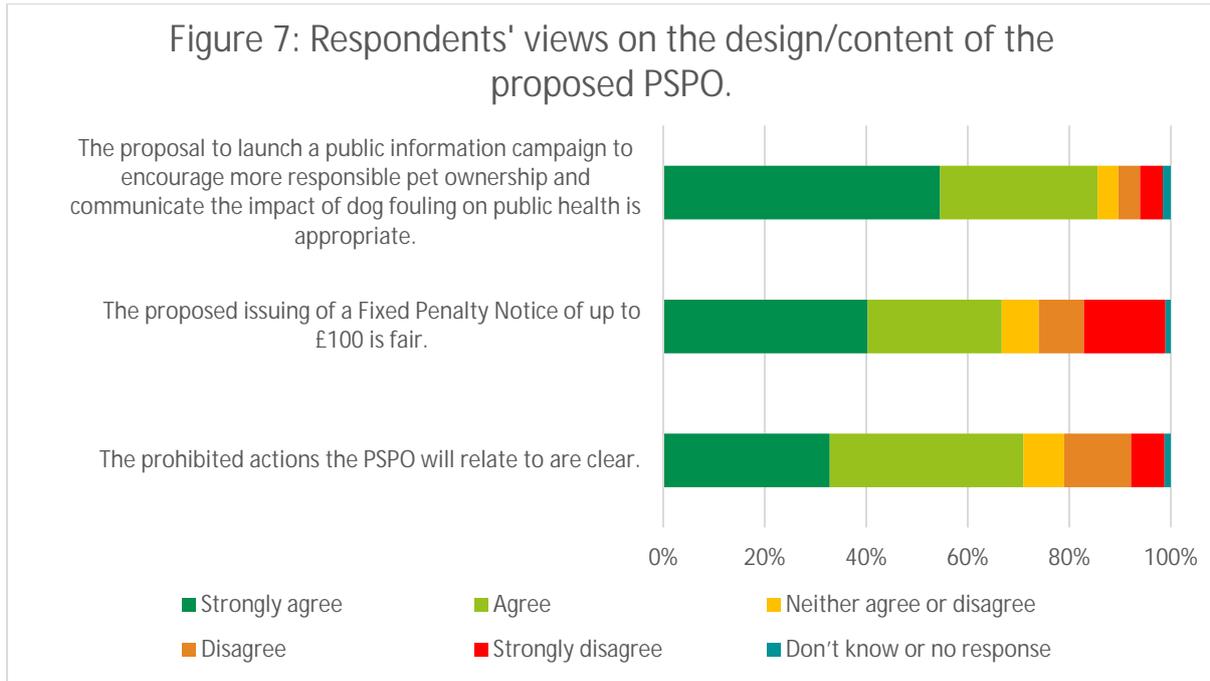

The question about the presentation of the proposals was followed within the survey by a question more focused on the design/content of the proposed Public Spaces Protection Order. Survey respondents were asked to provide a view on the following statements:

- The prohibited actions the PSPO will relate to are clear.
- The proposed issuing of a Fixed Penalty Notice of up to £100 is fair.
- The proposal to launch a public information campaign to encourage more responsible pet ownership and communicate the impact of dog fouling on public health is appropriate.

The results are presented in **Figure 7**. An average of 417 of the 561 survey respondents agree or strongly agree with all of the statements above and an average of 100 disagree or strongly disagree. **Overall, the response to the way the PSPO proposal has been designed/its content are very positive.** 398 people agree/strongly agree that the prohibited actions the PSPO will relate to are clear (111 disagree/strongly disagree). 374 respondents agree/strongly agree that the proposed issuing of a Fixed Penalty Notice of up to £100 is fair (140 disagree/strongly disagree) and 480 agree/strongly agree with the proposal to launch a public information campaign to encourage more responsible pet ownership and communicate the impact of dog fouling on public health is appropriate (49 disagree/strongly disagree). **The £100 Fixed Penalty Notice is the main area of concern with disagreement expressed by 25% of the survey respondents.**

Figure 7: Respondents' views on the design/content of the proposed PSPO.

Survey respondents were asked to add any comments to explain the response they had provided, particularly if they had disagreed with the statements provided. There were 291 comments, and these were considered and themed. The results of the analysis are shown in **Table 1** below.

**Table 1 Survey respondents' comments to explain views on the design/content of the PSPO**

Theme	Count	%
Unreasonable to fine if picking up after dogs	56	19
General agreement with the consultation proposals	49	17
How will the council enforce the PSPO? / unenforceable	38	13
Should focus on irresponsible owners	37	13
Impact negatively on where dogs can be walked	26	9
Fines should be higher than the £100 stated	19	7
The fine is too much / unfair for responsible dog owners	12	4
No need for PSPO / existing legislation is already in place	13	4
Will this cover working dogs / hunting dogs?	9	3
Need additional dog poo bins	9	3
Other comments	23	8
<b>Total</b>	<b>291</b>	<b>100</b>

Main themes within the feedback included comments that it would not be fair to impose a fine if the dog owner was picking up after their dog (19%), general agreement with the proposals (17%), questions about how the PSPO will be enforced (13%) and the suggestion that focus should be on irresponsible dog owners (13%). **4% felt the proposed Fixed Penalty Notice was too high and should be less than £100 and 7% felt it should be of a greater value. This feedback suggests it is probably about right.** 4% suggested there was no need for the

proposed PSPO because other legislation is available. Example comments are included below to better illustrate some of the feedback provided:

Example comments:

- *“Fine the dog owners who don't pick up dog excrement. However, you are prohibiting the exercising of dogs. Most dog owners are responsible. May be there should be more attention on cat owners and the neglectful behaviour that their cats can leave their excrement anyone causing medical issues for young children. I am sick and tired of removing cat excrement from my private property! Where is the legal process for this?”*
- *“The fixed penalty should be more.”*
- *“Working dogs must be considered, and where appropriate come under temporary exemptions. It is ridiculous to try and enforce urban rules on animals in a farming and hunting environment.”*
- *“Seems a waste of money when the council does not offer areas for dogs to be safe off lead owners have little option but to use playing fields for exercise. Number of people in Whitchurch has gone up dramatically, parks and fields for dog walking have decreased. Issue is not education but lack of alternatives.”*
- *“My concerns are that unless investment is put into the policing of these measures many of the morons who let their dogs foul the pavements will get away with it. I also think the fine is punitive, a day in court and an order on the owner and a fine of at least £2000. Let's publish the names of these imbeciles.”*
- *“Great idea, fed up of dogs fouling on country lanes and dogs not under control when taking our dog for a walk (on a lead).”*
- *“Why is this even worthy of council time? There is already legislation in place for dog fouling. I suggest the council focus resources on matters that need more urgent attention, such as saving money.”*
- *“I disagree with having to have a well-behaved dog on a fixed lead near a footpath or cycle path. Where else can one practise heel work away from traffic?”*
- *“Will there be an abundance of Responsible Officers watching dogs to see if their owner doesn't pick up? The proposal says there won't be any cost implication, so I don't see how this is possible. People can be fined currently for not picking up their dog's poo so if they are not seen and fined now, how will this improve in future?”*
- *“It appears that allowing a dog to foul will be an offence even when the dog waste is immediately picked up and disposed of. It isn't at all clear whether this applies everywhere or just in some locations, how this will be enforced, and how owners of dogs are expected to prevent their dogs from defecating anywhere in Shropshire (if it is to be illegal to allow this even when the waste is immediately picked up)? Many people rely heavily on their dogs for mental health and to combat loneliness. The proposals need to be much clearer, and reasonable having regard to people wishing to keep pets as well as keeping the streets clear.”*
- *“This will affect people with disabilities and having a support dog. There is not a register for support dogs (there is a register for dogs that have been supplied by certain organisations) The way that this is written will fall foul of the equality act.”*
- *“Totally agree but how will this be implemented- very challenging.”*

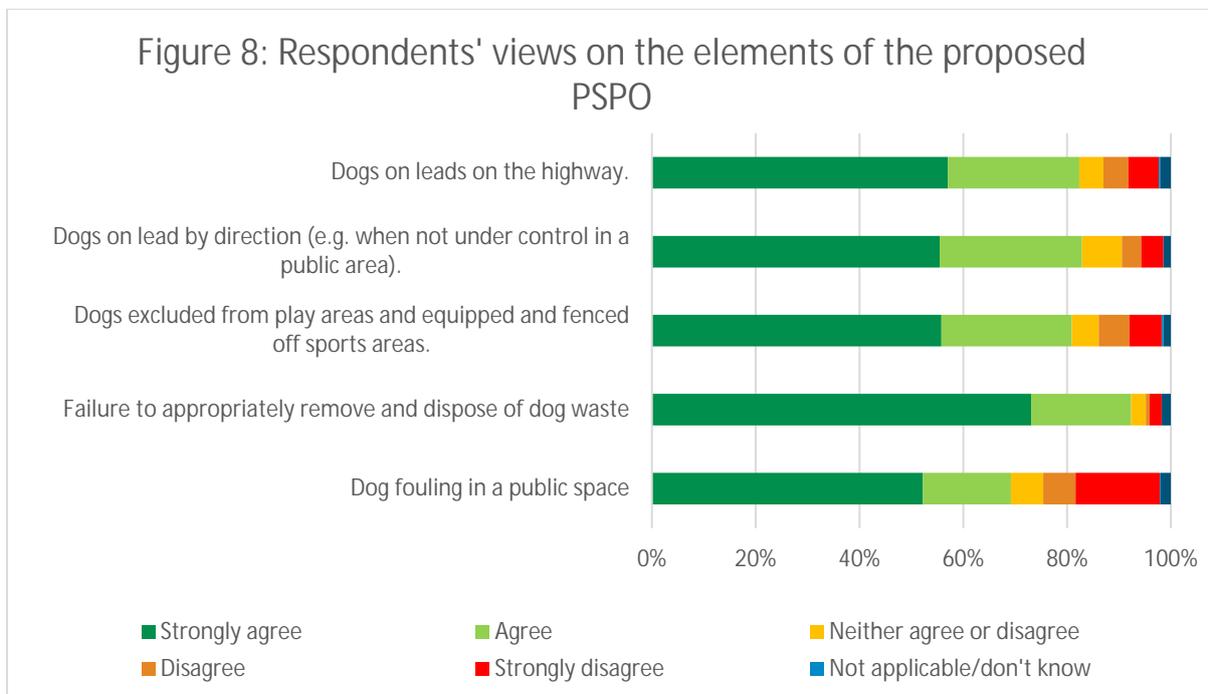

The next section of the report combines the survey responses and written responses to explore views in response to the consultation in more detail.

## 4 Views on the proposed PSPO

The consultation survey included a question to seek views on each of the restrictions or elements of the proposed PSPO. Survey respondents were asked their views on the following features of the PSPO:

- Dog fouling in a public space.
- Failure to appropriately remove and dispose of dog waste.
- Dogs excluded from play areas and equipped and fenced off sports areas.
- Dogs on lead by direction (e.g. when not under control in a public area).
- Dogs on leads on the highway.

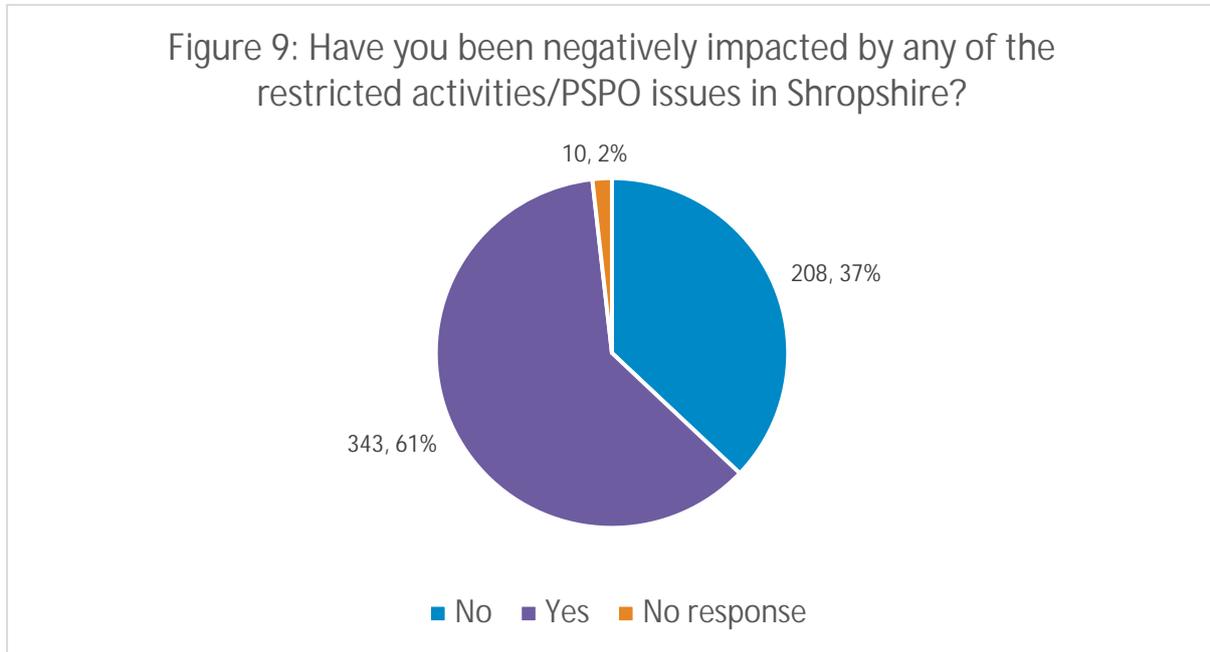

**Figure 8 below, displays the response and highlights that there is majority support for all 5 elements of the proposed PSPO (on average 457 survey respondents agree with every element and an average of 63 disagree (11%).**

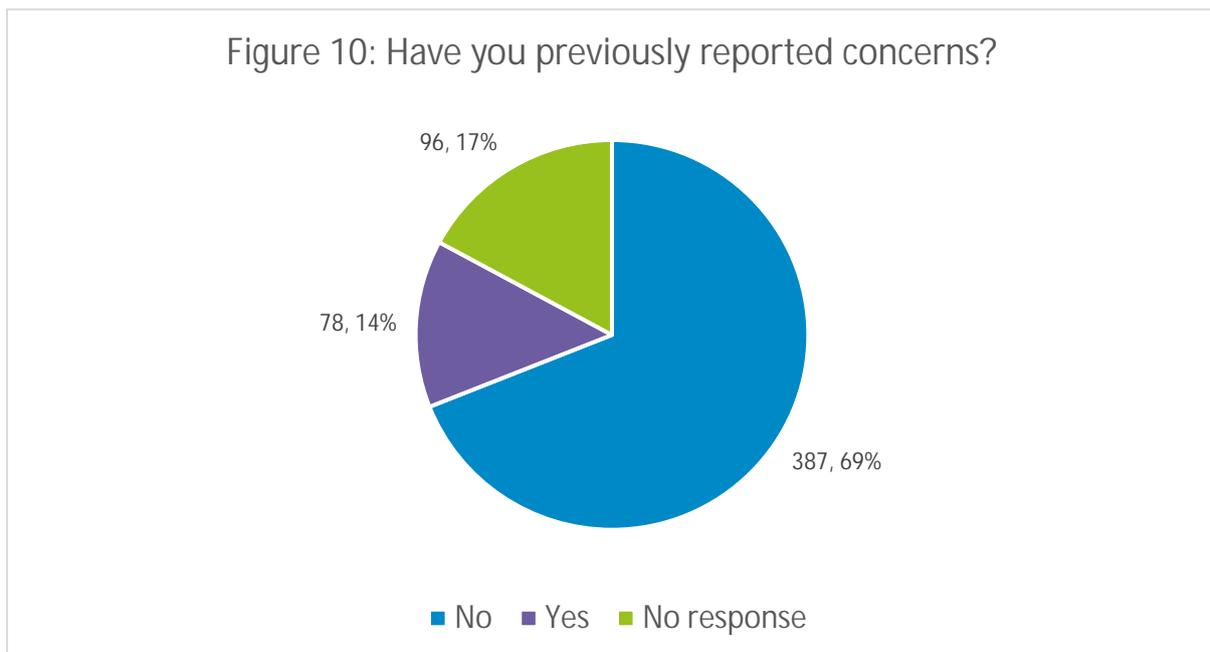

The element of the proposed PSPO with the most support is 'Dogs on lead by direction (e.g. when not under control in a public area)' 465 agree/strongly agree and 45 disagree/strongly disagree. This is followed closely by 'Dogs on leads on the highway' 462 agree/strongly agree and 60 disagree/strongly disagree. There are very few (only 17 respondents) who disagree/strongly disagree with the element 'Failure to appropriately remove and dispose of dog waste'.

Dog fouling in a public space faces more disagreement than any of the other elements of the proposed restrictions. 126 people disagree or strongly disagree (388 agree or strongly agree). 68 disagree or strongly disagree with dogs being excluded from play areas and equipped and fenced off sports areas (454 agree/strongly agree).

Linked to the 5 elements of the PSPO/ restricted activities, the survey included a question which read 'Have you been negatively impacted by any of the activities/issues listed above, in Shropshire?' **Figure 9 shows that 61% of the survey respondents have been impacted by the activities that are proposed for restriction under the PSPO.**

They were then asked 'If yes, have you previously reported concerns?' **Figure 10 shows that 14% of the survey respondents have reported concerns in the past.** Those who have reported concerns were asked to comment and explain more about their experiences. Each comment was read, themed and the results are shown in **Table 2.** There were 222 comments.

**Table 2 Survey respondents' experience of issues related to the PSPO**

Theme	Count	%
Amount of dog fouling / Not being cleaned up by owners	74	33
Dogs not being on leads/long leads causing nuisance or threat	42	19
Need to ensure enforcement /incident reporting/ follow up	27	12
Availability of dog poo bins / bags	15	7
Not reasonable to fine if owners clear up afterwards	14	6
Not reasonable to have dogs on leads / short leads at all times	13	6
Have witnessed / been involved in a dog attack	12	5
General agreement with the proposals	6	3
General disagreement with the proposals	6	3
Need to ensure there are sufficient places to exercise dogs	4	2
Other	9	4
<b>Total</b>	<b>222</b>	<b>100</b>

The top comment was related to dog waste in public places and failure of owners to clean up (33% of all comments). Other commonly mentioned concerns were dogs not on the lead and a failure to enforce or follow up on reported incidents. There were equal proportions of more general comments agreeing and disagreeing with the proposed PSPO. The example comments below illustrate the feedback received.

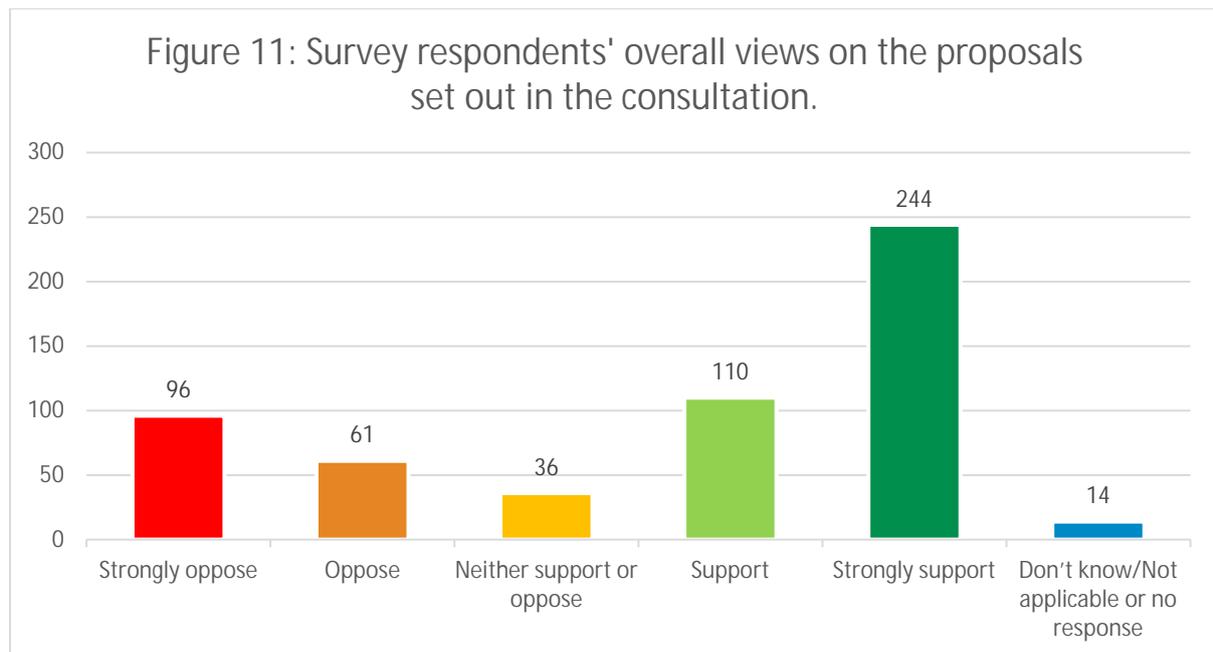

**Example comments:**

- *“As someone who was a regular runner in Shropshire, I have come across many dogs who have behaved badly/inappropriately near me. I have not been bitten but certainly nipped by a dog and I find dogs running up to me quite worrying. I often have found the owners to be aggressive in their attitude when I ask them to control their dogs.”*
- *“Dogs routinely off the lead and not under control on the highway and public paths limits my ability to freely exercise my right to use these areas as a pedestrian. I have been threatened by dogs off the lead on public footpaths around Pontesbury, Minsterley and surrounding areas. It is proportionate and reasonable for people to keep their dogs on short leads in shared public areas, so that everyone not just dog owners can enjoy fresh air and exercise. Last time I visited the quarry I came home with dog faeces on my shoe, having only walked on the footpaths not even through the grass. Dogs foul all over the paths in Pontesbury, particularly in the former council estate near the school....The number of dogs has vastly increased, and the level of control exercised by owners seems to have decreased proportionately.”*
- *“People’s definitions of a dogs under control is variable! Having got spaniels that like to run!”*
- *“Yes, aggressive dogs off the lead and harassing my dog (and me) on the lead with the owner taking no action. Dog owners not clearing up after their dog. Dog owners running with their dog off lead - the owner does not always recognise when their dog is defecating.”*
- *“Raised the issue about dogs fouling on the footpath and on my drive and the council did nothing about it. I offered to allow a poo bin to be put up on my boundary and it was rejected. I have had dog mess thrown over my hedge or pushed into my hedge by dog walkers. There are not enough dog waste bins in high traffic areas.”*
- *“Dog fouling pavements. Lack of bins to dispose of dog poo.”*
- *“To whom do I direct concerns and what us the point in doing this. Dog poo (not cleared up) is a significant problem and I encounter this every single day. Do I report every single day?”*

- “Dog poo in my garden, in the playing area for children on public footpaths and bridleways.”
- “You can’t stop a dog fouling. Clean up yes, fine for the fouling, no.”
- “I think I have raised the issue of providing bags at point of nuisance first rather than a fine.”
- “A pointless token, a poorly written PSPO with no information on how you are going to police it.”
- “Sorry but what’s the point trying to report. To date no one ever called me back about being knocked over - there is no one to enforce this behaviour set! How this will be implemented and “policed” is vague and won’t stick as there just aren’t resources to do it.”

The comments include concerns that failure to clean up should be the focus rather than the act of dog fouling and concerns that the PSPO will be difficult to enforce. Top issues experienced relate to the presence of dog waste in public areas and dogs off the lead.

All survey respondents were asked their overall view on the consultation proposals. **Figure 11** displays the results. **Overall, 63% of survey respondents support the proposals set out in the consultation and 28% oppose. More survey respondents selected ‘strongly support’ than any other category.**

To understand why there may be opposition to the proposed PSPO, survey respondents were asked to describe how the proposals would likely impact them, as an individual or a community/business. **Table 3** displays the feedback. There were 378 comments, and each was considered and themed. **A top theme within the comments (40% of all comments) was that the proposed PSPO could lead to an improved environment (e.g. cleaner or safer).** There were a few concerns from people who wondered if the proposals would result in fewer places to exercise their dogs and whether they would be fined because they couldn’t prevent their dog/s from defecating.

**Table 3 Views on the likely impact of the proposed PSPO**

Theme	Count	%
Improved / cleaner and safer environment	150	40
Will reduce / restrict where I can exercise my dog	51	13
Impact on mental and physical health	4	1
Concern over the potential fines / can't control dog defecating	43	11
Concern over the need for dogs to be on leads / short leads	22	6
Waste of council resources / concern over enforcement of PSPO	21	6
General positive impact	27	7
General negative impact	19	5
No impact	22	6
Other	19	5
<b>Total</b>	<b>378</b>	<b>100</b>

Example comments include:

#### Support for the proposals

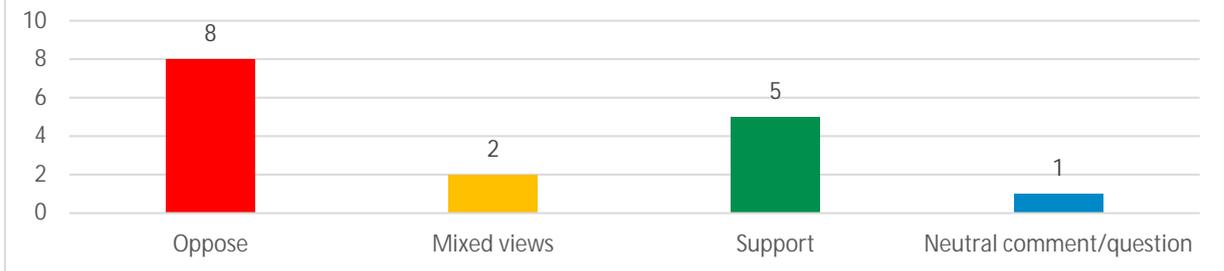

- *“Cleaner footpaths in Alveley.”*
- *“Greatly improve my environment if the proposed restrictions are properly enforced.”*
- *“Have a very positive impact, reducing concerns when walking our dog and hygiene on our roads and pathways.”*
- *“Able to take my grandchildren for walks to parks and public places without stepping in dog poo.”*
- *“If these proposals were implemented and enforced, it would make our communities safer (no dog mess left lying, no loose dogs upsetting people and other animals) but also would encourage dog owners to show respect to their community.”*

#### Concerns about the proposals

- *“A law that appears to be anti-dog could have a negative impact on businesses in Ludlow which markets itself on being dog friendly.”*
- *“As a responsible dog owner. Not being able to walk family dogs and children at same time.”*
- *“I disagree with dogs being excluded from public play areas. For responsible dog owners who have families this becomes extremely restrictive how do you take children and dog to the park and then not be able to accompany the children. Most dog owners are responsible what should happen is fining if non responsible dog owners.”*
- *“Looks like responsible dog owners may have less areas to exercise dogs off lead locally. This will mean more car journeys to other areas outside of town with negative environmental impact (emissions) and traffic.”*
- *“As a responsible dog owner who cleans up after my dog, I'm appalled by these proposals as my main source of relaxation and exercise is to walk my dog in the beautiful Shropshire countryside.”*
- *“Veterinary surgeon, these proposals could affect us business wise, with a reduction in dogs, or us needing to euthanise dogs due to the impracticality of not having a space for the dogs to toilet and it be collected. The 1 metre lead length is too short.”*

Some of the concerns above were reflected in the written responses to the consultation. **There were 16 written responses. 8 opposed the proposals, 2 had mixed views, 5 were in support** (many of these were from town and parish councils) and 1 was a more neutral comment/question. The summary of the written responses is shown in **Figure 12**.

Figure 12: Overall views expressed within written consultation feedback

Although some responses included a suggestion that respondents were happy for their comments to be made public, names have not been attributed to responses because that permission was not clear in all responses and consideration must be given to confidentiality. Officers have considered each of the written responses separately, but extracts are used below to share the main messages from those submissions.

#### Support for the proposals (with concerns/comments)

- *“Please add the council’s support to the Consultation. Thank you.”*
- *“[removed for confidentiality] Town Council has resolved to support the introduction of the new Dog Fouling and Stray Dogs: Public Space Protection Order. They wished to comment that enforcement would be key to the success of the Order.”*
- *“I strongly support Shropshire Council’s efforts to clamp down on cleaning up dog fouling. But the current proposals need a lot of improvement. In particular, the plan to fine dog walkers if their dog defecates in a public place are draconian and unworkable. I am concerned that the council is creating grey areas where people will be uncertain about the rules.... The following factors will need to be considered: - The cost of negotiating with landowners and leaseholders of land not owned by Shropshire Council to include their land within the PSPO. - The costs of signage across the county, including whether the cost of signs on land not owned by Shropshire Council will be rechargeable to others, which might be town and parish councils, leaseholders, charities, businesses and landowners.- The costs of staffing to oversee the introduction of the PSPO, dealing with complaints and queries, and of processing fixed penalty notices and court actions. - The anticipated income from fixed penalty notices.... I strongly support the principle of the proposed Public Space Protection Order. It needed greater scrutiny before going to cabinet and consultation.”*
- *“Strongly support.... I am concerned by the difficulty of implementing these proposals. How do you propose that a member of the public identifies an irresponsible owner? Or reports the dog fouling incident? How will you implement these proposals? How will fines be imposed and by whom?”*

#### Concerns about the proposals

- *“I have some concerns about this proposal and questions. How can you possibly police this? Similar policies in regards to dogs have historically failed. Any money earmarked to be spent on this would be a waste of money. Would it not be better to spend money on education and providing dog parks which are safe and able to cater for all dogs and their guardians.”*
- *“This is not a rule that should be implemented to working or hunting dogs...”*
- *“I wholeheartedly OBJECT to the proposal to keep dogs on leads. While it may be a safety necessity when dogs are on pavements, amongst traffic and pedestrianised Town*

centres. However, in fields, large parks and open spaces such as Brynhafod and Brogyntyn well behaved and obedient dogs should exercise freely. Dogs who do not have opportunities to run freely....become frustrated and trigger stacked, as has been seen in many dogs purchased during lockdown, who did not have freedom to interact, socialise and develop their dog characteristics and pack etiquette correctly. I have direct experience of this having worked with dogs for 20 years, as well as being an animal therapist. Furthermore, putting a lead on a dog will not solve the fouling issue. They will still defecate when they need to. But Owners fall into 2 camps. Those who pick up and those who won't. Leads will not miraculously encourage bad owners to pick up unfortunately."

- "I do however object to "if a dog has been allowed to foul" as many dogs, even ones effectively toilet trained, need to go when they need to go!.... Greater clarity required and signage on where dogs are allowed would also help stop any confusion for all users..... To support the enforcement action a proactive public information campaign will be launched, advising of health considerations, the impact of dog nuisance and the reasons for enforcement action. The campaign will aim to educate and encourage pet owners to act responsibly. I find this insulting as the majority of pet owners are responsible and act accordingly; those that aren't are unlikely to pay any notice to this or any other PSPO. Where are the proposals to promote other people's responsible behaviour towards animals? We are often met by aggression and socially unacceptable behaviour which has restricted where we feel able to walk our dogs, even on the lead.....I am also concerned that unless "Allowing dog fouling in the public area" is removed, or amended, from the PSPO then responsible owners and walkers may be penalised. Dogs and their owners seem to be discriminated against. We pay our Council Tax, yet these areas are potentially likely to become areas that we and our dogs we are excluded from, leaving us with no areas to exercise our dogs. When will the responsibility be shared between everyone equally?"
- "I am a dog owner and I walk my dog across the Shropshire countryside and in the towns of Much Wenlock, Church Stretton, Ludlow, Bishops Castle, Pontesbury and Shrewsbury. I hardly ever see dog faeces or meet an inconsiderate dog owner and in the countryside away from the tourist areas.....I am concerned that this proposal is disproportionate and a solution looking for a problem rather than having identified a problem. A Public Space Protection Order (PSPO) is a punitive and restrictive measure and therefore Section 72 of the Anti-Social Behaviour, Crime and Policing Act 2014 rightly applies a check and balance such that the authority must have regard to articles 10 and 11 of the Human Rights Act 1998. In this context the applicable restriction is that any restriction must be 'necessary in a democratic society'. There is also the misuse of the Equality Act....that restrictions and measures would be imposed on one group (dog owners) for an illusory benefit on another group (vulnerable people). This is a misuse of the Equalities Act which was never intended to be the legislative trigger for a more restrictive and less free society....In the case where there might be actual evidence of persistent dog fouling then a PSPO is a proportionate response but for that location only, and until such time as the problem has been resolved by other means....The restrictions are clearly not a proportionate response to the small number of unstated enquiries to the Dog Warden. Furthermore, they place a considerable limit on the long-established common-law freedom of the vast majority of dog owners who are very well behaved and have their dogs under control enjoy."
- "One can't tell a dog where to poo and, surely it is satisfactory enough, if dog owners pick up the poo in bags that they always carry with them....We know some people don't do this. Well, the council should apprehend them, not impose more stringent measures on law-abiding people."
- "I am writing on [details removed for confidentiality] behalf for some reassurance that any new rules would specifically exclude working dogs, and therefore not have any impact on gun dogs, sheep dogs or packs of hounds, for example. We note that the proposal

*specifically excludes assistance dogs but there is no reference to working dogs. It is possible that the Government's guidance in relation to PSPOs has been taken into consideration and therefore working dogs are not the intended target of this proposal, however, we would appreciate some clarification so that we can offer reassurance to our Shropshire-based members."*

Some of the written consultation responses are very comprehensive and too long to include in this report in full, but as much as possible the extracts are used to emphasise key points.

The survey included a question to ask, 'Do you have any suggestions or alternative proposals to the ones set out within the consultation?' The results are shown in **Table 4** below. There were 313 comments from the 561 survey respondents. **A top theme within the comments (also clear within some of the written consultation comments) was a concern that the PSPO couldn't be enforced due to lack of resources or was difficult to enforce. Another top theme was a request to remove the restriction about dog fouling** (with the explanation that dogs cannot be prevented from defecating and the issue is more about cleaning up afterwards). Another common theme was ensuring there are an adequate number of dog poo bins and making bags available.

**Table 4 Comments when asked for suggestions or alternative proposals to the ones set out within the consultation.**

Theme	Count	%
Need to ensure enforcement / ability to resource	46	15
Remove the fines for dog fouling if picked up / not reasonable	45	14
More dog poo bins / bags available	33	11
Proposals not required / existing legislation / waste of council resources	32	10
General positive comments / support the proposals	30	10
General negative comments / unreasonable / need clarification	22	7
No comment / No	18	6
Agree with issuing of fines. Fines / deterrent needs to be greater	19	6
Training and education / communication	18	6
Dedicated areas for exercising dogs	16	5
Other	34	11
<b>Total</b>	<b>313</b>	<b>100</b>

Example comments:

- *"Yes - find a way to actually enact current provisions for offenders who do not pick up after their dogs!"*
- *"Mandatory dog licensing and DNA testing (matched with dog poo)."*
- *"Raise the fine or reward people for reporting the "act" providing they have sufficient evidence (photo, name etc.) when doing so."*
- *"Happy to implement the picking up of waste and imposing fines for dog owners that don't. Also, happy to see the implementation of no dogs in children's play parks. I do not support the banning of dogs in public parks and playing fields."*
- *"Better enforcement of current dog fouling regulations. Separate regulations to exclude dogs from play areas and to keep dogs under control."*

- *“Be clearer about the fact that the PSPO will cover all footpaths including those in rural areas.”*
- *“Communications campaign, some controls are sensible to keep children safe but not as restrictive to dog owners.”*
- *“Make dog bins more numerous. People are put off carrying dog waste long distances. I know where all my bins are and some of them are a VERY long way away when I’m carrying a poo bag.”*
- *Perhaps it is worth, in certain areas, for example the Lyth Hill to fence off an area that is gated and designated as a “dog toilet”. I am not knowledgeable but have used such a facility in a park in Glasgow.”*
- *“It must include public footpaths on farmland. Dogs should be kept on a lead while on farmland. Dog faeces should be cleaned up on farmland the same as on a pavement.”*
- *“Yes, that the definition of ‘footpath’ be clarified to exclude rural rights of way, or to specify urban geographic areas.”*
- *“I am fully supportive of fines for irresponsible dog owners, as I too do not appreciate dog foul being left in spaces for the public. However, as a responsible dog owner, I find this an aggressive and unfair proposal with no incentive for responsible pet ownership.”*
- *“Yes, work with the public for safe and correct dog ownership. What’s to say these new ‘rules’ will work and will be implemented?”*

When considering suggestions and alternative proposals, it is important to note that the Dogs Trust provided a very robust response to the consultation with balanced comments on every element of the proposed PSPO, including suggestions for slight amendments. Suggestions included some reconsideration of the way exclusion zones are used and careful consideration of how the ‘dogs on a lead’ restrictions are worded and presented. The thorough and considered response from an organisation with expertise in this field is very welcomed and will be considered as part of the next stages of work, prior to presentation of final proposals for decision.

A few of the 16 written consultation responses (see extracts above) touched on equality, social inclusion and health (a needs assessment was shared as part of the consultation). A specific question was included within the survey; it read ‘Shropshire Council has undertaken an Equality, Social Inclusion and Health Impact Assessment (ESHIA) and will be updating this after the consultation. If you have any comments on diversity, equality or social impact that you would like use to consider please describe them below.’ There were 97 comments, and these are summarised in **Table 5**.

**Table 5 Comments on diversity, equality or social impact**

Theme	Count	%
Impact on dog owners’ mental health / ability to exercise	23	24
Nothing / Not applicable / Not needed	22	23
Need to consider mobility of elderly and disabled dog owners	13	14
Positive impact for the wider community	9	9
Impact on dogs’ health / ability to exercise	7	7
Don’t agree with the fine / too much	4	4
Waste of council money / resources	4	4
Other	14	15
<b>Total</b>	<b>96</b>	<b>100</b>

It had been anticipated that the issue of assistance dogs may feature in this section (this was briefly mentioned with comments also referring to older dog owners). **The top theme within comments when asked about diversity, equality and social impact were the impact on dog owners' mental health and ability to exercise.** 14% of comments referred to the needs of elderly and disabled dog owners.

Example comments are shown below:

- *“Dog nuisance is worse for people using walking aids, those with poor balance, and those who are blind or partially sighted.”*
- *“There is no register for all support animals. You will contravene the equality act.”*
- *“It's not impossible for people with assistance dogs to pick up after them, I'm not in favour of a blanket exclusion for assistance dogs.”*
- *“As a mobility scooter user, dog fouling on public footpaths and pavements is a hazard and difficult to remove from wheels for someone with restricted mobility.”*
- *“I have some concern over elderly dog owners who may be less able to deal with fouling because physical impairment.”*
- *“I suppose banning dogs from playgrounds would be awkward for parents to supervise their children.”*
- *“Social Impact: In order to make a PSPO the behaviour has to be having or likely to have a detrimental effect on the quality of lives of those in the locality persistent in nature and unreasonable. Does this apply to dogs on leads on highways?”*
- *“The dog walking community is very supportive of each other and can be a lifeline in rural areas so don't make it so hard for us to responsibly socialise with each other and our dogs.”*
- *“A lot of people don't get to meet or socialise due to anxiety/depression, etc. Taking their dogs to public fields is sometimes the only interaction with people they get. I have made some good friends from this.”*
- *“Clearly there is significant, growing evidence of the positive health benefits of outdoor exercise, walking in particularly for an aging population, and the mental health benefits of freedom to access the countryside - many residents chose to do this with their animal companions.”*
- *“I believe this is discriminatory to middle class responsible people, particularly pensioners, who rely on their dogs for companionship, exercise and safety in their homes, by proposing to impose draconian laws. It is also speciesism at its most ludicrous, victimising all dogs, who are the innocent victims yet again. The social impact on many of us, in not being allowed to take our dogs out with us as a matter of course, as we currently do, as they are welcome in local pubs and shops, will be huge and very restricting.”*
- *“There's a lack of dog poo bins in rural areas, even for popular walking routes. I believe this unfairly impacts those of us in rural areas over those in urban areas.”*
- *“In this proposal the council is prejudicing dog owners this is not equality.”*
- *“Equal rights for cat and dog owners because you only focus on dog owners.”*

The comments highlight that there were some very diverse comments on the issue of equality, and this extended to questions over why dog owners were faced with restrictions versus cat owners.

The last question within the survey was an open comment box for any further comments. There were 163 comments made and these are summarised in **Table 6** with example comments to illustrate the themes shown below.

**Table 6 Other comments**

Theme	No	%
Need to ensure enforcement / resources to enforce	37	23
Scheme will not work / Waste of public money and resources	28	17
Need additional dog poo bins / availability of bags	19	12
Availability of places to exercise dogs	16	10
Additional training and information for owners	11	7
General agreement on the proposals	18	11
General disagreement on the proposals	11	7
Other	23	14
<b>Total</b>	<b>163</b>	<b>100</b>

**Example comments:**

- *“How will this be policed?”*
- *“Do not outsource the role of enforcement to contractors who would be rewarded on evidencing enforcement. Direct employment and ‘least enforcement’ principles are important if this is implemented.”*
- *“I think a public information campaign with radio discussions and talks in schools to young people would help. Lots more signage. And above all ENFORCEMENT of fines.”*
- *“I strongly hope that the proposed Public Spaces Protection Order is successful and does not become bogged down for years.”*
- *“More people will take their dogs to shelters, as they can't walk them what they need, if dogs can't be let loose to socialise and play.”*
- *“This is a rural area, farming and hunting are part of the area and provide much employment. Consideration MUST be given to this community.”*
- *“Shropshire Council need to focus on better things to spend our money and time! Ban irresponsible owners but don't penalise the majority who are mindful.”*
- *“The proposal suggests a 1-meter dog lead for dogs by highways. The shortest leads I own are 1.25 meters and 1.7 meters in length. This proposal is unreasonable.”*
- *“Businesses are wooing dog owners to come into pubs/restaurants/shops with their dogs. A climate is being created where dog owners assume that everyone loves their dog and they are welcome everywhere off the lead. It would be good to get clear messaging from the council that dogs have to be kept under control and not everyone loves dogs.”*
- *“Please clarify the proposal around fouling. Is it no longer allowed anywhere even if cleaned up? If so, that's not going to work. Might want to give it some more thought!”*
- *“More poo bins, to prevent people just throwing bagged poo in hedges and these need to be emptied regularly.”*

Overall, many of the same themes featured in the open comment section of the survey as highlighted elsewhere within survey comments and referred to within the 16 written consultation responses. The overall themes from the feedback and key findings are summarised within the next, and last, section of this report.

## 5 Summary and Conclusions

The public consultation on the proposed Public Spaces Protection Order (PSPO) for dog fouling and control in Shropshire ran from 26 October 2023 to 21 December 2023 and gathered views from a range of stakeholders and key partners, as well as the general public. The PSPO is intended to address the issues of dog fouling and nuisance in public spaces, which have been reported to the Dog Warden Service as having a detrimental effect on the quality of life of those in the locality. The PSPO would create a framework to replace or update existing public space restrictions and enable the enforcement of the following prohibited actions:

- Allowing dog fouling in the public area.
- Failure to appropriately remove and dispose of dog waste if a dog has been allowed to foul.
- Dog exclusion from play areas, equipped and fenced sports areas.
- Dogs on leads by direction.
- Dogs on leads on the highway.

The consultation survey was completed by 577 respondents (561 survey respondents and 16 written responses were received). The survey results showed that there was majority support for all five elements of the proposed PSPO, with the highest level of agreement for dogs on lead by direction and dogs on leads on the highway.

63% of survey respondents supported the overall proposals, while 28% opposed them. The main reasons for support were the perceived benefits of a cleaner and safer environment, the reduction of dog nuisance and threat, and the promotion of responsible pet ownership. The main reasons for opposition were the concerns about the impact on dog owners' mental and physical health, the availability of places to exercise dogs, the fairness and enforceability of the fines, and the need to focus on irresponsible owners rather than all dog owners.

The written responses were more mixed, with eight opposing the proposals, two having mixed views, five supporting them, and one being neutral. The written responses raised similar issues as the survey comments, but also highlighted some specific concerns about the definition and scope of the PSPO, the impact on working and hunting dogs, the potential or perceived contravention of the Equality Act and the Human Rights Act, and the need for more clarity on the proposals.

The feedback from the consultation will inform the policy recommendations to be presented to Cabinet for final approval of the PSPO in February 2024. The feedback will also be used to update the Equality, Social Inclusion and Health Impact Assessment (ESHIA) and to consider any suggestions or alternative proposals that have been put forward by respondents. The Dog Warden Service will also review the communication and enforcement strategies for the PSPO, considering the views and experiences of the stakeholders and the public.

### **Anti-Social Behaviour, Crime and Policing Act 2014**

#### **Part 4 Section 59**

#### **COUNTY OF SHROPSHIRE DOG CONTROL PUBLIC SPACE PROTECTION ORDER 2023**

Shropshire Council (herein this Order called “the Authority”) in exercise of its powers under section 59 Anti-Social Behaviour, Crime and Policing Act 2014 (The Act) being satisfied that the conditions set out in Section 59 of the Act have been met, makes the following Order:

1. The Order applies to the public areas shown within the lined area on the plan Appendix 1 attached to this Order. For the purpose of this Order, public areas shall include the doorway or alcove of any premises or any other outdoor location to which the public would normally have free access.
2. The Authority is satisfied on reasonable grounds that the following conditions are met:
  - (i) The activities described below are carried out in a public place within the Authority’s areas and are having a detrimental effect on the quality of life of those in the locality, and that:
  - (ii) The effect, or likely effect of the activities
    - a) Is, or likely to be of a persistent nature;
    - b) Is, or is likely to be such as to make activities unreasonable; and;
    - c) Justifies the restrictions imposed by the Order.
    - d) An Authorised Officer includes a Police Constable, Police Community Support Officer (PCSO), an Authorised Officer of the Authority or any person authorised by the Authority.
3. The Authority has considered the rights and freedoms set out in the European Convention of Human Rights and it has been concluded that these restrictions imposed by this Order are lawful, necessary, and proportionate.
4. In addition to the Authority’s powers under Section 59 of the Anti-Social Behaviour Crime and Policing Act 2014 (The Act”) and having regard to section 72 of The Act, the Authority hereby makes the following Order.

## **The Activities**

5. The Activities to which this order relate are:
  - 5.1 Dog fouling and subsequent removal of dog faeces; and
  - 5.2 The walking of dogs in specified areas of Shropshire.

## **Requirement of this Order**

6. Any person in charge of a dog in any public place within the area of Shropshire must immediately clean up and remove any faeces, which has been deposited by the dog and it be disposed of accordingly, by being bagged and taken away or put into a public litter or dog waste bin.
7. Any person in charge of a dog in any public place within the area of Shropshire must comply with any request from any Authorised Officer of Shropshire Council, a Police Officer, or Police Community Support Officer to clean up and remove any dog faeces deposited by the dog where they have failed to do so. The dog faeces must be disposed of accordingly, by being bagged and taken away or put into a public litter or dog waste bin.

## **Exclusion of dogs in specified areas**

8. A person or persons in charge of a dog is prohibited from allowing the dog to enter fenced/enclosed areas within the County of Shropshire, which is signed at the entrance(s) as 'dog exclusion zone' (whether the sign uses those particular words or words and/or symbols having like effect).
9. A person or persons in charge of a dog is prohibited from allowing the dog to enter any enclosed public children's play area, playground or similar enclosed area situated within the County of Shropshire. This will include play areas owned by Parish and Town Councils, which is signed at the entrance(s) as 'dog exclusion zone' (whether the sign uses those particular words or words and/or symbols having like effect).

## **Further obligations of this order**

10. A person or persons in charge of a dog must comply with a direction given to them by a Police Officer, Police Community Support Officer, or an Authorised Officer of Shropshire Council to put and keep the dog on a lead, unless:
  - a) They have reasonable excuse for failing to do so; or
  - b) The owner or other person or authority having control of the land has consented.

### **Dogs off a lead on a Highway**

11. A person or persons in charge of a dog must keep a dog on a lead no longer than (1 metre in length) on a Highway.
12. A person or persons in charge of a dog must comply with a direction given to them by a Police Officer, Police Community Support Officer, or an Authorised Officer of Shropshire Council, unless:
  - a) They have reasonable excuse for failing to do so; or
  - b) The owner or other person or authority having control of the land has consented.

### **Exemption from the Order**

13. Nothing in this Order shall apply to a person who:
  - a) Is registered as a blind person in a register compiled under section 29 of the National Assistance Act 1948; or
  - b) Has a disability which affects their mobility, manual dexterity, physical co-ordination, or ability to lift, carry or otherwise move everyday objects, in respect of a dog trained by a prescribed charity upon which they rely for assistance.
  - c) If the dog is a working dog, including dogs that are being used for work in connection with emergency search and rescue, herding or shepherding animals, law enforcement and the work of the armed forces. These exemptions will only apply whilst the dog is working.

### **Duration**

14. The Order shall take effect from (INSERT DATE) and has effect for three years subject to any variation or extension of the Order.

### **Interpretation**

15. For the purpose of this Order:
  - a. A public space includes any place to which the public or any section of the public has access, on payment or otherwise, as a right or by virtue of an express or implied permission, for example a public highway/footpath, a park, a playing field.
  - b. The area of the County of Shropshire is shown as the area shaded (COLOUR) in the Map at Schedule 1.
  - c. A person who habitually has a dog in their possession shall be taken to be in charge of the dog at any time unless at that time, another person is in charge of the dog.

- d. Placing the bagged dog faeces in a receptacle provided for that purpose in the area shall be sufficient removal from the land.
- e. Claiming to be unaware of the dog defecation (whether by reason of not being in the vicinity or otherwise) or not having the means to remove the faeces shall not be a reasonable excuse for failing to remove the faeces.
- f. Agency, or contractor, an Authorised Officer of Shropshire Council means an employee, partnership of Shropshire Council, who is authorised for the purpose of giving directions under this Order.
- g. Each of the following is a “Prescribed Charity” for the purposes of the exemptions under this Order:
  - (i) Hearing Dogs for Deaf People (registered charity number: 293358)
  - (ii) Dogs for the Disabled (registered charity number: 700454)
  - (iii) Support Dogs (registered charity number: 1088281)
  - (iv) Canine Partners for Independence (registered charity number: 803680)
  - (v) Assistance Dogs UK (registered charity number: 1092960)
  - (vi) Guide Dogs (registered charity number: 209617)
  - (vii) The Kennel Club Charitable Trust (registered charity number: 327802)
  - (viii) Dogs Trust (registered charity number: 227523)

### **Penalty**

- 16. Failure without reasonable excuse to comply with the prohibitions or requirements imposed by this Order is an offence under Section 67 of this Act. A person guilty of an offence under section 67 of this Act is liable upon conviction in a Magistrates Court to a fine not exceeding level 3 on the standard scale (not exceeding £1000.00) or a fixed penalty notice not exceeding £100.00.

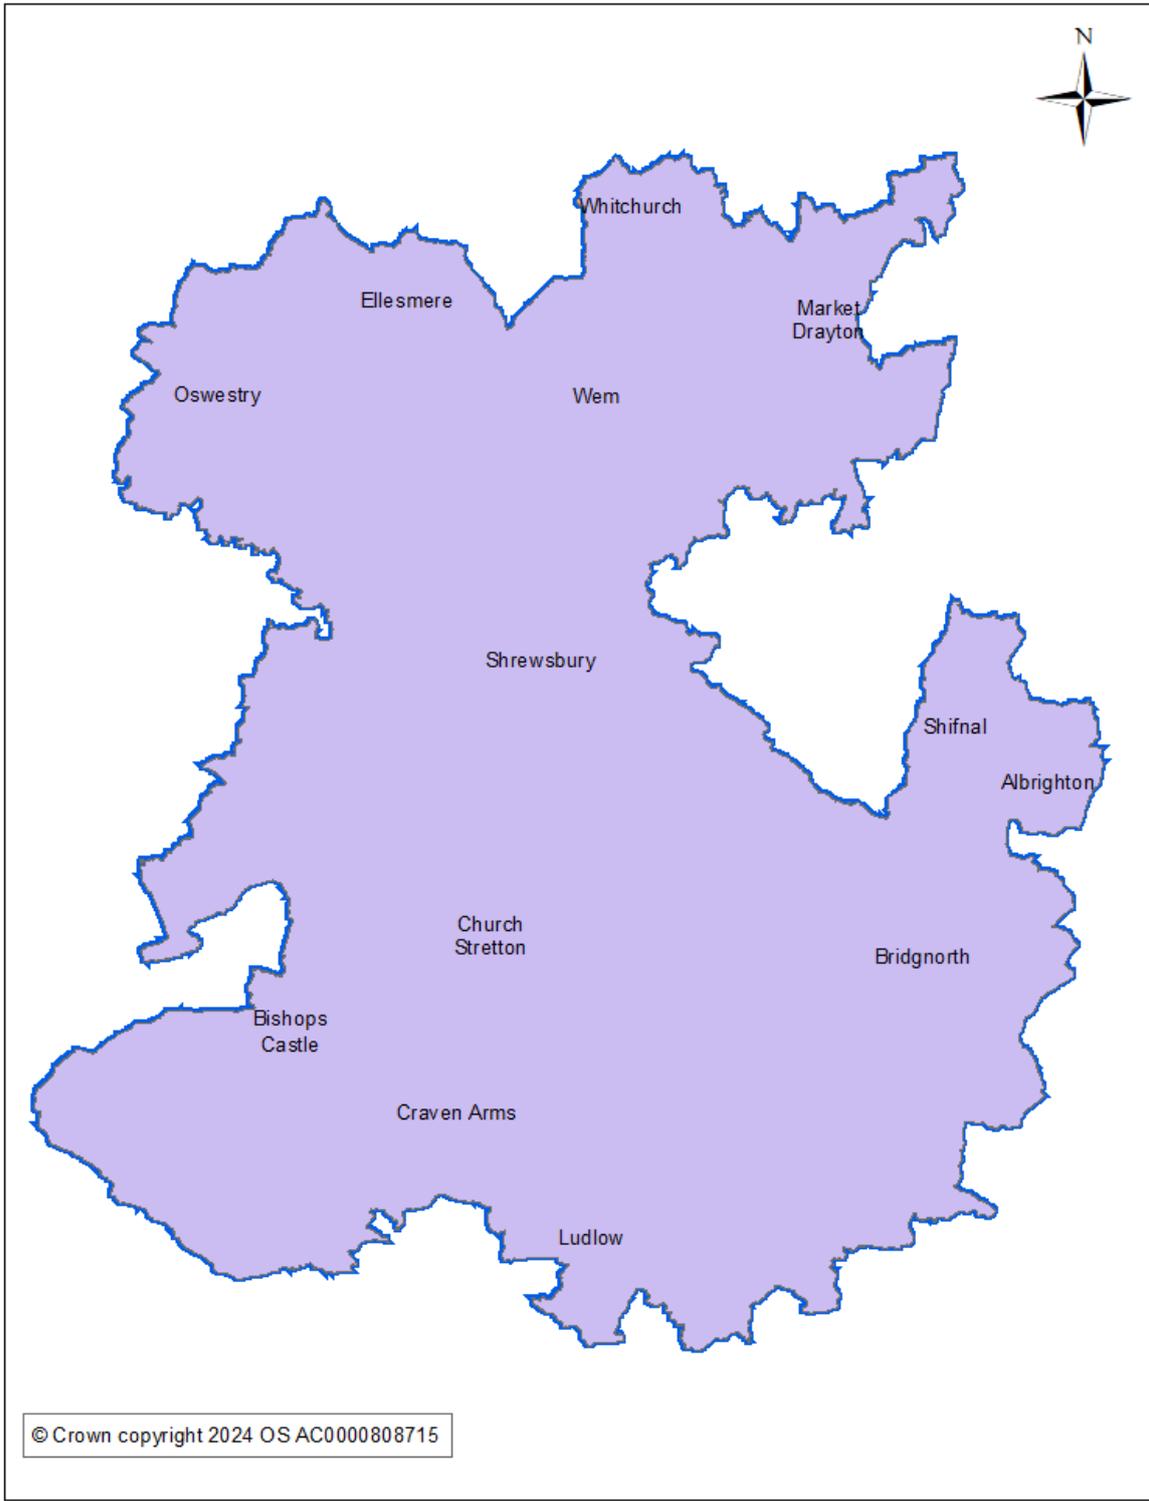

### **Appeal**

- 17. If a person wishes to challenge the validity of the Order on the grounds that Shropshire Council has no powers to make the Order and that any requirement of the Act has not been complied with, in relation to the Order being made, they may apply to the High Court to challenge within six weeks from the date on which this Order is made.

## Dog fouling health risks

While many dog owners take responsibility for their activities, there is a risk to public health from the conduct of the minority who neglect to clean up dog foul.

Dog fouling is a cause for concern, it is unsightly and causes mess but also carries many health risks.

Dog faeces can include bacteria and parasites that are harmful to humans, particularly young children as their immune systems are not fully developed. Dogs can deposit roundworm eggs known as *Toxocara canis* in their faeces. If swallowed, these tiny organisms are quickly transmitted between animals and people causing illness and disease that can travel throughout the body to the brain, lungs, kidneys, liver, heart and eyes. Roundworm larva can potentially cause stomach upsets, sore throats, asthma, and, in some rare cases blindness. These eggs can remain active on the ground for many years, even after the initial dog mess has worn away. There are approximately 120 cases of *Toxocara Canis* per year in the UK, very few of which are severe.

Bacteria and parasites can spread from a pile of faeces on the bottom of shoes and even on the feet of flies and other insects, in addition to direct hand-to-mouth transmission and direct skin contact with larvae.

Other harmful diseases caused by dog fouling, include:

- **Salmonella** – The most common bacterial infection transmitted to humans from dog faeces. This can even be excreted in the faeces of healthy dogs.
- **E Coli** – This bacterium lives in the intestines of dogs. E Coli can also be life-threatening for people with compromised immune systems. Certain strains of E Coli can escape into the bloodstream.
- **Yersiniosis** – a bacterial illness that can lead to intestinal infection in people.
- **Campylobacteriosis** - This can be a life-threatening infection for people with compromised immune systems, as it spreads to the bloodstream.

There is also a risk to the environment, as dog excrement can also contaminate waterways, causing fish and other species to be killed by nutrients from the overgrowth of harmful algae and toxic weeds.

## **Public information and education campaign**

A proactive public information and education campaign, advising of health considerations, the impact of dog nuisance and the reasons for subsequent enforcement action will run on a two-year programme. We will have routine events in the Quarry in Shrewsbury and events in other market towns in Shropshire, to raise awareness. Along with information available on the Council website.

In response to public complaint, we will have pop up events, where we will have a presents and leaflet material supporting information to stimulate conversations with the public, led by the Dog Warden.

To tackle the problem of dog fouling, it is important to understand the barriers to behaviour change. It is hoped that dog owners will be motivated by awareness of the health risks caused by uncleared dog faeces.

The education campaigns carried out will aim to target all ages and communicate the dangers of toxocariasis, a disease that can result in blindness, especially in young children.

The Dog's Trust and Keep Britain Tidy run an innovative campaign 'Walk This Way' that is aimed at reducing dog fouling. Working with local Authorities, they provide, installation material needed to map dog walking routs, colourful route markers and bin stickers to encourage proper waste disposal.

As part of the consultation, The Dog's Trust have offered to work with us, which is welcomed. We will involve them actively in the campaign and encourage them to attend events when they are able to.

Below is a sample of the project material:

If a Full or Stage Two report is required, please move on to full report stage once you have completed this initial screening assessment as a record of the considerations which you have given to this matter.*

<b>Actions to mitigate negative impact or enhance positive impact of the service change in terms of equality and social inclusion considerations</b>
<p>Following a series of audits into the Dog Warden service and an increasing nuisance from dog fouling it has been concluded that the service can be improved with the introduction of a county wide Public Space Protection Order (PSPO). This will allow the service to take enforcement action against pet owners who allow their animals to foul pavements and public amenity spaces.</p> <p>Ahead of consultation, the overall equality impact anticipated to be positive across the nine Protected Characteristic groupings set out in the Equality Act 2010 and across the whole county, due to health and well-being benefits for everyone in the community, if there is less dog fouling as a result of this policy being implemented.</p> <p>The public feedback and overall impact on equality is generally positive across the nine Protected Characteristic groupings, due to perceptions of health and well-being benefits for everyone in the community, if there is less dog fouling as a result of this policy being implemented. As views were gained from across Shropshire, with all county settlements represented, as well as views from people in the TWC area, this indicates that some assurances may be gained that views</p>

are representative of those visiting and working in Shropshire as well as those who live here.

There is potential for positive equality impact for the groupings of Age, Disability, Pregnancy and Maternity, and Sex, in particular. As with other policies in relation to the public realm, this is in terms of not only physical wellbeing but also mental well-being opportunities arising for people in these groupings to feel safer when outdoors for health benefits, education, work, or leisure, or simply walking to their local shops and amenities. This is particularly so for families with young children, wheelchair users, and older people who may consider themselves to be vulnerable and less likely to venture out without pavements that can be navigated safely by them and their carers, and that are clear of detritus and dog faeces. This is also reflected in the consultation responses, in which there was representation of views across age groups and across those with disabilities and those with caring responsibilities.

An additional grouping for whom there may be positive impacts are people with less visible disabilities or conditions, including people with neurodiverse conditions, and for people with visual impairments. The presence of dog fouling, which may be allied to fear around dogs, can cause distress for some children and young people with attachment disorders, and overstimulation for some people with autism.

There are specific positive impacts anticipated for children under five, and therefore, for all those associated with caring for this grouping, bringing in the groupings of Pregnancy and Maternity and Sex.

The overall impact on carers is likely to be positive. With the control in place in some public open spaces, the caring of an individual may be made easier, especially children, adults with learning disabilities, and people with visual and/or physical disabilities.

The consultation report highlights that 81 responses were from unpaid carers and 82 respondents said that they had limiting long term illnesses. These numbers should mean that a range of people with different levels of mobility and caring status are represented in the survey sample.

Mitigation of negative impacts is also anticipated to be necessary, as for some groupings, removing dog fouling presents as a challenge. These are the groupings of Age, Disability, Pregnancy and Maternity, and people in these and other groupings who have caring responsibilities, for the following reasons.

Age:

Older people (over 65 years) may have physical limitations and impairment of reduced mobility and dexterity, causing an inability to remove dog fouling.

Disability:

People within this grouping who have a physical disability may find it difficult to remove dog fouling, due to physical impairment. Wheelchair users and mobility scooter users could be particularly affected by dog fouling on streets and pathways, due either to difficulty picking up dog faeces if it has been caused by their own dog, or to difficulty dealing with dog fouling that they encounter which may go onto the wheels of their wheelchair or mobility scooter.

People within this grouping who have a cognitive disability either may not understand the concepts around the restrictions that are proposed, or may not be able to carry out the task of picking up dog faeces caused by their dog and disposing of it appropriately.

Pregnancy and maternity:

Individuals within this grouping could find themselves less physically able to remove dog fouling.

Additionally, the initial introduction of the PSPO, if this proceeds, could without mitigation have a negative impact for those in the grouping of Race, where there may be dog owners with limited understanding of English.

**Actions to mitigate negative impact or enhance positive impact of the service change in terms of health and wellbeing considerations**

The grouping for whom there are positive health and well-being impacts is Age, specifically children under 5 but also children who are being encouraged to walk to school or to leisure activities and are put off from doing so due to dog fouling. For the grouping of Disability, there may also be particular distress for those with neurodiverse conditions or attachment disorder, for whom the presence of dog fouling can cause visible and physical distress.

There will be less potential for children (under 5) to be harmed by un-cleared faeces or distressed by coming into contact with it. If personal hygiene has not fully developed, young children are most likely to be exposed to dog foul through their outdoor play activities and possible health consequences.

**Actions to review and monitor the impact of the service change in terms of equality, social inclusion, and health considerations**

The PSPO Exempts assistance dogs in certain circumstances.

People with specific characteristics will be exempt from complying with relevant restrictions. A registered blind person or a person who owns a dog trained by a charity to assist a person with a mobility, manual dexterity, or deafness impairment should be exempt from the PSPO.

Where there may not be adequate understanding of written English used on signage, the Council could use internationally recognised symbols with simple, clear font of a suitable and appropriate size, to mitigate against this communication challenge. Given that there were low responses from people who

were not White (British, Irish, Welsh) further engagement is warranted with people whose first language is not English and who may not therefore be aware of changes if approved.

Where a penalty notice is served, there may also be insufficient or inadequate understanding of the content of the penalty.

In order to mitigate negative impact or enhance positive impact, the Council will ensure that all officers involved in enforcement activities are familiar with requirements of the PSPO. Officers will be trained in Conflict resolution. They will be suitably trained in dealing with vulnerable people and/or disabilities and understand when discretion should be applied to achieve fair and consistent outcomes.

### **Associated ESHIAs**

ESHIA's in relation to PSPOs have been carried out for Shrewsbury Town Centre, whilst ESHIA's in relation to the public realm have been carried out for a number of Shrewsbury regeneration initiatives, and for the Ironbridge Gorge WHS SPD.

### **Actions to mitigate negative impact, enhance positive impact, and review and monitor overall impacts in terms of climate change considerations and any other impacts with regard to economic and societal implications**

#### ***Climate change***

The introduction of a county wide Public Space Protection Order to encourage responsible dog ownership is not expected to generate any direct impacts for the generation or capture of carbon emissions, the generation of renewable energy, or for adaptation to the impacts of climate change. There may be some indirect positive effects for carbon reduction if the mitigation of the existing negative impact of dog fouling leads to more extensive use of local open space.

If additional signage is needed, there will be carbon associated with the construction of the sign.

Actions to mitigate negative impact: Recommend carbon neutral signage.

#### ***Economic and societal/wider community***

The implementation of this order would mean grass from council managed sites, could be composted after it has been cut. As it will be clear from dog faeces. This will present an environmental benefit.

#### **Strategic Plan - Implications**

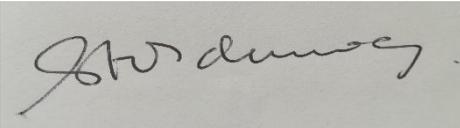

Healthy Living – supporting residents to take responsibility for their dogs and the health of others, and preventing ill health

Healthy Economy – ensuring that Shropshire is a healthy destination for tourists

Healthy Environment – enabling safer communities by reducing anti-social behaviours and risk of harm from stray dogs

Healthy Organisation – ensuring Shropshire’s internal capacity and capability is complemented effectively and that internal resources are organised efficiently and effectively to take the necessary enforcement to encourage responsible behaviour.

**Scrutiny at Stage One screening stage**

## **B. Detailed Screening Assessment**

### **Aims of the service change and description**

The purpose of this report is to seek Cabinet Approval for Public Space Protection Order for Shropshire to control dog fouling and to help control the risk of harm from stray dogs, following on from a period of public consultation.

Following a series of audits into the Dog Warden service and an increasing nuisance from dog fouling it has been concluded that the service can be improved with the introduction of a county wide Public Space Protection Order (PSPO). This will allow the service to take enforcement action against pet owners who allow their animals to foul pavements and public amenity spaces. The report therefore seeks Cabinet approvals to consult on proposals to introduce a PSPO which will allow the issue of fixed penalty notices for dog fouling.

The Anti-Social Behaviour, Crime and Policing Act 2014 introduced Public Spaces Protection Orders (PSPOs) which are intended to provide the means of preventing individuals or groups committing anti-social behaviour in a public space. Section 59 of the Act sets out the test which must be satisfied before a local authority make a PSPO...where the behaviour is having, or likely to have, a detrimental effect on the quality of life of those in the locality; be persistent or continuing in nature; and be unreasonable.

It has been concluded that both a public information campaign together with enforcement is likely to achieve the best results in terms of encouraging pet owners to act responsibly. This will help to protect those members of the public who use the Council's open recreation areas and their health from the adverse effects of dog nuisance.

The service development will enhance the Dog Warden service and provide strategic direction for the control of dogs and enforcement of nuisance behaviours

The conclusions reached are also considered to be ones that will best meet the themed aspirations of the Strategic Plan and align the service with the Plan.

### **Intended audiences and target groups for the service change**

The intended audiences and target groups are:

- All those who live in, work in or visit the county, so that they are aware of the proposals and have opportunity to respond to consultation.
- Dog owners, to act more responsibly and to make sure the public space they use remains safe.
- Town Councils and Parish Councils as they have interest and concerns on dog fouling.

We will also continue to engage with other statutory bodies, eg Police, to seek any concerns or experience they will have had with these types of orders in other authorities and with the Dog's Trust, whose response has been extremely valuable and helpful.

### **Evidence used for screening of the service change**

Dog fouling enquiries from April 2021 to March 2023:

<b>Month</b>	<b>Number of enquiries</b>
April 2021	28
May 2021	16
June 2021	17
July 2021	12
August 2021	10
September 2021	10
October 2021	15
November 2021	30
December 2021	16
January 2022	45
February 2022	22
March 2022	20
April 2022	21
May 2022	34
June 2022	26
July 2022	22
August 2022	16

October 2022	30
November 2022	21
December 2022	18
January 2023	46
February 2023	91

March 2023	50
Total	647

The consultation report highlights the following:

Good levels of response 561 online 16 written submissions from Shropshire and surrounding areas.

The consultation report highlights that 81 responses were from unpaid carers and 82 respondents said that they had limiting long term illnesses. These numbers should mean that a range of people with different levels of mobility and caring status are represented in the survey sample.

Approx' 2/3 found the proposals clearly presented with 63% in support of the proposals.

Strong support, over 80% for public information campaign.

Good levels of support for all proposals apart from first proposed prohibition for allowing dogs to foul, the offence supported was for not picking up and disposal.

Concerns raised included:-

Impact on owners mental and physical health

Availability of space to exercise dogs (animal welfare)

Fairness and enforceability of fines

Need to focus on irresponsible owners

Failure not to enforce or follow up reports

Highest level of agreement was dog on leads by direction and failure to remove and dispose of waste (to create an improved environment)

Other comments raised:-

Exemptions for working dogs

Availability of bins and bags

Dog's Trust detailed response - Key Take Aways

Adequate provision of disposal points

Rigorous enforcement

Exclusion areas to be kept to a minimum and to enclosed areas

Open sport areas should be excluded so animals can exercise freely and for animal health reasons

Support for dogs on leads by direction.

Adequate signing for exclusion and dog free areas

### **Specific consultation and engagement with intended audiences and target groups for the service change**

The Dog Warden service was authorised to undertake the consultation, with the results of an eight-week consultation now brought back to Cabinet for further

consideration and if required amendment.

Publicity materials are being produced to raise awareness with the public about the reasons for the initiative and introduction of PSPO to encourage responsible dog ownership.

These materials are to be presented to Cabinet when the consultation results are considered and to be introduced in advance of making the PSPO.

Details of specific consultation materials are contained in Appendix B of the Cabinet Report 18<sup>th</sup> October 2023 – Public Space Protection Order, Dog Constraints 06092023 – 1407

The full consultation report is included as a separate appendix to the Cabinet report for March 2024

**Initial equality impact assessment by grouping (Initial health impact assessment is included below this table)**

*Please rate the impact that you perceive the service change is likely to have on a group, through stating this in the relevant column.*

*Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.*

<b>Protected Characteristic groupings and other groupings in Shropshire</b>	<b>High negative impact <i>Stage Two ESHIA required</i></b>	<b>High positive impact <i>Stage One ESHIA required</i></b>	<b>Medium positive or negative impact <i>Stage One ESHIA required</i></b>	<b>Low positive, negative, or neutral impact (please specify) <i>Stage One ESHIA required.</i></b>
<u>Age</u> (please include children, young people, young people leaving care, people of working age, older people. Some people may belong to more than one group e.g., a child or young person for whom there are safeguarding concerns e.g., an older person with a disability)			Medium positive	
<u>Disability</u> (please include cancer; HIV/AIDS; learning disabilities; mental health conditions and syndromes; multiple sclerosis; neurodiverse conditions such as autism; hidden disabilities such as Crohn's disease; physical and/or sensory disabilities or impairments)			Medium positive	
<u>Gender re-assignment</u> (please include associated aspects: safety, caring)				Low positive

responsibility, potential for bullying and harassment)				
<b><u>Marriage and Civil Partnership</u></b> (please include associated aspects: caring responsibility, potential for bullying and harassment)				Low positive
<b><u>Pregnancy and Maternity</u></b> (please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Medium positive	
<b><u>Race</u></b> (please include ethnicity, nationality, culture, language, Gypsy, Roma, Traveller)				Low positive
<b><u>Religion or belief</u></b> (please include Buddhism, Christianity, Hinduism, Islam, Jainism, Judaism, Nonconformists; Rastafarianism; Shinto, Sikhism, Taoism, Veganism, Zoroastrianism, and any others)				Low positive
<b><u>Sex</u></b> (this can also be viewed as relating to gender. Please include associated aspects: safety, caring responsibility, potential for bullying and harassment)			Medium positive	
<b><u>Sexual Orientation</u></b> (please include associated aspects: safety; caring responsibility; potential for bullying and harassment)				Low positive
<b><u>Other: Social Inclusion</u></b> (please include families and friends with caring responsibilities; households in poverty; people for whom there are safeguarding concerns; people you consider to be vulnerable; people with health inequalities; refugees and asylum seekers; rural communities; and veterans and serving members of the armed forces and their families)				Low positive

**Initial health and wellbeing impact assessment by category**

*Please rate the impact that you perceive the service change is likely to have with regard to health and wellbeing, through stating this in the relevant column.*

*Please state if it is anticipated to be neutral (no impact) and add any extra notes that you think might be helpful for readers.*

<b>Health and wellbeing: individuals and communities in Shropshire</b>	<b>High negative impact</b> <i>Part Two HIA required</i>	<b>High positive impact</b>	<b>Medium positive or negative impact</b>	<b>Low positive negative or neutral impact</b> (please specify)
<p><b>Will the proposal have a <i>direct impact</i> on an individual's health, mental health and wellbeing?</b></p> <p>For example, would it cause ill health, affecting social inclusion, independence and participation?</p> <p>.</p>		X		
<p><b>Will the proposal <i>indirectly impact</i> an individual's ability to improve their own health and wellbeing?</b></p> <p>For example, will it affect their ability to be physically active, choose healthy food, reduce drinking and smoking?</p> <p>.</p>		X		
<p><b>Will the policy have a <i>direct impact</i> on the community - social, economic and environmental living conditions that would impact health?</b></p> <p>For example, would it affect housing, transport, child development, education, employment opportunities, availability of green space or climate change mitigation?</p> <p>.</p>			X Positive	
<p><b>Will there be a likely change in <i>demand</i> for or access to health and social care services?</b></p> <p>For example: Primary Care, Hospital Care, Community Services, Mental Health, Local Authority services including Social Services?</p> <p>.</p>			X Positive	

## **Guidance Notes**

### **1. Legal Context**

It is a legal requirement for local authorities to assess the equality and human rights impact of changes proposed or made to services. It is up to us as an authority to decide what form our equality impact assessment may take. By way of illustration, some local authorities focus more overtly upon human rights; some include safeguarding. It is about what is considered to be needed in a local authority's area, in line with local factors such as demography and strategic objectives as well as with the national legislative imperatives.

Carrying out these impact assessments helps us as a public authority to ensure that, as far as possible, we are taking actions to meet the general equality duty placed on us by the Equality Act 2010, and to thus demonstrate that the three equality aims are integral to our decision-making processes.

These are: eliminating discrimination, harassment and victimisation; advancing equality of opportunity; and fostering good relations.

These screening assessments for any proposed service change go to Cabinet as part of the committee report, or occasionally direct to Full Council, unless they are ones to do with Licensing, in which case they go to Strategic Licensing Committee.

Service areas would ordinarily carry out a screening assessment, or Stage One equality impact assessment. This enables energies to be focussed on review and monitoring and ongoing evidence collection about the positive or negative impacts of a service change upon groupings in the community, and for any adjustments to be considered and made accordingly.

These screening assessments are recommended to be undertaken at timely points in the development and implementation of the proposed service change.

For example, a Stage One ESHIA would be a recommended course of action before a consultation. This would draw upon the evidence available at that time, and identify the target audiences, and assess at that initial stage what the likely impact of the service change could be across the Protected Characteristic groupings and our tenth category of Social Inclusion. This ESHIA would set out intended actions to engage with the groupings, particularly those who are historically less likely to engage in public consultation eg young people, as otherwise we would not know their specific needs.

A second Stage One ESHIA would then be carried out after the consultation, to say what the feedback was, to set out changes proposed as a result of the feedback, and to say where responses were low and what the plans are to engage with groupings who did not really respond. This ESHIA would also draw more upon actions to review impacts in order to mitigate the negative and accentuate the positive. Examples of this approach include the Great Outdoors Strategy, and the Economic Growth Strategy 2017-2021

Meeting our Public Sector Equality Duty through carrying out these ESHIAs is very much about using them as an opportunity to demonstrate ongoing engagement across groupings and to thus visibly show we are taking what is called due regard of the needs of people in protected characteristic groupings.

If the screening indicates that there are likely to be significant negative impacts for groupings within the community, the service area would need to carry out a full report, or Stage Two assessment. This will enable more evidence to be collected that will help the service area to reach an informed opinion.

In practice, Stage Two or Full Screening Assessments have only been recommended twice since 2014, as the ongoing mitigation of negative equality impacts should serve to keep them below the threshold for triggering a Full Screening Assessment. The expectation is that Full Screening Assessments in regard to Health Impacts may occasionally need to be undertaken, but this would be very much the exception rather than the rule.

## **2. Council Wide and Service Area Policy and Practice on Equality, Social Inclusion and Health**

This involves taking an equality and social inclusion approach in planning changes to services, policies, or procedures, including those that may be required by Government. The decisions that you make when you are planning a service change need to be recorded, to demonstrate that you have thought about the possible equality impacts on communities and to show openness and transparency in your decision-making processes.

This is where Equality, Social Inclusion and Health Impact Assessments (ESHIA) come in. Where you carry out an ESHIA in your service area, this provides an opportunity to show:

- What evidence you have drawn upon to help you to recommend a strategy or policy or a course of action to Cabinet.
- What target groups and audiences you have worked with to date.
- What actions you will take in order to mitigate any likely negative impact upon a group or groupings, and enhance any positive effects for a group or groupings; and
- What actions you are planning to monitor and review the impact of your planned service change.

The formal template is there not only to help the service area but also to act as a stand-alone for a member of the public to read. The approach helps to identify

whether or not any new or significant changes to services, including policies, procedures, functions, or projects, may have an adverse impact on a particular group of people, and whether the human rights of individuals may be affected.

There are nine Protected Characteristic groupings defined in the Equality Act 2010. The full list of groupings is: Age; Disability; Gender Reassignment; Marriage and Civil Partnership; Pregnancy and Maternity; Race; Religion or Belief; Sex; and Sexual Orientation.

There is also intersectionality between these. Eg a young person with a disability would be in the groupings of Age and Disability, and if they described themselves as having a faith they would then also be in the grouping of Religion or Belief.

We demonstrate equal treatment to people who are in these groups and to people who are not, through having what is termed 'due regard' to their needs and views when developing and implementing policy and strategy and when commissioning, procuring, arranging, or delivering services.

For the individuals and groupings who may be affected, ask yourself what impact do you think is likely and what actions will you currently anticipate taking, to mitigate or enhance likely impact of the service change? If you are reducing a service, for example, there may be further use you could make of awareness raising through social media and other channels to reach more people who may be affected.

Social inclusion is then the wider additional category we use in Shropshire, in order to help us to go beyond the equality legislation in also considering impacts for individuals and households with regard to the circumstances in which they may find themselves across their life stages. This could be households on low incomes, or households facing challenges in accessing services, such as households in rural areas, and veterans and serving members of the armed forces and their families, or people that we might consider to be vulnerable, such as young people leaving care or refugee families.

Please note that the armed forces are now a grouping to whom we are required to give due regard under new Armed Forces legislation, although in practice we have been doing so for a number of years now.

When you are not carrying out an ESHIA, you still need to demonstrate and record that you have considered equality in your decision-making processes. It is up to you what format you choose.-You could use a checklist, an explanatory note, or a document setting out our expectations of standards of behavior, for contractors to read and sign. It may well not be something that is in the public domain like an ESHIA, but you should still be ready for it to be made available.

**Both the approaches sit with a manager, and the manager has to make the call, and record the decision made on behalf of the Council.**

*Carry out an ESHIA:*

- If you are building or reconfiguring a building.

- If you are planning to reduce or remove a service.
- If you are consulting on a policy or a strategy.
- If you are bringing in a change to a process or procedure that involves other stakeholders and the wider community as well as particular groupings

*Carry out an equality and social inclusion approach:*

- If you are setting out how you expect a contractor to behave with regard to equality, where you are commissioning a service or product from them.
- If you are setting out the standards of behavior that we expect from people who work with vulnerable groupings, such as taxi drivers that we license.
- If you are planning consultation and engagement activity, where we need to collect equality data in ways that will be proportionate and non-intrusive as well as meaningful for the purposes of the consultation itself.
- If you are looking at services provided by others that help the community, where we need to demonstrate a community leadership approach.

### **3. Council wide and service area policy and practice on health and wellbeing**

This is a relatively new area to record within our overall assessments of impacts, for which we are asking service area leads to consider health and wellbeing impacts, much as they have been doing during 2020-2021 and 2021-2022, and to look at these in the context of direct and indirect impacts for individuals and for communities.

A better understanding across the Council of these impacts will also better enable the Public Health colleagues to prioritise activities to reduce health inequalities in ways that are evidence based and that link effectively with equality impact considerations and climate change mitigation.

### **Health in All Policies – Health Impact Assessment**

Health in All Policies is an upstream approach for health and wellbeing promotion and prevention, and to reduce health inequalities. The Health Impact Assessment (HIA) is the supporting mechanism.

- Health Impact Assessment (HIA) is the technical name for a process that considers the wider effects of local policies, strategies and initiatives and how they, in turn, may affect people's health and wellbeing.
- Health Impact Assessment is a means of assessing both the positive and negative health impacts of a policy. It is also a means of developing good evidence-based policy and strategy using a structured process to review the impact.
- A Health Impact Assessment seeks to determine how to maximise health benefits and reduce health inequalities. It identifies any unintended health consequences. These consequences may support policy and strategy or may lead to suggestions for improvements.

- An agreed framework will set out a clear pathway through which a policy or strategy can be assessed and impacts with outcomes identified. It also sets out the support mechanisms for maximising health benefits.

The embedding of a Health in All Policies approach will support Shropshire Council through evidence-based practice and a whole systems approach, in achieving our corporate and partnership strategic priorities. This will assist the Council and partners in promoting, enabling and sustaining the health and wellbeing of individuals and communities whilst reducing health inequalities.

## **Individuals**

### **Will the proposal have a *direct impact* on health, mental health and wellbeing?**

For example, would it cause ill health, affecting social inclusion, independence and participation?

Will the proposal directly affect an individual's ability to improve their own health and wellbeing?

This could include the following: their ability to be physically active e.g., being able to use a cycle route; to access food more easily; to change lifestyle in ways that are of positive impact for their health.

An example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g., green highways), and changes to public transport that could encourage people away from car usage. and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve lives.

### **Will the proposal *indirectly impact* an individual's ability to improve their own health and wellbeing?**

This could include the following: their ability to access local facilities e.g., to access food more easily, or to access a means of mobility to local services and amenities? (e.g. change to bus route)

Similarly, to the above, an example of this could be that you may be involved in proposals for the establishment of safer walking and cycling routes (e.g. pedestrianisation of town centres), and changes to public transport that could encourage people away from car usage, and increase the number of journeys that they make on public transport, by foot or on bicycle or scooter. This could improve their health and wellbeing.

## **Communities**

Will the proposal directly or indirectly affect the physical health, mental health, and wellbeing of the wider community?

A *direct impact* could include either the causing of ill health, affecting social inclusion, independence and participation, or the promotion of better health.

An example of this could be that safer walking and cycling routes could help the wider community, as more people across groupings may be encouraged to walk more, and as there will be reductions in emission leading to better air quality.

An *indirect impact* could mean that a service change could indirectly affect living and working conditions and therefore the health and wellbeing of the wider community.

An example of this could be: an increase in the availability of warm homes would improve the quality of the housing offer in Shropshire and reduce the costs for households of having a warm home in Shropshire. Often a health promoting approach also supports our agenda to reduce the level of Carbon Dioxide emissions and to reduce the impact of climate change.

Please record whether at this stage you consider the proposed service change to have a direct or an indirect impact upon communities.

### **Demand**

#### **Will there be a change in demand for or access to health, local authority and social care services?**

For example: Primary Care, Hospital Care, Community Services, Mental Health and Social Services?

An example of this could be: a new housing development in an area would affect demand for primary care and local authority facilities and services in that location and surrounding areas. If the housing development does not factor in consideration of availability of green space and safety within the public realm, further down the line there could be an increased demand upon health and social care services as a result of the lack of opportunities for physical recreation, and reluctance of some groupings to venture outside if they do not perceive it to be safe.

## Local Plan – Additional Material for Examination in Public

<b>Responsible Officer:</b>	Mark Barrow		
email:	<a href="mailto:Mark.barrow@shropshire.gov.uk">Mark.barrow@shropshire.gov.uk</a>	Tel:	01743 258919
<b>Cabinet Member (Portfolio Holder):</b>	Cllr Chris Schofield		

### 1. Synopsis

This report seeks Cabinet approval to submit and consult upon additional material to the Local Plan Examination as a response to the Inspectors' Interim Findings into the Local Plan.

### 2. Executive Summary

- 2.1. The purpose of this report is to seek Cabinet approval for the submission of additional material to the Local Plan Examination in Public, and for this material to be subject to a public consultation in line with the expectation of the government appointed planning inspectors.
- 2.2. In July 2023, Cabinet agreed a range of new material to be submitted to the Local Plan Examination. Subsequently, the Council and the Planning Inspectorate received a CPR54 Pre-Action Protocol letter from a third-party objector to the Plan which argued the additional material was unlawful. In taking account of these issues, the examining Inspectors raised some soundness issues with some parts of the additional material. It should be noted that issues of soundness are capable of being remedied through the Examination process.
- 2.3. Following a further exchange of correspondence with the Inspectors, revised additional material has now been prepared. This has included the assessment of

revised options for informing the overall level of housing and employment requirements over the plan period. This additional material is captured in the following documents:

1. Sustainability Appraisal Report (April 2024) – Appendix 2
2. Housing and Employment Topic Paper (April 2024) – Appendix 3
3. Green Belt Topic Paper (April 2024) – Appendix 4

2.4. It is recommended that Cabinet agree Appendices 2, 3, and 4 to be submitted to the Local Plan Examination and for these documents to be subject to public consultation. The following documents also respond to the Inspectors Interim Findings and have already received approval by Cabinet on 19<sup>th</sup> July 2023 (Background Paper 2) and are therefore not part of this recommendation:

1. Draft DP Policy: Housing Provision for Older People and those with Disabilities and Special needs;
2. Updated Schedule of Main Modifications June 2023

2.5. This new information (appendices 2-4) provides further technical assessment work, principally through additional Sustainability Appraisal (SA), and provides a reasoned and justified response on a number of key points. Importantly, the new material provides a justification for why it is felt the Council needs to propose an upward adjustment to its currently submitted housing and employment requirements, and how this is proposed to be delivered.

2.6. The proposals are included in Appendix 3 Housing and Employment Topic Paper and recommend that the Council continue its strategy of planning for 'high' growth for both housing and employment delivery, plus continuing to seek to deliver contributions to the Black Country, agreed through the legal Duty to Cooperate process and previously agreed by Cabinet and full Council. As such it is proposed that the housing requirement is to be increased by 500 dwellings to a total of 31,300 dwellings over the course of the Plan period, and that the employment requirement is proposed to be increased by 20 hectares to a total of 320 hectares over the course of the Plan period.

2.7. In accommodating this proposed uplift, a number of options have been considered and subject to further Sustainability Appraisal; a process documented in Appendices 2 and 3 to this report. It is considered that due to the significant windfall opportunities available, and taking into account significant existing land supply for both housing and employment, there is no requirement for the Plan to allocate additional land to accommodate this uplift.

### 3. Recommendations

3.1 That Cabinet agree the Appendices 2-4 of this report to be submitted to the Local Plan Examination and for these documents to be subject to public consultation in line with the Council's Statement of Community Involvement (SCI).

3.2 That Cabinet agree that ahead of the public consultation any minor editorial changes to these documents are delegated to the Executive Director of Place in consultation with the Portfolio Holder for Planning and Regulatory Services.

# Report

## 4. Risk Assessment and Opportunities Appraisal

- 4.1 It is a statutory responsibility for Councils to maintain an up-to-date Local Plan. Under the Government's 'plan-led' approach to development, the Local Plan is a key component of the overall Development Plan for the area, and should provide a positive strategy to enable an area to grow in a sustainable manner.
- 4.2 The Local Plan is a key part of the Development Plan for an area. Section 38 (6) of the Planning and Compulsory Purchase Act 2004 states if regard is to be had to the Development Plan for the purpose of any determination to be made under the Planning Acts the determination must be made in accordance with the plan unless material considerations indicate otherwise. In dealing with planning applications, section 70(2) of the Town and Country Planning Act 1990 requires a planning authority to have regard to the provisions of the Development Plan so far as it is material to the application. Other parts of the Development Plan for an area include Neighbourhood Development Plans usually prepared by Town and Parish Councils.
- 4.3. It is the purpose of the Local Plan Review to ensure that Shropshire's Development Plan remains up to date for the purposes of decision making. One of the key elements of ensuring that a Development Plan is up to date is ensuring it has at least a five years' supply of deliverable housing sites against an up-to-date housing requirement. Whilst the Council's current housing land position shows a supply of 5.64 years' supply of deliverable housing land against the housing requirement within the adopted Development Plan, and 7.20 years supply of deliverable housing land against the housing need identified within the Local Housing Need Assessment undertaken using government's standard methodology, this position needs updating at least annually, and is at risk of challenge by potential applicants. The most effective way to ensure a plan-led sustainable housing land supply in excess of five years is to have an up to date and adopted Development Plan in place which provides a range of sustainable and deliverable housing allocations.
- 4.4. The Examination in Public (EiP) is an integral part of the Plan making process, and is the point in the process where the draft plan, alongside its evidence base, is assessed by an independently appointed Planning Inspector(s). The Council submitted the Local Plan to the Secretary of State in September 2021. Stage 1 hearing sessions into the Local Plan took place in July 2022 and January 2023. Whilst the Council can present reasoned and justified evidence to support its position, decisions on timescale and regarding the need to amend the Plan in any way are with the Inspectors. This is a normal procedural part of plan making, but one that does present some risk to the Council. To counter this risk it is important the Council continues to present an evidenced and justified approach to the plan, and seeks to respond to any Inspector's concerns in a timely and efficient manner.

## 5. Financial Implications

- 5.1. Planned growth provides the best possible opportunity for Shropshire Council to harness growth potential by providing a stable platform for investors and developers (from both the public and private sectors). Growth also provides an opportunity to secure contributions to help maintain and improve local facilities, services and infrastructure. New growth simultaneously imposes an additional burden on local services and provides opportunities to secure investment to improve local facilities which are the responsibility of Shropshire Council and other public service providers.
- 5.2. The Local Plan process is subject to a number of costs; during its preparation, principally due to the need to commission evidence base documents to inform both site allocations and development management policies; and through the EiP, principally through the cost of the Planning Inspectorate who examine the Plan. This expenditure is both necessary and unavoidable in the pursuit of a 'sound' Plan. The Council has been incurring costs of the Examination since 2021 when the Plan was submitted and Inspectors appointed. These costs were planned and reserves ringfenced for this purpose. However, attempts have been made to reduce the cost to the Council with support from the Inspectors, such as holding public hearing sessions virtually.
- 5.3. There is also a financial risk to the Council of not pursuing a review of the Local Plan in a timely manner, most notably through the likelihood of increased levels of planning appeals as a result of increased challenges to the integrity of the currently adopted Core Strategy and SAMDev Plan.
- 5.4. The EiP has a significant cost implication to the Council, most notably through the cost of the Inspectorate, the need to appoint a Programme Officer to support the role of the Inspector and the cost of hiring rooms for the public hearing sessions. The estimated costs of the EiP have been included within the budget of Planning Policy and Strategy, although it should be recognised that the final cost of the EiP is not known

## 6. Climate Change Appraisal

- 6.1. The recommendations propose that Cabinet agree to submit additional information to the Examination in Public to support the progression of the Local Plan through Examination and eventually to adoption. The proposed Local Plan includes new policies SP3 – Climate Change and DP11 – Minimising Carbon Emissions. In combination these policies provide a more robust local policy framework for supporting the transition to a zero-carbon economy through future master-planning work and ultimately decisions on planning applications, and relate to energy and fuel consumption, renewable energy generation, carbon offsetting and mitigation and climate change adaptation.

## 7. Background

- 7.1. Following a period of plan preparation and several stages of public consultation since 2017, Shropshire Council submitted the Local Plan to the Secretary of State on 3rd September 2021. This commenced the Examination in Public (EiP) stage.
- 7.2. It is the role of government appointed independent Planning Inspector(s) to examine the soundness and legal compliance of the Local Plan, having regard to a number of factors including the Planning and Compulsory Purchase Act 2004 (as amended); the National Planning Policy Framework (the NPPF); associated national guidance (NPPG); and representations made to the Plan at the Regulation 19 stage of the plan preparation phase.
- 7.3. Paragraph 35 of the NPPF (Dec 2023) sets out how Local Plans are examined. Plans are considered 'sound' if they are:
  - a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
  - b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
  - c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
  - d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.
- 7.4. In July 2022 and January 2023 Stage 1 hearing sessions into the Local Plan were held, focussing on legal compliance and strategic policy matters. In February 2023 the Inspectors provided their Interim Findings which confirmed the Council had complied with the legal Duty to Cooperate (DtC) and therefore the examination could continue. However, there were a number of matters the Inspectors sought further material on.
- 7.5. The purpose of this report is therefore to seek Cabinet approval for the submission of additional material to the Local Plan Examination in Public, and for this material to be subject to a public consultation in line with the expectation of the government appointed planning inspectors.
- 7.6. In July 2023, Cabinet agreed a range of new material to be submitted to the Local Plan Examination. In August 2023, the Council and the Planning Inspectorate received a CPR Part 54 Pre-Action Protocol letter (PAPL) from a third party objector to the Plan which argued that the resumption of the Examination based upon this new material would be unlawful. In October, the Inspectors sent a letter to the Council responding to the PAPL indicating they had some soundness

concerns about some aspects of the Council's additional information. This meant the Examination could not proceed as hoped at that time.

- 7.7. It should be noted there are important distinctions between issues of 'soundness' and issues of legal compliance in the context of examining Local Plans. Put simply, issues of soundness are capable of being resolved through the Examination process either through the provision of new evidence and/or modifications to the Plan. It was therefore encouraging that whilst raising issues of 'soundness' the Inspectors were indicating these issues were capable of being resolved.
- 7.8. To understand further the Inspector's soundness concerns, in November the Council sought clarification on a number of points raised by the Inspectors. The Inspectors responded in January 2024; this is included as Appendix 1 to this report and is referred to as ID37. It is considered that the Inspector's letter ID37 provides a clear summary of their expectations for additional work in order to progress the Examination positively. This has allowed officers to proceed with some confidence that we are preparing the necessary material.
- 7.9. A key issue where the Inspectors have required further work concerned the manner in which the proposed contribution to the forecast unmet need in the Black Country had been incorporated into Shropshire's housing and employment requirements. By way of recap, during the plan preparation process and as an important part of the legal Duty to Cooperate, the Council has agreed to meet 1500 dwellings and 30ha of employment land from the Black Country to support their forecast under delivery.
- 7.10. The additional SA material prepared and agreed by Cabinet in July 2023 assessed a number of growth options, all of which incorporated this proposed level of Black Country need. ID37 clarifies the Inspectors concerns regarding this manner in which this assessment was undertaken and how to remedy the situation to their satisfaction. In summary, the Council have been asked to provide further SA work which provides separate and distinct assessments of the impact of accepting the proposed unmet need from the Black Country whilst also assessing the County's own needs. Whilst fairly subtle in nature, it is recognised this is an important change to the manner in which the proposed unmet need is being assessed in the SA.
- 7.11. With reference to paragraph 5.7 of the Inspector's ID37, using the growth options set out in earlier stages of the plan preparation process, and applying an agreed Local Housing Need (LHN) base date at 2020 (25,894 dwellings over the plan period), the options, set out in Table 2.1, have been assessed to inform the decision on the housing requirement. The percentage uplifts applied relate to the varying degrees of growth aspiration above the county's LHN, and in doing so represent reasonable options for the Council to consider. In the submitted version of the Local Plan currently subject of the Examination, a 'high' growth option is preferred.

*Table 2.1: Options considered for housing requirement*

<b>Option</b>	<b>Local Housing Need</b>	<b>Percentage Uplift</b>	<b>Black Country Contribution</b>	<b>Housing Requirement (rounded)</b>
1a. Moderate Growth	25,894 dwellings	5% (1,295 dwellings)	0 dwellings	27,200 dwellings (1,236 dwellings per annum)
1b. Moderate Growth + BC Contribution	25,894 dwellings	5% (1,295 dwellings)	1,500 dwellings	28,700 dwellings (1,305 dwellings per annum)
2a. Significant Growth	25,894 dwellings	10% (2,589 dwellings)	0 dwellings	28,500 dwellings (1,296 dwellings per annum)
2b. Significant Growth + BC Contribution	25,894 dwellings	10% (2,589 dwellings)	1,500 dwellings	30,000 dwellings (1,364 dwellings per annum)
3a. High Growth	25,894 dwellings	15% (3,884 dwellings)	0 dwellings	29,800 dwellings (1,355 dwellings per annum)
3b. High Growth + BC Contribution	25,894 dwellings	15% (3,884 dwellings)	1,500 dwellings	31,300 dwellings (1,423 dwellings per annum)

7.12. With reference to paragraph 5.8 of the Inspectors ID38, using the growth options set out in earlier stages of the plan preparation process, and applying a baseline need of 250 hectares over the plan period (established through Council's evidence in the Economic Development Needs Assessment), the options set out in Table 2.2 have been assessed to inform the decision on employment requirement: The percentage uplifts applied relate to the varying degrees of growth aspiration above for the county's baseline employment land need, and in doing so represent reasonable options for the Council to consider. In the submitted version of the Local Plan currently subject of the Examination, a 'high' growth option is preferred.

*Table 2.2: Options considered for Employment Requirement*

<b>Option</b>	<b>Local Employment Land Need</b>	<b>Percentage Uplift</b>	<b>Black Country Contribution</b>	<b>Employment Land Requirement (rounded)</b>
1a. Productivity Growth	250ha	0%	0ha	250ha (11.5ha per annum)
1b. Productivity Growth + BC Contribution	250ha	0%	30ha	280ha dwellings (12.75ha per annum)
2a. Significant Growth	250ha	10% (25ha)	0ha	275ha (12.5ha per annum)
2b. Significant Growth + BC Contribution	250ha	10% (25ha)	30ha	300ha (14.0ha per annum)
3a. High Growth	250ha	15% (37.5ha)	0ha	290ha (13.0ha per annum)

3b. High Growth + BC Contribution	250ha	15% (37.5ha)	30ha	320ha (14.5ha per annum)
--------------------------------------	-------	-----------------	------	-----------------------------

- 7.13. Each housing and employment option has been subject to a new sustainability appraisal (SA) and clear conclusions have been reached. The full SA of these options and their conclusions can be viewed in Appendix 2 to this report.
- 7.14. Following on from the SA, and in line the Inspector's requirements, a new Housing and Employment Topic Paper has been prepared. This takes into account the conclusions of the SA process whilst also considering wider material considerations, such as deliverability. This Topic Paper is included as Appendix 3 to this report.

### Proposed Housing and Employment Requirements

- 7.15. In the submitted version of the Local Plan, the housing and employment requirements are based upon delivering a 'high' growth option for the county, with the inclusion of specific contributions for 1500 dwellings and 30 hectares of employment land towards unmet needs in the Black Country. These are currently 30,800 dwellings and 300 hectares of employment land respectively.
- 7.16. As discussed earlier, the manner in which the Black Country unmet need has been incorporated into the Shropshire requirement is central to the Inspectors concerns regarding the soundness of the Plan. However, it is notable the Inspectors have agreed that the Council's approach to identifying the housing and employment land needs of Shropshire itself is sound. In ID37 the Inspectors also note that at the earlier stages of plan preparation the Council opted for a 'high' growth option partly due to the conclusions of the SA at the time.
- 7.17. The updated SA work (Appendix 2) concludes that the 'high' growth options for Shropshire incorporating the proposed housing and employment unmet need from the Black Country (options 3b in tables 2.1 and 2.2 above) are the most sustainable options.
- 7.18. The Housing and Employment Topic Paper (Appendix 3) concludes that having taken into account the conclusions of the SA and a range of other material considerations, the 'high' growth options plus a contribution to the Black Country unmet need are the preferred requirements for the plan period.
- 7.19. Therefore it is proposed that the proposed amended housing and employment requirements over the plan period (2016-2038) are:

#### Housing Requirement

**Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further 1,500 dwelling uplift as a contribution toward forecast unmet housing need in the Black Country.

The resultant proposed housing requirement is **31,300 dwellings** over the proposed plan period from 2016-2038. This equates to an **annual average of around 1,423 dwellings**.

### Employment Requirement

**Option 3b: High Growth plus a contribution of 30 ha towards the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local employment needs of 250 ha over the 22 year plan period, plus a further 30 ha contribution toward forecast employment need in the Black Country. The resultant proposed requirement is **320 hectares** over the proposed plan period 2016-2038. This equates to an annual average of **14.5 hectares**

7.20. These proposals represent an increase of 500 dwellings and 20 hectares of employment land to the current requirements set out in the submitted version of the Local Plan. However, it is important to recognise that this would maintain the current strategy of 'high' growth and continue to deliver growth levels which would support a range of benefits to the county, including an increase in the delivery of affordable housing and support economic growth objectives. It is also recognised the SA does not identify any strongly negative environmental consequences for the delivery of this option. If agreed this will therefore need to be a main modification to the Plan.

### Delivering the Proposed Uplift to Housing and Employment Requirements

7.21. The SA and Topic Paper go on to consider the most appropriate means for the Plan to accommodate these proposed uplifts to the housing and employment requirements. In doing so it is particularly important to recognise that 'windfall' delivery, i.e. delivery on non-allocated sites, has been especially high in some settlements in the early part of the plan period since 2016, which has meant in some settlements the allowance for additional windfall in the remainder of the plan period to 2038 is very low. Nevertheless, it is important for the Council to assess reasonable options covering a range of potential ways to deliver additional growth.

7.22. Section 7 of the Topic Paper sets out the consideration of the options for delivering the proposed 500 dwelling uplift to housing growth and Section 15 does the same for the proposed 20ha uplift to employment land. The options considered are:

- Option 1: Increasing / utilising settlement guidelines and windfall allowances.
- Option 2: Densification of proposed site allocations.
- Option 3: Increasing the size of existing site allocations.
- Option 4: A combination of two or more of the other options.

7.23. The proposed mechanism for accommodating the proposed uplift to the housing requirement is **Option 1: Increasing Settlement Guidelines and Windfall Allowances**. This option entails identifying opportunities to increase settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements to provide additional capacity for windfall development sufficient to achieve the proposed uplift to the housing requirement.

7.24. It is considered the most appropriate settlements/sites where an increase to development guidelines is appropriate are Shrewsbury, Whitchurch and the

Former Ironbridge Power Station Site, as the anticipated windfall allowances for these settlements/sites contained in the submitted version of the Local Plan have already been exceeded. Section 7 of the Housing and Employment Topic Paper provides the full justification. It is therefore concluded the allocation of new sites to accommodate this uplift is unnecessary.

7.25. A similar approach is proposed to accommodate the proposed uplift to the employment requirement. This takes into account the significant employment land supply of around 413 hectares already or planned to be made available in Shropshire to 2038 and reflected in the proposed settlement guidelines in the draft Local Plan. It is therefore concluded the allocation of new sites or the increase of any settlement guidelines to accommodate this uplift is unnecessary.

### **Future Timeframe**

7.26. Should Cabinet approve the new material for consultation, it is expected this consultation will happen between April and June. Subject to the outcome of this, it is anticipated additional public hearing sessions to conclude the Stage 1 stage of the Examination and move into Stage 2 sessions (focussing on site allocations and Development Management policies) can happen in October and November.

## **8. Conclusions**

- 8.1. The purpose of this report is to seek Cabinet approval for the submission of additional material to the Local Plan Examination in Public, and for this material to be subject to a public consultation in line with the expectation of the government appointed planning inspectors.
- 8.2. The proposals are included in Appendix 3 Housing and Employment Topic Paper and recommend that the Council continue its strategy of planning for a 'high' growth for both housing and employment delivery, plus continuing to seek to deliver contributions to the Black Country. As such it is proposed that the housing requirement is to be increased by 500 dwellings to a total of 31,300 dwellings over the course of the Plan period, and that the employment requirement is proposed to be increased by 20 hectares to a total of 320 hectares over the course of the Plan period.
- 8.3. In accommodating this proposed uplift, it is considered that due to the significant windfall opportunities available, and taking into account significant existing land supply for both housing and employment, that there is no requirement for the Plan to allocate additional land to accommodate this uplift.

Mr West  
Planning Policy  
Shropshire Council  
PO BOX 4826  
Shrewsbury  
SY1 9LJ

16 January 2024

Dear Mr West

**Shropshire Local Plan Examination – Request for Clarification to ID36**

Introduction

1. Thank you for your letter dated 16 November (GC41). We agree that the most effective and fair way to consider the further material that the Council has produced and any soundness concerns that we or representors may have is through further hearing sessions in due course.
2. To get to that point we need to ensure that anyone who wishes to do so has had an opportunity to comment on any new material, including anyone who did not previously submit comments at the Regulation 19 stage of the Plan making process, but now wishes to do so because of a change in the Council's evidence. This would require a full Regulation 19 type consultation. It is not an effective use of the Council's resource to do this until we are satisfied that the further work the Council has undertaken meets our requirements.
3. What we want to avoid is numerous rounds of unnecessary consultation and hearings as this is time consuming and costly. Therefore, we will aim to answer the questions set out in your letter as clearly as possible, following the same order as your letter.
4. **Unmet Needs Forecast to Arise in the Black Country**

Question 1

*Can you confirm you require further sustainability appraisal (SA) work to consider reasonable options for contributing to the unmet needs forecast to*

*arise in the Black Country, as a distinct and separate exercise to the wider SA work on housing and employment requirements? Are you satisfied with the two options identified?*

- 4.1 What the Council has not done as part of the revised SA work is to look at what the environmental impacts are of meeting some of the unmet needs of the Black Country i.e. 1500 homes and 30ha of employment land, in addition to meeting its own needs. Instead, what the revised SA does is amalgamate the Black Country's unmet needs into its own growth options and at the same time alter the growth options compared to earlier SA work. This needs to be assessed as a distinct and separate exercise. We will cover the growth options issue in other questions you have posed.

## 5. **Assessing Growth Options**

### Question 2

*Could you please advise whether GC29 constitutes an appropriate identification and consideration of the reasonable housing growth options. If not, could you please provide further information on the issues affecting the assessment in GC29 and explain the growth options you consider the Council should assess?*

- 5.1 The Plan at Policy SP2 sets out a requirement for 30,800 homes which includes a contribution of 1500 homes to meet the Black Country needs. However, the Black Country needs were not assessed as part of the earlier SA work. At the time of the earlier SA work the Council decided that the high growth option which included a 15% uplift on the housing need figure was appropriate.
- 5.2 The SA concluded, "This option more than meets evidenced housing need and offers significant opportunities to meet the requirements of all sections of society in terms of location, affordability and adaptability. It is likely to support existing services such as schools, doctor's surgeries, shops and play areas in the medium to long term and to create a balanced supply of employment land and/or more or higher value jobs. It also is likely to support new leisure, recreational and cultural activities in the medium to long term and economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency". This was the justification for this high growth option.
- 5.3 The revised SA has 5 growth options for both housing and employment land requirements. For housing this is moderate growth, significant growth, and 3 variations on high growth. The original SA has 3, moderate growth, significant growth and high growth.
- 5.4 Given the different approach to calculating the housing requirement in each SA, the easiest way to understand this issue is to compare the annual housing requirement, rather than the overall plan period amount.
- 5.5 It appears that the Council are now opting for a housing requirement of 13% over their own Local Housing Need (LHN), but incorporating the agreed Black

Country need which equates to the extra 2% approximately. It seems that the main justification for this is the latest LHN figure which shows a reduction of 8% in housing need for Shropshire from 1,177 (2020) to 1,085 (2023) homes. However, care needs to be taken in making adjustments during an examination based on the latest LHN figure as next year it may go up again.

- 5.6 If the Council wishes to reduce its own housing requirement figure then this needs to be properly tested and the conclusion justified and the Black Country unmet needs also tested separately. That way the impacts of each can be properly understood and assessed.
- 5.7 What the SA should do is test options based on the 2020 baseline with 2 extra years, but only look at the growth options tested in the original SA, so a 5, 10 and 15% uplift and look at this with the Black Country unmet needs of 1,500 homes and without it. The results of the SA should then be used to assess what is an appropriate housing requirement in the Plan. The Plan should then make clear what the housing requirement for Shropshire is and how much of the Black Country unmet needs are being accommodated in the Plan. This should be included in Policy SP2 as well as the explanatory text which will need modifying accordingly.

#### Question 3

*Could you please advise whether GC29 constitutes an appropriate identification and consideration of the employment land growth options. If not, could you please provide further information on the issues within this assessment and explain the growth options you consider the Council should assess?*

- 5.8 Our concerns and advice are the same as in relation to housing. The original SA did not ascribe land amounts to the different growth options it tested so it is not as straightforward to compare as for housing. However, it is noteworthy that the economic growth options tested were 'significant growth', 'high growth' and 'productivity growth', so 3 different growth options whereas the revised SA tests 5 growth options. As set out above, increasing the growth options just seems to complicate matters. It is also important that employment growth aligns with housing growth. We cannot see where the Council have considered this.

## **6 The Housing and Employment Land Requirements**

#### Question 4

*Given that the housing and employment requirements have not been found to be sound, are the Council now being requested to propose alternative housing and employment land requirement figures for Shropshire, reflecting the outcome of the additional SA work?*

- 6.1 As set out above, the Council is effectively proposing different housing requirements for Shropshire to what was originally tested through SA work. We realise that some adjustments were necessary to take account of the 2020 LHN figure and the additional 2 years in the Plan, but essentially the Council in the

revised SA are opting for different growth options for housing and employment land.

- 6.2 Policy SP2 says that “Over the plan period from 2016 to 2038, around 30,800 new dwellings and around 300 hectares of employment land will be delivered. This equates to around 1,400 dwellings and around 14ha of employment land per annum”. Para 3.6 of the Plan says that the housing requirement of 30,800 homes will meet the housing need and support the long-term sustainability of the County and provide some flexibility to respond to LHN over the plan period. Paragraph 3.47 of the Plan refers to a Shropshire wide housing requirement of around 30,800 dwellings being essential for the long-term prosperity of Shropshire. Indeed, there are many parts of the Plan which read as though the Council are just seeking to meet their own housing requirement.
- 6.3 It is only in paragraph 3.7 of the Plan where it is explained that these 30,800 homes incorporate 1,500 dwellings to support the housing needs of the emerging Black Country Plan.
- 6.4 At some point the Plan changed from meeting just Shropshire’s own housing needs to meeting the needs of Shropshire and some of the Black Country’s unmet needs, but the evidence base remained the same.
- 6.5 What is important is that further SA work is robust, tests different levels of growth (including with and without the Black Country unmet needs). For consistency and clarity these should be the same growth options as the original SA. The housing requirement is a matter for the Council, informed by the new work set out in paragraph 5.7 above.

## 7. **Assessment of Sites**

### Question 5

*Having reviewed paragraphs 9.2-9.29 of GC29, does this assessment and the conclusions reached achieve your expectations regarding the identification of an appropriate geography for sites to accommodate proposed contributions to the unmet needs forecast to arise in the Black Country? If not, please could you help us by indicating what we have failed to consider.*

- 7.1 We are content with the work done to look at the relationship of the Black Country with Shropshire and then identify a broad geographical area to meet the unmet needs of the Black Country.

### Question 6

*Does this further explanation on the content and purpose of GC29 alleviate concerns regarding the extent of the assessment undertaken when determining appropriate sites to accommodate proposed contributions to unmet needs forecast to arise in the Black Country? If not, we would be grateful for further clarification on your concerns on this matter, together with appropriate guidance, in order to understand the extent of further work required.*

- 7.2 Your clarification on this matter is helpful that all available sites were assessed as part of the additional work and not just those sites that are allocated in the Plan. We do not consider that a new 'call for sites' exercise is warranted in this case.
- 7.3 However consideration needs to be given as to whether the employment site which is within the Green Belt and has been earmarked to meet some of the unmet needs of the Black Country is an appropriate choice. Are there any sites that could meet this need that are not in the Green Belt or any Green Belt sites which would result in less Green Belt harm i.e. has the Council examined fully all other reasonable options for meeting its identified need as set out in paragraph 146 of the Framework?

Question 7

*Does this explanation alleviate concerns regarding the approach to the 'filters' in Stage 2b of the site assessment process, in the context of determining proposed allocations to accommodate proposed contributions to unmet needs forecast to arise in the Black Country? If not, we would be grateful for more explicit guidance as to what we should do to the filters.*

- 7.4 Yes, your further explanation is helpful in clarifying these matters. We are satisfied that no further work is necessary at this stage. Further discussion on this matter can take place at future hearings if necessary.

Question 8

*Can you please advise whether this explanation alleviates your concerns regarding the update of Stage 3 of the site assessment process of reasonable site options to accommodate proposed contributions to unmet needs forecast to arise in the Black Country?*

- 7.5 Yes, your further explanation is helpful in clarifying these matters. We are satisfied that no further work is necessary at this stage. Further discussion on this matter can take place at future hearings if necessary.

Question 9

*Does the clarification on the work carried out as part of Stage 3 of the additional SA material address your concerns regarding the Council's consideration of alternative reasonable sites either not in the Green Belt or in the Green Belt but with less Green Belt harm in the same geographical location? If not, we would be grateful for more explicit guidance as to what we should do next.*

- 7.6 Yes, your further explanation is helpful in clarifying these matters. We are satisfied that no further work is necessary at this stage. What is important is that the policies and proposals in the Plan and the reasonable alternatives have been appraised on a like-for-like basis and reasons given for rejecting the alternatives that were appraised. Further discussion on this matter can take place at future hearings if necessary.

**8. The Role of Sustainability Appraisal**

## Question 10

*To ensure compliance with your requirements for the SA, the Council would like to seek your clarification on whether firstly, the additional SA material should arrive at conclusions on a preferred housing and employment land requirements (noting your comments in paragraph 9 of ID36)? Secondly, should a planning judgment on this matter now be appropriate, we would like to seek your clarification that these conclusions are reached in the Housing and Employment Topic Paper, where the conclusions of the SA and other material factors are considered in arriving at conclusions?*

- 8.1 The SA should arrive at conclusions on preferred housing and employment land requirements based on the evidence from the SA. However, it is appropriate to consider this alongside other evidence in, for example your Housing and Employment Topic Paper. This might include information from your Green Belt Assessment or about land availability etc. Importantly the Council need to produce a clear conclusion on the issue of what the housing and employment land requirement should be.

## 9. **Conclusion**

- 9.1 We hope these answers are helpful in allowing the Council to carry out the necessary SA addendum and revised Housing and Employment Topic Paper. Once the work has been undertaken the next step will be to carry out a full consultation on the additional work. Upon conclusion of the consultation, we will hold some further hearings sessions.
- 9.2 It would be helpful to know from the Council the likely timescales involved in carrying out this additional work. We are conscious that this examination is now into its third year. Please be assured that we are keen, as we are sure the Council and others are, to get to the stage of being able to hold further hearings as soon as possible.
- 9.3 We are not inviting comments from any representors to our letter. Should the Council have any questions please direct them through the programme officer.

*Louise Crosby and Nick Palmer*

## 2. Introduction

### Interim Findings

- 2.1. On 15<sup>th</sup> February 2023, the Planning Inspectors examining the draft Shropshire Local Plan issued an Interim Findings document (ID28). This followed the completion of the Stage 1 Hearing Sessions, which focused on legal and strategic issues (including strategic policies). These Hearing Sessions were primarily undertaken in July 2022, with a further session specifically regarding the Duty to Cooperate in January 2023.
- 2.2. ID28 addresses a range of matters, including Sustainability Appraisal (SA). With regard to SA, the Planning Inspectors conclude that an additional SA assessment should be undertaken regarding **Unmet Housing and Employment Land Needs of the Association of Black Country Authorities (ABCA) and Policy SP2**, in order to assist the examination of the draft Shropshire Local Plan, ensure compliance with Regulation 12 of The Environmental Assessment of Plans and Programmes Regulations (2004), and ensure the legal compliance and soundness of the draft Shropshire Local Plan.
- 2.3. With specific regard to the housing and employment land needs of Shropshire, the Planning Inspectors conclude within ID28 that the approach to identifying need is sound, stating within Paragraph 13 that: *“The Council’s approach to identifying the housing and employment land needs derived within Shropshire itself is sound.”*
- 2.4. With regard to the housing and employment land needs of the Black Country, the Planning Inspectors have acknowledged that the draft Shropshire Local Plan is proposing to provide 1,500 new homes and 30ha of employment land over the plan period in order to contribute to the unmet housing and employment land needs forecast to arise in the Black Country.
- 2.5. Specifically, within paragraph 13 of ID28 the Planning Inspectors conclude: *“In principle, the Council’s intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire’s housing need to meet some of this externally derived unmet need.”*
- 2.6. However, the Planning Inspectors explain within paragraphs 17-20 of ID28 that they are concerned that the decision to accommodate some of the housing and employment land needs of the Black Country may have changed the objectives and geographical scope of the draft Shropshire Plan. As this decision was reached at a point between the Regulation 18 and Regulation 19 stages of plan making, following the completion of much of the evidence base including the SA, these contributions were not considered within the SA, which tested options that were based on just meeting the needs of Shropshire.

- 2.7. As such, the Planning Inspectors explain within Paragraph 20 of ID28 *“Further SA work therefore needs to be undertaken to assess the likely effects of the proposed strategy – which is based on meeting Shropshire’s housing and employment needs and contributing towards unmet needs from the Black Country. In carrying out this work, consideration also needs to be given to the selection of the preferred strategy when judged against reasonable alternatives. For example, by testing a scenario which includes the originally envisaged ‘high growth scenario’ and a contribution towards unmet housing needs.”*
- 2.8. Within Paragraph 21 of ID28, the Planning Inspectors explain that if the intention remains to include proposed contributions to the unmet housing and employment land needs of the Black Country, then *“the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.”*
- 2.9. Within Paragraph 21 of ID28, the Planning Inspectors address the level and distribution of development, explaining that if *“following the additional SA work, the Council chooses to pursue the same growth option as before”* then *“the housing and employment land requirements will increase, and more sites will be required. Consideration will also need to be given to the distribution of development since accommodating some of the unmet needs may result in more sites being required in the part of Shropshire nearest the Black Country.”*

### **Responding to the Interim Findings**

- 2.10. Following receipt of ID28, Shropshire Council undertook additional Sustainability Appraisal work, which included Sustainability Appraisal assessment in relation to:
- a. Identifying an appropriate housing requirement for Shropshire, having regard to Local Housing Need and the potential for a contribution of 1,500 dwellings towards the unmet housing needs of the Black Country.
  - b. Identifying an appropriate employment land requirement for Shropshire, having regard to Local Employment Land Need and the potential for a contribution of 30ha towards the unmet employment land needs of the Black Country.
  - c. Identifying an appropriate strategic distribution of development across Shropshire.
  - d. Identifying an appropriate site(s) upon which the proposed contribution of 1,500 dwellings towards the unmet housing needs of the Black Country can be accommodated.
  - e. Identifying an appropriate site(s) upon which the proposed contribution of contribution of 30ha of employment land towards the unmet employment land needs of the Black Country can be accommodated.
  - f. If necessary, identifying additional housing allocations.
  - g. If necessary, identifying additional employment land allocations.
  - h. Re-assessment of relevant draft Policies within the draft Shropshire Local Plan, to support identification of appropriate main modifications in response to the consideration of the additional SA assessment work undertaken.

2.11. This additional Sustainability Appraisal work (GC29) was subsequently submitted to the examination in July 2023, with the intention of positively responding to the issues and concerns raised within ID28.

### **Update of the Response to the Interim Findings**

2.12. Following consideration of the additional Sustainability Appraisal work (GC29) undertaken by Shropshire Council, the Planning Inspectors raised concerns with some of the additional Sustainability Appraisal work undertaken by Shropshire Council within their correspondence on the 4<sup>th</sup> October 2023 (ID36).

2.13. After careful consideration of this correspondence, Shropshire Council sought clarification regarding the concerns raised within ID36 and the assessment work necessary to resolve these concerns, within correspondence on the 16<sup>th</sup> November 2023 (GC41).

2.14. On the 16<sup>th</sup> January 2024, the Planning Inspectors issued correspondence ID37 which addressed the questions raised by the Council within GC41. Within this correspondence the Planning Inspectors clarified the additional work required:

- a. Paragraph 4.1 of ID37 identifies the need for an SA assessment of the proposed contributions to the unmet housing and employment land needs forecast to arise in the Black Country as *“a distinct and separate exercise.”*
- b. Paragraph 5.6 of ID37 explains that the updated SA assessment should *“test options based on the 2020 baseline with 2 extra years”* for the level of housing growth, but *“only look at the growth options tested in the original SA, so a 5, 10 and 15% uplift and look at this with the Black Country unmet needs of 1,500 homes and without it.”*
- c. Paragraph 5.8 of ID37 explains that the updated SA assessment should assess *“‘significant growth’, ‘high growth’ and ‘productivity growth’, so 3 different growth options”* consistent with those previously assessed through the SA process. It is understood that as per the advice for the housing growth options, each option should be considered with and without the proposed 30ha contribution to unmet employment land needs forecast to arise in the Black Country. It is also *“important that employment growth aligns with housing growth.”*
- d. Paragraph 8.1 of ID37 explains that *“The SA should arrive at conclusions on preferred housing and employment land requirements based on the evidence from the SA.”* However, it also acknowledged that in identifying proposed housing and employment land requirements *“is appropriate to consider this alongside other evidence in, for example your Housing and Employment Topic Paper...”*

2.15. As a result, Shropshire Council has undertaken updated additional Sustainability Appraisal work, in order to positively respond to these requirements.

### **3. Purpose of this Document**

- 3.1. The purpose of this document is to provide a summary of the updated additional SA assessment work undertaken by Shropshire Council in order to positively respond to the conclusions reached by the Planning Inspectors within ID28, ID36 and ID37.
- 3.2. **For the avoidance of doubt, this document supersedes the previous Additional Sustainability Appraisal Report (GC29).**

### **4. Scope of this Document**

- 4.1. Reflecting the conclusions reached by the Planning Inspectors within ID28, ID36 and ID37 this document includes a summary of the updated additional SA assessment work undertaken by Shropshire Council in relation to:
  - a. Reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country (comprising the Local Planning Authority areas of Dudley, Sandwell, Walsall, and Wolverhampton).
  - b. Reasonable options for any contribution to the unmet employment land needs forecast to arise in the Black Country.
  - c. Identifying an appropriate housing requirement for Shropshire, having regard to Local Housing Need and any potential contribution towards the unmet housing needs forecast to arise in the Black Country.
  - d. Identifying an appropriate employment land requirement for Shropshire, having regard to Local Employment Land Need and any potential contribution towards the unmet employment land needs forecast to arise in the Black Country.
  - e. Identifying an appropriate strategic distribution of development across Shropshire.
  - f. If necessary, identifying an appropriate site(s) upon which any proposed contribution towards the unmet housing needs forecast to arise in the Black Country can be accommodated.
  - g. If necessary, identifying an appropriate site(s) upon which any proposed contribution towards unmet employment land needs forecast to arise in the Black Country can be accommodated.
  - h. If necessary, identifying additional housing allocations.
  - i. If necessary, identifying additional employment land allocations.
  - j. Re-assessment of relevant draft Policies within the draft Shropshire Local Plan, to support identification of appropriate main modifications in response to the consideration of the updated additional SA assessment work undertaken.

### **5. Assessment Methodology**

- 5.1. The assessment methodology utilised within the updated additional SA assessment work summarised within this document is consistent with that utilised to date within the wider SA process undertaken to inform the draft Shropshire Local Plan, as documented within the Regulation 19 Pre-Submission Draft Shropshire Local Plan 2016 to 2038: Sustainability Appraisal and Site Assessment Environmental Report and

Appendices (SD006.01-SD006.22). This includes the use of the same SA Objectives and assessment framework as outlined within **Chapter 2 of SD006.01**.

- 5.2. With respect to the SA assessment work undertaken to date, the main aspects of particular relevance to this updated additional SA assessment work include:
- a. The SA assessment of reasonable housing requirement options and the preferred housing requirement as summarised within the Issues and Strategic Options: Sustainability Appraisal Report (EV003.03); the Preferred Scale and Distribution of Development: Sustainability Appraisal Report (EV004.03); and SD006.01 (particularly Chapters 5 and 6).
  - b. The SA assessment of reasonable employment land requirement options and the preferred employment land requirement summarised within EV003.03; EV004.03; and SD006.01 (particularly Chapters 5 and 6).
  - c. The SA assessment of reasonable options for the strategic distribution of development and the preferred option for the strategic distribution of development summarised within EV003.03; EV004.03; and SD006.01 (particularly Chapters 5 and 6).
  - d. The SA assessment of draft Policy SP2: Strategic Approach within the Regulation 18 Pre-Submission Draft Shropshire Local Plan 2016 to 2038 Sustainability Appraisal and Site Assessment Environmental Report (EV007.04.01-EV007.04.22); and SD006.01 (particularly Chapters 9, 10 and 11) and SD006.02.
  - e. The SA assessment of potential housing site allocations within the Preferred Sites: Sustainability Appraisal Report (EV005.03.01-EV005.03.02); the Strategic Sites: Sustainability Appraisal Report (EV006.03); EV007.04.01-EV007.04.22; and SD006.01 (particularly Chapters 7, 8, 9, 10 and 11) and SD006.03-SD006.22.
  - f. The SA assessment of potential employment land site allocations within the Preferred Sites: Sustainability Appraisal Report (EV005.03.01-EV005.03.02); the Strategic Sites: Sustainability Appraisal Report (EV006.03); EV007.04.01-EV007.04.22; and SD006.01 (particularly Chapters 7, 8, 9, 10 and 11) and SD006.03-SD006.22.
- 5.3. The updated additional SA assessment work summarised within this document has drawn upon and built upon the SA assessment work already undertaken, particularly that summarised above.
- 5.4. **For the avoidance of doubt, this document supersedes the previous Additional Sustainability Appraisal Report (GC29).**

## **6. Summary of the SA Assessment: Reasonable Options for Contributing to the Unmet Housing Needs Forecast to Arise in the Black Country**

### **Introduction**

6.1. This section of the document summarises the additional SA assessment of the reasonable options for contributions to the unmet housing needs forecast to arise in the Black Country.

### **Identification of Reasonable Options for Any Contribution to the Unmet Housing Needs Forecast to Arise in the Black Country**

6.2. Shropshire Council has undertaken extensive duty to cooperate discussions with the Black Country Authorities regarding housing issues, including their local housing needs and approach to identifying existing and future housing land supply. Through these discussions it is understood that an unmet housing need is forecast to arise in the Black Country and it was established that it may be appropriate for a contribution to this forecast unmet housing need to be accommodated in Shropshire.

6.3. Following further consideration and duty to cooperate discussions, Shropshire Council and the Black Country Authorities agreed a proposed contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country. This is established within the signed Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV41). Further information on this matter is provided within the Housing Topic Paper (GC4i).

6.4. Importantly, within paragraph 3 of ID28, the Planning Inspectors concluded with regard to the duty to cooperate that *“we can confirm that we are satisfied that the Council has met the legal duty set out in Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended), in so far as it imposes a duty on a local planning authority to co-operate with other local planning authorities, the County Council and prescribed bodies or other persons by engaging constructively, actively and on an ongoing basis in relation to the preparation of a development plan document so far as relating to a strategic matter to maximise the effectiveness of the activity of plan preparation.”*

6.5. Furthermore, within paragraph 13 of ID28 the Planning Inspectors concluded that *“in principle, the Council’s intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire’s housing need to meet some of this externally derived unmet need.”*

6.6. However, within paragraph 14 of ID36 the Planning Inspectors concluded that *“As the plan proposes to meet some of the unmet needs of the Black Country, it is necessary*

*for the SA to appraise reasonable alternative options for achieving this against sustainability objectives.”*

- 6.7. Furthermore, within paragraph 4.1 of ID37 the Planning Inspectors confirmed that any proposed contribution to the unmet housing needs forecast to arise in the Black Country *“needs to be assessed as a distinct and separate exercise.”*
- 6.8. Having reflected on the extensive duty to cooperate process undertaken by the Council with the Black Country Authorities; the various factors considered in determining appropriate proposed contributions to unmet housing need, as documented within the Housing Topic Paper (GC4i); and the agreements reached within the Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV041), the Council has identified two reasonable options for the approach to proposed contributions to the unmet housing needs forecast to arise within the Black Country. There reasonable options are:
  - a. **Option 1:** No contribution towards the unmet housing needs forecast to arise within the Black Country.
  - b. **Option 2:** Contribution of 1,500 dwellings towards the unmet housing needs forecast to arise within the Black Country.

## Assessment of Reasonable Options for Any Contribution to the Unmet Housing Needs Forecast to Arise in the Black Country

6.9. The following tables summarise the additional SA assessment of the identified reasonable options for contributing to the unmet housing needs forecast to arise in the Black Country.

**Table 6.1: Option 1: No Contribution**

Option 1: No Contribution				
This option would result in none of the unmet housing needs forecast to arise within the Black Country being accommodated within Shropshire through the Shropshire Local Plan.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to affect present trends in the range of plants and animals and the quality and extent of wildlife habitats in Shropshire.</p> <p>This option would likely have a lower potential for a negative impact on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country.</p> <p>As such, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.</p> <p>This option would likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. The increased potential migration associated with this alternative option would also support a positive response to sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society  Page 106	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to result in a significant change from the existing baseline situation for Shropshire with regard to the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. It is also unlikely to result in a significant change to the ability for the Black Country Authorities to meet their own housing needs.</p> <p>This option would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country.</p> <p>Furthermore, this option would likely have a lower potential to provide much needed affordable housing and meet the housing needs of specific groups within our communities, including older people and families, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. This is because a key mechanism for delivering affordable housing is through provision as a developer contribution on market housing developments, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country; and a key mechanism for delivering specialist housing is as part of larger development sites, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>
4: Promote access to services for all sections of society	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation in respect of the ability to provide new services and facilities.</p> <p>This option would likely have a lower potential for a positive impact on the ability to provide access to services for all sections of society, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. This is because many services and facilities require a ‘critical population mass’ to maintain viability and sustainability. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation with respect to the use and access to public transport and the prevalence of walking or cycling to work.</p> <p>This option would likely have a lower potential for a positive impact on the ability to encourage the use of sustainable forms of transport, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. This is because residential development and population increases can increase the ability to facilitate the enhancement of existing provision of new forms of sustainable transport (critical population mass to maintain viability and sustainability). Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>
6: Reduce the need of people to travel by car	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to affect the reliance on travel by car.</p> <p>This option would likely have a lower potential for a negative impact on car usage, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, as more houses would likely result in more cars. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.</p> <p>The location of development is the main driver for use of private vehicles, continued levels of development in sustainable locations would mean residential development is closer to necessary locations (i.e., areas of employment) and likely reduce dependency county-wide on private vehicles when compared to options for development in less sustainable, more isolated locations.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation in respect of the ability to provide new leisure and cultural activities. This option would likely have a lower potential for a positive impact on the ability to support active and healthy lifestyles, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, given that many cultural and leisure facilities require a 'critical population mass' to maintain viability and sustainability. Although it is recognised that many recreational activities are based on the natural environment, which is likely to be less affected by this option than those involving a proposed contribution to the unmet housing needs forecast to arise in the Black Country. Furthermore, the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.
8: Protect and improve soil quality	0	0	0	It is the location of development that will have the most influence on soil quality. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process. The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to affect soil quality directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	Since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process. The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to affect water quality and water pollution directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to significantly impact on flood risk and opportunities to improve flood management.</p> <p>This option would likely have a lower potential for a negative impact on flood risk than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, as it could require less land, including greenfield land, for development. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, both of which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0	0	0	<p>The location of development is likely to have the greatest influence on these matters e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p> <p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to affect air quality and risk of air pollution directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.</p>
12: Reduce carbon dioxide emissions	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, the current baseline with respect to carbon dioxide emissions is likely to remain the same.</p> <p>This option would likely have a lower potential for a positive impact on reduction of carbon dioxide emissions than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, as increased economies of scale may offer some opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, opportunities to adapt and mitigate climate change are likely to remain similar to the present. Likewise, the potential for new large-scale habitats gained through residential development is also likely to be comparable to current trends. This option would likely have a lower potential for a positive impact on the promotion of adaptation to and mitigation of climate change, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. This is because whilst it could require less land (including greenfield land for development), new development is expected to achieve a minimum of 10% biodiversity net gain and as such a higher level of development will increase the amount of biodiversity net gain achieved. Furthermore, higher levels of development increase the potential for new large scale habitats gained through residential development. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.
14: Promote efficient use of natural resources	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is likely to provide a continuation of the current levels of opportunities to focus development on previously developed land and / or to re-use existing buildings. It will also likely result in the use of a comparable amount of primary aggregates. This option would likely have a lower potential for a negative impact on the amount of primary aggregates utilised and would likely increase the opportunity for a positive impact on the ability to focus development on previously developed land and / or to re-use existing buildings, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, it is likely that the current situation with respect to the conservation and enhancement of the historic environment is likely to continue.</p> <p>This option would likely have a lower potential to cause harm to existing heritage assets and their setting, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. Furthermore, any impact from this alternative option could be offset at least in part by increased opportunities to contribute to the restoration, enhancement and long-term management of heritage assets. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.</p>
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	<p>All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place.</p> <p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option is unlikely to change current trends in relation to conservation and enhancement of existing landscape character and local distinctiveness.</p> <p>This option would likely have a lower potential to harm existing landscape character and local distinctiveness, than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.</p>

Page 151

### **Summary of Option 1: No Contribution**

6.10. The adopted Development Plan for Shropshire does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. This option would therefore represent a continuation of this approach. It also represents the lowest of the reasonable options for contributions to the unmet housing needs forecast to arise in the Black Country. This option would result in a lower contribution to the unmet housing needs forecast to arise in the Black Country than that currently proposed within the draft Shropshire Local Plan.

- 6.11. Given that this option represents a continuation of the current approach, it would likely have neutral effects on all Sustainability Objectives. This includes the range of plants and animals; encouragement of a strong and sustainable Shropshire economy; provision of sufficient good quality housing to meet the needs of all sections of society; promotion of access to services; encouraging use of sustainable means of transport and reducing need to travel by car; supporting active and healthy communities; reducing flood risk and improving flood risk management; reducing carbon dioxide emissions and promotion of adaption to and mitigation of climate change; promoting efficient use of natural resources; and conserving and enhanced heritage, landscape character and local distinctiveness.
- 6.12. Many Sustainability Objectives are to a greater or lesser extent more directly influenced by the strategic distribution of development, which is assessed separately within the SA process, than levels of development. As such, reasonable options relating to the level of development generally result in uncertainty about impact against them. However, as this option would not result in any development and it forms a continuation of the current approach, it is considered that there is sufficient certainty that the likely impact is neutral.
- 6.13. It is acknowledged that for a number of the Sustainability Objectives, an option which includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, could have a higher potential for a positive affect than this option. In particular encouraging a strong and sustainable economy throughout Shropshire; providing a sufficient amount of good quality housing which meets the needs of all sections of society; promoting access to services and new leisure and cultural activities; reducing carbon dioxide emissions; and encouraging the use of sustainable modes of transport. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.
- 6.14. Conversely, it is also acknowledged that for the Sustainability Objective related to the protection and enhancement of the range of plants and animals; reducing reliance on private cars; reducing flood risk; promoting efficient use of natural resources; conserving and enhancing heritage assets; and conserving and enhancing landscape character and local distinctiveness, an option which includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country, could have a higher potential to negatively affect the issue than this option. Although again, the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet housing need forecast to arise in the Black Country exists in Shropshire.

**Table 6.2: Option 2: 1,500 Dwelling Contribution**

Option 2: 1,500 Dwelling Contribution				
<p>This option would result in 1,500 of the unmet housing need forecast to arise within the Black Country being accommodated within Shropshire through the Shropshire Local Plan. It positively responds to a range of factors regarding the relationship between Shropshire Council’s administrative area and the Black Country Authorities administrative area. This includes geographic proximity and relationship, transport links, migration and commuting patterns and travel to work areas (further information is documented within the Housing Topic Paper (GC4i)). These same factors informed Shropshire Council’s consideration of and decision that it may be appropriate to include a contribution to the unmet housing needs forecast to arise within the Black Country and discussions with the Black Country Authorities regarding the extent of any proposed contribution. This option is consistent with the proposed contribution to the unmet housing needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041).</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
<p>1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.</p>	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. It is therefore considered that it could have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher level of growth in this option compared with the baseline means that the potential for larger amounts of greenfield land to be released increases (although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process). Furthermore, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. This option would likely have a higher potential for a negative impact on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire than the option which aligns with the baseline (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process).</p>
<p>2: Encourage a strong and sustainable economy throughout Shropshire</p>	+	+	+	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. This option has the potential to attract additional workforce from the Black Country (through increased migration) and as such increases the ability to support a positive response to sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force. Other benefits are dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. This option would likely have a higher positive impact on the encouragement of a strong and sustainable economy in Shropshire than the option which aligns with the baseline.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
<p>3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society</p> <p>Page 114</p>	++	++	++	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. Given the relationship between Shropshire and the Black Country, it is likely that sites to accommodate any proposed contribution to the Black Country would need to be located in either eastern or central parts of Shropshire. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p> <p>This option would likely have a positive impact on the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families in Shropshire. This is because a key mechanism for delivering affordable housing is through provision as a developer contribution on market housing developments, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country; and a key mechanism for delivering specialist housing is as part of larger development sites, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country.</p> <p>It is also likely to result in a significantly positive effect on the housing needs of the Black Country Authorities, given that it would result in a significant contribution to the unmet housing needs that are forecast to arise. This option would likely have a higher positive impact on the provision of sufficient good quality housing to meet the needs of all section of society than an option which aligns with the baseline.</p>
<p>4: Promote access to services for all sections of society</p>	+/?	+/?	+/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. This option would likely have a positive impact on the ability to provide access to services for all sections of society (although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process), given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability.</p> <p>This option would likely have a higher positive impact on the provision of access to services for all sections of society (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process) than an option which aligns with the baseline.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>This option would likely increase the ability to facilitate the provision of new forms of sustainable transport. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher positive impact on the ability to facilitate the provision of new forms of sustainable transport (although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process), given that many services and facilities require a 'critical population mass' to maintain viability and sustainability) than an option which aligns with the baseline.</p> <p>If this development is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>
6: Reduce the need of people to travel by car	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>It is considered that this option would likely have a negative effect on car usage, as more houses would likely result in more cars. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher negative impact on car usage (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process), than an option which aligns with the baseline.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+/?	+/?	+/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>It is considered that this option could have a higher ability to support active and healthy lifestyles (although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process), given that many cultural and leisure facilities require a ‘critical population mass’ to maintain viability and sustainability. Whilst many recreational activities are based on the natural environment, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall (and again the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process).</p>
8: Protect and improve soil quality Page 116	?	?	?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence on soil quality. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p> <p>Furthermore, the impact of any such contribution on the total level of development proposed in Shropshire is also assessed separately within the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process. Furthermore, the impact of any such contribution on the total level of development proposed in Shropshire is also assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>It is considered that this option could require more land, including greenfield land, for development. This may increase the potential for development in areas of higher flood risk, particularly in the medium to long term. However, larger scale growth creates more opportunities for flood management measures. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher negative impact on flood risk than an option which aligns with the baseline. Although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	+/?	+/?	+/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. Increased economies of scale may offer some opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option has a higher potential for a positive impact on reducing carbon dioxide emissions than an option which aligns with the baseline. Although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p>
Page 118 13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. It is considered that this option could require more land, including greenfield land, for development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such an increased / higher level of development will increase the amount of biodiversity net gain achieved. Furthermore, higher levels of development increase the potential for new large scale habitats gained through residential development.</p> <p>This level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option has a higher potential for a positive impact on promoting adaptation to and mitigation of climate change. However again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. Specific site allocations are also assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
14: Promote efficient use of natural resources	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. It is therefore considered that this option could have a lower opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely increase the amount of primary aggregates utilised. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher potential for a negative impact on the efficient use of natural resources than the option which aligns with the baseline (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process).</p>
Page 19 15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country. It is therefore considered that this option could have a higher potential to harm existing heritage assets and their settings. This may be somewhat offset by increased opportunities to contribute to their restoration, enhancement and long-term management. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher potential for a negative impact on heritage assets than the option which aligns with the baseline (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process).</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-/?	-/?	-/?	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. As such, this option will result in more housing development to meet the unmet housing needs forecast to arise in the Black Country.</p> <p>All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As such, it is considered that this option could have a higher potential to change to existing landscape character and local distinctiveness. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher potential to harm existing landscape character and local distinctiveness than the option which aligns with the baseline. However, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p>

**Summary of Option 2: 1,500 Dwelling Contribution**

- 6.15. The adopted Development Plan for Shropshire does not include a proposed contribution to unmet housing needs forecast to arise in the Black Country. This option would therefore represent an increase to the amount of residential development proposed to meet unmet housing needs forecast to arise in the Black Country. It also represents the highest of the reasonable options for contributions to the unmet housing needs forecast to arise in the Black Country.
- 6.16. It is considered that this option positively responds to a range of factors regarding the relationship between Shropshire Council’s administrative area and the Black Country Authorities administrative areas. This includes geographic proximity and relationship, transport links, migration and commuting patterns, and travel to work areas (further information is documented within the Housing Topic Paper (GC4i)). These same factors informed Shropshire Council’s consideration of and decision that it may be appropriate to include a contribution to the unmet housing needs forecast to arise within the Black Country and discussions with the Black Country Authorities regarding the extent of any proposed contribution.
- 6.17. This option is consistent with the proposed contribution to the unmet housing needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041). It would result in a contribution to the unmet housing need forecast to arise in the Black Country that is consistent with that currently proposed within the draft Shropshire Local Plan.

- 6.18. It is considered that this option has the potential to result in a significant positive for the amount of good quality housing which meets the needs of all sections of society. This is because a key mechanism for delivering affordable housing is through provision as a developer contribution on market housing developments, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country; and a key mechanism for delivering specialist housing is as part of larger development sites, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country. It is also likely to result in a significantly positive effect on the housing needs of the Black Country Authorities, given that it would result in a significant contribution to the unmet housing needs that are forecast to arise.
- 6.19. It is also considered that this option would likely have a positive impact on the encouragement of a strong and sustainable economy in Shropshire. This is because it has the potential to attract additional workforce from the Black Country (through increased migration) and as such increases the ability to support a positive response to sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force. Other benefits are dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.
- 6.20. This option also has the potential to result in a positive impact on a number of other sustainability objectives, these being promotion of access to services for all sections of society; supporting active and healthy communities; encouraging use of sustainable means of transport; promoting adaptation and mitigation of climate change; and reducing carbon dioxide emissions. However, the extent of any such impact is less clear and is also dependent on one of both of the following factors - the impact of any such contribution on the total level of development proposed in Shropshire and the specific location of site allocations, which are assessed separately within the SA process.
- 6.21. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process. Furthermore, the extent of any impact is also dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.
- 6.22. This option also has the potential to result in a negative impact on a number of other sustainability objectives, these being the protection and enhancement of the range of plants and animals in Shropshire; the need to travel by car; flood risk and flood management; efficient use of natural resources; and conservation and enhancement of heritage value and landscape character/distinctiveness. However, the extent of any such impact is less clear and is also dependent on one of both of the following factors - the impact of any such contribution on the total level of development proposed in Shropshire and the specific location of site allocations, which are assessed separately within the SA process.

### **Comparison Summary of Reasonable Options for Any Contribution to the Unmet Housing Needs Forecast to Arise in the Black Country**

- 6.23. The overall purpose of this component of the updated additional SA assessment work is to help inform judgements about which of the reasonable alternatives for any contribution to the unmet housing needs forecast to arise in the Black Country is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 6.1 and 6.2 above.
- 6.24. To assist with the comparison of the results of the updated additional SA assessment of the reasonable alternatives for any contribution to the unmet housing needs forecast to arise in the Black Country, Table 6.3 has been prepared for illustrative purposes only.
- 6.25. This summarises, in comparative terms, how the two reasonable alternatives perform against each of the SA objectives. This is achieved by ‘ranking’ the performance of each of the reasonable options from best performing (1) to poorest performing (2) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 6.26. It is not however appropriate to ‘total-up’ the scores, because performance against each of the SA objectives requires consideration in and of itself and ‘totalling-up’ scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a ‘totalling-up’ of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

**Table 6.3: Comparison of Reasonable Options for Any Contribution to the Unmet Housing Needs Forecast to Arise in the Black Country**

<b>Sustainability Objective</b>	<b>Option 1: No Contribution</b>	<b>Option 2: 1,500 Dwelling Contribution</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2
2: Encourage a strong and sustainable economy throughout Shropshire	2	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	2	1
4: Promote access to services for all sections of society	2	1
5: Encourage the use of sustainable means of transport	2	1
6: Reduce the need of people to travel by car	1	2
7: Support active and healthy communities.	2	1
8: Protect and improve soil quality	?	?
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?

Sustainability Objective	Option 1: No Contribution	Option 2: 1,500 Dwelling Contribution
10: Reduce flood risk and improve flood management	1	2
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	?	?
12: Reduce carbon dioxide emissions	2	1
13: Promote adaptation and mitigation to climate change	2	1
14: Promote efficient use of natural resources	1	2
15: Conserve and enhance features and areas of heritage value and their setting	1	2
16: Conserve and enhance landscape character and local distinctiveness	1	2

## **Conclusion**

6.27. Tables 6.1 and 6.2 summarise the updated additional SA assessment work for each of the reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country. Table 6.3 then summarises, in comparative terms, how the two reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.

6.28. In summary:

- a. Option 1: No Contribution, would result in none of the unmet housing needs forecast to arise within the Black Country being accommodated within Shropshire, through the Shropshire Local Plan.
- b. Option 2: 1,500 Dwelling Contribution, would result in 1,500 of the unmet housing need forecast to arise within the Black Country being accommodated within Shropshire, through the Shropshire Local Plan. It positively responds to a range of factors regarding the relationship between Shropshire Council’s administrative area and the Black Country Authorities administrative area and is consistent with the proposed contribution to the unmet housing needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041).

6.29. Option 1: No Contribution represents a lower level of housing contribution towards the unmet housing needs forecast to arise in the Black Country than currently proposed within the draft Shropshire Local Plan. Option 2: 1,500 Dwelling Contribution represents a housing contribution towards the unmet housing needs forecast to arise in the Black Country that is consistent with that currently proposed within the draft Shropshire Local Plan.

6.30. It is apparent from the results of the updated additional SA assessment work that neither of the reasonable options for any contribution to the unmet housing needs forecast to arise in the Black Country are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a

nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for either of these reasonable options.

- 6.31. Conversely, Option 2: 1,500 Dwelling Contribution, is likely to result in a strongly positive effect on *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society* in the short, medium and long term. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 6.32. This is perhaps unsurprising as the achievement of *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society*, is directly related to housing provision, and Option 2: 1,500 Dwelling Contribution would result in a significant amount of housing growth as a contribution to the unmet housing needs forecast to arise in the Black Country.
- 6.33. Furthermore, a key mechanism for delivering much needed affordable housing in Shropshire is through provision as a developer contribution on market housing developments, irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country. Additionally, a key mechanism for delivering specialist housing to meet the needs of groups within our communities, is as part of larger development sites, again irrespective of whether the market housing is to meet the needs of residents of Shropshire or the Black Country.
- 6.34. It is important to note that in the case of Option 2: 1,500 Dwelling Contribution, there are a number of SA objectives that are linked to the impact of any such contribution on:
- a. The total level of development proposed in Shropshire, which is assessed separately within the SA process.
  - b. The strategic distribution and specific location of site allocations, which are also assessed separately within the SA process.
- 6.35. Furthermore, in some instances the extent of any potential impact should be considered in the context of the total level of growth associated with this option as a proportion of the total growth to meet Shropshire needs and aspirations.
- 6.36. In general terms, the updated additional SA assessment work can be summarised as concluding that Option 1: No Contribution, will have a neutral impact across all sustainability objectives, whilst Option 2: 1,500 Dwelling Contribution generally has a greater potential for positive impacts on social and economic factors, and a greater potential for negative impacts on environmental factors, than either the baseline or Option 1: No Contribution.
- 6.37. **It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.**
- 6.38. On balance, it is considered that Option 2: 1,500 Dwelling Contribution is the most sustainable of the two options identified. This is because:

- a. It presents an opportunity to achieve a strongly positive effect on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - b. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - c. Whilst it also poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through careful consideration of the interplay between this contribution and the total level of development proposed in Shropshire and the strategic distribution/location of site allocations.
  - d. It is considered that this option achieves the most appropriate 'balance' across all three pillars of sustainability – social, economic, and environmental.
  - e. This option would result in an appropriate contribution to the unmet housing need forecast to arise in the Black Country (consistent with the contribution agreed through the Duty to Cooperate Process and within a signed Statement of Common Ground between Shropshire Council and the Black Country Authorities), whereas Option 1: No Contribution would result in no contribution to the unmet housing need forecast to arise in the Black Country and as such impact on the ability to meet housing need beyond the Shropshire area.
- 6.39. This updated additional SA Assessment work is a very important consideration when undertaking the planning judgement regarding which reasonable option for a contribution to the unmet housing needs forecast to arise in the Black Country should be identified within the draft Shropshire Local Plan. However, a range of other evidence/factors will also require due consideration when undertaking this planning judgement.
- 6.40. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 6.41. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## **7. Summary of the SA Assessment: Reasonable Options for Contributing to the Unmet Employment Land Needs Forecast to Arise in the Black Country**

### **Introduction**

- 7.1. This section of the document summarises the additional SA assessment of the reasonable options for contributions to the unmet employment land needs forecast to arise in the Black Country.

### **Identification of Reasonable Options for Any Contribution to the Unmet Employment Land Needs Forecast to Arise in the Black Country**

- 7.2. Shropshire Council has undertaken extensive duty to cooperate discussions with the Black Country Authorities regarding employment land issues, including their local employment land needs and approach to identifying existing and future employment land supply. Through these discussions it is understood that an unmet employment land need is forecast to arise in the Black Country and it was established that it may be appropriate for a contribution to this forecast unmet employment land need to be accommodated in Shropshire.
- 7.3. Following further consideration and duty to cooperate discussions, Shropshire Council and the Black Country Authorities agreed a proposed contribution of 30ha of land towards the unmet employment land needs forecast to arise within the Black Country. This is established within the signed Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV41). Further information on this matter is provided within the Employment Strategy Topic Paper (GC4n).
- 7.4. Importantly, within paragraph 3 of ID28, the Planning Inspectors concluded with regard to the duty to cooperate that *“we can confirm that we are satisfied that the Council has met the legal duty set out in Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended), in so far as it imposes a duty on a local planning authority to co-operate with other local planning authorities, the County Council and prescribed bodies or other persons by engaging constructively, actively and on an ongoing basis in relation to the preparation of a development plan document so far as relating to a strategic matter to maximise the effectiveness of the activity of plan preparation.”*
- 7.5. Within paragraph 13 of ID28 the Planning Inspectors concluded that *“in principle, the Council’s intention to address some of the Association of Black Country Authorities (ABCA) unmet needs (1500 homes and 30ha of employment land), aligns with the spirit of the DtC. It is clear that the Council and the ABCA authorities are all content with this contribution and this is set out in a Statement of Common Ground (SoCG), signed prior to the submission of the Plan for examination. We recognise that there is a lack of any prescribed formula in national planning policy for calculating any uplift to Shropshire’s housing need to meet some of this externally derived unmet need.”*

- 7.6. However, within paragraph 14 of ID36 the Planning Inspectors concluded that *“As the plan proposes to meet some of the unmet needs of the Black Country, it is necessary for the SA to appraise reasonable alternative options for achieving this against sustainability objectives.”*
- 7.7. Furthermore, within paragraph 4.1 of ID37 the Planning Inspectors confirmed that any proposed contribution to the unmet housing needs forecast to arise in the Black Country *“needs to be assessed as a distinct and separate exercise.”*
- 7.8. Having reflected on the extensive duty to cooperate process undertaken by the Council with the Black Country Authorities; the various factors considered in determining appropriate proposed contributions to unmet need, as documented within the Employment Strategy Topic Paper (GC4n); and the agreements reached within the Statement of Common Ground between Shropshire Council and the Black Country Authorities (EV041), the Council has identified two reasonable options for the approach to proposed contributions to the unmet employment land needs forecast to arise within the Black Country. There reasonable options are:
- c. **Option 1:** No contribution towards the unmet employment land needs forecast to arise within the Black Country.
  - d. **Option 2:** Contribution of 30ha of land towards the unmet employment land needs forecast to arise within the Black Country.

## Assessment of Reasonable Options for Any Contribution to the Unmet Employment Land Needs Forecast to Arise in the Black Country

7.9. The following tables summarise the additional SA assessment of the identified reasonable options for contributing to the unmet employment land needs forecast to arise in the Black Country.

**Table 7.1: Option 1: No Contribution**

<b>Option 1: No Contribution</b>				
This option would result in none of the unmet employment land needs forecast to arise within the Black Country being accommodated within Shropshire through the Shropshire Local Plan.				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to affect present trends in the range of plants and animals and the quality and extent of wildlife habitats in Shropshire.</p> <p>This option would likely have a lower potential for a negative impact on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. Although the impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet employment land needs forecast to arise in the Black Country exists in Shropshire.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. It is also unlikely to result in a significant change to the ability for the Black Country Authorities to meet their own employment land needs.</p> <p>This option would result in a lower ability to support a positive response to sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. This is because such an option would provide further labour force (through changes to commuting patterns) and demand for such employment provision. However, the baseline position is that no contribution to unmet employment land needs forecast to arise in the Black Country exists in Shropshire.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. Furthermore, the extent of any contribution to the unmet employment land needs forecast to arise in the Black Country is unlikely to impact on the provision of sufficient good quality housing. As such, this option is unlikely to result in a significant change from the existing baseline situation for Shropshire with regard to the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.
4: Promote access to services for all sections of society	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation in respect of the ability to provide new services and facilities. This option would likely have a lower potential for a negative impact on the ability to provide access to services for all sections of society, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. This is because investment and numbers of working age people in employment would continue to place pressures on the existing and new services and facilities that serve communities in the county particularly during the working day and especially at peak hours. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet employment land needs forecast to arise in the Black Country exists in Shropshire.
5: Encourage the use of sustainable means of transport	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation with respect to the use and access to public transport and the prevalence of walking or cycling to work. This option would likely have a lower potential for a positive impact on the ability to provide access to services for all sections of society, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. This is because economic development can support investment in sustainable modes of transport. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to unmet employment land needs forecast to arise in the Black Country exists in Shropshire.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to affect the reliance on travel by car.</p> <p>This option would likely have a lower potential for a negative impact on car usage, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. This is because more employment development would likely result in more car usage. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.</p> <p>The location of development is the main driver for use of private vehicles, continued levels of development in sustainable locations would mean employment development is accessible to housing and other infrastructure and would likely reduce dependency county-wide on private vehicles, when compared to options for development in less sustainable, more isolated locations.</p>
7: Support active and healthy communities.	0	0	0	<p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is likely to maintain the existing situation in respect of the ability to provide new leisure and cultural activities.</p> <p>This option would likely have a lower potential for a positive impact on the ability to support active and healthy lifestyles, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. This is because employment development encourages more working age people to enter employment and seek recreational opportunities in the County. Although it is recognised that many recreational activities are based on the natural environment, which is likely to be less affected by this option than those involving a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. Furthermore, the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality	0	0	0	It is the location of development that will have the most influence on soil quality. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process. The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to affect soil quality directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	Since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process. The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to affect water quality and water pollution directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.
10: Reduce flood risk and improve flood management	0	0	0	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to significantly impact on flood risk and opportunities to improve flood management. This option would likely have a lower potential for a negative impact on flood risk than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country, as it could require less land, including greenfield land, for development. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0	0	0	The location of development is likely to have the greatest influence on these matters e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process. The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to affect air quality and risk of air pollution directly. Furthermore, as this option would not result in any development, it is considered that there is sufficient certainty that its likely impact is neutral.

16: Conserve and enhance landscape character and local distinctiveness	0	0	0	<p>All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place.</p> <p>The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option is unlikely to change current trends in relation to conservation and enhancement of existing landscape character and local distinctiveness.</p> <p>This option would likely have a lower potential to harm existing landscape character and local distinctiveness, than an option that includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.</p>

**Summary of Option 1: No Contribution**

7.10. The adopted Development Plan for Shropshire does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. This option therefore would represent a continuation of this approach. It represents the lowest of the reasonable options for contributions to the unmet employment land needs forecast to arise in the Black Country. This option would result in a lower contribution to the unmet employment land needs forecast to arise in the Black Country than that currently proposed within the draft Shropshire Local Plan.

7.11. Given that this option represents a continuation of the current approach, it would likely have neutral effects on all Sustainability Objectives. This includes the range of plants and animals; encouragement of a strong and sustainable Shropshire economy; provision of sufficient good quality housing to meet the needs of all sections of society; promotion of access to services; encouraging use of sustainable means of transport and reducing need to travel by car; supporting active and healthy communities; reducing flood risk and improving flood risk management; reducing carbon dioxide emissions and promotion of adaption to and mitigation of climate change; promoting efficient use of natural resources; and conserving and enhanced heritage, landscape character and local distinctiveness.

7.12. Many Sustainability Objectives are to a greater of lesser extent more directly influenced by the strategic distribution of development, which is assessed separately within the SA process, than levels of development. As such, reasonable options relating to the level of

development generally result in uncertainty about impact against them. However, as this option would not result in any development and it forms a continuation of the current approach, it is considered that there is sufficient certainty that the likely impact is neutral.

- 7.13. It is acknowledged that for a number of the Sustainability Objectives, an option which includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country, could have a higher potential for a positive affect than this option. In particular encouraging a strong and sustainable economy throughout Shropshire; provision of new leisure and cultural activities; adapting to climate change; and encouraging the use of sustainable modes of transport. Although the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.
- 7.14. Conversely, it is also acknowledged that for a number of other Sustainability Objectives, an option which includes a proposed contribution to the unmet employment land needs forecast to arise in the Black Country, could have a higher potential for a negative affect than this option. In particular those relating to the protection and enhancement of the range of plants and animals; promoting access to services; reducing carbon dioxide emissions; reducing reliance on private cars; reducing flood risk and promoting efficient use of natural resources; conserving and enhancing heritage assets; and conserving and enhancing landscape character and local distinctiveness. Although again, the extent of any impact of this alternative option is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire and the strategic distribution and site allocations, which are assessed separately within the SA process. However, the baseline position is that no contribution to the unmet employment land need forecast to arise in the Black Country exists in Shropshire.

**Table 7.2: Option 2: 30ha Employment Land Contribution**

**Option 2: 30ha Employment Land Contribution**

This option would result in 30ha of the unmet employment land need forecast to arise within the Black Country being accommodated within Shropshire through the Shropshire Local Plan. It positively responds to a range of factors regarding the relationship between Shropshire Council’s administrative area and the Black Country Authorities administrative area. This includes geographic proximity and relationship, transport links, migration and commuting patterns and travel to work areas (further information is documented within the Housing Topic Paper (GC4i)). These same factors informed Shropshire Council’s consideration of and decision that it may be appropriate to include a contribution to the unmet employment land needs forecast to arise within the Black Country and discussions with the Black Country Authorities regarding the extent of any proposed contribution.

This option is consistent with the proposed contribution to the unmet employment land needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041).

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
Page 186 1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	The adopted Development Plan for Shropshire which forms the baseline, does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. As such, this option will result in more employment land being developed to meet the unmet employment land needs forecast to arise in the Black Country. It is therefore considered that it could have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher level of growth in this option compared with the baseline means that the potential for larger amounts of greenfield land to be released increases (although the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process). Furthermore, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. This option would likely have a higher potential for a negative impact on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire than the option which aligns with the baseline (although again, the extent of any impact is considered to be dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process).

As such, this option will result in more employment land being developed to meet the unmet employment land needs forecast to arise in the Black Country.</p> <p>All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As such, it is considered that this option could have a higher potential to change existing landscape character and local distinctiveness. However, this level of growth in the context of the total growth to meet Shropshire needs and aspirations is relatively small, and as such may not result in a significant impact overall. Furthermore, the extent of any impact is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p> <p>This option would likely have a higher potential to harm existing landscape character and local distinctiveness than the option which aligns with the baseline. However, again the extent of any impact is considered to be dependent on the impact of any such contribution on the total level of development proposed in Shropshire, which is assessed separately within the SA process.</p>

## **Summary of Option 2: 30ha Employment Land Contribution**

- 7.15. The adopted Development Plan for Shropshire does not include a proposed contribution to unmet employment land needs forecast to arise in the Black Country. This option would therefore represent an increase to the amount of land for employment development proposed to meet unmet employment land needs forecast to arise in the Black Country. It also represents the highest of the reasonable options for contributions to the unmet employment land needs forecast to arise in the Black Country.
- 7.16. It is considered that this option positively responds to a range of factors regarding the relationship between Shropshire Council's administrative area and the Black Country Authorities administrative areas. This includes geographic proximity and relationship, transport links, migration and commuting patterns, and travel to work areas (further information is documented within the Employment Topic Paper (GC4n)). These same factors informed Shropshire Council's consideration of and decision that it may be appropriate to include a contribution to the unmet employment land needs forecast to arise within the Black Country and discussions with the Black Country Authorities regarding the extent of any proposed contribution.
- 7.17. This option is consistent with the proposed contribution to the unmet employment land needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041). It would result in a contribution to the unmet employment land need forecast to arise in the Black Country that is consistent with that currently proposed within the draft Shropshire Local Plan.
- 7.18. It is considered that this option has the potential to result in a significant positive for the encouragement of a strong and sustainable economy throughout Shropshire. This is because such an option would provide further labour force (through changes to commuting patterns) and demand for employment provision which could support sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force. It is also likely to result in a significantly positive effect on the employment land needs of the Black Country Authorities, given that it would result in a significant contribution to the unmet employment land needs that are forecast to arise.
- 7.19. This option also has the potential to result in a positive impact on a number of other sustainability objectives. This includes encouraging use of sustainable means of transport; supporting active and healthy communities; and promoting adaptation and mitigation of climate change. However, the extent of any such impact is less clear and is also dependent on one of both of the following factors - the impact of any such contribution on the total level of development proposed in Shropshire and the specific location of site allocations, which are assessed separately within the SA process.

- 7.20. This option is unlikely to have any effect on the sustainability objective relating to a sufficient amount of good quality housing which meets the needs of all sections of society, given that it would not directly impact on this issue. The location of development, rather than the amount, is likely to have the most influence on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process. Furthermore, the extent of any impact is also dependent on the impact of the contribution on the total level of development proposed in Shropshire, which is also assessed separately within the SA process.
- 7.21. This option has the potential to result in a negative impact on a number of sustainability objectives. This includes the protection and enhancement of the range of plants and animals in Shropshire; promotion of access to services for all sections of society; the need to travel by car; protecting and improving soil quality; conserving and enhancing water quality; flood risk and flood management; efficient use of natural resources; reducing carbon dioxide emissions; and conservation and enhancement of heritage value and landscape character/distinctiveness. However, the extent of any such impact is less clear and is also dependent on one of both of the following factors - the impact of any such contribution on the total level of development proposed in Shropshire and the specific location of site allocations, which are assessed separately within the SA process.

**Comparison Summary of Reasonable Options for Any Contribution to the Unmet Employment Land Needs Forecast to Arise in the Black Country**

- 7.22. The overall purpose of this component of the updated additional SA assessment work is to help inform judgements about which of the reasonable alternatives for any contribution to the unmet employment land needs forecast to arise in the Black Country is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 7.1 and 7.2 above.
- 7.23. To assist with the comparison of the results of the updated additional SA assessment of the reasonable alternatives for any contribution to the unmet employment land needs forecast to arise in the Black Country, Table 7.3 has been prepared for illustrative purposes only.
- 7.24. This summarises, in comparative terms, how the two reasonable alternatives perform against each of the SA objectives. This is achieved by ‘ranking’ the performance of each of the reasonable options from best performing (1) to poorest performing (2) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 7.25. It is not however appropriate to ‘total-up’ the scores, because performance against each of the SA objectives requires consideration in and of itself and ‘totalling-up’ scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a ‘totalling-up’ of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

**Table 7.3: Comparison of Reasonable Options for Any Contribution to the Unmet Employment Land Needs Forecast to Arise in the Black Country**

Sustainability Objective	Option 1: No Contribution	Option 2: 30ha Employment Land Contribution
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2
2: Encourage a strong and sustainable economy throughout Shropshire	2	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0
4: Promote access to services for all sections of society	1	2
5: Encourage the use of sustainable means of transport	2	1
6: Reduce the need of people to travel by car	1	2
7: Support active and healthy communities.	2	1
8: Protect and improve soil quality	1	2

Sustainability Objective	Option 1: No Contribution	Option 2: 30ha Employment Land Contribution
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	2
10: Reduce flood risk and improve flood management	1	2
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	?	?
12: Reduce carbon dioxide emissions	1	2
13: Promote adaptation and mitigation to climate change	2	1
14: Promote efficient use of natural resources	1	2
15: Conserve and enhance features and areas of heritage value and their setting	1	2
16: Conserve and enhance landscape character and local distinctiveness	1	2

## **Conclusion**

7.26. Tables 7.1 and 7.2 summarise the updated additional SA assessment work for each of the reasonable options for any contribution to the unmet employment land needs forecast to arise in the Black Country. Table 7.3 then summarises, in comparative terms, how the two reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.

7.27. In summary:

- a. Option 1: No Contribution would result in none of the unmet employment land needs forecast to arise within the Black Country being accommodated within Shropshire, through the Shropshire Local Plan.
- b. Option 2: 30ha Employment Land Contribution would result in 30ha of the unmet employment land needs forecast to arise within the Black Country being accommodated within Shropshire, through the Shropshire Local Plan. It positively responds to a range of factors regarding the relationship between Shropshire Council’s administrative area and the Black Country Authorities administrative area and is consistent with the proposed contribution to the unmet housing needs forecast to arise within the Black Country, agreed within a statement of common ground between Shropshire Council and the Black Country Authorities (EV041).

7.28. Option 1: No Contribution represents a lower level of employment land contribution towards the unmet employment land needs forecast to arise in the Black Country than currently proposed within the draft Shropshire Local Plan. Option 2: 30ha Employment Land Contribution represents an employment land contribution towards the unmet employment land needs forecast to arise in the Black Country that is consistent with that currently proposed within the draft Shropshire Local Plan.

7.29. It is apparent from the results of the updated additional SA assessment work that neither of the reasonable options for any contribution to the unmet employment land needs forecast to arise in the Black Country are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct,

permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for either of these reasonable options.

- 7.30. Conversely, Option 2: 30ha Employment Land Contribution, is likely to result in a strongly positive effect on *SA objective 2: encourage a strong and sustainable economy throughout Shropshire*, in the short, medium and long term. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 7.31. This is perhaps unsurprising as the achievement of *SA objective 2: encourage a strong and sustainable economy throughout Shropshire*, is directly related to employment land provision, and Option 2: 30ha Employment Land Contribution would result in a significant amount of employment land being made available for development as a contribution to the unmet employment lands needs forecast to arise in the Black Country.
- 7.32. Furthermore, Option 2: 30ha Employment Land Contribution would provide further labour force (through changes to commuting patterns) and demand for employment provision, which could support sustainable development opportunities, economic growth aspirations (including through the creation of more jobs), and diversification of labour force. It is also likely to result in a significantly positive effect on the employment land needs of the Black Country Authorities, given that it would result in a significant contribution to the unmet employment land needs that are forecast to arise.
- 7.33. It is important to note that in the case of Option 2: 1,500 Dwelling Contribution, there are a number of SA objectives that are linked to the impact of any such contribution on:
- a. The total level of development proposed in Shropshire, which is assessed separately within the SA process.
  - b. The strategic distribution and specific location of site allocations, which are also assessed separately within the SA process.
- 7.34. Furthermore, in some instances the extent of any potential impact should be considered in the context of the total level of growth associated with this option as a proportion of the total growth to meet Shropshire needs and aspirations.
- 7.35. In general terms, the updated additional SA assessment work can be summarised as concluding that Option 1: No Contribution, will have a neutral impact across all sustainability objectives, whilst Option 2: 30ha Employment Land Contribution, generally has a greater potential than Option 1: No Contribution, for positive impacts on social and economic factors, and a greater likelihood of negative impacts on environmental factors.

- 7.36. **It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.**
- 7.37. On balance, it is considered that Option 2: 30ha Employment Land Contribution is the most sustainable of the two options identified. This is because:
- a. It presents an opportunity to achieve a strongly positive effect on SA objective 2: encouragement of a strong and sustainable economy throughout Shropshire.
  - b. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - c. Whilst it also poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through careful consideration of the interplay between this contribution and the total level of development proposed in Shropshire and the strategic distribution/location of site allocations.
  - d. It is considered that this option achieves the most appropriate ‘balance’ across all three pillars of sustainability – social, economic, and environmental.
  - e. This option would result in an appropriate contribution to the unmet employment land forecast to arise in the Black Country (consistent with the contribution agreed through the Duty to Cooperate Process and within a signed Statement of Common Ground between Shropshire Council and the Black Country Authorities), whereas Option 1: No Contribution would result in no contribution to the unmet employment land need forecast to arise in the Black Country and as such impact on the ability to meet employment land need beyond the Shropshire area.
- 7.38. This updated additional SA Assessment work is a very important consideration when undertaking the planning judgement regarding which reasonable option for a contribution to the unmet employment land needs forecast to arise in the Black Country should be identified within the draft Shropshire Local Plan. However, a range of other evidence/factors will also require due consideration when undertaking this planning judgement.
- 7.39. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 7.40. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 8. Summary of the SA Assessment: Reasonable Options for the Housing Requirement

### Introduction

8.1. This section of the document summarises the updated additional SA assessment of the reasonable options for the housing requirement. It responds to Inspectors Letters ID28, ID36 and ID37.

### The Baseline

- 8.2. The baseline for these reasonable options is the local housing need for Shropshire of 25,894 dwellings over the 22-year plan period from 2016-2038 (equating to an annual average of 1,177 dwellings), as **calculated using Government's Standard Methodology with a 2020 base date**. This calculation is summarised within the Local Housing Need Assessment 2020 (EV069).
- 8.3. The assessment of local housing need with a **2020 base date** has been utilised to establish the baseline within this updated additional SA Assessment, as it was this calculation that underpinned the housing requirement at the time of the Regulation 19 Consultation and when Shropshire Council made the decision to submit the draft Shropshire Local Plan for examination. Furthermore, within paragraph 5.7 of ID37, the Planning Inspectors specified that the updated additional SA assessment of housing growth options should be *"based on the 2020 baseline."*

### Identification of Reasonable Options for the Housing Requirement

- 8.4. Consistent with the methodology utilised to identify reasonable options for the housing requirement within the SA assessment already undertaken to inform the draft Shropshire Local Plan, within the updated additional SA assessment work, reasonable options were identified based on various reasonable percentage uplifts (around 5%, 10% and 15%) above the identified baseline.
- 8.5. These uplifts ensure that local housing need is achieved, whilst also providing some flexibility to respond to changes to local housing need over the plan period and opportunities to:
- a. Respond positively to specific sustainable development opportunities;
  - b. Increase the delivery of family and affordable housing to meet the needs of local communities and support new families coming into Shropshire;
  - c. Support the delivery of specialist housing for older people, people with disabilities and the needs of other groups within the community;
  - d. Support the diversification of our labour force; and
  - e. Support wider aspirations, including increased economic growth and productivity.
- 8.6. Furthermore, reflecting the outcomes of duty to cooperate discussions undertaken with the Black Country Authorities, each reasonable option is assessed with and without a further specific uplift of 1,500 dwellings to reflect the proposed contribution to the unmet housing need forecast to arise within the Black Country.

- 8.7. This approach positively responds to the Planning Inspectors guidance ID37 which included at paragraph 5.7 *“look at the growth options tested in the original SA, so a 5, 10 and 15% uplift and look at this with the Black Country unmet needs of 1,500 homes and without it.”*
- 8.8. As such, three reasonable options for the housing requirement (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) were identified and were assessed within this updated additional SA assessment work. These reasonable options are:
- a. **Housing Requirement Option 1a: Moderate Growth** - Consisting of around a 5% uplift on the identified 2020 baseline local housing need. This option would result in a housing requirement of 27,200 dwellings over the plan period (which equates to around 1,236 dwellings as an annual average).
  - b. **Housing Requirement Option 1b: Moderate Growth plus a Contribution to the Black Country Authorities Unmet Housing Needs** - Consisting of around a 5% uplift on the identified 2020 baseline local housing need, plus a further specific uplift of 1,500 dwellings as a contribution to the unmet housing need forecast to arise in the Black Country. This option would result in a housing requirement of 28,700 dwellings over the plan period (which equates to around 1,305 dwellings as an annual average).
  - c. **Housing Requirement Option 2a: Significant Growth** - Consisting of around a 10% uplift on the identified 2020 baseline local housing need. This option would result in a housing requirement of 28,500 dwellings over the plan period (which equates to around 1,296 dwellings as an annual average).
  - d. **Housing Requirement Option 2b: Significant Growth plus a Contribution to the Black Country Authorities Unmet Housing Needs** - Consisting of around a 10% uplift on the identified 2020 baseline local housing need, plus a further specific uplift of 1,500 dwellings as a contribution to the unmet housing need forecast to arise in the Black Country. This option would result in a housing requirement of 30,000 dwellings over the plan period (which equates to around 1,364 dwellings as an annual average).
  - e. **Housing Requirement Option 3a: High Growth** - Consisting of around a 15% uplift on the identified 2020 baseline local housing need. This option would result in a housing requirement of 29,800 dwellings over the plan period (which equates to around 1,355 dwellings as an annual average).
  - f. **Housing Requirement Option 3b: High Growth plus a Contribution to the Black Country Authorities Unmet Housing Needs** - Consisting of around a 15% uplift on the identified 2020 baseline local housing need, plus a further specific uplift of 1,500 dwellings as a contribution to the unmet housing need forecast to arise in the Black Country. This option would result in a housing requirement of 31,300 dwellings over the plan period (which equates to around 1,423 dwellings as an annual average).

## Assessment of Reasonable Options for the Housing Requirement

8.9. The following tables summarise the additional SA assessment of the identified reasonable Housing Requirement Options:

**Table 8.1: Housing Requirement Option 1a: Moderate Growth**

Housing Requirement Option 1a: Moderate Growth				
This option represents around a 5% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). This option represents a total minimum housing requirement of <b>27,200 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,236 dwellings as an annual average.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats.
2: Encourage a strong and sustainable economy throughout Shropshire	-	-	-	As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to reduce the ability compared to that which currently exists and have the lowest potential of the options considered to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also impact on the ability to appropriately balance housing and employment land development. This option would also likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	-	-	-	<p>Whilst this option is sufficient to meet local housing need, it would represent a much decreased rate of development compared with the annual average housing requirement within the adopted Development Plan and recent and longer-term completion rates achieved.</p> <p>This option also represents the lowest level of housing growth considered. As such, it is likely that this option will reduce the ability compared to that which currently exists and have the lowest potential of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a geographic implication, with the more limited amounts of new housing development being focused within locations / settlements that are seen as ‘more viable’ or ‘attractive to the market’.</p> <p>This option would provide no contribution to unmet housing need forecast to arise in the Black Country, as such it would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.</p>
4: Promote access to services for all sections of society	-	-	-	<p>As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to reduce the ability to provide new services and facilities compared to that currently available and have the lowest potential of the options considered.</p> <p>Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability it is likely to impact on the longer term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	-	-	-	<p>As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to reduce / have the lowest potential to maintain or improve existing access to public transport. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is much lower than that within the adopted Development Plan, it is likely to result in less housing development compared to current policy requirements and it is also the lowest of the reasonable options identified. This may have a positive effect on car use.
7: Support active and healthy communities.	0	-	-	Since many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option), overall activity levels may remain similar to the current situation. However, as the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and cultural facilities and activities, and support the provision of new health, leisure and cultural facilities and activities will likely be reduced / the lowest in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	+	+	+	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to have a positive impact on this Sustainability Objective, as there are less houses proposed and therefore less likelihood that housing would be located in more flood-prone areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	?	?	?	Fewer opportunities for the use of renewable energy may be balanced by reduced energy consumption arising from a lower level of housing as the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered.
13: Promote adaptation and mitigation to climate change	-/?	-/?	-/?	As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to require a reduced / lower amount of land for development and as such reduce / have a lower potential for greenfield development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such a reduced / lower level of development will reduce the amount of biodiversity net gain achieved. Furthermore, the potential for new large scale habitats gained through residential development is also likely to be lower in this option than the others and compared with the housing requirement within the adopted Development Plan, thus reducing the contribution this can make to adapting and mitigating climate change.
14: Promote efficient use of natural resources	+	+	+	As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to provide an increased / greatest opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely use a reduced / the lowest amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	+/?	+/?	+/?	As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it has a reduced / the lowest potential to harm existing heritage assets and their settings. Although it would also likely have a reduced / lowest potential to offset impact by contributing to restoration, enhancement and long-term management of heritage assets.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is much lower than that within the adopted Development Plan and this option represents the lowest level of growth considered, it is likely to cause a reduced / the least change to existing landscape character and local distinctiveness.

### **Summary of Housing Requirement Option 1a: Moderate Growth**

- 8.10. The amount of growth proposed within this option is sufficient to meet local housing need. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents the lowest level of growth considered. This option does not include a contribution towards unmet housing need forecast to arise in the Black Country.
- 8.11. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being exceeded.
  - The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed through a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - The anticipated capacity and/or rates of delivery across other sources of supply is reduced – including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.

d. One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.

e. A combination of the above.

8.12. Furthermore, the draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country, this option would remove any proposed contribution to the unmet housing needs forecast to arise in the Black Country.

8.13. It is likely that this level of growth would have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire. It is also likely that it would reduce the need to travel by car, be more capable of being accommodated in areas of low flood risk, promote the efficient use of natural resources (by reducing the level of need) and conserve and enhance landscape character and local distinctiveness. It is also likely that this option would result in a lower potential for harm to heritage assets and their settings although this may be somewhat offset by reduced opportunities to contribute to their restoration, enhancement and long-term management of these assets and the historic environment.

8.14. It is considered that there is insufficient information to reach a confident conclusion regarding whether this option would result in a small positive, small negative or little or no net effect on carbon dioxide emissions and the promotion of adaptation and mitigation to climate change, as more or less growth can positively or negatively contribute to these factors dependent on how and where development is undertaken. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

8.15. Furthermore, it is considered that it is more the location rather than the amount of development that is likely to have the most significant influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality, and on reducing the risk of water and air pollution. Again, the strategic distribution of development and specific site allocations are assessed separately within the SA process.

8.16. As the average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents the lowest levels of growth considered, it is likely that this level of growth would have a negative effect on Shropshire's ability to positively respond to sustainable economic development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Furthermore, whilst this option is sufficient to meet local need, it will likely have a negative effect on the ability to provide the right housing to meet the needs of all groups within our communities.

- 8.17. As this option would provide no contribution to unmet housing need forecast to arise in the Black Country, it would likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country - although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire. Furthermore, this option would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country – although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire).
- 8.18. In addition, since new services and facilities are generally delivered through new development and all services and facilities require a ‘critical population mass’ to ensure their long term ‘viability’ and ‘sustainability’, there may be a negative impact on the provision and access to some services and facilities for some communities. This option may also negatively impact on the ability to improve access to public transport.
- 8.19. Although overall physical activity levels may not change, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and community facilities and activities, and to support the provision of new health, leisure and cultural facilities and activities will likely be reduced in the medium to long term.

**Table 8.2: Housing Requirement Option 1b: Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

Housing Requirement Option 1b: Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs				
<p>This option represents around a 5% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further specific uplift of 1,500 dwellings as a contribution toward unmet housing need forecast to arise in the Black Country.</p> <p>This option represents a total minimum housing requirement of <b>28,700 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,305 dwellings as an annual average.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats.
2: Encourage a strong and sustainable economy throughout Shropshire	-	-	-	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to reduce the ability compared to that which currently exists and have one of the lower potentials of the options considered to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also impact on the ability to appropriately balance housing and employment land development. However, this option would likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	-	-	-	<p>Whilst this option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country, it would represent a decreased rate of development compared with the annual average housing requirement within the adopted Development Plan and recent and longer-term completion rates achieved. This option also represents one of the lower levels of housing growth considered.</p> <p>As such, it is likely that this option will reduce the ability compared to that which currently exists and have one of the lower potentials of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a geographic implication, with the more limited amounts of new housing development being focused within locations / settlements that are seen as ‘more viable’ or ‘attractive to the market’.</p> <p>However, as this option would provide a contribution to unmet housing need forecast to arise in the Black Country, it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.</p>
4: Promote access to services for all sections of society	-	-	-	<p>As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to reduce the ability to provide new services and facilities compared to that currently available and have one of the lower potentials of the options considered. Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability it is likely to impact on the longer term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	-	-	-	<p>As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to reduce / have lower potential to maintain or improve existing access to public transport. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan, it is likely to result in less housing development compared to current policy requirements and it is also one of the lower of the reasonable options identified. This may have a positive effect on car use.
7: Support active and healthy communities.	0	0/-	0/-	Since many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option), overall activity levels may remain similar to the current situation. However, as the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and cultural facilities and activities, and support the provision of new health, leisure and cultural facilities and activities may be reduced / lower in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	+	+	+	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to have a positive impact on this Sustainability Objective, as there are less houses proposed and therefore less likelihood that housing would be located in more flood-prone areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	?	?	?	Fewer opportunities for the use of renewable energy may be balanced by reduced energy consumption arising from a lower level of housing as the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered.
13: Promote adaptation and mitigation to climate change	-/?	-/?	-/?	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to require a reduced / lower amount of land for development and as such reduce / have a lower potential for greenfield development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such a reduced / lower level of development will reduce the amount of biodiversity net gain achieved. Furthermore, the potential for new large scale habitats gained through residential development is also likely to be lower in this option than the annual average housing requirement within the adopted Development Plan and options with a higher annual average housing requirement, thus reducing the contribution this can make to adapting and mitigating climate change.
14: Promote efficient use of natural resources	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to provide an increased / greater opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely use a reduced / lower amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	+/?	+/?	+/?	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it has a reduced / lower potential to harm existing heritage assets and their settings. However, this may be somewhat offset by reduced / lower opportunities to contribute to their restoration, enhancement and long-term management.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to cause a reduced / a lower change to existing landscape character and local distinctiveness.

**Summary of Housing Requirement Option 1b: Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

- 8.20. The amount of growth proposed within this option is sufficient to meet local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered.
- 8.21. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being exceeded.
  - The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed through a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - The anticipated capacity and/or rates of delivery across other sources of supply is reduced – including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.

- d. One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.
  - e. A combination of the above.
- 8.22. The draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country. This option would continue this proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.23. It is likely that this level of growth would have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire. It is also likely that it would reduce the need to travel by car, be more capable of being accommodated in areas of low flood risk, promote the efficient use of natural resources (by reducing the level of need) and conserve and enhance landscape character and local distinctiveness. It is also likely that this option would result in a lower potential for harm to heritage assets and their settings although this may be somewhat offset by reduced opportunities to contribute to their restoration, enhancement and long-term management of these assets and the historic environment.
- 8.24. It is considered that there is insufficient information to reach a confident conclusion regarding whether this option would result in a small positive, small negative or little or no net effect on carbon dioxide emissions and the promotion of adaptation and mitigation to climate change, as more or less growth can positively or negatively contribute to these factors dependent on how and where development is undertaken. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 8.25. Furthermore, it is considered that it is more the location rather than the amount of development that is likely to have the most significant influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality, and on reducing the risk of water and air pollution. Again, the strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 8.26. It is likely that this level of growth would have a negative effect on Shropshire's ability to positively respond to sustainable economic development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Furthermore, whilst this option is sufficient to meet local need, it will likely have a negative effect on the ability to provide the right housing to meet the needs of all groups within our communities.
- 8.27. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, as such it is likely that this level of growth would have a negative effect on Shropshire's ability to positively respond to sustainable economic development opportunities, support the achievement of economic

growth aspirations including through the creation of more jobs, and support the diversification of our labour force. However, this option would likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.

- 8.28. Furthermore, whilst this option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country, it will likely have a negative effect on the ability to provide the right housing to meet the needs of all groups within our communities. However, this option would provide a contribution to unmet housing need forecast to arise in the Black Country, as such it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.29. In addition, since new services and facilities are generally delivered through new development and all services and facilities require a 'critical population mass' to ensure their long term 'viability' and 'sustainability', there may be a negative impact on the provision and access to some services and facilities for some communities. This option may also negatively impact on the ability to improve access to public transport.
- 8.30. Although overall physical activity levels may not change, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and community facilities and activities, and to support the provision of new health, leisure and cultural facilities and activities may be reduced in the medium to long term.

**Table 8.3: Housing Requirement Option 2a: Significant Growth**

Housing Requirement Option 2a: Significant Growth				
This option represents around a 10% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). This option represents a total minimum housing requirement of <b>28,500 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,296 dwellings as an annual average.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats.
2: Encourage a strong and sustainable economy throughout Shropshire	-	-	-	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered it is likely to reduce the ability compared to that which currently exists and have one of the lower potentials of the options considered to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also impact on the ability to appropriately balance housing and employment land development. This option would also likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	-	-	-	<p>Whilst this option is sufficient to meet local need, it would represent a decreased rate of development compared with the annual average housing requirement within the adopted Development Plan and recent and longer-term completion rates achieved. 4: Promote access to services for all sections of society	-	-	-	<p>As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to reduce the ability to provide new services and facilities compared to that currently available and have one of the lower potentials of the options considered. Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability it is likely to impact on the longer term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>
5: Encourage the use of sustainable means of transport	-	-	-	<p>As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to reduce / have lower potential to maintain or improve existing access to public transport. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan, it is likely to result in less housing development compared to current policy requirements and it is also one of the lower of the reasonable options identified. This may have a positive effect on car use.
7: Support active and healthy communities.	0	0/-	0/-	Since many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be positively affected by this option), overall activity levels may remain similar to the current situation. However, as the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and cultural facilities and activities, and support the provision of new health, leisure and cultural facilities and activities may be reduced / lower in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	+	+	+	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to have a positive impact on this Sustainability Objective, as there are less houses proposed and therefore less likelihood that housing would be located in more flood-prone areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	?	?	?	Fewer opportunities for the use of renewable energy may be balanced by reduced energy consumption arising from a lower level of housing as the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered.
13: Promote adaptation and mitigation to climate change	-/?	-/?	-/?	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to require a reduced / lower amount of land for development and as such reduce / have a lower potential for greenfield development. However, conversely new development is expected to achieve a minimum of 10% biodiversity net gain, as such a reduced / lower level of development will reduce the amount of biodiversity net gain achieved. Furthermore, the potential for new large scale habitats gained through residential development is also likely to be lower in this option than the annual average housing requirement within the adopted Development Plan and options with a higher annual average housing requirement, thus reducing the contribution this can make to adapting and mitigating climate change.
14: Promote efficient use of natural resources	+	+	+	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to provide an increased / greater opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely use a reduced / lower amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	+/?	+/?	+/?	As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it has a reduced / lower potential to harm existing heritage assets and their settings. However, this may be somewhat offset by reduced / lower opportunities to contribute to their restoration, enhancement and long-term management.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, it is likely to cause a reduced / a lower change to existing landscape character and local distinctiveness.

### **Summary of Housing Requirement Option 2a: Significant Growth**

- 8.31. The amount of growth proposed within this option is sufficient to meet local housing need. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered. This option does not include a contribution towards unmet housing need forecast to arise in the Black Country.
- 8.32. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being considerably exceeded.
  - The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed through a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - The anticipated capacity and/or rates of delivery across other sources of supply is reduced – including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.

e. A combination of the above.

- 8.33. Furthermore, the draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country, this option would remove any proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.34. It is likely that this level of growth would have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire. It is also likely that it would reduce the need to travel by car, be more capable of being accommodated in areas of low flood risk, promote the efficient use of natural resources (by reducing the level of need) and conserve and enhance landscape character and local distinctiveness. It is also likely that this option would result in a lower potential for harm to heritage assets and their settings although this may be somewhat offset by reduced opportunities to contribute to their restoration, enhancement and long-term management of these assets and the historic environment.
- 8.35. It is considered there is insufficient information to reach a confident conclusion regarding whether this option would result in a small positive, small negative or little or no net effect on carbon dioxide emissions and the promotion of adaptation and mitigation to climate change, as more or less growth can positively or negatively contribute to these factors dependent on how and where development is undertaken. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 8.36. Furthermore, it is considered that it is more the location rather than the amount of development that is likely to have the most significant influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality, and on reducing the risk of water and air pollution. Again, the strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 8.37. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered, as such it is likely that this level of growth would have a negative effect on Shropshire's ability to positively respond to sustainable economic development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Furthermore, whilst this option is sufficient to meet local need, it will likely have a negative effect on the ability to provide the right housing to meet the needs of all groups within our communities.
- 8.38. As this option would provide no contribution to unmet housing need forecast to arise in the Black Country, it would likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country - although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire. Furthermore,

this option would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country – although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire).

- 8.39. In addition, since new services and facilities are generally delivered through new development and all services and facilities require a ‘critical population mass’ to ensure their long term ‘viability’ and ‘sustainability’, there may be a negative impact on the provision and access to some services and facilities for some communities. This option may also negatively impact on the ability to improve access to public transport.
- 8.40. Although overall physical activity levels may not change, opportunities to focus development in locations with good access to and the ability to support the sustainability of existing health, leisure and community facilities and activities, and to support the provision of new health, leisure and cultural facilities and activities may be reduced in the medium to long term.

**Table 8.4: Housing Requirement Option 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

**Housing Requirement Option 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

This option represents around a 10% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further specific uplift of 1,500 dwellings as a contribution toward forecast unmet housing need in the Black Country.

This option represents a total minimum housing requirement of **30,000 dwellings** over the 22-year plan period from 2016-2038, which equates to around 1,364 dwellings as an annual average.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, present trends in the range of plants and animals and the quality and extent of wildlife habitats in Shropshire are unlikely to change.
2: Encourage a strong and sustainable economy throughout Shropshire	0/+	0/+	0/+	As the annual average housing requirement is very similar to that within the adopted Development Plan, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. However, this option would likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0/+	0/+	0/+	<p>This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country.</p> <p>As the annual average housing requirement is very similar to that within the adopted Development Plan, there is unlikely to be a significant change from the existing baseline situation with regard to the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>However, as this option would provide a contribution to unmet housing need forecast to arise in the Black Country, it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.</p>
4: Promote access to services for all sections of society	0	0	?/-	<p>As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to maintain the existing situation in respect of the ability to provide new services and facilities.</p> <p>However, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability, there may be a decline in the ability for some communities to access key services and facilities such as schools, post offices and play areas in the longer-term.</p>
5: Encourage the use of sustainable means of transport	0	0	0	<p>As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to maintain the existing situation with respect to the use and access to public transport and the prevalence of walking or cycling to work. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>
6: Reduce the need of people to travel by car	+	+	+	<p>As the annual average housing requirement is very similar to that within the adopted Development Plan, it is considered likely that the numbers of houses envisaged in this option can be accommodated in accessible locations. As the location of development is the main driver for use of private vehicles, continued levels of development in sustainable locations would mean that residential development would be closer to necessary locations (i.e., areas of employment) and thus there would be less dependency county-wide on private vehicles when compared to Options that would propose development in less sustainable, more isolated locations.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	-/0	As the annual average housing requirement is very similar to that within the adopted Development Plan it is likely to maintain the existing situation in respect of the ability to provide new leisure and cultural activities. Furthermore, as many recreational activities are based on the natural environment (which is likely to be less affected by this option than those involving higher levels of growth), overall activity levels may remain similar to the current situation. However, given that many formal leisure and cultural activities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	0	0	0	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. However, as the annual average housing requirement is very similar to that within the adopted Development Plan, the baseline situation is unlikely to significantly change with regard to flood risk and opportunities to improve flood management.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, the current baseline with respect to carbon dioxide emissions is likely to remain the same.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, opportunities to adapt and mitigate climate change are likely to remain similar to the present. Likewise, the potential for new large-scale habitats gained through residential development is also likely to be a comparable to current trends.
14: Promote efficient use of natural resources	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to provide a continuation of the current levels of opportunities to focus development on previously developed land and / or to re-use existing buildings. It will also likely result in the use of a comparable amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely that the current situation with respect to the conservation and enhancement of the historic environment is likely to continue.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is very similar to that within the adopted Development Plan, this option is unlikely to change current trends in relation to conservation and enhancement of existing landscape character and local distinctiveness.

### **Summary of Housing Requirement Option 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

- 8.41. The amount of growth proposed within this option is sufficient to meet local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered.
- 8.42. This level of growth is however lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being considerably exceeded.

- b. The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - c. The anticipated capacity and/or rates of delivery across other sources of supply is reduced– including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - d. One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.
  - e. A combination of the above.
- 8.43. The draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country. This option would continue this proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.44. It is likely that the growth within this option could be accommodated in accessible locations, thus reducing the need of people to travel by car when compared to the baseline and other options being considered within this SA.
- 8.45. As the level of growth within this option is as an annual average very similar to that within the adopted Development Plan, it is likely that the current situation will be maintained for the following sustainability objectives: protecting and enhancing the range of plants and animals and the quality and extent of wildlife habitats in Shropshire; encouraging a strong and sustainable economy; providing a sufficient amount of good quality housing; encouraging the use of sustainable means of transport; reducing flood risk and improving flood management; reducing carbon dioxide emissions; adapting to and mitigating climate change; promoting the efficient use of natural resources; conserving and enhancing heritage features and their settings, and conserving and enhancing landscape character and local distinctiveness.
- 8.46. However, this option would likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs

forecast to arise in the Black Country. This option would also provide a contribution to unmet housing need forecast to arise in the Black Country, as such it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.

- 8.47. Whilst physical activity levels may not change over the plan period, the provision of some leisure and cultural facilities may decline in the longer term, as many formal leisure and cultural activities require a 'critical population mass' to maintain viability and sustainability. Similarly, as services and facilities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
- 8.48. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

**Table 8.5: Housing Requirement Option 3a: High Growth**

Housing Requirement Option 3a: High Growth				
This option represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings). The total minimum housing requirement would equate to <b>29,800 dwellings</b> over the 22-year plan period from 2016-2038, which equates to around 1,355 dwellings as an annual average.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, present trends in the range of plants and animals and the quality and extent of wildlife habitats in Shropshire are unlikely to change.
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This option would also likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This option is sufficient to meet local need. As the annual average housing requirement is very similar to that within the adopted Development Plan, there is unlikely to be a significant change from the existing baseline situation with regard to the ability to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. This option would provide no contribution to unmet housing need forecast to arise in the Black Country, as such it would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society	0	0	?/-	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to maintain the existing situation in respect of the ability to provide new services and facilities. However, given that many services and facilities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access key services and facilities such as schools, post offices and play areas in the longer-term.
5: Encourage the use of sustainable means of transport	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to maintain the existing situation with respect to the use and access to public transport and the prevalence of walking or cycling to work. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
6: Reduce the need of people to travel by car	+	+	+	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is considered likely that the numbers of houses envisaged in this option can be accommodated in accessible locations. As the location of development is the main driver for use of private vehicles, continued levels of development in sustainable locations would mean that residential development would be closer to necessary locations (i.e., areas of employment) and thus there would be less dependency county-wide on private vehicles when compared to Options that would propose development in less sustainable, more isolated locations.
7: Support active and healthy communities.	0	0	-/0	As the annual average housing requirement is very similar to that within the adopted Development Plan it is likely to maintain the existing situation in respect of the ability to provide new leisure and cultural activities. Furthermore, as many recreational activities are based on the natural environment (which is likely to be less affected by this option than those involving higher levels of growth), overall activity levels may remain similar to the current situation. However, given that many formal leisure and cultural activities require a 'critical population mass' to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	0	0	0	Lower levels of development are more likely to be able to be accommodated in areas of low flood risk. However, as the annual average housing requirement is very similar to that within the adopted Development Plan, the baseline situation is unlikely to significantly change with regard to flood risk and opportunities to improve flood management.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g. development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, the current baseline with respect to carbon dioxide emissions is likely to remain the same.
13: Promote adaptation and mitigation to climate change	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, opportunities to adapt and mitigate climate change are likely to remain similar to the present. Likewise, the potential for new large-scale habitats gained through residential development is also likely to be a comparable to current trends.
14: Promote efficient use of natural resources	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely to provide a continuation of the current levels of opportunities to focus development on previously developed land and / or to re-use existing buildings. It will also likely result in the use of a comparable amount of primary aggregates.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	As the annual average housing requirement is very similar to that within the adopted Development Plan, it is likely that the current situation with respect to the conservation and enhancement of the historic environment is likely to continue.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the annual average housing requirement is very similar to that within the adopted Development Plan, this option is unlikely to change current trends in relation to conservation and enhancement of existing landscape character and local distinctiveness.

### **Summary for Housing Requirement Option 3a: High Growth**

- 8.49. The amount of growth proposed within this option is sufficient to meet local housing need. The average annual housing requirement within this option is lower than that within the adopted Development Plan and this option represents one of the lower levels of growth considered. This option does not include a contribution towards unmet housing need forecast to arise in the Black Country.
- 8.50. This level of growth is however lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- The housing land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed housing requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the housing requirement being significantly exceeded.
  - The anticipated capacity and/or rates of delivery across proposed site allocations is reduced. However, Shropshire Council generally takes a cautious approach to approximate site capacities and they have been informed a proportionate and robust site assessment process. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - The anticipated capacity and/or rates of delivery across other sources of supply is reduced– including windfall allowances. However, Shropshire Council generally takes a cautious approach to assumptions regarding the capacity and delivery rates/timescales for sources of housing land supply and for windfall allowances. As such, there is the potential that this approach would result in the housing requirement being significantly exceeded. This exercise would therefore need to be undertaken on a site by site basis.
  - One or more of the proposed site allocations could be de-selected. Whilst this could present an opportunity to de-select one or more of the poorer performing site allocations, this would very much be dependent upon the strategic approach to the distribution of development and it is important to ensure that housing needs across Shropshire are achieved.
  - A combination of the above.

- 8.51. Furthermore, the draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country, this option would remove any proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.52. It is likely that the growth within this option could be accommodated in accessible locations, thus reducing the need of people to travel by car when compared to the baseline and other options being considered within this SA.
- 8.53. As the level of growth within this option is as an annual average very similar to that within the adopted Development Plan, it is likely that the current situation will be maintained for the following sustainability objectives: protecting and enhancing the range of plants and animals and the quality and extent of wildlife habitats in Shropshire; encouraging a strong and sustainable economy; providing a sufficient amount of good quality housing; encouraging the use of sustainable means of transport; reducing flood risk and improving flood management; reducing carbon dioxide emissions; adapting to and mitigating climate change; promoting the efficient use of natural resources; conserving and enhancing heritage features and their settings, and conserving and enhancing landscape character and local distinctiveness.
- 8.54. As this option would provide no contribution to unmet housing need forecast to arise in the Black Country, it would likely have a lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than an option that includes a proposed contribution to the unmet housing needs forecast to arise in the Black Country - although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire. Furthermore, this option would likely have a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs than an option that included a proposed contribution to the unmet housing needs forecast to arise in the Black Country – although the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire).
- 8.55. Whilst physical activity levels may not change over the plan period, the provision of some leisure and cultural facilities may decline in the longer term, as many formal leisure and cultural activities require a ‘critical population mass’ to maintain viability and sustainability. Similarly, as services and facilities require a ‘critical population mass’ to maintain viability and sustainability, there may be a decline in the ability for some communities to access such facilities in the longer-term.
- 8.56. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

**Table 8.6: Housing Requirement Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

**Housing Requirement Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs**

This option represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a further specific uplift of 1,500 dwellings as a contribution toward forecast unmet housing need in the Black Country.

This option represents a total minimum housing requirement of **31,300 dwellings** over the 22-year plan period from 2016-2038, which equates to around 1,423 dwellings as an annual average.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to have a negative effect in the short term on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats, as the higher levels of growth in this option mean that larger amounts of greenfield land will likely need to be released. For the same reason, it is also likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in the medium and long term. However, this level of growth allows for more larger sites to come forward, and a master-planning approach on these sites may offer opportunities for biodiversity gains in the medium to long term. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to increase the ability compared to that which currently exists and have the highest potential of the options considered to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. This option would also likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option is sufficient to meet local need and provide an appropriate contribution to unmet housing need forecast to arise in the Black Country.</p> <p>The average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered. It represents an increased rate of development compared with the long-term completion rates achieved in Shropshire, but is a lower rate of development compared with short-term completion rates achieved in Shropshire.</p> <p>As such, it is likely that this option will increase the ability compared to that which currently exists and have the highest potential of the options considered to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families.</p> <p>It could also have a positive geographic implication, allowing for the more balanced distribution of development across locations / settlements that are seen as more and less ‘viable’ or ‘attractive to the market’.</p> <p>As this option would provide a contribution to unmet housing need forecast to arise in the Black Country, it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.</p>
4: Promote access to services for all sections of society	+	+	+ / ++	<p>As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to increase the ability compared to the baseline / have the highest potential of the options considered, to provide new services and facilities.</p> <p>Furthermore, given that many services and facilities require a ‘critical population mass’ to maintain viability and sustainability, it is likely to positively impact on the longer-term viability of some services and facilities and as such on the ability for some communities to access key services and facilities such as schools, post offices and play areas.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to increase the ability to facilitate the provision of new forms of sustainable transport. The scale of development in this option may require new transport infrastructure. If this development is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
6: Reduce the need of people to travel by car	-	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to result in more housing development compared to current policy requirements. This may have a negative effect on car usage - more houses would likely result in more cars. However, the scale of development may be large enough to support new or existing public transport solutions to counter this in the medium to longer term.
7: Support active and healthy communities.	0	+	+	Many recreational activities are associated with the natural environment (which as assessed within Sustainability Objective 1 may be negatively affected by this option), which could compromise the ability to support active and healthy communities. However, as the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it will likely increase / have the highest potential to focus development in locations with good access to health, leisure and cultural facilities and activities. The ability to support existing and provide new health, leisure and cultural facilities and activities will also likely increase, offsetting any negative impact and resulting in an enhancement in the medium to long term.
8: Protect and improve soil quality	?	?	?	Whilst the greater the level of development the greater the potential to impact on soil quality, it is the location of development that will have the most influence. A focus on the rural area is likely to affect best and most versatile agricultural land more than development in the urban areas. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	Whilst the greater the level of development the greater the potential to impact on water quality and water pollution (positively or negatively), since pollution from rural areas is the main issue affecting water quality in Shropshire, the location of allocated sites will determine the impact on water quality and the risk of pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it will likely require more land, including greenfield land, for development. This may increase the potential for development in areas of higher flood risk. However, larger scale growth creates more opportunities for flood management measures.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Whilst the greater the level of development the greater the potential to impact on air quality and pollution, the location of development is likely to have the greatest influence e.g., development within or close to an Air Quality Management Area is more likely to have a negative effect whereas development elsewhere is unlikely to change the current situation. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	?/+	?/+	?/+	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to require an increased / higher amount of land for development and as such increase / have the highest potential for greenfield development. As new development is expected to achieve a minimum of 10% biodiversity net gain, an increased / higher level of development will increase the amount of biodiversity net gain achieved. Furthermore, this level of growth allows for larger sites to come forward, therefore the potential for new large scale habitats gained through residential development is also likely to be increased / higher in this option than other options considered and compared with the annual average housing requirement within the adopted Development Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
14: Promote efficient use of natural resources	-	-	-	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents one the highest level of growth considered, it is likely to provide decreased / lower opportunity to focus development on previously developed land and / or to re-use existing buildings. It will also likely increase the amount of primary aggregates utilised.
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it has increased / the highest potential to harm existing heritage assets and their settings. However, this may be somewhat offset by increased opportunities to contribute to their restoration, enhancement and long-term management.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. As the average annual housing requirement is higher than that within the adopted Development Plan and this option represents the highest level of growth considered, it is likely to cause an increased / higher change to existing landscape character and local distinctiveness.

### Summary for Housing Requirement Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs

8.57. The amount of growth proposed within this option is sufficient to meet local housing need and provide an appropriate contribution (1,500 dwellings) towards unmet housing need forecast to arise in the Black Country. The average annual housing requirement within this option is higher than that within the adopted Development Plan and this option represents the highest level of growth considered.

8.58. This level of growth is also higher than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:

- a. **The buffer of the housing land supply is reduced.** The 'buffer' between the housing requirement as proposed upon the submission of the draft Shropshire Local Plan and the identified housing land supply is significant (exceeding 10%). It may be appropriate to reduce the extent of this buffer whilst maintaining robustness. However, it is important to ensure an appropriate 'buffer' between the housing requirement and housing land supply in order to maintain confidence regarding deliverability of the proposed housing requirement.
- b. **The density of proposed site allocations is increased.** Site capacities have been informed by a proportionate and robust site assessment process; however, Shropshire Council does generally take a cautious approach to approximate site capacities and there

are likely locations where there are potentially opportunities to increase site capacity and still achieve an appropriate form of development. This may be particularly relevant in circumstances where further assessment work/masterplanning has been undertaken regarding capacity by site promoters since submission of the draft Shropshire Local Plan and/or where a development is expected to include a form of housing which is of a higher density, such as smaller properties and specialist housing for older people - including in response to wider policies in the draft Shropshire Local Plan. This exercise would need to be undertaken on a site by site basis. Assumptions regarding delivery rates (and associated lead-in times) have been informed by best available information (including proactive discussions with relevant site promoters) and the application of professional judgement. This exercise would need to be undertaken on a site by site basis.

- c. **Settlement guidelines and windfall allowances in one or more settlements could be increased.** Whilst existing settlement guidelines and associated windfall allowances were considered reasonable when proposed and there is flexibility within the draft Shropshire Local Plan for settlement guidelines to be exceeded, where this is appropriate, there is evidence that in some instances settlement guidelines and associated windfall allowances have been overly cautious. As such, there are likely opportunities to increase settlement guidelines and associated windfall allowances to reflect changes to windfall commitments/understanding of likely windfall supply since the submission of the draft Shropshire Local Plan. As an example, Shrewsbury, had a settlement guideline which allowed a windfall allowance of 505 dwellings as at 31<sup>st</sup> March 2019. Current monitoring indicates that the settlement guideline will be exceeded as the proposed windfall allowance has already been exceeded. This exercise would need to be undertaken on a settlement by settlement basis.
- d. **One or more of the proposed site allocations could be expanded to increase its capacity.** There may be opportunities to extend the site area of proposed allocations in order to increase capacity. This additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
- e. **One or more additional site allocations could be proposed.** Additional site allocations could be associated with existing settlements or new strategic settlements. They could be allocated in order to provide additional capacity. This additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
- f. **A combination of the above.** It may be appropriate to consider one or more of the identified options in combination.

8.59. The draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country. This option would continue this proposed contribution to the unmet housing needs forecast to arise in the Black Country.

8.60. The high level of growth within this option would likely allow significant opportunities to provide much needed affordable housing and meet the housing needs of specific groups within our communities – including older people and families. The economy would also likely benefit from this option, as it provides greater opportunities to positively respond to sustainable development opportunities, support

the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.

- 8.61. This option would also provide a contribution to unmet housing need forecast to arise in the Black Country, as such it would likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country. Furthermore, this option would also likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position, which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire, or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.62. This option would also likely promote access to existing services such as schools or shops and provides the potential to increase provision, with particular opportunities in the medium to long term. Similarly, there may be good opportunities for provision of new health, leisure, recreational and cultural facilities. Economies of scale may also contribute to an increased provision of energy from renewable sources, whilst supporting reductions in energy consumption and promoting energy efficiency.
- 8.63. The scale of development in this option would likely require and facilitate new transport and other forms of infrastructure provision at a level higher than options with lower levels of growth. If this growth is focussed towards existing public transport hubs, use of sustainable means of transport may be encouraged. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 8.64. Due to the scale of development, it is likely that larger amounts of greenfield land would need to be released in this option compared to the baseline and options for lower levels of growth, there may also be a negative effect on the range of plants and animals and quality and extent of wildlife habitats, particularly in the medium to long term. However, this level of growth allows for more larger sites to come forward, a master-planning approach to larger sites may provide opportunities for biodiversity gains to offset such losses and provide opportunities for the creation of relatively large areas of new habitats. The specific site allocations are assessed separately within the SA process.
- 8.65. The location of development, rather than the amount, is likely to have the most influence on protecting and improving soil quality, the conservation and enhancement of water resources and air quality and on reducing the risk of water and air pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

- 8.66. It is likely to be more difficult to focus this level of growth in accessible locations, so it may not be possible to reduce the need of people to travel by car. However, new or existing public transport solutions may counter this. Due to the level of growth, this option may increase the potential for development in areas of higher flood risk. However, conversely larger scale growth creates more opportunities for flood management measures.
- 8.67. This option would likely use more land than the current baseline and the options with lower levels of growth considered, as such opportunities to focus development on previously developed land or existing buildings is likely to be more limited. This option would also likely increase the amount of primary aggregates required, above the baseline.
- 8.68. Higher levels of growth inevitably have a greater potential to cause harm to heritage assets and their settings, but equally the associated increased economic benefits may offer opportunities to provide for the better management of the historic environment. This option is unlikely to maintain or improve existing landscape character and unless development is carefully located and designed, may have a negative effect on local distinctiveness.

## **Comparison Summary of Reasonable Options for the Housing Requirement**

- 8.69. The overall purpose of this component of the updated additional SA assessment work is to help inform judgements about which of the reasonable alternatives for the housing requirement is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 8.1 - 8.6 above.
- 8.70. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the housing requirement, Table 8.7 has been prepared for illustrative purposes only. This summarises, in comparative terms, how the three reasonable alternatives (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) perform against each of the SA objectives. This is achieved by 'ranking' the performance of each of the reasonable options from best performing (1) to poorest performing (6) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a particular SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 8.71. It is not however appropriate to 'total-up' the scores, because performance against each of the SA objectives requires consideration in and of itself and 'totalling-up' scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a 'totalling-up' of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

**Table 8.7: Comparison of Housing Requirement Options**

Sustainability Objective	Option 1a: Moderate Growth	Option 1b: Moderate Growth + 1,500 Contribution to the Black Country	Option 2a: Significant Growth	Option 2b: Significant Growth + 1,500 Contribution to the Black Country	Option 3a: High Growth	Option 3b: High Growth + 1,500 Contribution to the Black Country
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	3	2	5	4	6
2: Encourage a strong and sustainable economy throughout Shropshire	6	4	5	2	3	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	6	4	5	2	3	1
4: Promote access to services for all sections of society	6	4	5	2	3	1
5: Encourage the use of sustainable means of transport	6	4	5	2	3	1
6: Reduce the need of people to travel by car	1	3	2	5	4	6
7: Support active and healthy communities.	6	4	5	2	3	1
8: Protect and improve soil quality	?	?	?	?	?	?
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	?	?	?
10: Reduce flood risk and improve flood management	1	3	2	5	4	6
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	?	?	?
12: Reduce carbon dioxide emissions	?	?	?	2	3	1
13: Promote adaptation and mitigation to climate change	6	4	5	2	3	1
14: Promote efficient use of natural resources	1	3	2	5	4	6
15: Conserve and enhance features and areas of heritage value and their setting	1	3	2	5	4	6
16: Conserve and enhance landscape character and local distinctiveness	1	3	2	5	4	6

## Conclusion

- 8.72. Tables 8.1 - 8.6 summarise the updated additional SA assessment work for each of the reasonable housing requirement options identified. Table 8.7 then summarises, in comparative terms, how the three reasonable alternatives (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) perform against each of the SA objectives – this is for illustrative purposes only.
- 8.73. It is apparent from the results of the updated additional SA assessment work that none of the reasonable housing requirement options are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 8.74. Conversely, housing requirement option 3b (high growth plus a 1,500 dwelling contribution to the Black Country Authorities unmet housing needs) is likely to result in a strongly positive effect on *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society* in the short, medium and long term. It also has the potential in the long-term for a strongly positive effect on *SA objective 4: promoting access to services for all sections of society*. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 8.75. This is perhaps unsurprising as the achievement of *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society*, is directly related to the amount of housing provided, and option 3b represents a significant level of housing growth above the baseline housing need identified, thereby providing greater opportunities to deliver affordable housing and other forms of housing to meet the needs of groups within our communities.
- 8.76. The achievement of *SA objective 4: promoting access to services for all sections of society* is also somewhat linked to the level of housing provided, as it provides greater ‘critical population mass’ thereby supporting the maintenance and enhancement of the viability and sustainability of services and facilities and also increasing the ability to provide new services and facilities.
- 8.77. It is important to note that there are a number of SA objectives that are linked to the strategic distribution and specific location of development (sites), and as such in the context of this updated additional SA assessment of reasonable options for the housing requirement, the conclusion can only be unknown. The strategic distribution and location of development (sites) are assessed separately within the SA process.
- 8.78. In general terms, the updated additional SA assessment work can be summarised as concluding that the greater the level of housing proposed within the option, the greater the likelihood of positive impacts on social and economic factors. Conversely

the greater the level of housing proposed within the option, the greater the likelihood of negative impacts on environmental factors.

- 8.79. However, this is also somewhat influenced by whether the option includes a proposed contribution to the unmet employment land need forecast to arise in the Black Country.
- 8.80. **It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.**
- 8.81. The housing requirement within Options 1a: Moderate Growth; 1b Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; and 2a: Significant Growth, represent annual average levels of housing growth that are less than the annual average housing requirement within the adopted Development Plan. This is perhaps unsurprising as the adopted Development Plan sets an ambitious housing requirement. However, crucially the amount of growth proposed within all these options, is sufficient to meet local housing need.
- 8.82. The housing requirement within Options 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; and 3a: High Growth, represent annual average levels of housing growth that are comparable to the annual average housing requirement within the adopted Development Plan. Again, crucially the amount of growth proposed within all these options, is sufficient to meet local housing need.
- 8.83. The housing requirement within Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs, represents an annual average level of housing growth that is higher than the annual average housing requirement within the adopted Development Plan. This reflects the fact that it is a 'high' growth option which is more than sufficient to meet local housing need plus a further contribution of 1,500 dwellings towards the Black Country Authorities Unmet Housing Needs.
- 8.84. The housing requirements within Options 1a: Moderate Growth; 2a: Significant Growth; and 3a: High Growth, would provide no contribution to unmet housing need forecast to arise in the Black Country. As the draft Shropshire Local Plan proposed a contribution of 1,500 dwellings towards the unmet housing needs forecast to arise in the Black Country, these options would remove this proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.85. These options would also have lower potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration) and a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs than the options that include a proposed contribution to the unmet housing needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire).
- 8.86. The housing requirements within Options 1b: Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; 2b: Significant

Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; and 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs, would provide a contribution to unmet housing need forecast to arise in the Black Country. These options would therefore continue this proposed contribution to the unmet housing needs forecast to arise in the Black Country within the draft Shropshire Local Plan.

- 8.87. These options would also likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own housing needs, and likely have a higher potential for a positive impact on the ability to attract additional workforce from the Black Country (through increased migration), than the baseline position (which is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire) or an option that includes no proposed contribution to the unmet housing needs forecast to arise in the Black Country.
- 8.88. To varying extents, the housing requirement within Options 1a: Moderate Growth; 1b Moderate Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; and 2a: Significant Growth, 2b: Significant Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs; and 3a: High Growth, represent lower levels of growth than currently proposed within the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of these options) for the potential refinement of the proposed strategy to align with either of these options, but irrespective of this, there is clearly confidence that all of these options are deliverable.
- 8.89. The housing requirement within Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs, represents a higher level of growth than currently proposed within the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of these options) for the potential refinement of the proposed strategy to align with either of these options, but irrespective of this, as it does entail delivery above that currently proposed and there would need to be careful consideration of whether the relevant option is deliverable.
- 8.90. On balance, it is considered that Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs represents the most sustainable of the reasonable options for the level of housing growth identified. This is because:
- a. It presents an opportunity to achieve a strongly positive effect on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - b. It presents the opportunity, in the long-term, to achieve a strongly positive effect on SA objective 4: promoting access to services for all sections of society.
  - c. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - d. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to

mitigate the extent of such impacts. Particularly through careful consideration of the locations of site allocations (assessed separately within the SA process) and the identification and application of appropriate policies to manage resultant development (also assessed separately within the SA process).

- e. It is considered that this option achieves the most appropriate 'balance' across all three pillars of sustainability – social, economic, and environmental.
- f. This option would ensure that local housing need is achieved, whilst also providing some flexibility to respond to changes to local housing need over the plan period and opportunities to respond to the identified issues and opportunities in Shropshire. It would also result in an appropriate contribution to the unmet housing need forecast to arise in the Black Country (consistent with the contribution agreed through the Duty to Cooperate Process and within a signed Statement of Common Ground between Shropshire Council and the Black Country Authorities).

-Options 1b and 2b would also achieve these outcomes but, with regard to the opportunities to respond to the identified issues and opportunities in Shropshire, this would be to a lesser extent than option 3b.

-Options 1a and 2a would result in no contribution to the unmet housing need forecast to arise in the Black Country and as such impact on the ability to meet housing need beyond the Shropshire area. Whilst achieving local housing need and providing opportunities to respond to the identified issues and opportunities in Shropshire, these opportunities would be to a lesser extent than option 3b.

-Option 3a would result in no contribution to the unmet housing need forecast to arise in the Black Country and as such impact on the ability to meet housing need beyond the Shropshire area.

8.91. Inevitably, the final determination (planning judgement) about which reasonable housing requirement option should be identified as the proposed housing requirement within the draft Shropshire Local Plan will be informed by a range of evidence/considerations. This updated additional SA Assessment work is a very important consideration when undertaking this planning judgement. However, a range of other factors will also require due consideration when undertaking this planning judgement.

8.92. For instance, it will be important to ensure that any proposed housing requirement option is deliverable within the proposed plan period. Consideration of deliverability will be informed by a range of factors, including:

- a. Past trends in housing completions and the housing market over the short, medium and long term;
- b. Recognition of the factors that can influence future trends in housing completions and the housing market in the short, medium and long term. This will include the myriad of known and unknown local, regional, national and international factors that may influence the housing market and housing delivery rates.

8.93. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be

required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.

- 8.94. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 9. Summary of SA Assessment: Reasonable Options for the Employment Land Requirement

### Introduction

9.1. This section provides an updated SA assessment of contemporary options for the employment land requirement to respond to Inspectors Letters ID28, ID36 and ID37.

### Baseline Need for Employment Land

9.2. Shropshire's baseline need for employment land is **250 hectares (ha) over 22 years from 2016 to 2038 at an annual rate of 11.5 ha/year**. This is determined from contemporary forecasts and employment land needs in the (EDNA) Economic Development Needs Assessment (2021) (EV043). This baseline need does not include any contribution towards unmet employment land needs in the Black Country.

9.3. The determination of the baseline need used the method in paragraphs 5.17–5.23 of the (ERTP) Employment Requirement Topic Paper (2021) (EV112). This adjusted the EDNA Growth Scenarios from the standard 40% density to an actual 26% density for employment development in Shropshire. **The baseline Experian Economic Forecast for Jobs Growth which identified an employment land need for 161.91ha has been adjusted to 250ha in the Housing and Employment Topic Paper (GCXX) in response to Inspectors' Letter ID37.**

9.4. The EDNA Growth Scenarios including the baseline Experian Economic Forecast were adjusted in ERTP (EV112) with the 30ha contribution included, for unmet need in the Black Country. This updated SA assesses each of the contemporary employment land options firstly with and then without this 30ha contribution to the Black Country.

### Development Plan Requirements

9.5. The Core Strategy (2011) (EV009) presents the strategic policies for the adopted Development Plan from 2006 to 2026. Core Strategy Policy CS1 Strategic Approach identifies an employment land requirement for **290 hectares over 20 years from 2006 to 2026 at an annual rate of 14.5 ha/year**.

9.6. The Submission Draft Local Plan (2021) (SD002) proposes the strategic policies for the period from 2016 to 2038. Draft Policy SP2 Strategic Approach currently proposes an employment land requirement for a **minimum 300 hectares over 22 years from 2016 to 2038 at an annual rate of 14.0 ha/year**. This would include the 30ha contribution towards unmet employment land need in the Black Country.

9.7. These requirements provide context for assessing the employment land requirement for the Submission Draft Local Plan and to confirm the soundness of the Plan.

## **Contemporary Options for the Employment Land Requirement to 2038**

### **Submission Draft Local Plan Objectives**

- 9.8. The Council intends that the Submission Draft Shropshire Local Plan will meet Shropshire’s employment land need for 250ha and support the Shropshire Economic Growth Strategy (2017 and as amended in 2022) by:
- a. Improving the location, range and choice of strategic development opportunities to meet the needs of local businesses and attract inward investment.
  - b. Ensuring the employment land offer is sustainable and accessible by focusing development into strategic corridors and principal and key centres.
  - c. Broadening the supply and distribution of business units and commercial premises and deliver a range and choice of modern, high quality floorspace options.
  - d. Attracting a range of business types and sizes to promote Shropshire:
    - i. as an investment location and a centre for business and enterprise;
    - ii. and establish new enterprises, support key sectors and clusters and deliver more, higher quality employment opportunities;
    - iii. as a location that encourages entrepreneurship and builds the skills and confidence of businesses to make successful investments and encourages residents to build their confidence to enter the labour market.
  - e. Attracting working age people to take employment in the County and use the opportunities offered by education, training and other support services to improve their prospects and meet the needs of businesses in the County.
- 9.9. To achieve these objectives, the Council will consider a number of contemporary employment land options and identify the appropriate employment land requirement for Shropshire. This seeks to implement EV044, the Shropshire Economic Growth Strategy and create a healthy local economy in Shropshire at: <https://shropshire.gov.uk/planning-policy/local-planning/local-plan-review/draft-shropshire-local-plan-2016-2038-examination/examination-library/evidence-base-documents/> and subsequently updated in 2022 at: <https://shropshire.gov.uk/business-support/shropshire-s-economic-growth-strategy-2022-2027/>.
- 9.10. Shropshire Council has subsequently published the Shropshire Plan (2022) which sets out the 3 year rolling programme to deliver longer term strategies like the Local Plan. The Shropshire Plan commits the Council to work with our communities, our partners and neighbouring areas *“Supporting together a healthy economy, providing opportunities for people to return to employment, utilising skills people have developed. Supported through access to accommodation close to their place of work”*. The Shropshire Plan at: <https://next.shropshire.gov.uk/the-shropshire-plan-2022-2025/>.

### **Economic Growth Options 2017**

- 9.11. The Issues and Strategic Options Consultation (2017) (EV003.01) presented Economic Growth Options for ‘Significant Growth’, ‘High Growth’ and ‘Productivity Growth’.

These offered a choice for the strategic approach to Shropshire's economic strategy and indicated different scales of development for the employment land requirement.

9.12. In ID37, paragraph 5.8, it is noted that 'The original SA [SD006.01] did not ascribe land amounts to the different growth options it tested and so it is not as straightforward to compare as housing'. Although these Economic Growth Options were not quantified in the original SA, the anticipated scales of development for these options were indicated by the Council:

- Issues and Strategic Options Consultation (January 2017) identified Significant Growth to be 290ha, delivered over 20 years at a rate of 14.5ha/year.
- Scale and Distribution of Development Consultation (October 2017) (EV004.01) identified High Growth to be 300ha, delivered over 20 years at a rate of 15ha/year.
- Issues and Strategic Options Consultation (January 2017) identified Productivity Growth as a lower employment requirement which would provide more 'higher value' jobs. This option would have drawn on evidence in a preceding Employment Land Review (2012) identified in paragraphs 4.3 - 4.6 of the ERTS (EV112) where the employment land need based on past take up was 249ha delivered over 20 years at a rate of 12.45ha/year.

9.13. In ID37 paragraphs 5.7 and 5.8, the Inspectors indicate this updated SA assessment may focus on annual rates of development in the earlier Economic Growth Options.

#### **Reasonable Adjustments to the 2017 Economic Growth Options**

9.1 It is recognised in ID37, paragraph 6.1, that comparing the original Economic Growth Options to contemporary employment land options, requires some reasonable adjustments to the original 2017 options. These adjustments recognise the:

- Extension of the Plan period from 20 years to 22 years at 2038.
- Contribution of 30ha towards unmet employment land needs in the Black Country.

9.2 It should also recognise, the Economic Growth Options presented different strategic approaches for the economic strategy in the Plan and indicated the scale of development for each of the three approaches. Consultation document EV003.01 in paragraph 3.1, identified that the Local Plan Review would establish the employment land requirement for Shropshire. The Economic Growth Options were intended to inform the process of establishing this employment land requirement for Shropshire.

9.3 The Economic Growth Options were based on an assessment of employment land need at 2017 using evidence in the Shropshire Employment Land Review (2012). This evidence of need used the rates of past take up of employment land in Shropshire. In using past rates of employment development, this assessment recognised the lower density of employment development in Shropshire. This evidence identified the rate of past take up in Shropshire to be 12.45ha/yr.

9.4 The EDNA now provides the contemporary assessment of need based on forecast jobs growth for Shropshire for the period from 2016 to 2038 This contemporary

assessment of need is a further reasonable adjustment to the Economic Growth Options in the Issues and Strategic Options Consultation.

- 9.5 The EDNA provided the key evidence by identifying the contemporary jobs growth forecasts and their relative employment land needs. In the ERTTP, the Council then adjusted these relative employment land needs to reflect actual needs in Shropshire. This evidence has been used to then determine the reasonable employment land options to be assessed in this updated SA.

#### **Extension to the Plan Period**

- 9.14. When the Plan period was extended to 22 years, the scales of growth indicated in the Economic Growth Options (2017) were maintained at their previously proposed figures. This re-aligned the annual requirements in these growth options to the pattern of employment development in the County. This responded to the changing economic circumstances in Shropshire including: the County's economic experiences from the start of the millennium, the UK departure from the European Union and the Covid-19 downturn.
- 9.15. It is important to note this change in the Plan period from 20 year to 22 years when considering how the employment land options in the Issues and Strategic Options Consultation may be reasonably amended. This change to the Plan period does not affect the contemporary employment land scenarios identified in the EDNA because this critical evidence recognises the Plan period would last for 22 years ending in 2038.

#### **Assessing Economic Growth Options for Shropshire**

- 9.16. The original growth options in the Consultation document EV003.01 (Issues and Strategic Options) provided three options for: 'Productivity', 'Significant' and 'High' Growth. In response to ID37 and in particular paragraphs 5.3, 5.4, 5.7, 5.8, 6.1, 6.4 and 6.5, the Council have identified contemporary employment land options for: 'Productivity', 'Significant' and 'High' Growth which are considered to be consistent in principle with the growth options assessed in EV003.01 after making the reasonable adjustments noted here.
- 9.17. The important consideration in determining these contemporary employment land options is that, like the housing options, the baseline position for employment land need has changed since 2017. The updated need assessment is an important component of these reasonable employment land options for this updated SA.

#### **Contemporary economic assessments of Shropshire**

- 9.18. In 2017, the assessment of employment land need was provided by the Shropshire Employment Land Review (2012) which is recognised above in the description of the Productivity Growth option. This need assessment was superseded by the EDNA and adjustments made by the Council in the ERTTP (EV112). This contemporary evidence identifies the appropriate employment land options to be assessed in this updated SA. It is reasonable then, to relate the earlier Economic Growth Options to the findings of this updated SA for the contemporary employment land options, as suggested in ID37.

### Standard percentage uplifts for employment land options consistent with housing options

9.19. In ID37, paragraph 5.8 seeks to provide consistent advice on confirming the employment land options to the advice provided for the housing options. Further, in paragraph 5.8, the importance of aligning the employment growth with housing growth is recognised and this provides a mechanism to address the fact that the original SA did not ascribe land amounts to the different economic growth options. A further reasonable adjustment to these economic growth options is to recognise the guidance in ID37, paragraph 5.7 that the three economic growth options may be uplifted using percentage uplifts in within the range used for the housing growth options from need (0%), 5%, 10% and 15%.

### Contribution to unmet need in the Black Country

9.20. Shropshire Council intends to contribute 30ha towards unmet employment needs in the Black Country, as agreed through the Duty to Cooperate process. This contribution of employment land is expected to influence the commuting relationship between the Black Country and Shropshire to bring a much needed, additional flow of labour into the Shropshire market. This contribution should be considered in each of the contemporary employment land options.

### Contemporary employment land options for Shropshire

9.6 The contemporary employment land options shown in Table AA are identified from the baseline need for 250ha shown in GC28 and uplifted using the percentages indicated in ID37. The Productivity Growth option is considered to represent the baseline economic need of only 250ha which reflects the objectives of the Consultation document EV003.01.

**Figure 9.1 – Contemporary Employment Land Options 2016 – 2038**

Option Ref:	Description of Option	Employment Land Need to 2038		Uplift	Employment Land Options 2038		Options with Black Country 30ha Contribution	
		ha	ha/yr		ha	ha/yr	ha	ha/yr
1a	Shropshire Productivity Growth	250	11.5	0	250	11.5		
2a	Shropshire Significant Growth			10	275	12.5		
1b	Shropshire Productivity Growth with Black Country Contribution			0			280	12.75
3a	Shropshire High Growth			15	290	13.0		
2b	Shropshire Significant Growth with Black Country Contribution			10			300	14.0
3b	Shropshire High Growth with Black Country Contribution			15			320	14.5

9.7 These contemporary options are considered to best describe a range of potential employment land requirements for Shropshire as requested in ID36 and ID37. These options are suitable for assessment in the updated SA to test their sustainability and deliverability to provide the employment land requirement for Shropshire to 2038.

## Assessment of Reasonable Options for the Employment Land Requirement

9.21. The following tables summarise the additional SA assessment of the identified reasonable Employment Land Requirement Options:

**Table 9.1: Employment Land Requirement Option 1a: Productivity Growth**

<b>Employment Land Requirement Option 1a: Productivity Growth</b>				
This option represents the baseline employment land forecast over the 22-year plan period from 2016-2038. The baseline employment land forecast for Shropshire is identified in the Shropshire Economic Development Needs Assessment for 161.91 hectares and has been adjusted to 250 hectares to take account of the lower density of development in Shropshire. This option represents a total minimum employment land requirement of <b>250 hectares</b> over the 22 year period from 2016 to 2038 which gives an annual average of around <b>11.5 hectares/year</b> .				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option represents the lowest employment land requirement and is below the level proposed in the draft Shropshire Local Plan. The annual average rate of employment development would be 11.5ha/year which is much lower than the 14.5ha/year in the adopted Development Plan. This option would therefore result in a reduction in the planned release of greenfield land for employment development and a reduction in the current and proposed planned rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	+/?	+/?	+/?	This option seeks to change the employment offer in Shropshire but represents the lowest level of employment land provision proposed, although it is sufficient to meet local need forecast to arise in Shropshire. The annual average employment land requirement of around 11.5ha/year is significantly lower than the 14.5ha/year in the adopted Development Plan, although it is comparable to recent annual average take-up in Shropshire between 2006 and 2020. The option would represent a slowing down in the rate of planned employment land development and could therefore affect the performance of the local economy by limiting the potential for positive changes in the business base, delivery of a lower level of new employment growth to meet the needs of the local population and reduction in the scope for positive changes to the number and productivity of the resident, working age, labour force. This option would provide few opportunities for strategic economic investment to meet demands in the local and sub-regional economy.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society.	-/?	-/?	-/?	<p>A restructuring of Shropshire’s economy as proposed within this option may improve broadband service provision and connectivity, although there is uncertainty as to whether this option would achieve such significant changes even in the long term.</p> <p>In contrast, this option represents the lowest level of planned employment development and has a significantly lower annual average than that in the adopted Development Plan. The consequent lower levels of planned investment in the County, reduced planned growth in numbers in employment and reduced planned growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.</p>
5: Encourage the use of sustainable means of transport.	?	?	?	<p>The annual average rate of employment development would be 11.5ha/year which is much lower than the 14.5ha/year in the adopted Development Plan. As such, this option would significantly reduce aspiration for and have the lowest planned potential to provide employment to support the maintenance or improvement of existing access to and demand for public transport.</p> <p>Furthermore, whilst this option seeks to change the employment offer in Shropshire towards higher value jobs focused in urban locations, it is uncertain whether this option would deliver such significant changes. The specific location of these high value jobs would have the greatest impact on the demand for sustainable transport and so the uncertainty about the impacts of this option would affect this objective. The strategic distribution of development and specific site allocations are assessed separately in the SA process.</p>
6: Reduce the need of people to travel by car.	?	?	?	<p>This option seeks restructure Shropshire’s economy including through a focus on urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. This could reduce the need for people to travel by car, although there is uncertainty as to whether this option would achieve such significant changes even in the long term.</p> <p>This option also has the lowest annual average rate of employment development at 11.5ha/year, which is much lower than the 14.5ha/year in the adopted Development Plan. This may encourage car borne commuting out/into the County, travel to work by car within the County and car travel for other purposes.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	0	<p>A restructuring of the economy towards greater productivity would indicate overall activity levels remaining similar to the current situation through increasing participation despite the lowest level of growth being proposed. In particular, recreational activities associated with the natural environment which are safeguarded in this option (Sustainability Objective 1) may benefit from greater participation.</p> <p>The lowest level of growth (which is significantly lower than that planned for in the adopted Development Plan) may positively contribute to safeguarding of recreational activities associated with the natural environment but could adversely affect public investment or commercial enterprise in new or existing, formal health, leisure or cultural facilities or services despite the urban focus for development providing good accessibility and resident working age population with families within the market catchment.</p> <p>On balance, it is considered there will be a balance and therefore little or no effect on the provision of health, leisure and recreational facilities even for this higher option.</p>
8: Protect and improve soil quality.	+	+	+	<p>This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These urban locations are less likely to impact on soil quality but there is uncertainty as to whether such significant changes would be achieved even in the long term. Furthermore, this option proposes the lowest level of growth at 11.5ha/year, significantly below the 14.5ha/year in the adopted Development Plan, which would further reduce potential impacts on soil quality as a result of planned development activity.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	+	+	+	<p>The lower level of growth, the urban focus where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs and nominal new greenfield releases would make the provision of water supply volumes, water quality standards and infrastructure investment more achievable and sustainable. It also poses a lower risk to water quality by avoiding pollution sources in rural areas and new water supply and infrastructure investment requires only limited extensions to the supply network or local capacity improvements. Furthermore, the employment land requirement associated with this option is the lowest proposed and this is also likely to reduce impact on water quality and reduce water pollution. However, there is uncertainty as to whether such significant changes would be achieved even in the long term.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management.	+/?	+/?	+/?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. The emphasis would be on providing employment land in the principal towns where investment demand is most likely to be expressed. This might make it easier to avoid areas of flood risk especially as the annual average level of growth is the lowest of the reasonable options and lower than the adopted Development Plan. However, it is uncertain whether such significant changes would be achieved even in the longer term. Ultimately, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	+/?	+/?	+/?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These locations are most likely to contain Air Quality Management Areas. The impact upon these areas has the greatest potential to further affect air quality. However, this option proposes the lowest level of growth of the options considered and the annual average level of growth is significantly less than that in the adopted Development Plan and as such is likely to reduce the potential to impact on air quality. There is uncertainty as to whether such significant changes would be achieved even in the long term. However, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions.	+	+	+	Managing carbon dioxide emissions is a strategic objective for climate change adaptation, a 'carbon neutral' economy and quality of life improvements. A lower growth aspiration and scale of employment development positively impacts industrial emissions, commercial transport volumes and risks to air quality standards. This would reduce energy consumption in business/industrial sectors and growth in carbon dioxide emissions especially from transport and travel. However, this may discourage the uptake of renewable energy into production processes and the integration of new technologies to support a 'carbon neutral' economy but a reduction in the growth of carbon dioxide emissions would be a key outcome.
13: Promote adaptation and mitigation to climate change.	0	0	0	The mitigation and adaptation to climate change would remain at the same level with this lowest growth than planned within the adopted Development Plan with fewer opportunities to accelerate the climate change response but somewhat offset by a reduced potential for impact.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
14: Promote efficient use of natural resources.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. As such, it is likely to offer the most efficient use of natural resources because of its focus on higher quality jobs rather than more land. Furthermore, the annual average employment land requirement associated with this option is lower than within the adopted Development Plan and would therefore likely reduce the demand for primary resources and increase potential for use of secondary/recycled resources.
15: Conserve and enhance features and areas of heritage value and their setting.	+	+	+	This option would focus investment into sustainable urban locations to restructure the employment offer in the County towards more, higher value jobs although it is uncertain whether this economic objective would be achieved. This lowest level of growth, the urban focus for employment development and the distribution of new development into a limited number of settlements presents the lowest risk of harm or loss to heritage assets and their settings in the County.
16: Conserve and enhance landscape character and local distinctiveness.	+	+	+	Shropshire has a varied landscape recognised in the Shropshire Landscape Typology identifying different landscapes influenced by geology, topography, river networks, land management and ownership history, other human activity. Protection provided by special designations and local appreciation of Ironbridge Gorge World Heritage Site, Area of Outstanding Natural Beauty on impressive central moorlands of the Shropshire Hills, imposing Wenlock Edge and Clee Hills, the Green Belt and rich heritage from archaeology, human settlement and past development. All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This lowest growth option, with an annual average significantly below that in the adopted Development Plan, would have the least impact on landscape character and distinctiveness in the County.

Page 208

### **Summary of Employment Land Requirement Option 1a: Productivity Growth**

- 9.22. Option 1a seeks to target the provision of employment towards higher value jobs and into urban locations where investment demand is most likely to be expressed. Whilst the level of growth associated with this option is sufficient to meet local need for employment land, it represents the lowest level of employment land considered.
- 9.23. Due to the level of growth proposed within this option, it would not provide any specific flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the

plan period. However, the employment land requirement does not represent a 'ceiling' on the scale of employment land development and the effects of market demand may increase levels/rates of development.

- 9.24. The annual average rate of employment land development resulting from this option would be generally consistent with recent take-up in Shropshire between 2006 and 2020, but is lower than that associated with the employment land requirements in the adopted Development Plan and as proposed within the submission version of the draft Shropshire Local Plan.
- 9.25. This option does not include a contribution towards unmet employment land need forecast to arise in the Black Country.
- 9.26. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The employment land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed employment land requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the employment land requirement being exceeded.
  - b. The anticipated capacity and/or rates of delivery on the proposed site allocations might need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
  - c. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.
  - d. One or more of the proposed site allocations might need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
  - e. A combination of the above.
- 9.27. This option is expected to have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats; reduction of carbon dioxide emissions; promotion of the efficient use of natural resources; conservation and enhancement of landscape character and local distinctiveness; conservation and enhancement of heritage assets and their settings; and soil and water quality/water pollution.

- 9.28. This option should have a positive effect on the encouragement of a strong and sustainable economy in Shropshire through the change in the employment offer towards higher value jobs. However, there is uncertainty as to whether such significant changes would be achieved even in the long term and this is a particular risk given the associated reduction in total employment provision.
- 9.29. This option could also have a positive effect on air quality/reducing air pollution risk; and flood risk/improved flood risk management. However, this is dependent on factors such as whether the change to higher value jobs is achieved and also the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.
- 9.30. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society; the provision of support for physical activity and healthy communities; and the further promotion of the adaptation and mitigation of climate change. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process.
- 9.31. The option could have a positive, neutral or negative effect on the reduction of the need to travel by car and the encouragement of the use of sustainable means of transport. This reflects the uncertainty as to whether this option would achieve the significant changes to the economy envisaged even in the long term and the significantly lower levels of planned employment development that may encourage car borne commuting out/into the County, travel to work by car within the County and car travel for other purposes.
- 9.32. The option could have a negative effect on the promotion of access to services for all sections of society. However, this is dependent on factors such as whether the change to higher value jobs is achieved and also the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.

**Table 9.2: Employment Land Requirement Option 1b: Productivity Growth with a Contribution to the Black Country Authorities**

**Employment Land Requirement Option 1b: Productivity Growth Plus a 30 hectare Contribution to the Black Country Authorities unmet employment land need**

This option represents the adjusted baseline employment land forecast of 250 hectares which equates to an annual average of around 11.5 hectares/year over the 22-year plan period from 2016-2038.

This option provides a further 30 hectare contribution to the Black Country Authorities which represents a total minimum employment land requirement of **280 hectares** over the 22 year period from 2016 to 2038 which gives an annual average of around **12.75 hectares/year**.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	The annual average rate of employment development would be 12.75ha/year which is much lower than the 14.5ha/year in the adopted Development Plan. This option would therefore result in a reduction in the planned release of greenfield land for employment development and a reduction in the current and proposed planned rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	+/?	+/?	+/?	This option seeks to change the employment offer in Shropshire, it is sufficient to meet local need forecast to arise in Shropshire and to contribute to unmet need in the Black Country (which in turn provides opportunities to enhance the economy). The annual average employment land requirement of 12.75ha/year is lower than the 14.5ha/year in the adopted Development Plan, but is higher than annual average employment land take-up in Shropshire between 2006 and 2020. The option could represent a slowing down in the rate of planned employment land development and could therefore affect the performance of the local economy by limiting the potential for positive changes in the business base, delivery of a lower level of new employment growth to meet the needs of the local population and reduction to the scope for positive changes to the number and productivity of the resident, working age, labour force. This option would however provide some opportunities for strategic economic investment to meet demands in the local and sub-regional economy. This option could create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.

Page 214

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	+/?	+/?	+/?	A restructuring of Shropshire's economy as proposed within this option may improve broadband service provision and connectivity, although there is uncertainty as to whether this option would achieve such significant changes even in the long term. In contrast, this option has a lower annual average employment land requirement than that in the adopted Development Plan. The consequent lower levels of planned investment in the County, reduced planned growth in numbers in employment and reduced planned growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.
5: Encourage the use of sustainable means of transport.	?	?	?	The annual average rate of employment development would be 12.75ha/year which is lower than the 14.5ha/year in the adopted Development Plan. As such, this option would reduce aspiration for and have the lowest planned potential for employment to support the maintenance or improvement of existing access to and demand for public transport. Whilst this option seeks to change the employment offer in Shropshire towards higher value jobs focused in urban locations, it is uncertain whether this option would deliver such significant changes. The location of these high value jobs would have the greatest impact on the demand for sustainable transport and so the uncertainty about the impacts of this option would affect this objective. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	+/?	+/?	+/?	This option seeks restructure Shropshire's economy including through a focus on urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. This could reduce the need for people to travel by car, although there is uncertainty as to whether this option would achieve such significant changes even in the long term. However, the annual average rate of employment development would be 12.75ha/year which is lower than the 14.5ha/year in the adopted Development Plan, which could encourage car borne commuting out/into the County, travel to work by car within the County and car travel for other purposes.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	0	<p>A restructuring of the economy towards greater productivity would indicate overall activity levels remaining similar to the current situation through increasing participation despite the lowest level of growth being proposed. In particular, recreational activities associated with the natural environment which are safeguarded in this option (Sustainability Objective 1) may benefit from greater participation.</p> <p>Furthermore the lower level of growth than proposed within the adopted Development Plan may positively contribute to safeguarding of recreational activities associated with the natural environment but could adversely affect public investment or commercial enterprise in new or existing, formal health, leisure or cultural facilities or services despite the urban focus for development providing good accessibility and resident working age population with families within the market catchment.</p> <p>On balance, it is considered there will be a balance and therefore little or no effect on the provision of health, leisure and recreational facilities even for this higher option.</p>
8: Protect and improve soil quality.	+	+	+	<p>This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These urban locations are less likely to impact on soil quality but there is uncertainty as to whether such significant changes would be achieved even in the long term. Furthermore, the employment land requirement associated with this option has a lower annual average rate of development at 12.75ha/year than the 14.5ha/year in the adopted Development Plan, which would further reduce the potential for an impact on soil quality as a result of planned development activity.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	+	+	+	<p>The lower level of growth, the urban focus where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs and nominal new greenfield releases would make the provision of water supply volumes, water quality standards and infrastructure investment more achievable and sustainable. It also poses a lower risk to water quality by avoiding pollution sources in rural areas and new water supply and infrastructure investment requires only limited extensions to the supply network or local capacity improvements. Furthermore, the average annual employment land requirement associated with this option is the lower than that within the adopted Development Plan, which is also likely to reduce impact on water quality and reduce water pollution. However, there is uncertainty as to whether such significant changes would be achieved even in the long term.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management.	+/?	+/?	+/?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. The emphasis would be on providing employment land in the principal towns where investment demand is most likely to be expressed. This might make it easier to avoid areas of flood risk especially as the annual average level of growth is lower than the adopted Development Plan. However, it is uncertain whether such significant changes would be achieved even in the longer term. Ultimately, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?	?	?	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. These locations are most likely to contain Air Quality Management Areas. The impact upon these areas has the greatest potential to further affect air quality. However, this option proposes a lower annual average level of growth than the adopted Development Plan and is likely to reduce the potential to impact on air quality. There is uncertainty as to whether such significant changes would be achieved even in the long term. However, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions.	+	+	+	Managing carbon dioxide emissions is a strategic objective for climate change adaptation, a 'carbon neutral' economy and quality of life improvements. A lower growth aspiration and scale of employment development as proposed could positively impact on industrial emissions, commercial transport volumes and risks to air quality standards. This would reduce energy consumption in business/industrial sectors and growth in carbon dioxide emissions especially from transport and travel. However, this may discourage the uptake of renewable energy into production processes and the integration of new technologies to support a 'carbon neutral' economy. A consequent reduction in the growth of carbon dioxide emissions would still be a key outcome. It is expected provision to meet Black Country unmet need may have implications for carbon dioxide emissions.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	0	0	0	Opportunities to mitigate and adapt to climate change would likely remain at the same level as present, balanced by lower growth than planned within the adopted Development Plan which creates fewer opportunities to accelerate the climate change response but somewhat offset by a reduced potential for impact.
14: Promote efficient use of natural resources.	+	+	+	This option seeks to target the provision of employment land to urban locations where investment demand is most likely to be expressed in order to change the employment offer towards higher value jobs. As such, it is likely to offer the most efficient use of natural resources because of its focus on higher quality jobs rather than more land. Furthermore, the annual average employment land requirement associated with this option is lower than within the adopted Development Plan and would therefore likely reduce the demand for primary resources and increase potential for use of secondary/recycled resources.
15: Conserve and enhance features and areas of heritage value and their setting.	+	+	+	This option would focus investment into sustainable urban locations to restructure the employment offer in the County towards more, higher value jobs although it is uncertain whether this economic objective would be achieved. The level of growth, the urban focus for employment development and the distribution of new development into a limited number of settlements would present the lowest risk of harm or loss to heritage assets and their settings in the County. The provision of land to help meet Black Country unmet need would have an urban focus with a potential heritage impact but this may be addressed through site assessments and the master-planning of development.
16: Conserve and enhance landscape character and local distinctiveness.	+	+	+	Shropshire's varied landscapes and its special designations and locally appreciated features and distinctiveness would still be supported by the lower growth for Shropshire and its urban focus and nominal greenfield releases which would contain landscape impacts to localised effects around proposed development sites. All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option proposes a lower annual average scale of employment development than the adopted Development Plan as such it is expected to have a lower potential for impact on this Sustainability Objective.

## **Summary for Employment Land Requirement Option 1b: Productivity Growth with a Contribution to the Black Country**

### **Authorities**

- 9.33. Option 1b seeks to target the provision of employment towards higher value jobs and into urban locations where investment demand is most likely to be expressed. The level of growth associated with this option is sufficient to meet local need for employment land and includes a 30ha contribution to the unmet employment land need forecast to arise in the Black Country.
- 9.34. However, the level of growth proposed within this option would not provide any specific flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. However, the employment land requirement does not represent a 'ceiling' on the scale of employment land development and the effects of market demand may increase levels/rates of development.
- 9.35. The annual average rate of employment land development resulting from this option is higher than recent take-up in Shropshire between 2006 and 2020, but is lower than that associated with the employment land requirements in the adopted Development Plan and as proposed within the submission version of the draft Shropshire Local Plan.
- 9.36. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The employment land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed employment land requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the employment land requirement being exceeded.
  - b. The anticipated capacity and/or rates of delivery on the proposed site allocations might need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
  - c. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.
  - d. One or more of the proposed site allocations might need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
  - e. A combination of the above.

- 9.37. This option is expected to have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats; reduction of carbon dioxide emissions; promotion of the efficient use of natural resources; conservation and enhancement of landscape character and local distinctiveness; conservation and enhancement of heritage assets and their settings; and soil and water quality/water pollution.
- 9.38. This option should have a positive effect on the encouragement of a strong and sustainable economy in Shropshire through the change in the employment offer towards higher value jobs and diversification of the labour force through the proposed contribution to the unmet employment land need forecast to arise in the Black Country. Furthermore, the annual average level of employment land developed associated with this option is higher than recent take-up in Shropshire between 2006 and 2020. However, there is uncertainty as to whether such significant changes to the employment offer would be achieved even in the long term and this is a particular risk given the associated reduction in total employment provision. In addition, the ability to increase the amount of employment land developed will also be reliant on the effective implementation of the wider strategy and policies of the draft Shropshire Local Plan and the market.
- 9.39. This option could also have a positive effect on the promotion of access to services; reducing the need for people to travel by car; and reducing flood risk and improving flood management. However, this is dependent on factors such as whether the change to higher value jobs is achieved and also the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.
- 9.40. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society; the provision of support for physical activity and healthy communities; and the further promotion of the adaptation and mitigation of climate change. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process.
- 9.41. This option could also have a neutral effect on the use of sustainable means of transport; and air quality/air pollution. However, this is dependent on the implications of the proposed contribution to the unmet employment land need forecast to arise in the Black Country and the associated changes to commuting patterns. This is also dependent on factors such as whether the change to higher value jobs is achieved and also the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.

**Table 9.3: Employment Land Requirement Option 2a: Significant Growth**

Employment Land Requirement Option 2a: Significant Growth				
<p>This option represents a 10% uplift on the adjusted baseline employment land forecast of 250 hectares over the 22-year plan period from 2016-2038 (annual average 11.5 hectares/year).</p> <p>This option represents a total minimum employment land requirement of <b>275 hectares</b> over the 22 year period from 2016 to 2038 which gives an annual average of around <b>12.5 hectares/year</b>.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option provides a significant uplift on the forecast employment land need for Shropshire, to an annual rate of 12.5ha/yr. The annual average rate of employment development is much lower than the 14.5ha/year in the adopted Development Plan. This option would therefore result in a reduction in the planned release of greenfield land for employment development and a reduction in the current and proposed planned rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	+/?	+/?	+/?	<p>This option provides a significant uplift on the forecast employment land need for Shropshire, to an annual rate of 12.5ha/yr. The annual average rate of employment development is much lower than the 14.5ha/year in the adopted Development Plan, but is higher than annual average employment land take-up in Shropshire between 2006 and 2020. The option would represent a slowing down in the rate of planned employment land development and could therefore affect the performance of the local economy by limiting the potential for positive changes in the business base, delivery of a lower level of new employment growth to meet the needs of the local population and reduction to the scope for positive changes to the number and productivity of the resident, working age, labour force.</p> <p>This option would provide more limited opportunities for strategic economic investment to meet demands in the local and sub-regional economy.</p> <p>This option could create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.</p>
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society.	?	?	?	This option has a lower annual average employment land requirement than that in the adopted Development Plan. The consequent lower levels of planned investment in the County, reduced planned growth in numbers in employment and reduced planned growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.
5: Encourage the use of sustainable means of transport.	?	?	?	The annual average rate of employment development would be 12.5ha/year which is lower than the 14.5ha/year in the adopted Development Plan. As such, this option would reduce aspiration for and have the lowest planned potential for employment to support the maintenance or improvement of existing access to and demand for public transport. However, the location of employment development is also a significant factor in influencing any impact on the use of sustainable means of transport. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	?	?	?	The annual average rate of employment development would be 12.5ha/year which is lower than the 14.5ha/year in the adopted Development Plan, which could encourage car borne commuting out/into the County, travel to work by car within the County and car travel for other purposes. However, the location of employment development is also a significant factor in influencing any impact on reduction of the need to travel by car. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
7: Support active and healthy communities.	0	0	0	The lower level of growth than proposed within the adopted Development Plan may positively contribute to safeguarding of recreational activities associated with the natural environment but could adversely affect public investment or commercial enterprise in new or existing, formal health, leisure or cultural facilities or services despite the urban focus for development providing good accessibility and resident working age population with families within the market catchment. On balance, it is considered there will be a balance and therefore little or no effect on the provision of health, leisure and recreational facilities even for this higher option.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 12.5ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on soil quality as a result of planned development activity. However, the location of development is likely to have the greatest influence on the impact on soil quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 12.5ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on water quality and water pollution as a result of planned development activity. However, the location of development is likely to have the greatest influence on the impact on water quality and water pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management.	+/?	+/?	+/?	This option represents a level of growth at 12.5ha/year which is below the 14.5ha/year in the adopted Development Plan. Lower levels of planned development are more likely to be accommodated in areas of low flood risk. However, ultimately, this is dependent on the specific location of development. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?	?	?	This option represents a level of growth at 12.5ha/year which is below that in the adopted Development Plan (at 14.5ha/year). However, the location of development and relationship to Air Quality Management Areas is likely to have the greatest impact on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions.	+	+	+	The management of carbon dioxide emissions is a strategic matter for achieving a 'carbon neutral' economy and improving standards of living in Shropshire. The scale of planned development associated with this option is lower than that in the adopted Development Plan as such it could positively impact on industrial emissions, commercial transport volumes and risks to air quality standards. This would reduce energy consumption in business/industrial sectors and growth in carbon dioxide emissions especially from transport and travel. However, this may discourage the uptake of renewable energy into production processes and the integration of new technologies to support a 'carbon neutral' economy. A consequent reduction in the growth of carbon dioxide emissions would still be a key outcome.
13: Promote adaptation and mitigation to climate change.	0	0	0	Opportunities to mitigate and adapt to climate change would likely remain at the same level as present, balanced by lower growth than planned within the adopted Development Plan which creates fewer opportunities to accelerate the climate change response but somewhat offset by a reduced potential for impact.
14: Promote efficient use of natural resources.	+	+	+	The annual average employment land requirement associated with this option is lower than within the adopted Development Plan and would therefore likely reduce the demand for primary resources and increase potential for use of secondary/recycled resources and the potential for focusing development on previously developed land.
15: Conserve and enhance features and areas of heritage value and their setting.	+/?	+/?	+/?	The annual average employment land requirement associated with this option is lower than within the adopted Development Plan and would therefore likely has a reduced potential to harm existing heritage assets and their settings. However, this may be somewhat offset by reduced / lower opportunities to contribute to their restoration, enhancement and long-term management.
16: Conserve and enhance landscape character and local distinctiveness.	+	+	+	Shropshire's varied landscapes and its special designations and locally appreciated features and distinctiveness would still be supported by the lower growth for Shropshire. All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option proposes a lower annual average scale of employment development than the adopted Development Plan as such it is expected to have a lower potential for impact on this Sustainability Objective.

## **Summary for Employment Land Requirement Option 2a: Significant Growth**

- 9.42. Option 2a provides a significant 10% uplift to the forecast employment land need for Shropshire. As such, it provides flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. Furthermore, the employment land requirement does not represent a 'ceiling' on the scale of employment land development and the effects of market demand could still increase levels/rates of development. However, this option does not include a contribution towards unmet employment land need forecast to arise in the Black Country.
- 9.43. The annual average rate of employment land development resulting from this option is higher than recent take-up in Shropshire between 2006 and 2020, but is lower than that associated with the employment land requirements in the adopted Development Plan and as proposed within the submission version of the draft Shropshire Local Plan.
- 9.44. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:
- a. The employment land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed employment land requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the employment land requirement being exceeded.
  - b. The anticipated capacity and/or rates of delivery on the proposed site allocations might need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
  - c. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.
  - d. One or more of the proposed site allocations might need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
  - e. A combination of the above.
- 9.45. This option is expected to have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats; reduction of carbon dioxide emissions; promotion of the efficient use of natural resources; and conservation and enhancement of landscape character and local distinctiveness.

- 9.46. This option should have a positive effect on the encouragement of a strong and sustainable economy in Shropshire, as whilst the annual average level of employment land developed associated with this option is lower than the requirement in the adopted Development Plan, it is higher than recent take-up in Shropshire between 2006 and 2020.
- 9.47. This option could also have a positive effect on reducing flood risk and improving flood management; and conservation and enhancement of heritage assets and their settings. However, this is dependent on factors such as the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.
- 9.48. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society; the provision of support for physical activity and healthy communities; and the further promotion of the adaptation and mitigation of climate change. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process.
- 9.49. This option could have a positive, neutral or negative effect on the promotion of access to services; the use of sustainable means of transport; reducing the need for people to travel by car; and soil, air and water quality and air/water pollution. This impact is dependent on factors such the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.

**Table 9.4: Employment Land Requirement Option 2b: Significant Growth with a Contribution to the Black Country Authorities**

**Employment Land Requirement Option 2b: Significant Growth Plus a 30 hectare Contribution to the Black Country Authorities unmet employment land need**

This option represents the adjusted baseline employment land forecast of 250 hectares (annual average 11.5 hectares/year) with a 10% uplift to 275 hectares at an annual average of 12.5 hectares/year over the 22 year period from 2016 to 2038.

This option provides a further 30 hectare contribution to the Black Country Authorities which represents a total minimum employment land requirement of **300 hectares** over the 22 year period from 2016 to 2038 which gives an annual average of around **14 hectares/year**.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option provides a significant uplift on the forecast employment land need for Shropshire, plus a further contribution of 30ha of employment land towards unmet need in the Black Country. The 14ha annual average rate of employment development proposed within this option, is similar to but below the 14.5ha annual average rate within the adopted Development Plan. This option would therefore result in a small reduction in the planned release of greenfield land for employment development and a reduction in the current and proposed planned rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	++	++	++	This option provides a significant uplift on the forecast employment land need for Shropshire, plus a further uplift as a contribution to the Black Country (which in turn provides opportunities to enhance the economy), to an annual average rate of 14ha/yr. This annual average rate is comparable to but less than the 14.5ha/year annual average rate in the adopted Development Plan, but is higher than annual average employment land take-up in Shropshire between 2006 and 2020. This option would continue to increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support to diversify our labour force. This option provides opportunities to deliver strategic economic investment from regional, national or international markets and facilitate appropriate 'windfall' employment development consistent with the strategic policy of the draft Shropshire Local Plan. This option would create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.

Page 224

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	?	?	?	This option has a lower annual average employment land requirement than that in the adopted Development Plan. The consequent lower levels of planned investment in the County, reduced planned growth in numbers in employment and reduced planned growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.
5: Encourage the use of sustainable means of transport.	+	+	+	This option has a similar annual average employment land requirement to that in the adopted Development Plan, but includes a specific contribution to the Black Country. There would therefore be a continued demand to maintain and improve existing access to public transport on primary and secondary routes where this investment may be a constraint on the growth of the economy, enhanced by increased commuting from the Black Country. An increased focus for the modal shift from car usage would be walking, cycling and new electronic transport technologies with an increasing need for investment in the highway/footway infrastructure possibly constraining this modal shift with increasing levels of economic growth. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	-	-	-	This option has a similar annual average employment land requirement to that in the adopted Development Plan. However, as this growth includes a contribution to the Black Country, it would be more attractive to workers commuting to employment in the County. Therefore whilst this option would encourage use and provision of sustainable modes of transport, it would also likely encourage car borne commuting to good quality employment in the County. This is anticipated in the provision of land to help meet Black Country unmet need, which could adversely impact the objective to reduce car travel. On balance, this option is considered likely to adversely impact the objective to reduce car travel.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	0	0	0	This option has a similar annual average employment land requirement to that in the adopted Development Plan. Recreational activities may be associated with the natural environment (which Sustainability Objective 1 considers to be positively affected by this option) or formal health, leisure or cultural facilities provided through public investment or commercial enterprises. In this option, anticipated overall activity levels may remain similar to the current situation because the proposed scale of development is similar to that of the adopted Development Plan. The encouragement of cross boundary travel to work movements into the County might mitigate any reduction to anticipated demand for commercial 'recreational' services, but could also somewhat limit capacity available to resident communities.
8: Protect and improve soil quality.	-/?	-/?	-/?	This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is less than but comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. As a result, it is anticipated this option could negatively impact the soil resources and best and most versatile agricultural land. However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	-/?	-/?	-/?	This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is less than but comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. As a result, it is anticipated this option could negatively impact the water quality and water pollution. However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management.	-/?	-/?	-/?	<p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is less than but comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>As a result, it is anticipated this option could negatively impact the water quality and water pollution.</p> <p>However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	0/?	0/?	0/?	<p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>However, the location of development and relationship to Air Quality Management Areas is likely to have the greatest impact on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.</p>
12: Reduce carbon dioxide emissions.	0/?	0/?	0/?	<p>The management of carbon dioxide emissions is a strategic matter for achieving a 'carbon neutral' economy and improving standards of living in Shropshire. This significant scale of development is not expected to adversely impact industrial emissions, transport volumes and air quality standards compared to planned development in the adopted Development Plan.</p> <p>This might also facilitate uptake of renewable energy into primary production processes and integration of new technologies to contribute towards achieving a 'carbon neutral' economy. It is expected provision to meet Black Country unmet need may have implications for carbon dioxide emissions.</p>

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	+	+	+	<p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>This may increase car usage and distances travelled but would necessitate investment in public transport and a movement towards more active travel in urban locations. Greater prosperity with increased participation would encourage the migration from fossil fuel to electric vehicles, uptake of renewable energy into primary production processes and integration of new technologies for the 'carbon neutral' economy. The delivery of land to help meet Black Country unmet need would positively impact this sustainability objective by further encouraging practices to help address the climate change emergency.</p>
14: Promote efficient use of natural resources.	-	-	-	<p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>It will entail the release of land for new development including greenfield sites. There would be a greater need for primary aggregate to deliver strategic infrastructure investment to access and service these sites. This need would be increased through the provision of land to help meet Black Country unmet need in Shropshire.</p>
15: Conserve and enhance features and areas of heritage value and their setting.	-	-	-	<p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>The scale of development in this option has some potential to contribute towards the restoration, enhancement and long-term management of the setting of heritage assets subject to the needs of specific locations. However, this option could also have a more widespread impact on heritage assets arising from economic development, negatively impacting this Sustainability Objective.</p> <p>The extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.</p>

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness.	-	-	-	<p>All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place.</p> <p>This option represents one of the highest growth options considered. It includes a significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020.</p> <p>The extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.</p>

**Summary for Employment Land Requirement Option 2b: Significant Growth with a Contribution to the Black Country Authorities**

- 9.50. Option 2b provides a significant 10% uplift to the forecast employment land need for Shropshire. As such, it provides flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. Furthermore, the employment land requirement does not represent a ‘ceiling’ on the scale of employment land development and the effects of market demand could still increase levels/rates of development.
- 9.51. This option also includes a further 30ha uplift, as a specific contribution towards the unmet employment land needs forecast to arise in the Black Country.
- 9.52. The annual average rate of employment land development resulting from this option is consistent with the annual average employment land requirement proposed within the submission version of the draft Shropshire Local Plan and comparable to but somewhat lower than that associated with the employment land requirement in the adopted Development Plan. However, it is higher than the annual average employment land take-up in Shropshire between 2006 and 2020.
- 9.53. This option would encourage a significant level of strategic economic investment and improvements in the growth and performance of the local economy. As such, it is expected to have a strongly positive effect on the encouragement of a strong and sustainable economy throughout Shropshire. This would improve the sustainability of the local economy and help to deliver the economic aspirations across the county. These aspirations would include the creation of more, higher quality jobs; and accelerated changes to the number and productivity of the resident, working age, labour force.

- 9.54. It is also expected that this option would have a positive effect on the encouragement of the use of sustainable means of transport; the promotion of adaptation and mitigation to climate change; and the range of plants and animals and the quality and extent of wildlife habitats.
- 9.55. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society; and supporting healthy and active communities. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process. It may also have a neutral effect on air quality/air pollution; and reduction of carbon dioxide emissions. However, this is somewhat dependent on other factors such as the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
- 9.56. This option could have a positive, neutral or negative effect on the promotion of access to services. This impact is dependent on a number of factors.
- 9.57. This option is expected to have a negative effect on reducing the need to travel by car; promotion of the efficient use of natural resources; conservation and enhancement of heritage assets; and conservation and enhancement of landscape character and local distinctiveness. However, the extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.
- 9.58. The option could also have a negative effect on soil quality; water quality/pollution; and flood risk/management. However, this will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.

**Table 9.5: Employment Land Requirement Option 3a: High Growth**

Employment Land Requirement Option 3a: High Growth				
<p>This option represents a 15% uplift on the adjusted baseline employment land forecast of 250 hectares over the 22-year plan period from 2016-2038 (annual average 11.5 hectares/year).</p> <p>This option represents a total minimum employment land requirement of <b>290 hectares</b> over the 22 year period from 2016 to 2038 which gives an annual average of around <b>13 hectares/year</b>.</p>				
Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	This option provides a significant uplift on the forecast employment land need for Shropshire. The 13ha annual average rate of employment development proposed within this option is below the 14.5ha annual average rate within the adopted Development Plan. This option would therefore result in a reduction in the planned release of greenfield land for employment development and a reduction in the current and proposed planned rates of employment development. This would have a positive effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats in Shropshire to 2038.
2: Encourage a strong and sustainable economy throughout Shropshire.	+	+	+	This option provides a significant uplift on the forecast employment land need for Shropshire, to an annual average rate of 13ha/yr. This annual average rate is less than the 14.5ha/year annual average rate in the adopted Development Plan, but is higher than annual average employment land take-up in Shropshire between 2006 and 2020. The option would represent a slowing down in the rate of planned employment land development. However, it would continue to support the achievement of economic growth aspirations including the creation of more jobs, and support to diversify our labour force. This option could provide some limited opportunities for strategic economic investment to meet demands in the local and sub-regional economy. This option could create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society.	?	?	?	This option has a somewhat lower annual average employment land requirement than that in the adopted Development Plan. The consequent lower levels of planned investment in the County, reduced planned growth in numbers in employment and reduced planned growth in employment land development may reduce demand for and number and capacity of new services and facilities to serve communities in the County.
5: Encourage the use of sustainable means of transport.	?	?	?	The annual average rate of employment development would be 13ha/year which is somewhat lower than the 14.5ha/year in the adopted Development Plan. As such, this option would reduce aspiration for and have the lowest planned potential for employment to support the maintenance or improvement of existing access to and demand for public transport. However, the location of employment development is also a significant factor in influencing any impact on the use of sustainable means of transport. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	?	?	?	The annual average rate of employment development would be 13ha/year which is somewhat lower than the 14.5ha/year in the adopted Development Plan, which could encourage car borne commuting out/into the County, travel to work by car within the County and car travel for other purposes. However, the location of employment development is also a significant factor in influencing any impact on reduction of the need to travel by car. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
7: Support active and healthy communities.	0	0	0	The lower level of growth than proposed within the adopted Development Plan may positively contribute to safeguarding of recreational activities associated with the natural environment but could adversely affect public investment or commercial enterprise in new or existing, formal health, leisure or cultural facilities or services despite the urban focus for development providing good accessibility and resident working age population with families within the market catchment. On balance, it is considered there will be a balance and therefore little or no effect on the provision of health, leisure and recreational facilities even for this higher option.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 13ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on soil quality as a result of planned development activity. However, the location of development is likely to have the greatest influence on the impact on soil quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 13ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on water quality and water pollution as a result of planned development activity. However, the location of development is likely to have the greatest influence on the impact on water quality and water pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
10: Reduce flood risk and improve flood management.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 13ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on flood risk. However, the location of development is likely to have the greatest influence on the impact on water quality and water pollution. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?	?	?	The employment land requirement associated with this option has a lower annual average rate of development at 13ha/year than the 14.5ha/year in the adopted Development Plan, which would reduce the potential for impact on air quality and air pollution as a result of planned development activity. However, the location of development and relationship to Air Quality Management Areas is likely to have the greatest impact on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions.	0	0	0	The management of carbon dioxide emissions is a strategic matter for achieving a 'carbon neutral' economy and improving standards of living in Shropshire. This scale of development is not expected to adversely impact industrial emissions, transport volumes and air quality standards compared to planned development in the adopted Development Plan. This might also facilitate uptake of renewable energy into primary production processes and integration of new technologies to contribute towards achieving a 'carbon neutral' economy.

Sustainability Objectives	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	0	0	0	Opportunities to mitigate and adapt to climate change would likely remain at the same level as present, balanced by lower growth than planned within the adopted Development Plan which creates fewer opportunities to accelerate the climate change response but somewhat offset by a reduced potential for impact.
14: Promote efficient use of natural resources.	+/?	+/?	+/?	The annual average employment land requirement associated with this option is somewhat lower than within the adopted Development Plan and would therefore likely reduce the demand for primary resources and increase potential for use of secondary/recycled resources and the potential for focusing development on previously developed land. However, this is also somewhat dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
15: Conserve and enhance features and areas of heritage value and their setting.	+/?	+/?	+/?	The annual average employment land requirement associated with this option is somewhat lower than within the adopted Development Plan and would therefore likely has a reduced potential to harm existing heritage assets and their settings. However, this may be somewhat offset by reduced / lower opportunities to contribute to their restoration, enhancement and long-term management. This is also somewhat dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
16: Conserve and enhance landscape character and local distinctiveness.	+/?	+/?	+/?	Shropshire's varied landscapes and its special designations and locally appreciated features and distinctiveness would still be supported by the lower growth for Shropshire. All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option proposes a somewhat lower annual average scale of employment development than the adopted Development Plan as such it is expected to have a lower potential for impact on this Sustainability Objective. However, this is also somewhat dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.

### **Summary for Employment Land Requirement Option 3a: High Growth**

9.59. Option 3a provides a very significant 15% uplift to the forecast employment land need for Shropshire. As such, it provides very significant flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. Furthermore, the employment land requirement does not represent a

'ceiling' on the scale of employment land development and the effects of market demand could still increase levels/rates of development.

9.60. However, this option does not include a contribution towards unmet employment land need forecast to arise in the Black Country.

9.61. The annual average rate of employment land development resulting from this option is higher than recent take-up in Shropshire between 2006 and 2020, but is lower than that associated with the employment land requirements in the adopted Development Plan and as proposed within the submission version of the draft Shropshire Local Plan.

9.62. This level of growth is lower than that currently proposed within the draft Shropshire Local Plan. As such, it could mean that:

- a. The employment land supply buffer is increased. This would provide further confidence regarding the deliverability of the proposed employment land requirement. However, the existing buffer is considered robust, as such there is the potential that this approach would result in the employment land requirement being exceeded.
- b. The anticipated capacity and/or rates of delivery on the proposed site allocations might need to be reduced. Shropshire Council takes a cautious approach to approximate site capacities which are informed through proportionate and robust site assessment based on best available information and professional judgement. However, it might be necessary to re-appraise the anticipated scales of delivery on a site by site basis.
- c. The anticipated capacity and/or rates of delivery from other sources including windfall sites might also need to be reduced. Shropshire Council takes a similarly cautious approach to assumptions for windfall allowances regarding the capacity and delivery rates/timescales. This exercise would need to reflect the potential to change the density of development by type of site and location.
- d. One or more of the proposed site allocations might need to be de-selected. Whilst this might present an opportunity to de-select one or more underperforming site allocations, this would be dependent on the strategic approach to the distribution of development. This would also need to ensure that employment land needs and demands would be met across the County.
- e. A combination of the above.

9.63. This option would encourage investment and improvements supporting the growth and performance of the local economy. As such, it is expected to have a positive effect on the encouragement of a strong and sustainable economy throughout Shropshire. This would improve the sustainability of the local economy and help to deliver the economic aspirations across the county. These aspirations would include the creation of more, higher quality jobs; and accelerated changes to the number and productivity of the resident, working age, labour force.

- 9.64. This option is also expected to have a positive effect on the range of plants and animals and the quality and extent of wildlife habitats.
- 9.65. This option could have a positive effect on the promotion of efficient use of natural resources; conservation and enhancement of heritage assets; and the conservation and enhancement of landscape character. However, this is somewhat dependent on factors such as the strategic distribution of development and specific site allocations are assessed separately within the SA process.
- 9.66. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society; the provision of support for physical activity and healthy communities; reduction of carbon dioxide emissions; and the further promotion of the adaptation and mitigation of climate change. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process.
- 9.67. This option could have a positive, neutral or negative effect on the promotion of access to services; the use of sustainable means of transport; reducing the need for people to travel by car; soil, air and water quality and air/water pollution; and flood risk. This impact is dependent on factors such the specific location of development – with the strategic distribution of development and specific site allocations assessed elsewhere in the SA process.

**Table 9.6: Employment Land Requirement Option 3b: High Growth with a Contribution to the Black Country Authorities**

**Employment Land Requirement Option 3b: High Growth Plus a 30 hectare Contribution to the Black Country Authorities unmet employment land need**

This option represents the adjusted baseline employment land forecast of 250 hectares (annual average 11.5 hectares/year) with a 15% uplift to 290 hectares at an annual average of 13 hectares/year over the 22 year period from 2016 to 2038.

This option provides a further 30 hectare contribution to the Black Country Authorities which represents a total minimum employment land requirement of **320 hectares** over the 22 year period from 2016 to 2038 which gives an annual average of around **14.5 hectares/year**.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-	-	-	This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. This option would likely require large greenfield sites to be released. Such sites would require a master-planned approach and would deliver opportunities for biodiversity gains in the medium to longer term. Nevertheless, it is likely to have a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats across Shropshire to 2038. Specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire.	++	++	++	This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country (which in turn provides opportunities to enhance the economy). This option would continue to increase and diversify the capacity for the local and regional economy to invest in Shropshire, to support the achievement of economic growth aspirations including the creation of more jobs, and support diversification of our labour force. This option provides opportunities to deliver strategic economic investment from regional, national or international markets and facilitate appropriate 'windfall' employment development consistent with the strategic policy of the draft Shropshire Local Plan. This option would create a balanced supply of employment land and deliver more 'higher value' jobs with the potential to improve the spatial distribution of economic opportunity across the County and to elevate the profile of Shropshire

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society.	0	0	0	The employment land requirement is unlikely to impact on the provision of sufficient good quality housing.
4: Promote access to services for all sections of society.	?	?	?	This option represents the highest growth option considered. The continued investment and numbers of working age people in employment would likely create demand for existing and new services and facilities that serve communities in the county. However, this demand could increase pressures on these services, particularly during the working day and especially at peak hours. This is expected to require further investment in critical or higher value services and facilities to keep pace with the increasing demand and to maintain service quality standards. The longer-term viability of many more communities is expected to improve through the geographic implications of the increased economic investment in the county helping to sustain key local services and facilities like local shops, post offices and banks.
5: Encourage the use of sustainable means of transport.	++	++	++	There would be a continued demand to maintain and improve existing access to public transport on primary and secondary routes where this investment may be a constraint on the growth of the economy. An increased focus for the modal shift from car usage would be walking, cycling and new electronic transport technologies with an increasing need for investment in the highway/footway infrastructure possibly constraining this modal shift with increasing levels of economic growth. The strategic distribution of development and specific site allocations are assessed separately in the SA process.
6: Reduce the need of people to travel by car.	-	-	-	This highest growth option would be attractive to workers commuting to employment in the County. Therefore whilst this option would encourage use and provision of sustainable modes of transport, it would also likely encourage car borne commuting to good quality employment in the County. This is anticipated in the provision of land to help meet Black Country unmet need, which could adversely impact the objective to reduce car travel. On balance, this option is considered likely to adversely impact the objective to reduce car travel.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+	+	+	<p>Recreational activities are associated with the natural environment and formal health, leisure or cultural facilities provided through public investment or commercial enterprises.</p> <p>It is considered that this option could negatively affect recreational activities are associated with the natural environment, as concluded within the assessment of Sustainability Objective 1. However, it is also considered that as overall economic activity levels would increase and significant economic development would occur, this could positively influence the capacity to support new and existing formal health, leisure and cultural facilities and activities. This outcome would be supported by, but may also require additional provision, as a result of changes to commuting patterns with the Black Country.</p>
8: Protect and improve soil quality.	-/?	-/?	-/?	<p>This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. As a result, it is anticipated this option could negatively impact the soil resources and best and most versatile agricultural land.</p> <p>However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution.	-/?	-/?	-/?	<p>This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. As a result, it is anticipated this option could negatively impact the water quality and water pollution.</p> <p>However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management.	-/?	-/?	-/?	This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. As a result, it is anticipated this option could negatively impact the water quality and water pollution. However, this is also dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution.	?/0	?/0	?/0	This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. However, the location of development and relationship to Air Quality Management Areas is likely to have the greatest impact on air quality. The strategic distribution of development and specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions.	-	-	-	The management of carbon dioxide emissions is a strategic matter for achieving a 'carbon neutral' economy and improving standards of living in Shropshire. The scale of employment land provision and the rate of economic activity may have implications for industrial emissions, transport volumes and air quality standards. However, greater economies of scale would offer opportunities for increasing provision of energy from renewable sources, reducing energy consumption with greater energy efficiency. This might also encourage a greater uptake of renewable energy into primary production processes and a further integration of new technologies to help achieve a 'carbon neutral' economy. It is expected this highest scale of employment land provision may have implications for carbon dioxide emissions including provision to meet Black Country unmet need subject to the proposed use of the land.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change.	+	+	+	This highest option would have the greatest capacity to increase investment in the Shropshire economy to achieve our economic growth aspirations including creating more jobs. This may increase car usage and distances travelled but would necessitate investment in public transport and a movement towards more active travel in urban locations. Greater prosperity with increased participation would encourage the migration from fossil fuel to electric vehicles, uptake of renewable energy into primary production processes and integration of new technologies for the 'carbon neutral' economy. The delivery of land to help meet Black Country unmet need would positively impact this sustainability objective by further encouraging practices to help address the climate change emergency.
14: Promote efficient use of natural resources.	-	-	-	This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. It will entail the release of land for new development including greenfield sites. There would be a greater need for primary aggregate to deliver strategic infrastructure investment to access and service these sites. This need would be increased through the provision of land to help meet Black Country unmet need in Shropshire.
15: Conserve and enhance features and areas of heritage value and their setting.	-	-	-	This is the highest scale of growth and of the options considered would require the release of the largest amount of land (including greenfield land) for development. The scale of development in this option has some potential to contribute towards the restoration, enhancement and long-term management of the setting of heritage assets subject to the needs of specific locations. However, this option could also have a more widespread impact on heritage assets arising from economic development, negatively impacting this Sustainability Objective. The extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness.	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features that convey a sense of place. This option represents the highest growth option considered. It includes a very significant uplift on the forecast employment land need for Shropshire and a 30ha contribution to the Black Country. It equates to an annual average rate of 14.5ha/yr, which is comparable with that in the adopted Development Plan, but is significantly higher than the recent annual average take-up in Shropshire between 2006 and 2020. The extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.

### **Summary for Employment Land Requirement Option 3b: High Growth with a Contribution to the Black Country Authorities**

- 9.68. Option 3b represents the highest of the reasonable employment land growth options considered. The employment land requirement associated with this option equates to a level of growth that is substantially higher than any of the preceding options. This scale of growth would require the highest level of land for development, likely including large greenfield sites to be released compared with these other options. However, the release of these greenfield sites would be supported by a master-planning approach to their development. The approach to the strategic distribution and specific site allocations are separately assessed in the SA process.
- 9.69. This option provides a very significant 15% uplift to the forecast employment land need for Shropshire. As such, it provides very significant flexibility to accommodate increased demand over the plan period or indeed to respond to other changes in economic circumstances or other opportunities that may arise, during the plan period. Furthermore, the employment land requirement does not represent a ‘ceiling’ on the scale of employment land development and the effects of market demand could still increase levels/rates of development.
- 9.70. This option also includes a further 30ha uplift, as a specific contribution towards the unmet employment land needs forecast to arise in the Black Country.
- 9.71. The annual average rate of employment land development resulting from this option is higher than recent take-up in Shropshire between 2006 and 2020 and that proposed within the submission version of the draft Shropshire Local Plan. It is equivalent to the annual average rate of employment land development associated with the aspirational employment land requirement in the adopted Development Plan.

- 9.72. As this level of growth is higher than that currently proposed within the draft Shropshire Local Plan, it could mean that:
- a. Greater reliance is placed on the employment land supply associated with proposed settlement guidelines and windfall allowances. Settlement employment guidelines proposed within the draft Shropshire Local Plan constitute either the level of employment land to be made available for development or specifically subject to development, dependent on location. Windfall allowances allow some flexibility for sites that are not allocated for development/other sources of supply to come forward. The settlement guidelines and associated windfall allowances proposed within the submission version of the draft Shropshire Local Plan provide significant flexibility and allow for choice and competition in the market and there may be an opportunity for them to accommodate an uplift to the employment land requirement.
  - b. Settlement guidelines and windfall allowances in one or more settlements could be increased in order to provide further flexibility for supply to come forwards.
  - c. The density of proposed site allocations could be increased, thereby increasing their capacity. However, a very cautious approach would be required as significant effort has already been undertaken to maximise site density for employment allocations – although this is challenging in a Shropshire context. Furthermore, it would be necessary to consider whether the increased density still resulted in an appropriate form of development, as such this exercise would need to be undertaken on a site by site basis.
  - d. One or more of the proposed site allocations could be expanded to increase its capacity. There may be opportunities to extend the site area of proposed allocations in order to increase capacity. This additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
  - e. One or more additional site allocations could be proposed. Additional site allocations could be associated with existing settlements or new strategic settlements. They could be allocated in order to provide additional capacity. This additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.
  - f. A combination of the above. It may be appropriate to consider one or more of the identified options in combination.
- 9.73. This option would encourage the highest level of strategic economic investment and improvements in the growth and performance of the local economy. As such, it is expected to have a strongly positive effect on the encouragement of a strong and sustainable economy throughout Shropshire. This would improve the sustainability of the local economy and help to deliver the economic aspirations across the county. These aspirations would include the creation of more, higher quality jobs; and accelerated changes to the number and productivity of the resident, working age, labour force.
- 9.74. It is also expected that this option would have a strongly positive effect on the encouragement of the use of sustainable means of transport, as the level of economic development supports investment in transport infrastructure.

- 9.75. This option is expected to have a positive effect on the promotion of adaptation and mitigation to climate change; and support for active and healthy communities.
- 9.76. It is expected that this option would have a neutral effect on the provision of sufficient good quality housing which meets the needs of all sections of society. Ultimately these issues are more likely to be affected by other elements of the Local Plan assessed elsewhere in the SA process. It may also have a neutral effect on air quality/air pollution; however, this is somewhat dependent on the strategic distribution of development and the location of site allocations, which are assessed separately in the SA process.
- 9.77. This option could have a positive, neutral or negative effect on the promotion of access to services.
- 9.78. This option is expected to have a negative effect on the range of plants and animals and the quality and extent of wildlife habitats; reducing the need to travel by car; reduction of carbon dioxide emissions; promotion of the efficient use of natural resources; conservation and enhancement of heritage assets; and conservation and enhancement of landscape character and local distinctiveness. However, the extent of any impact will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.
- 9.79. The option could also have a negative effect on soil quality; water quality/pollution; and flood risk/management. However, this will be dependent on the strategic distribution of development and specific site allocations, which are assessed separately within the SA process.

## **Comparison Summary of Reasonable Options for the Employment Land Requirement**

- 9.80. The purpose of this component of the additional SA assessment is to inform judgements about which of the reasonable alternatives for the employment land requirement is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 9.1 to 9.6 above.
- 9.81. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the employment land requirement, Table 9.7 has been prepared for illustrative purposes. This summarises, for comparison, how the three reasonable alternative options (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) perform against each SA objective.
- 9.82. This is achieved by 'ranking' the performance of each reasonable option from the best performing (1) to the poorest performing (6) against each SA objective. Where reasonable alternatives achieve the same ranking in the short, medium and longer term for an SA objective, professional judgement has been used to determine whether the increasing scale of growth proposed in the option would be more likely to have a positive or negative effect on that SA objective.
- 9.83. It is not appropriate to 'total' the scores across all the objectives for each option. The performance of the option requires consideration of each SA objective separately and 'totalling' the scores would not achieve this outcome. Furthermore, the SA objectives address different considerations, so it is not possible to combine them into a single score.
- 9.84. There are also more SA objectives addressing environmental matters than social and economic matters, as such 'totalling' the scores would create a bias towards environmental factors. The principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving 'sustainability'.

**Table 9.7: Comparison of Employment Land Requirement Options**

Sustainability Objective	Option 1a: Productivity Growth	Option 1b: Productivity Growth + 30ha Contribution to Black Country	Option 2a Significant Growth	Option 2b: Significant Growth + 30ha Contribution to Black Country	Option 3a: High Growth	Option 3b: High Growth + 30ha Contribution to Black Country
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	3	5	4	6
2: Encourage a strong and sustainable economy throughout Shropshire	6	4	5	2	3	1
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	N/A	N/A	N/A	N/A	N/A	N/A
4: Promote access to services for all sections of society	6	1	5	3	4	2
5: Encourage the use of sustainable means of transport	4	3	6	2	5	1
6: Reduce the need of people to travel by car	2	1	3	5	4	6
7: Support active and healthy communities.	2	2	2	2	2	1
8: Protect and improve soil quality	1	2	3	5	4	6
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	2	3	5	4	6
10: Reduce flood risk and improve flood management	1	2	3	5	4	6
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	1	2	3	5	4	6
12: Reduce carbon dioxide emissions	1	2	3	5	4	6
13: Promote adaptation and mitigation to climate change	3	3	3	2	3	1
14: Promote efficient use of natural resources	1	2	3	5	4	6
15: Conserve and enhance features and areas of heritage value and their setting	1	2	3	5	4	6
16: Conserve and enhance landscape character and local distinctiveness	1	2	3	5	4	6

## Conclusion

- 9.85. Tables 9.1 - 9.6 summarise the updated additional SA assessment work for each of the reasonable employment land requirement options identified in this section of the additional SA assessment. Table 9.7 summarises, for comparison, how the three reasonable alternatives (each with and without a proposed contribution to the unmet housing need forecast to arise in the Black Country) perform against each of the SA objectives – this is for illustrative purposes only.
- 9.86. It is important to recognise that the principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving ‘sustainability’.
- 9.87. It is apparent from the results of the updated additional SA assessment work that none of the reasonable employment land requirement options are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 9.88. Conversely, employment land requirement options 2b (significant growth plus a 30ha employment land contribution to the Black Country Authorities) and 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) are both likely to result in a strongly positive effect on *SA objective 2: encouragement of a strong and sustainable economy throughout Shropshire* in the short, medium and long term.
- 9.89. Furthermore, option 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) is likely to have a strongly positive effect on *SA objective 5: encouraging the use of sustainable means of transport* in the short, medium and long term.
- 9.90. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 9.91. The potential for options 2b (significant growth plus a 30ha employment land contribution to the Black Country Authorities) and 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) to achieve a strongly positive effect on *SA objective 2: encouragement of a strong and sustainable economy throughout Shropshire* is perhaps unsurprising this is directly related to the amount of employment land developed, and these options represent significant levels of employment land development in a Shropshire context. They also present the opportunity to attract additional employment opportunities (as employers seek appropriate sites to meet their needs) and workforce from the Black Country (through changes to commuting patterns).

- 9.92. The potential for option 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) to achieve a strongly positive effect on *SA objective 5: encouraging the use of sustainable means of transport* is linked to the ‘critical mass’ which supports such provision, created by this significant level of employment development (and associated movements of materials and employees) and changes to commuting patterns as a result of the contribution to the unmet employment land need forecast to arise in the Black Country.
- 9.93. It is important to note that there are a number of SA objectives that are linked to the strategic distribution and specific location of development (sites), and as such in the context of this updated additional SA assessment of reasonable options for the employment land requirement, the conclusion is in some instances unknown. The strategic distribution and location of development (sites) are assessed separately within the SA process.
- 9.94. In general terms, the updated additional SA assessment work can be summarised as concluding that the greater the level of employment land proposed within the option, the greater the likelihood of positive impacts on social and economic factors. Conversely the greater the level of employment land proposed within the option, the greater the likelihood of negative impacts on environmental factors.
- 9.95. However, this is also impacted by whether the option involves a proposed restructure of the economy (as proposed within the productivity growth options) or includes a proposed contribution to the unmet employment land need forecast to arise in the Black Country – with potential for changes to commuting patterns as a result.
- 9.96. **It is important to recognise that the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.**
- 9.97. The employment land requirement within options 1a (productivity growth), 1b (productivity growth plus a 30ha employment land contribution to the Black Country Authorities), 2a (significant growth), 2b (significant growth plus a 30ha employment land contribution to the Black Country Authorities) and 3a (high growth) represent annual average levels of employment land development that are to varying degrees less than the annual average employment land requirement within the adopted Development Plan. This is perhaps unsurprising as the adopted Development Plan sets a very ambitious and aspirational employment land requirement. However, crucially the amount of growth proposed within all these options, is sufficient to meet local employment land need.
- 9.98. Furthermore, with the exception of option 1a (which has a comparable annual average employment land requirement to recent annual average take-up in Shropshire between 2006 and 2020), all options have an annual average employment land requirement that exceeds recent annual average take-up in Shropshire between 2006 and 2020.
- 9.99. Option 2b (significant growth plus a 30ha employment land contribution to the Black Country Authorities) results in a comparable employment land requirement to that proposed within the submission version of the draft Shropshire Local Plan.

- 9.100. Options 1a (productivity growth), 1b (productivity growth plus a 30ha employment land contribution to the Black Country Authorities), 2a (significant growth) and 3a (high growth) all result in a lower employment land requirement than that proposed within the submission version of the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of these options) for the potential refinement of the proposed strategy to align with either of these options, but irrespective of this, there is clearly confidence that all of these options are deliverable.
- 9.101. Option 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) results in an employment land requirement that is higher than that proposed within the submission version of the draft Shropshire Local Plan. There are a number of different means (including those documented within the summary of this option) for the potential refinement of the proposed strategy to align with this option, but irrespective of this, as it does entail delivery above that currently proposed there would need to be careful consideration of whether the relevant option is deliverable.
- 9.102. The employment land requirements within options 1a (productivity growth); 2a (significant growth); and 3a (high growth), would provide no contribution to unmet employment land need forecast to arise in the Black Country. As the draft Shropshire Local Plan proposed a contribution of 30ha of employment land towards the unmet employment land needs forecast to arise in the Black Country, these options would remove this proposed contribution to the unmet employment land needs forecast to arise in the Black Country.
- 9.103. These options would also have lower potential for a positive impact on the ability to attract additional employment opportunities (as employers seek appropriate sites to meet their needs) and workforce from the Black Country (through changes to commuting patterns) and a lower potential for a positive impact on the ability of the Black Country Authorities to meet their own employment land needs than the options that include a proposed contribution to the unmet employment land needs forecast to arise in the Black Country. However, the baseline position is that no contribution to unmet housing needs forecast to arise in the Black Country exists in Shropshire.
- 9.104. The employment land requirements within options 1b (productivity growth plus a 30ha employment land contribution to the Black Country Authorities); 2b (significant growth plus a 30ha employment land contribution to the Black Country Authorities); and 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities), would provide a contribution to unmet employment land need forecast to arise in the Black Country. These options would therefore continue this proposed contribution to the unmet employment land needs forecast to arise in the Black Country within the draft Shropshire Local Plan.
- 9.105. These options would also likely have a higher potential for a positive impact on the ability of the Black Country Authorities to meet their own employment land needs, and likely have a higher potential for a positive impact on the ability to attract additional employment opportunities (as employers seek appropriate sites to meet

their needs) and workforce from the Black Country (through changes to commuting patterns) than the baseline position (which is that no contribution to unmet employment land needs forecast to arise in the Black Country exists in Shropshire) or an option that includes no proposed contribution to the unmet employment land needs forecast to arise in the Black Country.

9.106. On balance, it is considered that option 3b (high growth plus a 30ha employment land contribution to the Black Country Authorities) represents the most sustainable of the reasonable options for the level of employment land development identified. This is because:

- a. It presents an opportunity to achieve a strongly positive effect on SA objective 2: encouragement of a strong and sustainable economy throughout Shropshire in the short, medium and long term.
- b. It presents the opportunity, in the long-term, to achieve a strongly positive effect on SA objective 5: encouraging the use of sustainable means of transport in the short, medium and long term.
- c. It presents an opportunity to achieve positive impacts against other identified sustainability objectives.
- d. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through careful consideration of the strategic distribution of development (assessed separately within the SA process); the specific locations of site allocations (assessed separately within the SA process); and the identification and application of appropriate policies to manage resultant development (also assessed separately within the SA process).
- e. It is considered that this option achieves the most appropriate 'balance' across all three pillars of sustainability – social, economic, and environmental.
- f. This option would ensure that local employment land need is achieved, whilst also providing some flexibility to respond to changes to local employment land need over the plan period and opportunities to respond to the identified issues and opportunities within the Economic Growth Strategy for Shropshire. It would also result in an appropriate contribution to the unmet employment land need forecast to arise in the Black Country (consistent with the contribution agreed through the Duty to Cooperate Process and within a signed Statement of Common Ground between Shropshire Council and the Black Country Authorities).

-Options 1b and 2b would also achieve these outcomes but, with regard to the opportunities to respond to the identified issues and opportunities within the Economic Growth Strategy for Shropshire, this would be to a lesser extent than option 3b.

-Options 1a and 2a would result in no contribution to the unmet employment land need forecast to arise in the Black Country and as such would impact on the ability to attract additional employment opportunities from the Black Country (as employers seek appropriate sites to meet their needs) and workforce from the

Black Country (through changes to commuting patterns) and impact on the ability to meet employment land need beyond the Shropshire area. Whilst achieving local employment land need and providing opportunities to respond to the identified issues and opportunities respond to the identified issues and opportunities within the Economic Growth Strategy for Shropshire, these opportunities would be to a lesser extent than option 3b.

-Option 3a would result in no contribution to the unmet housing need forecast to arise in the Black Country and as such would impact on the ability to attract additional employment opportunities from the Black Country (as employers seek appropriate sites to meet their needs) and workforce from the Black Country (through changes to commuting patterns) and impact on the ability to meet employment land need beyond the Shropshire area.

- 9.107. A range of factors will be considered when undertaking this planning judgement. This will include consideration of deliverability and the conclusions reached by the Planning Inspectors within their Interim Findings (ID28), particularly regarding the decision that the employment land requirement be established as a 'minimum' rather than being expressed as 'around'.
- 9.108. It is important to ensure that the proposed employment land requirement is deliverable within the proposed plan period. Consideration of deliverability will be informed by factors including:
- a. Past trends in employment completions and recent changes to the commercial land and property market shown in monitoring data and other research;
  - b. Recognition of factors that may influence the future rates of completion of employment land and premises in a changing commercial market.
- 9.109. In the planning judgement, the final determination of which reasonable employment land option should be identified as the proposed employment land requirement in the draft Shropshire Local Plan will be informed by a broad range of evidence and considerations. This additional SA Assessment will be an important consideration in reaching this planning judgement.
- 9.110. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 9.111. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 10. Summary of SA Assessment: Reasonable Options for Accommodating the Uplift to the Proposed Housing Requirement

### Introduction

10.1. Following completion of the updated additional SA assessment work on reasonable options for the housing requirement, the conclusions reached regarding reasonable options for the proposed housing requirement were given careful consideration alongside the extensive range of other information available. This informed the planning judgement regarding which of the reasonable options for the housing requirement should form the basis for the housing requirement within the draft Shropshire Local Plan.

10.2. In conclusion, Shropshire Council considers that Option 3b, should form the basis for the proposed housing requirement within the draft Shropshire Local Plan.

10.3. **Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country.

10.4. The resultant proposed housing requirement is **31,300 dwellings** over the proposed plan period from 2016-2038. This equates to an annual average of around 1,423 dwellings.

10.5. **This planning judgement exercise has been summarised within the Updated Housing and Employment Topic Paper.**

### Identification of Reasonable Options for Accommodating the Uplift to the Proposed Housing Requirement

10.6. Having carefully considered the range of mechanisms (informed by conclusions in paragraph 8.58) available to ensure delivery of the proposed housing requirement and in particular the proposed uplift to the housing requirement, four reasonable options have been identified. These are:

**Option 1: Increasing Settlement Guidelines and Windfall Allowances.** It is considered likely that opportunities exist to increase settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements to provide additional capacity for windfall development.

Settlement housing guidelines constitute the level of residential development specifically planned for at a settlement within the draft Shropshire Local Plan. Draft Policy SP7: Managing Housing Development summarises key considerations in circumstances where either the proposed settlement housing guideline appears likely to be exceeded or not achieved.

Windfall allowances are in effect the difference between the settlements housing guideline and the capacity of completions already achieved in the proposed plan period / identified commitments (sites with planning permission or prior approval, 'saved' SAMDev allocations and proposed allocations). This allowance can be achieved through the emergence of additional dwellings on windfall sites (sites not specifically planned for but facilitated by the draft Shropshire Local Plan) and/or other sources of additional dwellings that emerge in a settlement.

Existing settlement guidelines and associated windfall allowances were considered reasonable when proposed, and there is flexibility within the draft Shropshire Local Plan for settlement guidelines to be exceeded. However, there is evidence that in some instances settlement guidelines and associated windfall allowances have been overly cautious.

As such, there are likely opportunities to increase settlement guidelines and associated windfall allowances to reflect changes to windfall commitments/understanding of likely windfall supply since the submission of the draft Shropshire Local Plan.

Given that there is an existing allowance for windfall development within the housing land supply, this could also affect the 'buffer' between the housing requirement and the identified housing land supply.

Additional capacity associated with any increased windfall allowances would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

- a. **Option 2: Densification of Proposed Site Allocations.** There are likely opportunities to increase the density and thereby the capacity of one or more proposed site allocations. Particularly in circumstances where further assessment work/masterplanning has been undertaken regarding capacity by site promoters since submission of the draft Shropshire Local Plan and/or where a development is expected to include a form of housing which is of a higher density, such as smaller properties and specialist housing for older people - including in response to wider policies in the draft Shropshire Local Plan.

However, a cautious approach would be required to ensure that the increased density still resulted in an appropriate form of development, as such this exercise would need to be undertaken on a site by site basis.

Additional capacity associated with densification of site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

- b. **Option 3: Increasing Site Allocations.** There may be opportunities to extend the site area of proposed allocations in order to increase their capacity and/or opportunities to identify additional site allocations (including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements in order to provide additional capacity).

Additional capacity associated with increasing site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

- c. **Option 4: A Combination of Two or More of the Other Options.** It may be appropriate to consider two or more of the identified options in combination.

## Assessment of Reasonable Options for Accommodating the Uplift to the Proposed Housing Requirement

10.7. The following tables summarise the additional SA assessment of the identified reasonable options to accommodate the proposed uplift to the housing requirement:

**Table 10.1: Accommodating the Uplift to the Proposed Housing Requirement Option 1: Increasing Settlement Guidelines and Windfall Allowances**

<b>Accommodating the Uplift to the Proposed Housing Requirement Option 1: Increasing Settlement Guidelines and Windfall Allowances</b>				
This option would entail increasing settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements, to provide additional capacity for windfall development to meet the uplift to the proposed housing requirement. This additional windfall allowance would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	As this option would facilitate additional windfall development, it could have a negative effect in the short, medium and long term on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats. However, the majority of protected and priority habitats and species are found in the countryside. Much of this additional windfall development resulting from this option would be directed towards appropriate sites in urban areas. This is likely to reduce the extent of or remove any negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats may be minimal.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. As much of the additional windfall development resulting from this option would be directed towards appropriate sites in urban areas, it is likely to increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It is likely that this option would also facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.</p> <p>It would concentrate this development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also have a positive geographic implication, allowing for the more balanced distribution of development across locations / settlements that are seen as more and less ‘viable’ or ‘attractive to the market’.</p>
4: Promote access to services for all sections of society	++	++	++	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate this development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased ‘critical population mass’ which supports viability and sustainability.</p>
5: Encourage the use of sustainable means of transport	+	+	+	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate this development in the most sustainable settlements which benefit from the greatest access to a range of sustainable means of transport. As such, it is likely to promote access to and encourage use of sustainable means of transport.</p>
6: Reduce the need of people to travel by car	+	+	+	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate this development in the most sustainable settlements which benefit from the greatest access to a range of sustainable means of transport, which can reduce reliance on travel by car.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+	+	+	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate this development in the most sustainable settlements which benefit from a range of health, leisure, recreation, and cultural facilities. As such, this option is likely to promote positive access to health, leisure, recreation, and cultural facilities.</p> <p>This option will also support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by increasing the 'critical population mass' which supports their viability and sustainability.</p>
8: Protect and improve soil quality	+/?	+/?	+/?	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. Focussing planned development in urban areas offers the ability to reduce the amount of best and most versatile agricultural land and maximise the amount of brownfield land used for development. However, this is somewhat dependent on the specific windfall sites that come forwards.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+/?	+/?	+/?	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should minimise impact/offer some protection to existing water resources. However, this is somewhat dependent on the specific windfall sites that come forwards.</p>
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	<p>This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. This windfall development is less likely to constitute larger scale development which creates more opportunities for flood management measures. The effect on flood risk and opportunities to improve flood management will ultimately depend on the location of specific windfall development within the urban area.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	-/?	-/?	-/?	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. The effect on air quality and the ability to reduce air pollution associated with this option will to a large extent depend on the location of resultant windfall development sites e.g., development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. As all AQMAs are in urban areas this has the potential for a negative impact on them.
12: Reduce carbon dioxide emissions	+	+	+	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas with the widest array of infrastructure, services and facilities necessary to support new development. This will likely provide opportunities to reduce energy consumption and produce energy from renewable sources.
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	Irrespective of location, it is expected that this additional residential development would achieve a minimum of 10% biodiversity net gain. This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas with the widest array of infrastructure, services and facilities necessary to support new development. This option may provide good opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Although windfall development is less likely to constitute larger scale development which generally creates more such opportunities.
14: Promote efficient use of natural resources	++	++	++	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. Urban areas and in particular windfall development in urban areas, are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas and particularly windfall development in urban areas has significant potential to use alternatives to primary aggregates and makes the best use of existing infrastructure.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. Focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the specific windfall development sites and the nature of the development undertaken.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	This option would facilitate additional windfall development sufficient to meet the proposed uplift to the housing requirement. It would concentrate much of this development in appropriate sites in urban areas. Whilst this focus on existing urban areas can minimise potential for harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live – although this could be positive in circumstances where it results in redevelopment of a derelict brownfield site. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

### **Summary for Accommodating the Uplift to the Proposed Housing Requirement Option 1: Increasing Settlement Guidelines and Windfall Allowances**

10.8. This option would entail increasing settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements, to reflect that there is additional capacity for windfall development to meet the uplift to the proposed housing requirement. It would not require additional site allocations, rather it responds the significant volumes of windfall development that occur in Shropshire and facilitates further such development. This option would continue to align with the principle of urban focus.

- 10.9. It is likely that this option would facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.
- 10.10. As this option would concentrate the additional residential development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development, it would likely allow significant opportunities to promote access to services for all sections of society.
- 10.11. Furthermore, the concentration of this additional residential development in urban areas and the focus on ‘windfall’ development is considered likely to provide significant opportunities to re-use existing buildings and land and achieve higher development densities; and provide significant potential to use alternatives to primary aggregates and make the best use of existing infrastructure.
- 10.12. This option would also likely support the encouragement of a strong and sustainable economy throughout Shropshire, particularly given that in focusing housing in urban areas, it directs associated labour force to those areas considered to have the greatest opportunity for sustainable development opportunities that support the achievement of economic growth aspirations.
- 10.13. By concentrating the additional residential development in the most sustainable settlements, this option is also likely to encourage the use of sustainable means of transport, reduce the need of people to travel by car, support active and healthy communities, and provide opportunities to reduce carbon dioxide emissions. As such, it is likely to have a positive effect on these objectives.
- 10.14. This option may have a positive effect on the protection and improvement of soil quality and conservation and enhancement of water quality/reduction of water pollution, as windfall development on appropriate sites in urban areas is likely to offer some protection/minimise impact on these resources, which are primarily affected by activities in rural areas. However, this is somewhat dependent on the specific windfall sites that come forward. This option may also have a positive effect on the ability to adapt to and mitigate climate change due to the focus on sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development and the expectation of the achievement of biodiversity net gain. However, windfall development is less likely to constitute larger scale development which creates opportunities for adaptation and mitigation of climate change.
- 10.15. The impact of this option on the conservation and enhancement of heritage assets and their settings is unknown. Whilst focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, it also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the specific windfall development sites and the nature of the development undertaken.

- 10.16. This option may have a negative effect on the protection and enhancement of the range of plants and animals in Shropshire and the quality and extent of wildlife habitats as a result of the associated development. However, the majority of protected and priority habitats and species are found in the countryside and much of the additional windfall development resulting from this option would be directed towards appropriate sites in urban areas. As such, this impact may be minimal, dependent on the location and nature of development.
- 10.17. This option may also have a negative effect on the reduction of flood risk/improvement of flood management and reduction of air pollution/protection of air quality, particularly as it concentrates more development in urban areas. However, this is to a large extent dependent on the specific location and nature of the windfall development.
- 10.18. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as whilst it focuses the additional development in existing urban areas, which is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.

**Table 10.2: Accommodating the Uplift to the Proposed Housing Requirement Option 2: Densification of Proposed Site Allocations**

Accommodating the Uplift to the Proposed Housing Requirement Option 2: Densification of Proposed Site Allocations				
<p>This option would entail increasing the density and thereby the capacity of one or more proposed site allocations. It is considered that options for such densification of proposed allocations exist, given the cautious approach the Council takes to site densities and the policy expectations regarding housing mix and provision of specialist housing. There may also be opportunities to respond to further assessment work/masterplanning undertaken regarding site capacity by site promoters since submission of the draft Shropshire Local Plan.</p> <p>Additional capacity associated with densification of proposed site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the importance of protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitats. As such, this is likely to reduce the extent of any potential for a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats may be minimal.</p> <p>However, densification of proposed allocations could result in a negative impact on this objective. Furthermore, some of the proposed allocations do have a negative impact on this objective which densification has the potential to increase.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>As the majority of the proposed allocations are associated with urban areas, it is likely to increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.</p> <p>There are a number of proposed allocations associated with rural settlements, it is considered any densification of these allocations could complement the growth proposed in urban areas, but would have a lower positive effect against this objective.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement. It is likely that this option would also facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.</p> <p>As proposed allocations are associated with both urban and rural settlements, responding to the fact that housing need does arise in both urban and rural areas, it also has the potential to positively respond to arising needs.</p>
4: Promote access to services for all sections of society	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>As the majority of the proposed allocations are associated with urban areas, densification of them would mean development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased ‘critical population mass’ which supports viability and sustainability.</p> <p>However, there are a number of proposed allocations associated with rural settlements where less infrastructure, services and facilities exist – albeit all proposed allocations are associated with settlements that offer an appropriate level of infrastructure, services and facilities.</p>
5: Encourage the use of sustainable means of transport	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities, including options for sustainable means of transport.</p> <p>As such, it is likely to promote access to and encourage use of sustainable means of transport.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are also associated with rural settlements that offer an appropriate level of infrastructure, services and facilities, including options for sustainable means of transport. As such, it is likely to reduce reliance on travel by car.</p>
7: Support active and healthy communities.	+/?	+/?	+/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest range of infrastructure, services and facilities access, including health, leisure, recreation, and cultural facilities. Other, proposed allocations are also associated with rural settlements that offer an appropriate level of infrastructure, services and facilities, this could include health, leisure, recreation, and cultural facilities. As such, this option is likely to promote positive access to health, leisure, recreation, and cultural facilities, but it is somewhat dependent on the specific allocations.</p> <p>This option could also support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by increasing the 'critical population mass' which supports their viability and sustainability.</p>
8: Protect and improve soil quality	?	?	?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>As these areas are already identified for development this option is unlikely to have a significant impact on this objective, as it would not affect the amount of best and most versatile agricultural land subject to development. However, it is acknowledged that this option has very limited potential to promote brownfield development and densification of proposed allocations could result in a negative impact on this objective.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations and nature of resultant development.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+/?	+/?	+/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the conservation and enhancement of water quality in Shropshire and a desire to avoid negative impacts.</p> <p>Furthermore, the majority of the proposed allocations are associated with urban settlements and pollution from rural areas is the main issue affecting water quality in Shropshire.</p> <p>As such, this option could minimise impact/offer some protection to existing water resources. However, this is somewhat dependent on the specific site allocations and nature of resultant development.</p>
10: Reduce flood risk and improve flood management	?	?	?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The selection of proposed site allocations was informed by consideration of reduction of flood risk and improvement of flood management in Shropshire. As such, this is likely to reduce the extent of any potential for a negative effect. Furthermore, many of the proposed site allocations are sufficiently large scale to create opportunities for flood management measures. Conversely, densification of proposed allocations could result in a negative impact on this objective as it increases the coverage of built form and decreases opportunities for flood management.</p> <p>As such, it is considered that the effect on flood risk and opportunities to improve flood management will ultimately depend on the specific site allocations and nature of resultant development.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	+/?	+/?	+/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>Development within or close to an Air Quality Management Area is more likely to have an adverse impact on air quality/air pollution, whilst development elsewhere is unlikely to alter the current situation. The selection of proposed site allocations was informed by consideration of air quality and the ability to reduce air pollution. Furthermore, none of the proposed allocations are within or close to an Air Quality Management Area and only a limited number have any potential for an impact on one. However, this will ultimately depend on the specific site allocations and nature of resultant development.</p>
12: Reduce carbon dioxide emissions	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities. This will likely increase opportunities for reducing energy consumption and the production of energy from renewable sources.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	<p>Irrespective of location, it is expected that this additional residential development would achieve a minimum of 10% biodiversity net gain.</p> <p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest range of infrastructure, services and facilities access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities.</p> <p>Furthermore, many of the proposed site allocations are sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Although, conversely, densification of proposed allocations could result in a negative impact on this objective.</p> <p>As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development.</p>
14: Promote efficient use of natural resources	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities.</p> <p>This option would specifically involve densification of proposed allocations and as such is very likely to increase the efficient use of land. Although, it is considered less likely that it would support the re-use existing buildings.</p> <p>Densification of development may also have the potential to increase the use of alternatives to primary aggregates and making the best use of existing infrastructure, as there is a greater 'critical mass' to support this. Although this is considered dependent on the specific allocations.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the importance of conserving and enhancing heritage assets in Shropshire. As such, this option is likely to minimise the extent of any potential for a negative effect on heritage assets.</p> <p>However, some of the proposed allocations do have a negative impact on this objective. Furthermore, densification of proposed allocations could also result in a negative impact on this objective. Conversely, densification of development may also increase ‘critical mass’ increasing opportunities for the positive management of heritage assets.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations.</p>
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The densification of proposed allocations is likely to increase the potential for impact on landscape character and change to the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.</p> <p>Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.</p>

### **Summary for Accommodating the Uplift to the Proposed Housing Requirement Option 2: Densification of Proposed Site Allocations**

10.19. This option would entail increasing the density and thereby the capacity of one or more proposed site allocations. As such, it would not require additional site allocations / expansion of the area of proposed allocations. It is considered that options for such densification of proposed allocations exist, given the cautious approach the Council takes to site densities and the policy expectations regarding housing mix and provision of specialist housing. There may also be opportunities to respond to further assessment work/masterplanning undertaken regarding site capacity by site promoters since submission of the draft Shropshire Local Plan. However, a cautious approach

would be required, with each site considered on an individual basis, to ensure that the increased density still resulted in an appropriate form of development. Also, it is important to note that the reason for the Council's cautious approach to site densities is to provide confidence in deliverability of the proposed housing requirement.

- 10.20. This option would likely continue to align with the principle of urban focus as the majority of proposed allocations are associated with urban settlements, however there are those associated with rural settlements. As such, this is somewhat dependent on the allocations selected (although the level of uplift to the proposed housing requirement in the context of the total proposed housing requirement is unlikely to result in a significant change to the overall distribution of development).
- 10.21. It is likely that this option would facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.
- 10.22. This option would also likely support the encouragement of a strong and sustainable economy throughout Shropshire. This is because the majority of the proposed allocations are associated with urban areas and as such it has the potential to direct the additional associated labour force to those areas considered to have the greatest opportunity for sustainable development opportunities that support the achievement of economic growth aspirations. Any densification of those allocations in rural areas could complement the growth proposed in urban areas, but would have a lower positive effect against this objective.
- 10.23. Similarly, this option is considered to have the potential for a positive effect on the promotion of access to services for all sections of society, encouragement of the use of sustainable modes of transport, reduction of reliance on travel by car, and reducing carbon dioxide emissions. This is because the majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities.
- 10.24. It is considered that this option provides opportunities to promote efficient use of natural resources as one mechanism for contributing to this is increased densification, which is fundamental to this option. Densification also has the potential to increase the use of alternatives to primary aggregates and the ability to make best use of existing infrastructure, as there is a greater 'critical mass', although this is considered dependent on the specific allocations.
- 10.25. This option may have a positive effect on the adaptation to and mitigation of climate change, as the majority of the proposed allocations are associated with urban areas which benefit from the greatest access to a range of infrastructure, services and facilities and other proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities.

Furthermore, many of the proposed site allocations are sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Although, conversely, densification of proposed allocations could result in a negative impact on this objective. As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development.

- 10.26. This option may also have a positive effect on supporting active and healthy communities, as the majority of the proposed allocations are associated with urban areas which benefit from health, leisure, recreation, and cultural facilities, although others are associated with rural settlements that may offer some health, leisure, recreation, and cultural facilities. As such, it is considered that the effect on supporting active and healthy communities is somewhat dependent on the specific site allocations and nature of resultant development.
- 10.27. This option may also have a positive effect on the conservation and enhancement of water quality/reduction of water pollution, as the majority of the proposed allocations are associated with urban settlements and pollution from rural areas is the main issue affecting water quality in Shropshire. Furthermore, the selection of proposed site allocations was informed by consideration of the conservation and enhancement of water quality in Shropshire. However, this is somewhat dependent on the specific site allocations and nature of resultant development.
- 10.28. This effect on the enhancement of air quality and reduction of risk of air pollution is unknown. The selection of proposed site allocations was informed by consideration of air quality and the ability to reduce air pollution. Furthermore, none of the proposed allocations are within or close to an Air Quality Management Area and only a limited number have any potential for an impact on one. However, this will ultimately depend on the specific site allocations and nature of resultant development.
- 10.29. The impact of this option on both the protection and improvement of soil quality and reduction of flood risk/improvement of flood management is unknown, as it will ultimately depend on the specific site allocations and nature of resultant development. Both these issues informed the identification of proposed site allocations but it would need to be ensured that densification did not alter the impact.
- 10.30. This option may have a negative effect on protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitat, and conserving and enhancing heritage assets as whilst these issues informed the identification of proposed site allocations, densification could result in a negative effect.
- 10.31. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as densification of proposed allocations is likely to increase the potential for impact on landscape character and change to the character of

those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.

**Table 10.3: Accommodating the Uplift to the Proposed Housing Requirement Option 3: Increasing Site Allocations**

**Accommodating the Uplift to the Proposed Housing Requirement Option 3: Increasing Site Allocations**

This option would entail increasing site allocations in order to increase capacity. This could be through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements) in order to provide additional capacity. Additional capacity associated with increasing site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>The extent of any impact on protected and priority habitats and species would be dependent on the location of extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that this option would likely have a positive impact on the encouragement of a strong and sustainable economy throughout Shropshire. However, the extent of this impact would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>If located in urban areas or as part of new strategic settlements, they would likely increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas. If located in rural area, they could complement the growth proposed in urban areas, but would have a lower positive effect against this objective.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement. It is likely that this option would also facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.</p> <p>Housing need arise in both urban and rural areas, the specific need addressed would be dependent on the location of amended site allocations. This would be assessed separately within the SA process.</p>
4: Promote access to services for all sections of society	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on the promotion of access to services would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased ‘critical population mass’ which supports viability and sustainability. A number of rural settlements offer a level of infrastructure, services and facilities and development within them can enhance the ‘critical population mass’, however other rural settlements have much more limited levels of infrastructure, services and facilities.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on the encouragement of sustainable modes of transport would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary which can promote use of sustainable modes of transport. A number of rural settlements offer a level of infrastructure, services and facilities, including options for sustainable means of transport. However, other rural settlements have much more limited levels of infrastructure, services and facilities and options for sustainable means of transport.</p>
6: Reduce the need of people to travel by car	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on reducing reliance on travel by car would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary which can reduce reliance on travel by car. A number of rural settlements offer a level of infrastructure, services and facilities, which can also reduce reliance on travel by car, albeit to a lesser extent. However, other rural settlements have much more limited levels of infrastructure, services and facilities and as such development in such locations would have a higher level of reliance on travel by car.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on supporting active and healthy communities would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities including health, leisure, recreation, and cultural facilities.</p> <p>Rural settlements offer more varied access to health, leisure, recreation, and cultural facilities.</p> <p>This option could also support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (dependent on location) by increasing the 'critical population mass' which supports their viability and sustainability.</p>
8: Protect and improve soil quality	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on the protection and improvement of soil quality is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on the conservation and enhancement of water quality and reduction of risk of water pollution is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on flood risk and flood management is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>Development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. It is considered that the extent of any impact on air quality and air pollution is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
12: Reduce carbon dioxide emissions	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>This will likely increase opportunities for reducing energy consumption and the production of energy from renewable sources. However, it is considered that the extent of any impact on carbon dioxide emissions is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	<p>Irrespective of location, it is expected that this additional residential development would achieve a minimum of 10% biodiversity net gain.</p> <p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement. These amended proposed site allocations may be sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change.</p> <p>However, the location of amended proposed site allocations will affect the ability to access infrastructure, services and facilities and utilise sustainable means of transport. As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development. Proposed site allocations are assessed separately within the SA process.</p>
14: Promote efficient use of natural resources	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on promotion of the efficient use of natural resources is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of any impact on the conservation and enhancement of heritage assets is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the housing requirement.</p> <p>It is considered that the extent of the impact on conservation and enhancement of landscape character and local distinctiveness will be affected by the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>However any development is still likely to change the character of those places where the majority of people currently live and harm to visual amenity is possible with all forms of development, regardless of location.</p> <p>Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.</p>

### **Summary for Accommodating the Uplift to the Proposed Housing Requirement Option 3: Increasing Site Allocations**

- 10.32. This option would entail increasing site allocations in order to increase capacity. This could be through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements) in order to provide additional capacity.
- 10.33. This option would likely continue to align with the principle of urban focus, if it entailed the extension of the site area of one or more proposed allocations, as the majority of proposed allocations are associated with urban settlements (however there are those associated with rural settlements). It could also continue to align with the principle of urban focus if it entailed the identification of one or more additional site allocations, however this would to an extent be dependent on the location of such proposed allocations. Although the level of uplift to the proposed housing requirement in the context of the total proposed housing requirement is unlikely to result in a significant change to the overall distribution of development.

- 10.34. It is likely that this option would facilitate the ability to deliver additional good quality housing which meets the needs of all sections of society. This includes much needed affordable housing and housing to meet the needs of specific groups within our communities – including older people and families.
- 10.35. This option would also likely support the encouragement of a strong and sustainable economy throughout Shropshire. However, the extent of this impact would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
- 10.36. There are a number of SA objectives against which this option has the potential for a positive impact. This includes promoting access to services for all sections of society; encouraging the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reducing carbon dioxide emissions; and promoting adaptation and mitigation to climate change. However, this is dependent on the location and nature of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
- 10.37. The impact of this option on the protection and improvement of soil quality; conservation and enhancement of water quality in Shropshire and reduction of the risk of water pollution; reduction of flood risk/improvement of flood management; conservation and enhancement of air quality and reduction of the risk of air pollution; promotion of efficient use of natural resources; and conservation and enhancement of heritage assets, is unknown. This will ultimately depend on the location and nature of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
- 10.38. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as whilst the extent of any negative impact will be dependent on the location and nature of any extensions to existing proposed allocations/new proposed allocations, any development is still likely to change the character of those places where the majority of people currently live and harm to visual amenity is possible with all forms of development, regardless of location.
- 10.39. This option may also have a negative effect on protecting and enhancing the range of plants and animals in Shropshire. However, the extent of any impact on protected and priority habitats and species would be dependent on the location of extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.

**Table 10.4: Accommodating the Uplift to the Proposed Housing Requirement Option 4: A Combination of Two or More of the Other Options**

Accommodating the Uplift to the Proposed Housing Requirement Option 4: A Combination of Two or More of the Other Options				
<p>This option would entail utilising a combination of all or a selection of mechanisms from the other reasonable options for accommodating the uplift to the proposed housing requirement. These are increasing Settlement Guidelines and Windfall Allowances in Strategic, Principal, Key Centres and/or Strategic Allocations; densification of proposed site allocations; and increasing site allocations either through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements). Additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	<p>This option would entail utilising a combination of two or more of the other reasonable options for accommodating the uplift to the proposed housing requirement. These are increasing Settlement Guidelines and Windfall Allowances in Strategic, Principal, Key Centres and/or Strategic Allocations; densification of proposed site allocations; and increasing site allocations either through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements).</p> <p>As such, the effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
4: Promote access to services for all sections of society	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
6: Reduce the need of people to travel by car	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
7: Support active and healthy communities.	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
8: Protect and improve soil quality	?	?	?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	-/?	-/?	-/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
14: Promote efficient use of natural resources	?	?	?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.

#### **Summary for Accommodating the Uplift to the Proposed Housing Requirement Option 4:**

10.40. This option would entail utilising a combination of the other reasonable options for accommodating the uplift to the proposed housing requirement. These are increasing settlement guidelines and windfall allowances in Strategic, Principal, Key Centres and/or Strategic Allocations; densification of proposed site allocations; and increasing site allocations either through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements). This option would likely continue to align with the principle of urban focus.

- 10.41. As such, the effects against the SA objectives will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
- 10.42. Therefore, this option would likely have a strongly positive effect against the SA objective of providing a sufficient amount of good quality housing which meets the needs of all sections of society. It is considered that this option would also likely have a positive effect against the SA objective of encouraging a strong and sustainable economy throughout Shropshire.
- 10.43. This option likely has the potential for a positive impact against SA objectives of promoting access to services for all sections of society; encouraging the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reduction of carbon dioxide emissions; and promotion of adaptation and mitigation to climate change. However, this is dependent on the specific approach and in particular the location of development site – with any changes to site allocations assessed separately within the SA process.
- 10.44. Also as a result, it is considered that this option would likely have a negative impact against the SA objective of conserving and enhancing landscape character and local distinctiveness. It is also considered that this option likely has the potential for a negative impact against the SA objectives of protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitats; reducing flood risk and improving flood management; conserving and enhancing Shropshire's air quality and reduce the risk of air pollution; and conserving and enhancing features and areas of heritage value and their setting. However, this is dependent on the specific approach and in particular the location of development site – with any changes to site allocations assessed separately within the SA process.
- 10.45. It is considered that this option could have a positive, negative or neutral impact on the protection and improvement of soil quality; conservation and enhancement of water quality in Shropshire and reduction of the risk of water pollution; and promotion of the efficient use of natural resources. This is dependent on the location and nature of development sites – with any changes to site allocations assessed separately within the SA process.

## **Comparison Summary of Reasonable Options for Accommodating the Uplift to the Proposed Housing Requirement**

- 10.46. The purpose of this component of the additional SA assessment is to inform judgements about which of the reasonable alternatives for accommodating the proposed uplift to the housing requirement is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 10.1 to 10.4 above.
- 10.47. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the housing requirement, Table 10.5 has been prepared for illustrative purposes. This summarises, for comparison, how the four reasonable alternative options perform against each SA objective. This is achieved by 'ranking' the performance of each reasonable option from the best performing (1) to the poorest performing (4) against each SA objective. Where reasonable alternatives achieve the same ranking in the short, medium and longer term for an SA objective, professional judgement has been used to determine whether the increasing scale of growth proposed in the option would be more likely to have a positive or negative effect on that SA objective.
- 10.48. It is not appropriate to 'total' the scores across all the objectives for each option. The performance of the option requires consideration of each SA objective separately and 'totalling' the scores would not achieve this outcome. Furthermore, the SA objectives address different considerations, so it is not possible to combine them into a single score.
- 10.49. There are also more SA objectives addressing environmental matters than social and economic matters, as such 'totalling' the scores would create a bias towards environmental factors. The principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving 'sustainability'.

**Table 10.5: Comparison of Reasonable Options for Accommodating the Uplift to the Proposed Housing Requirement**

Sustainability Objective	Option 1: Increasing Settlement Guidelines and Windfall Allowances	Option 2: Densification of Proposed Site Allocations	Option 3: Increasing Site Allocations	Option 4: A Combination of the Other Options
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	3	3
2: Encourage a strong and sustainable economy throughout Shropshire	1	2	3	3
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	1	1	1	1
4: Promote access to services for all sections of society	1	2	3	3
5: Encourage the use of sustainable means of transport	1	2	3	3
6: Reduce the need of people to travel by car	1	2	3	3
7: Support active and healthy communities.	1	2	3	3
8: Protect and improve soil quality	1	2	3	3
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	2	3	3
10: Reduce flood risk and improve flood management	2	1	1	2
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	3	1	2	3
12: Reduce carbon dioxide emissions	1	2	3	3
13: Promote adaptation and mitigation to climate change	2	1	3	3
14: Promote efficient use of natural resources	1	2	3	3
15: Conserve and enhance features and areas of heritage value and their setting	3	1	2	3
16: Conserve and enhance landscape character and local distinctiveness	1	1	1	1

## Conclusion

- 10.50. Tables 10.1 - 10.4 summarise the updated additional SA assessment work for each of the reasonable options identified for accommodating the uplift to the proposed housing requirement. Table 10.5 then summarises, in comparative terms, how the four reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.
- 10.51. It is apparent from the results of the updated additional SA assessment work that none of the reasonable options identified for accommodating the uplift to the proposed housing requirement are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 10.52. Conversely, all of the reasonable options are considered likely to result in a strongly positive effect on *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society* in the short, medium and long term. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 10.53. This is perhaps unsurprising as the achievement of *SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society*, is directly related to the provision of housing, and all these options would result in the accommodation of the uplift to the proposed housing requirement, thereby providing greater opportunities to deliver affordable housing and other forms of housing to meet the needs of groups within our communities.
- 10.54. Option 1: increasing settlement guidelines and windfall allowances is also considered likely to result in a strongly positive effect on *SA objective 4: promotion of access to services for all sections of society* and *SA objective 14: promotion of efficient use of natural resources* in the short, medium and long term.
- 10.55. The achievement of *SA objective 4: promoting access to services for all sections of society* is linked to the location of development and this option would ensure that it is concentrated in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased ‘critical population mass’ which supports viability and sustainability.
- 10.56. The achievement of *SA objective 14: promotion of efficient use of natural resources* is also linked to the location of development sites. Urban areas and in particular windfall development in urban areas, are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas and particularly windfall development in urban areas has

significant potential to use alternatives to primary aggregates and makes the best use of existing infrastructure.

- 10.57. It is important to note that there are a number of SA objectives that are linked to the strategic distribution and specific location of development (sites), and as such in the context of this updated additional SA assessment of reasonable options for accommodating the proposed uplift to the housing requirement, the conclusion can only be unknown or at best a level of uncertainty exists. The strategic distribution and location of development (sites) are assessed separately within the SA process.
- 10.58. In general terms, the updated additional SA assessment work can be summarised as concluding that the options that provide greater certainty about the proportion of the uplift to the housing requirement within urban areas achieves more positive impacts on social, economic and environmental factors.
- 10.59. It is important to note that the housing needs of Shropshire's rural communities must be recognised and appropriately planned for within any strategic distribution of planned development incorporated into the draft Shropshire Local Plan. However, this component of the SA assessment addresses only the proposed uplift to the housing requirement.
- 10.60. It is considered that all of the reasonable options identified for accommodating the uplift to the proposed housing requirement are realistic and as such have the capability to accommodate the uplift to the proposed housing requirement. However, in exercising planning judgement regarding which of these options is most appropriate, it will be important to consider deliverability – informed by relevant evidence. The results of this updated additional SA Assessment work is also a very important consideration when undertaking this planning judgement.
- 10.61. On balance, it is considered that Option 1: increasing settlement guidelines and windfall allowances represents the most sustainable of the reasonable options for accommodating the uplift to the proposed housing requirement. This is because:
- a. It presents an opportunity to achieve a strongly positive effect on SA objective 3: provision of a sufficient amount of good quality housing which meets the needs of all sections of society in the short, medium and long term.
  - b. It presents an opportunity to achieve a strongly positive effect on SA Objective 4: promotion of access to services for all sections of society in the short, medium and long term.
  - c. It presents an opportunity to achieve a strongly positive effect on SA objective 14: promotion of efficient use of natural resources in the short, medium and long term.
  - d. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - e. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through identification of appropriate policies to manage resultant development (assessed separately within the SA process).

- f. It is considered that this option achieves the most appropriate 'balance' across all three pillars of sustainability – social, economic, and environmental.
- g. This option would ensure that the proposed uplift to the proposed housing requirement is accommodated within the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development.
- Options 2: densification of proposed site allocations would also achieve this outcome. However, on balance it is considered that the positive sustainability outcomes associated with Option 1 are more significant than Option 2 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 2 – primarily due to the increased certainty regarding the urban focus of development. Furthermore, it is important to note that the reason for the Council's cautious approach to site densities is to both provide confidence in deliverability of the proposed housing requirement and avoid risk of over-development which can have negative impacts on a number of SA objectives.
- Option 3: increasing site allocations would also achieve the proposed uplift to the proposed housing requirement. However, on balance it is considered that the positive sustainability outcomes associated with Option 1 are more significant than Option 3 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 3 – primarily due to the increased certainty regarding the urban focus of development.
- Option 4: a combination of the other options would also achieve the proposed housing requirement uplift. However, from an SA perspective, the effects against each SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must reflect the 'worst case' scenario from each of the other reasonable options.
- 10.62. Inevitably, the final determination (planning judgement) about which reasonable option for accommodating the uplift to the proposed housing requirement within the draft Shropshire Local Plan will be informed by a range of evidence/considerations. This updated additional SA Assessment work is a very important consideration when undertaking this planning judgement. However, a range of other factors will also require due consideration when undertaking this planning judgement. For instance, it will be important to ensure that any proposed option for accommodating the uplift to the proposed housing requirement accords with the overall Plan strategy and importantly is deliverable within the proposed plan period.
- 10.63. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 10.64. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 11. Summary of SA Assessment: Reasonable Options for Accommodating the Uplift to the Proposed Employment Land Requirement

### Introduction

11.1. Following completion of the updated additional SA assessment work on reasonable options for the employment land requirement, the conclusions reached regarding reasonable options for the proposed employment land requirement were given careful consideration alongside the extensive range of other information available. This informed the planning judgement regarding which of the reasonable options for the employment land requirement should form the basis for the employment land requirement within the draft Shropshire Local Plan.

11.2. In conclusion, Shropshire Council considers that Option 3b, should form the basis for the proposed employment land requirement within the draft Shropshire Local Plan.

11.3. **Option 3b: High Growth Plus a 30ha Employment Land Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local employment land need of 250ha over the 22-year plan period (annual average of around 11.5ha), plus a 30ha employment land contribution toward forecast unmet employment land need in the Black Country.

11.4. The resultant proposed employment land requirement is **320ha** over the proposed plan period from 2016-2038. This equates to an annual average of around 14.5ha.

11.5. **This planning judgement exercise has been summarised within the Updated Housing and Employment Topic Paper.**

### Identification of Reasonable Options for Accommodating the Uplift to the Proposed Employment Land Requirement

11.6. Having carefully considered the range of mechanisms available to ensure delivery of the proposed employment land requirement and in particular the proposed uplift to the employment land requirement, four reasonable options have been identified. These are:

- a. **Option 1: Utilising Settlement Guidelines and Windfall Allowances.** Settlement employment guidelines constitute the level of employment land to either be made available for development or specifically subject to development, dependent on location. Draft Policy SP13: Delivering Sustainable Economic Growth and Enterprise provides the overarching strategy for the delivery of employment development. Windfall allowances are in effect the difference between the settlements employment land guideline and the capacity of completions already achieved in the proposed plan period / identified commitments (sites with planning permission or prior approval, 'saved' SAMDev allocations and proposed allocations). This allowance can be achieved through the emergence of additional employment land on windfall sites (sites not specifically planned for but facilitated by the draft

Shropshire Local Plan) and/or other sources of additional employment land that emerges in a settlement.

The settlement guidelines and associated windfall allowances proposed within the submission version of the draft Shropshire Local Plan provide **significant flexibility and allow for choice and competition in the market**. The intention of this approach is to provide confidence regarding the deliverability of the proposed employment land requirement.

This is particularly the case in the Strategic and Principal Centres where employment land guidelines are expressed in the context of the amount of employment land to be made available for development, rather than a specific quantity of employment land to be developed.

It is considered likely that opportunities exist to either **utilise this flexibility** within the settlement guidelines and windfall allowances of one or more Strategic, Principal, Key Centres and/or Strategic Settlements; or **increasing** settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements; in order to accommodate the proposed uplift to the employment land requirement.

However, any reliance on these mechanisms would need to be deliverable in the proposed plan period and support delivery of necessary supporting infrastructure.

- b. **Option 2: Densification of Proposed Site Allocations.** Opportunities to increase the density and thereby capacity of one or more proposed employment land allocations could be considered. Particularly in circumstances where further assessment work/masterplanning has been undertaken regarding capacity by site promoters since submission of the draft Shropshire Local Plan and/or where a development is expected to include a form of employment/mix of employment which would result of a higher density of development.

However, a very cautious approach would be required as significant effort has already been undertaken to maximise site density for employment allocations – although this is challenging in a Shropshire context. Furthermore, it would be necessary to consider whether the increased density still resulted in an appropriate form of development, as such this exercise would need to be undertaken on a site by site basis.

Additional capacity associated with densification of site allocations would need to be deliverable in the proposed plan period and support delivery of necessary supporting infrastructure.

- c. **Option 3: Increasing Site Allocations.** There may be opportunities to extend the site area of proposed allocations in order to increase their capacity and/or opportunities to identify additional site allocations (including through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements in order to provide additional capacity).

Additional capacity associated with increasing site allocations would need to be deliverable in the proposed plan period and support delivery of necessary supporting infrastructure.

- d. **Option 4: A Combination of Two or More of the Other Options.** It may be appropriate to consider two or more of the identified options in combination.

**Assessment of Reasonable Options for Accommodating the Uplift to the Proposed Employment Land Requirement**

11.7. The following tables summarise the additional SA assessment of the identified reasonable options to accommodate the proposed uplift to the employment land requirement:

**Table 11.1: Accommodating the Uplift to the Proposed Employment Land Requirement Option 1: Utilising Settlement Guidelines and Windfall Allowances**

<b>Accommodating the Uplift to the Proposed Employment Land Requirement Option 1: Utilising Settlement Guidelines and Windfall Allowances</b>				
This option would entail utilising existing flexibility within the settlement guidelines and windfall allowances of one or more Strategic, Principal, Key Centres and/or Strategic Settlements or increasing settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements; in order to accommodate the proposed uplift to the employment land requirement. Any reliance on these mechanisms would need to be deliverable in the proposed plan period and support delivery of necessary supporting infrastructure.				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	As this option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development to meet the proposed uplift to the employment land requirement, it could have a negative effect in the short, medium and long term on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats. However, the majority of protected and priority habitats and species are found in the countryside. Existing flexibility within the settlement guidelines and/or additional windfall development resulting from this option would be directed towards appropriate sites in urban areas. This is likely to reduce the extent of or remove any negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats may be minimal.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. As existing flexibility within the settlement guidelines and/or additional windfall development resulting from this option would be directed towards appropriate sites in urban areas, it is likely to increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It is therefore unlikely to have any real impact on the provision of good quality housing meeting the needs of all sections of society.
4: Promote access to services for all sections of society	+	+	+	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. As such, it would concentrate this development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased 'critical population mass' which supports viability and sustainability.
5: Encourage the use of sustainable means of transport	+	+	+	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate this development in the most sustainable settlements which benefit from the greatest access to a range of sustainable means of transport. As such, it is likely to promote access to and encourage use of sustainable means of transport.
6: Reduce the need of people to travel by car	+	+	+	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment requirement. It would concentrate this development in the most sustainable settlements which benefit from the greatest access to a range of sustainable means of transport, which can reduce reliance on travel by car.
7: Support active and healthy communities.	+/?	+/?	+/?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. This option could support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by supporting the 'critical mass' through increased economic activity within these locations, which supports their viability and sustainability.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
8: Protect and improve soil quality	+/?	+/?	+/?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas. Focussing planned development in urban areas offers the ability to reduce the amount of best and most versatile agricultural land and maximise the amount of brownfield land used for development. However, this is somewhat dependent on the specific windfall sites that come forwards.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+/?	+/?	+/?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should minimise impact/offer some protection to existing water resources. However, this is somewhat dependent on the specific windfall sites that come forwards.
10: Reduce flood risk and improve flood management	-/?	-/?	-/?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development on appropriate sites in urban areas, but is less likely to constitute larger scale development which creates more opportunities for flood management measures. The effect on flood risk and opportunities to improve flood management will ultimately depend on the location of specific windfall development within the urban area.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	-/?	-/?	-/?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas. The effect on air quality and the ability to reduce air pollution associated with this option will to a large extent depend on the location of development sites e.g., development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. As all AQMAs are in urban areas this has the potential for a negative impact on them.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	+	+	+	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas with the widest array of infrastructure, services and facilities necessary to support new development. This will likely provide opportunities to reduce energy consumption and produce energy from renewable sources.
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	Irrespective of location, it is expected that this additional employment development would achieve a minimum of 10% biodiversity net gain. This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas with the widest array of infrastructure, services and facilities necessary to support new development.
14: Promote efficient use of natural resources	++	++	++	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas. Urban areas and in particular windfall development in urban areas, are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas and particularly windfall development in urban areas has significant potential to use alternatives to primary aggregates and makes the best use of existing infrastructure.
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment land requirement. It would concentrate much of this development in appropriate sites in urban areas. Focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the specific development sites and the nature of the development undertaken.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	<p>This option would utilise existing flexibility within the settlement guidelines and/or facilitate additional windfall development sufficient to meet the proposed uplift to the employment requirement. It would concentrate much of this development in appropriate sites in urban areas.</p> <p>Whilst this focus on existing urban areas can minimise potential for harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live – although this could be positive in circumstances where it results in redevelopment of a derelict brownfield site. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.</p> <p>Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.</p>

### **Summary for Accommodating the Uplift to the Proposed Employment Land Requirement Option 1: Utilising Settlement Guidelines and Windfall Allowances**

- 11.8. This option would entail utilising existing flexibility within the settlement guidelines and windfall allowances of one or more Strategic, Principal, Key Centres and/or Strategic Settlements or increasing settlement guidelines and associated windfall allowances for one or more Strategic, Principal, Key Centres and/or Strategic Settlements; in order to accommodate the proposed uplift to the employment land requirement. This option would continue to align with the principle of urban focus.
- 11.9. It is likely that this option would significantly contribute to facilitating the ability to encourage a strong and sustainable economy throughout Shropshire. Furthermore, the concentration of this additional employment development in urban areas and the focus on utilising existing flexibility within the settlement guidelines and windfall allowances is considered likely to provide significant opportunities to re-use existing buildings and land and achieve higher development densities; and provide significant potential to use alternatives to primary aggregates and make the best use of existing infrastructure.
- 11.10. As this option would concentrate the additional employment development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development, it would likely support opportunities to promote access to

services for all sections of society; encourage the use of sustainable means of transport; reduce reliance on travel by car; and reduce carbon dioxide emissions.

- 11.11. This option may have a positive effect on the protection and improvement of soil quality and conservation and enhancement of water quality/reduction of water pollution, as utilisation of existing flexibility within the settlement guidelines and/or facilitation of additional windfall development sufficient to meet the proposed uplift to the employment requirement would concentrate much of this development in appropriate sites in urban areas, which is likely to offer some protection/minimise impact on these resources, as they are primarily affected by activities in rural areas. However, this is somewhat dependent on the specific windfall sites that come forward.
- 11.12. This option may also have a positive effect on the ability to adapt to and mitigate climate change; and the creation of active and healthy communities due to the focus on sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development and the expectation of the achievement of biodiversity net gain. However, utilising existing flexibility within the settlement guidelines and/or facilitating additional windfall development sufficient to meet the proposed uplift to the employment requirement is less likely to constitute larger scale development which creates opportunities for adaptation and mitigation of climate change.
- 11.13. The impact of this option on the conservation and enhancement of heritage assets and their settings is unknown. Whilst focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, it also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the specific development sites and the nature of the development undertaken.
- 11.14. This option would likely have a neutral effect on the delivery of good quality housing as this is more likely to be influenced by other components of the draft Shropshire Local Plan.
- 11.15. This option may have a negative effect on the protection and enhancement of the range of plants and animals in Shropshire and the quality and extent of wildlife habitats as a result of the associated development. However, the majority of protected and priority habitats and species are found in the countryside and utilising existing flexibility within the settlement guidelines and/or facilitating additional windfall development sufficient to meet the proposed uplift to the employment land requirement as entailed within this option would primarily occur in urban areas. As such, this impact may be minimal, dependent on the location and nature of development.
- 11.16. This option may also have a negative effect on the reduction of flood risk/improvement of flood management and reduction of air pollution/protection of air quality, particularly as it concentrates more development in urban areas. However, this is to a large extent dependent on the specific location and nature of the resultant development.

11.17. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as whilst it focuses the additional development in existing urban areas, which is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.

**Table 11.2: Accommodating the Uplift to the Proposed Employment Land Requirement Option 2: Densification of Proposed Site Allocations**

Accommodating the Uplift to the Proposed Employment Land Requirement Option 2: Densification of Proposed Site Allocations				
<p>This option would entail consideration of the ability to increase the density and thereby the capacity of one or more proposed site allocations. Particularly in circumstances where further assessment work/masterplanning has been undertaken regarding capacity by site promoters since submission of the draft Shropshire Local Plan and/or where a development is expected to include a form of employment/mix of employment which would result of a higher density of development.</p> <p>Additional capacity associated with densification of proposed site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.</p>				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the importance of protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitats. As such, this is likely to reduce the extent of any potential for a negative effect on the range of protected, priority, key or indicator species and on the quality and extent of wildlife habitats may be minimal.</p> <p>However, densification of proposed allocations could result in a negative impact on this objective. Furthermore, some of the proposed allocations do have a negative impact on this objective which densification has the potential to increase.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations.</p>
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Proposed employment land allocations are associated with urban areas, as such this option is likely to increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.</p> <p>This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. It is therefore unlikely to have any real impact on the provision of good quality housing meeting the needs of all sections of society.
4: Promote access to services for all sections of society	+	+	+	This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. Proposed employment land allocations are associated with urban areas, therefore their densification would mean development in the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased 'critical population mass' which supports viability and sustainability.
5: Encourage the use of sustainable means of transport	+	+	+	This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. Proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. As such, their densification is likely to promote access to and encourage use of sustainable means of transport.
6: Reduce the need of people to travel by car	+	+	+	This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. Proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. As such, their densification is likely to reduce reliance on travel by car.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	+/?	+/?	+/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>This option could support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by supporting the 'critical mass' through increased economic activity within these locations, which supports their viability and sustainability. However, this is somewhat dependent on the specific site allocations and nature of resultant development.</p>
8: Protect and improve soil quality	?	?	?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>As these areas are already identified for development, this option is unlikely to have a significant impact on this objective, as it would not affect the amount of best and most versatile agricultural land subject to development. However, it is acknowledged that this option has very limited potential to promote brownfield development and densification of proposed allocations could result in a negative impact on this objective.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations and nature of resultant development.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+/?	+/?	+/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the conservation and enhancement of water quality in Shropshire and a desire to avoid negative impacts. Furthermore, proposed employment land allocations are associated with urban settlements and pollution from rural areas is the main issue affecting water quality in Shropshire.</p> <p>As such, this option could minimise impact/offer some protection to existing water resources. However, this is somewhat dependent on the specific site allocations and nature of resultant development.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	?	?	?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>The selection of proposed site allocations was informed by consideration of reduction of flood risk and improvement of flood management in Shropshire. As such, this is likely to reduce the extent of any potential for a negative effect. Furthermore, proposed employment land allocations are generally sufficiently large scale to create opportunities for flood management measures. Conversely, densification of these proposed employment land allocations could result in a negative impact on this objective as it increases the coverage of built form and decreases opportunities for flood management. As such, it is considered that the effect on flood risk and opportunities to improve flood management will ultimately depend on the specific site allocations and nature of resultant development.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Development within or close to an Air Quality Management Area is more likely to have an adverse impact on air quality/air pollution, whilst development elsewhere is unlikely to alter the current situation. The selection of proposed employment land allocations was informed by consideration of air quality and the ability to reduce air pollution. Furthermore, none of the proposed allocations are within or close to an Air Quality Management Area and only a limited number have any potential for an impact on one. However, this will ultimately depend on the specific site allocations and nature of resultant development.</p>
12: Reduce carbon dioxide emissions	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Their densification will likely provide opportunities to reduce energy consumption and increase production of energy from renewable sources.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	<p>Irrespective of location, it is expected that this additional employment development would achieve a minimum of 10% biodiversity net gain.</p> <p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Proposed employment land allocations are associated with urban areas which benefit from the greatest range of infrastructure, services and facilities access to a range of sustainable means of transport.</p> <p>Furthermore, many of the proposed site allocations are sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Although, conversely, densification of proposed allocations could result in a negative impact on this objective.</p> <p>As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development.</p>
14: Promote efficient use of natural resources	+	+	+	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport.</p> <p>This option would specifically involve densification of proposed allocations and as such is very likely to increase the efficient use of land. Although, it is considered less likely that it would support the re-use existing buildings or brownfield land.</p> <p>Densification of development may also have the potential to increase the use of alternatives to primary aggregates and making the best use of existing infrastructure, as there is a greater 'critical mass' to support this. Although this is considered dependent on the specific allocations.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	-/?	-/?	-/?	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>The selection of proposed site allocations was informed by consideration of the importance of conserving and enhancing heritage assets in Shropshire. As such, this option is likely to minimise the extent of any potential for a negative effect on heritage assets.</p> <p>However, some of the proposed allocations do have a negative impact on this objective. Furthermore, densification of proposed allocations could also result in a negative impact on this objective. Conversely, densification of development may also increase ‘critical mass’ increasing opportunities for the positive management of heritage assets.</p> <p>As such, it is considered that this is somewhat dependent on the specific site allocations.</p>
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	<p>This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>The densification of proposed allocations is likely to increase the potential for impact on landscape character and change to the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.</p> <p>Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity, but it is unlikely to prevent localised changes in landscape character.</p>

### **Summary for Accommodating the Uplift to the Proposed Employment Land Requirement Option 2: Densification of Proposed Site Allocations**

11.18. This option would entail increasing the density and thereby the capacity of one or more proposed site allocations. As such, it would not require additional site allocations / expansion of the area of proposed allocations. However, a very cautious approach would be required as significant effort has already been undertaken to maximise site density for employment allocations – although this is challenging in a Shropshire Context. Furthermore, it would be necessary to consider whether the increased density still resulted in an appropriate form

of development, as such this exercise would need to be undertaken on a site by site basis. This option would continue to align with the principle of urban focus.

- 11.19. It is likely that this option would significantly contribute to facilitating the ability to encourage a strong and sustainable economy throughout Shropshire.
- 11.20. This option would also likely support a positive effect on the promotion of access to services for all sections of society, encouragement of the use of sustainable modes of transport, reduction of reliance on travel by car, and reducing carbon dioxide emissions. This is because proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of sustainable means of transport. Other, proposed allocations are associated with rural settlements that offer an appropriate level of infrastructure, services and facilities.
- 11.21. It is considered that this option provides opportunities to promote efficient use of natural resources as one mechanism for contributing to this is increased densification, which is fundamental to this option. Densification also has the potential to increase the use of alternatives to primary aggregates and the ability to make best use of existing infrastructure, as there is a greater 'critical mass', although this is considered dependent on the specific allocations.
- 11.22. This option may have a positive effect on the adaptation to and mitigation of climate change, as proposed employment land allocations are associated with urban areas which benefit from the greatest access to a range of infrastructure, services and facilities. Furthermore, many of the proposed site allocations are sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Although, conversely, densification of proposed allocations could result in a negative impact on this objective. As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development.
- 11.23. This option may also have a positive effect on supporting active and healthy communities, as proposed employment land allocations are associated with urban areas and as such have the potential to support critical mass of these services. However, it is considered that the effect is somewhat dependent on the specific site allocations and nature of resultant development.
- 11.24. This option may also have a positive effect on the conservation and enhancement of water quality/reduction of water pollution, as proposed employment land allocations are associated with urban settlements and pollution from rural areas is the main issue affecting water quality in Shropshire. Furthermore, the selection of proposed site allocations was informed by consideration of the conservation and enhancement of water quality in Shropshire. However, this is somewhat dependent on the specific site allocations and nature of resultant development.

- 11.25. This effect on the enhancement of air quality and reduction of risk of air pollution is unknown. The selection of proposed site allocations was informed by consideration of air quality and the ability to reduce air pollution. Furthermore, none of the proposed allocations are within or close to an Air Quality Management Area and only a limited number have any potential for an impact on one. However, this will ultimately depend on the specific site allocations and nature of resultant development.
- 11.26. This option would likely have a neutral effect on the delivery of good quality housing as this is more likely to be influenced by other components of the draft Shropshire Local Plan.
- 11.27. The impact of this option on both the protection and improvement of soil quality and reduction of flood risk/improvement of flood management is unknown, as it will ultimately depend on the specific site allocations and nature of resultant development. Both these issues informed the identification of proposed site allocations but it would need to be ensured that densification did not alter the impact.
- 11.28. This option may have a negative effect on protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitat, and conserving and enhancing heritage assets as whilst these issues informed the identification of proposed site allocations, densification could result in a negative effect.
- 11.29. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as densification of proposed allocations is likely to increase the potential for impact on landscape character and change to the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location.

**Table 11.3: Accommodating the Uplift to the Proposed Employment Land Requirement Option 3: Increasing Site Allocations**

**Accommodating the Uplift to the Proposed Employment Land Requirement Option 3: Increasing Site Allocations**

This option would entail increasing site allocations in order to increase capacity. This could be through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements) in order to provide additional capacity. Additional capacity associated with increasing site allocations would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	-/?	-/?	-/?	This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. The extent of any impact on protected and priority habitats and species would be dependent on the location of extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. It is considered that this option would likely have a positive impact on the encouragement of a strong and sustainable economy throughout Shropshire. However, the extent of this impact would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process. If located in urban areas or as part of new strategic settlements, they would likely increase the ability to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas. If located in the rural area, they could complement the growth proposed in urban areas, but would have a lower positive effect against this objective.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This option would entail densification of existing proposed site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement. It is therefore unlikely to have any real impact on the provision of good quality housing meeting the needs of all sections of society.
4: Promote access to services for all sections of society	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on the promotion of access to services would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary to support new development. It could also increase the ability to support existing and provide new services and facilities, as a result of increased 'critical population mass' which supports viability and sustainability. A number of rural settlements offer a level of infrastructure, services and facilities and development within them can enhance the 'critical population mass', however other rural settlements have much more limited levels of infrastructure, services and facilities.</p>
5: Encourage the use of sustainable means of transport	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment requirement.</p> <p>It is considered that the extent of any impact on the encouragement of sustainable modes of transport would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary which can promote use of sustainable modes of transport. A number of rural settlements offer a level of infrastructure, services and facilities, including options for sustainable means of transport. However, other rural settlements have much more limited levels of infrastructure, services and facilities and options for sustainable means of transport.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on reducing reliance on travel by car would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>Development located within urban areas benefit from the widest array of infrastructure, services and facilities necessary which can reduce reliance on travel by car. A number of rural settlements offer a level of infrastructure, services and facilities, which can also reduce reliance on travel by car, albeit to a lesser extent. However, other rural settlements have much more limited levels of infrastructure, services and facilities and as such development in such locations would have a higher level of reliance on travel by car.</p>
7: Support active and healthy communities.	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional employment site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>This option could support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by supporting the 'critical mass' through increased economic activity within these locations, which supports their viability and sustainability. However, it is considered that the extent of any impact on supporting active and healthy communities would entirely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations and nature of resultant development.</p>
8: Protect and improve soil quality	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on the protection and improvement of soil quality is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on the conservation and enhancement of water quality and reduction of risk of water pollution is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
10: Reduce flood risk and improve flood management	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on flood risk and flood management is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>Development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. It is considered that the extent of any impact on air quality and air pollution is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
12: Reduce carbon dioxide emissions	+/?	+/?	+/?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>This will likely increase opportunities for reducing energy consumption and the production of energy from renewable sources. However, it is considered that the extent of any impact on carbon dioxide emissions is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
13: Promote adaptation and mitigation to climate change	+/?	+/?	+/?	<p>Irrespective of location, it is expected that this additional employment development would achieve a minimum of 10% biodiversity net gain.</p> <p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>These amended proposed site allocations may be sufficiently large scale to create opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change.</p> <p>However, the location of amended proposed site allocations will affect the ability to access infrastructure, services and facilities and utilise sustainable means of transport. As such, it is considered that the effect on promotion of adaptation to and mitigation of climate change is somewhat dependent on the specific site allocations and nature of resultant development. Proposed site allocations are assessed separately within the SA process.</p>
14: Promote efficient use of natural resources	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on promotion of the efficient use of natural resources would be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of any impact on the conservation and enhancement of heritage assets is dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p>
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	<p>This option would entail increasing site allocations, either through expanding the size of one or more existing and/or identification of one or more additional site allocations, in order to facilitate additional development sufficient to meet the proposed uplift to the employment land requirement.</p> <p>It is considered that the extent of the impact on conservation and enhancement of landscape character and local distinctiveness will be affected by the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.</p> <p>However, any development is still likely to change the character of those places where the majority of people currently live and harm to visual amenity is possible with all forms of development, regardless of location.</p> <p>Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.</p>

### **Summary for Accommodating the Uplift to the Proposed Employment Land Requirement Option 3: Increasing Site Allocations**

11.30. This option would entail increasing site allocations in order to increase capacity. This could be through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements) in order to provide additional capacity.

- 11.31. This option would likely continue to align with the principle of urban focus, if it entailed the extension of the site area of one or more proposed allocations, as the majority of proposed allocations are associated with urban settlements (however there are those associated with rural settlements). It could also continue to align with the principle of urban focus if it entailed the identification of one or more additional site allocations, however this would to an extent be dependent on the location of such proposed allocations. Although the level of uplift to the proposed employment land requirement in the context of the total proposed employment land requirement is unlikely to result in a significant change to the overall distribution of development.
- 11.32. This option would also likely support the encouragement of a strong and sustainable economy throughout Shropshire. However, the extent of this impact would largely be dependent on the location of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
- 11.33. There are a number of SA objectives against which this option has the potential for a positive impact. This includes promoting access to services for all sections of society; encouraging the use of sustainable means of transport; reducing the need of people to travel by car; reducing carbon dioxide emissions; supporting active and healthy communities; and promoting adaptation and mitigation to climate change. However, this is dependent on the location and nature of any extensions to existing proposed allocations/new proposed allocations and nature of resultant development. Proposed site allocations are assessed separately within the SA process.
- 11.34. This option would likely have a neutral effect on the delivery of good quality housing as this is more likely to be influenced by other components of the draft Shropshire Local Plan.
- 11.35. The impact of this option on the protection and improvement of soil quality; conservation and enhancement of water quality in Shropshire and reduction of the risk of water pollution; reduction of flood risk/improvement of flood management; conservation and enhancement of air quality and reduction of the risk of air pollution; promotion of efficient use of natural resources; and conservation and enhancement of heritage assets, is unknown. This will ultimately depend on the location and nature of any extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.
- 11.36. This option would likely have a negative effect on the conservation and enhancement of landscape character and local distinctiveness, as whilst the extent of any negative impact will be dependent on the location and nature of any extensions to existing proposed allocations/new proposed allocations, any development is still likely to change the character of those places where the majority of people currently live and harm to visual amenity is possible with all forms of development, regardless of location.

11.37. This option may also have a negative effect on protecting and enhancing the range of plants and animals in Shropshire. However, the extent of any impact on protected and priority habitats and species would be dependent on the location of extensions to existing proposed allocations/new proposed allocations. Proposed site allocations are assessed separately within the SA process.

**Table 11.4: Accommodating the Uplift to the Proposed Employment Land Requirement Option 4: A Combination of Two or More of the Other Options**

**Accommodating the Uplift to the Proposed Employment Land Requirement Option 4: A Combination of Two or More of the Other Options**

This option would entail utilising a combination of all or a selection of mechanisms from the other reasonable options for accommodating the uplift to the proposed employment land requirement. These are utilising settlement guidelines and windfall allowances in Strategic, Principal, Key Centres and/or Strategic Allocations; densification of proposed site allocations; and increasing site allocations either through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements). Additional capacity would need to be deliverable within the proposed plan period and support the delivery of necessary supporting infrastructure.

16: Conserve and enhance landscape character and local distinctiveness	-	-	-	See commentary for SA Objective 1. The effects against this SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.

#### **Summary for Accommodating the Uplift to the Proposed Employment Land Requirement Option 4:**

11.38. This option would entail utilising a combination of the other reasonable options for accommodating the uplift to the proposed housing requirement. These are utilising settlement guidelines and windfall allowances in Strategic, Principal, Key Centres and/or Strategic Allocations; densification of proposed site allocations; and increasing site allocations either through the extension of the site area of one or more existing proposed allocations and/or identification of one or more additional site allocations (such as through the early release of proposed safeguarded land, identification of new strategic site allocations or identification of new site allocations associated with existing settlements). This option would likely continue to align with the principle of urban focus.

- 11.39. As such, the effects against the SA objectives will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must align with the 'worst case' scenario from each of the other reasonable options.
- 11.40. This option would likely have a positive impact towards the encouragement of a strong and sustainable economy throughout Shropshire.
- 11.41. This option also likely has the potential for a positive impact on a number of other SA objectives. These are the promotion of access to services for all sections of society; encouragement of the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reducing carbon dioxide emissions; and promotion of adaptation and mitigation to climate change. However, this is dependent on the specific approach and in particular the location of development site – with any changes to site allocations assessed separately within the SA process.
- 11.42. This option would likely have a neutral effect on the delivery of good quality housing as this is more likely to be influenced by other components of the draft Shropshire Local Plan.
- 11.43. It is considered that this option would likely have a negative impact against the SA objective of conserving and enhancing landscape character and local distinctiveness.
- 11.44. It is also considered that this option likely has the potential for a negative impact against the SA objectives of protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitats; reducing flood risk and improving flood management; conserving and enhancing Shropshire's air quality and reduce the risk of air pollution; and conserving and enhancing features and areas of heritage value and their setting. However, this is dependent on the specific approach and in particular the location of development site – with any changes to site allocations assessed separately within the SA process.
- 11.45. It is considered that this option could have a positive, negative or neutral impact on the protection and improvement of soil quality; conservation and enhancement of water quality in Shropshire and reduction of the risk of water pollution; and promotion of the efficient use of natural resources. This is dependent on the location and nature of development sites – with any changes to site allocations assessed separately within the SA process.

## **Comparison Summary of Reasonable Options for Accommodating the Uplift to the Proposed Employment Land Requirement**

- 11.46. The purpose of this component of the additional SA assessment is to inform judgements about which of the reasonable alternatives for accommodating the proposed uplift to the employment land requirement is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 11.1 to 11.4 above.
- 11.47. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the employment land requirement, Table 11.5 has been prepared for illustrative purposes. This summarises, for comparison, how the four reasonable alternative options perform against each SA objective. This is achieved by 'ranking' the performance of each reasonable option from the best performing (1) to the poorest performing (4) against each SA objective. Where reasonable alternatives achieve the same ranking in the short, medium and longer term for an SA objective, professional judgement has been used to determine whether the increasing scale of growth proposed in the option would be more likely to have a positive or negative effect on that SA objective.
- 11.48. It is not appropriate to 'total' the scores across all the objectives for each option. The performance of the option requires consideration of each SA objective separately and 'totalling' the scores would not achieve this outcome. Furthermore, the SA objectives address different considerations, so it is not possible to combine them into a single score.
- 11.49. There are also more SA objectives addressing environmental matters than social and economic matters, as such 'totalling' the scores would create a bias towards environmental factors. The principle of sustainable development is to achieve a balance across the social, economic, and environmental objectives as the three pillars for achieving 'sustainability'.

**Table 11.5: Comparison of Reasonable Options for Accommodating the Uplift to the Proposed Employment Land Requirement**

Sustainability Objective	Option 1: Utilising Settlement Guidelines and Windfall Allowances	Option 2: Densification of Proposed Site Allocations	Option 3: Increasing Site Allocations	Option 4: A Combination of the Other Options
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	1	2	3	3
2: Encourage a strong and sustainable economy throughout Shropshire	1	1	2	2
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	N/A	N/A	N/A	N/A
4: Promote access to services for all sections of society	1	1	2	2
5: Encourage the use of sustainable means of transport	1	1	2	2
6: Reduce the need of people to travel by car	1	1	2	2
7: Support active and healthy communities.	1	1	2	2
8: Protect and improve soil quality	1	2	3	3
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	1	1	2	2
10: Reduce flood risk and improve flood management	2	1	1	2
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	3	1	2	3
12: Reduce carbon dioxide emissions	1	1	2	2
13: Promote adaptation and mitigation to climate change	2	1	3	3
14: Promote efficient use of natural resources	1	2	3	3
15: Conserve and enhance features and areas of heritage value and their setting	3	1	2	3
16: Conserve and enhance landscape character and local distinctiveness	1	1	1	1

## Conclusion

- 11.50. Tables 11.1 - 11.4 summarise the updated additional SA assessment work for each of the reasonable options identified for accommodating the uplift to the proposed employment land requirement. Table 11.5 then summarises, in comparative terms, how the four reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.
- 11.51. It is apparent from the results of the updated additional SA assessment work that none of the reasonable options identified for accommodating the uplift to the proposed employment land requirement are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 11.52. Conversely, Options 1 and 2 are considered likely to result in a strongly positive effect on *SA objective 2: encouraging a strong and sustainable economy throughout Shropshire* in the short, medium and long term. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 11.53. This is perhaps unsurprising as the achievement of *SA objective 2: encouraging a strong and sustainable economy throughout Shropshire*, is directly related to the provision of employment opportunities (with urban locations being best placed to maximise positive impacts of such provision). Options 1 and 2 would result in the accommodation of the uplift to the proposed employment requirement in urban locations.
- 11.54. Option 1 is also considered likely to result in a strongly positive effect on *SA objective 14: promotion of efficient use of natural resources* in the short, medium and long term.
- 11.55. The achievement of *SA objective 14: promotion of efficient use of natural resources* is also linked to the location of development sites. Urban areas and in particular windfall development in urban areas, are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas and particularly windfall development in urban areas has significant potential to use alternatives to primary aggregates and makes the best use of existing infrastructure.
- 11.56. It is important to note that there are a number of SA objectives that are linked to the strategic distribution and specific location of development (sites), and as such in the context of this updated additional SA assessment of reasonable options accommodating the proposed uplift to the employment land requirement, the conclusion can only be unknown or at best a level of uncertainty exists. The strategic distribution and location of development (sites) are assessed separately within the SA process.

- 11.57. In general terms, the updated additional SA assessment work can be summarised as concluding that the options that provide greater certainty about the proportion of the uplift to the employment land requirement within urban areas achieves more positive impacts on social, economic and environmental factors. This is because urban locations generally have the highest employment land needs, potential labour force and are best placed to maximise positive impacts of such provision.
- 11.58. It is important to note that the employment land needs of Shropshire’s rural communities must be recognised and appropriately planned for within any strategic distribution of planned development incorporated into the draft Shropshire Local Plan. However, this component of the SA assessment addresses only the proposed uplift to the housing requirement.
- 11.59. It is considered that all of the reasonable options identified for accommodating the uplift to the proposed employment land requirement are potentially realistic and as such have the capability to accommodate the uplift to the proposed employment land requirement. However, in exercising planning judgement regarding which of these options is most appropriate, it will be important to consider deliverability – informed by relevant evidence. The results of this updated additional SA Assessment work is also a very important consideration when undertaking this planning judgement.
- 11.60. On balance, it is considered that Option 1: utilising settlement guidelines and windfall allowances represents the most sustainable of the reasonable options for accommodating the uplift to the proposed employment land requirement. This is because:
- a. It presents an opportunity to achieve a strongly positive effect on SA objective 2: encouraging a strong and sustainable economy throughout Shropshire in the short, medium and long term.
  - b. It presents an opportunity to achieve a strongly positive effect on SA objective 14: promotion of efficient use of natural resources in the short, medium and long term.
  - c. It presents an opportunity to achieve positive impacts against a range of identified sustainability objectives.
  - d. Whilst it poses a potential risk of achieving negative impacts against a range of identified sustainability objectives, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through identification of appropriate policies to manage resultant development (assessed separately within the SA process).
  - e. It is considered that this option achieves the most appropriate ‘balance’ across all three pillars of sustainability – social, economic, and environmental.
  - f. This option would ensure that the proposed uplift to the proposed employment land requirement is accommodated within the most sustainable settlements with the widest array of infrastructure, services and facilities necessary to support new development.
- Options 2: densification of proposed site allocations would also achieve this outcome. However, on balance it is considered that the positive sustainability

outcomes associated with Option 1 are more significant than Option 2 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 2. Furthermore, it is important to note that the reason for the Council's approach to site densities is to both provide confidence in deliverability of the proposed employment land requirement and avoid risk of over-development which can have negative impacts on a number of SA objectives.

-Option 3: increasing site allocations would also achieve the proposed uplift to the proposed employment land requirement. However, on balance it is considered that the positive sustainability outcomes associated with Option 1 are more significant than Option 3 and the risks of negative sustainability outcomes associated with Option 1 are lower than Option 3 – primarily due to the increased certainty regarding the urban focus of development.

-Option 4: a combination of the other options would also achieve the proposed employment land requirement uplift. However, from an SA perspective, the effects against each SA objective will align with the effects of the other three options. Applying the precautionary principle, the conclusion for this reasonable option must reflect the 'worst case' scenario from each of the other reasonable options.

- 11.61. Inevitably, the final determination (planning judgement) about which reasonable option for accommodating the uplift to the proposed employment land requirement within the draft Shropshire Local Plan will be informed by a range of evidence/considerations. This updated additional SA Assessment work is a very important consideration when undertaking this planning judgement. However, a range of other factors will also require due consideration when undertaking this planning judgement. For instance, it will be important to ensure that any proposed option for accommodating the uplift to the proposed employment land requirement accords with the overall Plan strategy and importantly is deliverable within the proposed plan period.
- 11.62. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 11.63. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 12. Summary of SA and Site Assessment: Site(s) to Accommodate Proposed 1,500 Dwelling and 30ha Employment Land Contributions Towards the Unmet Needs Forecast to arise within the Black Country

### Introduction

12.1. Following completion of the updated additional SA assessment work on reasonable options for the housing and employment land requirements, the conclusions reached were given careful consideration alongside the extensive range of other information available. This informed the planning judgement regarding which of the reasonable options for the housing and employment land requirements should form the basis for the housing and employment land requirements within the draft Shropshire Local Plan.

12.2. In conclusion, Shropshire Council considers that:

12.3. Option 3b should form the basis for the proposed housing requirement within the draft Shropshire Local Plan.

12.4. **Option 3b: High Growth Plus a 1,500 Dwelling Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local housing need of 25,894 dwellings over the 22-year plan period (annual average of 1,177 dwellings), plus a 1,500 dwelling contribution toward forecast unmet housing need in the Black Country.

12.5. The resultant proposed housing requirement is **31,300 dwellings** over the proposed plan period from 2016-2038. This equates to an annual average of around 1,423 dwellings.

12.6. Option 3b should form the basis for the proposed employment land requirement within the draft Shropshire Local Plan.

12.7. **Option 3b: High Growth Plus a 30ha Employment Land Contribution to the Black Country Authorities Unmet Housing Needs** represents around a 15% uplift on local employment land need of 250ha over the 22-year plan period (annual average of around 11.5ha), plus a 30ha employment land contribution toward forecast unmet employment land need in the Black Country.

12.8. The resultant proposed employment land requirement is **320ha** over the proposed plan period from 2016-2038. This equates to an annual average of around 14.5ha.

12.9. **These planning judgement exercises have been summarised within the Updated Housing and Employment Topic Paper.**

### **Identification of Site(s) to Accommodate Proposed Contributions Towards Unmet Housing and Employment Land Needs Forecast to Arise in the Black Country**

- 12.10. Paragraph 21 of ID28 specified that for the purpose of effectiveness, there is a need to identify sites to accommodate any proposed contributions to unmet needs forecast to arise in the Black Country, through additional SA and site assessment work.
- 12.11. Specifically, it states “...the Council will also need to consider which site or sites in the Plan will be identified to meet that need. This also needs to be subject to sustainability appraisal to reflect the objectives and geographical scope of the Plan.”
- 12.12. As the proposed housing and employment land requirements include proposed contribution to the unmet housing and employment land needs forecast to arise in the Black Country (1,500 dwellings and 30ha of employment land), it is necessary to consider the sites upon which these contributions should be accommodated.
- 12.13. This section of the SA therefore summarises the updated additional SA and site assessment work undertaken to inform the identification of sites to accommodate the proposed 1,500 dwelling and 30ha employment land contribution towards the unmet needs forecast to arise within the Black Country.

### **Identification of a Reasonable Assessment Geography**

- 12.14. As documented within the Housing Topic Paper (GC4i) and Employment Strategy Topic Paper (GC4n), it is considered a functional relationship exists between Shropshire and the Black Country. However, it is also considered that the extent of the relationship with the Black Country Authorities varies across Shropshire, which is perhaps unsurprising given the size and geography of Shropshire.
- 12.15. As such, it was considered appropriate and proportionate to identify a reasonable geography of Shropshire within which potential sites that could contribute to the unmet housing and employment land needs of the Black Country could be located, prior to undertaking additional SA and site assessment work.
- 12.16. Consistent with the assessment of the functional relationship between Shropshire and the Black Country, this was informed by consideration of:
- a. Geographic proximity and the location and quality of main road and rail transport links between Shropshire and the Black Country.
  - b. Migration patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - c. Commuting patterns between sub-geographies (Place Plan Areas) within Shropshire and the entirety of the Black Country.
  - d. The extent to which Travel to Work Areas (TTWA’s) associated with the Black Country penetrate into Shropshire and vice versa.

## **Summary: Process Undertaken to Identify a Reasonable Assessment Geography**

### ***Geographic Proximity and the Location of Main Road and Rail Transport Links***

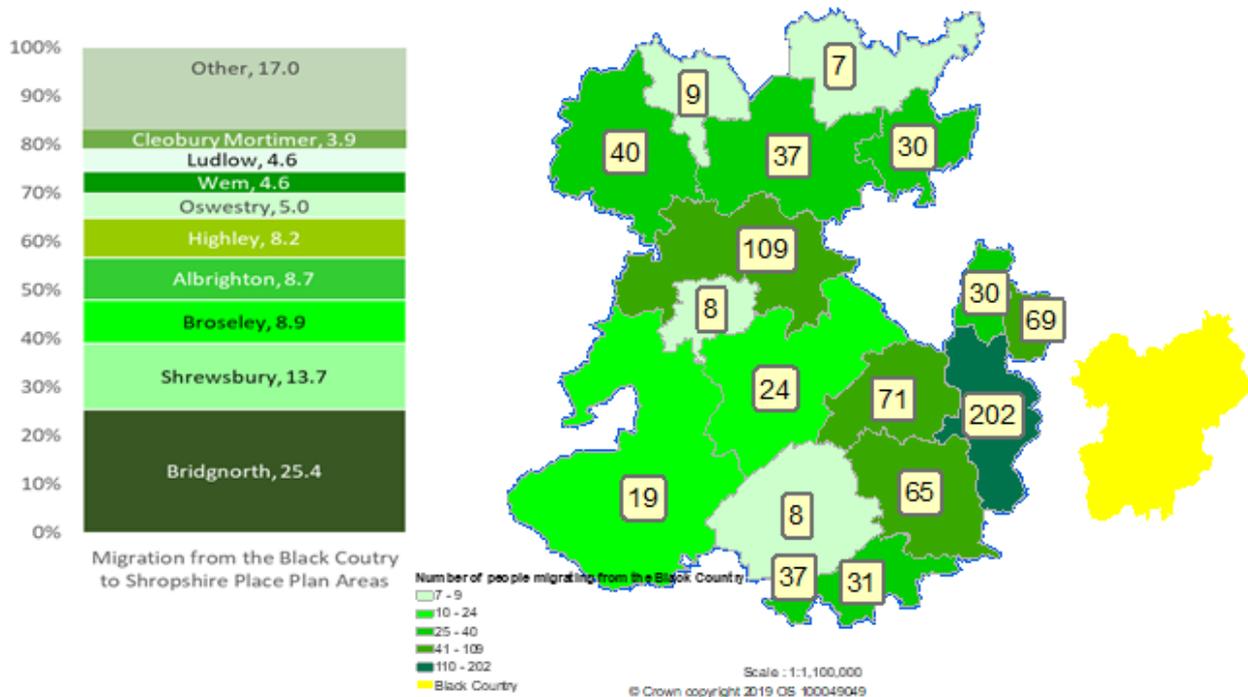

- 12.17. Shropshire covers a large and diverse geographic area. Whilst none of Shropshire adjoins the Black Country, it is considered that eastern and central parts of Shropshire are in geographic proximity, particularly to Wolverhampton and Dudley. However, northern, southern and western portions of Shropshire have a much more limited geographic proximity to the Black Country.
- 12.18. A number of road and rail links exist between Shropshire and the Black Country, as documented within the Housing Topic Paper (GC4i).
- 12.19. Key road link includes the A5 / M54 Corridor running from Shrewsbury to Wolverhampton (via Shifnal and Albrighton); the A41 corridor running from Albrighton to Wolverhampton (and also extending north into Shropshire linking with Shifnal, Market Drayton and Whitchurch); the A454 and A458 corridors linking Bridgnorth to Wolverhampton and Dudley respectively. These routes allow access to the rest of Shropshire and also to Sandwell and Walsall.
- 12.20. Rail links between Shropshire and the Black Country are provided via the Shrewsbury to Wolverhampton railway line, which includes regular stops at Shifnal and Albrighton in Shropshire and allows for onward travel from Wolverhampton to Birmingham with regular stops at various locations in Sandwell and Dudley (including Coseley and Tipton in Dudley). This line allows for onward rail connections to other parts of Shropshire and other parts of the Black Country via the rail network.
- 12.21. It is apparent and unsurprising that it is the parts of Shropshire on the east and in central areas that have the most direct transport links to the Black Country. Northern, southern and western portions of Shropshire have much less direct links to the Black Country.

### ***Migration Patterns***

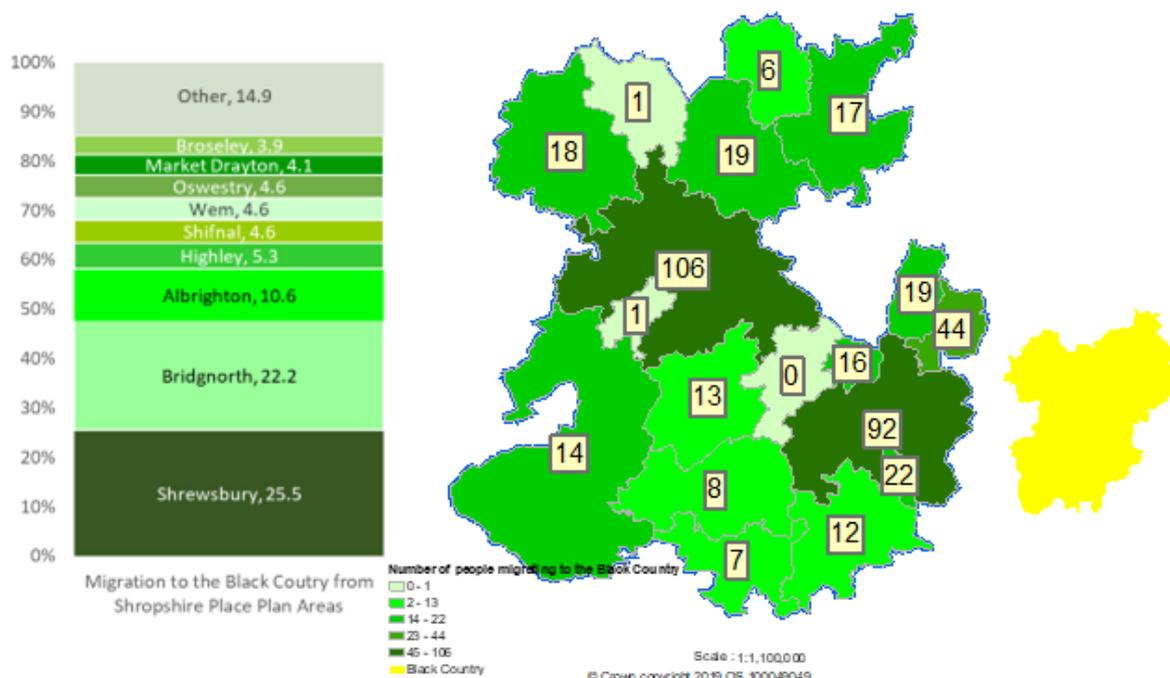

- 12.22. The Housing Topic Paper (GC4i) provides information on migration patterns at a sub-Shropshire level (based on 2011 Census data). These are summarised in Figure 12.1 and Figure 12.2.
- 12.23. It is apparent from this data that the majority of people migrating into Shropshire from the Black Country are moving to eastern and central locations. It is also apparent that the majority of people migrating out of Shropshire to the Black Country are moving from eastern and central locations. Specifically:
- a. Bridgnorth Place Plan Area (25.4%) was by far the most popular destination for people migrating from the Black Country to Shropshire, closely followed by Shrewsbury (13.7%), Broseley (8.9%), Albrighton (8.7%) and Highley (8.2%) Place Plan Areas.
  - b. The largest proportion of people migrating from Shropshire to the Black Country were from the Shrewsbury Place Plan Area (25.5%), followed by Bridgnorth (22.2%), and Albrighton (10.6%) Place Plan Areas.

12.24. It is also apparent from this data that migration links between the Black Country and western, north-western and south-western locations within Shropshire are much more limited and are likely to have stronger functional links with other locations such as Cheshire to the north, Herefordshire to the south and Wales to the west.

**Figure 12.1: Internal Migration from the Black Country Authorities to Shropshire (at a Sub-Shropshire level)<sup>1</sup>**

**Figure 12.2: Internal Migration from Shropshire (at a Sub-Shropshire Level) to the Black Country Authorities<sup>2</sup>**

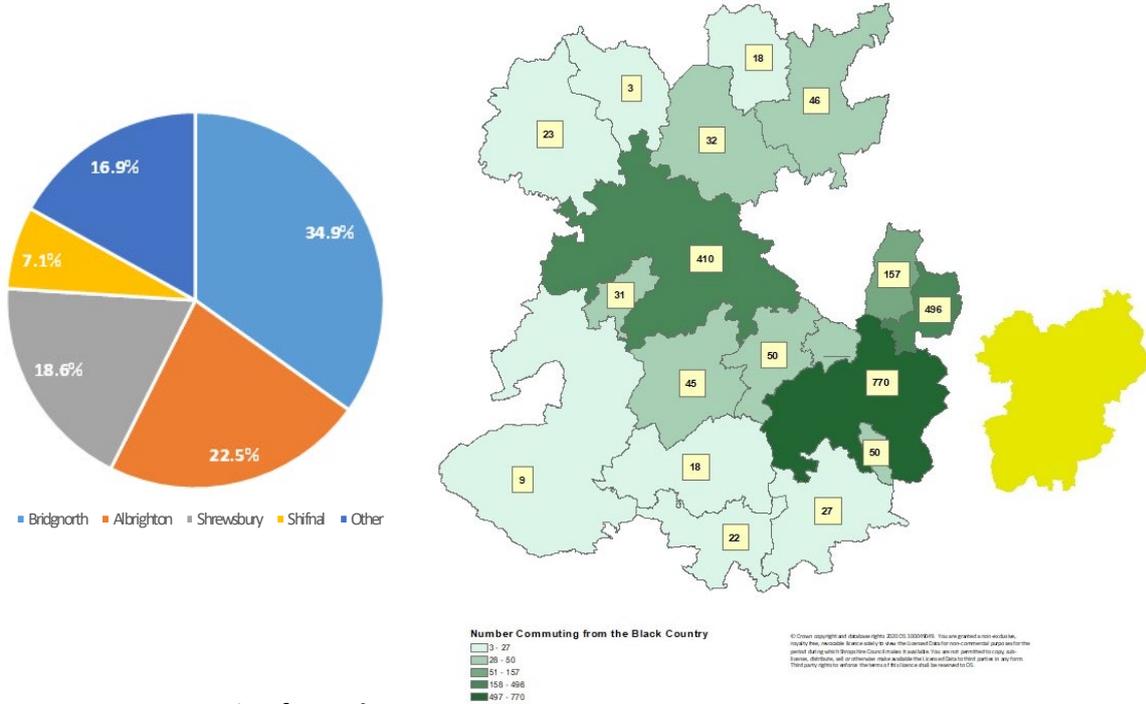

<sup>1</sup> ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

<sup>2</sup> ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

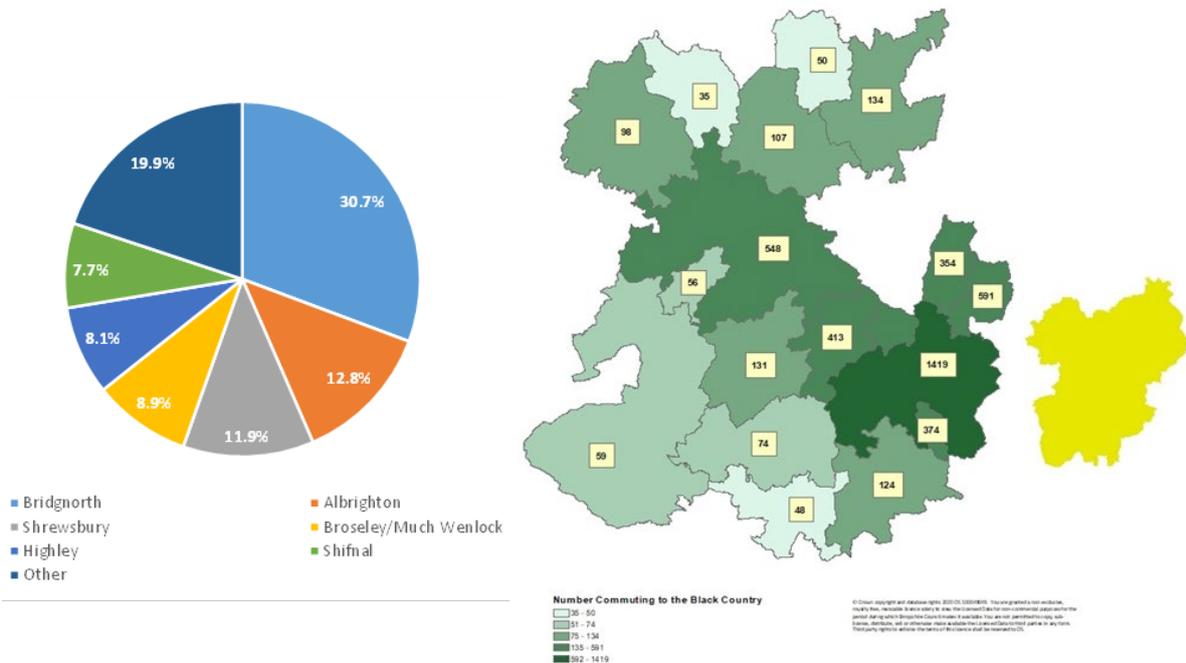

### Commuting Patterns

12.25. The Housing Topic Paper (GC4i) also provides information on commuting patterns at a sub-Shropshire level (based on 2011 Census data). This is summarised within Figure 12.3 and Figure 12.4.

**Figure 12.3: Commuting from Black Country Authorities to Shropshire (at a Sub-Shropshire Level)<sup>3</sup>**

**Figure 12.4: Commuting from Shropshire to the Black Country Authorities (at a Sub-Shropshire Level)<sup>4</sup>**

<sup>3</sup> ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

<sup>4</sup> ONS, 2011 Census, Migration - Origin Destination, Crown Copyright

- 12.26. It is apparent from this data that the majority of people commuting into Shropshire from the Black Country, commute to eastern and central locations. It is also apparent that the majority of people commuting out of Shropshire to the Black Country, commute from eastern and central locations. Specifically:
- a. The majority of commuters from the Black Country into Shropshire were employed within the Bridgnorth Place Plan Area (34.9%), followed by Albrighton (22.5%), Shrewsbury (18.6%), and Shifnal (7.1%) Place Plan Areas.
  - b. The largest proportion of people commuting from Shropshire to the Black Country were from the Bridgnorth Place Plan Area (30.7%), followed by Albrighton (12.8%) and Shrewsbury (11.9%) Place Plan Areas.
- 12.27. It is also apparent from this data that commuting links between the Black Country to and western, northern and southern locations within Shropshire are much more limited.

### ***Travel to Work Areas***

- 12.28. Travel to Work Areas (TTWA's) are a geography created to approximate labour market areas - self-contained areas in which most people both live and work. As summarised within the Housing Topic Paper (GC4i), only one TTWA applies to both Shropshire and the Black Country, this being the Wolverhampton and Walsall TTWA which represents 2.7% of the Shropshire population. This population is located largely within the Albrighton Place Plan Area, Bridgnorth Place Plan Area and a very small part of the Shifnal Place Plan Area.

### ***Conclusion***

- 12.29. It was apparent from the consideration of the range of identified factors, that it is the eastern and central parts of Shropshire that have the strongest functional relationship with the Black Country – they are closest geographically, and generally benefit from the most direct transport links, and contain the areas with the strongest migration and commuting/TTWA links. The functional relationship with the Black Country is significantly more limited within western, northern and southern parts of Shropshire.
- 12.30. It was concluded that potential sites to accommodate the proposed contribution of 1,500 dwellings and 30ha of employment land towards the unmet needs forecast to arise within the Black Country should be located within either central or eastern parts of Shropshire. Specifically, within one or more of the following Place Plan Areas:
- a. Albrighton
  - b. Bridgnorth
  - c. Broseley
  - d. Highley
  - e. Much Wenlock
  - f. Shifnal
  - g. Shrewsbury

12.31. These Place Plan Areas have been identified, as the range of factors considered indicate they have the strongest functional relationship to the Black Country. It was therefore considered that sites in these areas would be best able to promote sustainable patterns of development and would also be most likely to meet the needs of the relevant Black Country households.

### *Housing*

12.32. Within these Place Plan Areas, it was concluded that those sites suitable for accommodating all or part of the proposed contribution to the unmet housing needs forecast to arise within the Black Country would be those associated with the urban areas (Strategic, Principal and Key Centres) with reasonable housing guidelines proposed; or potential strategic settlements/strategic sites.

12.33. This was because such locations:

- a. Perform both a local and more strategic function within Shropshire.
- b. Align with the principle of urban focus which underpins the distribution of development across Shropshire.
- c. Consistent with the principle of urban focus, are envisaged to have a reasonable amount of housing development occurring, potentially sufficient to contribute to local needs and more strategic needs.
- d. Are best able to sustainably accommodate the larger sites necessary to support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country (alongside local needs).
- e. Generally, offer the services and facilities best able to support connectivity between Shropshire and the Black Country.
- f. Are considered most likely to meet the needs of the relevant Black Country households.

12.34. Conversely other locations (Community Hubs, Community Cluster settlements, and the wider rural area – excluding potential strategic settlements / strategic sites) are:

- a. Generally smaller scale and perform a more local function.
- b. Do not constitute urban areas, therefore they do not align with the principle of urban focus that underpins the distribution of development across Shropshire.
- c. Consistent with the principle of urban focus, are generally envisaged to have a lower amount of housing development occurring.
- d. Are less able to accommodate sites large enough to meet local needs and support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.
- e. Offer lower levels of services and facilities to support connectivity between Shropshire and the Black Country.

## *Employment*

- 12.35. Similarly, within these Place Plan Areas, it was concluded that those sites suitable for accommodating all or part of the proposed contribution to the unmet employment land needs forecast to arise within the Black Country would be those associated with the urban areas (Strategic, Principal and Key Centres) where significant employment land guidelines are proposed; or potential strategic settlements / strategic sites.
- 12.36. This was because such locations:
- a. Perform both a local and more strategic function within Shropshire.
  - b. Align with the principle of urban focus which underpins the distribution of development across Shropshire.
  - c. Consistent with the principle of urban focus, are envisaged to have a significant amount of employment land made available for development, potentially sufficient to contribute to local needs and more strategic needs.
  - d. Are best able to sustainably accommodate the larger sites necessary to support all or part of the proposed contribution to the unmet employment land need forecast to arise within the Black Country (alongside local needs).
  - e. Generally, offer the services and facilities best able to support connectivity between Shropshire and the Black Country.
  - f. Are considered most likely to meet the needs of the relevant Black Country households.
- 12.37. Conversely other locations (Key Centres with lower employment land guidelines and supply, Community Hubs, Community Cluster settlements, and the wider rural area – excluding potential strategic settlements / strategic sites) are generally envisaged to have a lower amount of employment land development occurring. They are also generally less able to accommodate the large employment sites sufficient to meet both local needs and support all or part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.

## *Conclusion*

- 12.38. As such, the **reasonable options for sites** to accommodate all or part of the proposed contribution to the unmet housing needs forecast to arise within the Black Country are those in the following locations:
- a. Sites associated with the settlement of Albrighton.
  - b. Sites associated with the settlement of Bridgnorth.
  - c. Sites associated with the settlement of Broseley.
  - d. Sites associated with the settlement of Highley.
  - e. Sites associated with the settlement of Much Wenlock.
  - f. Sites associated with the settlement of Shifnal.
  - g. Sites associated with the settlement of Shrewsbury.
  - h. Potential strategic settlements/sites within Albrighton Place Plan Area.

- i. Potential strategic settlements/sites within Bridgnorth Place Plan Area.
  - j. Potential strategic settlements/sites within Broseley Place Plan Area.
  - k. Potential strategic settlements/sites within Highley Place Plan Area.
  - l. Potential strategic settlements/sites within Much Wenlock Place Plan Area.
  - m. Potential strategic settlements/sites within Shifnal Place Plan Area.
  - n. Potential strategic settlements/sites within Shrewsbury Place Plan Area.
- 12.39. The **reasonable options for sites** to accommodate all or part of the proposed contribution to the unmet employment land needs forecast to arise within the Black Country are those in the following locations:
- a. Sites associated with the settlement of Bridgnorth.
  - b. Sites associated with the settlement of Shifnal.
  - c. Sites associated with the settlement of Shrewsbury.
  - d. Potential strategic settlements/sites within Albrighton Place Plan Area.
  - e. Potential strategic settlements/sites within Bridgnorth Place Plan Area.
  - f. Potential strategic settlements/sites within Broseley Place Plan Area.
  - g. Potential strategic settlements/sites within Highley Place Plan Area.
  - h. Potential strategic settlements/sites within Much Wenlock Place Plan Area.
  - i. Potential strategic settlements/sites within Shifnal Place Plan Area.
  - j. Potential strategic settlements/sites within Shrewsbury Place Plan Area.
- 12.40. **For the avoidance of doubt, reasonable options for sites to accommodate the proposed contributions to unmet housing and employment land need forecast to arise within the Black Country are in the eastern and central parts of Shropshire at the larger settlements where growth is proposed and all potential strategic settlements/sites.**
- 12.41. Shropshire Council considers that this represents a comprehensive range of reasonable options for sites to accommodate all or part of the proposed contribution of 1,500 dwellings and 30ha of employment land to the unmet needs forecast to arise within the Black Country.

#### **Scope of the Additional SA and Site Assessment Work**

- 12.42. Having reviewed the SA and site assessment work already undertaken within the identified reasonable geography, conclusions were reached regarding the scope of the additional SA and Site Assessment work required in order to inform the identification of appropriate site(s) from within the reasonable options identified to accommodate the proposed contributions to the unmet housing and employment land needs forecast to arise within the Black Country.
- 12.43. With regard to the **identification of sites**, it was concluded that a comprehensive process was undertaken to identify sites for consideration within the site assessment

process undertaken to inform the identification of proposed allocations within the draft Shropshire Local Plan.

- 12.44. This included a call for sites, identification of potential sites through a Strategic Land Availability Assessment (SLAA), and consideration of sites submitted during each of the five stages of Regulation 18 (Plan Making) consultation undertaken.
- 12.45. It is considered that this represented an extensive and comprehensive range of reasonable options for site allocations across Shropshire and similarly represented an appropriate range of reasonable options for sites to accommodate the proposed contribution to the unmet housing need forecast to arise in the Black Country. Therefore, it was not considered necessary or appropriate to undertake a further call for sites or to seek to identify further sites for consideration within the site assessment process.
- 12.46. For the avoidance of doubt, although a further call for sites was not considered necessary or appropriate, following identification the reasonable assessment geography, **the Council re-assessed all sites in the site assessment process that were in this assessment geography, as part of the additional work. The additional work was not limited to those sites that are proposed for allocation within the draft Shropshire Local Plan.**
- 12.47. **Stage 1 of the Site Assessment process** involved a high-level strategic assessment of sites across Shropshire (within the Strategic Land Availability Assessment), with more detailed assessment undertaken in later stages of assessment. It is at this later stage of assessment that conclusions were reached regarding the sustainability and suitability of sites for allocation. As such, it was also concluded that this stage of the site assessment process did not require updating.
- 12.48. **Stage 2a of the Site Assessment process** involved consideration of the performance of sites against relevant SA Objectives identified through the SA Scoping Report. These SA Objectives are considered appropriate to assess the sustainability of sites to accommodate the needs of Shropshire and any contribution to the Black Country.
- 12.49. The conclusion of **Stage 2a of the site assessment process** involved calculating an overall score for each site, based on performance against all identified SA objectives. Sites were then allocated a category, either 'Good', 'Fair' or 'Poor', through comparison to other sites at the relevant settlement. This was then considered as part of the wider site assessment process.
- 12.50. It was considered the process to calculate an overall score for each site and the principle of allocating each site to a category based on comparison to other relevant sites also remained appropriate when assessing the sustainability of sites to accommodate the needs of Shropshire and any contribution to the Black Country.
- 12.51. However, to allow for comparison across the entirety of the assessment geography (and therefore between all reasonable options for accommodating all or part of the proposed contribution to the unmet housing and employment land needs forecast to

arise within the Black Country), a targeted update of the **Stage 2a Site Assessment process** was undertaken.

- 12.52. This update allocated each site a category of either 'Good', 'Fair' or 'Poor', through comparison to other sites within the relevant assessment geography identified. This alongside the category allocated on a settlement basis, was considered as part of the wider site assessment process. In this way, it informs identification of appropriate site(s) to accommodate proposed contributions to the unmet needs forecast to arise in the Black Country.
- 12.53. **Stage 2b of the site assessment process** involved a 'filter' of sites based on availability, size and strategic suitability. When undertaking this screening, no specific consideration was given to the potential scale of development need in any location.
- 12.54. The intention of the 'filters' applied in Stage 2b of the site assessment process was to 'narrow down' the sites considered in Stage 3 of the site assessment process. This is consistent with all previous iterations of the SA undertaken to inform the draft Shropshire Local Plan.
- 12.55. Dealing with each of the three filters in turn:
- a. Size: Sites were 'filtered out' of the site assessment process where they were less than a specified size (unless there was potential for allocation as part of a wider site). The site size 'filters' applied were 0.2ha in Community Hubs and Strategic/Principal/Key Centres within/partly within the Green Belt or Shropshire Hills AONB, and 0.5ha for other Strategic/Principal/Key Centres. No other filters on size were applied.
  - b. Availability: Sites were 'filtered out' of the site assessment process where there remained uncertainty about whether the site was available for relevant forms of development, despite best efforts to ascertain site availability.
  - c. Strategic Suitability: Sites were 'filtered out' of the site assessment process where they were identified as being subject to a significant physical, heritage and/or environmental constraint (identified within the Strategic Land Availability Assessment). These constraints are such that it was considered they were unsuitable for development.
    - Significant physical constraints include where the site is landlocked (cannot be accessed); some distance from the built form (unless it could represent a potential strategic site); or the majority of the site is in flood zones 2/3, an identified open space, or has a severely adverse topography.
    - Significant environmental/heritage constraints include where the majority of the site has been identified as a heritage or natural environment asset.
- 12.56. It was considered these filters remain logical to both the consideration of sites to accommodate the needs and objectives of Shropshire and the needs of the Black Country and did not require updating.
- 12.57. **Stage 3 of the SA and site assessment process** was the point at which detailed consideration of sites that progressed through initial screening was undertaken. It was also at this stage that conclusions regarding proposed allocations were reached.

- 12.58. As such, it was considered that this stage was the most appropriate to consider suitability to accommodate / contribute towards accommodation of the proposed 1,500 dwelling and 30ha of employment land towards the unmet needs forecast to arise within the Black Country and ultimately to identify the site(s) to accommodate these proposed contributions. **Stage 3 of the SA and site assessment process was therefore subject to a comprehensive update.**
- 12.59. Therefore, the additional SA and site assessment work required focused within **Stage 2a of the Site Assessment** and **Stage 3 of the Site Assessment process.**

### **Targeted Update to the Stage 2a Site Assessment process**

- 12.60. The SA Objectives utilised within the SA process to assess the sustainability of sites to meet the needs of Shropshire were considered equally appropriate to assess the sustainability of sites to accommodate all or part of the proposed contribution to the unmet needs forecast to arise in the Black Country.
- 12.61. Similarly, the principle of and process undertaken to allocate each site an overall 'score' and allocate a category, either 'Good', 'Fair' or 'Poor', through comparison to other sites was also considered appropriate.
- 12.62. However, to allow for comparison across the entirety of the assessment geography (and therefore between all reasonable options for accommodating all or part of the proposed contribution to the unmet housing and employment land needs forecast to arise within the Black Country), a targeted update of the **Stage 2a Site Assessment process** was required.
- 12.63. For completeness, this update considered all sites associated with settlements identified within the 'relevant assessment geography' and all potential strategic sites / settlements. Each site was allocated a category of either 'Good', 'Fair' or 'Poor', through comparison to all other sites identified.
- 12.64. Please Note: As this categorisation occurred over a different geography to that utilised when comparing sites in the context of the relevant settlement (or when comparing potential strategic sites / settlements), in some instances sites were allocated to differing categories across the two processes. This is to be expected, given the differing geographies and the differing purposes – accommodating the development needs of a specific settlement and contributing to meeting the needs of Shropshire, compared with accommodating all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 12.65. The results of this exercise, alongside the category allocated on a settlement basis, will be considered as part of the wider site assessment process. In this way, it will inform the identification of appropriate site(s) to accommodate proposed contributions to the unmet needs forecast to arise in the Black Country.
- 12.66. For the avoidance of doubt, this additional work considered all sites identified within the site assessment process in the relevant assessment geography and all potential strategic sites - not just those sites that are proposed for allocation within the draft Shropshire Local Plan.

12.67. This entailed consideration of around 450 sites as potential locations to accommodate proposed contributions to unmet housing needs forecast to arise in the Black Country; and around 350 sites as potential locations to accommodate proposed contributions to unmet employment land needs forecast to arise in the Black Country.

### **Updating the Stage 3 Site Assessment process**

- 12.68. To allow for the Stage 3 Site Assessment process to effectively consider the sites that constitute reasonable options to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country, it was concluded that three further specific factors required consideration, these being:
- a. The results of the targeted update to the Stage 2a site assessment;
  - b. Relationship of the site and where appropriate the associated settlement to the Black Country; and
  - c. Potential of the site to accommodate all or part of the proposed contribution to the Black Country.
- 12.69. Other strategic factors related to the suitability and appropriateness of a site accommodating all or part of the proposed contribution to the Black Country were addressed as part of the wider strategic considerations.
- 12.70. These factors alongside other factors considered within the site assessment process then ultimately informed the decision regarding which sites are proposed to accommodate all or part of the proposed contributions to the unmet needs forecast to arise within the Black Country and equally which sites are not proposed to accommodate all or part of the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 12.71. For the avoidance of doubt, this additional work considered all sites within the relevant assessment geography that proceeded to stage 3 of the site assessment process both within the Green Belt and non-Green Belt sites, and not just those sites that are proposed for allocation within the draft Shropshire Plan. This assessment also explicitly considered the outcome of the Green Belt assessment and review undertaken to inform the preparation of the draft Shropshire Local Plan. It also specifically assesses the relationship of sites with the Black Country.
- 12.72. This entailed consideration of around 230 sites as potential locations to accommodate proposed contributions to unmet housing needs forecast to arise in the Black Country; and around 160 sites as potential locations to accommodate proposed contributions to unmet employment land needs forecast to arise in the Black Country.

### **Summary of the Additional SA and Site Assessment Work**

- 12.73. **The Updated Stage 2a SA and Site Assessment work and the Updated Stage 3 Site Assessments form Appendices 1-10 of this Additional SA Report.**
- 12.74. Appendix 1 of this Additional SA Report provides the updated Stage 2a housing Assessments, for all the relevant settlements and the identified potential strategic settlements/sites.

12.75. A summary of the results of this updated assessment is provided within Table 12.1:

12.77. Appendices 3-10 of this Additional SA Report consist of the updated Stage 3 Assessments for each of the relevant settlements and the identified potential strategic settlements/sites.

12.78. The decision regarding appropriate sites to accommodate all or part of the proposed contributions to the unmet housing and employment land needs forecast to arise within the Black Country and the quantity of proposed contribution that should be accommodated upon them, were ultimately ones of professional judgement.

- 12.79. This is comparable to the process undertaken when identifying sites to accommodate all or part of a proposed settlement housing guideline and/or the proposed housing requirement.
- 12.80. This professional judgement was directly informed by the targeted updated to Stage 2a of the site assessment process; the additional factors considered regarding the relationship of each site (and where appropriate the associated settlement) to the Black Country; and the potential of the site to accommodate all or part of the proposed contribution to the Black Country, within Stage 3 of the site assessment process. It was also directly informed by the other factors considered within the entirety of the site assessment process.
- 12.81. The reasoning for decisions is explained within the Updated Stage 3 Site Assessments, which form Appendices 3-10 of this Additional SA Report.
- 12.82. In summary, following completion of the targeted Update to the Stage 2a SA Site Assessments and the Updated Stage 3 SA Site Assessments, a series of sites have been identified to accommodate the proposed contributions of 1,500 dwellings and 30ha of employment land towards unmet needs forecast to arise within the Black Country. These sites and a brief summary of the reasons for their identification are documented within Table 12.3.
- 12.83. For the avoidance of doubt, this additional work considered all sites within the relevant assessment geography that proceeded to stage 3 of the site assessment process, both within the Green Belt and non-Green Belt sites, and not just those sites that are proposed for allocation within the draft Shropshire Plan.
- 12.84. It is apparent that the sites identified to accommodate the proposed contributions to the unmet needs forecast to arise in the Black Country constitute existing proposed allocations within the draft Shropshire Local Plan. This is perhaps unsurprising as these proposed allocations were themselves informed by a proportionate and robust site assessment process, which was reviewed and updated as part of this process.
- 12.85. The Updated Stage 3 Site Assessments demonstrate that the proposed allocations are sustainable and appropriate locations for development when specifically considered in the context of the ability to accommodate all or part of the proposed contribution to the unmet needs of the Black Country.
- 12.86. It also demonstrates that these proposed allocations would have been identified whether considered specifically to meet the needs of Shropshire or to specifically provide a contribution to the unmet development needs of the Black Country from the outset.
- 12.87. In effect, the Updated Stage 3 Site Assessments endorse previous conclusions regarding the sustainability of these proposed site allocations and demonstrates that these proposed allocations are considered **suitable and sustainable** when considered specifically to meet the needs of Shropshire and when **specifically considered to accommodate all or part of the proposed contribution to the unmet needs of the Black Country**.

**Table 12.3: Sites Identified Through the Site Assessment Process to Accommodate Proposed Contributions to Unmet Needs Forecast to Arise in the Black Country**

Site Reference	Site Name	Specific Policy	Total Capacity	Black Country Contribution	Summary
BRD030	Tasley Garden Village, Bridgnorth	S3.1	1,050 dwellings 16ha employment land New local centre 20ha of green infrastructure and a 19ha linear park	600 dwellings	<p>Bridgnorth is located in south-east Shropshire with a functional relationship to the Black Country. It benefits from strong road links to the Black Country via the A454 corridor. Bridgnorth is a principal centre and performs a strategic role in the east of Shropshire. The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
SHF018b & SHF018d	Land east of Shifnal Industrial Estate, Upton Lane, Shifnal	S15.1	39 hectares (15.6ha net development)	30ha of employment land	<p>Shifnal is located in east Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shifnal is a key centre and a focus for investment, employment, housing and development on the M54/A5 strategic corridor.</p> <p>The site constitutes a proposed strategic employment allocation which due to its size and location has the potential to form both a local and regionally important employment centre.</p> <p>The site can accommodate a sizeable contribution towards the unmet employment land needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints. Whilst the site is located within the Green Belt, it is considered that consideration of all other reasonable options has been undertaken and exceptional circumstances exist to justify the release of this land for employment, as documented within the new Housing &amp; Employment Topic Paper and Green Belt Topic Paper.</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

SHR060, SHR158 & SHR161	Land between Mytton Oak Road and Hanwood Road, Shrewsbury	S16.1	1,500 dwellings 5ha of employment land	300 dwellings	<p>Shrewsbury is located in central Shropshire with a functional relationship to the Black Country. It benefits from strong road and rail links to the Black Country via the M54/A5 corridor and Shrewsbury-Wolverhampton railway line.</p> <p>Shrewsbury is the strategic centre of Shropshire and the primary focus for new development in the County.</p> <p>The site constitutes a proposed sustainable urban extension, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
Page 359 IRN001	Former Ironbridge Power Station	S20	Range of local services and facilities Around 1,075 dwellings Around 6ha of employment land Extensive green infrastructure	600 dwellings	<p>The Former Ironbridge Power Station is located in east Shropshire with a functional relationship to the Black Country. It benefits from road access to the M54/A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.</p> <p>The Former Ironbridge Power Station is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development.</p> <p>The site can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.</p> <p>Development of the site would be considered to constitute sustainable development, informed by careful consideration of identified opportunities and constraints (including the fact that it is not located within the Green Belt).</p> <p>Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>

### Likely Significant Effects and Mitigation Measures

- 12.88. As the sites identified to contribute towards meeting the needs of each of the settlements considered within this updated SA assessment work and to accommodate the proposed contributions to the unmet needs forecast to arise in the Black Country are already proposed for allocation within the draft Shropshire Local Plan, consideration of significant effects and mitigation measures has already been undertaken within the earlier SA assessment work.
- 12.89. For completeness, Shropshire Council has re-considered significant effects and identified mitigation measures for these sites and concluded that they remain appropriate in the context of both meeting local needs and accommodating the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 12.90. Similarly, where mitigation measures were considered necessary, it has also been concluded that they are appropriate in the context of both meeting local needs and accommodating the proposed contribution to the unmet needs forecast to arise within the Black Country.
- 12.91. In summary, the site SA process uses a Good, Fair or Poor rating system when assessing sites. Sites rated as 'Poor' are considered to have likely significant adverse effects for which mitigation measures should be proposed.
- 12.92. Table 12.4 summarises the 'ratings' for all proposed housing allocations within the assessment area, including those proposed to accommodate the proposed contribution of 1,500 dwellings towards the unmet needs forecast to arise within the Black Country.

**Table 12.4: Summary of Proposed Housing Allocations Likely Significant Effect within the Assessment Areas**

Settlement:	Site Ref:	Overall Settlement Sustainability Conclusion	Overall Black Country Contribution Sustainability Conclusion
Albrighton	ALB017 & ALB021	<b>Fair</b>	Fair
Bridgnorth	BRD030	<b>Fair</b>	<b>Fair</b>
Highley	HNN016	<b>Good</b>	Good
Much Wenlock	MUW012VAR	<b>Fair</b>	Fair
Shifnal	SHF013	<b>Good</b>	Fair
Shifnal	SHF015 & SHF029	<b>Fair</b>	Fair
Shifnal	SHF022 & SHF023 (part)	<b>Fair</b>	Fair
Shrewsbury	SHR054a	<b>Fair</b>	Good
Shrewsbury	SHR145	<b>Fair</b>	Good
Shrewsbury	SHR173	<b>Fair</b>	Fair
Shrewsbury	SHR057 & SHR177	<b>Good</b>	Good
Shrewsbury	SHR060, SHR158 & SHR161	<b>Fair</b>	<b>Fair</b>
Potential Strategic Site	BNT002 (Clive Barracks, Tern Hill)	<b>Fair</b>	Poor
Potential Strategic Site	IRN001 (Former Ironbridge Power Station)	<b>Poor</b>	<b>Poor</b>

*\*The **Bold** conclusions identify the relevant Conclusion(s) for each site.*

12.93. Table 12.5 summarises the ‘ratings’ for all proposed employment allocations within the assessment area, including those proposed to accommodate the proposed contribution of 30ha of employment land towards the unmet needs forecast to arise within the Black Country.

**Table 12.5: Summary of Proposed Employment Allocations Likely Significant Effect within the Assessment Areas**

Settlement:	Site Ref:	Overall Settlement Sustainability Conclusion	Overall Black Country Contribution Sustainability Conclusion
Bridgnorth	BRD030	<b>Fair</b>	Fair
Bridgnorth	P58a	<b>Fair</b>	Fair
Bridgnorth	STC002	<b>Fair</b>	Fair
Shifnal	SHF018b & SHF018d	<b>Fair</b>	<b>Fair</b>
Shrewsbury	SHR060, SHR158 & SHR161	<b>Fair</b>	Fair
Shrewsbury	SHR166	<b>Poor</b>	Fair
Potential Strategic Site	BNT002 (Clive Barracks, Tern Hill)	<b>Fair</b>	Fair
Potential Strategic Site	IRN001 (Former Ironbridge Power Station)	<b>Poor</b>	Poor

*\*The **Bold** conclusions identify the relevant Conclusion(s) for each site.*

12.94. It is apparent from Table 12.4 and Table 12.5 that only 2 of the proposed allocations within the assessment area perform ‘poorly’ and as such are considered to have likely significant adverse effects for which mitigation measures should be proposed.

12.95. The first site is SHR166 at Shrewsbury, which is intended to contribute towards achieving the proposed employment land guideline for Shrewsbury, the proposed employment land requirement for Shropshire and the wider spatial strategy for Shropshire. It is not proposed to accommodate any of the proposed contribution to the unmet employment land need forecast to arise within the Black Country. Much of the site contains a newly designated Scheduled Monument (designated in late 2022). This matter is currently being given due consideration, informed by ongoing engagement with the site promoter.

12.96. The second site is IRN001 the Former Ironbridge Power Station which is intended to contribute towards achieving the housing and employment land need in Shropshire, accommodate part of the proposed housing contribution to the unmet housing need forecast to arise within the Black Country (600 dwellings), and as such contribute towards the achievement of the proposed housing and employment land requirements for Shropshire and the wider spatial strategy for Shropshire. This site now benefits from Outline Planning Permission (19/05560/OUT) and a series of Reserved Matters permissions for enabling works have been issued.

12.97. Having reviewed the mitigation measures previously identified for these sites (with the exception of the matter of the newly designed Scheduled Monument on site SHR166 which is currently being given due consideration), it is considered that they are effective in the context of sustainably accommodating Shropshire needs.

12.98. The mitigation measures for IRN001 are also considered equally effective in the context of sustainably accommodating the identified component of the proposed contribution to the unmet housing need forecast to arise within the Black Country.

12.99. These measures are summarised within Table 12.6. They are also set out in the relevant site guidelines in the draft Shropshire Local Plan.

**Table 12.6: Summary of Proposed Employment Allocations Likely Significant Effect within the Assessment Areas**

Reasons for 'Poor' Score	Mitigation Measure(s)
<b>Site: SHR166 - Shrewsbury</b>	
<p>Site is not within walking distance (480m) of services and facilities (Primary School, GP surgery, Leisure centre, Outdoor sports facility)</p>	<p>An appropriate vehicular access will be created from the A49 and all necessary improvements to the local and Strategic Road Network will be undertaken.</p> <p>Development will create and enhance pedestrian and cycle links within and through the site and implement appropriate links from the site into the town.</p> <p>Key Green infrastructure corridors will be enhanced, including the River Severn and the environmental networks on and around the site.</p>
<b>Site: IRN001 (Former Ironbridge Power Station)</b>	
<p>Site contains parts of Tick Wood and Benthall Edge SSSI.</p> <p>Site contains part of the Buildwas Sand Quarry SSSI.</p> <p>Site is close to other parts of Tick Wood and Benthall Edge SSSI and the Buildwas River Section SSSI.</p> <p>Site contains part of the Buildwas Sand Quarry Wildlife Site.</p> <p>Site is close to the River Severn, Buildwas Roadside Verge and Birches Coppice Wildlife Sites.</p> <p>Site is close to Tick Wood, Banghams Wood and Benthall Edge Wood Ancient Woodland Sites.</p>	<p>Retention and protection by appropriate buffer zones within the development of Tick Wood and Benthall Edge SSSI, Buildwas Sand Quarry SSSI and Buildwas Sand Quarry Wildlife Site.</p> <p>Appropriate buffers to Tick Wood and Benthall Edge SSSI, the Buildwas River Section SSSI, the three Ancient Woodland Sites (in line with Natural England and Forestry Commission Standing Advice) and the three Wildlife Sites within the vicinity of the development Site.</p>
<p>Site contains an outdoor sports facility.</p>	<p>The provision of facilities and services within a village centre including a nursery and primary school and GP surgery - the latter subject to CCG assessment and advice.</p>
<p>Site is in Flood Zones 2 and 3 (along the river).</p>	<p>The exclusion from development of those parts of the site within Flood Zones 2 and 3.</p>
<p>Site contains (an extremely) small part of the Severn Gorge Conservation Area.</p> <p>Site is close to the Ironbridge Gorge World Heritage Site.</p> <p>Site is close to Buildwas Abbey Scheduled Monument.</p> <p>Site is close to the remainder of the Severn Gorge Conservation Area.</p> <p>Site is close to two Grade II Listed Buildings: The Slip and Albert Edward Bridge.</p>	<p>A comprehensive heritage assessment which addresses the site's relationship with the Ironbridge Gorge World Heritage Site, Buildwas Abbey Scheduled Monument, the Severn Gorge Conservation Area and the two Grade II Listed Buildings. This will then guide the conservation and enhancement of these features in line with the requirements of the National Planning Policy Framework and Local Plan policy.</p>
<p>Site has a group Tree Preservation Order on its western boundary (in the grounds of Buildwas Abbey).</p>	<p>An assessment of the impact of development on the trees subject to TPO in order to demonstrate how they can be safeguarded.</p>

Reasons for 'Poor' Score	Mitigation Measure(s)
Site is not within easy walking distance of community services and amenities such as a primary school or GP surgery.	<p>The provision of green infrastructure (including accessible natural greenspace) and sports facilities – the latter being determined by the Shropshire Playing Pitch and Outdoor Sports Strategy. Pedestrian and cycle links to services and facilities both on-site and the wider area, will be integrated into the green infrastructure network.</p> <p>The provision of facilities and services within a village centre including a nursery and primary school and GP surgery - the latter subject to CCG assessment and advice.</p>

12.100. Therefore, whilst the Former Ironbridge Power Station Site performs 'poorly' in the context of SA objectives and is considered to likely have significant adverse effects for which mitigation measures are required, it is apparent that a range of appropriate mitigation measures are available. As such, Shropshire Council maintain the view that it is an appropriate location to accommodate part of the proposed contribution to the unmet housing need forecast to arise within the Black Country.

12.101. This is because the site:

- a. Is located in east Shropshire with a functional relationship to the Black Country.
- b. Benefits from road access to the M54/A5 corridor link to the Black Country via either the A4169 / A5523 or A4169 / A442.
- c. Is a part brownfield site that benefits from Outline Planning Permission and will form a new strategic settlement, with the capacity to accommodate a significant volume of development, including a range of associated services and facilities.
- d. Can accommodate a sizeable contribution towards the unmet housing needs forecast to arise in the Black Country.
- e. Accommodating the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.

12.102. Furthermore, development of this site would, subject to the identified mitigation measures and identified site guidelines, be considered to constitute sustainable development.

12.103. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22). It is considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.

## **13. Summary of SA Assessment: Reasonable Options for the Strategic Distribution of Development Across Shropshire**

### **Introduction**

- 13.1. Through the SA assessment work undertaken to inform the draft Shropshire Local Plan (as summarised within SD006.01, Sustainability Appraisal and Site Assessment Environmental Report) three reasonable options for the strategic distribution of planned development were identified. The associated SA assessment of these options informed identification of the proposed approach to the strategic distribution of planned development within the draft Shropshire Local Plan: urban focus, by which a significant proportion of development is directed towards the urban settlements that have the infrastructure available to best support development. This is complemented by development in rural areas (particularly the larger rural settlements) to maintain and enhance sustainability.
- 13.2. It is acknowledged that the decision to propose an increase to the housing and employment land requirements and the proposed mechanism for accommodating these increases should be considered in the context of the strategic distribution of planned development.
- 13.3. It is also acknowledged that the identification of sites to accommodate the proposed contribution to the unmet needs forecasts to arise in the Black Country should be considered in the context of the strategic distribution of planned development.
- 13.4. However, it is important to note that the SA assessment of these options is entirely independent of the conclusions reached regarding the proposed mechanism for accommodating the proposed increase to the housing requirement. It is similarly independent of conclusions reached regarding the proposed sites to accommodate the proposed contributions to unmet needs forecast to arise in the Black Country.
- 13.5. This section of the document therefore summarises the updated additional SA assessment of the reasonable options for the strategic distribution of planned development across Shropshire.
- 13.6. The starting point for this updated additional SA assessment work on the strategic distribution of planned development was the 'broad categories' of settlement identified within the earlier stages of SA.
- 13.7. These have been updated to reflect the presence of the proposed Strategic Settlements, which in the future will form part of the 'urban area'. They have also been updated to reflect the terminology for these 'broad categories' of settlement within the draft Shropshire Local Plan, which is considered provide a clearer indication of the role and nature of the settlements within each 'broad category'.
- 13.8. These 'broad categories' are:
  - a. The Strategic Centre – Shrewsbury.
  - b. Principal Centres, Key Centres and Strategic Settlements.

- c. Rural Area – including Community Hubs, Community Clusters and the wider rural area which is classified as ‘countryside’ for planning policy purposes.

13.9. Shropshire is a large and diverse rural county containing hundreds of settlements of varying sizes and an extensive rural area. The ‘broad categories’ of settlement are considered to be responsive to the demographics and characteristics of Shropshire and the range of settlements within it. As such, Shropshire Council considers that they represent an appropriate starting point for the updated additional SA assessment work on the strategic distribution of planned development.

### **Identification of Reasonable Options for the Strategic Distribution of Development**

13.10. Consistent with the methodology utilised to identify reasonable options for the strategic distribution of planned development within the SA assessment already undertaken to inform the draft Shropshire Local Plan, reasonable options for the strategic distribution of planned development within this updated additional SA assessment work were identified based on various distributions of the total development between the three identified ‘settlement categories’.

13.11. As such, three reasonable options for the strategic distribution of planned development were identified and were assessed within this updated additional SA assessment work. These reasonable options are:

a. **Strategic Distribution of Planned Development Option A: Rural Rebalance -**

Consisting of around 25% of planned housing development within the Strategic Centre of Shrewsbury; around 40% of planned housing development in the Principal Centres, Key Centres and Strategic Settlements; and around 35% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, with a significant component in the rural areas.

The principle of ‘rural rebalance’ is one which allows for a high proportion of planned development within the rural area (particularly the larger rural settlements) in order to enhance its sustainability.

This option is responsive to and consistent with the ‘rural rebalance’ option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan.

b. **Strategic Distribution of Planned Development Option B: Urban Focus -** Consisting of around 29% of planned housing development within the Strategic Centre of Shrewsbury; around 45% of planned housing development in the Principal Centres, Key Centres and Strategic Settlements; and around 26% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, with the majority concentrated in urban areas.

The principle of ‘urban focus’ is one of accommodating a larger proportion of development within urban settlements that have the infrastructure available to

best support development, with complementary development in the rural areas (particularly the larger rural settlements) to maintain and enhance sustainability.

This option is responsive to the 'urban focus' option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan.

- c. **Strategic Distribution of Planned Development Option C: Balanced Growth** - Consisting of around 30% of planned housing development within the Strategic Centre of Shrewsbury; around 40% of planned housing development in the Principal Centres, Key Centres and Strategic Settlements; and around 30% of planned housing development in the rural area. Planned employment development would reflect the principles of this distribution, approximately balancing provision across the three broad categories.

The principle of 'balanced growth' is seeking to evenly distribute development across all categories of settlement in Shropshire in order to support their long term sustainability.

This option is responsive to and consistent with the 'balanced growth' option assessed within the SA assessment already undertaken to inform the draft Shropshire Local Plan.

## Assessment of Reasonable Options for the Strategic Distribution of Planned Development

13.12. The following tables summarise the additional SA assessment of the identified reasonable Distribution of Development Options:

**Table 13.1: Strategic Distribution of Planned Development Option A: Rural Rebalance**

<b>Strategic Distribution of Planned Development Option A: Rural Rebalance</b>				
This option consists of around 25% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 40% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 35% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, with a significant component in the rural areas.				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on the range of species and the quality and extent of habitats in Shropshire resulting from the strategic distribution of development.
2: Encourage a strong and sustainable economy throughout Shropshire	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, this option is likely to represent little change to current economic trends or the ability to respond positively to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, this option is likely to represent little change to current ability to provide sufficient good quality housing to meet the needs of all sections of society.
4: Promote access to services for all sections of society	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be limited change to the impact on existing provision and accessibility of services and amenities resulting from the strategic distribution of development.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on the provision and use of transport infrastructure resulting from the strategic distribution of development.
6: Reduce the need of people to travel by car	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, this option is unlikely to alter the current situation with respect to the impact on the use of public transport and the prevalence of walking or cycling to work.
7: Support active and healthy communities.	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, this option is unlikely to change existing patterns of leisure and recreational activities and the provision of health and cultural activities resulting from the strategic distribution of development.
8: Protect and improve soil quality	?	?	?	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, it is unlikely that it will change the impact of the strategic distribution of development on soil quality. However, this is ultimately dependent on the sites allocated for development. The specific site allocations are assessed separately within the SA process.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	?	?	?	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, it is unlikely that it will change the impact of the strategic distribution of development on water quality and pollution. This distribution of growth is likely to be capable of being accommodated without affecting existing water quality or causing water pollution. However, this is ultimately dependent on the sites allocated for development. The specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	?/0	?/0	?/0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, it is unlikely that it will change the impact of the strategic distribution of development on flood risk and flood management. However, ultimately the effect on flood risk and opportunities to improve flood management will depend on the location of sites allocated for development. Land allocated in the current Local Plan is generally not in areas of high flood risk so it may be possible to achieve a similar outcome with this option. The specific site allocations are assessed separately within the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?/0	?/0	?/0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, it is unlikely that it will change the impact of the strategic distribution of development on air quality. However, ultimately the effect on air quality will depend on the location of sites allocated for development e.g. development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. The specific site allocations are assessed separately within the SA process.
12: Reduce carbon dioxide emissions	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on carbon dioxide emissions resulting from the strategic distribution of development.
13: Promote adaptation and mitigation to climate change	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on climate change resulting from the strategic distribution of development.
14: Promote efficient use of natural resources	0/?	0/?	0/?	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, it is unlikely that it will change the impact of the strategic distribution of development on opportunities to use previously developed land, re-use existing buildings and use of primary aggregates. However, the location of allocated sites will have a significant impact on opportunities to use previously developed land and re-use existing buildings. The specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on heritage assets and their setting resulting from the strategic distribution of development.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	As the strategic distribution of planned development is generally comparable to that within the adopted Development Plan, there is likely to be little change to the impact on landscape character and distinctiveness resulting from the strategic distribution of development.

**Summary for Strategic Distribution of Planned Development Option A: Rural Rebalance**

- 13.13. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘rural rebalance’. ‘Rural rebalance’ involves a high proportion of planned development occurring within the rural area (particularly the larger rural settlements) in order to enhance its sustainability, but still allows for a significant amount of development within the Strategic Centre, Principal Centres, Key Centres and Strategic Settlements.
- 13.14. It is considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed housing requirement for Shropshire (which meets identified local housing needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 1,500 dwelling contribution towards the unmet housing needs forecast to arise in the Black Country).
- 13.15. It is also considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed employment requirement for Shropshire (which meets identified employment land needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 30ha employment land contribution towards the unmet employment land needs forecast to arise in the Black Country).
- 13.16. The strategic distribution of planned development associated with this reasonable option has a reduced urban focus and increased rural focus when compared to that proposed within the draft Shropshire Local Plan, particularly following proposed amendments to

settlement housing guidelines and windfall allowance in order to accommodate the proposed uplift to the housing requirement. As such, it could result in a need to amend settlement guidelines and site allocations.

- 13.17. As the strategic distribution of planned development associated within this option is generally comparable to that within the adopted Development Plan, it is likely to result in little change to the impact of the strategic distribution of development on the following sustainability objectives: encouraging a strong and sustainable economy throughout Shropshire; providing a sufficient amount of good quality housing which meets the needs of all sections of society; protecting and enhancing the range of plants and animals and the quality and extent of wildlife habitats in Shropshire; promoting access to services for all sections of society; encouraging the use of sustainable means of transport; reducing the need of people to travel by car; supporting active and healthy communities; reducing carbon dioxide emissions; adapting to and mitigating climate change; conserving and enhancing heritage features and their settings; and conserving and enhancing landscape character and local distinctiveness.
- 13.18. The location of allocated sites is likely to have the most influence on protecting and improving soil quality and the conservation and enhancement of water resources. This is also likely to be the case for protection of air quality, reducing flood risk and promoting efficient use of natural resources (although impact on use of primary aggregates is unlikely to change as this is more closely linked to the strategic distribution of development). Land allocated in the adopted Development Plan is generally not in areas of high flood risk or directly impacting on air quality management areas, so it would likely be possible to achieve a similar outcome with this option.

**Table 13.2: Distribution of Development Option B: Urban Focus**

Strategic Distribution of Planned Development Option B: Urban Focus				
This option consists of around 29% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 45% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 26% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, with the majority concentrated in urban areas.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+/?	+/?	+/?	The majority of protected and priority habitats and species are found in the countryside. This option entails around a 9% reduction to the amount of planned development occurring within the rural area to that within the adopted Development Plan and compared with Option 1. As such, it is likely to have a positive effect on the range, extent and quality of plants and animals in Shropshire. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	This option is likely to support the provision of an appropriate and balanced supply of employment land across Shropshire. Due to the significantly increased focus on 'urban areas' to that within the adopted Development Plan it is likely to significantly increase the ability compared to that which currently exists to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Page 372

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. These settlements contain the highest proportion of the population and as such a significant component of the total housing need in Shropshire.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. There remains housing need in Shropshire’s rural communities.</p> <p>As such, it is considered that this option would likely support provision of housing in locations that are responsive to needs.</p>
4: Promote access to services for all sections of society	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. These settlements benefit from the greatest range of services and facilities.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves offer some services and facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to services and facilities.</p> <p>This option will also support the sustainability of existing services and facilities and the provision of new services and facilities (particularly in the larger settlements) by increasing the ‘critical population mass’ which supports the viability and sustainability of services and facilities.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
5: Encourage the use of sustainable means of transport	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. These settlements benefit from the greatest access to a range of sustainable means of transport.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that themselves often offer more sustainable transport opportunities.</p> <p>As such, it is likely to significantly promote positive access to and encouragement of the use of sustainable means of transport.</p>
6: Reduce the need of people to travel by car	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. These settlements benefit from a range of services and facilities and means of sustainable transport which can reduced reliance on travel by car.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that offer some services and facilities and often offer sustainable transport opportunities.</p> <p>As such, this option is likely to maximise the reduction in the need for car-based transport.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
7: Support active and healthy communities.	++	++	++	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. These settlements benefit from a range of health, leisure, recreation, and cultural facilities.</p> <p>Furthermore, the planned development in urban areas will be complemented by planned development within rural areas, albeit this will represent a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. This means that planned development in rural areas can be more effectively directed towards the larger rural settlements that can offer some formal health, leisure, recreation and cultural facilities.</p> <p>As such, this option is likely to promote positive access for all sections of society to health, leisure, recreation, and cultural facilities.</p> <p>This option will also support the sustainability of existing health, leisure, recreation, and cultural facilities and the provision of new health, leisure, recreation, and cultural facilities (particularly in the larger settlements) by increasing the 'critical population mass' which supports their viability and sustainability.</p>
8: Protect and improve soil quality	+/?	+/?	+/?	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. Focussing planned development in the urban areas offers the ability to reduce the amount of best and most versatile agricultural land and maximise the amount of brownfield land used for development. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.</p>
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+	+	+	<p>This option directs the majority of planned development towards urban areas, meaning that a much higher proportion of planned development will occur in urban areas than within the strategy within the adopted Development Plan. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer greater protection to existing water resources.</p>

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
10: Reduce flood risk and improve flood management	?	?	?	The effect on flood risk and opportunities to improve flood management will depend on the location of site allocations. The specific site allocations are assessed separately within the SA process.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	?	?	?	The effect on air quality and the ability to reduce air pollution will to a large extent depend on the location of site allocations e.g., development within or close to an Air Quality Management Area is more likely to have an adverse impact whilst development elsewhere is unlikely to alter the current situation. The specific site allocations are assessed separately within the SA process. However, as all AQMAs are in urban areas this option is the most likely to have a negative impact on them. Conversely, less development in the rural area may protect air quality more generally.
12: Reduce carbon dioxide emissions	+	+	+	This option directs the majority of planned development towards urban areas which are most likely to support larger scale development(s). The economies of scale possible with this approach may promote opportunities for reducing energy consumption and the production of energy from renewable sources.
13: Promote adaptation and mitigation to climate change	+	+	+	This option directs the majority of planned development towards urban areas. If a strategic overview to each settlement is taken, this option may provide good opportunities to increase the connectivity of urban and rural habitats and/or provide new habitats which help mitigate climate change. Furthermore, urban areas are most likely to support larger scale development(s). Therefore, the potential for new large scale habitats gained through residential development is also likely to be increased / higher than the strategic approach within the adopted Development Plan, so increasing the contribution this can make to adapting and mitigating climate change. Specific site allocations are assessed separately within the SA process.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
14: Promote efficient use of natural resources	+	+	+	This option directs the majority of planned development towards urban areas. Urban areas are most likely to contain opportunities to re-use existing buildings and land and achieve higher development densities. Furthermore, development in urban areas have greater potential to use alternatives to primary aggregates and makes the best use of existing infrastructure. Specific site allocations are assessed separately within the SA process.
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option directs the majority of planned development towards urban areas. Focussing planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the location of allocated sites. Specific site allocations are assessed separately within the SA process.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	This option directs the majority of planned development towards urban areas. Whilst increasing the proportion of planned development that occurring in locations associated with the urban area is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

### **Summary for Strategic Distribution of Planned Development Option B: Urban Focus**

13.19. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘urban focus’. ‘Urban focus’ involves the largest proportion of planned development being directed towards urban settlements that have the infrastructure available to best support development, with complementary development in the rural areas - particularly the larger rural settlements to maintain and enhance rural sustainability.

- 13.20. It is considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed housing requirement for Shropshire (which meets identified local housing needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 1,500 dwelling contribution towards the unmet housing needs forecast to arise in the Black Country).
- 13.21. It is also considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed employment requirement for Shropshire (which meets identified employment land needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 30ha employment land contribution towards the unmet employment land needs forecast to arise in the Black Country).
- 13.22. The strategic distribution of planned development associated with this reasonable option is generally consistent with that proposed within the draft Shropshire Local Plan, including following proposed amendments to settlement housing guidelines and windfall allowance in order to accommodate the proposed uplift to the housing requirement. As such, it would likely support the retention of the principles of proposed strategies for settlements across Shropshire and the proposed site allocations identified to support the achievement of these proposed settlement strategies.
- 13.23. As employers and employment opportunities are more significantly associated with 'urban areas' than rural areas, it is considered that this option would likely help retain and support existing businesses by providing suitable housing for existing and attracting new labour force. It is also considered that this option would increase the ability compared to that which currently exists to positively support the achievement of economic growth aspirations including through the creation of more jobs.
- 13.24. This option will also increase the ability to provide housing which meets the needs of all groups within our communities, given that it directs the majority of planned development to urban areas where a significant component of the total housing need in Shropshire is located, but continues to allow for complementary planned development within rural areas where there remains housing need.
- 13.25. Concentrating development of society to health, leisure, recreation, and cultural facilities; promote positive access to and encourage the use of sustainable means in the urban area and the associated larger settlements is also likely to increase the ability to promote positive access for all sections of society to services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities; promote positive access for all sections of transport and maximise the reduction in the need for car-based transport. It also provides support for the long term sustainability of existing and opportunities to provide new services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities and health, leisure, recreation, and cultural facilities.

- 13.26. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer the highest level of protection to existing water resources. The economies of scale possible with this approach may promote opportunities for reducing energy consumption, production of energy from renewable sources, and adapting to and mitigating climate change. An urban focus also maximises the potential to re-use existing buildings and land, using alternatives to primary aggregates and making the best use of existing infrastructure.
- 13.27. Focussing development in the urban areas offers the ability to minimise the amount of best and most versatile agricultural land, maximise the amount of brownfield land used for development, and minimise any harm to protected, priority, key or indicator habitats, plants, animals or birds as the majority of protected and priority habitats and species are found on the countryside. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
- 13.28. The potential to reduce flood risk, improve flood management and protect air quality is dependent on the location of allocated sites. Similarly, focussing development in the towns and larger settlements increases the likelihood of harm to the significance of heritage assets but also provides the best opportunities to contribute to their better management. The balance between these competing issues will depend on the location of allocated sites.
- 13.29. Whilst development in the more urban parts of the county is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints, can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

**Table 13.3: Distribution of Development Option C: Balanced Growth**

Strategic Distribution Option C: Balanced Growth				
This option consists of around 30% of planned housing development occurring within the Strategic Centre of Shrewsbury; around 40% of planned housing development occurring in the Principal Centres, Key Centres and Strategic Settlements; and around 30% of planned housing development occurring in the rural area. Planned employment development would reflect the principles of this distribution, approximately balancing provision across the three broad categories.				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+/?	+/?	+/?	The majority of protected and priority habitats and species are found in the countryside. This option entails around a 5% reduction to the amount of planned development occurring within the rural area to that within the adopted Development Plan and compared with Option 1. As such, it is likely to have a positive effect on the range, extent and quality of plants and animals in Shropshire. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This option is likely to support the provision of an appropriate and balanced supply of employment land across Shropshire. Due to the increased focus on 'urban areas' to that within the adopted Development Plan it is likely to increase the ability compared to that which currently exists to positively respond to sustainable development opportunities, support the achievement of economic growth aspirations including through the creation of more jobs, and support the diversification of our labour force. Given wider economic aspirations, it will also provide good opportunities to create a balanced supply of employment land and/or more or higher value jobs. This is because it is generally considered that these opportunities are more significantly associated with 'urban areas' than rural areas.

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Development Plan. These settlements contain the highest proportion of the population and as such a significant component of the total housing need in Shropshire.</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. There remains housing need in Shropshire's rural communities. As such, it is considered that this option would likely support provision of housing in locations that are responsive to needs.</p>
4: Promote access to services for all sections of society	+	+	+	<p>This option seeks to achieve a balanced distribution of planned development. As such, it will entail a higher proportion of the total planned development occurring within urban areas than within the strategy within the adopted Development Plan. These settlements benefit from the greatest range of services and facilities.</p> <p>This will be complemented by planned development within rural areas, albeit a smaller proportion of the total planned development than within the strategy within the adopted Development Plan. Specific site allocations are assessed separately within the SA process.
15: Conserve and enhance features and areas of heritage value and their setting	?	?	?	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Development Plan. Increasing the amount of planned development in urban areas generally increases the likelihood of harm to the significance of heritage assets where significant quantities are clustered, but also provides the best opportunities to contribute to enhanced management of heritage assets. The balance between these competing issues will depend on the location of allocated sites. Specific site allocations are assessed separately within the SA process.
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	This option directs more of the planned development towards urban areas than within the strategic approach to planned development within the adopted Development Plan. Whilst increasing the proportion of planned development that occurring in locations associated with the urban area is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people currently live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

### **Summary for Strategic Distribution of Planned Development Option C: Balanced Growth**

- 13.30. The strategic distribution of planned development associated with this reasonable option is underpinned by the principle of ‘balanced growth’. ‘Balanced growth’ involves the even distribution of development across all categories of settlement in Shropshire in order to support their long term sustainability.
- 13.31. It is considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed housing requirement for Shropshire (which meets identified local housing needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 1,500 dwelling contribution towards the unmet housing needs forecast to arise in the Black Country).
- 13.32. It is also considered that this proposed strategic distribution of development would allow for the sustainable accommodation of the proposed employment requirement for Shropshire (which meets identified employment land needs; provides a positive contribution to the identified issues and opportunities in Shropshire; and includes a 30ha employment land contribution towards the unmet employment land needs forecast to arise in the Black Country).
- 13.33. The strategic distribution of planned development associated with this reasonable option has a reduced urban focus and increased rural focus when compared to that proposed within the draft Shropshire Local Plan, particularly following proposed amendments to settlement housing guidelines and windfall allowance in order to accommodate the proposed uplift to the housing requirement. As such, it could result in a need to amend settlement guidelines and site allocations.
- 13.34. As employers and employment opportunities are more significantly associated with ‘urban areas’ than rural areas, it is considered that this option would likely help retain and support existing businesses by providing suitable housing for existing and attracting new labour force. It is also considered that this option would increase the ability compared to that which currently exists to positively support the achievement of economic growth aspirations including through the creation of more jobs.
- 13.35. This option will also increase the ability to provide housing which meets the needs of all groups within our communities, given that it directs the more of planned development to urban areas than the strategic distribution of development within the adopted Development Plan, where a significant component of the total housing need in Shropshire is located, but continues to allow for significant planned development within rural areas, where there remains housing need.

- 13.36. Concentrating a higher proportion of the total development in the urban area and the associated larger settlements is also likely to increase the ability to promote positive access for all sections of society to services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities; promote positive access for all sections of society to health, leisure, recreation, and cultural facilities; promote positive access to and encourage the use of sustainable means of transport and maximise the reduction in the need for car-based transport. It also provides support for the long term sustainability of existing and some opportunities to provide new services and facilities such as schools, doctor's surgeries, shops, parks, play areas and sports facilities and health, leisure, recreation, and cultural facilities.
- 13.37. Since pollution from rural areas is the main issue affecting water quality in Shropshire, this option should offer higher levels of protection to existing water resources than the strategic distribution of planned development within the adopted Development Plan. The economies of scale possible with this approach may promote opportunities for reducing energy consumption, production of energy from renewable sources, and adapting to and mitigating climate change. Increasing the proportion of development in urban areas compared to the strategic approach for planned development within the adopted Development Plan also increases the potential to re-use existing buildings and land, using alternatives to primary aggregates and making the best use of existing infrastructure.
- 13.38. Focussing more development in urban areas than the strategic approach for the distribution of planned development within the adopted Development Plan offers the ability to reduce the amount of best and most versatile agricultural land, maximise the amount of brownfield land used for development, and minimise any harm to protected, priority, key or indicator habitats, plants, animals or birds as the majority of protected and priority habitats and species are found on the countryside. However, this is somewhat dependent on proposed site allocations. The specific site allocations are assessed separately within the SA process.
- 13.39. The potential to reduce flood risk, improve flood management and protect air quality is dependent on the location of allocated sites. Similarly, focussing development in the towns and larger settlements increases the likelihood of harm to the significance of heritage assets but also provides the best opportunities to contribute to their better management. The balance between these competing issues will depend on the location of allocated sites.
- 13.40. Whilst development in the more urban parts of the county is likely to minimise harm to rural landscapes, it is still likely to change the character of those places where the majority of people live. At the same time, harm to visual amenity is possible with all forms of development, regardless of location. Careful design, which respects those features that convey a sense of place and takes account of valued viewpoints, can help to maintain local distinctiveness and minimise losses of visual amenity but it is unlikely to prevent localised changes in landscape character.

## **Comparison Summary of Reasonable Options for the Strategic Distribution of Planned Development**

- 13.41. The overall purpose of this component of the updated additional SA assessment work is to help inform judgements about which of the reasonable alternatives for the strategic distribution of planned development is the most sustainable against the SA objectives. This updated additional SA assessment work is summarised within Tables 12.1 - 12.3 above.
- 13.42. To assist with the comparison of the results of the additional SA assessment of the reasonable alternatives for the strategic distribution of planned development, Table 12.4 has been prepared for illustrative purposes only. This summarises, in comparative terms, how the three reasonable alternatives perform against each of the SA objectives. This is achieved by 'ranking' the performance of each of the reasonable options from best performing (1) to poorest performing (3) in relative terms, against each SA objective – where reasonable alternatives achieve the same/similar rating in the short, medium and long term for a SA objective, professional judgement has been utilised to determine whether there are nuances within the scoring of the options.
- 13.43. It is not however appropriate to 'total-up' the scores, because performance against each of the SA objectives requires consideration in and of itself and 'totalling-up' scores would not achieve this requirement. Furthermore, the SA objectives are diverse and address differing considerations, therefore it is not possible to directly compare them. In addition, there are also more SA objectives that address environmental topics than social and economic topics, as such a 'totalling-up' of scores would create a bias towards environmental factors, when the principle of sustainable development is about achieving balance across all three pillars – social, economic, and environmental.

**Table 13.4: Comparison of Strategic Distribution of Planned Development Options**

Sustainability Objective	Option A: Rural Rebalance	Option B: Urban Focus	Option C: Balanced Growth
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	2	1	1
2: Encourage a strong and sustainable economy throughout Shropshire	3	1	2
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	3	1	2
4: Promote access to services for all sections of society	3	1	2
5: Encourage the use of sustainable means of transport	3	1	2
6: Reduce the need of people to travel by car	3	1	2
7: Support active and healthy communities.	3	1	2
8: Protect and improve soil quality	2	1	1
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	2	1	1
10: Reduce flood risk and improve flood management	1	2	2
11: Conserve and enhance Shropshire’s air quality and reduce the risk of air pollution	1	2	2
12: Reduce carbon dioxide emissions	3	1	2
13: Promote adaptation and mitigation to climate change	3	1	2
14: Promote efficient use of natural resources	3	1	2
15: Conserve and enhance features and areas of heritage value and their setting	1	2	2
16: Conserve and enhance landscape character and local distinctiveness	1	2	2

## **Conclusion**

- 13.44. Tables 12.1 - 12.3 summarise the updated additional SA assessment work for each of the reasonable strategic distribution of planned development options identified. Table 12.4 then summarises, in comparative terms, how the three reasonable alternatives perform against each of the SA objectives – this is for illustrative purposes only.
- 13.45. It is apparent from the results of the updated additional SA assessment work that none of the reasonable strategic distribution of planned development options are likely to result in a strongly negative effect. This being a significant adverse impact that is predicted to be direct, permanent, irreversible and of major magnitude on a large part or the whole of Shropshire, a nationally/internationally protected asset, or on areas outside the County. As such, mitigation would not be required for any of these reasonable options.
- 13.46. Conversely, strategic distribution of planned development Option B (urban focus) is likely to result in a strongly positive effect on SA objectives:
- a. 2: Encouraging a strong and sustainable economy throughout Shropshire.
  - b. 3: Providing a sufficient amount of good quality housing which meets the needs of all sections of society.
  - c. 4: Promoting access to services for all sections of society.
  - d. 5: Encouraging the use of sustainable means of transport.
  - e. 6: Reducing the need of people to travel by car.
  - f. 7: Supporting active and healthy communities.
- 13.47. A strongly positive effect is a significant benefit that is predicted to be direct, permanent, irreversible and of major magnitude to a large part or all of Shropshire or a large number of people/receptors (including outside the County).
- 13.48. This is perhaps unsurprising as the achievement of SA objectives 2, 3, 4, 5, 6 and 7 can all be contributed to through the focusing of development in urban areas as it is these locations where the majority of the larger employers in Shropshire are located; where due to the greater proportion of the population there is the highest housing need; and where there is the greatest potential to access services, facilities and infrastructure.
- 13.49. It is important to note that there are a number of SA objectives that are linked to the specific location of development (sites), and as such in the context of the additional SA assessment of reasonable options for the strategic distribution of planned development, the conclusion can only be unknown. The location of development (sites) is assessed separately within the SA process.
- 13.50. In general terms, the updated additional SA assessment work can be summarised as concluding that focusing a higher proportion of development within urban areas achieves more positive impacts on social, economic and environmental factors.

- 13.51. However, it is important to ensure housing needs of Shropshire’s rural communities are recognised and appropriately planned for within any strategic distribution of planned development incorporated into the draft Shropshire Local Plan.
- 13.52. The strategic distribution of planned development associated with reasonable Options A and C would result in a reduced urban focus and increased rural focus (albeit to differing extents) when compared to that proposed within the draft Shropshire Local Plan, particularly following proposed amendments to settlement housing guidelines and windfall allowance in order to accommodate the proposed uplift to the housing requirement. As such, they could result in a need to amend settlement guidelines and site allocations.
- 13.53. Conversely the strategic distribution of planned development associated with reasonable Option B is generally consistent with that proposed within the draft Shropshire Local Plan, including following proposed amendments to settlement housing guidelines and windfall allowance in order to accommodate the proposed uplift to the housing requirement. As such, it would likely support the retention of proposed strategies for settlements across Shropshire and the proposed site allocations identified to support the achievement of these proposed settlement strategies.
- 13.54. On balance, it is considered that Option B: Urban Focus is the most sustainable of the three reasonable options for the strategic distribution of planned development. This is because:
- a. It presents an opportunity in the short, medium and long term to achieve a strongly positive effect on SA objectives 2: encouraging a strong and sustainable economy throughout Shropshire; 3: providing a sufficient amount of good quality housing which meets the needs of all sections of society; 4: promoting access to services for all sections of society; 5: encouraging the use of sustainable means of transport; 6: reducing the need of people to travel by car; and 7: supporting active and healthy communities
  - b. It presents an opportunity to achieve positive impacts against a range of other identified sustainability objectives.
  - c. Whilst it will likely have a negative impact on SA objective 16: conserve and enhance landscape character and local distinctiveness, and the impact on some other SA objectives is unclear, it is considered that opportunities exist to mitigate the extent of such impacts. Particularly through careful consideration of the locations of site allocations (assessed separately within the SA process) and the identification of appropriate policies to manage resultant development (also assessed separately within the SA process).
- 13.55. This updated additional SA Assessment work is a very important consideration when undertaking the planning judgement regarding which reasonable option for the strategic distribution of planned development should be identified within the draft Shropshire Local Plan. However, a range of other evidence/factors will also require due consideration when undertaking this planning judgement.

- 13.56. For the avoidance of doubt, it is considered that none of these reasonable options would result in a significant effect and as such no mitigation measures would be required. It is also considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 13.57. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## 14. Summary of SA Assessment: Relevant Draft Policies

### Introduction

- 14.1. Following conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document (including an appropriate housing requirement, an appropriate employment land requirement, an appropriate strategic distribution of development, and appropriate sites to accommodate proposed contributions to the unmet housing and employment land needs forecast to arise within the Black Country), a series of main modifications are required to relevant draft policies within the draft Shropshire Local Plan.
- 14.2. This section of the document summarises the additional SA assessment of these relevant draft Policies, to support identification of appropriate main modifications in response to the conclusions reached.
- 14.3. For the avoidance of doubt, the need to undertake further SA assessment work to consider the implications of wider main modifications will be considered at an appropriate time within the ongoing examination process.

### Draft Policies to be Assessed

- 14.4. Having reflected on the conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document, Shropshire Council considers that the following policies require Main Modifications:
- a. Draft Policy SP2: Strategic Approach<sup>5</sup>;
  - b. Draft Policy SP7; and
  - c. Draft Policy SP13: Delivering Sustainable Economic Growth and Enterprise.
- 14.5. Furthermore, in response to the ID28 Shropshire Council has prepared a new draft Policy to address the housing needs of older people and those with disabilities and special needs. In preparing this draft Policy, Shropshire Council has undertaken updated additional SA assessment work. For completeness, this updated additional SA assessment work is also summarised within this section of the document.

---

<sup>5</sup> Draft Policy SP2 sets out the Plan's strategic approach to development. It identifies Shropshire's housing and employment land requirements and the settlements in which these will be delivered. The SA for the Issues & Strategic Options and Preferred Scale and Distribution of Development documents evaluate the options considered in the preparation of draft Policy SP2. The draft settlement Policies S1 to S20 implement draft Policy SP2 (they show how SP2 applies, but they are not considered to represent reasonable alternatives for SA purposes), as such they were not subject to separate SA within the Sustainability Appraisal and Site Assessment Environmental Report undertaken to inform the Regulation 19: Pre-Submission Draft of the Shropshire Local Plan. To represent reasonable options, any evaluation should be capable of guiding the choice of an option by providing differing results. An individual evaluation of each settlement policy is unlikely to offer this. This approach follows NPPG which states that '*reasonable alternatives are the different realistic options considered by the plan-maker in developing the policies in its plan. They must be sufficiently distinct to highlight the different sustainability implications of each so that meaningful comparisons can be made*'.

## **Summary of the Additional SA assessment of Policies**

14.6. The following tables summarise the additional SA assessment of the policies that require Main Modifications following the conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document.

14.7. Each policy assessment is then followed by a written summary of the conclusions for each policy.

**Table 14.1: SA Assessment of Revised Policy SP2. Strategic Approach**

### **SP2. Strategic Approach**

- Page 394
1. Shropshire will flourish, accommodating investment and new development that contributes to meeting needs and making its settlements more sustainable. New development will be supported by necessary infrastructure and be of a high-quality which positively responds to its setting, local needs and our changing climate.
  2. Over the plan period from 2016 to 2038, a minimum of 31,300 new dwellings and a minimum of 320 hectares of employment land will be delivered, of which 1,500 dwellings and 30ha of employment land are to contribute to unmet development needs forecast to arise within the Black Country. The housing and employment land requirements equate to around 1,423 dwellings and around 14.5ha of employment land per annum.  

This Local Plan ensures that sufficient land in the right locations is available to achieve these growth aspirations, including sites that already benefit from planning permission or prior approval, sites allocated for development within the SAMDev Plan as documented within Appendix 2 of this Local Plan (referred to as ‘saved’ allocations), sites allocated for development within Settlement Policies S1-S20 of this Local Plan, and appropriate windfall sites that are consistent with the requirements of the Local Plan. However, the availability of land will be kept under review to ensure a continuous supply of suitable sites is available.
  4. Delivery of affordable housing remains a key priority in Shropshire, as such around 7,700 affordable dwellings (equating to around 25% of the total housing requirement) will be delivered during the plan period from 2016 to 2038.
  5. Main town centre uses will be focused into the diverse network of town centres and recognisable high streets across Shropshire. It will complement their scale and character and support appropriate diversification.
  6. To achieve a sustainable and appropriate pattern of development which also maximises investment opportunities, new development will be focused in the urban areas identified in Schedule SP2.1. Specifically:
    - a. Shrewsbury will bloom, fulfilling its role as a strategic centre and acting as a focus for well-designed new housing and employment development. This will be supported by the provision of supporting infrastructure, high-quality retail, leisure, transport and other public realm improvements within and on the edge of the town centre in support of the delivery of the Big Town Plan and its related masterplans.
    - b. Principal and Key Centres will accommodate significant well-designed new housing and employment development, supported by necessary infrastructure. Growth within these diverse settlements will maintain and enhance their roles, support key services and facilities and maximise their economic potential.

- c. Strategic Settlements will form successful, well-designed and sustainable communities, delivering new housing and employment development. They will provide an appropriate mix of housing, employment, local services and facilities and infrastructure.
7. Recognising the rurality of much of Shropshire and the importance of ensuring the long-term sustainability of rural communities, growth in urban areas will be complemented by appropriate new development within Community Hubs, identified in Schedule SP2.2, which are considered significant rural service centres; and to a lesser extent Community Clusters, identified in Schedule SP2.3, which consist of settlements with aspirations to maintain or enhance their sustainability. Outside these settlements, new development in the wider rural area will consist of affordable housing where there is evidenced local needs and appropriate rural employment and economic diversification.
8. The production of formal Neighbourhood Plans will be supported and can identify development opportunities which will complement proposals in this Local Plan. Where appropriate they can also identify additional Community Clusters.

**Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach**

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	-	-	The level of growth in this option means that greenfield land may need to be released. This is likely to have an adverse effect on the range of plants and animals and the quality and extent of wildlife habitats in Shropshire in the medium and long term.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	There are likely to be good opportunities to create a balanced supply of employment land and/or more or higher value jobs. It also includes an explicit contribution of 30ha of employment land towards the unmet needs forecast to arise in the Black Country.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	This option more than meets evidenced local housing need and offers significant opportunities to meet the requirements of all sections of society in terms of location, affordability and adaptability. It also includes an explicit contribution of 1,500 dwellings towards unmet housing need forecast to arise within the Black Country.
4: Promote access to services for all sections of society	0	+	+	Development should provide good opportunities to support existing services in the medium to long term. Master-planning of larger development may enable increased provision of services in the medium to longer term.
5: Encourage the use of sustainable means of transport	0	+	+	Focussing growth on the urban areas increases opportunities for the use of sustainable travel options in the medium to long term

Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	0	+/?	+/?	The scale of development in the county may be large enough to support new or existing public transport solutions to discourage private vehicle use over the medium to long term.
7: Support active and healthy communities.	0	+	+	This level of development is likely to provide opportunities for new leisure, recreational and cultural activities in the medium to long term.
8: Protect and improve soil quality	?/-	?/-	?/-	Even though development is focussed on the urban areas, greenfield land will still need to be released. This may have a negative effect on soil quality depending on location.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	Since pollution from rural areas is the main issue affecting water quality in Shropshire, there is likely to be little change in the current situation.
10: Reduce flood risk and improve flood management	0/?	0/?	0/?	This level of growth scale could create more opportunities for flood management measures.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Shropshire has two small Air Quality Management Areas (AQMA): one in Bridgnorth and the other in Shrewsbury. There is the potential for an effect on air quality, dependent on the location of development sites.
12: Reduce carbon dioxide emissions	+	+	+	Economies of scale may offer opportunities to increase the provision of energy from renewable sources, support reductions in energy consumption and promote energy efficiency.
13: Promote adaptation and mitigation to climate change	0/?	0/?	0/?	Opportunities to mitigate and adapt to climate change through habitat creation and improved connectivity will be dependent on the location of allocated sites.
14: Promote efficient use of natural resources	0	-	-	Growth may encourage the re-use of existing buildings and previously developed land but these gains are likely to be offset by an increase in the use of primary aggregates and greenfield sites in the medium to long term
15: Conserve and enhance features and areas of heritage value and their setting	0/?	0/?	0/?	Growth may lead to the loss of, or harm to, heritage features and their settings but depending on the location and design, development also enables better management of the historic environment. Development has the potential to cause harm, but equally, the associated increased economic benefits may offer good opportunities to enhance heritage assets and provide for their better management

Page 396

Sustainability Appraisal Assessment of Revised Policy SP2. Strategic Approach				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features which convey a sense of place. This policy is unlikely to maintain or improve existing landscape character over the Plan period.

**Summary for Revised Policy SP2: Strategic Approach**

- 14.8. The policy is likely to be **significantly positive** towards **encouraging a strong and sustainable economy** as well as **providing a sufficient amount of good quality housing** which meets the needs of all sections of society. It also explicitly addresses the proposed housing and employment land contributions towards the unmet needs forecast to arise.
- 14.9. It is also likely to assist with the reduction of carbon dioxide emissions, and in the medium to long term would help to promote access to services and facilities for all sections of society, as well as encourage the use of sustainable means of transport and would support active and healthy communities. It could potentially help to reduce the need for people to travel by car in the medium to long term.
- 14.10. The policy is unlikely to effect on the sustainability objectives of conserving and enhancing water or air quality in Shropshire and reduce the risk of water/air pollution, although this is somewhat dependent on the location of development. It is also unlikely to change the current situation in respect of reducing flood risk and improve flood management, promoting adaptation and mitigation to climate change or conserving and enhancing features and areas of heritage value and their setting.
- 14.11. The policy may have a negative effect on soil quality; however, this is not wholly established. Nonetheless, it would appear that the policy could have a negative effect with regard to conserving and enhancing landscape character and local distinctiveness, and in the medium to long term may be harmful to the promotion of efficient use of natural resources and the protection and enhancement of the range of plants and animals in Shropshire and the quality and extent of wildlife habitats (which is mostly due to the use of greenfield land).

**Table 14.2: SA Assessment of Revised Policy SP7. Managing Housing Development**

**SP7. Managing Housing Development**

1. In addition to supporting the development of the housing on the allocations set out in Policies S1-S20, there will be positive consideration of other sustainable housing development where this does not conflict with the Policies of the Local Plan.
2. In particular, additional housing development opportunities which would support the reuse of disused land or premises within settlement development boundaries as shown on the Policies Map; or contribute towards achieving wider town centre regeneration will be supported.
3. The residential development guidelines for settlements set out in Policies S1-S20 are a significant policy consideration. Where housing proposals which are otherwise compliant with the policies of this Local Plan would lead to the residential development guideline for a settlement being exceeded, having taken account of the number of completions since the start of the plan period as well as and any outstanding commitments, including site allocations, regard will be had to all of the following:
  - a. The benefits arising from the proposal, aside from increasing housing supply;
  - b. The likely delivery of the outstanding commitments;
  - c. Any cumulative impacts arising from the development, especially on infrastructure provision; and
  - d. The increase in the number of dwellings relative to the guideline.
4. Additional market housing development outside the settlement development boundaries shown on the Policies Map will be strictly controlled in line with Policy SP10, and will only be considered potentially acceptable where there is clear evidence that the residential development guideline for the settlement appears unlikely to be met over the plan period, or where there are specific considerations set out in the Settlement Policies.

**Sustainability Appraisal Assessment of Policy SP7. Managing Housing Development**

Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	Development which does not conflict with other Local Plan policies is supported. This means that those policies which seek to conserve and enhance the natural environment should prevent harm occurring to wildlife.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	The policy is likely to encourage the retention of jobs in the county and to maintain and support existing businesses.

Sustainability Appraisal Assessment of Policy SP7. Managing Housing Development				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	The policy specifically promotes residential development to meet housing need.
4: Promote access to services for all sections of society	+	+	+	The policy encourages development in those settlements which have a range of services, so this objective is likely to be supported.
5: Encourage the use of sustainable means of transport	+	+	+	The policy encourages development in those settlements which are already best served by sustainable means of transport so this objective is likely to be supported.
6: Reduce the need of people to travel by car	0/+	0/+	0/+	The policy encourages development in the most accessible existing settlements so this may lead to a reduction in the need to travel by car.
7: Support active and healthy communities.	0	0	0	This objective is unlikely to be affected by this policy.
8: Protect and improve soil quality	?/-	?/-	?/-	Development outside existing settlement boundaries is likely to lead to the release of greenfield land. This may have a negative effect on soil quality depending on location.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	This objective is unlikely to be affected by this policy.
10: Reduce flood risk and improve flood management	0	0	0	This objective is unlikely to be affected by this policy.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0	0	0	This objective is unlikely to be affected by this policy.
12: Reduce carbon dioxide emissions	0	0	0	This objective is unlikely to be affected by this policy.
13: Promote adaptation and mitigation to climate change	0	0	0	This objective is unlikely to be affected by this policy.
14: Promote efficient use of natural resources	++	++	++	The re-use of existing buildings and previously developed land is specifically encouraged by this policy.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	This objective is unlikely to be affected by this policy.

Sustainability Appraisal Assessment of Policy SP7. Managing Housing Development				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	-	-	-	All development changes the character of the landscape and has the potential for an adverse effect on those features which convey a sense of place. This policy is unlikely to maintain or improve existing landscape character over the Plan period.

**Summary for Revised Policy SP7: Managing Housing Development**

- 14.12. This policy is **significantly positive** towards the promotion of the **efficient use of natural resources** and is also **significantly positive** towards the **provision of a sufficient amount of good quality housing** which meets the needs of all sections of society. The re-use of existing buildings and previously developed land is specifically encouraged by this policy and it specifically promotes residential development to meet housing need. The policy also encourages access to services for all sections of society as it relates to settlements which have a range of services, and also encourages the use of sustainable means of transport as well as a strong and sustainable economy throughout Shropshire. The policy may also assist with reducing the need for people to travel by car as it encourages development in the most accessible existing settlements.
- 14.13. Sustainability objectives concerned with water quality and flood risk and management are unlikely to be affected by this policy. It is also unlikely to change the current situation with respect to protecting and enhancing the range of plants and animals in Shropshire and the quality and extent of wildlife habitats as well as promoting adaptation and mitigation to climate change. The policy has no effect on the sustainability objectives of Shropshire’s air quality of the reduction of carbon emissions and will not change the baseline for objectives of supporting active and healthy lifestyles and the conservation and enhancement of areas of heritage value.
- 14.14. It is possible that the policy may have a negative impact upon soil quality as development outside existing settlement boundaries is likely to lead to the release of greenfield land. Additionally all development changes the character of the landscape and so this could have an impact with regard to the conservation and enhancement of landscape character and local distinctiveness.

**Table 14.3: SA Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise**

**SP13. Delivering Sustainable Economic Growth and Enterprise**

1. Shropshire will deliver a minimum of 320 hectares of employment development from 2016 to 2038 and will protect established employment areas for employment uses to achieve the objectives of Policy SP2. The strategic supply of land and protected employment areas are identified on the Policies Map and in the Authority Monitoring Report which will monitor the delivery of this employment development.
2. Employment generating uses will comprise:
  - a. Primary employment uses in Classes B2, B8, E(g)(i),(ii),(iii) and Sui Generis Waste Installations for recycling/treating/disposing of recovered materials to diversify the local economy of Shropshire;
  - b. Secondary employment uses in Classes E(a),(c),(d),(e), C2, C2A, and Sui Generis Waste Material Recovery Facilities, Retail Warehousing and Sales (including vehicle sales) and Vehicle Hire (including taxis and 'vehicle sharing' services) to diversify the employment offer on larger employment areas;
  - c. Ancillary essential or exceptional service uses in Classes E(b),(f), C1 and Sui Generis Hot Food and Takeaway Services and Hostels to diversify the effective operation and self-containment of larger employment areas.
3. Development of employment generating uses will be expected to demonstrate that the:
  - a. Site has the capacity to accommodate the scale of the proposed development particularly uses which attract visiting members of the public;
  - b. Proposed uses and any intensification of use conforms with neighbouring uses particularly primary employment uses on or close to the site;
  - c. Infrastructure investment is sufficient to serve the proposed or intensified uses particularly to provide sufficient capacity in key utilities and to facilitate the use of renewable and low carbon energy and decentralised energy sources;
  - d. Development satisfies the requirements of national and local policies especially to:
    - i. Protect the Green Belt or safeguarded land except where there are very special circumstances for development,
    - ii. Protect the Shropshire Hills Area of Outstanding Natural Beauty except where there are exceptional circumstances for development,
    - iii. Conserve areas of higher landscape value except where justified; or
    - iv. Conserve the natural and historic environments except where justified.
4. Development on mixed-use sites will be expected to utilise returns from higher value land uses to bring the land within the employment site/area to the market through the provision of accesses, servicing and other infrastructure to facilitate the development of employment uses on the land.
5. Development on allocated sites will be expected to satisfy the:
  - a. Economic growth objectives of the Economic Growth Strategy;
  - b. Strategy for the settlement in which the proposed site is located;

- c. Development guidelines for allocated employment sites or mixed-use sites with employment generating uses in Settlement Policies S1-S18, Strategic Settlement Policies S19-S20, or approved Neighbourhood Plans; and
  - d. Requirements of Local Plan policies relevant to the proposed location or uses of land.
6. Windfall Class B employment development on other sites will be supported, where the proposal is:
- a. To expand the premises or to intensify the operation of an existing business;
  - b. For the change of use / conversion of an existing building to employment use;
  - c. Located on a site within or adjoining an established employment area;
  - d. For development of a suitable scale located within a Community Hub, Community Cluster or in the Countryside that satisfies Policy SP7, SP8, SP9;
  - e. Distributed according to the strategic approach in Policy SP2;
  - f. Consistent with the economic growth objectives of the Shropshire Economic Growth Strategy;
  - g. For major employment development including large scale inward investment for known 'end users' or occupiers, that satisfies the objectives of Policy SP12.
7. To support strategic and local employers, there is a presumption to protect allocated employment land and established employment areas. The protection of these employment sites/areas will be proportionate to the significance of these sites/areas in this hierarchy which is explained in the Authority Monitoring Report:
- a. Regional Sites – inward investment sites of regional or national significance will be protected for primary employment uses;
  - b. Sub-Regional Sites – high quality, premium investment sites will be protected for primary employment uses;
  - c. Key Shropshire Sites – good quality, prime sites in the local market will be protected for employment uses;
  - d. Key Local Sites – good quality, business and industrial sites in the local market will be protected for employment uses;
  - e. Mixed Commercial Sites – traditional affordable sites for mixed commercial uses or sites with broad spectrum Class E uses with a mix of building formats.
8. To support strategic and local employers, there is a presumption to protect allocated employment land and established employment areas for employment uses consistent with the hierarchy of employment sites. Proposals for change of use or for the loss of employment land and premises from primary employment uses on regional or sub-regional sites or from employment uses on any other protected employment sites will only be supported where:
- a. A contemporary market assessment of the employment land in the Settlement demonstrates a satisfactory supply for the remaining period of the Local Plan which does not compromise the supply of land in the County; and
  - b. A comprehensive marketing exercise demonstrates the site is not suitable or viable for the intended employment uses for the site in the hierarchy of employment sites; and:
  - c. The application demonstrates that the proposed use will make a significant contribution to the local economy, the local community or to other significant Local Plan objectives.

Sustainability Appraisal Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	+	+	+	The policy requires that national and local policy requirements to protect habitats and species must be followed.
2: Encourage a strong and sustainable economy throughout Shropshire	++	++	++	This policy focusses on delivering this objective
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	0	0	0	This objective is unlikely to be affected by this policy
4: Promote access to services for all sections of society	0	0	0	This objective is unlikely to be affected by this policy
5: Encourage the use of sustainable means of transport	0	0	0	This objective is unlikely to be affected by this policy
6: Reduce the need of people to travel by car	0	0	0	This objective is unlikely to be affected by this policy
7: Support active and healthy communities.	0	0	0	This objective is unlikely to be affected by this policy
8: Protect and improve soil quality	?/-	?/-	?/-	Development outside existing settlement boundaries is likely to lead to the release of greenfield land. This may have a negative effect on soil quality depending on location.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	+	+	+	Since pollution from the countryside is the main issue affecting water quality in Shropshire, economic development may have a beneficial effect on water quality by taking land out of agricultural production.
10: Reduce flood risk and improve flood management	0	0	0	This objective is unlikely to be affected by this policy
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0/?	0/?	0/?	Shropshire has two small Air Quality Management Areas (AQMA): one in Bridgnorth and the other in Shrewsbury. There is the potential for an effect on air quality, dependent on the location of development sites.
12: Reduce carbon dioxide emissions	0	0	0	This objective is unlikely to be affected by this policy
13: Promote adaptation and mitigation to climate change	0	0	0	This objective is unlikely to be affected by this policy
14: Promote efficient use of natural resources	-	-	-	Economic development is likely to increase the need for primary aggregates and other natural resources
15: Conserve and enhance features and areas of heritage value and their setting	+	+	+	The policy requires that national and local policy requirements relating to the conservation of the historic environment must be followed.

Sustainability Appraisal Assessment of Revised Policy SP13. Delivering Sustainable Economic Growth and Enterprise				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
16: Conserve and enhance landscape character and local distinctiveness	+	+	+	The policy requires that national and local policy requirements to protect areas of landscape value must be followed.

***Summary for Revised Policy SP13: Delivering Sustainable Economic Growth and Enterprise***

- 14.15. This policy is likely to be **significantly positive** for **encouraging a strong and stable economy** throughout the county, as this is its primary aim. Additionally, as this policy requires that national and local policies are followed, it also positively affects the conservation and enhancement of landscapes and areas of heritage value. Water quality would improve due to this policy, as economic development may have a beneficial effect by taking land out of agricultural production. Additionally, it would help to protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.
- 14.16. The policy would likely have no effect on the sustainability objectives of reducing flood risk and improve flood management, conserving and enhancing Shropshire’s air quality and reduce the risk of air pollution (although this is somewhat dependent on the location of development), reducing carbon dioxide emissions or promotion of adaptation and mitigation to climate change.
- 14.17. Likewise, it is unlikely to change the situation in relation to encouragement for the use of sustainable means of transport or the reduction the need of people to travel by car, as well as supporting active and healthy communities. Sustainability objectives concerned with sufficient numbers of good quality housing and access to services for all society are unlikely to be affected by this policy.
- 14.18. As development outside the existing settlement boundaries is likely to lead to the release of greenfield land, it may have a negative effect on soil quality depending on location. Likewise economic development is likely to increase the need for primary aggregates and other natural resources, thus affecting the promotion of efficient use of natural resources.

**Table 14.4: SA Assessment of New Policy Regarding Housing Provision for Older People and those with Disabilities and Special Needs**

**New Policy. Housing Provision for Older People and those with Disabilities and Special Needs**

1. The housing needs of older people and those with disabilities and special needs will be met in a way that provides choice and importantly complements and facilitates the People’s Strategy for Shropshire. A fundamental principle of the People’s Strategy for Shropshire is supporting people to remain independent within their own homes and within their existing communities and support networks for as long as possible. The People’s Strategy for Shropshire will be facilitated and complemented through the provision of accessible and adaptable housing and appropriate forms of specialist housing in accordance with the requirements of this Policy.

**Accessible and Adaptable Housing**

2. All housing specifically designed for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations.
3. On sites of 5 or more dwellings, at least 5% of the dwellings will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and a further 70% of the dwellings will be built to the M4(2) (accessible and adaptable dwellings) or higher standard within Building Regulations, unless site-specific factors indicate that step-free access cannot be achieved.  
All dwellings on sites of less than 5 dwellings and the remaining dwellings on sites of 5 or more dwellings that are not subject to the requirements of Paragraph 3 of this Policy are strongly encouraged to achieve the M4(2) (accessible and adaptable dwellings) standard within Building Regulations or higher.  
All housing designed to M4(3) (wheelchair user dwellings) standard within Building Regulations must also be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.
6. All housing designed to M4(2) (accessible and adaptable dwellings) within Building Regulations is strongly encouraged to be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.

**Specialist Housing**

7. All specialist housing for older people or those with disabilities and special needs will be built to the M4(3) (wheelchair user dwellings) standard within Building Regulations and must also be designed to be ‘friendly’ to those with dementia and to those with disabilities and special needs.
8. Reflecting the People Strategy for Shropshire, and the principle of supporting people to remain independent within their own homes and within their existing communities and support networks for as long as possible, new specialist housing provision for older people or those with disabilities and special needs will consist of:

- a. The forms of specialist housing which support independent living, including age-restricted housing; retirement/sheltered housing; or extra care housing; or
  - b. Nursing homes providing high-level care for those with dementia and/or complex needs; or
  - c. A combination of the above.
9. All specialist housing provision will integrate into rather than be apart (gated-off) from existing and new communities, recognising the social and sustainability benefits of multi-generational and inclusive communities.
  10. Ideally, specialist housing should be located where future occupiers can benefit from access to existing services and facilities. Where appropriate services and facilities are not already available, a range of supporting services and facilities will need be provided on sites where specialist housing is provided. Any services and facilities provided should be proportionate in scale to the type of specialist housing and ensure the scheme remains affordable.
  11. When providing specialist housing, opportunities to provide appropriate key worker accommodation for any associated care staff should be proactively considered.
  12. Specialist housing designed to meet the diverse needs of older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy and the requirements of other relevant Local Plan Policies (particularly Policies SP3-SP9, DP4, DP12 and Policies S1-S20) will be supported in appropriate locations within the development boundaries identified on the Policies Map.
  13. Specialist housing schemes that consist of 100% local needs affordable specialist housing for older people or those with disabilities and special needs that is consistent with the requirements of Paragraph 8 of this Policy, the requirements of Policy DP5 and the requirements of other relevant Local Plan Policies will be positively considered.
  14. Specialist housing that is consistent with the requirements of Paragraph 8 of this Policy and is agreed to be Use Class C2 development, will in addition to meeting the housing needs of older people also constitute a secondary employment use. These forms of specialist housing will therefore be considered an appropriate secondary employment use on mixed-use employment sites, where they are consistent with the requirements of Policy SP11; complement the existing and planned wider employment uses of the site; are served by appropriate infrastructure; and facilitate the delivery of the wider employment site, including through the provision of accesses, servicing and other infrastructure.
  15. On site allocations for 250 or more dwellings and all development sites for 250 or more dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 20% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy.
  16. On site allocations for 150-249 dwellings and all development sites for 150-249 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 15% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. At the lower end of this category, it is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers, as they generally have lower operational and staffing costs and requirements.

17. On site allocations for 50-149 dwellings and all development sites for 50-149 dwellings (irrespective of whether such sites are brought forward through a series of phases or planning permissions), at least 10% of houses must constitute a form of specialist housing for older people and/or those with disabilities and special needs documented within Paragraph 8 of this Policy. It is likely that this provision will consist of age-restricted housing or retirement/sheltered housing in the form of apartments or a small group of bungalows which can be delivered in smaller numbers as they generally have lower operational and staffing costs and requirements.
18. Specialist housing provided in accordance with Paragraphs 15-17 of this Policy that is consistent with the definition of affordable housing can also represent all or part of the contribution to affordable housing required in accordance with Policy DP4 of the Local Plan. However:
  - a. The mix of specialist housing provided across Shropshire should include both open market and affordable housing.
  - b. Affordable housing provision should not be concentrated only in affordable specialist housing, as it is important that the other forms of affordable housing are delivered, including for key workers such as the care staff for specialist housing.
  - c. As such, if it is considered that completions and commitments of specialist housing is concentrated in affordable tenures or if it is considered that affordable housing completions and commitments are concentrated in forms of specialist housing, specialist housing provision on a site may be required to be open market and similarly the affordable housing provision may be required to be general housing.
19. On site allocations, provision of a level of housing which results in the relevant settlements housing guideline being exceeded and/or the site allocations approximate site provision figure within the relevant Settlement Policy (S1-S20) being exceeded will be positively considered where:
  - a. This over-provision is a direct result of the provision of a significant quantity of specialist housing in excess of that required within Paragraphs 15-17 of this Policy,
  - b. Over provision is specialist housing of a type documented within Paragraph 8 of this Policy,
  - c. The development proposed remains an appropriate form of development on the site having regard to its characteristics and the character of the surrounding area, and
  - d. The proposed development complies with the wider policies of the Local Plan, particularly Policies SP3, SP5, SP6, DP1, DP3, DP4, DP12, DP13, DP15-DP18, DP26, DP28, and DP29.
20. Proposals that result in the loss of existing specialist housing designed to meet the needs of older people or those with disabilities and special needs will be resisted unless:
  - a. There is no longer an identified need for the existing form of specialist housing in the settlement and Shropshire as a whole; or
  - b. The needs will be met elsewhere within the settlement, preferably close to the existing specialist housing or in a preferential location for specialist housing; or
  - c. Redevelopment would provide an improved quality of a comparable category of specialist housing and associated facilities; or

- d. Redevelopment would provide an alternative form of specialist housing which is identified within Paragraph 8 of this policy, demonstrably of greater need in Shropshire, and the provision of the specialist housing and associated facilities is of a high quality.

<b>Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs</b>				
<b>Sustainability Objective</b>	<b>Short Term</b>	<b>Medium Term</b>	<b>Long Term</b>	<b>Commentary</b>
1: Protect and enhance the range of plants and animals in Shropshire and the quality and extent of wildlife habitats.	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations. This means those policies which seek to conserve and enhance the natural environment should prevent harm occurring to wildlife.
2: Encourage a strong and sustainable economy throughout Shropshire	+	+	+	This policy supports provision of specialist housing which can create local employment opportunities. It also recognises the need to consider provision of appropriate housing for key workers associated with these employment opportunities, thereby supporting provision of an appropriate labour force.
3: Provide a sufficient amount of good quality housing which meets the needs of all sections of society	++	++	++	The policy aims to positively contribute to this objective. It is likely that it will positively contribute to the provision of the housing needs of specific groups within our communities – particularly older people and those with disabilities and special needs.
4: Promote access to services for all sections of society	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.
5: Encourage the use of sustainable means of transport	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.

Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
6: Reduce the need of people to travel by car	+	+	+	This policy promotes the provision of specialist housing for older people and those with disabilities in locations accessible to services and facilities. It also requires the provision of proportionate services and facilities which are responsive to the type of specialist housing provision and the need to maintain affordability, and any existing provision in the area.
7: Support active and healthy communities	+	+	+	This policy supports provision of adaptable housing and specialist housing, which can support older people and those with disabilities and special needs to remain healthy and active for longer.
8: Protect and improve soil quality	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
9: Conserve and enhance water quality in Shropshire and reduce the risk of water pollution	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
10: Reduce flood risk and improve flood management	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
11: Conserve and enhance Shropshire's air quality and reduce the risk of air pollution	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
12: Reduce carbon dioxide emissions	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.

Sustainability Appraisal Assessment of New Policy. Housing Provision for Older People and those with Disabilities and Special Needs				
Sustainability Objective	Short Term	Medium Term	Long Term	Commentary
13: Promote adaptation and mitigation to climate change	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
14: Promote efficient use of natural resources	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.
15: Conserve and enhance features and areas of heritage value and their setting	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations. This means those policies which seek to conserve and enhance the built environment should prevent harm occurring to heritage. The policy also supports the continued use of existing specialist housing for appropriate forms of specialist housing, thereby supporting the continued use of such buildings, including those which are heritage assets.
16: Conserve and enhance landscape character and local distinctiveness	0	0	0	This objective is unlikely to be affected by this policy. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations.

Page 410

**Summary for New Policy: Housing Provision for Older People and those with Disabilities and Special Needs**

14.19. This policy is likely to be **significantly positive** for the **provision of a sufficient amount of good quality housing** which meets the needs of all sections of society, in the short, medium and longer term. This can be achieved through the provision of adaptable housing and specialist housing to meet the needs of older people and those with disabilities and special needs.

- 14.20. The policy also likely to positively contribute to the encouragement of a strong and sustainable economy in Shropshire, promotion of access to services and facilities, encouraging use of sustainable means of transport, reduction in the need to travel by car, and supporting active and healthy communities.
- 14.21. There is likely to be no change to the situation with respect to environmental objectives including enhancing the range of plants and animals and quality of habitats, adaption to climate change, efficient use of natural resources, reducing flood risk, protecting soil quality, reduction in carbon emissions, and conserving air and water quality. The policy recognises that appropriate locations for specialist housing for older people and those with disabilities and special needs are those consistent with wider policy considerations which address these various environmental issues.

## **Conclusion**

- 14.22. As part of undertaking the SA process, it is important to consider ways of mitigating adverse effects and maximising beneficial effects. This is responsive to National Planning Practice Guidance (NPPG) which states that *“The sustainability appraisal should identify any likely significant adverse effects and measures envisaged to prevent, reduce and, as fully as possible, offset them”*<sup>6</sup> (mitigation measures).
- 14.23. Consistent with the methodology utilised throughout the SA assessments undertaken to inform the draft Shropshire Local Plan, effects as those that are scored either:
- ++ Strongly positive, likely to benefit a large area of Shropshire or a large number of people or receptors, including outside the county. The effect is likely to be direct, permanent, irreversible and of major magnitude.*
- or*
- Strongly negative, likely to have a significant adverse impact on the whole, or on a large part of, Shropshire, on internationally or nationally protected assets or on areas outside the county. The effect is predicted to be direct, permanent, irreversible and of major magnitude.*
- 14.24. Table 14.5 summarises the significant effects of the Policies requiring Main Modifications following conclusions reached regarding the range of issues informed by the additional SA and site assessment work summarised within this document.
- 14.25. Table 14.5 also summarises the significant effects of the new draft Policy to address the housing needs of older people and those with disabilities and special needs.

**Table 14.5: Significant Effects of Revised and New Local Plan Policies**

<b>Policy</b>	<b>Sustainability Objectives significantly positively affected</b>	<b>Sustainability Objectives significantly negatively affected</b>
SP2. Strategic Approach	SO2 & SO3	No objectives significantly negatively affected.
SP7. Managing Housing Development	SO3 & SO14	No objectives significantly negatively affected.
SP13. Delivering Sustainable Economic Growth and Enterprise	SO2	No objectives significantly negatively affected.
New Policy. Meeting the Housing Needs of Older People and Those with Disabilities and Special Needs	SO3	No objectives significantly negatively affected.

- 14.26. Table 14.5 demonstrates that these draft policies are not likely to result in any significant negative effects, and as such no mitigation measures would be required.

---

<sup>6</sup> NPPG – Strategic Environmental Assessment and Sustainability Appraisal, Paragraph 016, Reference ID: 11-016-20190722

- 14.27. It is considered that the monitoring framework established within the Sustainability Appraisal and Site Assessment Environmental Report (SD006.01) is appropriate in order to monitor the significant environmental effects of implementing the draft Shropshire Local Plan.
- 14.28. This document should be read in conjunction with the Sustainability Appraisal and Site Assessment Environmental Report and its Appendices (SD006.01-SD006.22).

## Additional Sustainability Appraisal Report: Appendix 3

Updated Stage 3 Site Assessment:  
Albrighton Key Centre

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>ALB002</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	1%
<i>Percentage of site in Flood Zone 2:</i>	2%
<i>Percentage of site in Flood Zone 1:</i>	98%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	3%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	6%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject to a check on the capacity of Rectory Road and consideration of a shared highway network with ALB015 & P39 which would allow westbound traffic to access the Newport Rd via ALB015. This group of sites could accommodate 957 homes.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Buffering the southern and eastern boundaries and the pond will reduce the developable area available.
<i>Ecology Comments Other Constraints:</i>	Donington & Albrighton LNR lies adjacent to the southern boundary. The potential impacts on the LNR will need to be assessed and it will need to be adequately buffered. The southern and eastern boundaries form an Environmental. Network corridor. There is a pond on the site. Should GCNs be present, a min. 50m buffer will be required. Requires EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles (known to be present), white-clawed crayfish, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effects on settings Grade II* St. Cuthbert's Church (NHLE ref. 1273838), associated Scheduled Monument and Grade II* Listed churchyard cross (NHLE refs. 1015301 & 1239196), and Albrighton Conservation Area. Some metal detectorist finds and large size of site suggests it has some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges around site and copses of woodland within site. Strip of woodland continuous with Donnington Pool along southern boundary
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure sufficient development stand-off from Donnington Pool and woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate central wooded copse in open space and plant to connect to / expand adjoining wooded areas.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Railway line to the north causing noise. Possible noise from RAF Cosford which may need assessment. Old farm buildings on site and historic map shows features which may present contamination of the land
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail. Noise assessment and suitable glazing and ventilation if issues with aircraft noise found. Remediation likely to be available for any contaminated land that may be found.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of the built form of the settlement.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.</p> <p>This site contains significant trees and hedgerows. It is also located within the gap between Albrighton and Cosford. Furthermore the noise generated at Cosford Airfield may require mitigation.</p> <p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>Whilst the site is relatively well related to the built form of the settlement it adjoins and is separated from the bulk of the built form of the settlement by a local nature reserve (which also has local amenity and landscape value). The site also adjoins a conservation area and other heritage assets.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A suitable buffer would be required to southern and eastern boundaries to mitigate and manage impacts on adjoining Local nature reserve.</p> <p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Opportunity for high quality tree planting and creation of links into/between existing wooded areas.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is also separated from the built form of the settlement by a Local Nature Reserve, in proximity to numerous heritage assets and within the gap between Cosford and Albrighton.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The railway line forms an Env. Network corridor. Requires EclA and surveys for GCNs (ponds within 500m), bats, badgers, reptiles and nesting birds. Hedgerows will need to be buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance hedgerows/tree lines. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	Site immediately adjacent to and likely to have a negative affect upon the setting of II Listed station buildings (NHLE refs. 1221627)
<i>Heritage Comments Other Constraints:</i>	
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site bordered by hedgerows
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey & Tree Protection Plan
<i>Tree Comments Opportunities:</i>	no trees on site - enhance tree cover within site, to deliver net gain for biodiversity.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise assessment required for rail noise and commercial noise and odour from existing restaurant. The site is possibly viable as long as mitigation on the rail facing façade such as s gables or walls which are uninterrupted by windows or internal layout of dwelling so non habitable rooms are facing away from rail track.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majoriry of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>The site is not located within the Green Belt. It is located within the existing built form of Albrighton, with clearly defined site boundaries.</p> <p>The capacity of the site is likely to be limited to a small number of houses given limitations of the Railway Station access road junction onto Station Road.</p> <p>Site immediately adjacent to and likely to have a negative affect upon the setting of II Listed station buildings (NHLE refs. 1221627).</p> <p>The site is adjacent to the railway line which will have noise implications, there is also an environmental network alongside the railway line.</p> <p>Hedgerows along northern and southern boundaries.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Capacity of local highway network (access onto Station Road) would need to be reflected when determining scale of any development.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Retain and enhanced hedgerows.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>Yes</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Potential for windfall development</p>
<p><b>Reasoning</b></p>	<p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is already located within the development boundary of Albrighton. It is relatively small and its capacity is constrained by the highway access.</p> <p>Any potential for windfall development is subject to such factors as the assessment and ability to appropriately manage any impact on the impact on the adjacent grade II Listed station buildings and their settings, effective mitigation of noise from the railway line, retention of hedgerows and enhancement of the environmental network.</p> <p>In light of the above, the site would also not be appropriate to contribute to assist in meeting the unmet need of the Black Country.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation

<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The northern element of the site is located within a parcel which performs weakly against purpose 2, purpose 3 and purpose 4. The southern element of the site is located within a parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The release of the parcel containing the northern element of the site would have a low-moderate level of harm on the Green Belt. The release of the parcel containing the southern element of the site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p>
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. An improved Bowling Green Lane (eastern end) would need to be incorporated into the highway layout of the overall site. Links with ALB018 would need to be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. This site is likely to significantly increase traffic on the western end of Bowling Green End and improvements may require third party land. The impact on the eastern end of Bowling Green Lane and junction with Newport Rd (linked with ALB018) is likely to be unacceptable but subject to a detailed assessment. This could be reduced if a strategic road connection can be made between Worthington Dr Loak Road, through P38.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed. The pond/priority habitats /watercourse/hedgerows should be appropriately buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	<p>The site may contain priority habitats - botanical survey required.</p> <p>There are ponds on/adjacent to the site. If GCNs are present then a min. 50m will be required.</p> <p>The northern boundary forms an Environmental. Network corridor, due to the presence of a watercourse. A PROW crosses the site.</p> <p>Requires botanical survey, ECHA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds</p>

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Grade II listed Shifnal Manor (The Manor House - NHLE ref. 1176147). No known archaeological interest but large size of site also suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges around site boundaries and occasional trees within site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate internal trees in open space and plant to connect to / expand adjoining strip of woodland to the north.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Possible noise from RAF Cosford which may need assessment. Sewage works to the north east of the site creating odour. Potential for land contamination with historic features noted on the site and unknown filled ground
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and suitable glazing and ventilation if issues with aircraft noise found. Significant stand off distance from sewage treatment works recommended. Remediation likely to be available for any contaminated land that may be found.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the west of and only partly adjoining the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The northern element of the site is located within a parcel which performs weakly against purpose 2, purpose 3 and purpose 4. The southern element of the site is located within a parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within two different Green Belt parcels. The release of the parcel containing the northern element of the site would have a low-moderate level of harm on the Green Belt. The release of the parcel containing the southern element of the site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p> <p>There is concern about the ability to provide an appropriate access to the site and the capacity of the wider road network. Resolving these issues may involve third party land.</p> <p>The site is located within the gap between Albrighton and Cosford Airfield.</p> <p>The site contains identified areas of open space and mature trees/hedgerows. It may also contain priority habitats, which would require assessment /management. Noise generated at Cosford Airfield may require mitigation.</p> <p>The site is adjacent to a sewage treatment works and in proximity of ecological and heritage assets which will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. <i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Ensure reasonable development stand-off form woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Some noise from the school but generally not expected to be an issue unless there is plant and equipment that may make noise and impact on proposed dwellings.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and appropriate stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to any noise source.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to the critical role the parcel plays in preserving the setting of the historical settlement area within Albrighton. Whilst a sub-parcel was identified with a reduced harm, this did not include the land promoted within this site.</p> <p>The site is well related to the built form of Albrighton, close to services and facilities including the primary school.</p> <p>Part of the site is within Albrighton Conservation Area this is therefore a significant consideration, particularly with regard to design quality.</p> <p>The site also has some significant trees and may contain priority habitats. These factors will also require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>ALB013</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	4%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2, purpose 3; and purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a low level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Low and Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Low and Medium

<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. Requires botanical survey, EclA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, the site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	N/A
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	site sandwiched between main road and railway.
<i>Tree Comments Other Constraints:</i>	belts of trees to site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Thin site needs careful attention to shading and other constraints posed by trees.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Significant road and rail noise likely. Possible land contamination from past land use.
<i>Public Protection Comments Management of Constraints:</i>	Noise assessment and appropriate stand off distance, glazing and ventilation consideration and layout and orientation of dwellings to any noise source plus boundary treatment as necessary.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of Albrighton, adjacent to the built form of Cosford. The site is separated from Albrighton by other land and the railway line.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2, purpose 3; and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a low level of harm on the Green Belt.</p> <p>Much of the site has already been developed and forms part of the settlement of Cosford. The remainder of the site lies in the gap between Cosford and Albrighton.</p> <p>The site is not well related to the built form of Albrighton and it may therefore be more appropriate to consider in the context of Cosford.</p> <p>As the site is sandwiched between the A41 and the railway line, the impact of noise on residential amenity would be a significant consideration. The site contains wooded belts along its boundaries and may also contain priority habitats, which would require due assessment/management.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could be restored/improved to provide a priority wildlife habitat and enhance environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites location sandwiched between the railway line and A41 and the associated noise is a significant consideration for residential development.</p> <p>The site is divorced from the built form of Albrighton (this separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm). It may therefore be more appropriate to consider in a Cosford context.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed.
<i>Ecology Comments Other Constraints:</i>	Some of the boundaries form Environmental. Network corridors. These should be retained and buffered. The site may contain priority habitats - botanical survey required. There is a pond adjacent to the north-western boundary. Should GCNs be present, a min. 50m buffer will be required. Requires botanical survey, Bats and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, the site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site contains earthwork remains of ridge and furrow (HER PRN 33238). Large size of site suggests it may hold other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO trees to eastern boundary
<i>Tree Comments Other Constraints:</i>	trees and hedgerows within and around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Potential road noise from roads to the north, west and east.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the south and adjoining the built form of Albrighton. The site is well related to the built form of Albrighton adjoining the primary school and close to services and facilities.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that whilst the wider parcel within which this site is located would have a high level of harm on the Green Belt, the site has been identified within a sub-parcel which would have a moderate level of harm on the Green Belt, as it is well contained and considered to have characteristics of the settlement edge.</p> <p>The site has some significant trees on and in proximity; archaeological interest; parts are within an environmental network; and there may be priority habitats. These factors will require due consideration.</p> <p>A small portion of the site is located within the 30 year and 100 year surface flood risk zones, whilst 40% of the site is located within the 1,000 year surface flood zone.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>A small portion of the site is in areas at higher risk of surface water flooding, this will need to be assessed and managed. Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could be restored/improved to provide a priority wildlife habitat and enhance environmental network. Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Remove from the Green Belt and safeguard for future development.</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. However, the site is located within a sub-parcel which has been identified as having a moderate level of harm on the Green Belt, as such it is considered an appropriate location to remove from the Green Belt and safeguard for future development beyond the current plan period. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Ecology Comments Significant Constraints:</i>	Buffering the southern boundary may reduce the developable area available.
<i>Ecology Comments Other Constraints:</i>	Donington & Albrighton LNR lies adjacent to the southern boundary. The potential impacts on the LNR will need to be assessed and it will need to be adequately buffered. Requires EcIA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, otters, water voles (known to be present), white-clawed crayfish, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible effects on settings Grade II* St. Cuthbert's Church (NHLE ref. 1273838), associated Scheduled Monument and Grade II* Listed churchyard cross (NHLE refs. 1015301 & 1239196), and Albrighton Conservation Area. No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs & CA, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows within and around site. Block of mature trees adjacent eastern boundary and woodland continuous with Donington Pool to south.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Fine trees in northern section could be focal points in open space within any development. Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south and east
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise from road to the west of the site. Rail noise to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road and rail.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the north of and only partly adjoining the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the impact on the setting of the historic settlement and encroachment on the countryside. No sub-parcels were identified which would have less harm.</p> <p>This site contains significant trees and hedgerows. It is also located within the gap between Albrighton and Cosford (noise generated at Cosford, adjacent roads and railway lines may require mitigation).</p> <p>Whilst the site is relatively well related to the built form of the settlement it is separated from the bulk of the built form of the settlement by a local nature reserve (which also has local amenity and landscape value). The site also adjoins a conservation area and other heritage assets.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Buffer would be required to southern and eastern boundaries to mitigate and manage impacts on adjoining LNR.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could enhance environmental network.</p> <p>Existing trees on the northern portion of the site could form a focus for any open space provision. Trees could also provide buffers to the south and east of the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is also separated from the built form of the settlement by a Local Nature Reserve, in proximity to numerous heritage assets and within the gap between Cosford and Albrighton.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>ALB017</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The site consists of land previously removed from the Green Belt and safeguarded for future development.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes the development fund a suitable estate road access to the site and a review and extension of the existing 30mph speed limit with associated traffic calming. In order to address potential safety concerns related to the bend in Kingswood Road a roundabout junction access should be considered which replaces the need for the existing Kingswood Road / Beamish Lane priority junction.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Assumes vehicular and pedestrian links will be provided to the adjacent allocated development site to the west of the site to facilitate sustainable travel to the village facilities and local access. Also assumes a review of the A41 / Beamish Lane junction and consideration of closure.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	11
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The northern boundary forms an Environmental. Network corridor. This must be buffered. There is a pond on the site - if this contains GCNs then a min. 50m buffer will be required. Requires botanical survey and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerow and trees to northern boundary. Group of trees within site. Mature trees at southern access with Kingswood Road
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north of the site.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>The site is located to the east of Albrighton within land safeguarded for future development.</p> <p>The site is adjacent to the Albrighton development boundary, directly adjoining an allocated housing site, and would be well related to the future built up extent of the settlement.</p> <p>The site forms part of an environmental network and there are significant trees and hedgerows present, these will need due consideration.</p> <p>The site may be subject to other ecological and heritage interests which would need to be evaluated as part of any development scheme.</p> <p>Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed. Impact on the A41 / Beamish Lane junction also needs to be assessed.</p> <p>Existing road network and access will require improvement to accommodate development.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Traffic calming and extension of 30mph speed limit necessary.</p> <p>Need to consider capacity of junction of Beamish Lane with A41.</p> <p>Buffering of the railway line.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could enhance environmental network.</p> <p>The site should integrate into the existing built form of the settlement and the developments occurring on adjacent sites.</p> <p>Strategic links through the site and into the adjacent development site required - vehicular/cyclist/pedestrian and green infrastructure/environmental networks.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Yes</p>
<b>Recommendation</b>	<p>Allocate for development alongside ALB021.</p>
<b>Reasoning</b>	<p>The site is well related to the settlement within an area of safeguarded land identified to meet Albrighton's future development requirements and is a natural direction for expansion.</p> <p>Given its position geographically it is considered an appropriate site for housing development to meet the needs of the local community and its surrounding rural hinterland.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	<p>ALB017 &amp; ALB021 Total: 180 dwellings</p>

**If proposed for Allocation  
Design Requirements:**

Comprehensive masterplan required for ALB017 and ALB021. Design and layout will ensure vehicular, cyclist and pedestrian access from ALB017 into ALB021. Contributions to jointly required infrastructure will be proportional, based on the level of development forecast.

An appropriately designed roundabout will be provided on Kingswood Road at the point of access into the site.

The 30mph zone on Kingswood Road will be extended to reflect the extent of the site and the impact on Beamish Lane/A41 junction assessed and mitigated. This will likely involve closure of this junction.

To enhance access to services and facilities in the town and achieve integrated communities, the development will include a northern vehicular, cyclist and pedestrian connection and any other appropriate pedestrian and cycle links into the saved SAMDev Allocation ALB002.

Green infrastructure will be provided through the site and link into the wider area. This provision will include an appropriate green buffer of the railway line and the associated green infrastructure corridor.

The pond on ALB017 will be appropriately assessed and managed (opportunity to integrate into open space provision). Where possible trees and hedgerows on the site should be retained and enhanced, supported by positive tree planting, particularly on areas of open space.

The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.

**\*Green Belt Purposes  
(where applicable):**

N/A

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>ALB018</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	2%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. An improved Green Lane would need to be incorporated into the highway layout of the overall site. Along with major junctions on the A464 and Elm Road. Links with ALB007 would need to be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Cross Road / Elm Road junction would need to be assessed for improvements. The impact on the eastern end of Bowling Green Lane and junction with Newport Rd (linked with ALB007) is likely to be unacceptable but subject to a detailed assessment. This could be reduced if a strategic road connection can be made between Worthington Dr Loak Road, through P38.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas should not be developed. The pond/priority habitats/hedgerows should be appropriately buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. There are ponds on/adjacent to the site. If GCNs are present then a min. 50m will be required. A PROW crosses the site. Requires botanical survey, EA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed The Old Windmill (NHLE ref. 1053693), The Elms (NHLE ref. 1053692) and Barn 60m SE of The Elms (NHLE ref. 1367612). Tithe Map indicates that a brickfield present in one part of site, and together with its large size, suggests that it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around site boundaries and along internal lanes. Copse of trees in northern corner of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Design open space to integrate with existing good trees.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the edge of the site to the north and east.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the south-west of the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p> <p>This is a very large site which comprises several land parcels. Whilst the site adjoins the development boundary to the east, due to its size it does project into the countryside to the south-west of the settlement.</p> <p>There is concern about the ability to provide an appropriate access to the site and the capacity of the wider road network. Resolving these issues may involve third party land.</p> <p>The site contains some significant trees and hedgerows and is in proximity to listed buildings. It may also contain priority habitats and be of archaeological interest. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Local highway network and access are not satisfactory and would require improvement to accommodate development requiring land outside the promoted site to achieve this. This would include improvements to Green Lane and junctions with A464, Elm Road and potentially a new road connection through P38.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The local highway network and access are constrained.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	14
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then the site should not be developed. The trees and hedgerows should be appropriately buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. There is a pond on the site. If GCNs are present then a min. 50m will be required. Requires botanical survey, EA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	If priority habitat, the site should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	N/A
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO tree at road frontage to site.
<i>Tree Comments Other Constraints:</i>	mature trees and hedges around site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the south east boundary
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>Land has been safeguarded for future development to the east of Albrighton, although it is recognised that there is a need to ensure that there remains land safeguarded for development beyond the current plan period.</p> <p>This site is in the Green Belt to the south-west of the settlement boundary.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to encroachment on the countryside and weakening of the role of neighbouring areas of Green Belt. No sub-parcels were identified with less harm.</p> <p>This site in isolation is not well related to the built form of Albrighton being divorced from the development boundary.</p> <p>The site has some significant trees and hedgerows, including a TPO, and there may be priority habitats. These factors will require detailed consideration.</p> <p>Noise impacts from nearby roads and adjoining commercial uses would need to be assessed and managed.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities.</p> <p>The site in isolation is poorly related to the built form of the settlement (separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm).</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>ALB021</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	0%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%

<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The site consists of land previously removed from the Green Belt and safeguarded for future development.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. Beamish La is not suitable for additional development traffic. However, if linked to ALB017 and Beamish La was improved or ALB 021 had vehicular access to Kingswood Rd via ALB 017 then the site could be developed.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If vehicular and pedestrian links are achieved to the adjacent development site (ALB017) to facilitate sustainable travel to the village facilities and prevent additional traffic on Beamish Lane which is currently unsuitable for additional traffic. Also assumes a review of the A41 / Beamish Lane junction and consideration of closure.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	15
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The northern boundary forms an Environmental. Network corridor. This must be buffered. Requires botanical surveys, EcIA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	N/A
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees along northern boundary and hedgerows to south-west and east boundaries.
<i>Tree Comments Management of Constraints:</i>	development stand-off from trees along northern boundary.
<i>Tree Comments Opportunities:</i>	tree planting to enhance tree cover on site.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north of the site and road to the east.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road and rail.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The site is located to the east of Albrighton within land safeguarded for future development. The site is separated from the Albrighton development boundary by another promoted site (ALB017), which forms the remainder of the safeguarded land. The site forms part of an environmental network and there are significant trees and hedgerows present, these will need due consideration.</p> <p>The site may be subject to other ecological interests which would need to be evaluated as part of any development scheme. Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed. Existing road network and access will require improvement to accommodate development. Impact on the A41 / Beamish Lane junction also needs to be assessed.</p> <p>Highways and noise impacts associated with the adjoining railway line would need to be fully assessed and managed.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Traffic calming and extension of 30mph speed limit necessary.</p> <p>Need to consider capacity of junction of Beamish Lane with A41.</p> <p>The existing road network and access off Beamish Lane is not satisfactory and will require improvement to accommodate development, potentially by seeking access via ALB017 to Kingswood Road.</p> <p>Buffering of the railway line.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could enhance environmental network.</p> <p>Opportunity for high quality tree planting.</p> <p>The site should integrate into the existing built form of the settlement and the developments occurring on adjacent sites.</p> <p>Strategic links through the site and into the adjacent development site required - vehicular/cyclist/pedestrian and green infrastructure/environmental networks.</p> <p>This site should also be considered in the context of ALB017 - to ensure a rational approach to development and the provision of infrastructure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>Yes</p>
<b>Recommendation</b>	<p>Allocate for development alongside ALB017.</p>
<b>Reasoning</b>	<p>The site is well related to the settlement within an area of safeguarded land identified to meet Albrighton's future development requirements and is a natural direction for expansion.</p> <p>Whilst the site performs poorly within Stage 2a Settlement Sustainability Appraisal of the Site Assessment process, this is primarily due to access to services and facilities. Enhancing access from the site to the services and facilities available within the town can be achieved through development of the site (in combination with ALB017). Furthermore additional green infrastructure provision can be achieved through development of the site (in combination with ALB017).</p> <p>Given its position geographically it is considered an appropriate site for housing development to meet the needs of the local community and its surrounding rural hinterland.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	<p>ALB017 &amp; ALB021 Total: 180 dwellings</p>

**If proposed for Allocation  
Design Requirements:**

Comprehensive masterplan required for ALB017 and ALB021. Design and layout will ensure vehicular, cyclist and pedestrian access from ALB017 into ALB021. Contributions to jointly required infrastructure will be proportional, based on the level of development forecast.

An appropriately designed roundabout will be provided on Kingswood Road at the point of access into the site.

The 30mph zone on Kingswood Road will be extended to reflect the extent of the site and the impact on Beamish Lane/A41 junction assessed and mitigated. This will likely involve closure of this junction.

To enhance access to services and facilities in the town and achieve integrated communities, the development will include a northern vehicular, cyclist and pedestrian connection and any other appropriate pedestrian and cycle links into the saved SAMDev Allocation ALB002.

Green infrastructure will be provided through the site and link into the wider area. This provision will include an appropriate green buffer of the railway line and the associated green infrastructure corridor.

The pond on ALB017 will be appropriately assessed and managed (opportunity to integrate into open space provision). Where possible trees and hedgerows on the site should be retained and enhanced, supported by positive tree planting, particularly on areas of open space.

The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere.

<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	Good sight, no known constraints at this time.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; and moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt due to the critical role the parcel plays in preserving the setting of the historical settlement area within Albrighton. Whilst a sub-parcel was identified with a reduced harm, this did not include the land promoted within this site.</p> <p>The site is well related to the built form of Albrighton, close to services and facilities including the primary school.</p> <p>The site is wholly within Albrighton Conservation Area this is therefore a significant consideration, particularly with regard to design quality.</p> <p>The site also has some significant trees and may contain priority habitats. These factors will also require due consideration.</p> <p>The site has a very constrained road access via Harp Lane which will also serve the adjoining allocated site, Land at White Acres (ALB003) which has been identified to deliver retirement housing. It is unclear whether Harp Lane would have sufficient capacity to serve additional development.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>It is unclear whether Harp Lane would have sufficient capacity to serve additional development.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes

<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>The site is not located within the Green Belt. The site consists of a large field with well defined field boundaries. There are residential dwellings to west and south, land to the east is currently allocated for residential development and to the north is the school and associated playing fields.</p> <p>The site is currently only accessible via a field gate access onto Shaw Lane. There is insufficient width to achieve an estate road vehicle access in this location and it is also unlikely to be able to deliver a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site (to the east of this site), any such access would need to have due regard of trees along site boundaries.</p> <p>The site is bounded by substantial belts of TPO'd trees to east, west and south.</p> <p>The existing site access falls within the Albrighton Conservation Area.</p> <p>Possible effect of setting of Grade II Meeson Hall and the site may also have archaeological potential.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>The site is currently only accessible via a field gate access onto Shaw Lane. There is insufficient width to achieve an estate road vehicle access in this location and it is also unlikely to be able to deliver a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site to the east of this site), any such access would need to have due regard of trees along site boundaries.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>Yes</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Potential for windfall development</p>
<b>Reasoning</b>	<p>The site is located within the development boundary.</p> <p>Any potential for windfall development is subject to identification and provision of an appropriate vehicular, cycle and pedestrian access. The current potential point of access is significantly constrained due to the width of available land, which means an appropriate access is unlikely to be achievable, and the limited ability to achieve a suitable junction onto Shaw Lane. However, an alternative access could potentially be achieved through the adjacent development site (to the east of this site), although any such access would be subject to highway approval and would need to have due regard of trees along site boundaries.</p> <p>Whilst the site performs poorly within the Sustainability Appraisal this is primarily due to access to services and facilities. Development could provide enhanced access to services and facilities and on-site green infrastructure.</p> <p>In addition to the above factors, any potential for windfall development is also subject to factors such as appropriate enhancement of site boundaries, due consideration of heritage assets in the area and the protection and integration of TPOs along site boundaries.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the east of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the sub-parcel containing this site would have a low-moderate level of harm on the Green Belt.</p> <p>The site is bounded by the Albrighton By-Pass and railway line (noise associated with these features will require due consideration). Whilst the site is adjacent to the built form of the settlement/land safeguarded for future development, it is some distance from the majority of the services and facilities in the settlement. The site is located within a parcel with medium landscape and visual impact for housing and medium-high impact for employment.</p> <p>The site also contains some significant trees/hedgerows and may contain priority habitats. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Remove from the Green Belt and safeguard for future development.</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>Due to the sites location, bounded by the Albrighton By-Pass and Railway Line and separated from the services and facilities available within the settlement by these physical features, it is likely that future use for employment purposes will be considered most appropriate. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>These uses would need to complement existing uses on the site and in the surrounding area.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation

<i>Percentage of site in Flood Zone 1:</i>	85%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	8%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	12%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	21%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	6%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a moderate level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	12
<i>Ecology Comments Significant Constraints:</i>	If priority habitats are present then those areas of the site should not be developed, reducing the developable area available. The Environmental. Network corridor/tree lines/hedgerows/scrub/ditch should be retained and buffered, reducing the developable area available.
<i>Ecology Comments Other Constraints:</i>	The site may contain priority habitats - botanical survey required. The eastern section of the site and southern boundaries are Environmental. Network corridor. Requires botanical survey, EA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles, invertebrates and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	If priority habitats, those areas should not be developed. If not priority habitat: protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Site could potentially be restored/enhanced as priority habitat
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Scheduled Monument of Moated site 330m south west of Humphreston Hall (NHLE ref. 1019203). Medium sized site in proximity to a moated site suggests that it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (setting assessment, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows to site boundaries. North-west corner of site is constrained by mature trees and south-east by narrowness and scrub woodland
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	plant large, long-lived trees within site open space as part of a quality landscape scheme.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Noise from A41 and railway.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail and road.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<b>Strategic Considerations:</b>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2 and purpose 3; and moderately against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a moderate level of harm on the Green Belt.</p> <p>The site is bounded by the Albrighton By-Pass and railway line (noise associated with these features will require due consideration). The site is separated from the built form of the settlement by the railway line and other land. It is also some distance from the majority of the services and facilities in the settlement.</p> <p>15% of the site is located within flood zones 2 and/or 3, this is the element of the site most closely associated with the built form of Albrighton.</p> <p>8% of the site is located within the 30 year surface flood zone, 12% within the 100 year surface flood risk zones and 21% within the 1,000 year surface flood zone.</p> <p>The site also contains some mature trees; may contain priority habitats; and is adjacent to a scheduled monument. These factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is separated from the built form of the settlement by the railway line and other land (separating land is considered to form part of a sensitive Green Belt parcel, the release of which would have high harm).</p> <p>The element of the site is closest proximity to the built form of the settlement is located within flood zones 2 and/or 3.</p> <p>The site is adjacent to a scheduled monument.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P35</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	2%
<i>Percentage of site in Flood Zone 2:</i>	3%
<i>Percentage of site in Flood Zone 1:</i>	97%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	10%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	14%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	28%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	1%
<i>Percentage of the site within 20m of a detailed river network:</i>	18%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. This site could accommodate 1,158 homes and the impact on the highway in the vicinity could be very significant. In particular it will be necessary to assessments the A41 bypass junction (eastern end). However, the site should have the financial capacity to afford all necessary mitigation. Two access points onto Kingswood Road will need to be created and traffic from the centre of the site should be able to reach both access points. This would also enable public transport to be potentially re-routes through the site from Kingswood Road. Excellent pedestrian and cycle provision, including links to ALB008 and the school are critical to minimising single occupancy car traffic generated by the site.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	21
<i>Ecology Comments Significant Constraints:</i>	The developable area is much reduced by the presence of the Environmental. Network (and its associated habitats).
<i>Ecology Comments Other Constraints:</i>	Much of the site is Environmental. Network core habitat or corridors. The Environmental. Network must be retained and enhanced. There are ponds on/adjacent to the site and a ditch/drain along the southern boundary. The site may contain priority habitats - botanical survey required. There are PROWs and TPOs on the site. Requires botanical survey and bat surveys for bats (buildings, trees and transects), GCNs (ponds within 500m), badgers, white-clawed crayfish, otters, water voles, invertebrates, reptiles and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Environmental. Network and priority habitats must not be developed. Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Parts of the site could potentially be restored/enhanced as priority habitat. Habitat connectivity and POS could be enhanced.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site partially within Shifnal Conservation Area. Includes part of non-designated historic parkland for Albrighton Hall and also has potential to impact on setting of non-designated Albrighton Hall. Some metal detectorist finds and large size of site suggests it has some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on character and appearance and setting of CA; impacts on non-designated parklands and setting of Albrighton Hall; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	north-western part of site in conservation area. Strip of TPO woodland projects into central northern part of site.
<i>Tree Comments Other Constraints:</i>	mature trees and groups of trees and hedges around and throughout site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees
<i>Tree Comments Opportunities:</i>	large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the east, particularly from the A41. Possible noise from Albrighton Hotel.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the road and hotel noise.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site.</p> <p>Development of the entirety of the site would result in the need for an assessment of the eastern end of the A41 By-Pass junction; two access points onto Kingswood Road (this would also allow for public transport to be re-routed); and excellent pedestrian/cyclist links.</p> <p>10% of the site is located within the 30 year surface flood zone, 14% within the 100 year surface flood risk zones and 28% within the 1,000 year surface flood zone.</p> <p>The site contains environmental networks, which must be retained/enhanced.</p> <p>The site contains ponds and may contain priority habitats; part of the site is located within a conservation area; the site also includes part of a non-designated historic parkland and could impact on the setting of the non-designated Albrighton Hall; there are trees subject to TPO protection; and mature trees and hedgerows on the site.</p> <p>For the sub-area of the site it is expected that these factors will require proportional consideration, although some issues may only apply to the wider site.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Development of the entirety of the site would result in the need for an assessment of the eastern end of the A41 By-Pass junction; two access points onto Kingswood Road (this would also allow for public transport to be re-routed); and excellent pedestrian/cyclist links. For the identified sub-area, these requirements would need to be proportional to the scale of development proposed. Flood risk ( FZ2 and/or 3) relates to SW corner of parcel.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Site could potentially be restored/enhanced as priority habitat.</p> <p>Opportunity for high quality tree planting to form the focus for open space provision on the site.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Remove the identified sub-area from the Green Belt and safeguard for future development.</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. However, a sub-parcel has been identified which would result in a moderate level of harm to the Green Belt, this sub-area represents an element of this site. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>The wider site contains designated and undesignated heritage assets, however these are considered to be focused outside the identified sub-parcel.</p> <p>The site contains ecological assets, however the majority of which are outside the identified sub-parcel.</p> <p>The wider site would require significant highway improvements, these would need to be provided proportional to the level and impact of development on the sub-parcel.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	17
<i>Ecology Comments Significant Constraints:</i>	Reduction in developable area available due to presence of ponds.
<i>Ecology Comments Other Constraints:</i>	An Environmental. Network corridor (a ditch) runs through part of the site. There are a number of ponds on the site. Ponds (priority habitat) should be retained, buffered and connectivity increased, which will reduce the developable area available. If GCNs are present in any of the ponds, buffers of at least 50m are likely to be required. Requires Ecla and surveys for bats (in trees), GCNs (ponds within 500m), badgers and nesting birds. The hedgerows will need to be appropriately buffered.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	No known archaeological interest but site is of a large size, so may have some archaeological potential
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees and groups of trees around and within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site. large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the boundaries of the site. Commercial operation to the northwest creating possible noise, dusts, odour.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.

<i>Percentage of the site within 20m of a detailed river network:</i>	3%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Patshull Road Newhouse Lane Holyhead Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes development will fund site frontage improvements along Newhouse Lane and Patshull Road, including widening, provision of footway and extension of speed limits. Also assumes development will fund review and improvements at four junctions - Holyhead Road / Patshull Road, Cross Road / Patshull Road, Newhouse Lane / Holyhead Road and Newhouse Lane / Cross Road. The extent of these reviews and improvements will be dependent upon the layout of the development and decisions on the most appropriate access points for a development of potentially 1688 homes. A new access onto Holyhead Road may be appropriate.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	N. The site would not be able to deliver necessary improvements to Patshull Road or Newhouse Lane north of the site frontages for both vehicular and sustainable modes of transport to access Albrighton.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
<i>Ecology Comments Significant Constraints:</i>	Reduction in developable area available due to presence of ponds.
<i>Ecology Comments Other Constraints:</i>	An Environmental. Network corridor (a ditch) runs through part of site. There are a number of ponds on and in close proximity to the site. Ponds (priority habitat) should be retained, buffered and connectivity increased, which will reduce the developable area available. If GCNs are present in any of the ponds, buffers of at least 50m are likely to be required. Requires Ecology buffers for GCNs (in trees), GCNs (ponds within 500m), badgers and nesting birds. The hedgerows will need to be appropriately buffered. PROWs cross the site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Very large site which would be likely to impact on the settings of Grade II listed Lea Hall (NHLE ref. 1274036) and Boningale Conservation Area. Site would substantially reduce spatial separation between Albrighton and Boningale. Numerous metal detectorist finds from the site which suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of LBs and CA; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	hedgerows and mature trees and groups of trees around and within site
<i>Tree Comments Management of Constraints:</i>	due to size of site - full EIA and landscape character assessment and VIA. At a smaller scale - Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	use 20% canopy cover policy to plant trees and woodland within site. large area of land so affords opportunity to integrate existing trees and groups of trees within a matrix of open space and natural habitat. Expand woodland adjacent southern boundary.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Roads around boundary of the site creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Potential to mitigate noise through separation distances, orientation and room layout as well as glazing and boundary treatment.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the south of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.</p> <p>A small proportion of the site is located within 30 and/or 100 year surface water flooding. 10% of the site is within the 1,000 year surface flood zone.</p> <p>The site is separated from the built form of the settlement and projects into the countryside.</p> <p>Development could impact on settings of Grade II listed Lea Hall and Boningale Conservation Area. Site would substantially reduce spatial separation between Albrighton and Boningale.</p> <p>The site may have archaeological potential.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>Development could impact on settings of Grade II listed Lea Hall and Boningale Conservation Area. Site would substantially reduce spatial separation between Albrighton and Boningale.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm.</p> <p>The site is poorly related to the built form of the settlement.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<p><b>Further Main Modification Required</b></p>	<p>No</p>
<p><b>If proposed for Allocation, Potential Capacity:</b></p>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the west of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Albrighton's proximity and strong transport links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<b>Strategic Considerations:</b>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2, purpose 3 and purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a low-moderate level of harm on the Green Belt.</p> <p>The site contains a mature hedgerow and may contain priority habitats.</p> <p>A small proportion of the site is located within the 30 year and 100 year surface flood zones. 22% of the site is within the 1,000 year surface flood zone.</p> <p>The site is located in the gap between Albrighton and Cosford.</p> <p>The site is adjacent to a sewage treatment works which will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. However, given the scale of the site it is unlikely that in isolation it could accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country.</p>
<b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Known Infrastructure Opportunities:</b>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<b>Potential for Windfall?</b>	<p>No</p>
<b>Potential for Allocation?</b>	<p>No</p>
<b>Recommendation</b>	<p>Retain as Green Belt</p>
<b>Reasoning</b>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>Whilst the site is considered to be located within a Green Belt parcel, where the release would result in low-moderate harm it is also located in the gap between Cosford and Albrighton.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>
<b>Further Main Modification Required</b>	<p>No</p>
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

- Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);
- Purpose 2 (merging of neighbouring towns);
- Purpose 3 (safeguarding countryside from encroachment);
- Purpose 4 (preserving setting/character of historic towns); and
- Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes  
(where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P39</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	No
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	1%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	Yes
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.
<i>Landscape Considerations: (from the LVSS)</i>	Medium
<i>Visual Impact Considerations: (from the LVSS)</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. Subject to a check on the capacity of Rectory Road and consideration of a shared highway network with ALB015 & P002 which would allow westbound traffic to access the Newport Rd via ALB015. This group of sites could accommodate 957 homes. This is particularly important as there is a pinch point on Rectory Rd south of the site frontage where third party land would be required for any improvements.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	13
<i>Ecology Comments Significant Constraints:</i>	None
<i>Ecology Comments Other Constraints:</i>	The northern boundary forms an Environmental. Network corridor. Requires survey, EIA and surveys for bats, GCNs (ponds within 500m), badgers, reptiles and nesting birds.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Environmental. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Medium sized site with a number of metal detectorist finds reported from it suggesting some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	trees to northern and east site boundaries
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	plant large, long-lived trees within site open space as part of a quality landscape scheme.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Rail to the north creating noise.
<i>Public Protection Comments Management of Constraints:</i>	Stand off distance, glazing and ventilation consideration and layout and orientation of dwellings plus boundary treatment as necessary to the rail.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal:</b>	Poor
<b>Black Country Contribution Conclusion - Stage 2a Sustainability Appraisal:</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north of Albrighton. Albrighton is located in east Shropshire on the A5/M54 Corridor - an area with a strong functional relationship to the Black Country. Albrighton benefits from strong road links to the Black Contry (around 4 miles to the list) via both the M54/A5 corridor and the A41 corridor. Albrighton benefits from a railway station, which is a regular stop on the Shrewsbury to Wolverhampton line. This railway station is within reasonable walking distance for the majority of the town.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Albrighton's proximity and strong transport links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>There is safeguarded land to the east of Albrighton intended to make provision for settlement development needs. This site is in Green Belt to the north of the settlement.</p> <p>As the sites availability is currently unknown, the site is not considered suitable for allocation. However it may have potential for future safeguarding.</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that the release of the parcel containing this site would have a high level of harm on the Green Belt.</p> <p>The site is separated from the built form of the settlement by other land. It is also some distance from the majority of the services and facilities in the settlement.</p> <p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>The site is bounded by the railway line to the north and is also located within the gap between Albrighton and Cosford. The noise associated with these features will require due consideration.</p> <p>The site also contains some mature trees; environmental networks; and may contain priority habitats, these factors will require due consideration.</p> <p>The site is located within a source protection zone, Environment Agency Guidance will need to be considered.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal.</p> <p>The site contains grades 1/2/3 agricultural land. Applying the precautionary principle this is considered best and most versatile agricultural land.</p> <p>The site is situated in Albrighton, which benefits from proximity to the Black Country and strong transport links via the M54/A5 corridor, A41 corridor and a railway station on the Shrewsbury to Wolverhampton line. The site is also of a sufficient scale to accommodate a meaningful proportion of the proposed contribution to the unmet need of the Black Country, should it be identified as a proposed allocation.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Capacity of local highway network (Rectory Lane) and access would require assessment and potentially improvement to accommodate development. This may require land outside the promoted site to be achieved, including land in third party ownership.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>Safeguarded land available to meet settlement development requirements along with infill and exception site opportunities. The sites availability is currently unknown.</p> <p>The site is considered to be located within a sensitive Green Belt parcel, the release of which would have high harm. Furthermore the site is separated from the built form of the settlement by other land located within the same sensitive Green Belt parcel.</p> <p>Beyond this other land is a Local Nature Reserve, between the site and the built form of the settlement.</p> <p>The site is located in the gap between Cosford and Albrighton.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p style="text-align: center;">GB Assessment Parcel P51</p> <p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; and strongly against purpose 4. The parcel was not included in the Green Belt Review undertaken for Shropshire which considered harm of release .</p> <p style="text-align: center;">Parcel not included in Part 2 Green Belt Review</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Very High
<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	A442 & B4363
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Y
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Assumes junction onto A442 can be achieved without conflicting with the Cemetery junction and crossing facilities for pedestrians to the west side of the A442 incorporated. The topography and visibility on the B4363 may not allow a highway standard junction to be achieved but pedestrian cycle access should be provided.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	22
<i>Ecology Comments Significant Constraints:</i>	Site lies entirely within Env. Network corridor. CS17 Environmental Networks applies. No or reduced number of dwellings possible. Suggest seek landscape advice.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for Dormice, Badgers, Bats, nesting birds, vascular plants (possible species-rich semi-improved grassland needs botanical survey), reptiles. Environmental Network if very restricted housing numbers proposed.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to north east and south in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Retain as part of Environmental Network in accordance with CS17 Environmental Networks and MD12. Otherwise use minimum number of houses to release majority of site for semi-natural open space, accessible to the public.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	N/A
<i>Heritage Comments Management of Constraints:</i>	
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	blocks of TPO woodland adjoin north and south of site
<i>Tree Comments Other Constraints:</i>	derelict hedgerow trees along eastern site boundary, group of trees within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover to the north and south and enhance tree / hedge linkage along east of site
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the west
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is outside the development boundary within the Green Belt to the north of Low Town adjacent to the A442. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The land occupies a visually prominent site with hilly topography which may no longer be available, having been purchased to provide additional cemetery land.</p> <p>The severe topographical issues affecting the site's access and the site's ecological interest and role as an environmental network are significant constraints to development. Proximity to a range of recognised natural and historic assets, including protected trees and woodland, a wildlife site and high landscape value and visual impact are also significant considerations. In particular the sensitivity of the landscape to change arising from new housing is high and from new employment is very high. Similarly the views experienced are of high sensitivity to change arising from new housing and very high sensitivity to change arising from employment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Acceptable highway access required.</p> <p>Retention/enhancement of environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is also located in an area with ecological, high landscape and visual sensitivity. The sites topography may be challenging to create an appropriate access.</p> <p>It is understood that the site may have been purchased to provide an extension to the cemetery.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

<i>Public Protection Comments Management of Constraints:</i>	Road noise to the west
<i>Public Protection Comments Opportunities:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is outside the development boundary within the Green Belt to the north of Low Town adjacent to the A442. It is a linear site with a relatively poor relationship to the existing built form of the settlement. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The land occupies a visually prominent site with hilly topography which may no longer be available, having been purchased to provide additional cemetery land.</p> <p>The severe topographical issues affecting the site's access and the site's ecological interest and role as an environmental network are significant constraints to development. Proximity to a range of recognised natural and historic assets, including protected trees and woodland, a wildlife site, high landscape value and visual impact are also significant considerations. In particular the sensitivity of the landscape to change arising from new housing is high and from new employment is very high. Similarly the views experienced are of high sensitivity to change arising from new housing and very high sensitivity to change arising from employment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Acceptable highway access required.</p> <p>Retention/enhancement of environmental network.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is also located in an area with ecological, high landscape and visual sensitivity. The sites topography may be challenging to create an appropriate access.</p> <p>It is understood that the site may have been purchased to provide an extension to the cemetery.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	N
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Y. Provided development can fund major earthworks and drainage associated with gaining access to the highway as the land is considerably higher than Stourbridge Road and introducing a footway on the southside of Stourbridge Road.
Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	21
Ecology Comments Significant Constraints:	Site lies entirely within Env. Network corridor. CS17 Environmental Networks applies. No or reduced number of dwellings possible. Suggest seek landscape advice.
Ecology Comments Other Constraints:	EclA required. Surveys for Dormice, Badgers , Bats, nesting birds, plants (possible species-rich semi-improved grassland and other habitats need botanical survey), reptiles. Environmental Network if very restricted housing numbers proposed.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Protect, enhance and restore Env. Network to south and east in accordance with CS17 Environmental Networks and MD12, preferably by not allocating this site.
<i>Ecology Comments Opportunities:</i>	Retain as part of Environmental Network in accordance with CS17 Environmental Networks and MD12. Otherwise use minimum number of houses to release majority of site for semi-natural open space, accessible to the public.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impact on setting of Bridgnorth Conservation Area.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of CA).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO trees within site and along eastern boundary, TPO woodland adjoining southern and western boundaries.
<i>Tree Comments Other Constraints:</i>	site surrounded by mature trees and woodland
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road noise to the north
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	The site is located in east Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is an area of green open space which forms part of the environmental network within the built form of Bridgnorth. Development of the site is compromised by its ecological value and by the difficulty and cost of achieving an acceptable highway access. Possible impact on the setting of the Conservation Area and TPO trees are also significant considerations.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Major earthworks and drainage would be required in an ecologically sensitive location and Conservation Area setting context to achieve an acceptable highway access.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>Yes</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Potential Windfall site</p>
<p><b>Reasoning</b></p>	<p>Whilst potentially suitable in principle, this is an environmentally sensitive site with access problems. The modest proportion of the site which is developable may not provide sufficient viability to deliver an acceptable scheme.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No

Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<b>Ecology Comments Significant Constraints:</b>	Site lies entirely within Env. Network corridor. CS17 Environmental Networks applies. No or reduced number of dwellings possible. Site also directly abuts Ancient Woodland protected under the NPPF. Suggest seek landscape advice.
<b>Ecology Comments Other Constraints:</b>	EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (likely unimproved grassland and other priority habitats need botanical survey), reptiles. Ancient Woodland also to be surveyed to inform impacts from residential development. Environmental Network if very restricted housing numbers proposed.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees in field. Large buffer required to Ancient Woodland boundary without public access. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12, preferably by not allocating this site.
<i>Ecology Comments Opportunities:</i>	Retain as part of Environmental Network in accordance with CS17 Environmental Networks and MD12. Otherwise use minimum number of houses to release majority of site for semi-natural open space, accessible to the public, whilst buffering the Ancient Woodland from public access.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Historic OS maps indicate part of site used for a rifle range in the C19th. No other known archaeological interest but site is of a large size, so may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	TPO woodland adjoins length of eastern boundary.
<i>Tree Comments Other Constraints:</i>	hedges, trees and scrub within and around site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	Industrial uses to the west include a household recycling centre which will be noisy and create odour and dusts.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>This site occupies a visually sensitive position adjacent to but outside the development boundary and sits within the Green Belt. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The site adjoins ancient woodland, is within an area of high landscape value and visual impact, forms part of the environmental network and may have archaeological value, all of which are significant considerations. The sensitivity of the landscape to change arising from new housing is high and from new employment is very high. Similarly the views experienced are of high sensitivity to change arising from new housing and very high sensitivity to change arising from employment. Neighbouring uses (Recycling centre and Ancient Woodland) mean that the site is unsuitable for residential development.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Retention/enhancement of environmental network.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is also located in an area with high landscape and visual sensitivity and adjacent to ancient woodland. Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<p><b>Reasoning</b></p>	<p>The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site forms part of the environmental network, occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth (and its services and facilities) by a wooded field and the A458. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Countryside</p>
<p><b>Reasoning</b></p>	<p>The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account likely need to safeguard ecological interest, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. <i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds adjacent and within 500m with GCN records), Dormice, Badgers , Bats, nesting birds. Environmental Network lies adjacent to the site along the northern border. Footpath crosses site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees and hedges in field.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and public footpaths. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	SE part of site may effect setting of Oldbury Conservation Area. Large size of site and scatter of metal detectorist finds suggests it may have some archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on setting of CA; archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around site and a group of a few trees within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Air quality mitigation may be necessary.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Large site close to the village of Oldbury which occupies a rural setting and is physically and functionally separated from the development boundary the Bridgnorth bypass. The site slopes away from the A458. An acceptable highway access cannot be achieved without third party land. Possible impact on the setting of the Oldbury Conservation Area and areas of landscape value and visual impact are also considerations.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>An acceptable highway access.  A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth.  Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.  See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Countryside</p>
<p><b>Reasoning</b></p>	<p>An acceptable highway access cannot be achieved without third party land. The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure, although it is acknowledged that given its size it would have the potential to provide services on site.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the A458. It is understood that only about half of the identified land is actually available for development. The size and capacity of the site would be insufficient to provide for the provision of local services in this location and appropriate traffic calming and pedestrian links to Bridgnorth. The site forms part of a wider site promotion.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth. Linkage to environmental network. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Considered as part of a wider site promotion.</p>
<p><b>Reasoning</b></p>	<p>The site is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account the fact that only part of the site is understood to be available for development, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site, which includes this area of land has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?	Y
Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?	Assumes the development (linked with BRD025) can fund a new roundabout junction in the same location as the existing Wenlock Road / A458 Bypass ghost island junction.
Highway Comments - Could the Development Occur Without Off-Site Works?	Y
Highway Comments - Are Envisaged Off-Site Works Achievable?	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	18
Ecology Comments Significant Constraints:	Natural England would need to be consulted if >100 houses according to IRZs (potential impacts on SSSIs). Otherwise none.
Ecology Comments Other Constraints:	EcIA required. Surveys for GCN (ponds within 500m), Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles, water voles if open ditches present on eastern and western boundaries. Env. Network borders site, particularly to A458 verge and the woodland area to the north, plus ditches/watercourses on boundaries.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/tree lines on boundaries. Retain mature trees, hedges in fields. Protect, enhance and restore Env. Network by linking semi-natural open space with northern and eastern boundaries in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large size of site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedgerows around and within the site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to north as a noise source. Any significant scale development causing additional traffic movements into town requires air quality assessment. Possible impact from commercial to the west.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Any significant scale development causing additional traffic movements into town requires air quality assessment (for town impacts and also for on site impacts the later of which is best addressed through standoff distances). Standoff distances to commercial to the west and any additional mitigation as necessary
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Good
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Good
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Good
<b>Relationship to the Black Country</b>	The site is located to the west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Site is allocated as employment land as an integral part of a wider, mixed-use development in the adopted SAMDev Plan to deliver balanced growth for Bridgnorth during the period to 2038.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Roundabout on A458.</p> <p>A local service centre and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as employment land</p>
<p><b>Reasoning</b></p>	<p>The site forms an integral part of an existing, mixed-use allocation (ELR011a) . Residential development in this location would result in housing which is physically and functionally divorced from the built area of Bridgnorth, together with its facilities, services and infrastructure. The size and capacity of the site, taking into account the fact that only part of the site is understood to be available for development, would be insufficient, to provide for the provision of local services and appropriate traffic calming and pedestrian links to Bridgnorth.</p> <p>A preferable site which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Relationship to the Black Country</b>	The site is located in central Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Vacant former builders yard which is in close proximity to services and facilities being located just to the north of Bridgnorth town centre within the development boundary. The site includes non designated heritage assets and is located between two conservation areas therefore the setting of these and impact on non designated heritage assets will be an important consideration. Part of the site is potentially impacted by surface and ground water flood risk which will need investigation.</p> <p>It is understood that this site now has Planning Permission for extra care facilities.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>An appropriate highway access.</p> <p>Design measures appropriate to its location within the conservation area and in proximity to a number of listed buildings.</p> <p>Surface water flood risk management.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>Yes</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Potential windfall</p>
<p><b>Reasoning</b></p>	<p>Site is a suitable location for residential development within the development boundary subject to access and design considerations and measures.</p> <p>It is understood that this site now has Planning Permission for extra care facilities.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	B4555 but not Oldbury Road
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	N
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y. If the development can demonstrate a highway standard and safe access can be built in close proximity to the B4555 / Oldbury Road T-junction.
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	N
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	Y. If the development can demonstrate there will be no adverse impact on the operation of the B4555 / Oldbury Road junction.
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	20
<i>Ecology Comments Significant Constraints:</i>	Site lies partly within Env. Network corridor and CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA required. Surveys for Dormice, Badgers, Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Env. Network corridor covers the site, linking it to the River Severn LWS. Grassland appears relatively unimproved.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Protect, enhance and restore Env. Network by restricting development close to the roadside boundary and providing large semi-natural open space to the east towards the river, in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Use large open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	May effect setting of the Scheduled Monuments of Bridgnorth Castle (NHLE ref. 1004783) and Panpudding Hill (NHLE ref. 1013493), together with the setting of the Bridgnorth Conservation Area. Site also contains a number of lynchet banks of possible medieval date (HER PRN 33335).
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of SMs and CA, archaeological DBA + ?field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	woodland adjacent south-west part of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the south-west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Assessment of impact on AQMA needed and mitigation where available.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located in south Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Whilst Bridgnorth proximity and strong highway links to the Black Country means that this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution.

<p><b>Strategic Considerations:</b></p>	<p>Whilst the site is associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, due to its size it is unlikely that in isolation it could accommodate a meaningful component of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Irregularly shaped site located to the rear of residential dwellings on Oldbury Road adjacent to but outside the development boundary. Approximately half of the site is located within flood zones 2 and/or 3 and lies partly within the environmental network. The remainder of the site is developable in principle, subject also to heritage considerations, but a highway access cannot be safely achieved. Planning appeal against refusal of outline consent dismissed 2016.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Acceptable highway access. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Countryside</p>
<p><b>Reasoning</b></p>	<p>The site is not achievable since a safe highway access cannot be achieved.</p> <p>A preferable site has been identified which could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, due to the sites size it is unlikely that in isolation it could accommodate a meaningful contribution. It is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

Further Main Modifications Required:	No
If proposed for Allocation Design Requirements:	

\*Green Belt Purposes (where applicable):

n/a

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement, retain and enhance mature trees/hedgerows/tree lines and protect adjacent priority habitats. Protect, enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Use open space provision to provide biodiversity enhancements. Link open space to existing hedgerow systems and Env Network on boundaries.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes Grade II Listed The Leasowes (NHLE ref. 1294006) and the former Farm House at The Leasowes (NHLE ref. 1294006). The effects upon their settings would need to be carefully considered. Also the significance the farmhouses and surviving traditional farm buildings at the non-designated historic farmsteads at Footbridge Farm (HER PRN 25926), Hundred House Farm (HER PRN 25940), and Roundthorn Farm (HER PRN 25941). Only known archaeological interest if a former brickworks at the NW end of site (HER PRN 33038). However, very large site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (Setting of LBs, Level 2 historic buildings assessment if demo of any historic farmhouses or farm buildings included; archaeological DBA + field evaluation [geophysical survey + trial trenching]).
<i>Heritage Comments Opportunities:</i>	Creation of appropriate settings within amenity green space for LBs and retained non-designated historic farm buildings. Retention of historic field patterns/ hedgerows as green infrastructure and within the grain of the development.
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Numerous mature trees and hedgerows within and around site. Blocks of woodland to parts of north, west and south site boundary
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Utilise strategic approach to landscape design as part of concept and masterplanning of the scheme.
<i>Tree Comments Opportunities:</i>	Retain and enhance tree cover within site, as appropriate to deliver net gain for biodiversity. Seek to expand existing woodland blocks by planting new native woodland, as part of a planned network of natural habitats / accessible open space distributed throughout the site .
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	A Phase I Desk Study should be undertaken and submitted to identify any potential contamination issues from historical map information and other sources. The site has a number of identified features such as unknown filled ground, but these are unlikely to have a huge impact on any proposed development. The proposal is over known foul water private drainage facilities to the Punch Bowl and other residential properties (properties in the area have private sewerage treatment plants with infiltration fields and pipework into adjacent fields). These are not severn trent assets. Road Noise from the 60mph A458, road noise assessment required. Commercial Noise from the Punch Bowl Inn (wedding venue premises) and a manufacturing business a further 60 metres south of Punch Bowl Inn which have proposed residential near to the premises. The current Nock Deighton Livestock Market may be relocated from existing site onto the new business area of the site and give rise to odour complaint. General interaction of business area and residential to be managed by class uses. There is an active application for Chicken Rearing units in the Tasley area. There may be an air quality impact on the existing AQMA.
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>A very large site located to the south-west of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, a new employment site in a prime roadside location, community facilities within a new local centre to support the new community and extensive green infrastructure. The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the A458. The site is also separated from the built form of the settlement by either land allocated for employment development or land which is included within the site promotion, but is in third party ownership and the owners have indicated that the land is not available for development. Once the employment allocation is implemented this will form part of the built form of Bridgnorth increasing the sites connectivity to the town. The land which is in third party ownership would effectively 'buffer' the site from the main road and in the longer term may in part represent a windfall development opportunity - although an appropriate buffer of the A458 would need to be retained. Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The site has the potential to provide significant and effective pedestrian and cycle links over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This could include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land.</p> <p>The site has grade 3 agricultural land quality. Best and most versatile agricultural land is graded 1-3a. Precautionary approach to assume land is amongst best and most versatile.</p> <p>Parts of the site, along its western and southern boundaries, are located within flood zones 2 and/or 3. Additionally parts of the site are also located within the 1 in 1,000 surface water flood risk zone. However, the site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is not located within the Green Belt.</p> <p>The parcel which covers the majority of the site has medium-high landscape and visual sensitivity to employment. A portion of the site was beyond the area assessed.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Impact Risk Zone for 2 SSSI's, one of which is for residential development of greater than 100 dwellings. Discussions with Ecology Officers at Shropshire Council and initial discussions with Natural England indicate that risks can be managed through appropriate design, layout and construction of the development.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, wooded areas and along the route of a drain. There may also be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains two Grade II listed buildings and several non-designated heritage assets, these will need to be retained and appropriately buffered. Due to its size is likely to have archaeological potential.</p> <p>The site adjoins two existing employment allocations, one of which is for the relocation of the livestock market. Design and layout will need to give these factors due consideration.</p> <p>The site is close to sources of current road and commercial noise and potential future noise and odour from the relocated livestock market (the adjacent employment allocation includes land specifically for the livestock market and associated landscaping), other commercial uses on the existing employment allocation and potential commercial uses on the employment land proposed within the site promotion itself. These issues would require careful and sensitive consideration; however, it is considered that this can be appropriately managed through appropriate design and layout and use of green infrastructure buffering.</p> <p>The site is in proximity to quarries (and allocated extensions) at Morville and Bridgwalton. It is considered that through the use of appropriate buffers this proximity can be mitigated.</p> <p>The relationship with the site subject to a planning application for Poultry Units (within the site promotion).</p> <p>The site is located over known foul water private drainage facilities to the Punch Bowl and other residential properties, but this could be appropriately managed if the site were developed.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A new local centre to provides retail and community uses.</p> <p>A new community centre.</p> <p>A raised pedestrian/cyclist bridge of the A458.</p> <p>Primary school.</p> <p>Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth.</p> <p>Necessary improvements to road infrastructure.</p> <p>Significant open space and green infrastructure on the site with opportunities for linkages to the existing environmental network.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>A linear park.</p> <p>SUDs and water treatment facilities.</p> <p>A potential park and ride.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>

<b>Recommendation</b>	Allocate part of the site as a sustainable urban extension of Bridgnorth to include around 1,050 dwellings (600 dwellings of which form part of the proposed contribution to unmet needs forecast to arise in the Black Country), 16ha employment land, a new local centre, 20ha of green infrastructure and a 19ha linear park. Identify part of the site as a potential future direction for growth.
<b>Reasoning</b>	<p>The site represents an opportunity to achieve a high quality mixed use development providing around 1,050 dwellings, 16ha of employment land, a new local centre (which could include a range of retail and community uses) and significant areas of Green Infrastructure including a new Linear Park which extends beyond the site area. Further land would also be available for further development beyond 2038. The level of housing proposed means that there is an opportunity to provide a range of sizes, types and tenures which will respond to local needs, including the need for affordable, key worker and local employee housing.</p> <p>The employment provision will be visible from the A458 Bridgnorth Bypass, as such it could represent an attractive location for employers in a 'gateway location'. It is considered that this site could complement existing and proposed provision within the area.</p> <p>The mixed-use development of this site presents an opportunity to support the local economy, create jobs, provide housing to meet needs arising in Shropshire and accommodate 600 houses as part of the proposed contribution to the unmet housing need forecast to be arise within the Black Country.</p> <p>It is therefore considered appropriate to identify BRD030 as a sustainable urban extension, the development of which will contribute to meeting the development needs of Shropshire and accommodate 600 dwellings of the proposed contribution to the unmet housing need forecast to arise within the Black Country.</p> <p>Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>Whilst it is acknowledged that the A458, employment allocations and a small area of third party land causes severance between the site and the existing built form of the settlement, due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Furthermore, due to the scale of the site it has the potential to provide significant and effective pedestrian and cycle links over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This could include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land. Provision of facilities on site and access improvements will address specific sustainability appraisal issues. Once the employment allocation is implemented this will form part of the built form of Bridgnorth increasing the sites connectivity to the town. The land which is in third party ownership would effectively 'buffer' the site from the main road and in the longer term may in part represent a windfall development opportunity - although an appropriate buffer of the A458 would need to be retained.</p> <p>Due to the scale of the site, it is considered that appropriate public transport links can be provided. There is also the potential to operate a dedicated park and ride service from the site, this will need to be investigated in partnership with appropriate local community groups and bus operators.</p> <p>Any necessary improvements to the A458 Ludlow Road roundabout, the wider highway network and associated infrastructure will be informed by Strategic and Local Highway Transport Assessments. An air quality assessment of the impact of increased vehicular movements into Bridgnorth will also be undertaken and its recommendations implemented. Given the scale of the site, it is considered that necessary works are achievable.</p> <p>The site is not located within the Green Belt, the NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. This site is considered to represent a sustainable option for meeting the development needs of Bridgnorth.</p> <p>Whilst some of the site is located within Flood Zones 2 and/or 3, the site is of a sufficient scale that these areas can be used for green infrastructure provision.</p> <p>Whilst some of the site is within the 1 in 1,000 surface water flood zone, it is considered that the site is of sufficient size that following the use of SUDs and attenuation ponds, development can avoid any areas with residual surface water flood risk.</p> <p>The site is located within the Impact Risk Zone for 2 SSSI's, one of which is for residential development of greater than 100 dwellings. Discussions with Ecology Officers at Shropshire Council and initial discussions with Natural England indicate that risks can be managed through appropriate design, layout and construction of the development.</p> <p>Environmental networks and wooded areas on the site can also be retained and form part of the green infrastructure provision.</p> <p>The parcel which covers the majority of the site has medium-high landscape and visual sensitivity to employment. High quality design and layout will reduce any visual impact.</p> <p>The site contains two Grade II listed buildings and several non-designated heritage assets. A Heritage Assessment provided by the Promotors indicates that less than substantial harm would arise to the significance of these designated heritage assets as a result of the changes that would occur to their settings. Because Sections 66(i) of the Planning (Listed Buildings and Conservation Areas) Act 1990 and the tests set out in Paragraphs 193, 194 and 196 of the Framework are therefore engaged, the Council is required to place great weight upon to their conservation. However, whilst this requirement is acknowledged, it is considered that through appropriate design and layout of development and incorporation of effective Green Infrastructure, impacts on these assets can be minimised.</p> <p>Noise, any odour and any dust associated with the A458, nearby quarries and proposed extensions of quarries, the existing employment allocations (one of which is allocated specifically for the relocated livestock market) and the employment proposed on the site will need to be considered within the design, layout and use of green infrastructure. Given the scale of the site, this is considered achievable.</p> <p>Part of the site was subject to a Planning Application for 'poultry units' however this was refused at appeal. In any event, given that the land subject to this Planning Application is within the site promotion, it is considered that this could be appropriately mitigated through inclusion of a guideline stipulating that before occupation of the first dwelling on the site, any poultry units operating on the site or indeed land within the wider site promotion will cease operation and subsequent conditions/legal agreements within any Planning Application for development of the site.</p> <p><b>The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed 'Garden Village' proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (July 2021 Update), provided as part of the evidence base for the Local Plan Review.</b></p> <p>Furthermore, it is considered appropriate for the development occurring on this site to contribute to meeting the development needs of Shropshire and accommodate 600 dwellings of the proposed contribution to the unmet housing need forecast to arise within the Black Country. Accommodating part of the proposed contribution to the Black Country on this site will contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications Required:</b>	<p style="text-align: center;">Yes:</p> <p>Draft Policies SP2 and S3 to be amended to reflect the fact that 600 of the dwellings proposed on the site form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>
<b>If proposed for Allocation, Potential Capacity:</b>	<p>1,050 dwellings, 16ha employment land, a new local centre, 20ha of green infrastructure and a 19ha linear park.</p> <p>Of these 1,050 dwellings, 600 dwellings form part of the proposed contribution towards the unmet housing needs forecast to arise within the Black Country.</p>

<p><b>If proposed for Allocation Design Requirements:</b></p>	<p>A comprehensive mixed-use sustainable urban extension informed by a Supplementary Planning Document and applying Garden Village Standards.</p> <p>A construction management plan is required.</p> <p>High quality design, mix and layout of housing responding to site constraints and opportunities and local needs.</p> <p>Maximise energy efficiency. Opportunities for on-site energy generation.</p> <p>Employment provision is an intrinsic element of the development, occurring alongside and cross-subsidised by housing in a gateway location.</p> <p>New local centre, primary school and if required a medical centre will support the sites community.</p> <p>Site design and layout will respond to any identified landscape and visual effects and heritage assets on site and in wider area.</p> <p>Green infrastructure is a key component. Mature trees, hedgerows, structural vegetation retained.</p> <p>Listed and non-designated historic farm buildings will be retained.</p> <p>Noise, odour and dust arising from roads, employment (current and future) the relocated livestock market and mineral activities.</p> <p>Before occupation of dwellings on the site, any poultry units operating on the site promotion to cease operation.</p> <p>Appropriate pedestrian, cycle and vehicle accesses and links to and through the site to be provided. Necessary highway works to be undertaken.</p> <p>An air quality assessment of the impact of increased vehicular movements into Bridgnorth will also be undertaken and its recommendations implemented.</p> <p>Appropriate public transport links will be provided including investigation of potential park and ride.</p> <p>Significant and effective pedestrian and cycle links will be provided over the A458 to encourage safe and sustainable patterns of movement between the site and the wider town. This will include but not be limited to a raised pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near the Ludlow Road roundabout, subject to ground investigations and available land.</p> <p>Historic environment assets on the site will be retained and appropriately buffered.</p> <p>Natural environment assets on and in proximity of the site, including Thatcher's Wood and Westwood Covert SSSI, Devil's Hole SSSI and any priority habitats will be safeguarded and appropriately buffered.</p> <p>Multi-stage SuDs and water treatment facilities, informed by a sustainable drainage strategy to be provided. Water runoff will be restricted to the equivalent greenfield rate and water quality in the wider drainage network will be protected. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site.</p> <p>Development will be excluded from the portions of the site located in Flood Zones 2 and/or 3.</p>
---	---

<i>Highway Comments - Direct Access to Highway Network?</i>	Y
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	Via Telegraph lane
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	Telegraph lane is already well used route, likely to be able to accommodate development.
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	Y
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	Y - May need localised improvements to Telegraph lane depending on scale of development.
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	The brook forms an Environmental Network corridor and CS17 Environmental Networks applies. Reduced numbers of housing may be required as protection of Environmental Network unlikely to be fully possible in open space provision.
<i>Ecology Comments Other Constraints:</i>	EclA required and surveys for badgers, bats, GCNs, water voles, otters, white-clawed crayfish, nesting birds and reptiles

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancements. Retain and enhance all hedgerows/tree lines on boundaries. Protect, enhance and restore Env. Network in accordance with CS17 and MD12
<i>Ecology Comments Opportunities:</i>	Enhance Env. Network
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	A number of cropmarks on land to the west of brook and large size of site suggest it may have some archaeological potential. Site is detached from and relates poorly to the urban form of the town.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	Boundary hedgerows and mature trees
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arboricultural Impact Assessment, Tree Protection Plan & Arboricultural Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover approach to enhance tree cover in association with future development. Incorporate good trees and tree groups as part of open space within development and plan strategically for a network of connected green infrastructure.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Industrial works at north of site. Sewerage issues known in the area
<i>Public Protection Comments Management of Constraints:</i>	BS4142 assessment. Parts of the site may not be suitable.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the south-west of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>An irregularly shaped site, some distance from the existing built form of Bridgnorth, separated by a number of agricultural fields (subject to consideration within site BRD030).</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>A very small portion of the site is located within flood zones 2 and/or 3 and within the 1 in 30, 1 in 100 and 1 in 1,000 surface flood risk zones.</p> <p>The majority of the site is within 20m of a detailed river network.</p> <p>The landscape and visual sensitivity of the site has not been assessed.</p> <p>The site has boundary hedgerows and mature trees.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p> <p>The brook along the sites northern and western boundaries forms part of an environmental network. There may also be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site may have archaeological potential.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as countryside</p>
<p><b>Reasoning</b></p>	<p>In isolation the site is separated from the build form of Bridgnorth by a number of agricultural fields. Whilst the site could be considered alongside BRD030, BRD030 is very extensive and it is not considered necessary to further extend the site southwards.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>

<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The site consists of P54 (part - significantly reduced to that within previous iterations of the site promotion), P56, P58a, STC002 and STC005. A larger proposal in this general location (including additional land) was consulted upon as a preferred site allocation within the Preferred Sites consultation in late 2018/early 2019).</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>This site represents a very large site located to the East of Bridgnorth. The site has the potential to deliver a new sustainable urban extension incorporating the credentials of a garden village development. The site could provide a mix of housing which would contribute to meeting local needs, opportunities for expansion of a very successful employment site, community facilities within a new local centre to support the new community and extensive green infrastructure. The components of the site generally have good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. The provision of pedestrian and cycle links between the site and the existing built form of Bridgnorth will require very careful consideration due to the presence of the Hermitage Ridge and associated ancient woodland. The site also offers the potential to provide a park and ride on the site, which would provide a level of mitigation.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The Green Belt Assessment indicates that the parcels which cover the site: perform a weak contribution to purpose 2; a moderate (P54 and P58) and strong (P56 and P57) contribution against purpose 3; and makes no (P54, P57 and P58) and weak (P56) contribution against purpose 4.</p> <p>The Green Belt Review indicates that release of these parcels would have the following levels of harm to the Green Belt: Moderate (a small sub-parcel of P54 to the west of The Hobbins, proposed for mixed-use/residential development on the most recent Concept Masterplan prepared by the site promoter; P57, part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter; and P58 part of which is proposed for employment development as an extension of Stanmore Industrial Estate on the most recent Concept Masterplan prepared by the site promoter).</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site is primarily located outside of identified source protection zones, although much of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, is located within Source Protection Zone 3. However, it is considered that this issue could be managed through appropriate design and construction of development.</p> <p>The majority of the site is located within a landscape parcel which has medium landscape and visual sensitivity to housing and employment. A very small portion of the most easterly element of the site, understood to be proposed exclusively for employment development as an expansion of Stanmore Industrial Estate, has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>The site lies immediately adjacent to ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth. Design and layout will need to give these factors due consideration.</p> <p>Parts of the site are located within an environmental network, mainly along site boundaries, although the entirety of STC002 is located within an environmental network. There are also wooded areas within the site and may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is close to sources of road and commercial noise and potential future noise from other commercial uses on the employment land proposed within the site promotion itself. However, it is considered that this can be managed through design and layout of the development and use of green infrastructure buffering.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth is a consideration.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>A new local centre to provides retail and community uses.</p> <p>A new community centre.</p> <p>A park and ride.</p> <p>Primary school.</p> <p>Pedestrian and cyclist infrastructure on the site and from the site into Bridgnorth. This will need to positively respond to the presence of ancient woodland and the gradient between the site and the town.</p> <p>Necessary improvements to road infrastructure.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Significant open space and green infrastructure on the site.</p> <p>Improvements to Stanmore Country Park.</p> <p>SUDs and water treatment facilities.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>

<b>Recommendation</b>	Retain the majority of the site as Green Belt. Allocate two of the component sites (P58a and STC002) specifically for extensions to Stanmore Industrial Estate.
<b>Reasoning</b>	<p>The site adjoins ancient woodland along Hermitage Ridge. This ridge also creates physical and functional separation between the site and the built form of Bridgnorth. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site contains part of and parts of the site are in proximity of The Hermitage Scheduled Monument.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p><b>The Framework places a responsibility on the Local Planning Authority to devise an appropriate strategy for the area, taking into account the reasonable alternatives, and based on proportionate evidence. It is considered that either BRD032 the Revised Stanmore Garden Village proposal or BRD030 the Tasley Garden Village proposal could provide for the scale of growth proposed for the town over the long term to 2038. Within this context it is considered appropriate to provide a detailed overview of the competing planning considerations between the two options, and to show the weight that has been afforded to these competing considerations. In this way this assessment can be viewed as providing the planning balance between the two competing proposed ‘Garden Village’ proposals and a transparent and reasoned explanation as to why one has been preferred over the other. A summary of this assessment is provided within the Bridgnorth Development Options Assessment (Updated), provided as part of the evidence base for the Local Plan Review.</b></p> <p>However, Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the Industrial Estate, it is considered appropriate to identify further land for its expansion, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of some land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>A small part of P58a is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint. Sites P58a and STC002 are well related to the built form of Stanmore Industrial Estate and as such represent opportunities for the expansion of the site. As extensions of Stanmore Industrial Estate they will be accessed through the existing access (subject to necessary improvements). Much of P58a is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint. STC002 forms part of an environmental network. The design, layout and quantum of development can reflect this and seek to ensure provision of green corridors linked to Stanmore Country Park. A small portion of P58a has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact. Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site’s size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>
<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	

**If proposed for Allocation  
Design Requirements:**

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

**If proposed for Allocation

<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; strongly against purpose 3; and weakly against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. No sub-parcels were identified which would have less harm.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P52 and P53a/b): If 66% of these sites were developed as housing they could accommodate 2,225 homes. These site have good vehicular access potential, directly onto the A454.</p> <p>As part of a strategic settlement east of Bridgnorth Low Town these sites lie the furthest north from the existing development and therefore have less sustainable transport potential. The most direct route into Low town from these sites would be along the Wolverhampton Road which is not attractive for pedestrians and has limited scope for improvement.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>Ancient Woodland (AW) immediately adjacent to western site boundary. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer will be required reducing numbers of houses possible.</p> <p>Suggest seek landscape advice.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Footpath runs diagonally through site. Environmental Network corridor and core area immediately adjoins the site. Reduced numbers of housing may be required as protection of Environmental Network unlikely to be fully possible in open space provision.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Provide a green route through site along footpath and link to open space and boundary hedges to enhance and restore Env. Network in accordance with CS17 Environmental Networks and MD12. Inaccessible buffer required to Ancient Woodland of 15-50m in addition.
<i>Ecology Comments Opportunities:</i>	Buffer and protect ancient woodland. Enhance environmental network by providing green link along footpath. Use open space provision to provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large size and substantial number of metal detectorist finds suggests that it may hold significant archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site. Mature deciduous woodland adjacent western boundary.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to extend woodland cover and create 15m buffer with the woodland to the west
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise issues. Agricultural, commercial and game activity to the north of the site creating potential noise and odour. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Separation distance from agri, commercial and game rearing to the north of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Poor
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Poor
<b>Relationship to the Black Country</b>	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site occupies a rural setting and consists of a series of undulating agricultural fields to the north east of Bridgnorth in the Green Belt. The site is physically and functionally separated from the built form of Bridgnorth by an elevated area of countryside containing mature woodland, a cemetery and agricultural fields. Possible impact on adjoining ancient woodland is a significant consideration. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The site performs poorly in Stage 2a Settlement and Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Highway capacity. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Park &amp; Ride, local highway improvements. Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>The site is additionally located in an area with challenging topography, and is also separated from the built form of the settlement by the cemetery and adjoins ancient woodland.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P53a</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes

<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; strongly against purpose 3; with no contribution against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt due to the level of encroachment on countryside and the weakening of the role of adjoining areas with regard to purpose 3. No sub-parcels were identified which would have less harm.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Medium
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P52 and P53a/b): If 66% of these sites were developed as housing they could accommodate 2,225 homes. These site have good vehicular access potential, directly onto the A454.</p> <p>As part of a strategic settlement east of Bridgnorth Low Town these sites lie the furthest north from the existing development and therefore have less sustainable transport potential. The most direct route into Low town from these sites would be along the Wolverhampton Road which is not attractive for pedestrians and has limited scope for improvement.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (ponds within 500m) Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles. Two footpaths run north-south through site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub on site. Provide green routes through site along footpaths and link to open space and boundary hedges.
<i>Ecology Comments Opportunities:</i>	Enhance environmental network by providing green link along footpaths linked to open space. Use open space provision to provide biodiversity enhancements.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Possible impacts on settings of Grade II listed Swancote Farmhouse (NHLE ref. 1190070) and Garden House at Swancote Farmhouse (NHLE ref. ) Prehistoric cropmark pit alignment (HER PRN 21522) present towards SW end of site. In addition, its large size and two significant clusters of metal detectorist finds suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on settings of LBs, archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover in association with future development. Retain fine trees within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Road to the south creating noise issues. Some agricultural barns which may create noise/odour /fly issues depending on use. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Suggest good separation distance from any agricultural buildings located on the edge of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the north-east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The western part of a larger site located to the north east of Bridgnorth which consists of a large number of agricultural fields bounded by the A454 to the south and rural roads/lanes to the west and north. The site is located in the Green Belt and does not adjoin any of the existing development at The Hobbins or Stanmore. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and wooded ridge. Proximity to buildings and sites of heritage interest, trees and any other ecological interest will also be a consideration. The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>

<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Medium and High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P54, P55, P56 and P58a/b): If 66% of these sites were developed as housing they could accommodate 4,591 homes. These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PROW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	None.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (likely priority habitats need botanical survey), reptiles, otter and water vole. 3 footpaths run through site. Environmental Network corridor immediately adjacent to southern and eastern boundary and stepping stone on site. Reduced area would be available for development if GCN found on site.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees/scrub/ditches on site. Retain all ponds as part of landscaping of open space to maintain and enhance Env. Network. Create green corridors along footpaths and link with open space and Env. Network to the south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green link along footpaths and 'Brook' linked to open space. Use open space provision to provide biodiversity enhancements and links to Stanmore Country Park.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site crossed by projected line of former Roman road from Greensforge (Staffs) to central Wales (HER PRN 04076), and also includes a prehistoric cropmark pit alignment (HER PRN 21522) and part of site of Bridgnorth racecourse (HER PRN 32056). In addition, very large size of site suggests it may have other archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	mature trees and hedges within and around site. Blocks of plantation and natural woodland within site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from woodland and seek to retain internal trees within open space.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover and expand woodland in association with future development. Retain fine trees and woodland within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Anaerobic digester on northern boundary of the site creating odour and noise. Road noise to northern boundary of the site. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Separation distance from anaerobic digester a necessity. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Poor

<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Poor
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>A large site consisting of agricultural land in the Green Belt to the east of Bridgnorth. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by agricultural fields and the Hermitage Ridge (and associated ancient woodland). Part of the site adjoins the built form of The Hobbins and is in proximity of Stanmore Industrial Estate. Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration. The site also offers the potential to provide a park and ride on the site would provide a level of mitigation.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>A portion of the eastern extent of the site has medium-high landscape and visual sensitivity to housing and high landscape and visual sensitivity to employment.</p> <p>Approximately 1/3 of the site has grade 2 agricultural land quality and the remainder grade 3 agricultural land. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>Part of the site is located within Source Protection Zone 3. The design of development on these elements of the site will need to be appropriately designed in order to respond to this.</p> <p>The site is in proximity of ancient woodland which runs along Hermitage Ridge, an environmental network corridor, there are trees and hedgerows on and around the site, and there may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains and is in proximity to a number of heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>The site is in proximity of an anaerobic digester.</p> <p>The site performs poorly in Stage 2a Settlement Sustainability Appraisal for housing and employment, primarily due to poor access to existing facilities and services and for potential impacts on environmental and heritage assets. However, it performs fair in the Stage 2a Black Country Contribution Sustainability Appraisal for housing and employment.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p><i>Air quality in Bridgnorth</i></p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Waste water treatment capacity.</p> <p>A range of community services and infrastructure as part of a large scale planned mixed-use development.</p> <p>Separation distance and appropriate residential amenity protection measures.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Park &amp; Ride, local highway improvements.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is some distance from the built form of Bridgnorth, separated physically and functionally by agricultural land and the Hermitage Ridge. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Assessment of the site in combination with adjoining sites is summarised separately within this assessment.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	
<b>If proposed for Allocation Design Requirements:</b>	

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	<p>The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purposes 2 &amp; 3; with a strong contribution against purpose 4.</p> <p>The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a high level of harm on the Green Belt as it would significantly compromise the role the green belt is playing with regard to purpose 4. A sub-parcel forming the western strip of this parcel, adjoining the settlement edge, was identified which would have a low- moderate level of harm if released.</p>
<i>Landscape Considerations (Residential) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	High
<i>Landscape Considerations (Employment) (from the LVSS):</i>	Very High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	Very High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P54, P55, P56 and P58a/b): If 66% of these sites were developed as housing they could accommodate 4,591 homes. These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PROW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>This site consists largely of Ancient Woodland and Local Geological Site and is covered by a TPO. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, greatly reducing the remaining land available to development. Site lies completely within Env. Network corridor and CS17 Environmental Networks applies. Suggest seek landscape advice.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EcIA required. Surveys for GCN (ponds within 500m) Dormice, Badgers, Bats, nesting birds, plants (Ancient Woodland and other priority habitats need botanical survey to assess impacts) and reptiles. 2 footpaths run through site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Protect Ancient Woodland and the Local Geological site under MD12 and the Env. Network in accordance with CS17 Environmental Networks. Suggest do not allocate this site.
<i>Ecology Comments Opportunities:</i>	Retain as Environmental Network.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes part of designated area of the Scheduled Monument of The Hermitage (NHLE ref. 1004782) and steep scarp slope on which Hermitage Hill Coppice sits, which may contain unrecorded archaeological features.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	Development would need to avoid area of Scheduled Monument. S106 monies could help to secure management and enhanced access and interpretation of SM.
<i>Tree Comments Significant Constraints:</i>	eastern half of site is TPO woodland.
<i>Tree Comments Other Constraints:</i>	scattered scrub within field and hedgerows to field boundaries on western side of site
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Existing large blocks of woodland should remain undeveloped.
<i>Tree Comments Opportunities:</i>	
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Industrial estate close by with Household recycling centre which may produce odour and noise. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Suggest separation distances from the industrial estate (no housing on the thin handle of the site in the south). AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site contains a scheduled ancient monument, ancient woodland, TPO trees a geological site and has significant ecological and heritage value. Part of the site forms a prominent escarpment which has an important role in relation to the setting of the town and green belt purposes and has high landscape value. Additionally the site adjoins an industrial area, including a waste recycling centre therefore residential amenity would be compromised without appropriate buffering. The site is therefore not considered suitable for allocation or to have potential for future safeguarding for development.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Relevant supporting studies should be undertaken and their recommendations implemented. See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>This is a very sensitive site subject to a number of visual, natural, historic environment and other constraints, including topography. Additionally the site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	<p>This site lies immediately adjacent to Ancient Woodland which Has a TPO and a Local Geological Site. Damage to AW must be avoided, see NPPF. AW must be buffered from the impacts of development and a buffer would be required to the woodland, which is inaccessible to the public, reducing the remaining land available to development. Site also lies partly within the Env. Network corridor (on the western boundary) and adjacent to the Network on the south and south-east boundaries. CS17 Environmental Networks applies. Only reduced numbers of housing possible as protection of Environmental Network unlikely to be fully possible in open space provision. Suggest seek landscape advice.</p>
<i>Ecology Comments Other Constraints:</i>	<p>EclA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (Ancient Woodland and other priority habitats need botanical survey to assess impacts) reptiles and geology. A footpath runs through the site.</p>

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees on site. Retain pond as part of landscaping of open space. If GCN present mitigation land will need to be provided. Protect Ancient Woodland with inaccessible buffer of 15 - 50m, managed for biodiversity and address any adverse impacts on Local Geological site under MD12. Create green corridor along footpath and link with open space and Env. Network to the south and east in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green link along footpath linked to open space. Use open space provision to provide biodiversity enhancements and accessible links to Stanmore Country Park.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Site includes part of designated area of the Scheduled Monument of The Hermitage (NHLE ref. 1004782). Also contains three Iron Age/ Roman cropmark enclosure sites (HER PRNs 02320, 02321 & 00205) and a possible medieval holy well known as the Hermits Well (HER PRN 00386). Beyond these site, finds of prehistoric flint scatter (HER PRN 01341) and metal detectorist finds suggest wider archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (impact on SM and its setting, archaeological DBA + field evaluation). Development would need to avoid
<i>Heritage Comments Opportunities:</i>	Development would need to avoid area of Scheduled Monument. S106 monies could help to secure management and enhanced access and interpretation of SM.
<i>Tree Comments Significant Constraints:</i>	TPO woodland adjoins length of western boundary.
<i>Tree Comments Other Constraints:</i>	hedges within and around site and occasional mature trees around site boundaries.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Create 15m buffer from adjacent woodland. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and important retained trees.
<i>Tree Comments Opportunities:</i>	Use 20% canopy cover policy to enhance tree cover and expand woodland in association with future development. Retain fine trees and woodland within site as features in open space within any development.
<i>Public Protection Comments Significant Constraints:</i>	
<i>Public Protection Comments Other Constraints:</i>	Landfill off site to the south poses a gassing risk. Noise from roads bordering the site. Any significant scale development causing additional traffic movements into town requires air quality assessment.
<i>Public Protection Comments Management of Constraints:</i>	Contaminated land assessment necessary and mitigation required. Noise mitigation available and could include stand off distance, glazing and ventilation consideration and layout and orientation of dwellings, barrier treatment. and combinations thereof to mitigate for road noise. Suggest good separation distance from any agricultural buildings located on the edge of the site. AQ assessment likely to be required and mitigation stated.
<i>Public Protection Comments Opportunities:</i>	Would be better location if AQ issue in Bridgnorth did not exist.
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>A large site consisting of agricultural land in the Green Belt to the east of Bridgnorth. The site is bounded by the A458 to the south, A454 to the east, Hermitage Hill to the west, and the B4363 to the north. The site occupies a rural setting and is physically and functionally separated from the development boundary and built form of Bridgnorth by the Hermitage Ridge (and associated ancient woodland). Part of the site adjoins the built form of The Hobbins and is in proximity of Stanmore Industrial Estate (separated by Stanmore Country Park). Due to the scale of the site it has the potential to provide on site services and facilities to serve existing and new communities. Provision of pedestrian and cycle links will require careful consideration. The site also offers the potential to provide a park and ride on the site would provide a level of mitigation.</p> <p>The site generally has good vehicular access potential. However there will be a need to undertake works to road infrastructure to ensure that it is appropriate to support the development.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>Much of the site has grade 2 agricultural land quality. This is amongst the best and most versatile.</p> <p>Parts of the site are located within the 1 in 1,000 surface water flood risk zone. The site is of sufficient scale that development could be excluded from these elements of the site and a comprehensive development still achieved.</p> <p>The site adjoining ancient woodland, which runs along Hermitage Ridge to the west of the site between it and the existing form of Bridgnorth, proximity to trees subject to TPO protection, proximity to an environmental network corridor, there are hedgerows on and around the site, occasional trees on site boundaries and there may be protected species and priority habitats on site. Design and layout will need to give these factors due consideration.</p> <p>The site contains part of and parts are in proximity of The Hermitage Scheduled Monument. Development would need to avoid this area and a suitable buffer. The site contains and is in proximity to a number of other heritage assets which should be appropriately managed. Due to its size is likely to have archaeological potential.</p> <p>Given the scale of the site it is important to ensure that necessary supporting infrastructure is provided.</p> <p>Air quality in Bridgnorth.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Waste water treatment capacity.</p> <p>A range of community services and infrastructure as part of a large scale planned mixed-use development.</p> <p>Improvement of environmental network &amp; measures to protect ancient woodland including buffer strip.</p> <p>Contaminated land and other appropriate environmental mitigation measure.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Park &amp; Ride.</p> <p>Potential interpretation of ancient monument on the site and provision of footpath link to Bridgnorth across and open space provision, if compatibility with the need to protect Hermitage Coppice.</p> <p>Environmental network enhancement and formation of linkage to Stanmore Country Park.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>No</p>
<p><b>Recommendation</b></p>	<p>Retain as Green Belt</p>
<p><b>Reasoning</b></p>	<p>The site is separated physically and functionally by agricultural land and the Hermitage Ridge. Whilst it is considered that provision of a new local centre and park and ride on the site would contribute to mitigation, the ability to provide effective pedestrian and cycle links are more complex due to the gradient and presence of ancient woodland along Hermitage Ridge.</p> <p>The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully. An alternative site has been identified which is not located within the Green Belt and could achieve much of the development needs and aspirations for Bridgnorth through a comprehensive and sustainable development. This site is of sufficient scale that it can deliver appropriate traffic calming and pedestrian links into the town and extensive on site services and facilities to serve its new community.</p> <p>Assessment of the site in combination with adjoining sites is summarised separately within this assessment.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p> <p>The site is therefore not proposed for inclusion within the draft Shropshire Local Plan.</p>

<b>Further Main Modifications Required:</b>	No

These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PRoW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
<i>Highway Comments - If No Direct Access, Can One Reasonably Be Achieved? And How?</i>	
<i>Highway Comments - Existing Highway Suitable for Traffic Associated with the Development at the Access Point?</i>	
<i>Highway Comments - If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?</i>	
<i>Highway Comments - Could the Development Occur Without Off-Site Works?</i>	
<i>Highway Comments - Are Envisaged Off-Site Works Achievable?</i>	
<b>Highways Accessibility Rating (Out Of 24) (Based on Primary School, GP Surgery, Convenience Store &amp; Public Transport Service):</b>	N/A
<i>Ecology Comments Significant Constraints:</i>	Suggest seek landscape advice.
<i>Ecology Comments Other Constraints:</i>	EcIA required. Surveys for GCN (ponds on site and within 500m) Dormice, Badgers , Bats, nesting birds, plants (unimproved grassland and other priority habitats need botanical survey to assess impacts), reptiles. This site lies immediately adjacent to the Env. Network corridor (on the northern and western boundary). CS17 Environmental Networks applies.

<i>Ecology Comments Management of Constraints:</i>	Protected and priority species and habitats mitigation and enhancement. Retain and enhance all hedgerows/trees on site. Retain pond as part of landscaping of open space. If GCN present or priority habitats (field patterns look interesting), mitigation land will need to be provided. Open space to include retained mature trees and link to Env. Network to the west and northern corner in accordance with CS17 Environmental Networks and MD12.
<i>Ecology Comments Opportunities:</i>	Enhancement of environmental network by providing green links along northern boundary, including centralised open space. Use open space provision to provide biodiversity enhancements and links to Stanmore Country Park for residents.
<i>Heritage Comments Significant Constraints:</i>	
<i>Heritage Comments Other Constraints:</i>	Large size of site suggests it may have archaeological potential.
<i>Heritage Comments Management of Constraints:</i>	Heritage Assessment required with application (archaeological DBA + field evaluation).
<i>Heritage Comments Opportunities:</i>	
<i>Tree Comments Significant Constraints:</i>	
<i>Tree Comments Other Constraints:</i>	site surrounded by and containing mature trees and hedgerows. Tree nursery / young plantation? Occupying southern portion of site.
<i>Tree Comments Management of Constraints:</i>	Standard BS5837 tree survey / constraints analysis. Arb Impact Assessment, Tree Protection Plan & Arb Method Statement. Particular attention to size, number and location of dwellings in order to create sustainable juxtaposition of houses and trees.
<i>Tree Comments Opportunities:</i>	Retain fine trees and woodland within site as features in open space within any development. Expand / link with existing woodland adjacent site
<i>Public Protection Comments Significant Constraints:</i>	Busy industrial site to border. Noise etc considered considerable and not acceptable to build residential in close proximity that may inhibit the industrial activity in future.
<i>Public Protection Comments Other Constraints:</i>	
<i>Public Protection Comments Management of Constraints:</i>	
<i>Public Protection Comments Opportunities:</i>	
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Residential):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Residential):</b>	Fair
<b>Settlement Conclusion - Stage 2a Sustainability Appraisal Site Assessment (Employment):</b>	Fair
<b>Black Country Conclusion - Stage 2a Sustainability Appraisal (Employment):</b>	Fair
<b>Relationship to the Black Country</b>	The site is located to the east of Bridgnorth. Bridgnorth is located in south-east Shropshire, an area with a strong functional relationship to the Black Country. Bridgnorth has strong highway transport links to the Black Country (approximately 14 miles away) via the A458 corridor. The nearest railway stations to Bridgnorth are at Telford, Albrighton and Shifnal. These would require some other form of transport to access them.
<b>Potential to Accommodate Housing As Part Of Proposed Contribution to Black Country</b>	Given Bridgnorth's proximity and strong highway links to the Black Country, this site could be suitably located to accommodate some of the proposed contribution to the unmet development needs forecast to arise within the Black Country, should it be identified as a proposed site allocation.

<p><b>Strategic Considerations:</b></p>	<p>A greenfield site in a rural setting more closely associated with the Stanmore Industrial Estate, it is physically and functionally separated from the development boundary and built form of Bridgnorth by Stanmore Industrial Estate, Stanmore Country Park, agricultural fields and the Hermitage Ridge (and associated ancient woodland). The site is located within the Green Belt. The NPPF specifies that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, before concluding that such circumstances exist all other reasonable options should be examined fully.</p> <p>The size of this site and its location associated with a Principal Centre in close proximity to the Black Country and with good highway links between the two areas, means that it could accommodate a portion of the proposed contribution to the unmet development needs forecast to arise within the Black Country.</p> <p>Much of the site is located within a source protection zone 3.</p> <p>The site is located within two landscape parcels (much of the site is in the less sensitive parcel), which have medium and medium-high landscape and visual sensitivity to housing development and medium and high landscape and visual sensitivity to employment development.</p> <p>The site benefits from good highway links, although any necessary improvements of the A454/A458 and A454/B4363 roundabout junctions would need to be undertaken.</p> <p>The site is adjacent to an environmental network corridor and may contain priority habitats and protected species. The site contains and is in proximity of mature trees and hedgerows.</p> <p>The site may have archaeological potential.</p> <p>The site adjoins an industrial area, therefore residential amenity would be compromised and the site is therefore not considered suitable for residential use.</p> <p>There is a foul sewer through site and some known pluvial flood risk which the design, layout of and access to the development will need to take into account informed by a flood risk assessment.</p>
<p><b>Known Infrastructure Requirements to make Development Suitable in Planning Terms:</b></p>	<p>Power supply and other utilities.</p> <p>Improvements to the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout.</p> <p>Substantial and effective boundary treatments.</p> <p>Links to adjacent woodland.</p> <p>An effective buffer to residential properties.</p>
<p><b>Known Infrastructure Opportunities:</b></p>	<p>Protection and enhancement of Stanmore Country Park.</p> <p>Green infrastructure links through the site.</p> <p>SuDS.</p> <p>Acoustic design, layout, green infrastructure and appropriate building materials.</p> <p>Relevant supporting studies should be undertaken and their recommendations implemented.</p> <p>See comments from relevant service areas.</p>
<p><b>Potential for Windfall?</b></p>	<p>No</p>
<p><b>Potential for Allocation?</b></p>	<p>Yes</p>
<p><b>Recommendation</b></p>	<p>Allocate in part as an employment allocation to support the expansion of Stanmore Industrial Estate</p>
<p><b>Reasoning</b></p>	<p>The site is well related to Stanmore Industrial Estate, an existing employment area which is inset within the Green Belt. Stanmore Industrial Estate which is inset in the Green Belt is a very successful employment site and represents a centre of excellence for engineering and advanced manufacturing. In order to provide for the medium and long term growth of the site, it is considered appropriate to identify further land for the expansion of this site, which will complement proposals for housing and employment provision elsewhere in Bridgnorth. This can only be achieved through the release of dome land from the Green Belt. Removing land from the Green Belt is subject to identification of exceptional circumstances, this will be detailed within a Green Belt: Exceptional Circumstances Statement.</p> <p>The sites will form extensions of Stanmore Industrial Estate and as such will be accessed through the existing access (subject to necessary improvements).</p> <p>A small part of the site is located within the 1 in 1,000 surface flood risk zone, the site is of sufficient size to address this constraint.</p> <p>Much of the site is located within Source Protection Zone 3. The design of development on these elements of the site can manage this constraint.</p> <p>A small portion of the site has high landscape and visual sensitivity to employment. High quality design and layout can reduce any visual impact.</p> <p>Design and layout of development will need to mitigate any noise and visual impact on The Hobbins and other nearby residential properties.</p> <p>Whilst the site's size and location (proximity and connectivity to the Black Country) could mean that it is an appropriate location to meet cross-boundary needs arising in the Black Country, it is considered that there are other more appropriate sites upon which to accommodate these proposed contributions.</p> <p>Development of the alternative sites identified to accommodate the proposed contributions to the unmet needs forecast to arise within the Black Country is considered to constitute sustainable development and accommodating parts of these proposed contributions on them would contribute to the achievement of the wider spatial strategy for Shropshire.</p>

<b>Further Main Modifications Required:</b>	No
<b>If proposed for Allocation, Potential Capacity:</b>	6.8ha of employment land
<b>If proposed for Allocation Design Requirements:</b>	<p>The site represents an extension to the existing Stanmore Industrial Estate. Development will be for complementary employment uses (use classes B1, B2, B8 and appropriate sui generis uses) only.</p> <p>Access will be provided via the existing Stanmore Industrial Estate. Necessary improvements will be made to highways infrastructure, including the access road to Stanmore Industrial Estate and its junction with the A454, the A454/A458 roundabout and the A454/B4363 roundabout.</p> <p>Substantial and effective boundary treatments will be required in order to create a buffer around the site. An effective buffer to nearby residential properties is particularly important. The buffer to the north should provide a positive link to nearby woodland.</p> <p>Development should seek to provide green infrastructure links through the site, retain high quality trees, woodland and priority habitats on the site. Any lost trees should be offset within the sites buffer. The public right of way along part of the sites southern boundary will be retained.</p> <p>Acoustic design, layout, green infrastructure and appropriate building materials will be used to appropriately manage noise arising from the site.</p> <p>The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere. Compensatory provision to the Green Belt will be made through investment in the quality of Stanmore Country Park.</p>

Purpose 1 (checking the unrestricted sprawl of large built up areas - only applies to parcels adjacent to large built up areas);

Purpose 2 (merging of neighbouring towns);

Purpose 3 (safeguarding countryside from encroachment);

Purpose 4 (preserving setting/character of historic towns); and

Purpose 5 (assisting urban regeneration by encouraging re-use of brownfield land - applies consistently across all parcels).

**\*Green Belt Purposes (where applicable):**

<b>Site Assessment - Stage 3 Updated</b>	
<b>Site Reference:</b>	<b>P58b</b>
<i>Coal Authority Reference Area?</i>	No
<i>Mineral Safeguarding Area?</i>	Yes
<i>Wholly or Partly Grade 1, 2 and/or 3 Agricultural Land Quality:</i>	Yes
<i>Percentage of site in Flood Zone 3:</i>	0%
<i>Percentage of site in Flood Zone 2:</i>	0%
<i>Percentage of site in Flood Zone 1:</i>	100%
<i>Percentage of the site in the 30 year surface flood risk zone:</i>	0%
<i>Percentage of the site in the 100 year surface flood risk zone:</i>	1%
<i>Percentage of the site in the 1,000 year surface flood risk zone:</i>	9%
<i>Percentage of the site identified on the EA Historic Flood Map:</i>	0%
<i>Percentage of the site within 20m of an historic flood event:</i>	0%
<i>Percentage of the site within 20m of a detailed river network:</i>	0%
<i>All or part of the site within a Source Protection Zone:</i>	No
<i>Green Belt* Considerations: (from the GB Assessment/Review)</i>	The Green Belt Assessment undertaken for Shropshire indicates that this site is located within a Green Belt parcel which performs weakly against purpose 2; moderately against purpose 3; with no contribution against purpose 4. The Green Belt Review undertaken for Shropshire indicates that this site is located within a Green Belt parcel, the release of which would have a moderate level of harm on the Green Belt due to the level of encroachment on countryside within the parcel itself. No sub-parcels were identified which would have less harm.
<i>Landscape Considerations (Residential) (from the LVSS):</i>	Medium high
<i>Visual Impact Considerations (Residential) (from the LVSS):</i>	Medium high
<i>Landscape Considerations (Employment) (from the LVSS):</i>	High
<i>Visual Impact Considerations (Employment) (from the LVSS):</i>	High
<i>Highway Comments - Direct Access to Highway Network?</i>	<p>(Comments on P54, P55, P56 and P58a/b): If 66% of these sites were developed as housing they could accommodate 4,591 homes. These site have good vehicular access potential, directly onto the A454 and A458. (Or via The Hobbins in the case of P58).</p> <p>As part of a strategic settlement it is assumed that these sites will be designed to promoted cycling and walking for local trips and that local facilities will be provided to maximise sustainable travel. However, those sites (or parts of sites) that are closest to Bridgnorth Low Town are also well located for sustainable travel to facilities in this area in the initial phases of development of the strategic settlement when new facilities have not yet been introduced. The master plan will need to include direct walking and cycling routes that link to existing PRoW at Elmhurst and Hazel View in Low Town and provide controlled crossing(s) of the A454. These walking routes will also provide access to the existing Bridgnorth town bus service that currently operate within Low Town.</p>
