A1402B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Proposals do not account for existing and proposed employment areas within 10miles of the settlement. Shifnal housing growth is concealed by using low housing density and is in addition to existing consents not yet built out. Proposed safeguarded land exceeds Shifnal's future housing needs and will destroy the village atmosphere. Employment proposals will exacerbate traffic problems/ gridlocks in the town centre. Additional commuters will inevitably use travel by car and use this route. Green Belt must be retained, particularly to the west. Site assessments have been inadequate, there are contradictions and missing evidence. The plan is contradictory and difficult to navigate. Support the decision not to proceed with development at Tong. 36 acre site for Air Ambulance appears excessive in comparison with other site:

A1449B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	Strong objection to remove the site from the Green Belt. RAF and museum have been able to develop already under the current designation so there is no need to make a major change here. The current local plan policies specifically permit specific developments proposed for the site through policy CS5 and MD6; The document mentions the Defence Review, but this occurred during the last Local Plan and didn't require a change to the green belt policy so there is no clear conclusion this review will require a change in policy; So no exceptional circumstances have been demonstrated to require a change to Green Belt policy; While the plan refers to development of military, museum and a complementary Aviation Academy being developed these will not be compromised by the site being in the Green Belt; it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specified developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained. It would appear, therefore, that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development through its Invest in Shropshire brochure. In view of the current economic climate and effects of COVID-19 on the , economy. it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non-site related developments as proposed in the Plan. Additionally does not believe there is sufficient evidence for the Proposed Midlands Air Ambulance Charity site to be relocated, and if a move is required this could be accommodated through existing policies for the green belt as was the case with the M54 Service station at Shifnal. In conclusion the development proposals for the Costford site can be accommodated through existing policy and there is no need to remove the site through a change to Green Belt policy

Proposals do not account for existing and proposed employment areas within 10miles of the settlement. Shifnal housing growth is concealed by using low housing density and is in addition to existing consents not yet built out. Proposed safeguarded land exceeds Shifnal's future housing needs and will destroy the village atmosphere. Employment proposals will exacerbate traffic problems/ gridlocks in the town centre. Additional commuters will inevitably use travel by car and use this route. Green Belt must be retained, particularly to the west. Site assessments have been inadequate, there are contradictions and missing evidence. The plan is contradictory and difficult to navigate. Shifnals desirability depends on staying a certain size and not being absorbed into priorsless/telford. Too many faceless housing estates will make idsall degenerate in anywheresvilles England and destroy the very character which makes it sought after. Road traffic systmes needs to be imaginatively rationalised and existing housing renovated and refurbished first where possible
A1494B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. A1609B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	In relation to an alternative scheme promoted by Nurton Developments, Shifnal Matters do not consider that the development of this large site in the Green Belt with an open vista to the south is acceptable. The size of the development is too large in the context of Shifnal taking into account the character and historic nature of the town. There is no adequate infrastructure to support the scheme which would be bounded by a major A road into Shifnal and the railway line to the east. There are no exceptional circumstances to justify releasing land from the greenbelt. Development proposed would cause significant traffic issues around the town, particularly given the existing poor conditions that are in places single carriageway. Several junctions in the town have reduced visibility and are very busy already. Very narrow footways along the busy roads. Pollution increase with housing numbers, as well as there already being a significant number of cars in and around the conservation area. Average peak time hourly flows surveys have been carried out, indicating that there is Street traffic, the subsequent right turn onto the A464, creates very significant queuing back up Aston Street as far as the first roundabout with Carriers Lane, a distance of over 0.5 km. This, amongst other readings, indicate significant existing traffic problems in the town. The proposed employment development land located off Stanton Road will create a substantial increase in traffic on Stanton Road and Aston Street even if commercial vehicles could be effectively restricted from using this route. We do not believe there to be justification for a bypass around the west of Shifnal - the excavation needed would significantly affect the stability of the bridge, Network Rail are unlikely to accept this, commercial traffic between Telford and Shifnal would have to be re-routed thus not alleviating the traffic at Five Ways roundabout, there would be a conflict of use of the underbridge with the high voltage National Grid electricity cables running between the pylon immediately to the north of the structure and the substation in Innage Road to the south of the railway, the gyratory would increase journey distance between Telford and Shifnal and it is likely that existing residential areas would be used as 'rat-runs.' No information has been provided within the LPR which enables the likely traffic impacts on Shifnal's highway infrastructure and environment to be assessed. The only information regarding highways assessment is a couple of slides from a presentation by Shropshire council officers given in Shifnal in December 2018.
A1609B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	We hope that Shropshire Council can please provide information on (1) the methodology applied when calculating Shifnal's employment need, (2) justification on how other sites in Shifnal were ruled out in the sustainability appraisal and (3) the heritage assessment used to inform their site selection process.
A1609B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The Shifnal Dental Practice does not offer an NHS service to adult patients. HSA score =3 should be 0, there is no petrol station in Shifnal. These scoring errors have been the case since at least Jan 2019 and were advised to Shropshire Council in previous consultations. When these errors are corrected Shifnal scores 90 instead of 97 and placing it towards the bottom end of the ranking of the "key centres".

Support the decision not to proceed with development at Tong. 36 acre site for Air Ambulance appears excessive in comparison with other sites. I support the decision not to develop land to the east of Coppice Green Lane. Development there would cause the removal of historic woodland, an SSI and cause a high level of harm to the ecological environment
A1834B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area		Consider that proposed site allocation SHF013; SHF015 & SHF029; SHF022 and SHF023 (part); and SHF018b & SHF023 (part) would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: SHF013: traffic, boundary; M54 section, M54 J3 and M54 J4. SHF015 & SHF029: traffic; M54 J3 and M54 J4. SHF022 and SHF023 (part): traffic; M54 J3 and M54 J4. SHF018b & SHF023 (part): traffic; M54 J3 and M54 J4. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.
A1847B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. A1863B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	all references relate to Settlement Policy S15 (Shifnal Place Plan Area) of the Shropshire Council's 'Regulation 18: Pre-Submission Draft of the Shropshire Local Plan 2016 to 2038' dated August 2020.A) Ref. S15.1.1: The new Development Strategy is contrary to the views of the electorate & residents as correlated in the Shifnal Neighbourhood Plan (2014-2016) and ignores prior public consultations with preference to commercial interests. Refer to: http://www.shifnalplan.co.uk/B) Ref. S15.1.1, S15.1.4, 5.203, 5.204: The immediate implementation of the new Development Plan whilst building works are still on-going under the previous 2000-2016 plan, would, I consider, represent severe over development to one area. The proposed safeguarded land area is excessive and far exceeds Shifnal's future local housing needs. The result will be to replace Shifnal's unique "village" character with that of an urban fringe to a conurbation.C) It has been noted that the size of Shifnal housing growth may have been calculated utilising a low housing density which may not have included for housing already approved but not yet built. The corrected figure may therefore show Shifnal with a growth of 54% which would far exceed the 23% proposed for other Shropshire areas. The growth is also in excess of local needs with the inference that Shifnal is being proposed as an overflow settlement for other areas.D) Ref. 5.214d, 5.215: The proposed by-pass with sections of one-way traffic is impractical and would only provide a service road for any 'infill' housing developments. The use of the existing cartway bridge under the railway is also unrealistic due to its restrictive width which would therefore pose a risk to both traffic and pedestrians.E) Ref. 5.202, 5.212: The proposed extent of employment land to the East of Shifnal is unrealistic. If implemented it would result in an increase of both private and heavy commercial traffic through Shifnal & surrounding roads, exacerbating local air-borne pollution levels and posing new risk factors for the health & safety of Shifnal residents. Such an increase in traffic would not be alleviated by the proposed 'by-pass' (refer to item D above). The proposal for commercial traffic to be deterred from the centre of Shifnal and instead be encouraged to travel eastwards to Junction 3 on the M54 would be unenforceable due to the reduction in policing over the last ten years. The suggestion of deterrence also ignores that trade would be deterred with Telford making the increased travel times unviable for businesses.F) Ref. 5.202, 5.212: With the proximity of Telford there already exists extensive commercial developments, some presently unused and waiting for tenants. Also, the competition from similar zoning within 10 miles of Shifnal may make the proposed commercial sites redundant. By allocating the land proposed for commercial / industrial use does not guarantee that it would be used for this purpose; if left undeveloped or 'banked' it has been known, following commercial pressure, for a subsequent planning application for a change of use to housing to be allowed.G) Ref. 5.202, 5.212: For the reasons listed in items E and F above I would suggest that the largest extent of the employment land proposed for Shifnal should therefore not be considered both in terms of sustainability and the resulting detrimental effect upon the character of the town.H) Education & medical facilities are already severely compromised by a growing population. Waiting times at the medical practice continue to deteriorate; both due to a shortage of doctors nationally and appropriate premises. A permanent police presence in Shifnal was terminated in the early part of the last decade. Both of these factors, I suggest, pose a serious risk to the health, safety and security of Shifnal residents. The provision of all levels of school places will need to be extended heavily and will be dependent upon funding which in turn may become limited due to further economic restrictions nationally.I) Refs. S15.1.3 & 7; 5.214 & 5.216: Shifnal should not be extended towards Telford as agreed by the Development Strategy Plan of 2000-2016. This policy was to prevent an expansion into the Telford conurbation and to protect green belt land; the implementation of the proposed development boundary is counter to this original objective. The assessment of the environmental impact of the proposed loss of green belt and prime farmland is also inadequate, not taking into account the eradication of wildlife habitats, localised flooding, deterioration of air quality and other factors associated with CO2 generation and climate change in general.J) The allocation of 36 acres for the Midlands Air Ambulance at Tong appears surprisingly excessive. With no development plans available there is no way to justify the utilisation of such a large area. It is noted however, that the development of both the existing site at Cosford and other air ambulance sites amount only to 2-3 acres. Further clarifications are required.K) I support the decision NOT to proceed with the Bradford Estates proposals at Tong.L) Ref. 5.204 & 5.209 It is noted from these items that any 'respite' after 2025 is only a wish of Shropshire Council and not a promise. As construction works are still being implemented by planning applications made under the previous Development Strategy Plan of 2000-2016, it is unreasonable to allow any further developments under these new proposals without an immediate extended respite for the people of Shifnal. Such a respite would also allow investment to be made to offset problems already encountered by the rapid expansion of Shifnal's population. A delayed and unguaranteed respite until 2025 is unreasonable and any 'pipeline investments' in infrastructure should have already been implemented to accommodate the physical and social consequences of those developments recently built. Consequently, I would not support any further development unless balanced to local needs and growth together with a realistic assessment of the existing infrastructure of Shifnal.M) Ref. 5.209 This item states that 'The approach in the Local Plan is to seek new, additional housing allocations around the edge of Shifnal to complement new housing areas brought forward by the SAM Dev Plan which extend the footprint of the urban area'. Does this infer that Shropshire Council has decided to implement these proposals in the face of substantial opposition from the Residents and Electorate of Shifnal; and as such, are the people of Shifnal being told to accept these proposals as a fait accompli?
A1872B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Support the decision not to proceed with development at Tong. 36 acre site for Air Ambulance appears excessive in comparison with other site:
A1914B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	Object to Shifnal housing and employment needs because the Local Plan is seeking to meet needs imposed by central government. The consequent changes to the Local Plan will remove the current support for the Shifnal Neighbourhood Plan that is widely supported by the community of Shifnal. This housing need is created by an uncontrolled world population expansion, a barely controlled immigration and 'economic migration into the UK, an uncontrolled population increase in the UK (primarily from the immigrant population); and in Shifnal migration of UK residents westwards towards the town frequently from the West Midlands conurbation. It is NOT local need or even Shropshire need that is driving the proposed increase in development. summary, this is nearly all about migration and not need created by Shifnal and the residents of the town have had enough development as a result of a huge increase in residential development both on large site developments and as a result of there being no improvement in facilities to cope with the current 2014 Plan let alone further development in the town. Finally, where is the democracy in this consultation process? We know Shifnal Matters has campaigned alongside residents of Shifnal, and I see no effect on the proposals put forward by Shropshire Council. This Draft Local Plan is being IMPOSED not consulted upon. The sections of the Local Plan that are specifically objected to are as follows: P16 - C3.7: No evidence to support the need to provide housing for the Black Country because delivery opportunities are constrained'; P20 - Policy SP3: Building housing or industrial units on green belt land does the opposite of the intention of this Strategic Policy; P24: it destroys historic hedgerows and wetlands; it creates more damage to the environment as attracting people from the West Midlands creates more not less commuting; P90 Policy DP13: All development negatively impacts on the environment; P123 - Policy DP25 – para 4.218: This table indicates an excessive contribution of green belt land from 'the Shifnal area, even if sacrificing green belt was acceptable; Para 4.216: Green Belt Review outcomes should be repeated; Site P173 and SHF017: Grade 2 agricultural land with High harm to Green Belt; Sites SFH017 South and P16a: Grade 2 agricultural land with High harm to Green Belt; Sites P15b and SHF019: Grade 3 agricultural land with High harm to Green Belt; Re develop the environmental disaster at Shifnal Industrial Estate, not build more; P240 – para 315.1: The word WILL is used throughout this document. Is the draft plan a consultation or an imposition? P249 – para 5.204: The phrase long period of respite is used. How long and can the authorities be trusted? P249 – para 5.206: It is clearly acknowledged that the residents of Shifnal want no further development; P250 – para 5.209: Creating a strong and legible boundary is actually crudely drawing a ring around the town and proudly announcing that you have place shaped for future development by encroaching further into the Green Belt. This is so simplistic, gobble up some more land to complete a circle. It is not clever planning. it is contrary to the wishes of the residents of Shifnal; P250 - para 5.211: Recognises that high harm will occur. Also assumes that employment will be attracted away from Telford and the West Midlands, by council bureaucrats not business people. P250 – para 5.212: 'Assurance' that the land use is for employment only. Can this statement be trusted? P250 – para 5.213: Recognises that high harm will occur; P251 – para 5.216: The 'structural constraints' do not need to be addressed, just leave Shifnal alone. Who has decreed, in such an assertive manner that they need to be addressed, they only need to be addressed if additional development is forced upon the unwilling town residents.

A2097B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	Despite many promises, pledges and proposals, no significant improvements have been made to the key roads and junctions in the town centre, nor to any of the basic infrastructure. The current Shropshire proposals to increase the size of the town can therefore be seen to be untenable and impractical, as well as being comprehensively rejected at public meetings held pre COVID 19. The Neighbourhood Plan has been ignored. There is no credible evidence that more houses or other development is needed in Shifnal or its surroundings. There are alternative areas for development, such as Priorslee, Stafford Park and Halesfield. There are no proposals in the Plan to ensure adequate provision of infrastructure, which should include highways, parking, school capacities, and medical demand. Promised improvements but never delivered. Shifnal has not had its fair share of funds – S106 monies only spent on roundabouts to support the developments, CIL has not come back into the community, and the New Homes Bonus should have provided funds. These funds must be being used to balance the council's books, to assist with the purchase of the town centre property and sale of Shire Hall. There is no evidence of need or demand for more development in the area.
A2098B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. A2109B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	Schedule A7 sets out 'indicative' timescales for the developments, with sites SHF015 & SHF029 (Land adjoining Beech House between A464 and Park Lane, Shifnal) listed for the 'medium term'; 2025-2030. As the owner of site SHF029, and also on behalf of Guy Thomas as the owner of site SHF015, I would like to assure the Council that we know of no impediments to these sites being available for development very much sooner, and given Shifnal's key position as the preferred investment location in the M54 corridor and the significant growth in demand for housing, we believe these sites should certainly be considered for the short term, 2020-2025.
A2118B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. A2304B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	Object to planned growth of Shifnal and removal of land from Green Belt for housing and industry without assessing full environmental impacts: loss of openness, loss of farmland, CO2 generation, flooding and climate change. Green Belt must be retained especially to west to separate Shifnal from Telford. The planned scale of growth will increase the population by 54% (compared to average growth of 23% in the County) and swamp the town's highway, transport, health and education infrastructure. Housing growth increases the existing scale of new development but this is concealed on low density sites. Employment growth takes no account of other large employment sites around Shifnal (10 mile radius) and will exacerbate traffic congestion in the town centre. Safeguarded land (equal to 130 football pitches) exceeds Shifnal's future housing need and destroys the town's village character. The presentation of this plan is riddled with contradictions, missing evidence and limits to public involvement.
A2305B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Additional commuters will inevitably use travel by car and use this route. Green Belt must be retained, particularly to the west. Site assessments have been inadequate, there are contradictions and missing evidence. The plan is contradictory and difficult to navigate. The loss of greenbelt that Shropshire Council state we are blessed with stunning countryside that we need to protect and ancient woodlands that only yesterday Shropshire council stated nature also plays a huge roles in the battle against climate change by storing carbon in trees as the trees mature they will become more effective at storing carbon and along with other initiative contribute to the wider target of the county reaching net zero carbon by 2030 must apply to shifnal too. I am not against development but it must be proportional. I am surprised that Nurton Developments proposal is not being considered for land staddling Upton Lan and off the main road A464 as it seems a compromise, provided it is accessed from the A464. Additional housing on that site would merely be an extension to the recent new housing anf the land proposed is mainly scrub land and not used by the town for recreation purposes in the same way as the Lodge Hill and Coppice Green Lane greenbelt. There would need to be major investment in the crossroads as this is a blackspot for accidents
A2320B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Proposals do not account for existing and proposed employment areas within 10miles of the settlement. Shifnal housing growth is concealed by using low housing density and is in addition to existing consents not yet built out. Proposed safeguarded land exceeds Shifnal's future housing needs and will destroy the village atmosphere. Employment proposals will exacerbate traffic problems/ gridlocks in the town centre. Additional commuters will inevitably use travel by car and use this route. Green Belt must be retained, particularly to the west. Site assessments have been inadequate, there are contradictions and missing evidence. The plan is contradictory and difficult to navigate. The loss of greenbelt that Shropshire Council state we are blessed with stunning countryside that we need to protect and ancient woodlands that only yesterday Shropshire council stated nature also plays a huge roles in the battle against climate change by storing carbon in trees as the trees mature they will become more effective at storing carbon and along with other initiative contribute to the wider target of the county reaching net zero carbon by 2030 must apply to shifnal too. I am not against development but it must be proportional. I am surprised that Nurton Developments proposal is not being considered for land staddling Upton Lan and off the main road A464 as it seems a compromise, provided it is accessed from the A464. A2323B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area		<p>Shifnal is an inherently sustainable location, indeed consider it is one of the most sustainable settlements in Shropshire, which we consider should receive a higher level of housing growth within the plan period, and that the safeguarded sites identified around Shifnal, should not be safeguarded but allocated for delivery within the plan period.</p> <p>If the proposed safeguarded land in Shifnal remains as such, there should be mechanisms built in to the plan for safeguarded sites to come forward during the plan period should the need arise. It would be beneficial to allocate site reference numbers to each of the safeguarded sites identified with the draft Plan so that the Policies Map can be cross referenced at the appropriate points within the Local Plan Review.</p> <p>Shifnal's location on the M54/A5 East growth corridor, and the strong connectivity benefits this creates, form an important context for understanding both current demand pressures but also the extent to which these are likely to continue to increase where the corridor's investment is realised. At a local level, there has evidently been success in recent years in elevating the regularity of rail services to Shifnal. This has reinforced its connectivity into the corridor and specifically the national rail infrastructure which itself will continue to be enhanced through the delivery of HS2. This investment in improvements to rail connectivity has also responded to Shifnal's own growth. This again forms important context to its ongoing credentials for accommodating sustainable growth.</p> <p>The Council's evidence indicates provision of new homes and employment space will serve to support existing businesses and public services in Shifnal, delivering benefits for current and future residents and ensuring the resilience of this part of its employment base.</p> <p>Proposed allocation of a large employment site in Shifnal is strongly supported as a means of sustainably accommodating inward investment and enabling local business to grow building on the advantages of the M54 corridor. This will, it is agreed, offer the opportunity to create a more sustainable balance between housing and employment in Shifnal over the plan period. However, it is important to recognise that there is a realistic prospect that where the provision of housing is curtailed on the basis of the proposed requirement for the town, this is likely to occur in parallel to a period in which new employment would be starting to be delivered on the allocation. Where some level of displacement of people living in Shifnal and working elsewhere to living and working in Shifnal could occur, the enhancement in the provision of rail transport services alongside other factors is likely to make it challenging to realise this quickly.</p> <p>Where the creation of jobs will elevate demand for housing locally this suggests that to realise the benefits in full associated with its location on the M54 corridor the Draft Plan should recognise the need for greater flexibility in the advancement of safeguarded land within the plan period.</p> <p>Site promotion for SHF019 and P15b. Supporting documents provided include a vision document, landscape visual assessment, transport note, A464 and Park Lane access proposals, initial heritage appraisal, preliminary ecological appraisal and flood risk assessment.</p> <p>The site is some 12.7ha and has been identified as proposed safeguarded land within the draft Local Plan. It has capacity for 175-200 dwellings and is in a single ownership.</p> <p>The site lies to the south of Shifnal and comprises two grass intermittently used grazing fields. The site is enclosed by hedgerows and vegetation and contains three mature oak trees.</p> <p>The A464 forms the site's north eastern boundary, beyond which are further agricultural fields and a large fishing pond. There are a number of trees along the north-west boundary, beyond which is a large residential property known as Beech House. To the south-west is The Terrace, a Grade II listed residential dwelling. Park Lane, the north to south route into Shifnal, forms the sites western boundary. The whole site is in the Green Belt.</p> <p>The site is located within close proximity of a range of local services and facilities. Indeed, consider the site meets each of the requirements of draft policy DP29. Shifnal is an inherently sustainable location which we consider should receive a higher level of housing growth within the plan period, and that the safeguarded sites identified around Shifnal, should not be safeguarded but allocated for delivery within the plan period. Consider the site is located in a highly sustainable location and benefits from good access to existing public transport with the opportunity for everyday activities to be made by use of existing active transport opportunities, thereby assisting in reducing carbon emissions. This therefore provides a strong evidence base for bringing forward residential development in this location.</p> <p>There is no formal vehicle access to the site but the site is well served by the strategic and local road network and would be accessed off the A464 Wolverhampton Road and Park Lane. A transport note has been prepared for the site and in conclusion safe access can be provided into the development, which itself will lead to a series of well-designed estate roads which will form an important part of the scheme's overall design. Furthermore to enhance pedestrian and cycle connectivity into Shifnal Village Centre, a new footpath is proposed to the west of the site access along the southern side of the A464. There are no formal PROW on the site.</p> <p>The site is not subject to any overriding environmental or physical designations or constraints that would prevent the site from delivering residential development.</p> <p>With regard to Heritage, an Initial Heritage Appraisal has been undertaken. This indicates the site is to the north-west and north-east of the grade II listed 'The Terrace', and therefore the setting of this asset is an important issue to be addressed as part of any emerging scheme. In considering the relationship between the site and grade II listed 'The Terrace', the Initial Heritage Appraisal informed the design of the Illustrative Masterplan through a range of design opportunities, including: Opportunity to establish a buffer of open space to the west and immediate north of the Terrace could be provided to maintain prominent views of the Terrace from within the western part of the site and from along Park Lane; A comprehensive landscaping scheme should be considered to screen and soften views of the proposed development from the grounds of The Terrace. The hedgerow to the western boundary with Park Lane could be enhanced with additional hedgerow trees; The existing mature trees contribute to the landscape character and parkland qualities of the site and should be retained where possible; The arrangement, scale, massing and design of the proposed development will also need to be carefully considered and opportunities to create a development that perpetuates the parkland characteristics of the site should be explored; and Access and highway interventions should be carefully considered, ensuring that engineering works and associated infrastructure are kept to a minimum where possible. There is an opportunity to reinstate estate railings along Park Lane and into the development to maintain the parkland character of the site.</p> <p>With regard to ecology, a Preliminary Ecological Appraisal has been undertaken, which identified that with the exception of boundary habitats, the site is of low ecological value. Provided appropriate mitigation measures (identified in the study) are incorporated into the final design, no significant impacts are envisaged as a result of the proposed development. The Illustrative Masterplan illustrates how these mitigation measures are integrated.</p> <p>A Flood Risk Assessment has been undertaken for the site. It is evident from the Flood Risk Assessment that there are no constraints to the development of the site for residential development, with the entirety of the site being located within Flood Zone 1 and located away from the identified flood risk within Shifnal, around Wesley Brook.</p> <p>Whilst the exact form of Surface Water Management Strategy will need to be confirmed in due course further to detailed site investigations, the proposed development has been designed to provide suitable space for Sustainable Urban Drainage infrastructure which can be incorporated into the wider open space network / strategy on site.</p> <p>The landscape assessment concludes that due to the site's location, within an enclosed landscape, it is considered to be appropriate for development in landscape and visual terms. This assessment has informed the vision document and illustrative masterplan prepared for the site, which include the following design principles: Opportunity to maintain some of the site's parkland character through an area offset from the southwest and western boundary of the site; Potential to retain existing trees and hedgerows within site; and Opportunity for residential properties along the south-eastern boundary of the site to be outward looking to create a positive edge to the countryside.</p> <p>The site is located within the Green Belt but is already proposed to be safeguarded for future development beyond the draft Local Plan period. The Council's evidence base demonstrates that it, together with preferred housing allocation SHF022 and part SHF023, are located in the least harmful direction of growth surrounding Shifnal.</p>
A2328B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	<p>The level of growth is too high for Shifnal – services would not be able to cope.</p> <p>Proposals do not account for existing and proposed employment areas within 10miles of the settlement.</p> <p>Shifnal housing growth is concealed by using low housing density and is in addition to existing consents not yet built out.</p> <p>Proposed safeguarded land exceeds Shifnal's future housing needs and will destroy the village atmosphere.</p> <p>Employment proposals will exacerbate traffic problems/ gridlocks in the town centre. A2503B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	1. The plan for Shifnal demands a level of growth that will swamp available roads, health services, schools and rail services 2. The plan for Shifnal takes no account of huge employment zones already planned within 10 mile radius. (duty to cooperate). 3. The size of Shifnal housing growth is concealed by using low housing density and it comes on top of houses already approved and not built. This will give Shifnal growth of 54% compared with 23% for the Shropshire area. 4. The proposed safeguarded land area (equivalent to 130 football pitches) far exceeds Shifnals future local housing needs and will destroy Shifnal's villages character forever. 5. The suggested scale of the industrial development will exacerbate the traffic already experienced in the town centre at peak periods as the resulting additional commuters will inevitably travel by car using this route 6. The green belt must be retained, especially to the west side, and protected to prevent Shifnal becoming another suburb of Telford. 7. Most of the Shifnal land earmarked for housing and industrial is being removed from the green belt with inadequate assessment of flooding, traffic generation, climate change, air quality, loss of prime farmland & and other environmental considerations. 8 . Presentation of this draft plan is riddled with contradictions, missing evidence and an effective denial of public access. 9. Support the decision not to proceed with the Bradford Estates proposals at Tong. 10. The 36 acre provision for the Midlands Air Ambulance at Tong appears excessive. No current plans are available to justify the size of the development and both the existing site in Cosford and other air ambulance sites are 2-3 acre:
A2505B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S15 Shifnal Place Plan Area	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Proposals do not account for existing and proposed employment areas within 10miles of the settlement. A0016B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Only Brownfield sites should be considered for Bayston Hill. traffic is too busy for proposed site. Don't agree that the Development boundary is being moved. Recently four different planning appeals, including one public enquiry, have refused building on farmland surrounding Bayston Hill. Each Inspector recognised that Bayston Hill is separate from other communities and is already a large settlement with poor access and few amenities for an existing community of 5,200 residents.
A0018B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	As a member of a Residents Group and are currently in the process of arranging a meeting with CEG, the main land agent developing the Master Plan for this area. A key area of immediate interest is how this development will fit in with the 2 new proposed schools within SHREW030/R due to begin construction in 2021(?). Access to these schools is already of concern when considering the current road layout of Squinter Pip and Red Deer Rd and the issues that even local traffic already has with the tight narrow bends and corners and parking issues which would pose significant concerns for the safety of the students. There have already been collisions on the stretch of road adjacent to the proposed school site. Access to Park and Ride from Myton Oak Rd in the North makes sense and it is assumed this will be the start point of any inner link road through to Hanwood Rd. Where this access will be is of great interest given traffic issues both roads see when in holiday season and there is congestion on the A5. Ideally nothing would begin until the NWRR is completed, which will hopefully reduce the volume of traffic travelling to the West of Shrewsbury. A local centre will be welcomed by all and the North of SHR158 could be the most suitable place for it to be considered central and accessible to new and existing residents. The schools are much needed and the suggestion of a Medical Centre is welcomed. A key area of interest for the residents Group is the consideration of green infrastructure corridors and the acknowledgement of the environmental network to the East of the site, particularly that bordering SHR060 and SHREW094 and SHREW019 is welcomed. This natural pond is teeming with wildlife and is a resting place for swans, wild geese, ducks, moorhens etc and therefore a wide green corridor is required between the pond and any further new development to prevent the loss of this natural haven. This would also neatly flow into the corridor already created between SHREWS030/R and SHREW094. A robust residual surface water plan are very much needed as we are already seeing levels of the current ponds and streams rising year by year, and this is while the area is able to flood and create temporary pools in the lower points before it is turned into hard standing.
A0020B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Site Allocation: Land south of Sundome Road, Shrewsbury. There is a requirement for a planting "buffer to the former Shrewsbury Canal." I support this buffer, but it must not be such so as to interfere with the canal's restoration i.e. it should ensure that machinery and equipment can be utilised for the required restoration work without any undue impediment.
A0026B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The Parish Council strongly supports the level of development for Cross Houses in the Local Plan. The residents, at two public meetings, let it be known that Cross Houses had received a large number of housing due to five year land supply issues and asked that this additional housing be taken into account when Shropshire Council in this refresh of the local plan. The 9 wind fall houses allocated to the proposed development boundary is considered acceptable.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0030B1	Viability and Deliverability of Proposed Site	Draft Policy Area S16 Shrewsbury Place Plan Area		Richborough Estates believe delivery is likely to occur earlier in the plan period than currently shown in Appendix 7. We believe delivery is more likely in the short term period 2020/21 – 2024/25.
A0037B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Not a suitable site as it experiences noise and pollution, which risks the health and wellbeing of residents. The local plan should not change for this area and new applications should be judged on the policies as they currently exist. To reduce future pandemic risks and fight climate change, it is essential that this site is retained as countryside and not developed. I am concerned that the developer has not fully taken into account the sources of noise and pollution relying on weekday peaks but ignoring key weekend periods where there are clashes between retail, football and seasonal holiday traffic using the A5 trunk road.
A0049B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub. The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings. The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster. The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents. Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements. A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions. New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage. The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council. Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far. Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost. If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur. <u>Wish to remain a Community Cluster and not be a Community Hub.</u>
A0053B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub. The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings. The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster. The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents. Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements. A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions. New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage. The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council. Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far. Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost. If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur. <u>Wish to remain a Community Cluster and not be a Community Hub.</u>
A0063B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Appeal to us to re-consider a site owned by the respondent in Preston Montford
A0068B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	There is an increasing need for open space as more green land is built on. When Shirehall is vacated the sports pitches at the back of the site could be a green lung. It would be a mistake to sell Shirehall for more housing and why is it not included in the Plan? Planning process is sadly lacking and should be better or there will not be a Shropshire to develop.
A0081B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with Longden's Hub status. Disagrees with the large-scale development this will bring, due to flooding, cycle and walking routes will be disrupted, roads would not be able to manage the development.
A0082B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with Longden's Hub status. Development would impact the roads, which are not fit for more cars than it already serves. Lack of, or insufficient public transport means reliance on cars from the village. Concerned change in status would result in development which Longden could not cope with. Acknowledges that development is needed, but Hub status would result in too much for the village.
A0085B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with Longden's Hub status. Limited existing infrastructure & services cannot support this. Roads are currently poor with regular horses. Primary school cannot take more numbers, small village reputation is its selling point - more houses would ruin this. Poor public transport. The village can sustain large growth.
A0087B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	We wish to have the Town Centre part of the map redrawn to exclude St Alkmunds Square in the same way as Town Walls, Belmont, St John's and Swan Hill, and designate it residential. I would point out that St Alkmund Square is bordered by Church St and over this boundary road is St Alkmund Place (this is not part of the Square; as designated on some old maps) which is Commercial and often confuses individuals.
A0088B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The school is too small for the existing numbers and the roads in the village are poor. The public transport services are also too poor.
A0090B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub against local community wishes. Infrastructure inadequate to service additional population including capacity of local shop and unreliability of buses leading to dependence on private motor vehicles which is not climate change prevention compatible or affordable for some. Issues with amount of speeding traffic on road with 30mph limit. Longden's rural setting central to its character and would be lost by building standard modern estate housing on surrounding fields. Development would conflict with ecological requirements and addressing climate change. Proposed changes to central government planning combined with proposed Hub status for Longden will exacerbate the situation with resulting lack of opportunities for local community voice to be heard and result in inappropriate significant development levels which do not benefit the village or community simply to meet targets. Evidence from elsewhere demonstrates that development does not necessarily support the retention of local services and facilities such as schools. Broader perspective of impacts versus target requirements needed
A0098B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Allocation contrary to community view expressed at public meeting. New houses unnecessary. Lyth Hill Road access busy and inappropriate for additional use. Capacity of local infrastructure, dentists, schools, roads, including access to A49 etc an issue
A0100B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	New line for development boundary suggested. Objection to non-inclusion of promoted site (SHR185) north of Dobbies across A5 and separate promotion document provided. Sustainable, deliverable site, with no environmental or right of way designations, no listed buildings, outside conservation area, no flood risk in a mixed use area well connected to main growth centre of Shrewsbury and its amenities. Access available and potential for additional access. Could be considered with adjacent promoted land SHREW036 (as SHR182) and discussion ongoing with a view to master planned development (residential led with employment element) for greater site. Sustainable location for housing and commercial development which would benefit from prominent roadside location, infrastructure & connectivity. Would deliver infrastructure and sustainability benefits, help provide development needs in line with spatial strategy that focuses growth in Shrewsbury. Development in this location would retain the A5 as a strategic buffer between Shrewsbury and Bayston Hill. The A5 provides a fixed defensible and logical boundary. Development would have a positive impact on Shrewsbury town centre, Meole Brace Retail Park and the local services south of the A5 & an opportunity to provide fully integrated cycle and pedestrian routes through and around the site.
A0100B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Recognition of Shrewsbury as main Strategic Centre of Shropshire and primary focus for development in the County, is supported. In addition to main provision through residential allocations, well located, sustainable windfall sites within and on the edges of Shrewsbury should help meet housing and employment development needs.
A0108B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	This village voted to be a cluster. The scoring system does not take into account limited nature of the services. Poor roads in and around village, which are also fairly narrow. The parish has already had properties developed in excess of the current Local Plan
A0114B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Development site affects National Grid assets or are in close proximity including 400kV Overhead Transmission lines. A plan showing details of the site locations and details of National Grid's assets provided.
A0114B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Development site affects National Grid assets or are in close proximity including 400kV Overhead Transmission lines. A plan showing details of the site locations and details of National Grid's assets provided.
A0115B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to the proposed development of Longden village by the Local Plan. Hub status inappropriate, Longden a very small village with limited road and other infrastructure and not capable of supporting further development or vehicles. Existing issues with HGVs. Agricultural rural setting central to local leisure opportunities & the character of the village. Additional development will result in loss of village identity.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0119B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to development off Lyth Hill Road. Not supported locally. Access and pedestrian safety issues due to busy road & parked cars which would be exacerbated by additional development. Capacity of services (schools and GPs) is a significant issue together with limited access points to the A49 and additional congestion.
A0120B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Proposals offer the opportunity for the Council to rectify its maladministration of Darwins Walk development (SHREW019 and SHREW094) which has resulted highway and residential safety issues, in particular a 'rat run', through provision of a relief road and traffic calming. The proposed development should include appropriately located link road between Hanwood Road and Mytton Oak Road which does not impact on residents. The proposal for a school will exacerbate an already unacceptable situation.
A0121B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The Parish Council supports the allocation of Nesscliffe village as a community hub and the policies, map and supporting text associated with this.
A0121B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The Parish Council supports the rest of the parish, outside of the Nesscliffe development boundary being classed as "Open Countryside".
A0134B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Support Baschurch being identified as a Community Hub. The settlement has a good range of services and facilities and good sustainability credentials. Indeed it is one of the higher serviced Community Hubs identified. Support proposed allocation BNP024. The site forms a natural extension of the existing allocation (BAS017) being developed by Galliers' Homes, which also allows for vehicular access. It is within short walking distance of all village facilities. Scores 'good' within the Sustainability Appraisal. Is highly deliverable and will provide a suitable mix of housing to meet the needs of families together with older and younger residents, improving the range and choice of housing in Baschurch. Can provide a generous area of open space and footpaths will link to open space on the adjacent Galliers' Homes site and to the wider PROW network. Development will improve the vitality of the village, support local services and increase the range and choice of housing available. There is a need to clarify the proposed site guideline regarding 'low-density', 'significant open space provision' and consider the proposed site capacity of 35 dwellings as this represents a density of only 11.7dph and could conflict with Policies SP1, SP3 and SP5 which require efficient use of land. Whilst Policy DP1 requires a higher proportion of smaller dwellings. The existing allocation (BAS017) being developed by Galliers' Homes is at a density of 17.5dph, although these are predominantly larger detached properties. Reflecting the proposed policies a density of 20dph would be more appropriate, with a minimum guideline of some 60 dwellings. This is still below assumptions in the SLAA. There is also a need to clarify the proposed site guideline regarding 'supporting delivery of the medical centre', wording is vague and not consistent with Para 34 of the NPPF (setting out contributions expected from development). Policy requirements 'squeeze' the viability of development, as demonstrated within the Local Plan Delivery and Viability Study. BNP024 can achieve policy requirements, however 'low-density' and 'significant open space provision' further limits saleable floorspace on the site relative to other proposed allocations. As such it is important that policy guidelines are realistic about the means by which the development might, "support the delivery of the medical practice". CIL is the best means of contributing to provision of a medical centre, such contributions should not be in addition to CIL, and policy guidelines should recognise this. The site is highly deliverable and viable. It is likely to be delivered earlier than the Local Plan's current forecast of 2020-2030 with the 2021-2025 period more appropriate in Local Plan Appendix 7: Forecast of Delivery Timescales for Local Plan Allocations. There are local housebuilders keen to deliver the site as soon as possible.
A0138B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Policy S16.1 makes no specific provision for Shrewsbury's significant need for specialist housing for the elderly. To make the Plan more robust and meet local needs, we would suggest a specialist Retirement Village comprising a range of types of older persons' housing including bungalows, assisted living and extra care housing, located opposite the recent development of retirement flats at Shire Living, the Coppice, Holyhead Road. Site promotion (5.5h) included in Rep. Site has an existing access, is well screened in the landscape, is served by public transport and close to the countryside and other older person accommodation and other complementary services. The site would complement the health/care development on the existing allocation (Shrewsbury West SUE). The site is outside the groundwater source protection zone and due to topography would not drain into the one to the north. The site is considered viable and deliverable within the time period 2020-2030. Retirement villages have proven to be a successful model, providing opportunities for residents to move from more independent accommodation to more supported accommodation as their needs change and enable couples to remain geographically close even when their needs differ. Furthermore, a concentration of older people better supports a good range of specialist services for the elderly, benefitting those on the site and wider area
A0146B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to the proposed Hub status of Longden village which will create extra traffic. Cluster status should be retained. Longden has limited road and other infrastructure and not capable of supporting further development or vehicles. Existing road safety and traffic issues. Attractive countryside setting should be retained
A0150B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub. The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings. The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster. The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents. Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements. A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions. New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage. The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council. Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far. Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost. If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur. <u>Wish to remain a Community Cluster and not be a Community Hub.</u>
A0167B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Employment at both Castle Foregate and Sentinel Works is identified as protected employment land. It is assumed that protected employment land status is supportive of the expansion and improvement of existing employment operations. There is significant concern that proposals for the North West Relief Road, applications within the SUE West and other development in this locality will have a detrimental impact on the future viability of the Oxon Hall Caravan Park. Positive dialogue is very important.
A0167B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Policy S16.1 makes reference to the proposed alignment of the NWRR and the Councils principle of support for it. We have significant concern about the impact of the NWRR and similar concerns in relation to criteria 7 of this policy. Specifically the proposed support for potential commercial uses along the NWRR corridor. We would not support any proposals which increase the extent of development in proximity of Oxon Hall Caravan Park, particularly uses which would create noise and disturbance. Criteria 7 should be amended to reflect these concerns. Determination of Planning Applications on the SUE West should accord with the adopted Masterplan, as set out in policy
A0167B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Comprehensive information provided regarding a Planning Application on SUE West (SAMDev Plan allocation). This included consideration of local and national policy. Key considerations identified included: noise; safe crossing of existing and proposed roads; construction management; and safe access for caravans.
A0174B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	SHR060 is a greenfield site outside development boundary in open country so it's open market residential and is contrary to policy, there is no road frontage, no access via SHREW019. viewed along with SHR158 & SHR161 a large proportion of SHR060 should be open greenspace. towards western side of site sloping makes it less viable, developed it would have high impact on Violet Grove & Bluebell. This will also impact on pond, housing impacting on the ponds ecosystem. On the western side flocks of Canadian Geese, swans, moorhens feed. Rich biodiversity contacted with pond and reedbeds, greater spotted woodpecker, pied wagtail etc along with frogs toads & newts, dragonflies, mayflies a rich ecosystem well established also providing cover for hibernation. High value site that could contain protected species. The site is within 250meters of wildlife site. Impact was made when Darwin Walk was built and this is far larger development. Development would be contrary to SC policy. Country Park Estate was promoted by press and Peter Nutting planning committee 01/07/14 supported 37 acres of public open space. This was never carried out. There have been trees felled and a loss of habitat. Big town plan objectives support openspace & green corridors. SHR060 should be used to support this. SHR060 could be an ideal location for community recreation, education, bird hides, direct green access for planned primary school
A0182B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Hub. The village is small and has 135 residential dwellings and the thought of it becoming a Community Hub is total madness! We believe that the points system is severely flawed, when you compare Longden with Minsterley, Hanwood and Pontesbury. The pub is only open part-time and part of it has already been converted into 3 living spaces. The library is only in the village every 2 weeks for about 10 minutes. The shop/PO is very small. The school is full. The village isn't easily accessible from the main bypass in Shrewsbury and there is already a considerable traffic problem in the village and at Radbrook at school times. If Shropshire Council are so short of housing stock, why not tap into some of the 400,000 land banked that Developers have already got planning permission for?
A0192B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to the proposed designation of Ford as a community hub - Hierarchy of Settlements assessment scoring system has been misapplied to Ford and the correct score is 42 points this reflects <ul style="list-style-type: none"> •Inaccurate recording of available amenity green space at Quail Ridge which when identified non amenity or duplicate areas (detailed in rep) within it are deleted becomes less than 0.2ha threshold. •Peak Bus service – There is not a return service between 3pm and 6pm within the specified distance of the village (services & locations detailed in rep) •Outdoor sports facility- the former Bowling Green does not qualify as in private ownership, not accessible to the public & has no arrangements in place for use of the space as a Bowling Green. There is a planning application for storage units pending consideration. Additionally disagree that mobile libraries should only get 1 point less than permanent libraries as service is far more limited. Hub designation also inappropriate because of: Conservation Area, limiting potential for infill and potential harm to character of Conservation Area; Soil Grade 2 or 3 which is good or very good for agricultural & warrants protection; Ford village is in a mineral safeguarding area and development would therefore contravene policies SP13 and DP31; Right Home, Right Place Housing Survey (2020) showed that the scale of demand in Ford is low and it has been hard to find tenants for affordable housing recently completed at Cross Gates Meadow and this was reflected in officer comment; concerned that hub status will be permanent and lead to development beyond the boundary in the medium to longer term.
A0192B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Ridge and furrow soil pattern at FRD011 should be protected as per policy DP24; Ford village is in a mineral safeguarding area and development would contravene policies SP13 and DP31; EIA needed for site FRD011; Ford village is in a mineral safeguarding area and development would therefore contravene policies SP13 and DP31; the scale of housing demand in Ford is low

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0213B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Uffington has been removed as a Community Cluster without justification. This is surprising given the SAMDev housing requirement for Uffington has not been delivered. It is considered that Uffington should remain as a Community Cluster with further sites allocated to address the shortfall in delivery since the SAMDev was adopted and meet the growing need for the different types of housing identified in the NPPF and the draft Local Plan (Policies DP1 – DP7). This will become increasingly important if the revised housing methodology for Shropshire becomes national policy in late 2020
A0215B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub, as: There are already nearby Community Hubs at Pontesbury and Dorrington. Shropshire is a rural county, making Longden a Community Hub would change the nature of the village and surrounding area. Fields and PROWs around Longden village are essential to the health and wellbeing of residents. Development on greenfield sites around the village would negatively impact wildlife and their habitats, including mature trees. Traffic will increase and cause highway safety issues, particularly for pedestrian, cyclists and horse riders (Shrewsbury Road is well used and has many blind bends). There are also no pedestrian pavements between Longden and nearby villages. Increased traffic will also make journeys to Shrewsbury more difficult. Longden bank is virtually impassible in winter. Longden is prone to flooding and certain areas are therefore unsuitable for development. Development will also exacerbate flooding to existing properties and roads by removing natural drainage - increasing highway safety issues. There are few services and amenities in the village and little to occupy young adults
A0226B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Current main road through site is often dangerous: it is bendy, cars are parked on it and vehicles speed. School pupils commute through on foot and by bike. Building a new school will cause access issues with already problematic traffic. The Park and Ride is a good idea but again the main road will not cope. What will be done to protect the spectacular wildlife when the school is built?
A0229B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Vehicular access will be inadequate, especially if from the existing estate. I would hope that noise levels are carefully considered for new residents. New housing on the west of the town means that residents will have to commute through the town to employment in the north and the North West Relief Road seems crucial for this as is a better organised, easy to use and cost effective public transport system to reduce car usage. Quiet roads to the town centre should be put in place. A green gap between the new development and Bowbrook Meadows would be beneficial and likely to be highly used. It would be great if the wildlife returning to Bowbrook Meadows now construction has slowed down, had an area left for them on the new development site.
A0245B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Site promotion (part of BAY027) should be considered for development (low density / high-quality self-build housing, leisure/hospitality facilities or holiday lodges) The site is associated with the small settlement of Redhill, with access to services and facilities in Hook-a-Gate (part of a proposed Community Cluster) and a short journey to services and facilities in Shrewsbury. It benefits from an access off Longden Road, already used for railway maintenance and 15 or so houses. It is well screened, so will not overlook existing properties.
A0249B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Site BIT015 should be identified as a site allocation within the Local Plan. The site is in a sustainable location in the heart of Bicton, within easy walking or cycling distance to services and facilities. It is also under 2km from services and facilities in Bicton Heath, with regular bus services between Shrewsbury and Oswestry available from a nearby stop. Development of the site would help meet future housing requirements and support growth of Bicton Community Hub. The site is currently a semi-derelict farm. There is only one allocation (BIT022) which will intrude into the countryside and be a dominant feature when passing through the village. It appears that this site has only been allocated due to its location adjacent to the B4380 and will not provide any benefit to the village or contribute to the wider character of the area. The proposed development boundary is odd, excluding the historic centre of Bicton.
A0258B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The parish council supports the Hanwood community hub, and support the separate classification of Hanwood Bank as Open Countryside. Development must not be allowed to encroach outside the development boundary of Hanwood
A0258B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Part of the site for this 1,500 home extension is within Great Hanwood parish. The parish council objects to its allocation for development as it encroaches into the parish and the increased traffic at Edgebold will have an adverse impact on Hanwood; Edgebold roundabout and the A488 are already high risk areas for accidents and speeding and this development will worsen this issue.
A0260B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	I support the approach outlined in policy S16.1 'Development Strategy: Shrewsbury Strategic Centre' including the allocations for new housing development identified in Schedules 16.1(i) and 16.1(ii), and on the Policies Map. This appears to provide a balanced provision which meets the development requirements for Shrewsbury over the Local Plan period. I also support the aims outlined in Para 12 of this Development Strategy which recognise the special character of the town and its particular environmental challenges. This aims to ensure that the development of the town will have regard to '...the promotion, conservation and enhancement of the town's natural and historic features, heritage assets, green corridors and spaces, and ...Environmental quality, including the corridors of the River Severn and its tributaries, the town centre and the registered battlefield...' I am particularly concerned that the Kingsland /Rad Valley which provides a priceless mature asset, should be recognised as a key element of the Green Infrastructure within Shrewsbury. This river corridor should not be vulnerable to entirely inappropriate development proposals, similar to the recent Planning application ref: 20/03270/FUL.
A0267B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Evidence submitted for inclusion of site BNP037 in Baschurch. Statement outlines that the site is available and deliverable, and is suitably located near road networks and local services including a medical practice. The site has the potential to also relocate Baschurch Bowling Club with access directly onto Yeaton Lane, which has previously been discounted by Shropshire Council. Whilst the new bowling green would require enabling works in the form of residential development between the northern boundary of the bowling green and properties to the rear of Perrfield Road, the land owner would be providing the land for the club on a peppercorn rent. Additional site plan information also submitted
A0268B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Support proposed allocation of SHR197VAR. The site is ideally located to deliver vital employment land, adjacent to Shropshire main growth point, Shrewsbury. It is capable of expanding on the existing commercial focus of Shrewsbury towards its north east and the area around Hariescott whilst making the very most of two of the County's strategic transport corridors of the A49 and A53 (offering excellent transport links). It is also well located to allow access from/benefit from pedestrian and public transport links to the nearby range of employment, commercial and community uses as well as Shrewsbury Town Centre. It also benefits from PROWs that provide access into the Sandourne area of Shrewsbury, which could be diverted/upgraded to increase accessibility into town and from town into the countryside. There is a pressing need for more employment land in Shrewsbury, this has been consistently identified throughout the Local Plan review. Development of SHR197VAR can contribute to achieving the draft Spatial Strategy (urban focus and levels of employment land, identified within draft Policy SP2 and its explanation) and the objectives of the Economic Growth Strategy for Shropshire. In particular SHR197VAR can contribute to two specific objectives in the strategy, these being: directing economic growth towards a number of specified transport corridors and economic hubs in the County, two of which are identified as the Shrewsbury urban area and the A49 corridor; and targeting growing in under-represented sectors, including research and development and creative and digital technologies. Analysis identifies a steady decline in the delivery of Class B1(a), B2 and B8 since 2007, albeit it is acknowledged that there remains a demand for these uses. In parallel there has been an increase in both the delivery of and demand for Class B1(b) and B1(c) uses (this growth appears to have taken place across a network of 'Community Hubs' due to the ability to deliver more bespoke units at a lower market drawing a high proportion of start-ups and pioneer uses away from the current employment allocations and SUEs around Shrewsbury. There is therefore a need for sufficient sites at Shrewsbury to balance the delivery of traditionally popular, albeit space intensive, Class B2 and B8 uses with the emerging trend of new Class B1b and B1c uses. SHR197VAR can directly meet the qualitative needs of Shropshire, confirmed by an assessment of current market and employment trends undertaken by a local agent who concluded "likely to be a good demand for employment land in this location over the next 10 years. Considering the population of Shrewsbury and its status as the county town of Shropshire, the level of B1c users is generally low. There is a pent-up demand from employers who reside in Shrewsbury and wish to work in the town, but there is currently a complete lack of available sites and facilities", "a surge towards requirements from other employment sectors, in particular research and development, laboratories for the food industry and data storage, as well as some more general commercial uses for larger premises, which have been stymied through lack of opportunities", "available units in Shrewsbury are historically fairly small and therefore do not offer prospective occupiers the opportunity to expand in the future" and "demand for employment space in this location will increase over the next few years, specifically from the food industry. This would complement the start-up units at Shrewsbury Food Hub". SHR197VAR has a net developable area of 7ha and can accommodate approximately 20,000m2 of new employment floorspace (Gross Internal Area) comprising a mix of Class B1c, B2 and B8 uses - it is entirely flexible employment land that can respond to changing needs and help meet needs of Shrewsbury and Shropshire more widely. It will allow a rebalancing of employment growth at Shrewsbury away from the more traditional Class B2, B8 and office-based industries and provide more of a focus on information and technology industries. This will help effect the 'step change' required by the Economic Growth Strategy of the plan. SHR197VAR can also deliver structural landscaping and screening around the fringes of the site, including a landscaped drainage attenuation feature at its southern end, linkages to the existing road, footpath and public transport networks including enhanced footpath linkages across the site; and ecological enhancements throughout the site focused on the new landscaping features. SHR197VAR is immediately available, devoid of any environmental, infrastructure or legal constraints and demonstrably deliverable and developable. Development of SHR197VAR would be in full accordance with the wider suite of general policies of the emerging Local Plan - it has the ability to meet all of the standards set out in draft Policy DP12 and provide a range of employment units that deliver significant energy efficiencies was considered from the earliest point of the site's promotion. Site promoter has undertaken a thorough approach to site promotion and prepared significant assessments already which will allow for an early application and delivery to occur, this should provide confidence about deliverability. In terms of the specific merits of SHR197VAR there are no constraints that would hinder the development of the land - physical, commercial or otherwise. Market analysis has been undertaken by an agent and informed conclusion that the site would represent a highly attractive and sought-after location for a wide number of employment uses, especially those with a customer facing format. Due to the location of the site at what is effectively the northern gateway to Shrewsbury it will provide a high degree of immediate visual prominence from the strategic road network, maximising its attractiveness to commercial operators. It also benefits from good access to the strategic road network and potential to form part of a growing commercial hub, which adds to its attraction as a location. Due to the flexibility offered by proposed site guidelines (allowing Class B1, B2 and B8 uses), SHR197VAR there is flexibility to respond to needs and the market, although consider that it would be particularly well suited to Class B1(c) uses as targeted by the Economic Growth Strategy. It could similarly lend itself to a range of larger or even a single Class B2 unit in the sector of engineering, agri-food or agri-tech, helping to further the ambitions of the Big Town Plan. Also note continual need for Class B8 floorspace across Shropshire, particularly along the main distributor routes such as the A53 and A49 corridors. The site is well located, devoid of any barriers to delivery and resultantly would be subject of a high level of market demand. Appendix 7 of the Draft Local Plan suggests delivery between 2025 and 2035, however would expect delivery much more quickly in a maximum of two phases (based on market attractiveness of the location and site promoters commitment to delivery). Marketing will begin as early as possible once the allocation is secure with an expectation that it will be purchased by a commercial developer quickly. On this basis we would anticipate the quicker delivery of the site in its entirety, likely over the short to medium term of 2020 through to 2030 at the latest. There may be a need to clarify uses on the site given recent changes to the Use Class Order. An illustrative masterplan is provided as an appendix to this representation. Proposals respond to Council ambitions to create a more vibrant and diverse economy across Shropshire with Shrewsbury as its focus, whilst also delivering sensitive design that complements nearby existing and proposed uses. A viability report, access strategy, environmental opportunities and constraints technical note, heritage statement, Great Crested Newt survey and archaeological desk based assessment are also provided as appendices to this representation. SHR197VAR bolsters the Council's employment land strategy, one which would otherwise be partially reliant on two further allocations in Shrewsbury that are inflicted by a range of infrastructure and environmental constraints. It also offers flexibility and greater choice to the market. Consider delivery of SHR197VAR would complement the key requirements of draft policy SP1 entirely, specifically in the way in which it will provide a new modern employment development at a highly accessible location on the edge of Shropshire's key growth point, Shrewsbury. One of the key pillars of the strategy in draft Policy SP2 is the delivery of at least 15ha of employment land per annum over the plan period until 2038 focused primarily on Shrewsbury as the Strategic Centre of the County. SHR197VAR would help directly fulfil the spatial ambitions of the plan. SHR197VAR can also successfully and viably incorporate a range of low carbon energy systems and energy efficient fabrics and design. Its design and layout can also comfortably accommodate additional network of planting across the site as well as SUDs - masterplan provided as an appendix to this representation. SHR197VAR represent one of the most preferable locations for commercial development when assessed against the sequential approach described by draft Policy DP9. Major new employment development can be delivered at the site in such a way that does not have a harmful impact on the prevailing landscape character or nearby heritage assets. The orientation of the site, being bound by the strategic road network and both existing and proposed employment development beyond on two sides, would result in the delivery of a development that would both complement and strengthen the growing commercial hub at Battlefield Roundabout. SHR197VAR can be delivered in a way that is entirely sensitive to a combination of local habitats and existing trees and hedgerows. It does not contain any statutory or non-statutory ecological designations - the wider site features a number of potential habitats capable of supporting protected species, but none lie within the proposed allocation

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0272B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Promotion of an extension to site BNP035. The 2.15 acre site is a logical extension to BNP035 and would be directly accessed through this site. Development of the site could comply with guidelines proposed for BNP035 in that it would provide for a low density scheme which will include the delivery of a firm development edge to the eastern part of the site to ensure development is suitably contained, and would be served by a safe access through to Shrewsbury Road. The site would not encroach further north east than the adjacent estate to the north west and will result in a defined limit to the development in the area. Developer who is legally committed to develop BNP035 has indicated an intention to commit to this additional site, should it become a preferred option, demonstrating deliverability.
A0272B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Confirmation that site is deliverable immediately and is adjacent to residential development and with safe access. It is considered this site represents the most suitable site for housing in the village. The site is well located adjacent to residential development and with safe access. It is also considered deliverable with developer interest - a legal agreement (subject to planning) has been completed with Shingler Group Ltd to purchase and develop the site. Concept layout plan prepared by Shingler Group Ltd indicating how 23 units of mixed house types including "affordable units" can be provided together with three areas of open space, one of which would act as a small village green is provided. A separate submission promotes the area of land immediately to the north east of the identified site for further development as a natural progression of the site BNP035.
A0299B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Support the settlement strategy for Shrewsbury. Recognise the need to consider constraints to development, but consider its important that the Local Plan does not preclude opportunities to bring forward residential development on brownfield sites in the flood zone, particularly where an acceptable design solution can be identified that will ensure that new housing is not at risk of flooding and risk elsewhere is not increased/reduced.
A0306B064	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	We are concerned about firstly, the proximity of this site to a SSSI and secondly, the lack of mitigation measures mentioned in the plan:
A0313B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Alternative site promoted - as a hub Ford should have more than one allocation (FRD011 should also be allocated).
A0314B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Alternative site promoted - but not named. For a medical centre and dentist
A0316B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The sprawl needs to end. Battlefield village is now encased by industrial development. Lion Coppice is the last remaining wild green space inside the A49. By allowing this development to spill out over the A49 it opens the floodgates to more development along the A49 and the A53. This development means that there can be no expansion of the capacity of the A49. With the proposed North West Road channelling traffic onto the A49 via the Battlefield Link Road from the Ellesmere Road Roundabout, the A49 (already prone to traffic jams) will need widening to accommodate this traffic. By building along the edge of it it's stopping the opportunity to solve this problem.
A0321B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Support the letter sent by Longden Village Action Group. This makes the following points. Object to Longden being a Community Hub. The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings. The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster. The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents. Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements. A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions. New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage. The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council. Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far. Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost. If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur. Wish to remain a Community Cluster and not be a Community Hub.
A0326B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to any proposal to build new houses off Lyth Hill Road as such a development would lead to dangerous traffic conditions and a threat to public safety.
A0329B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The site is unsuitable for development as it is prime agricultural land. Agricultural land is essential for ecological, sustainability and economic reasons. This will become more acute after we leave the E.U. Building on this agricultural land compromises the ability of future generations to meet their own needs. This site is currently outside the development boundary. Extending the development boundary would adversely affect the character and identity of the settlement of Bayston Hill. Development of this site will also be detrimental to wildlife as it forms a green extension to Lyth Hill Country Park. Light pollution would be particularly detrimental to nocturnal wildlife.
A0330B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The site is unsuitable for development as it is prime agricultural land. Agricultural land is essential for ecological, sustainability and economic reasons. This will become more acute after we leave the E.U. Building on this agricultural land compromises the ability of future generations to meet their own needs. This site is currently outside the development boundary. Extending the development boundary would adversely affect the character and identity of the settlement of Bayston Hill. Development of this site will also be detrimental to wildlife as it forms a green extension to Lyth Hill Country Park. Light pollution would be particularly detrimental to nocturnal wildlife.
A0331B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	BAY039 should be removed from the draft Local Plan as: It is opposed by the local community, the previous Preferred Sites Consultation summary does not properly reflect this. It will result in unacceptable and dangerous increases to vehicles on Lyth Hill Road. There is no evidence of a comprehensive traffic survey having been undertaken, it had it would have noted existing traffic is considerable; numerous vehicles park on Lyth Hill Road obscuring vision - causing problems for pedestrians, cyclists, and vehicles (particularly large ones); a particularly obscured point is near the junction of Lyth Hill Road and Cornwall Drive/Clarkefields; and work on the A49 regularly disrupts traffic in Bayston Hill. These problems would be exacerbated by development of BAY039. Issues noted during the Preferred Sites consultation remain relevant, specifically: • The site is located beyond the current development boundary. • The level of traffic arising from development on surrounding unsuitable roads including Lyth Road. • Additional traffic will deter non-motorised users accessing the Country Park. • The site doesn't accord with the aspiration of the Bayston Hill Community Led Plan (2028) which desires small housing sites spread around the village and retention of the gap between Bayston Hill and Shrewsbury. • The site is remote from and has poor road access to most of the existing facilities in Bayston Hill. • Better alternative sites exist at the area to the northwest of BAY039. • Planning permission has already been refused for good reasons. • Would result in the loss of greenfield land.
A0345B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Hierarchy of Settlement Para 5.234 the criteria for designating hub status has been misapplied - querying the allocation of points for the size of the amenity space, bowling green, Library, Public Transport Forms 1 - 4
A0345B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Oppositor to building on site FRD011 - lack of infrastructure the village lies in a conservation area, is an ancient ridge, is a designated mineral safeguarding area, biodiversity present in and adjacent to the proposed site, following the recent housing needs survey the results found the demand for housing in Ford to be low with difficulty letting the recently built affordable housing Forms 5 - 9
A0346B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Hierarchy of Settlement Para 5.234 the criteria for designating hub status has been misapplied - querying the allocation of points for the size of the amenity space, bowling green, Library, Public Transport Forms 1 - 4
A0346B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Oppositor to building on site FRD011 - lack of infrastructure the village lies in a conservation area, is an ancient ridge, is a designated mineral safeguarding area, biodiversity present in and adjacent to the proposed site, following the recent housing needs survey the results found the demand for housing in Ford to be low with difficulty letting the recently built affordable housing Forms 5 - 9
A0347B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Regarding the recent plan review letter of objection sent to the Shropshire council by Longden Village Action Group. confirm total agreement with these views addressed in the letter of objection, which are widely shared by many locals.
A0349B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree on designation of Ford as a community hub. Believes the calculation of points has been misapplied. Not an adequate bus service, no bowling green and restaurant is outside the village. Ford has suffered from over development and contrary to national policy.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0350B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree on designation of Ford as a community hub. Believes the calculation of points has been misapplied. Not an adequate bus service, no bowling green and restaurant is outside the village. Ford has suffered from over development and contrary to national policy.
A0351B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Regarding the recent plan review letter of objection sent to the Shropshire council by Longden Village Action Group. confirm total agreement with these views addressed in the letter of objection, which are widely shared by many locals.
A0364B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Longden should remain a Community Cluster and not become a Community Hub. Longden cannot support more houses. The roads cannot cope with more vehicles or pedestrians. Residents want the village to remain peaceful and quiet. Development will destroy the way of life in the village. The character of other villages and towns has been destroyed by sprawling development and associated vehicles
A0374B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Wattlesborough is wholly sustainable with shops, school, village hall, employment and direct access to the A489 Trunk Road It is extremely frustrating to see the Parish Council maintain their open countryside status. A mixed residential development on WAH009 would ensure that young and old residents are able to stay in the village and contribute to the community. WAH009 is available and could come forward for development immediately
A0375B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Wattlesborough is wholly sustainable with shops, school, village hall, employment and direct access to the A489 Trunk Road. It is extremely frustrating to see the Parish Council maintain their open countryside status. WAH012 is available and could come forward for development immediately.
A0377B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disappointed Halfway House is being classed as open countryside. The Parish Council should consider the benefits of Community Hub or Community Cluster status, especially given the availability of a superb road network, shops, school, employment etc. Site HYH004 is available and it can come forward immediately for development.
A0378B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disappointed that sites STA005 has been identified as not having 'long term potential' for residential development within the SLAA. The site is available, adjoins existing built form within the settlement of Stapleton, with an established access to Council Road, is flat and wholly sustainable by virtue of Stapleton being part of a Community Cluster and as such presents a logical and suitable site for a modest residential development. Further evidence and layout plans can be provided as required.
A0379B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Pleased to note that BIT015 has been identified as having Long Term Potential for residential development within the SLAA. Consider that the sites could be considered to have short term potential as The land is currently available. Adjacent land has recently been the subject of residential development. The site is deliverable. The site adjoins existing development (to its north) is level, brownfield and easily developable. It performs 'fair' within the SA, which is better than many of the sites in Bicton. The site has direct access onto Bicton Lane which in turn leads to Holyhead Road. Further evidence and layout plans can be provided as required.
A0380B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disappointed to see that site MFB003 is classed as not having long term development potential. This site is ready for immediate development.
A0382B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Pleased to see site NES012 is identified as a long term potential SLAA residential site. We feel the site should be considered for short term potential due to availability, deliverability, accessibility and sustainability having achieved a fair status rating and could be delivered in a two phase approach. We are keen to offer the site for mixed residential development. Site plans attached.
A0392B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): The provision of a new Medical Centre has been identified as a priority by Baschurch Parish Council to support the development within the village and catchment area of the existing surgery, with work progressing on development of a Business Case. The provision of a road from Station Road to Eyton Lane has been identified as a priority by Baschurch Parish Council to alleviate the congestion and safety issues adjacent to the schools in Eyton Lane. Comment(s): The following to be added to support the proposed New Medical Centre: "Land has already been allocated through a 106 Agreement to support a new Medical Practice which is to be further supported by the requirement to allocate additional land to this project from the adjacent allocated site. The provision of a new Medical Centre is a priority for the residents of Baschurch and the catchment area of the existing Surgery due to the significant existing and planned development within the catchment area." The following to be added to support the link road: "A link road, suitable for use by coaches, between Station Road and Eyton Lane is a priority to alleviate the traffic and safety concerns adjacent to the schools in Eyton Lane. Any future development in adjacent sites will need to contribute towards this
A0392B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): That the statement that Shrewsbury is the primary focus for new development in the County will be read across to the Community Hubs, Community Clusters and the Countryside within the Shrewsbury Place Plan area. These should be developed with the same priority as all other similar areas with the County. Comment(s): There is a risk that the whole of the Shrewsbury Place Plan will be deemed as the primary focus for new development instead of just the town itself as the strategic centre. The wording needs to be made clearer to prevent the whole place plan area being subject to a priority within the County.
A0392B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): Experience has shown that numbers are being treated subjectively and the addition of the word "around" makes that even more subjective and open to interpretation to a much higher number. There is already the ability for the numbers to be increased through a process in SP6, so there is no need for an approximate value in this table. Comment(s): The settlements' residential guidelines show for Baschurch "Around 360 dwellings". The term "around" is too loose and open to a very wide interpretation without any limit in the upward direction. It is accepted that the Residential Guideline can be exceeded but this is in accordance with SP6 Paragraph 3 where additional considerations need to be addressed. Therefore, there is no reason for the word "about" or "approximately" to be used and a firm number will ensure that the requirements of SP6 Paragraph 3 will apply at that number and not at 110%, 120% or whatever number can be subjectively applied by an applicant at the time.
A0392B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): That a solution to the junction onto Shrewsbury Road is not adequate for the traffic from the current and allocated development sites accessing Shrewsbury Road. Comment(s): The Development Guidelines state "All necessary highway improvements, including to the main access junction onto Shrewsbury Road will be undertaken." To make clear the improvements required, this shall include "....., where at least a mini roundabout shall be provided."
A0392B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): That a solution to the junction onto Shrewsbury Road is not adequate for the traffic from the current and allocated development sites accessing Shrewsbury Road if BNP035 is developed before BNP024. That there is no community benefit from this site so therefore the provision of affordable housing should be increased to 20% instead. Comment(s): The Development Guidelines state "An appropriate highway access will be provided and all necessary improvements to the local highway network implemented." Should BNP035 be developed before BNP024, then the road improvements to the main access junction onto Shrewsbury Road shall be undertaken, where at least a mini roundabout shall be provided. This site allocation has no other community benefit within the guidelines and therefore a requirement for a minimum of 20% affordable housing in accordance with DP3 shall be provided on this site, even if this means enlarging the site to accommodate the additional Affordable Dwellings only. We appreciate that the target in DP3 is 10% in the north and 20% in the south, but we would like to ensure 20% in the north where no other community benefit is being provided
A0392B16	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Risk(s): To provide an additional allocated site within the already allocated Residential Guideline. Comment(s): This site is in the area of what was BAS034 in the previous plan period. Still being reviewed, to be presented at Parish Council Meeting 5 October 2020 and submitted separately. Note we have an informal extended deadline to accommodate our further work in this area. The submission will include a comment to stipulate the area allocated to parking for the station should be conditioned in S106 to be available for the duration of the plan period (2038

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0415B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am writing to say that I agree in its entirety with the "Objection from the Longden Village Action Group" to the "Shropshire Council Local Plan Review". I also agree with the "Longden Village Development Statement 2017-2027". 1. Also, connecting Longden to the rest of Shropshire are very poor. I understand that the best road, which is the main Shrewsbury road, was downgraded by the council in the 1960s to no longer be a B road. There are many blind corners on this Shrewsbury Road. This is a dangerous road. A little North of Hook A Gate is a weak railway bridge that it is not recommended to drive large lorries over. I understand that this Shrewsbury Road cannot be improved by for example building bypasses because it runs within a narrow valley. Longden is a gateway to the Shropshire Hills and so road building here is much more difficult and expensive than it would be in the North Shropshire Plain. Many people in Longden do not work in Shrewsbury because of the limited job opportunities there. Instead they work in Telford or Wolverhampton or beyond. The most important road out of Longden is the single track road to the A49. With increased traffic in recent years I have met far more oncoming cars on this road than I used to. This bottleneck would become much worse if a significant number of new houses was built in Longden parish. This road emerges onto a hill on the A49 with poor visibility of cars travelling North on the A49. It is not a good spot for a new improved road to emerge onto the A49. I do not believe that it would be viable to build more than a the number of houses proposed in the Longden Village Development Statement without a dramatic and expensive improvement to the roads around Longden. 2) The last bus from Shrewsbury to Longden is at 18:05 and the first bus from Longden in the morning is at 08:10. I believe that even for someone working in central Shrewsbury it would not be possible to commute to and from Longden using the bus service. Leaving work early each day at 17:30, especially if you had not got in until 09:30 that morning, would be unacceptable to most employers. For a commuting bus to be viable, the last bus would need to be at 19:00 or later. Commuting to a more likely centre of employment such as Telford would of course be impossible using the Longden bus service. 3) A number of "facilities" around Longden have been awarded a points score similar to that of Pontesbury to justify Longden also being defined as a hub for house building. Pontesbury Library is open for 4 days a week, including Saturday. The library bus that turns up infrequently in Longden offers a much poorer service. Similarly the opening hours for Longden shop are much shorter than those for the Coop in Pontesbury which unlike the shop in Longden has a good range of reasonably priced products. The Tankerville Arms in Longden seems to only be open erratically due to a lack of customers. I suspect that it will shut. Similarly the Church (when it was open) did not have weekly services. Annscroft Church is the only well attended Church in this group of parishes
A0423B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Condover should be a Hub
A0423B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Policy 16.2 put forward in the Plan Review omits to include this significant settlement from the list of proposed Community Hubs in the Shrewsbury Place Plan. Condover is a significant settlement in the rural area south of Shrewsbury and this proximity makes it more important that it should deliver a mix of housing based on identified land allocations in the Local Plan. We disagree with this omission. In our view it is not correct to rely on a Neighbourhood Plan given the clear housing need for the types of housing identified in the HNA.
A0439B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to proposed allocations BNP024 & BNP035 and consider BNP021 would represent a more preferable allocation. BNP021 is located adjacent the Corbett Secondary School, Pre-School, Baschurch Village Hall and Sports fields. It could be developed to accommodate the proposed housing growth for Baschurch, replacing the proposed allocations (BNP024 & BNP035). BNP021 would form a natural and logical addition to the built form of the village/committed developments and allowing comprehensive development and a 'rounding off' of the settlement. It performs 'good' within the SA and had 'long term potential' with the SLAA (consistent with the proposed allocations). It is considered misleading that the full extent of committed developments are not included within the development boundary. The committed residential sites to the north, afford the opportunity for access and linkage, thus limiting the impact/congestion on Eyton Lane and providing an opportunity to improve traffic links to Station Road. BNP021 could be phased to deliver across the plan period. BNP021 is largely void of substantial landscaping and has low ecological potential (owing to them being in active agricultural use). As such there is potential to enhance and improve the landscape and biodiversity of the site and its surroundings. BNP024 & BNP035 are too remote from core facilities of the village and can't provide the localised road network betterment that development of BNP021 can. The Parish Council are keen for ned development to deliver tangible community benefits. BNP021 affords the opportunity for improvements to Eyton Lane, which is busy with school traffic (both pedestrian and vehicular).
A0450B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Biton Parish Council object to scale of housing development in Shropshire and proportion of housing in Shrewsbury due to impacts on environment and urban infrastructure specifically the page 6, para 2.2 - proposed scale of housing development increases dependency on private vehicles and is not consistent with objective to achieve net zero carbon economy page 6, para 2.5 - housing requirement for over 30,000 dwellings is excessive (equal to 20% of current 138,000 households in Shropshire) page 8, para 2.19 - Local Transport Plan should have been deposited with the Local Plan to help assess the transport impacts of the scale of development page 10, para 2.25 - Infrastructure Plan should have been deposited with the Local Plan to help assess whether social and other infrastructure had been adequately improved before development commence
A0450B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Policy S16.1 and para should not require Shrewsbury and the surrounding rural area to achieve such a disproportionately large quantity of the housing development proposed in Shropshire. Shrewsbury could become so densely populated and developed that it deters further business growth and inward investment. In para 5.222, the development and infrastructure provision for Site SHR057/SHR177 cannot realistically be presented as necessary to support improvements to Shrewsbury's green infrastructure. In para 5.223 the detailed masterplanning of this development will also require a strategic planning input and investment from the local authority to avoid any adverse impacts from this development on Shrewsbury. The development guidelines for this site should also address the following impacts of the proposed housing development: 1,500 dwellings will accommodate over 2,500 private vehicles which will conflict with traffic on Mytton Oak Road especially ambulance movements traffic from the development will increase movements on the A5 by-pass and is likely to exceed existing capacities of some roundabout junctions and it is difficult to see how planned road improvements could mitigate for the growth in traffic movements the impacts on social and other infrastructure in the west of Shrewsbury should be mitigated by both site SHR057/SHR177 and by site but this latter development does not appear to be providing any additional infrastructure investment:
A0451B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Longden should not be designated as a Community Hub. The infrastructure of the village can only support a small number of new houses and cannot support the larger scale of development being proposed in the village.
A0455B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Development of BAY039 will result in the loss of agricultural land with an environmental value that is of value to the country. Where new housing is required it should be built on brownfield land. New housing on Lyth Hill Road will increase traffic use along this road (used to relieve flows along the A49) which is already heavily used and affected by speeding. This traffic will also increase volumes at the A49 junctions in Bayston Hill and at the Lyth Hill junction north of Dorrington. These traffic impacts will also be driven by residents accessing local services. The development of BAY039 will also increase pedestrian movements along Lyth Hill Road, increase the flood risk and impact on the capacity of local services. The development on this land has already been refused and this proposal must show how it is different, improved or better.
A0455B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Development of BAY050 which includes BAY012 The Glebelands will result in the loss of amenity land with habitat. Plans submitted for planning approval for these sites indicate the proposed development provide only limited open space and a replacement vicarage whereas Bayston Hill still has a functioning vicarage. This will increase traffic at the heavily used and dangerous A49/Lyth Hill Road junction and increase demands on local services with limited capacity. Development and the increasing population in Bayston Hill will forever alter the character of Bayston Hill.
A0477B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to designation of Longden as a Community Hub as the village should remain a Community Cluster. In the Settlement Hierarchy assessment of Longden - the public house is struggling to remain open following recent temporary closures and broadband and mobile phone not-spots affect the village. School Lane in Longden is an unadopted, single lane road affected by inadequate passing places, severe flooding, increasing through traffic, increasing services vehicles to the Golden Arrow Court business park, traffic volumes damage roadway services including water pipes and further development will affect amenity uses along the lane.
A0488B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I object to any Development on the land bounded by Longden Road to the west, the A49 to the east, the A5 to the south and the southern edge of Meole Village (Washford Road, Pendle Way, Milnthorpe Close and Waterside Gardens). This land should be designated 'open Countryside' and not subject to development, without full consultation with Meole Residents. I object to the Development on SHR 145 unless this includes additional vehicular access to Meole Brace Retail Park, sufficient to fully relieve traffic congestion on the Park and also to facilitate walking and cycling, consistent with Government Strategy (Strategy for Investment in Cycling and Walking 2017) and the recent update (Feb 2020) plus The Low Traffic neighbourhood and Shropshire Climate. Partnership Strategy (due for publication December 2020). The Meole Traffic Group requests a Professional Assessment of the provisions for traffic, including cycling & pedestrians for the Meole Area & adjacent roads and parking, as part of this review, to include consultation with Residents at all stages, including Terms of Reference, Scope of Assessment, publication and implementation. I formally request a review of the Meole Community infrastructure, including the need for a Doctors' Surgery or satellite of existing Surgery, Pharmacy provisions & a modern Community Centre immediately. I formally request that Shropshire Council should facilitate a Local Neighbourhood Plan for Meole, as it is an ancient village with fewer Community Facilities than neighbouring Wards, with multiple recent Housing Developments impacting on Meole, including traffic issues, and there is a pressing need to implement several Government Papers and both National and local Initiatives, including (among others) those described in Paragraph 2 of this page
A0501B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Paragraph 5.224 It is incompatible with the council's own declaration of climate emergency to make planning decisions that will increase carbon emissions. New roads bring more traffic as a result of the induced traffic effect. More cars and more car journeys results in more fossil fuel being burnt, and there is the carbon from the building and maintenance of the road, plus carbon sequestration lost in the destruction of habitats to make way for the road. Transport carbon emission are rising in Shropshire and now stand at 37%. This local plan needs to contain targets in every sector for % reduction in CO2 emissions year on year. As a direct consequence, the proposal to build a North West Relief Road is incompatible with a climate emergency and the requirement to reduce the county's carbon footprint. The large amount of tax payer money that the council has committed to this road should be spent on carbon reduction projects throughout the county. £17 million could be wisely spent in ways that benefit the whole county and genuinely support efforts to mitigate climate crisis. I disagree with paragraph 5.224 because the NWRR proposal should be abandoned. https://bettertransport.org.uk/roads-nowhere/induced-traffic
A0509B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Development of 125 new households in Ford contradicts the Council's stated aims on climate change and the environment 1. Ford does not have a regular bus service – and none at all in the evening and on Sundays 2. Ford no longer has a railway station 3. Ford does not have any local industry People moving to Ford, if they work, will need to drive to Shrewsbury or beyond, and return in the evening. ONS statistics show an average of 1.3 vehicles per household. 125 new dwellings will yield 162 new vehicles in the village. This is probably an underestimate because all working age people who move to Ford will need to drive. If environmental protection and tackling climate change were to be taken at all seriously by the Council, it would site new development near transport hubs and places of work
A0509B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagrees with Ford classification as a hub and questions scoring given to some services in Ford.
A0509B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to allocation of the site as 1. Lower Farm has been the centre of the village for centuries 2. It is home to bats, swallows, crested newts and many other endangered species 3. It is in the Ford 'Conservation' area Any building, other than for farming and improvement should never be allowed on this key environmental site at the heart of the village. Any attempt to build on it will meet with the strongest opposition at both local and national level
A0509B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Concern that there are insufficient school places at Ford Primary school to accommodate increase in pupils from the new housing being proposed
A0513B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Supports proposed Development Boudnary, but would also be appropriate to include the MB park and Ride site within the dev boundary as a natural extension.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0513B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	MD&DP support the Council's approach of identifying Shrewsbury as the primary focus for new development within the County. This focus of growth would aid in meeting Shropshire's Strategic Objective of continuing to maintain Shrewsbury as the County's Strategic Centre and develop it into a sub-regional centre. Shrewsbury is already well established to manage the expected housing and economic growth and should be the focus of new homes, new jobs, further retail and leisure and where necessary infrastructure improvements. This is considered the most appropriate and sustainable area for the County to grow and MD&DP support the Council's approach to implementing this through the Reg 18 Local Plan.
A0513B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	MD&DP further supports the Council's allocation of Land to the south of Meole Brace Retail Park as Site SHR145 as a housing allocation within the Reg 18 Local Plan. It is considered that this site represents a sustainable location and should be kept as an allocation for new housing site with the capacity to include extra care/assisted living facilities. Notwithstanding the recent refusal of this site at planning application stage (19/04389/OUT) the application process established (and officers accepted) that there were no technical reasons why the site couldn't come forward for residential development. There were no technical objections from any Council Department nor any Statutory Consultee. No specific issues raised by highways, regulatory services, flooding and drainage, or archaeology, ecology and trees. The allocation is deliverable in the short term. In addition, as part of the planning application it was agreed that the development of the Site would provide a number of public benefits. However, would like to see site guidelines amended to... "Vehicular access will be provided off Hereford Road to serve the development and the adjacent park and ride site. Any mature trees, hedgerows and priority habitats will be retained and where appropriate be enhanced and expanded to form part of the green infrastructure network. Acoustic design, layout, green infrastructure and appropriate building materials will be used to manage noise arising, including from the adjacent Meole Brace Retail Park, Hereford Road, A5, the railway line and the Park and Ride. This will need to follow Good Acoustic Design principles set out in ProPG and associated supplementary guidance. The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere."
A0518B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The Council appears to have removed the community cluster status of Uffington without justification This is all the more surprising in the circumstances that the SAMDev housing requirement for Uffington has not been delivered by the development of the allocated UFF006/10 site which has only provided a single dwelling. It is Les Stephan Planning's client's view that development status of Uffington should remain as a "cluster" with further sites being allocated to address the shortfall in delivery since the SAMDev was adopted and meet the growing need for the different types of housing identified in the NPPF and the draft Local Plan (Policies DP1 – DP7). This will become increasingly important if the revised housing methodology for Shropshire becomes national policy in late 2020
A0520B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Objects to designation of Longden as a hub. Further development should also be avoided as the road access to Longden is narrow and would create more traffic passing Meole and Priory schools in Shrewsbury; other small local roads are regularly used by large agricultural vehicles and not suitable for commuter traffic. Longden only has a limited number of services and parking for these is limited. Longden also has lack of employment opportunities and people would have to commute out of the village
A0526B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Proposes sites BNP033/BNP040 for housing allocation on the southern edge of Baschurch in Prescott further to the landowners submission to the Strategic Land Availability Assessment. BNP040 contains an equestrian centre with stables, menage and paddocks adjoining a single residential property fronting onto the B5067 and is contiguous with adjacent paddocks under BNP033. A planning appeal decision is submitted for a similar land use in Lavendon near Milton Keynes in Buckinghamshire. In the decision, the Inspector concludes an equestrian centre and the related paddocks may all be regarded as previously developed land. In the context of NPPF test of sustainable development, planning permission was granted for the redevelopment of the lands for housing. It is suggested BNP033/BNP040 also be allocated for housing development on the same grounds.
A0538B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Cross Houses should remain a Hub. Cross Houses has had enough house building in recent years. Cross Houses' residents should have had the option to remain as Open Countryside. The points scoring is flawed – only have mobile library, only 1 children's playground, 1 amenity green space, the outdoor play facility is just a field. The Inspector should inspect all the facilities to determine whether SC is correct.
A0557B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with Ford becoming a Community Hub as it doesn't have the infrastructure or amenities to support 125 new houses. Don't believe that the overgrown bowling green can be classes as a sports facility. Ford lies within a conservation area. Local housing survey 2019/20 showed demand for new housing is low. Also the site allocated for 75 dwellings FRD011 is an ancient ridge and furrow field that should be protected. Development on this land conflicts with DP24. This land should be protected.
A0571B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Support allocation of site SHRD60 Hanwood Road Shrewsbury, along with neighbouring SHR158 and SHR161 which form a sustainable location for future development. Initial designs for the site suggest it can accommodate 439 properties, along with 0.5ha of employment land and a green wildlife corridor. Proposals for a local centre, medical centre and increased education capacity in this area of Shrewsbury will in close proximity to this site and easily accessible via sustainable forms of transport including walking and cycling. Highways reports indicate that Hanwood Road will provide adequate access to new development on the site. Whilst the SC viability study list the site as marginal we believe this is a worst case scenario and would welcome further discussion with SC on this matter. We consider the site is deliverable and viable within the plan period
A0572B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The majority of the site allocation (SHR158) is promoted for development by CEG who are a strategic development and investment company operating across the UK. CEG have been leading discussions between the two other landowners forming the draft allocation; Mr Roger Parry (on behalf of Davies Parry (Oakfields) Limited Site SHRD60) and Shropshire Council (via their Estates Team Site SHRD61). CEG confirm that the proposed site allocation is both viable and deliverable. We have extensively reviewed the policy requirements and 'Development Guidelines' provided in respect of the Site's allocation in the Regional 18 Pre-Submission Draft Shropshire Local Plan and do not anticipate any issues in the Site's deliverability or viability in this respect. Notwithstanding the above, we would welcome the opportunity to discuss the assumptions made within the Study. The Study makes various assumptions regarding the delivery of the allocation, in particular a £17.38m cost of abnormal site infrastructure costs, which the Study's author states is a high level assumption provided by the Council. It would be most helpful to CEG to understand the assumptions behind this cost in more detail, and we would welcome a process of engagement with the Council over the coming months. CEG confirm that the assumptions made with regards to the timescales for the delivery of the proposed site allocation are correct, given the scale of the development proposed. In respect of deliverability CEG are committed to bringing forward an outline application as soon as possible and in advance of the Examination in Public. Some early discussions with housebuilders have taken place and it is expected that a proportion of the site will be available early in the plan period. Naturally, a site of this scale will be phased, and a phasing plan will form part of the outline application.
A0598B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Wishes to see Cross Houses designated as Open Countryside, not a community hub; concern Parish Council are not objecting to designation as a hub; concern about points given in hub status for library, playground, green space and outdoor sports facility
A0600B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Community consultations in Ford have shown that the general population do not support high growth in housing in the village. Greater consideration of community wishes should be reflected in the designation of Ford as a Hub
A0637B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am local to Longden and have lived in the Parish all of my life. I wish to write and tell you that I strongly agree with the objections that have been sent to you by the Longden Village Action Group. I feel certain my views are shared with many in our Rural community.
A0639B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Ford being a Hub. Quail Ridge Amenity Green Space wrongly includes the play area and Advanti LPG gas tanks: the correct area is 0.19ha therefore 3 points should be deducted. The bus service arrives at 6.08pm and a service not in the parameters of the village arrives at 4.52pm; deduct 5 points. The outdoor sports facility is not publicly accessible and is subject to a planning application for storage: deduct 1 point. The library service is restricted and not accessible - 1 visit every 2 weeks for 20 minutes: deduct 1 point. Ford lies within a conservation area. Points have been wrongly allocated to "Make" the criteria suit. The criteria has been implemented to suit the Council not the residents. Soils within Ford as classed as good to very good and should remain as agricultural land. Ford is designated as a mineral safeguard area this conflicts with SP13. Field FRD011 is an ancient Ridge & Furrow field and this loss would conflict with Policy DP24. The loss of FRD011 would have detrimental impact of the local biodiversity especially the loss of hedgehogs and other hedgerow wildlife. The local Housing Survey reported a low demand for new housing with a lack of rental take up on existing properties. Field FRD011 lacks the infrastructure connections to facilitate a high density development. Access to the main road at peak times is difficult especially making a right turn towards Welshpool. Trinity School has no room for expansion for the development of Cross Gates Meadow. The 75 proposed dwellings would produce many more than 1 child Existing residents' children would be forced out of local education. Existing residents' mental health will be impacted as a result from building noise, builders working weekends, Builders working past 5pm, loss of privacy to rear gardens, loss of privacy to windows facing field FRD011. Loss of public footpath/common land as this has been used for many years as a green space. 75 houses is not low density this should not be allowed a figure of below 50 should be considered if at all. Access at peak times along Butt Lane does not support development, building or construction traffic. Loss of community.
A0641B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Concerned about infrastructure, lack of open space and play facilities, lack of bus routes, school and medical facility and community room to serve the additional population. Developments should be built in parallel with essential infrastructure. Green networks are essential (DP13 & DP15) so existing boundaries around site 060 should be retained. Full public consultation should be carried out on the master plan before finalising proposals.
A0642B50	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The case for the NWRR is weak. It should be omitted from the Local Plan unless a revised business case and carbon assessment shows that it still makes economic and environmental sense. The Shrewsbury Place Plan Appears to allow commercial development but not residential in the area west of Ellesmere Rd but this is not clear. 10a: The reinforcement and enhancement of the local and strategic highway network: Investment in roads is not consistent with the Climate Emergency or Net Zero CO2 target. Shrewsbury Integrated Transport Strategy, the Big Town Plan Movement Strategy and the Shropshire Local Transport Plan: None of these documents are available for the consultation and it is not clear how they support or are supported by the NWRR
A0642B51	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	This seems to get the green light assuming NW road built – but traffic won't be included in NWR assessment. This needs to be included as understanding cumulative impacts of developments is essential.
A0642B53	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Para 5.224 The traffic implications of SHR173 need to be included in the NWRR traffic modelling to assess cumulative impacts.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0651B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Petition objecting to the identification of Ford as a proposed Community Hub and the proposed allocation of FRD011.</p> <p>258 (84.9%) of dwellings responded and 46 (15.1%) were not at home/unoccupied. Of those available:</p> <p>2 (0.8%) were in favour of Ford being designated as a Community Hub and the subsequent housing development.</p> <p>15 (5.8%) refused to sign for other reasons.</p> <p>241 (93.4%) were in support of this petition.</p> <p>The results of the petition clearly show overwhelming support for its aims and objectives.</p> <p>Consider that the criteria for identification of Ford as a Community Hub are incorrect as:</p> <ul style="list-style-type: none"> -Amenity Greenspace at Quail Ridge: If the gas tank and play area (already allocated points) are excluded, then the amenity area is below the size threshold of 0.2ha. Meaning a reduction of 3 points. -Bus Service: There is no return service arriving between 3 and 6pm, it arrives at 6:08pm. There is one bus that arrives in Ford parish at 4:52pm but it only stops opposite the Smoke Stop, now within the parameters of the village/development boundary and not within a reasonable walking distance of the village. Meaning a reduction of 5 points. -Outdoor sports facility: The redundant bowling green is overgrown and not accessible to the public. Planning Application for storage units pending consideration. Meaning a reduction of 1 point. -Library: Mobile library for 20 minutes once a fortnight should not be allocated 1 point less than a permanent library open 6 days a week, as it is a far more limited service. <p>Object to identification of Ford as a proposed Community Hub and proposed development for the following additional reasons:</p> <ul style="list-style-type: none"> -The village lies within a Conservation Area (limiting potential for infill and potential harm to the character of the Conservation Area). -Soil types within and surrounding the area are good/very good (Grade 2 and 3) for agricultural use. -Ford is designated a Mineral Safeguarding Area and proposed development conflicts with draft Policy SP13. -FRD011 is an ancient Ridge and Furrow field that should be protected. Its proposed development conflict with draft Policy DP24. -The required Environmental Impact Assessment will highlight biodiversity present in and adjacent to FRD011 that should be protected. -A Local Housing Survey undertaken in 2019/20 showed scale of demand for new housing was low. This highlighted that it has been particularly difficult to find tenants for the recently completed affordable housing at Cross Gates Meadow (32 dwellings). Officer observed the results of this survey did not provide much evidence for a big increase in development. -Ford is a rural village that lacks infrastructure to support the level of extensive development resulting from Community Hub status. Concerned that if identified as a Community Hub, this status will be permanent and lead to development beyond the development boundary in the medium to long term.
A0652B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	agree in principal with some considerations - ensure that the wildlife pond is protected - consider green corridor. increased traffic along squinter Pip Way and Red Deer Road. consider parking and increased road traffic
A0674B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Object to Longden being a Community Hub.</p> <p>The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings.</p> <p>The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster.</p> <p>The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents.</p> <p>Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements.</p> <p>A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions.</p> <p>New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage.</p> <p>The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council.</p> <p>Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far.</p> <p>Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost.</p> <p>If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur.</p> <p>Wish to remain a Community Cluster and not be a Community Hub.</p>
A0682B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am concerned yet again regarding the possibility of Longden village becoming a "hub" for housing development. Longden is on a B road and the already difficult traffic flow will only get worse and more dangerous. The road network in and around Longden does not support Longden becoming a "hub". Longden is surrounded by public footpaths, some of which will disappear if village be one a hub. Not only will recreational enjoyment be curtailed, the visual, and noise impact will be substantial to the village. The government is actively encouraging people to get fit and walk locally, but this development will significantly limit this.
A0684B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Opposes the designation of Longden as a hub settlement, and questions the scoring process of the hierarchy of settlements document - including why Longden is allocated 3 points for a library when its only a mobile, the same as Pontesbury which has a permanent new library
A0686B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Oppose allocation of BAY039. The site was turned down only three years ago. Shropshire Councils own criteria suggests BAY040, BAY042, and BAY048 are available and score as well or better in the Sustainability Appraisal and Site Assessment Environmental reports. Access to the site is poor and there are already issues with speeding on the road. Access from the A49 to the road to the site is also poor, and when accidents occur on the A49 this road is used as a cut through. Flooding on the site is a concern and drainage in the area could not cope with further increase in water. Bayston Hill Parish Council does not support the allocation of this site. Designation of Bayston Hill as a "preferred development area" and changing the boundary seems underhand and has not given people without social media information an issue. Consulting during a pandemic means people haven't been able to meet to discuss the process
A0686B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Other sites in Bayston Hill are more appropriate and better meet the Sustainability Appraisal and Site Assessment Environmental criteria; disputes that the site is within easy walking distance of the GP and shops services school and other facilities. The sites proximity to the Lyth Hill Country Park is also an issue that seems to have been overlooked. Concern that the site won't provide enough off street parking and excess cars will block up Lyth Hill Road affecting access to Lyth Hill for walkers, cyclists and horse riders
A0694B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Support objections to the identification of Longden as a Community Hub by community groups. Longden is only served by one relatively small road from Shrewsbury to Bishops Castle, going North to South and two small single track roads going East to West. Traffic on the North to South road is already restricted by having to pass through the village of Anncroft where many Properties have no off-street parking, resultant on-street parking at times causes vehicles to be held-up waiting to pass. Further development at Longden, one mile away would only exacerbate the problem.
A0716B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Longden should not be a Hub - roads a poor/narrow, limited pub access, limited library access, shop & post office are one building, broadband only available via satellite link.
A0717B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Roads are narrow and dangerous with school children - more houses will exacerbate this problem, the Shrewsbury-Longden road does not merit even a 'B' road status,
A0838B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	My comments relate to two issues connected with sites SHR 161, 158 and 060.1) Whilst I disagree with the scale of development proposed in the Local Plan in general, and these sites in particular, some development will inevitably take place in this part of Shrewsbury. Shropshire Council needs to ensure that it does not make the same mistakes that it made in the current DanlvsWalk/Bowbrook housing areas where it has allowed extensive housing to be built without ensuring that the necessary infrastructure was built at the same time. I refer in particular to proper footpath access to reasonable amounts of open space; to the lack of any play facilities for children; to the lack of a bus route; and to the lack of a school, medical facilities or community building to serve a population that is considerably greater than many of Shropshire's larger villages. It is within the control of the planning system to place conditions on planning consents to ensure that large scale developments are built in parallel with essential infrastructure. The draft Local Plan has a raft of policies dealing with these issues. but the policies are of no value if they are not used and enforced. Be bold, and don't let it be just another housing estate! 2) My second comment is more specific. It will need to be realised through the eventual Master Plan but is still relevant to this consultation. There is a need to ensure that extensive green networks and corridors are created for wildlife and to maintain open views, and this is reinforced in Local Plan policies DP 13 and DP 15 in particular. There are several swales and water features that run through the existing Darwins Walk/Bowbrook housing areas, and these, together with hedgerow continuity, offer the opportunity to make continuous habitat links which allow wildlife to flourish. In one area in particular there is the opportunity to create a network from the existing open space of the Community Woodland and ancient wells at Nobold Lane, across the A488 Hanwood Road, and along the line of the current water feature north of Violet Grove and Red Deer Road. Site 060 is adjacent to this area, and to fulfil the corridor concept it would be essential to keep the boundary of any building on this site well to the north of the current water area and nearby hedgerows. It would be very helpful if the Council could ensure that a full public consultation is carried out on the Master plan before any of its proposals are finalised.
A0857B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Opposes inclusion of Valeswood, Great Ness, Little Ness and Hopton as a community cluster. Area has already had extensive development in the last 5 years, and significant development is planned in nearby Nesscliffe and Baschurch, and two large poultry farms have also been developed in the area. The road network is not suitable for increased levels of traffic and is also heavily used by large farm vehicles and HGV's. Public transport in the area is also poor, and few job opportunities. Nesscliffe Country Park is likely to be designated as a nature reserve and new housing will be detrimental to this designation

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0862B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Support draft Policy S16.1 and the settlement development boundary as now shown on the Policies Map. As the county's strategic centre, Shrewsbury is an appropriate location to accommodate growth. Land within the town's bypass offers some of the most sustainable locations for development anywhere in the county. Draft Policy S16.1 sets a housing requirement of 8,625 dwellings for Shrewsbury over the 22 year plan period 2016-2038. This equates to a growth rate of 1.17% per annum of Shrewsbury's estimated 33,597 dwellings. The compares positively to the overall growth of 1.13% per annum in the number of households in Shropshire over the plan period. However it is only marginally above the projected increase in households in Shropshire, so the town's growth is barely more than the county's as a whole. In light of this, the policy should seek 8,625 dwellings as a minimum figure. Expressing the housing guideline figure as a minimum figure will support the Plan's strategy to focus development in urban areas. Strongly support allocation of SHR054a as: <ul style="list-style-type: none"> • It provides better balance of residential development across the town, being one of only two sites north of the river and the only new allocation on east side of Shrewsbury; • It enhances Shrewsbury's ability to deliver its housing requirement of 8,625 dwellings; • It reduces the Plan's reliance on unidentified windfall sites (currently 505 dwellings); • It is sustainably located close to a range of existing services and facilities including schools, doctors, shops, public transport and a very good range of sports and health facilities; • It makes better use of currently under-utilised agricultural land separated from wider land by the bypass in accordance with paragraph 118d of the NPPF; • Allocation of the site is consistent with the allocation of site SHR166, which is also within the Shrewsbury bypass; • The Landscape Report provided to the Council in September 2019 confirms that the site will have an acceptable impact on wider landscape; • Development of the site will provide a pedestrian route from the Shropshire Way footpath along the river to Sundorne Road as part of the site's green infrastructure contribution, enhancing the town's network. Residential development will have to comply with draft Policy DP1 (Residential Mix) which requires sites of over 5 dwellings to include 25% of dwellings to be 2 bed or less and a further 25% 3 bed or less; and sites of over 50 dwellings to include a range of specialist housing to meet the needs of older people. These requirements will reduce the average size of dwellings significantly. The indicative layout plan for the site that was submitted with the 'Call for Sites' assumed an average floorspace of around 115sqm per dwelling. The emerging policies will bring the average floorspace down to around 85sqm. Smaller units require an increase in the number of dwellings by approximately 35% in order to achieve the same floorspace coverage. Therefore, in order to achieve the same floorspace as shown in the indicative layout plan at these smaller sizes, there would need to be at least 81 dwellings on the site. Draft Policy SP1 (The Shropshire Test) requires development which, "makes efficient use of land" and draft Policy SP5 (High-Quality Design) includes a requirement to make, "efficient and effective use of land and topography". Support these sections of Policies SP1 and SP5. SHR054a is 3.86 hectares in size, the proposed guideline figure of only 60 dwellings is equivalent to a density of only 15.5 dwellings per hectare. This is inconsistent with draft Policies SP1 and SP5 as the site is capable of accommodating 116 dwellings at a density of 30 dwellings per hectare. Acknowledge that some of the site will be needed for compensatory car parking for the Shrewsbury Club, however this does not justify a reduction from 116 dwellings to only 60 dwellings. 85 dwellings (net density of 22 dwelling/ha) would be more appropriate. Assuming the above guideline of around 85 dwellings, we can confirm that the site will be highly deliverable and viable. SHR054a is likely to be delivered earlier than the current timescale of 2025-2030 shown in Local Plan Appendix 7: Forecast of Delivery Timescales for Local Plan Allocations. This should be changed to the 2021-2025 period.
A0871B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Longden should remain a cluster not become Hub. Any new housing should be in keeping with the size and village rural character. Less points should have been given to Longden by the Hierarchy of Settlements because: they only have infrequent, little used, mobile library; very small pub which only opens part time & not well patronised; nursery affiliated with the school not a separate entity; no superfast broadband; Housing would result in increased carbon emissions contrary to legislation and Councils climate change policy. Hub proposal result in additional built development & suburbanisation in the Countryside eroding open and rural character of the area.
A0873B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	BIT023 promoted for allocation. It is identified as a site with long term potential which has no significant constraints identified by the SLAA. However considered site is has short term potential. Site is accessible and well located relative to village, school and facilities, the development boundary and has a favourable Fair sustainability rating. It is immediately available, fully deliverable with interest from developers. Identified site BIT022 has more significant identified highway issues, implications and requirements than proposed site BIT023 where SC Highways have accepted proposed access arrangements and identified no significant highway concerns relative to previous applications. BIT023 also well placed for safe access to school. Site can be fully self-contained to provide a phased housing if required, with a new access that will not have a negative impact on the existing infrastructure. Additional information can be provided as required to support bringing the site forward. Site location plan provided .
A0878B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	New Promotion / amended site part SHR110/SHR055 site is has short term potential because site; has no significant constraints;is immediately available, fully deliverable; well located, adjoining land has been developed for residential use and proposed development, including schools. There has been interest from developers in the site. Bringing site forward would help to deliver stated dwelling requirement
A0879B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Site WEY015 has short term potential for development for 30 dwellings because site; has no significant constraints; has existing access; is immediately available, fully deliverable; well positioned for village expansion located in the centre of Westbury, adjoining previously developed land and the development boundary; good access to village hall, church & pub. Site can be fully self-contained to provide a phased development if required, with an access that will not have a negative impact on the existing infrastructure. There has been interest from developers in the site. Site location plan provided.Additional information can be provided as required to support bringing the site forward.
A0879B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Site in Westbury promoted for development (see summary B1)
A0882B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am writing in response to the consultation for the Shropshire Strategic Land Availability Assessment, with regards to land to the west of Hanwood belonging to our clients. This site is currently an agricultural field. We are pleased to note this site has been identified as a 'Long Term Potential SLAA Residential Site' within the consultation. This finds the site to have no significant constraints. I am writing as we believe this land can be considered for short term potential due to the following: Availability Mr. & Mrs. Sandells have the benefit of full title to the land and are willing to make it immediately available for development. The land is adjoining the highway with good access via the existing residential estate and developed land and this site has received interest from developers. Deliverability and Sustainability We can confirm this is a well located and fully deliverable site. We believe this site is suitably placed to provide the development of 22 dwellings by 2038, being situated with an access off B488 and adjoining previously developed land and the development boundary, plus walking distance to the school, local amenities and playing fields. The land is well positioned with access to the highway on the western adjoining land that has already been developed. The land is well placed for the expansion of Hanwood in terms of its location to the school and facilities. There will be no requirement for children and parents to walk on a footpath on the very busy main road (A488), as the school would be accessed via the much safer route. The land is also well placed for access to the village hall, playing fields and school.
A0883B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Puts forward land in Dorrington for consideration as a suitable development site. Land on the Limes Paddock, currently an agricultural field located to the north of Dorrington, Shrewsbury ref. DGN018. We are pleased to note this site has been identified as a 'Long Term Potential SLAA Residential Site' within the consultation. This finds the site to have no significant constraints but has future potential. I am writing as we believe this land can be considered for short term potential due to the following =- land is available and owner has full title to the land; it is a deliverable site within Dorrington which has excellent access to the A49; and the site is withing walking distance of the centre of Dorrington and its shops and services.
A0895B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Fletcher Homes object to the Cross Houses settlement guideline figure which has reduced from 130 dwellings in the previous consultation to only 90 dwellings in the current draft Plan. The Council's Schedule A5(ii) on page 330 of the Plan shows 18 dwellings delivered in Cross Houses in the first 3 years of the plan period (2016-2019), equivalent to 6 dwellings per annum. If this rate of delivery were extrapolated for the whole plan period, ie. 6 dwellings per annum x 22 years, the village would deliver 132 dwellings. Fletcher Homes supports the designation of Cross Houses as a Community Hub. The village is a sustainable settlement with a good range of services and significant local employment, scoring 53 points on the Council's 'Hierarchy of Settlements' paper (August 2020), several points above the cut-off level of 48 points. Fletcher Homes' ongoing development in Cross Houses has proved very popular, with very strong demand the new houses largely from existing village residents keen to move to more suitable housing in the village. It has brought significant investment into Cross Houses and is prepared to continue to do so, helping secure a more sustainable future for the village. Shropshire will be required to have higher housing delivery, as a result of the latest household projections and the new standard methodology. Cross Houses is located on the Strategic Corridor off the A58 between Shrewsbury and Bridgnorth benefitting from access to the employment and service opportunities in these settlements. Cross Houses has benefitted from the successful delivery of Phases 1 and 2 of the large Fletcher Homes scheme in the village. Fletcher Homes suggest that site CSH006 is allocated in Cross Houses because the Sustainability Appraisal in the Site Assessments report shows that site CSH006 has the best sustainability score of all of the options in Cross Houses. It was only not selected by the Council because it was considered too large, however the field can easily be subdivided, with suitable landscaping to soften the south eastern boundary. The proposed line of a 2.5ha site that rounds off the Cross Houses development boundary could accommodate 30 - 60 dwellings, depending on density. Site CSH006 forms a natural extension of Fletcher Homes' existing development, from which access is available and fully achievable. It would be accessed through the existing Fletcher Homes Phase 1 development. Site CSH006 should have the following development guidelines: appropriate pedestrian, cycle and vehicular access will be provided to the site via Ridout Road; site to be developed at a low-density and to include significant open space to reflect the character of its 'edge of village' location; mature trees, hedgerows and priority habitats will be retained, forming part of the green infrastructure network.
A0896B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Galliers Homes supports the designation of Bomere Heath as a Community Hub as a sustainable settlement with a good range of services and significant local employment. Additional housing is needed to retain the next generation, provide for resident workers and maintain a balanced community, to enhance the sustainability of the village. The natural direction for growth is to the south, towards Leaton Industrial Estate with employment opportunities on 22 let industrial units. The proposed allocations extend the village edge to meet Bomere Heath's cricket and football pitches, connected with a new pedestrian footway provided by the existing development. This direction of growth links the village with its leisure and employment opportunities and is strongly supported by Galliers Homes. Galliers Homes strongly supports the preferred housing allocation BOM019 as forming natural extension of Galliers Homes recent development of 34 dwellings on the adjoining site to the north. There are no technical difficulties and Galliers Homes will be able to deliver housing relatively quickly. We can confirm that the site is viable and that it is deliverable, with an option agreement in place with Galliers Homes that ensure that a planning application will be forthcoming shortly after allocation. It is likely to be delivered earlier than the Local Plan's current forecast of 2025-2030, with the 2021-2025 period more appropriate in the Local Plan Appendix 7: Forecast of delivery timescales for local plan allocations. The existing Galliers Homes development to the north was designed to provide access to a future extension on site BOM019. The new roundabout on Shrewsbury Road was oversized to cater for the planned later phases on the basis that it would cater for later phases of development. The proposed policy guidelines should be revised to reflect this, removing references to a new access off Shrewsbury Road and instead referring to the provision already made to access the next phase of development via Trinity View. Similarly a new footpath has recently been constructed along Shrewsbury Road as part of the previous development (17/00768/REM). It is unnecessary for the new allocations to duplicate this path. We therefore suggest the proposed changes to the policy guidelines shown below: "This site represents Phase 1 of the development. An appropriate highway access will be provided via the recently completed phase of development at the Wickets and Trinity View and any other necessary highway improvements undertaken including the extension of the 30mph zone and other relevant traffic calming measures. New pedestrian footpath links will be provided where necessary to link the site to the services in the village. Existing trees, hedgerows, public rights of way and priority habitats will be retained and enhanced. Acoustic design, layout, green infrastructure and appropriate building materials will be used to appropriately manage noise from Shrewsbury Road. The site will incorporate appropriate sustainable drainage, informed by a sustainable drainage strategy. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site, which will form part of the Green Infrastructure network. Flood and water management measures must not displace water elsewhere." It should be noted that the existing development (17/00768/REM) included a surface outfall and pond under the high voltage electricity lines, close to the railway, that was oversized and designed to cater for these later phases of development. A sustainable surface water drainage strategy is therefore in place and the agreed outfall rate with Severn Trent Water will not need changing when allocations BOM019 and BOM020 are developed.
A0896B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Galliers Homes supports the designation of Bomere Heath as a Community Hub as a sustainable settlement with a good range of services and significant local employment. Additional housing is needed to retain the next generation, provide for resident workers and maintain a balanced community, to enhance the sustainability of the village. The natural direction for growth is to the south, towards Leaton Industrial Estate with employment opportunities on 22 let industrial units. The proposed allocations extend the village edge to meet Bomere Heath's cricket and football pitches, connected with a new pedestrian footway provided by the existing development. This direction of growth links the village with its leisure and employment opportunities and is strongly supported by Galliers Homes. Galliers Homes strongly support the preferred housing allocation BOM020 as forming a natural extension to BOM019 and providing certainty for the direction of growth for the village over the longer term, joining up with recreational facilities and linking to local employment. We can confirm that the site is viable and that it is deliverable, with an option agreement in place with Galliers Homes that ensure that a planning application will be forthcoming shortly after allocation. Galliers Homes have a strong local reputation for high quality housing and are committed to ensuring that preferred allocation BOM019 comes forward quickly, with BOM020 following behind to meet the needs of the village across the plan period. As phase 2, the timescale of 2025-2030 is appropriate in the Local Plan Appendix 7: Forecast of delivery timescales for local plan allocations. The policy guidelines appear to reflect the footway that has recently been constructed by Galliers Homes as part of the previous development (17/00768/REM). We therefore support the proposed development guidelines.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0896B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to preferred housing guideline of 200 dwellings over 2016-2038 as far too low. Bayston Hill has 2,024 dwellings and the level of growth over the 22 year plan period 2016-2038 represents annual growth of 0.45% well below the proposed rate of 1.01% per annum for Shropshire. Support the designation of Bayston Hill as a Community Hub, as a sustainable settlement with a good range of services and significant local employment attracting 80 points for its services and facilities as one of the top three scoring Community Hubs. Bayston Hill is on the A49 corridor with excellent access to nearby Shrewsbury. The A49 is a strategic corridor in paragraph 4.91e of the Plan and Policy SP2: Strategic Approach and explanatory paragraph 3.26. Despite the A49 being one of these strategic corridors, the Plan unjustifiably diminishes Bayston Hill's potential for growth. Bayston Hill's proposed growth rate is far lower than other Community Hubs with similar sustainability scores at Pontesbury with 80 points with 1.03% per annum growth; St Martins with 77 points with 1.66% per annum growth; Clun with 72 points with 1.1% per annum growth; Gobowen with 71 points with 1.2% per annum growth. This would call into question the basis by which the settlement growth figures have been determined. Galliers Homes made comments under Policy SP2 to increase Shropshire's overall housing needs and Bayston Hill can contribute more to meeting Shropshire's housing needs with an upward adjustment to the housing guideline figure to at least 1% per annum equal to 445 dwellings. Paragraph 5.228 of the Plan states, "Bayston Hill is a large urban village located to the south of Shrewsbury. Due to the proximity between these settlements, consistent with Community Hub Policy SP7, the retention of the Green Gap to the north of Bayston Hill is a key priority." There is however no evidence that supports the retention of a 'Green Gap'. It does not feature in either the Shropshire Open Space and Recreation Needs Assessment (September 2018) or in the Green Infrastructure Strategy for Shrewsbury (July 2020). The Council's Landscape & Visual Sensitivity Assessment (2018) identifies the southern side of Bayston Hill (on the opposite side to the Green Gap) as more visually sensitive than the northern side of the village. In addition to looking out towards the South Shropshire Hills Area of Outstanding Natural Beauty some 5 km to the east, south and south west, the southern end of the village is associated with the local beauty spot of Lyth Hill and is crossed by many well-walked Public Rights of Way. In contrast, the north side of Bayston Hill has lower landscape and visual sensitivity. In relation to parcel 20BYH-E to the north west of the village, the study states, "Views within this rural landscape are of variable quality taking in a farmed landscape of diverse scale and condition, major road infrastructure..... To the north, views are contained by hedgerows, A5 embankment and planting. This reduces its susceptibility as new development would be better screened by the existing landform and vegetation than in a more open landscape." It notes the potential benefits of development: "There is also potential to improve the settlement edge which is partially integrated. There is a low sense of tranquility due to frequent road noise and quarry traffic, however this could be buffered by screen mounding and planting which would be appropriate within the parcel." It is perfectly possible to improve the gap by utilising private investment to this end. The settlement strategy for Bayston Hill should actively promote sites that will provide additional planting and new areas of public open space that will benefit residents and improve the landscape and recreational potential of the gap. Galliers Homes have repeatedly suggested the allocation of site BAY005 to deliver an attractive area of public open space along the northern edge of Bayston Hill (fig 9 overleaf). The site is very well located for access to Bayston Hill's shops and facilities as well as being close to the Pulley Lane route into Shrewsbury. The Council already recognises the sustainability credentials of site BAY005, scoring it 'fair' (-4) in its Site Assessments (August 2020). The development of site BAY005 provides an opportunity for generous new landscaping along the ridgeline and public open space providing views north, similar in style to the popular Lyth Hill park that provides views south. The site can deliver an enhanced village edge with landscaped public open space on its northern edge. Galliers Homes commend site BAY005 to the Council for allocation in its Final Plan and propose the following development guidelines: "Development to provide public open space along the ridgeline with appropriate landscaping and viewpoints. Existing trees and hedges will be retained wherever possible. Appropriate highway improvements will be made to the junction of Gorse Lane and Pulley Lane". Paragraph 5.228 should be amended to read: "Bayston Hill is a large urban village located to the south of Shrewsbury. Due to the proximity between these settlements, consistent with Community Hub Policy SP7, the improvement of the Green Gap to the north of Bayston Hill is a key priority. Three Local Plan residential allocations have been identified in Bayston Hill, one of which represents the redevelopment of a former school, the other is located to the south of the existing bus form overlooking the South Shropshire Hills Area of Outstanding Natural Beauty, and the third provides infill development with new public open space and landscaping to improve the northern edge of the village."
A0901B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	development is allocated under the assumption that the North West Relief Road is built, regardless of the previous unsuitability rating at stage two. The induced traffic demand in building a ring road to the north of Ellesmere Road will in the medium to long term increase traffic congestion along this road. The NWRR is not the solution to this problem. Will have negative effects on the wildlife.
A0909B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Consideration should be given to allowing housing development at the northern end of the proposed NWRR in the vicinity of the Ellesmere Road/Baschurch Road junction (i.e. site SHR181). Access would be available in a short time-frame. Development of one or other or both of the areas of that to the east of the route of the NWRR, off Ellesmere Road or to the west of the route, off Baschurch Road could take place in the immediate future or phased to take place along with the construction of the NWRR. Development of this land would help alleviate journeys, thus helping to achieve the aims of DP12 and DP19.2. 16.1.4 indicates the "focus" of directing residential growth to the west of the town, particularly N & S of Mytton Oak Road. This will perpetuate the long-known issue of residential development being situated to the west of the town with the major employment areas being to the east and north of the town. More housing should be located north. It is considered short-sited that the land between the route of the road and the development boundary shown on the Proposals Map for Shrewsbury will remain regarded as "Countryside," as this area could assist with meeting the apparent shortfall in housing land supply. It appears that the housing requirement for the County has increased, but, in spite of the stated aim of the Plan to foster an "urban focus" the requirement for housing in Shrewsbury has not been increased, and now falls below the 30% target which was the Council's earlier objective. S16.1 confirms the requirement for Shrewsbury for 8,625 dwellings which appears to be 615 dwellings short of meeting the 30% target for housing in Shrewsbury. It is suggested that this shortfall should be rectified by further allocation(s) in Shrewsbury. SAMDev sites are not included in Appendix 7. SUEs are difficult to maintain – there may be a shortfall and so more sites should be allocated, as is the case with SHR173 being completed in the Plan period.
A0910B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Policy S16.2: Shrewsbury Place Plan – Community Hubs, is not supported because it does not include Cockshutt in the list of Community Hubs, even though Cockshutt has a larger population than 6 of the 10 villages listed.
A0920B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported. The identification of Ford as a Hub settlement accords with the Local Plan's vision in this regard, given Ford's strategic location on the A458 corridor with excellent connections to a wide range of employment opportunities both in the rural area and Shrewsbury. However part 2 of Policy SP2 undermines these aims as it only proposes 1,400 dwellings per annum, which is below the figure set out in the Core Strategy and the 2018 household projection forecast. There is also a danger the plan will fail to be consistent with the NNPF. The Government's current consultation proposes changes to the standard method that would apply the 2018-based household projections and apply an affordability adjustment that would increase this figure to 2,124 households per annum. There is a strong case for the Council to re-consider its housing requirements in light of the Government's recent consultations on changes to the Framework and its direction of travel to increase housing delivery across the country. Policy SP2 will be more resilient if the housing requirement figure is increased to reflect the latest household projections and affordability data, replacing the current housing target of "around 30,800 dwellings" to "at least 46,700 new dwellings" over 22 years 2016-2038. The above change to policy SP2 should be reflected in the Community Hub policies, including policy S16.2 in relation to Ford, which can accommodate a much higher residential guideline figure.
A0920B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The statement in Policy SP7 that "Community Hubs are considered significant rural service centres and the focus for development within the rural area" is supported. It is therefore very disappointing that Policy SP7 seeks to limit development in Community Hubs, only permitting development where it, "would not result in the settlement's residential guideline being exceeded" (section 1f of the policy). This section of the policy makes the guideline a ceiling figure, running counter to the National Planning Policy Framework's consistent use of housing numbers as minimums rather than maximums. It is contrary to the Government's key objective of, "significantly boosting the supply of homes" expressed in paragraph 59 of the Framework and in more recent Ministerial Statements. It makes the Local Plan's job of delivering the housing and employment development that Shropshire needs much more difficult than it needs to be. In our view, Community Hubs should be allowed the flexibility to respond to changing needs and not have artificial constraints such as a ceiling on numbers imposed on them. We therefore suggest that all residential guideline figures are expressed as minimums and that section 1f should be deleted from policy SP7 in its entirety.
A0920B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The designation of Ford as a Community Hub settlement in Policy S16.2 is strongly supported as this is seen as vital to ensuring the village's long-term future. The settlement of Ford lies in close proximity to, and has a strong relationship with, Shrewsbury. It is also located on the A458, part of the strategic road network through the County. Ford is therefore one of relatively few villages in Shropshire that has significant potential for rural growth both socially and economically and development in the settlement will complement growth in urban areas, in accordance with Policy SP2: Strategic Approach. However we are disappointed that the services and facilities provided in the cluster of development at the west of Ford are not recognised, and that the policy relies on 60% of dwellings to be delivered on just one site. This is a missed opportunity to provide additional windfall opportunities in a highly sustainable location within the settlement. It also fails to recognise where the Council has previously considered development to be sustainable in the settlement of Ford, including the brownfield land surrounding the Smoke Stop that previously benefited from consent for travel lodge style accommodation and the new residential development being constructed on land to the north of the A458 (subject of planning consents 14/01819/OUT and 17/03865/FUL). The current consultation provides an opportunity for Shropshire Council to amend policy S16.2 and Inset Map S16 to acknowledge that the cluster of development around the junction of Back Lane with the A458 forms an important part of the settlement and is a sustainable location for future development and to include brownfield sites previously found by the Authority to be sustainable locations for new development and residential sites currently under construction
A0928B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The overall analysis of Shrewsbury and its settlement strategy appears to be fair. It is welcomed that as Strategic Centre, Shrewsbury is the largest settlement in Shropshire. It contains the main commercial, cultural and administrative centre for Shropshire, offering most of its employment and a large range of services and facilities to the residents of the town and its large rural catchment. It is appropriately seen as a highly sustainable location to accommodate the largest proportion of Shropshire growth. Taylor Wimpey and Persimmon support its main focus to growth which would see the majority of growth directed towards Shrewsbury and the main Towns with more limited growth (albeit not to the total exception of growth) in the rural areas. This is important to support sustainable patterns of growth, but also support delivery. The approach has the real potential to be deliverable, but still allows for all parts of Shropshire to gain from the benefits of new housing and employment development. The approach for Shrewsbury in the Plan reflects the town's focus within the heart of the County and the excellent range of services and facilities the town already provides. It also reflects the opportunity to deliver on emerging growth aspirations, such as those expressed through the emerging Big Town Plan, as well as responding to specific development opportunities presented by a range of factors. Land is available in sustainable locations to support delivery at Shrewsbury. Our specific comments are as follows; • Shrewsbury is and should be the primary focus for development in the County. • Additional housing and employment development beyond the 8,625 development guideline is justified in Shrewsbury and deliverable. • The residual requirement to allocate additional sites, given our concerns highlighted in our representations elsewhere including an undue reliance on windfall will mean that further sites in Shrewsbury will be needed even to meet the currently proposed housing requirement of the plan. • More housing will be needed is the housing requirement is appropriately increased as we suggest. Equally Shrewsbury should be the first priority for any additional allocations should deficiencies be identified in any of the current Regulation 18 consultation sites to date. • Past rates of delivery in the town show that it is a strong market that could support a high level of provision reducing the extent of more dispersed growth around Shropshire • Whilst there are some significant historical and ecological constraints around the town, such as the setting of the Registered Battlefield to the north and areas of flood risk around the town there are equally relatively unconstrained sites which can accommodate the scale of development envisaged • Identified critical infrastructure priorities for Shrewsbury are identified but none represent an impediment to its future growth and can be addressed. • A greater range of medium sized sites upto 400 dwellings would better support delivery – the trajectory for the large Shrewsbury (and other large main centre sites) unrealistically expects some delivery for the period 2021 to 2026 (Phase 1). Given the timescales for adoption of the Local Plan Review, the needs for significant infrastructure to be put in place to support the large sites, the outline and Reserved Matters application process, means that such large scale sites are most unlikely to deliver in the Phase 1 of the Plan, but more likely the latter part of Phase 2. Sites around 400 dwellings can be more easily delivered and maintain delivery in the early phases of the Plan period. In this context, whilst the allocation of strategic sites to help deliver the required level of growth within Shrewsbury, the proposed allocation of SHR158/SHR060/SHR161 concentrate a very large part of the total dwellings within the plan period. This represents a significant overreliance on a small number of large sites to achieve the required level of housing delivery, with some considerable risk particularly in the early years of the plan.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0928B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Taylor Wimpey and Persimmon have submitted proposals suggesting the allocation of land for housing at Weir Hill Phase 3. The site represents a suitable, sustainable and deliverable site for residential development and a logical extension to the settlement, adjoining the existing residential areas of the town to the north, west and south. Allocation of the site would create a strong and well-defined settlement edge, without extending out into the wider open countryside. The site is now further enclosed by the proposed employment allocation SHR166 to the north east of the site, across the River Severn, which is shown as a "standalone" development boundary. A previous Vision Statement for the site has been updated with the latest proposals which Taylor Wimpey and Persimmon propose for the site. It addresses comments and feedback about the proposals which have been raised through discussions with officers to date as well as issues and opportunities which have emerged through phases 1 and 2 of the development. The Vision Document confirms that the development can deliver a high quality scheme providing new homes as well as a new local centre with a range of uses which will support the sustainability of this phase and earlier phases of the development. The vision for the site is landscape led with much of the site being dedicated to open space and mixed recreation space with areas close to the river protecting existing ecology interests but also promoting new opportunities for enhanced biodiversity. Community use opportunities are presented in the development with new dedicated parking for local walkers and those enjoying the enhanced country park, as well as community space for local groups including potentially for the Scouts (who need a new facility), wildlife trust or other community groups. As a whole the development completes the final phase of the Weir Hill development with new and enhanced proposals for the existing and new community. It is our submission here that the site is suitable for allocation for around 400 dwellings. Evidential material in support of the allocation in respect of landscape, transport and traffic, ecology, drainage etc have been made available to the council in the past and are fully available on request to ensure that site is duly considered to its full merit. The site has not been allocated in the plan to date. It is our strong submission that the Council's assessment of the site within the sustainability appraisal and site selection process to date has been misconceived and flawed. The Council have not judged the proposals fairly, have misunderstood the delivery of associated infrastructure including the delivery timeframe for the new London Road link which will be in place to serve this phase as well as earlier phases. They have not had appropriate empirical evidence to judge highway implications and traffic. They have also failed to appropriately and fairly consider localised, site specific landscape implications. The following is particularly highlighted with reference to attached supporting information comprising Vision Document (Septemeb 2020), Landscape and Visual Appraisal (PGLA, September 2020) and Transport Technical Note (Croft, September 2020); Landscape Sensitivity – the landscape review undertaken by Gillespies for the Council as part of the Local Plan evidence base, identified the development on this site as an area of landscape medium / high sensitivity. The assessment is not appropriate for the evaluation of small component parts of the wider landscape around the Town. Indeed the study itself highlights that it is "a strategic assessment which provides the context for more detailed studies of individual sites. It does not make judgements on the appropriateness of specific developments on individual sites (and does not consider specific development proposals where these might exist). More detailed studies relating to specific site allocations and development proposals will be undertaken at a local authority level as part of the Development Plan and development management process". The character area classification of landscape sensitivity is therefore not a definitive factor in assessing site proposals, which have to be done in the context of the specific proposals themselves. Indeed, the Gillespies Report suggests as much in stating "In this study visual aspects are considered in relation to landscape character and quality and not in relation to specific views (although these will be noted where they are a key characteristic of a particular area). This is because views and visibility change over short distance and can only be assessed in relation to a particular development type as part of landscape and visual impact assessment." Our own assessment previously submitted to the Council and now further updated as attached in a September 2020 update by PGLA here highlights that the lack of granularity within the parcels of the SLVSA combined with the methodology is providing an assessment with inaccurate and distorted broad brush gradings regarding landscape and visual sensitivity. Further in this context the sensitivity grading is therefore not reflective of the more fine granular nature of the wider character area which means it usefulness and effectiveness as a tool to inform or strongly influence an assessment for a specific site such as this site SHR176 is obviously flawed and will not provide the local authority with an accurate and helpful evidence base for making decisions on site allocations. A more appropriate and focused landscape assessment confirms significant less sensitivity, less than other sites around the Town which have been selected for allocation. The landscape sensitivity here is not medium high. It is self-evidence that by comparison to the Gillespies work (and no criticism of its approach and brief), the landscape assessment work we have submitted as part of our evidence in support of this site does appropriately assess the site and its sensitivity, which is in fact Medium Low and landscape impacts moderate to negligible. This is noting particular proposal including the approach which safeguards as open space and landscape planting, those areas which may be more visually sensitive adjacent to the river. If the Officers assessment has been influenced by the Gillespies broad brush character assessment which it seemingly has and not the circumstances of this particular site and proposed development, then it is undoubtedly unfair and flawed. Masterplan/Uses – Some concern has been expressed about the proposals for Phase 3 (and indeed combined with Phases 1 and 2) not allowing for any additional supporting local social infrastructure, whether that be a local shop, community uses, or other social infrastructure. The development of Phases 1 and 2 will see the completion of 600 dwellings and with this further Phase 3, could see a total of 1000 dwellings coming forward as part of this overall development at Weir Hill. Reflecting this discussion, the updated masterplan and proposals for the site (see Vision Document, Septemeb 2020) provides for a logical location for such community and social infrastructure in the heart of the development, yet not necessarily compete with the facilities which are already at Column, or on Abbey Foregate. The site proposed could provide a valuable addition to the development, providing the opportunity for some small shop units, health use, community space or similar in combination – we have been in discussion with local groups such as the Scouts who also need new provision for community use and have the potential to accommodate their needs within the development either as a standalone facility or with joint provision. This is part of the updated vision for the site which builds on elements within phases 1 and 2, particularly expanding upon and completing the vision for the riverside park with an extensive array of wider mixed components for the park aligning with the Council's own green infrastructure aspirations in the recent study as well as the Big Town Plan. Comments and feedback on matters of ecology have also focused particular proposals for the mixed community uses within the park, with considerable emphasis on biodiversity gains and complementarity with the river and its designation as a local wildlife site. None of the development proposals have ever proposed any development in such proximity to the river to impact on ecology interests, moreover the vision has always seen opportunity for gains. Likewise, that part of the site which adjoins the river and is located within Flood Zones 2 and 3 have never been proposed for development and all built development is within Flood Zone 1. London Road Access – a significant concern in the Council's assessment of this site was a mis-understanding that the delivery of the London Road link (through Phases 1 and 2) would be provided much later in the Plan period such that the accessibility and traffic benefits of this link wouldn't be available to Phase 3 in the short term. This is not the case. The delivery of the London Road link is conditioned in the current planning permission issued by the Council for Phases 1 and 2, such that no more than 175 homes within Phases 1 and 2 can be commenced construction and no more than 150 dwellings occupied before the London Road link is fully open to public use. In this regard, development is well underway in Phase 1 of the development. Reserved Matters have been approved for Phase 2. The London Road link has full planning permission as part of the hybrid planning permission and Phase 2 reserved matters and is under construction with a currently expected opening this year to tie in with wider construction and occupations. The road will easily be available to provide access to Phase 3 of the development in the short term and previous concerns this regard are misplaced. Equally no construction access whatsoever would be required to construct Phase 3 using Preston Street, which was a principal concern of the council in establishing the limits to occupations on Phase 1. Phase 3 is available for very early delivery in the Plan period and will support the plan housing delivery trajectory as other larger schemes will take some time to come forward. Further transport analysis has been undertaken on potential traffic implications for Phase 3 in the Attached Transport Technical Note (Croft September 2020). It highlights that the site is highly accessible including by non car means; vehicle access is available and safe; an assessment of traffic from the development (including a considered assessment of traffic distribution with the London Road link in place) shows that it would have a minimal impact on Preston Street, or the wider highway network; there will be no requirement whatsoever for construction traffic to use Preston Street as the London Road link will be in place and there is no highway or safety concerns that should prevent the site from being allocated. Overall, the Vision for Phase 3 of the Weir Hill development presents a high quality sustainable development which is supportable by clear evidence and should be allocated in the Local Plan Review.</p>
A0954B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>1. Cerda Planning Ltd is instructed to make representations to the Shropshire Local Plan Review – Consultation Regulation 18: Pre-submission Draft Local Plan on behalf of Gleeson Strategic Land Ltd. Relevant supporting evidence and assessments have been taken into account when forming the views below</p> <p>2. Gleeson Strategic Land Ltd has an interest in a significant parcel of land on the south-eastern edge of Bayston Hill. It is our client's intention to bring this site forward for residential development through the plan led process as part of the Local Plan Review, and as such our responses will be primarily focussed on the settlement of Bayston Hill and the Shrewsbury Place Plan area in which it is located.</p> <p>See also representation on policy SP2 which concludes that the site should be allocated.</p> <p>SITE AND ITS LOCATION</p> <p>4. The site is 17.53 hectares in size and situated immediately adjacent to the settlement edge to the south-east as illustrated by the insert below. The site is bounded to the east by the Hereford Road the A49 distributor road and is accessed directly from the Hereford Road. The subject site is currently in use for agricultural purposes. It is generally free from trees and other vegetation save for the field boundary hedgerows. Land falls away across the site from the north east to the south west where it joins the A49 at grade.</p> <p>SITE HISTORY</p> <p>5. Outline proposals for residential development (access only) were refused in September 2015 under planning application 14/05556/OUT. Two reasons for refusal were cited as follows:</p> <ul style="list-style-type: none"> The proposed development is located within an area defined as open countryside where new dwellings are only permitted where required to accommodate key agricultural, forestry or other essential countryside workers or to meet a local need for affordable housing/accommodation. No such need has been demonstrated in this case and the proposal would lead to sporadic and unsustainable development, promoting rather than reducing the need for vehicular travel to access local services. Accordingly, the proposal fails to comply with adopted policies MD1 and MD7a of SAMDev, policies CS4, CS5, CS6 and CS17 of the Core Strategy; and Central Government Guidance advice contained in the National Planning Policy Framework. Insufficient detailing has been included within the application to provide the local Planning Authority or the Highways Agency to assess the impacts that an access at the proposed location would have upon the adjacent A49. As such the proposal cannot be adequately assessed in order to ascertain the likely impacts upon highways safety, and as there are concerns in regard to this issue the proposal in its current form is not considered to comply with policies CS6 and CS7 of the Core Strategy or the guidance contained within the NPPF. <p>6. The first reason for refusal could be overcome through the Local Plan process. If the Council came to a position whereby the development of the site could be supported, the settlement boundary could be re-drawn around the edges of the site. This would take the site out of its current countryside designation.</p> <p>7. In relation to the second reason – the officer report sets out that the Highways Agency had raised concerns in relation to the proposals and that requests were made to the applicant to provide a Stage 1 Safety Audit. This was never received. As neither the Local Planning Authority or the Highways Agency were confident that safe access or egress could be achieved without these details, the refusal on highway grounds was issued.</p> <p>8. Safe access would be possible into the site and any new proposals on the site would be accompanied by relevant audits and assessments.</p> <p>9. The planning officer concluded in all other matters that the proposals were acceptable: "the proposals would be closely related to the surrounding urban context and could provide a softer edge to the main village via a carefully considered reserved matters application. The impact on the landscape was not considered to be harmful and it was considered that a layout could be provided within the curtilage on the site without undue harm to the landscape character whilst also providing a more attractive settlement boundary via the provision of outward facing dwellings and a resultant soft edge to the village." and "It is recognised that the views of neighbouring dwellings tight on the boundary would be restricted from what are currently open vistas of the surrounding countryside, however a sensitive design would ease the sense of enclosure that could be felt by neighbours to the site. It must also be considered that subject to suitable interface distances, a development of this nature could be accommodated on site without undue harm to residential amenity."</p> <p>SLAA 2018</p> <p>10. The site was included in the Strategic Land Availability Assessment (SLAA) 2018, site reference BAY040 for residential use (with an indicative yield of 525). Through this process the Council considered the suitability of the site for residential purposes. The Residential Suitability Summary states: "The site is located adjacent to but outside of the settlement development boundary. Consequently, open market residential development on the site would be contrary to policy. However, the site may have long term potential subject to relevant changes to policy and management of any physical, heritage and environmental constraints."</p> <p>11. The residential overall summary states: "The site is considered available; achievable; and viable (subject to any further necessary viability assessment). Furthermore, the associated settlement offers a range of services and facilities suitable to meet the needs of potential occupiers of the site. However, the site is not currently suitable for development as it is located in the countryside where open market residential development is currently contrary to policy. Additionally, the site is subject to a physical; environmental; or heritage constraint and the sites suitability is subject to appropriate assessment and management of any impact. Specifically, its proximity to a Ramsar site which means that an assessment under the Habitat Regulations will be needed. If the assessment is passed and/or suitable mitigation of this identified constraint were possible, the sites development potential would also depend on appropriate changes to policies affecting this location; and suitable management of any other physical, heritage and environmental constraints present (informed by input from relevant service areas and infrastructure providers) and the outcome of a visual impact and landscape sensitivity assessment. Such constraints include its proximity to one or more Listed Buildings and a Scheduled Monument."</p> <p>12. It concludes that the site is not currently suitable but does have future potential subject to further detailed assessment. It is therefore right and proper that the site is considered in the plan making process.</p> <p>13. Gillespie's have produced a Landscape and Sensitivity Assessment of Bayston Hill for the Council in order to inform the site selection process. The subject site falls within Area B. This document advises that the landscape is defined by the small upstanding hill (Bayston Hill) to the west and Lyth Hill to the south west.</p> <p>14. In terms of landscape value, the document concludes: "this landscape is of moderate scenic quality derived from the wider setting of the Shropshire Hills AONB however the rural character of the landscape has been weakened as result of agricultural intensification and extensive loss of hedgerows and tree cover. Landscape value is low with no distinctive features, sparse natural habitats and poor connectivity despite the presence of Lyth Hill and Country Park to the western boundary. Although the Shropshire Hills AONB lies some 5 kms to the east, south and south west, the low-lying landscape displays very few of the AONB's special qualities and could not be considered to fall within its setting."</p> <p>15. In terms of landscape sensitivity, the assessment concludes that overall, the sensitivity of the landscape to change arising from new housing is medium- low.</p> <p>16. In terms of visual susceptibility, the document states: "Agricultural intensification and loss of hedgerows and tree cover, has created an open often vast landscape with far reaching views that are particularly susceptible to new development. There is no relationship with the settlement edge and there are few sensitive receptors within the parcel. This reduction in susceptibility has however to be balanced against the highly scenic panoramic views that extend towards the Shropshire Hills AONB from Lyth Hill that could be vulnerable to change. Development would also be visible from higher elevated viewpoints including Lyth Hill and intervisibility with the AONB. The relative number of people likely to experience the view is high due to Paragraph 5.228 Policy SP7 and link to SP16.4 - explanation I welcome the statement that the green gap between Bayston Hill and Meole Village is seen as an important buffer Zone between the two areas. Securing this green gap has been a long standing policy of Shropshire Council and is very much supported by the residents of Meole village and Meole Village Residents Association. The area around the Rea brook south of Meole Village is seen as a green lung for the area and is used extensively by local people for recreational purposes. As the Rea brook south of Meole Village is an important tributary for the river severn and leads into the Rea valley conservation areas I believe permanent protection should be afforded to its length all the way to Hook-a-gate and would urge Shropshire Council to recognise its importance within its Strategic policy documents. It is also an important flood plain area reducing volume flows into the river Severn at Longden Coleham and is a valuable green corridor for wildlife movement and habitat protection which fits in with many policies identified in the partial plan review</p>
A0955B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Paragraph 5.228 Policy SP7 and link to SP16.4 - explanation I welcome the statement that the green gap between Bayston Hill and Meole Village is seen as an important buffer Zone between the two areas. A0956B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Provide further evidence on housing delivery trajectory, including key assumptions for larger site allocations and lapse rates. Support for recognition of sustainable location of south-west area of Shrewsbury town. Direct further growth to the town of Shrewsbury, alongside sustainable growth of the Community Hubs and Clusters. Noting the constraints to housing growth around Shrewsbury town, further recognise the sustainable location of the south-west area of the town to which additional development could be directed. Our Client's Site represents a sustainable site option in this location which should be considered further(Alternative site promotion Bloor Homes in relation to land at Nobold) Delivery trajectories need to be provided for the Saved SAMDev allocations to reflect the most up to date position for these Saved allocations which are a key part of the housing delivery strategy. The delivery trajectory for the draft SLP housing allocation at Land between Mytton Oak Road and Hanwood Road is anticipated to medium-long term and potentially extend beyond the plan period. The Council should be clear on the assumptions that have been made to inform the delivery trajectories for these sites (no detailed commentary provided) & include further flexibility to ensure the housing requirements of Shrewsbury are met within the plan period at this sustainable location within the town. The Council should also consider the potential to provide a more sustainable strategy focused upon the town of Shrewsbury, alongside sustainable growth of the Community Hubs and Clusters. The risks to the delivery of smaller scale sites should also be factored into the Council's housing trajectory e.g. lapse rates, which can generally be higher for smaller scale schemes. It is not clear what lapse (or non-implementation rate) has been assumed in the housing trajectory overall for the plan period. This should be clearly identified and evidenced as per the NPPG (Paragraph 024 ID: 3-024-20190722) There is no justification provided for the 10% lapse rate assumed in the Five Year Supply Statement i.e. local evidence of implementation rates in recent years. Shrewsbury Alternative site promotion. Bloor Homes in relation to land at Nobold. Land at Nobold (the Site) has been assessed within the Strategic Housing Land Availability Assessment (SHLAA, 2018) under a number of separate parcels and site references. Whilst rejected for policy reasons, in light of accompanying commentary and the Site's proximity to existing draft SLP allocations, it is clear that there is potential for further consideration of strategic land release within the south west area of the town as a sustainable location. It is apparent that significant flood risk to east, centre and north west of town constraints further opportunities in those locations. Combined with existing allocations that have already been proposed around the town edges, the area to the south west represents the next logical area to examine further. Bloor homes have excellent track record of bringing forward strategic land including major urban extensions with significant infrastructure packages. Land at Nobold, Shrewsbury lies to the south west of the town of Shrewsbury in close proximity to the existing suburban neighbourhoods of Radbrook and Meole Brace, representing a sustainable location for residential development with access to a range of existing services and facilities. It provides the opportunity for a sustainable urban extension of approximately 138 hectares with residential development to the north of the A5 and employment development to the south (indicated on the accompanying Concept Plan). The development is capable of catering for a range of infrastructure needs including a primary school, local centre, green infrastructure and highways infrastructure. Land adjacent to the Site in separate ownership (to the west fronting Hanwood Road) is also considered as part of a comprehensive masterplan. In close proximity to the north lies the proposed draft SLP mixed use allocation (SHR060, SHR158 & SHR161) for 1,500 dwellings, 5ha of employment land (minimum) and a local centre, including potential education and medical facilities. There are also a number of Saved SAMDev Plan sites in close proximity, including SHREW212 for 175 dwellings and SHREW019, 094, 030/R and 210/09 for a total of 550 dwellings. These existing SAMDev allocations and the proposed draft SLP allocations demonstrate the overall sustainable nature of this location. Development of Land at Nobold would serve to complement these proposed developments, maximising the opportunity provided by the existing sustainable location with conceptplan/masterplan provided. Concept Plan retain existing and incorporate further green infrastructure provision, make use of and enhance existing connections within the area & help deliver on the objectives of the Shrewsbury Big Town Plan.
A0957B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Planned housing growth is too fast for Shrewsbury. It is very unpopular and infrastructure is lagging well behind the need, already reducing the quality of residents' lives. Furthermore, high growth will not help emissions targets, which are insufficiently well guarded (SP3) in the Plan The Big Town Plan is not now offering meaningful consultation. Shrewsbury residents have too little say and the draft Local Plan does not advance the importance of early public collaboration. While there are references to the Big Town Plan's Spatial Principle of the Green Network, that of "Balancing Growth" is missing, despite the early suggestions of some 1400 "windfall" homes, allocation. For Shrewsbury there may be other criteria that need to be tested since the Town has several unique features needing conservation and enhancement. Big Town Plan leaders wish to enable this rigour in some way more specific than a County wide set of broad principles. Specific comments on policy wording: Para 2. This paragraph suggests that "the Shropshire Test" is agreed in principle by the Big Town Plan although this has not been agreed. It seems to undermine any further attempt to detail features of acceptable developments within Shrewsbury town. Para 3 ignores the Big Town Plan principle of 'Balanced Growth'. Para 6 It seems right that there is an emphasis on employment opportunities and that some of this is in terms of allocated land. However, employment (post Covid) may be better provided by enhancing electronic 'highways' and the provision of free or wide band-width broadband in terms of employment opportunities is missing from the Local Plan. Para 7 accepts the so-called North West Relief Road as a factor in extending the pre-set "Development Boundary" for both ELR 67 and SHR 173. However, the new road is not necessary to extend these boundaries. In the case of SHR 173, the limitations concern the access from Ellesmere Road. Personal experience suggests that the NWRR traffic predictions for Ellesmere road are now inaccurate and that the NWRR will not reduce accessibility along that road. Para 11 lacks the definition that would ENSURE that desired outcomes are met. Para 12 is welcome and needs a degree of extrapolation. In terms of particular sites for development, the allocations are accepted but (previous experience suggests) a lack of degree of specification that might avoid the considerable public opposition to particular developments. Each of these sites needs a closer detailed specification of the local needs, how the local voice will be heard, the infrastructure implications and contributions, in addition to the Shropshire test and any Big Town Plan test requirements. The specifications for these sites have insufficient detail to avoid considerable local disquiet and long term sub-standard living
A0962B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Error in Consultation Inset Plan for Baschurch which should be corrected. Extract from Plan Review Extract Shropshire Local Plan Review extract approved for consultation at Cabinet 20th July 2020 contrasted with the Plan that formed part of the 3rd August to 30th September consultation. Developer request that the settlement boundary be amended to accommodate the extent of planning permissions for mixed use including residential development was reflected on Baschurch inset plan considered by the Cabinet Committee on the 20th July 2020 but not included in the consultation version plan. Understand that this is a cartographical error which will be rectified and if this is the case objection will not be relevant. Also object to the exclusion of additional area fully wrapped around & contained by the development boundary line from the settlement. Baschurch is identified as a Community Hub and focus for development within the rural area etc as set out in Policy SP7. SP9 references supporting rural communities by enabling some controlled development to maintain local sustainability & defines appropriate development. It is considered that the 2.3 ha land excluded is not open countryside, is effectively part of the settlement and serves no open countryside function. The Inset Plan development boundary lines should therefore be amended to clearly include the 2.3 ha site (BNP034a) as shown on the submitted Plan. This would allow developers with an option on the land to develop a phase 2 scheme linked to the phase optioned land with planning permission. The site assessment identifies that the site is available, sustainable & suitable. The site has also been established as viable by the prospective developer, available now, is a suitable location for development and should be considered deliverable as a windfall site within development boundary which will assist in meeting housing target.
A0974B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Support for inclusion of site Land between A5 and Holyhead Road, Montford Bridge SY4 1EG

A0976B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	It is considered that Site BAY048 should be allocated for housing in the Local Plan Review for the following reasons i. It meets the aspirations of the local community as it is a sustainable site on the edge of the settlement ii. The hatched area submitted on the attached plan extends to circa 0.7ha which would allow for 8-10 residential dwellings and this would meet the aspirations of the local community through the delivery of smaller sites on the edge of the settlement. The following sites have been graded as 'Future Potential', and in association with BAY048 could collectively achieve the residential housing need requirement of 100 dwellings (BAY008/BAY013/BAY019/BAY042). This approach would be more in line with the community's aspirations than the over reliance on one large site, namely BAY039. iii. Site BAY048 extends in total to 2.43ha which would facilitate circa 72 houses at 30dph. Should Shropshire Council disagree with the local community's aspirations for smaller sites, it is considered that the entire site would be suitable, achievable and deliverable for residential development. iv. In the round, the site provides for a contained continuation of ribbon development along Lyth Hill Road whilst not leading to an incursion into open countryside as the development will have the benefit of infilling the gap between Bayston Hill and The White House. v. The site is extremely well serviced in terms of access to the vast array of services and facilities in Bayston Hill. vi. The site is presently used for agricultural purposes and is not constrained by any statutory, historic or environmental designations or ownership issues. The site offers a relatively flat, un-prominent, neutral, well bounded sustainable site for housing development. vii. The site is sustainable, achievable and deliverable within the plan period
A0976B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	It is considered that the allocation of the 'Preferred Site' BAY039 is inappropriate for the settlement of Bayston Hill due to the following reasons: i. An outline planning application (17/02561/OUT) for residential development for 103 dwellings was refused on this site on 10/10/2017. The proposal met with a high level of objection from local residents, including the Parish Council. The following key reasons for objection remain relevant in contesting the allocation of the site: a. Prominent visual position. b. The application was accompanied by a flood risk assessment which concludes that extensive mitigation measures will be required to prevent the risk of flooding affecting properties outside the site. c. Furthermore, the south-east end of the site is at high risk of surface water flooding. ii. Bayston Hill are currently preparing a Community Led Plan (2028), The initial aspirations of the community can be summarised as follows: a. Desire for small housing sites geographically spread around the village. b. Smaller developments to provide opportunities for local builders and developers. c. Smaller sites will enable a greater level of individuality to come forward through design and materials. d. Mixed development size to meet the varying needs of the community and provide support for local services. e. The survey has found an identified need for all house types, including those suitable for downsizing and 4-5 bed executive homes. f. Local support to retain a gap between Bayston Hill and Shrewsbury to protect its unique character. iii. Further to the above points, Site BAY039 does not accord with the aspirations of the local community.

A0977B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Promotion of site HWD005 in Hanwood. Whilst agreeing with the principle of the upgrade of Hanwood to a community Hub from a community Cluster in the draft Local Plan, the owner of land west of Orchard Lane, Hanwood disagrees with the content of Policy SP7 as, in the case of Hanwood, the housing guideline for the settlement can not be delivered within the current, out of date, development boundary. In the light of the impossibility of the 15 required "windfall" dwellings being built within the Hanwood development boundary, our client suggests that Policy S16.2 is amended to propose an extension to the development boundary for Hanwood to include his land west of Orchard Lane (HWD005) as an allocated site. The HWD005 site has already been identified as a "Long Term Potential" residential site in the SLAA. (See attached Feb 2019 Supporting Statement). The attached Illustrative Site Plan demonstrates how this can be achieved on the lower part of the HWD005 site by the provision of twelve small to medium sized dwellings served by an upgrade to Orchard Lane and the unmade track to Highfield. This proposed enhancement of the Orchard Lane connection to the A488 represents a significant benefit (confirmed by the Council's Highways Officer) to the community by the provision of highway safety and drainage improvements to the Weir Road/Orchard Lane/A488 junction. The types and sizes of the dwellings can be agreed at the planning application stage in accordance with proposed Policies DP1 – DP7, but an early assessment of the capacity of the site indicates that a cross-subsidy/lower cost market/entry level/older persons' housing scheme may be the most appropriate.
A0981B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The proposed development of 400 dwellings is of sufficient size to generate demand for playing fields, and whilst it would not be expected by Sport England that such provision should be delivered on-site for this proposed allocation, the policy should require that developers would be expected to make off-site developer contributions towards the delivery of playing field provision, in line with investment priorities identified the Council's Playing Pitch and Outdoor Sports Strategy (PPOSS) and that contributions will be calculated using Sport England's Playing Pitch Calculator. In the Central sub area (of which Shrewsbury forms part) there are currently shortfalls of capacity for cricket and rugby union, and there are predicted to be shortfalls for football, rugby union and cricket in the future taking into account participation and population growth. There is also an identified need for investment in additional 3G artificial grass pitches to meet existing and future needs. The demand from this proposed housing allocation using Sport England's Playing Pitch Calculator is set out on the separate sheet that accompanies this form. In summary, the development would generate demand for 1.01 playing pitches and 1.34 changing rooms. Within the Shrewsbury area, the PPS identifies a need for new full size 3G pitch and additional cricket provision. There is also a need to improve rugby provision. The ECB advise that several Shrewsbury based clubs including Shrewsbury CC, Pontebury CC and Beacon CC would most likely pick up the additional demand for cricket and have links to secondary schools on the west side of Shrewsbury. Growth in teams would generate the need for investment both in additional cricket pitches but also improved ancillary provision. The Football Foundation also comment regarding the need for additional 3G pitch provision on the west side of Shrewsbury as there are limited alternative opportunities to secure a suitable site to serve this demand. The RFU comment that the main priorities would be to secure contributions towards off-site improvements at Shrewsbury RFC, however there is also a need for a World Rugby compliant 3G pitch for training. Given the need for new provision, it is recommended that the wording of the proposed allocation is expanded to expressly reference the need to secure contributions towards off-site investment in playing pitch provision in Shrewsbury, which could be pooled with other contributions from other developments in Shrewsbury to deliver identified priorities for sports pitches. The policy should reference that developer(s) will be expected to work with NGB's to identify the most appropriate mix of sports facilities to address these identified needs and to secure their future management and maintenance where necessary. The additional sheet also sets out the demand for sports halls and swimming pools using Sport England's Sports Facilities Calculator. Whilst the development, of itself, would not generate sufficient demand to justify provision of additional sports halls and swimming pools, a contribution towards improving the quality of facilities would be justified. The Council's Built Sports Facilities Strategy identifies that whilst there is sufficient quantitative provision of swimming pools and sports halls to meet the existing and future needs of the population, the stock of facilities are aging and in need of investment. The focus for any developer contributions should therefore be on contributing towards qualitative improvements to existing built sports facilities including the Quarry Leisure Centre facility. The proposed allocation should therefore also make provision for a suitable developer contribution towards built sports facility investment in line with the priorities identified in the Built Sports Facilities Strategy. It is recommended that this is set out in the wording of the proposed allocation so that developer(s) are clear what is required to be provided to address the infrastructure needs generated by this development.
A0981B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The proposed development of 450 dwellings is of sufficient size to generate demand for playing fields, and whilst it would not be expected by Sport England that such provision should be delivered on-site for this proposed allocation, the policy should require that developers would be expected to make off-site developer contributions towards the delivery of playing field provision, in line with investment priorities identified the Council's Playing Pitch and Outdoor Sports Strategy (PPOSS) and that contributions will be calculated using Sport England's Playing Pitch Calculator. In the Central sub area (of which Shrewsbury forms part) there are currently shortfalls of capacity for cricket and rugby union, and there are predicted to be shortfalls for football, rugby union and cricket in the future taking into account participation and population growth. There is also an identified need for investment in additional 3G artificial grass pitches to meet existing and future needs. The demand from this proposed housing allocation using Sport England's Playing Pitch Calculator is set out on the separate sheet that accompanies this form. In summary, the development would generate demand for 1.13 playing pitches and 1.51 changing rooms. Within the Shrewsbury area, the PPS identifies a need for new full size 3G pitch and additional cricket provision. There is also a need to improve rugby provision. The ECB advise that several Shrewsbury based clubs including Shrewsbury CC, Pontebury CC and Beacon CC would most likely pick up the additional demand for cricket and have links to secondary schools on the west side of Shrewsbury. Growth in teams would generate the need for investment both in additional cricket pitches but also improved ancillary provision. The Football Foundation also comment regarding the need for additional 3G pitch provision on the west side of Shrewsbury as there are limited alternative opportunities to secure a suitable site to serve this demand. The RFU comment that the main priorities would be to secure contributions towards off-site improvements at Shrewsbury RFC, however there is also a need for a World Rugby compliant 3G pitch for training. Given the need for new provision, it is recommended that the wording of the proposed allocation is expanded to expressly reference the need to secure contributions towards off-site investment in playing pitch provision in Shrewsbury, which could be pooled with other contributions from other developments in Shrewsbury to deliver identified priorities for sports pitches. The policy should reference that developer(s) will be expected to work with NGB's to identify the most appropriate mix of sports facilities to address these identified needs and to secure their future management and maintenance where necessary. The additional sheet also sets out the demand for sports halls and swimming pools using Sport England's Sports Facilities Calculator. Whilst the development, of itself, would not generate sufficient demand to justify provision of additional sports halls and swimming pools, a contribution towards improving the quality of facilities would be justified. The Council's Built Sports Facilities Strategy identifies that whilst there is sufficient quantitative provision of swimming pools and sports halls to meet the existing and future needs of the population, the stock of facilities are aging and in need of investment. The focus for any developer contributions should therefore be on contributing towards qualitative improvements to existing built sports facilities including the Quarry Leisure Centre facility. The proposed allocation should therefore also make provision for a suitable developer contribution towards built sports facility investment in line with the priorities identified in the Built Sports Facilities Strategy. It is recommended that this is set out in the wording of the proposed allocation so that developer(s) are clear what is required to be provided to address the infrastructure needs generated by this development.
A1011B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Concerned about level of development in Cross Houses and strongly suggest that should remain as Open Countryside and not a Community Hub. Housing needs assessment should be undertaken. Recent Parish Council Community Led Plan questionnaire was not sufficient in asking whether further development was required and the difference between Open Countryside and Community Hub. Believe Inspector should request PC to explain why this was not made clear and why they assumed Community Hub was a given. The proposed Hub status is based on a points system with several areas of contention in the scoring of services, facilities and employment for Cross Houses. Such as lack of library (mobile library does not constitute a library, single provision children's playground and amenity green space and outdoor sports facility, assumed to a playing field owned by PC which is just a field.

A1106B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Shrewsbury West Urban Extension (SUE), which contains our site, is included as a saved policy in the local plan. However, it has not been designated its own policy within the plan. We advise that as part of policy S16. Shrewsbury Place Plan Area the SUE is discussed and its benefits (namely a minimum of 750 homes which will be delivered over the coming decades) are highlighted. This will ensure that there is a coordinated approach for the Shrewsbury area as suggested in paragraph 5.222. The potential increased capacity of the site should also be examined. This site has been allocated and it is BDW's intention to deliver homes in a timely manner, in line with Shropshire's housing trajectory, once this is decided upon. The full application also demonstrates that it may be possible for the SUE to accommodate more houses than previously allocated, and we believe this should be explored by Shropshire Council. The SUE can be seen in the attached Local Plan map. However, we believe that the map's graphics and its specifications could be improved. We suggest that further detail be provided on this map and that the drawn lines used to represent certain areas (relief road, allocation, development boundary etc) are made clearer and more precise. The plan should also make reference to the SUE Masterplan which Shrewsbury was adopted in 2013 (https://www.shropshire.gov.uk/media/7262/shrewsbury-west-sue-masterplan-february-2014-appendix-a.pdf) Rather than multiple sub-divided maps the DLP could provide a single map showing the whole of the Shrewsbury area and the spatial strategy for future development. This would be helpful for the purposes of understanding and coordination. Paragraph 4.261. of the plan states that "the subregional role of Shrewsbury is to be enhanced by the delivery of the North West Relief Road to extend the A53 around the north and west of Shrewsbury." Paragraph 5.224 also discusses the relief road and the implications of its development. Although it is not mentioned, the delivery of the relief road is integral to the SUE. We support this approach, but recommend it makes a detailed reference to the Shrewsbury West Urban Extension as they are directly linked. We also request the relief road is framed as part of a wider spatial approach for the Shrewsbury area, highlighting its importance.
A1110B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I would like to make additional statements to clarify the statements made by the Longden Village Action Group. 1) The roads connecting Longden to the rest of Shropshire are very poor. I understand that the best road, which is the main Shrewsbury road, was downgraded by the council in the 1960s to no longer be a B road. There are many blind corners on this Shrewsbury Road. Around 15 years ago I was just North of Hook A Gate headed towards Longden and my car's wing mirror was ripped off by a large delivery van travelling North at great speed around a blind corner. Unlike this van, I was being careful not to cross over the lines at the middle of the road. This is a dangerous road. A little North of Hook A Gate is a weak railway bridge that it is not recommended to drive large lorries over. I understand that this Shrewsbury Road cannot be improved by for example building bypasses because it runs within a narrow valley. Longden is a gateway to the Shropshire Hills and so road building here is much more difficult and expensive than it would be in the North Shropshire Plain. Many people in Longden do not work in Shrewsbury because of the limited job opportunities there. Instead they work in Telford or Wolverhampton or beyond. The most important road out of Longden for me is the single track road to the A49. With increased traffic in recent Years I have met far more oncoming cars on this road than I used to. This bottleneck would become much worse if a significant number of new houses was built in Longden parish. This road emerges onto a hill on the A49 with poor visibility of cars travelling North on the A49. It is not a good spot for a new improved road to emerge onto the A49. I do not believe that it would be viable to build more than a the number of houses proposed in the Longden Village Development Statement without a dramatic and expensive improvement to the roads around Longden. 2) The last bus from Shrewsbury to Longden is at 18:05 and the first bus from Longden in the morning is at 08:10. I believe that even for someone working in central Shrewsbury it would not be possible to commute to and from Longden using the bus service. Leaving work early each day at 17:30, especially if you had not got in until 09:30 that morning, would be unacceptable to most employers. For a commuting bus to be viable, the last bus would need to be at 19:00 or later. Commuting to a more likely centre of employment such as Telford would of course be impossible using the Longden bus service. 3) A number of "facilities" around Longden have been awarded a points score similar to that of Pontesbury to justify Longden also being defined as a hub for house building. Pontesbury Library is open for 4 days a week, including Saturday. The library bus that turns up infrequently in Longden offers a much poorer service. Similarly the opening hours for Longden shop are much shorter than those for the Coop in Pontesbury which unlike the shop in Longden has a good range of reasonably priced products. The Tankerville Arms in Longden seems to only be open erratically due to a lack of customers. I suspect that it will shut. Similarly the Church (when it was open) did not have weekly services. Annscroft Church is the only well attended Church in this group of parishes.
A1111B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am a resident of Longden. I agree with the letter representing the residents of Longden village in its entirety. I strongly object to Longden village becoming a hub for new housing developments as proposed by a new system of allocating points for existing services in the village such as a library van, a bus service or a pub. Somehow the point system has unequally given us the same planning status as a much more developed village such as Pontesbury, which is almost a small town in comparison having a purpose built library a Secondary school and even a small supermarket. Longden has only one very small shop/post office, a small school, and a pub that has partly been sold for building. This can not be right or fair. I am shocked by the ever increasing pressure for more and more housing in this small village in rural Shropshire, with limited local job opportunities. The only current options are for people to commute elsewhere, generally by car to places like Shrewsbury and Telford, along narrow country lanes where residents are finding it more and more difficult to pull in to their own drives because of the speed of continuous streams of traffic. Much of the housing in the village is actually on the Shrewsbury to Longden road, or for example Plealey Lane, and along with most of the County we are concerned about vans and cars using the back- lanes as commuter runs or school runs etc. brought here by their sat navs. I have just discovered a very good survey that was produced by Shropshire County Council in 2006 'The Shropshire-landscape-typology.PDF' the gist of it is that the landscape in and around Longden developed gradually over centuries, and has been looked after and farmed with care and attention emerging as I understand it from open moorland on the high ground of the Stiperstones not far away with common land that gradually became enclosed by field boundaries i.e. hedges many centuries ago. The hedges have a mix of all sorts of old trees and hawthorn which are great for wildlife. The large estates had an effect on the landscape, with a history of looking after the land and helping to create our valued landscapes, each and every field is part of that landscape and would disappear with the first removal of our wonderful hedges to make room for a new access road. We are not far from an area of outstanding natural beauty, and already the U.K gov.t is thinking of protecting more land from development to help our environment and biodiversity. The public are becoming more concerned about the loss of the natural world. During coronavirus lock-down, it was remarkable to see how many people took to cycling and walking in the area with the lack of traffic. The air felt cleaner. As Shrewsbury becomes more densely built up particularly in and around the Radbrook area and places like Sweet Lake at Nobold not too far away, it seems that people are looking to the Shrewsbury - Longden route as a way out of the town to enjoy the country-side for exercise etc. and for rural escapes. The popularity of the Shropshire Hills is an asset to everybody and appears to be more popular than ever. Cardingmill Valley attracts around a million visitors a year, and camp sites such as the one at Ratlinghope near Bridges are pretty busy with those looking to hike and bird watch. Any increase in the size of Longden will have an impact on Tourism and leisure activities, in fact the new development of 13 houses on the old 'Arrow 'site in Longden can be clearly seen from the top of the Lawley hill, one of our iconic Shropshire landmarks. We understand that there is a demand for housing but would argue that there are better places for it, and in the mean-time will be supporting U.K. farming to reduce air miles and help to alleviate climate change wherever possible.
A1111B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I am a resident of Longden. I agree with the letter representing the residents of Longden village in its entirety. A1126B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Given the mix of facilities and infrastructure it is recognised that Bayston Hill is a Community Hub. However, given that facilities and infrastructure are already over-structed, a range of smaller sites rather than rapid development of larger sites is considered more sustainable. The recently completed Community Led Plan revealed a clear preference within the community for smaller developments. The guideline for Bayston Hill is too high and difficult to achieve without extending the development boundary. Standard density assumptions for sites (30dph) are too high, as reflected in the proposed capacity of allocations. BAY039 should be removed from the draft Local Plan as: There is strong local opposition to the site from residents and the Parish Council. An Outline Planning Application was previously refused on the site. The decision notice indicated a reason for refusal was the site being outside the development boundary - don't simply change the boundary to permit development. The site has a poor access off Lyth Hill Road and additional traffic will probably cause the junction with Hereford Road to become overwhelmed. Particularly in combination with other development proposals. It is remote from most of the existing facilities in the village Its development will have a negative impact upon Lyth Hill Country Park (a potential Local Nature Reserve) and existing residents. It may impact on the viability of other sites. There is significant concern that if BAY039 is allocated and the development boundary expanded to reflect this, it will not be long before more than 20ha of greenfield land is developed. Disagree with development boundary being amended to include BAY039. Alternative sites which do not involve the expansion of the villages development boundary should be considered, including BAY050, BAY013, BAY026 and BAY019. Some of these perform more favourably within the S/

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1126B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	SHR145 should be removed from the draft Local Plan as: Local residents and Bayston Hill Parish Council are opposed to the site. An Outline Planning Application was previously refused on the site. This decision should hold for a significant period and the site will never prove to be a suitable environment for good quality housing - keeping windows closed because of noise pollution. Creating a new access onto Hereford Road is likely to increase the numbers of vehicles/congestion on the A5/A49 Dobbie's roundabout and the entrance to Meole Brace Retail Park. The central reservation on Hereford Road means access is likely to be left turn only, increasing pressure on these roundabouts further. If the site is developed a second entrance to Meole Brace Retail Park may be required. The site should be retained as countryside. Disagree with development boundary being amended to include SHR145.
A1126B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Fully endorse para 5.228 of the Explanation to Policy S16.4 which recognises the important of retaining the Green Gap to the north of Bayston Hill between Shrewsbury and the village.
A1126B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Given the mix of facilities and infrastructure it is recognised that Bayston Hill is a Community Hub. However, given that facilities and infrastructure are already over-stretched, a range of smaller sites rather than rapid development of larger sites is considered more sustainable. The recently completed Community Led Plan revealed a clear preference within the community for smaller developments. The guideline for Bayston Hill is too high and difficult to achieve without extending the development boundary. Standard density assumptions for sites (30dph) are too high, as reflected in the proposed capacity of allocations. The Parish Council recognises this site as the most appropriate location for a larger scheme as it has good links with existing infrastructure and offers the opportunity to enhance the village facilities through the provision of a Community Hub. The open space of the Glebeland is much valued by the local community and it is important that a significant area of green space is allocated on the site. Object to the possible infringement on Green Space provision on the site. Do not support any trade-off of green space in relation to this site. The open space that is provided is for all the community and allows good access to pathways. There is a need for retirement bungalows and low cost 2 and 3 bedroom homes, as evidenced within the recently completed Community Led Plan Survey (2018)
A1127B1	Viability and Deliverability of Proposed Site	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Agree with site allocation, but guideline is too low. It should be around 30, not 15. Likely to be short to medium term.
A1129B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The Pre-Submission Draft Plan proposes the allocation of Land West of Ellesmere Road, Shrewsbury (SHR173) for the development of 450 dwellings. Our client does not object to the principle of development of land to the west of Ellesmere Road for new housing and is indeed supportive of this location as a sustainable part of Shrewsbury within which new homes can be provided, particularly in the context of progress towards the implementation of the Northern West Relief Road (NWRR). Our client is however concerned that the proposed allocation of SHR173 is not effectively justified. Put simply it is not clear why SHR173 is the preferred location in the west of Shrewsbury area for new development when there are other available, suitable and achievable development sites including our client's land interests at Crosshill Farm (SHR163) and more widely as defined in site no. SHR174. Our client has reviewed the evidence base for the Plan's proposed allocation of SHR173 including both the strategic housing land availability assessment and the various stages of the Plan's Sustainability Appraisal (SA) of the potential sites. On its own evidence there is very little difference in the suitability for residential development of SHR173 above or in preference to other adjacent/nearby sites including SHR174. A side-by-side comparison of the SA analysis and findings for both SHR173 and SH174 has been undertaken for our client and is appended to this representation. It is plainly evident from this comparison that both site areas perform well as sustainable locations for new residential development but there is not objective differentiation for the proposed allocation of SHR173 only given the obvious merits of SHR174. It is also evident that the SA analysis for both sites (and indeed others) has been undertaken on an inconsistent basis with very different weight and emphasis applied to the ability to develop the sites; their possible highways/traffic effects and ecological and air quality/noise implications. In short the assessment of SHR173 appears to be biased in favour of the site's allocation above SHR174 or other sites in these regards against a baseline position which is very similar in terms of inter alia: overall location, access, landscape, ecology and future development of the NWRR. The SA analysis also makes some very sweeping and general assumptions as to the capacity of the sites and the possible effects of development arising from each (this is subject to further comment in a separate representation concerning the omission of SHR174 from the Pre-Submission Draft Plan). Overall our client concludes that while SHR173 is a sustainable development site that there is no objective evidence upon which this allocation should be favoured now above other sites including SHR163 and SHR174 which is equally or indeed better placed to support the sustainable development of new housing for Shrewsbury.
A1129B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The identification of Shrewsbury as the Strategic Centre of Shropshire and the primary focus for development in policy S16.1 is supported. An increased focus on Shrewsbury is appropriate given the town's role and function as the primary, highest order centre in Shropshire and given that there are available opportunities for new housing development within the town and through new sustainable urban extensions. It is essential that the Local Plan Review maximises opportunities for housing development in sustainable locations such as Shrewsbury and its immediate surroundings. It is our client's view however that Shrewsbury should accommodate additional housing development above the level identified in policy S16.1 (8,625 dwellings). The town and its immediate hinterland benefits from the highest levels of access to jobs, services and facilities and is well positioned with respect to existing and proposed/emerging infrastructure, including the new North West Relief Road. Our client's land to the west of Ellesmere Road is not physically or environmentally encumbered and should form a focus for future housing development allocation in this Plan. The land is capable of sustainable development along with contributions towards critical infrastructure identified in the Settlement Strategy. The focus of growth to the west of the town is supported in principle as set out in S16.1 at bullet 4. Our client considers that there are other sites, including their land interests to the West of Ellesmere Road that are suitable and sustainable locations for residential development that would help further support the focus of growth for Shrewsbury. In this respect, the delivery of the Northern West Relief Road (NWRR) set out in bullet 7 of policy S16.1 is supported in principle with the proposed road line identified on the Policies Map. Our client does not however support the proposed retention of the Countryside designation for land between the proposed NWRR road and the existing area of Shrewsbury along the line of Ellesmere Road. The implementation of the NWRR in this location is a fundamental change to the landscape character and visual relationship of the countryside to the town in this location. There is little logical reason to exclude the area contained between the NWRR and the town from being used for appropriate additional residential and commercial development and it is noted that the Plan supports commercial (but not residential development) within this area (as bullet 7 sets out). There is no justification or rationale for restricting this area from providing for residential development and it is noted in the Plan's Sustainability Appraisal and in the previous SHLAA sites assessment evidence that our client's site (Refs: SHR163 and SHR174) performs as well as the proposed allocation of site SHR173 and it is unclear why this site has been selected in preference. Overall, our client's site (and surrounding land as a part of SHR174) can and should make a positive residential development contribution to the future growth of Shrewsbury particularly in light of the changing character and levels of accessibility to the area provided by the implementation of the NWRR. The Draft Plan misses an opportunity to allow new land for development to come forward before the NWRR is completed and which can assist in helping meet the immediate housing land supply requirements of the Plan period, or in the circumstances that other allocated sites fail to be delivered.
A1129B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Our client has land interests that are encompassed by site reference no. SHR163 (Land at Crosshill Farm, west of Ellesmere Road, Shrewsbury). Our client objects to the omission of their land interest SHR163 from the Pre-Submission Draft Plan including at policy Schedule S16.1 (i) and the relevant Policies Map Inset S16 (Shrewsbury Town). Our client has previously provided Shropshire Council with substantial details setting out the availability, suitability and achievability of significant, sustainable residential-led development of the site on its own terms and as part of the wider SHR174 site area. The principle of residential development in the area to the west of Shrewsbury is supported in the Pre-Submission Draft Plan and is welcomed by our client. However the failure to identify and allocate our client's land represents a significant omission from the Plan given the level and nature of new housing required in Shrewsbury and in Shropshire overall. The characteristics of the area to the west of Ellesmere Road are anticipated to fundamentally change during the lifetime of the Plan with the confirmed funding and development proposals for the new North West Relief Road (NWRR) infrastructure that will cut through, bisecting our client's land and encompassing a substantial area to the east of the NWRR within a more urbanised character setting at the edge of Shrewsbury. Put simply, there will be a new hard urban edge to Shrewsbury created by the NWRR and which should be used positively in the Plan to form a new, sustainable, residential development area for Shrewsbury. The presence of the new road will, as designed in the emerging planning application, effectively transform the landscape and visual character of the surrounding area as well as change the ecological and biodiversity relationship of Hencott Pool Ramsar/SSSI with the surrounding land to the east. The road will also bring new opportunities for improved strategic and local area highway access for land to the west of Ellesmere Road. Set against this substantial change in underlying characteristics, it is not clear why SHR163 has been omitted from allocation in the Pre-Submission Draft Plan when the nearby neighbouring site SHR173 has now been proposed for allocation. This is particularly concerning given our client's concern that the Sustainability Assessment (SA) and strategic housing land availability assessment evidence that purports to underpin SHR173 does not demonstrate any fundamental, objective differences between SHR173 and SHR163. Our client has conducted a side-by-side comparison of the SA and site assessments undertaken for SHR173 and SHR163 and is concerned that the assessments (a) do not appear to have been undertaken on a consistent or comprehensive basis; (b) fail to reflect the actual physical characteristics of SHR163 or the ability of that site to resolve, mitigate or compensate any potential ecological, noise, access or air quality effects (which the SA downplays substantially in relation to SHR173). Overall, there is no clear evidence why SHR163 was not proposed for allocation as it performs equally or better than SHR173 and has the added benefit of being able to positively address the NWRR as part of any future development of the land. Our client therefore objects to the omission of SHR163 due to the lack of objective evidence or rational planning arguments for its exclusion from the Draft Plan and the inconsistent approach taken to its assessment alongside other sites, including SHR173, in the SA. SHR163 is available, acceptable and can be delivered as a sustainable residential development site (on its own or as part of SHR174 and with SHR109 in part) within the early part of the Shropshire Plan period. The site's allocation would provide a positive and proactive response to the changing character and nature of the surrounding area as well as offering a scale of site opportunity that can effectively address landscape and open space infrastructure requirements and deliver ecological and biodiversity benefits above those offered by the new NWRR road.
A1129B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Comparison Document of sites on Ellesmere Road to support information submitted in response A1129
A1130B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The Pre-Submission Draft Plan proposes the allocation of Land West of Ellesmere Road, Shrewsbury (SHR173) for the development of 450 dwellings. Our client does not object to the principle of development of land to the west of Ellesmere Road for new housing and is indeed supportive of this location as a sustainable part of Shrewsbury within which new homes can be provided, particularly in the context of progress towards the implementation of the Northern West Relief Road (NWRR). Our client is however concerned that the proposed allocation of SHR173 is not effectively justified. Put simply it is not clear why SHR173 is the preferred location in the west of Shrewsbury area for new development when there are other available, suitable and achievable development sites including our client's land interests at Crosshill Farm (SHR163) and more widely as defined in site no. SHR174. Our client has reviewed the evidence base for the Plan's proposed allocation of SHR173 including both the strategic housing land availability assessment and the various stages of the Plan's Sustainability Appraisal (SA) of the potential sites. On its own evidence there is very little difference in the suitability for residential development of SHR173 above or in preference to other adjacent/nearby sites including SHR174. A side-by-side comparison of the SA analysis and findings for both SHR173 and SH174 has been undertaken for our client and is appended to this representation. It is plainly evident from this comparison that both site areas perform well as sustainable locations for new residential development but there is not objective differentiation for the proposed allocation of SHR173 only given the obvious merits of SHR174. It is also evident that the SA analysis for both sites (and indeed others) has been undertaken on an inconsistent basis with very different weight and emphasis applied to the ability to develop the sites; their possible highways/traffic effects and ecological and air quality/noise implications. In short the assessment of SHR173 appears to be biased in favour of the site's allocation above SHR174 or other sites in these regards against a baseline position which is very similar in terms of inter alia: overall location, access, landscape, ecology and future development of the NWRR. The SA analysis also makes some very sweeping and general assumptions as to the capacity of the sites and the possible effects of development arising from each (this is subject to further comment in a separate representation concerning the omission of SHR174 from the Pre-Submission Draft Plan). Overall our client concludes that while SHR173 is a sustainable development site that there is no objective evidence upon which this allocation should be favoured now above other sites including SHR163 and SHR174 which is equally or indeed better placed to support the sustainable development of new housing for Shrewsbury.
A1130B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The identification of Shrewsbury as the Strategic Centre of Shropshire and the primary focus for development in policy S16.1 is supported. An increased focus on Shrewsbury is appropriate given the town's role and function as the primary, highest order centre in Shropshire and given that there are available opportunities for new housing development within the town and through new sustainable urban extensions. It is essential that the Local Plan Review maximises opportunities for housing development in sustainable locations such as Shrewsbury and its immediate surroundings. It is our client's view however that Shrewsbury should accommodate additional housing development above the level identified in policy S16.1 (8,625 dwellings). The town and its immediate hinterland benefits from the highest levels of access to jobs, services and facilities and is well positioned with respect to existing and proposed/emerging infrastructure, including the new North West Relief Road. Our client's land to the west of Ellesmere Road is not physically or environmentally encumbered and should form a focus for future housing development allocation in this Plan. The land is capable of sustainable development along with contributions towards critical infrastructure identified in the Settlement Strategy. The focus of growth to the west of the town is supported in principle as set out in S16.1 at bullet 4. Our client considers that there are other sites, including their land interests to the West of Ellesmere Road that are suitable and sustainable locations for residential development that would help further support the focus of growth for Shrewsbury. In this respect, the delivery of the Northern West Relief Road (NWRR) set out in bullet 7 of policy S16.1 is supported in principle with the proposed road line identified on the Policies Map. Our client does not however support the proposed retention of the Countryside designation for land between the proposed NWRR road and the existing area of Shrewsbury along the line of Ellesmere Road. The implementation of the NWRR in this location is a fundamental change to the landscape character and visual relationship of the countryside to the town in this location. There is little logical reason to exclude the area contained between the NWRR and the town from being used for appropriate additional residential and commercial development and it is noted that the Plan supports commercial (but not residential development) within this area (as bullet 7 sets out). There is no justification or rationale for restricting this area from providing for residential development and it is noted in the Plan's Sustainability Appraisal and in the previous SHLAA sites assessment evidence that our client's site (Refs: SHR163 and SHR174) performs as well as the proposed allocation of site SHR173 and it is unclear why this site has been selected in preference. Overall, our client's site (and surrounding land as a part of SHR174) can and should make a positive residential development contribution to the future growth of Shrewsbury particularly in light of the changing character and levels of accessibility to the area provided by the implementation of the NWRR. The Draft Plan misses an opportunity to allow new land for development to come forward before the NWRR is completed and which can assist in helping meet the immediate housing land supply requirements of the Plan period, or in the circumstances that other allocated sites fail to be delivered.

A1130B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Our client has land interests that are encompassed by site reference no. SHR163 (Land at Crosshill Farm, west of Ellesmere Road, Shrewsbury). Our client objects to the omission of their land interest SHR163 from the Pre-Submission Draft Plan including at policy Schedule S16.1 (i) and the relevant Policies Map Inset S16 (Shrewsbury Town). Our client has previously provided Shropshire Council with substantial details setting out the availability, suitability and achievability of significant, sustainable residential-led development of the site on its own terms and as part of the wider SHR174 site area. The principle of residential development in the area to the west of Shrewsbury is supported in the Pre-Submission Draft Plan and is welcomed by our client. However the failure to identify and allocate our client's land represents a significant omission from the Plan given the level and nature of new housing required in Shrewsbury and in Shropshire overall. The characteristics of the area to the west of Ellesmere Road are anticipated to fundamentally change during the lifetime of the Plan with the confirmed funding and development proposals for the new North West Relief Road (NWRR) infrastructure that will cut through, bisecting our client's land and encompassing a substantial area to the east of the NWRR within a more urbanised character setting at the edge of Shrewsbury. Put simply, there will be a new hard urban edge to Shrewsbury created by the NWRR and which should be used positively in the Plan to form a new, sustainable, residential development area for Shrewsbury. The presence of the new road will, as designed in the emerging planning application, effectively transform the landscape and visual character of the surrounding area as well as change the ecological and biodiversity relationship of Hencott Pool Ramsar/SSSI with the surrounding land to the east. The road will also bring new opportunities for improved strategic and local area highway access for land to the west of Ellesmere Road. Set against this substantial change in underlying characteristics, it is not clear why SHR163 has been omitted from allocation in the Pre-Submission Draft Plan when the nearby neighbouring site SHR173 has now been proposed for allocation. This is particularly concerning given our client's concern that the Sustainability Assessment (SA) and strategic housing land availability assessment evidence that purports to underpin SHR173 does not demonstrate any fundamental, objective differences between SHR173 and SHR163. Our client has conducted a side-by-side comparison of the SA and site assessments undertaken for SHR173 and SHR163 and is concerned that the assessments (a) do not appear to have been undertaken on a consistent or comprehensive basis; (b) fail to reflect the actual physical characteristics of SHR163 or the ability of that site to resolve, mitigate or compensate any potential ecological, noise, access or air quality effects (which the SA downplays substantially in relation to SHR173). Overall, there is no clear evidence why SHR163 was not proposed for allocation as it performs equally or better than SHR173 and has the added benefit of being able to positively address the NWRR as part of any future development of the land. Our client therefore objects to the omission of SHR163 due to the lack of objective evidence or rational planning arguments for its exclusion from the Draft Plan and the inconsistent approach taken to its assessment alongside other sites, including SHR173, in the SA. SHR163 is available, acceptable and can be delivered as a sustainable residential development site (on its own or as part of SHR174 and with SHR109 in part) within the early part of the Shropshire Plan period. The site's allocation would provide a positive and proactive response to the changing character and nature of the surrounding area as well as offering a scale of site opportunity that can effectively address landscape and open space infrastructure requirements and deliver ecological and biodiversity benefits above those offered by the new NWRR road.
A1130B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Comparison Document of sites on Ellesmere Road to support information submitted in response A1130
A1139B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I have concerns about this site due to its proximity to my home in Carmen Avenue, Shrewsbury. The noise from the A49 and A5 are intrusive currently and I do not look forward to this site creating more noise and light pollution. What does 'appropriate' links from the site into town mean? Will these links meet the aim to reduce travel by car? Where is the proposed Parkway Station in relation to this site?
A1152B46	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	During the Preferred Scale and Distribution of Development consultation 8,625 dwellings and 91ha of employment land was proposed (based on the proposed balanced growth). This remained the same during the preferred sites consultation. In the draft Local Plan despite the plan period having been increased by 10%, and there being an increasing urban focus, the housing guideline figure for Shrewsbury remain unchanged, although allocations for 410 more houses are proposed. However, the employment land guideline has now been increased by 9 Ha to 100 Ha, although 6 Ha less employment land is proposed for allocation. Consider the overall housing guideline of 30,800 is exaggerated and should be considerably lower, which would have a knock-on effect on Shrewsbury. However, note the relative proportion of the overall guideline that is earmarked for the main towns has been reduced slightly. The same maths applies to the guideline for Shrewsbury.
A1160B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Longden Parish Council. Response to Shropshire Council's Local Plan Consultation. September 2020 The Parish Plan, Longden Village Development Statement and the recent Public Meetings have been instrumental in formulating this response to the proposed Local Plan scheme for Longden Parish. The feelings and views of the residents have been incorporated into this considered response and the Parish Council fully endorse and support the views expressed in the objection from Longden Village Action Group. Longden has endeavoured to satisfy the recent SAMDev scheme that asked for a relatively large number of homes to be built within the Parish from 2016 to 2026. Longden expected 50 new properties and in fact nearly 90 have been built throughout the Parish and many more are planned and agreed. This has increased the development in Longden Parish by nearly double that which was expected! This recent planning history has meant that Parish residents are now firmly of the opinion that there has been enough development within the Parish. The infrastructure, road links and amenities are such that the present level of housing is close to the upper limit of capacity for the existing facilities. The road network is inadequate and has not been improved for decades. Visits to primary care services involve residents travelling by car through single track lanes to Pontesbury or Bayston Hill as there is no bus service. Housing developments nearer to Shrewsbury town have increased the traffic using the only direct route from the Parish into the town and there is always significant traffic queuing at morning and evening peak times impacting on Parish residents accessing facilities there. Residents of villages to the South also use the Longden road into Shrewsbury and the accruing vehicles are contributing to the excessive traffic numbers and speeding through the Parish. We are delighted to see that our arguments and requests that the villages and settlements within Longden Parish are to be given open countryside status and confirm that this is the wish of residents. We were dismayed however, to see that Longden village is still included in the list of proposed Hubs and this has meant the dissemination of information explaining this position particularly at residents' meetings, during COVID limitations to be rather rushed and we are concerned that despite our best efforts, some residents might still be unaware of the implications of the proposed plan. The detailed scoring for designating Longden as a HUB is badly flawed, blunt, and wrong. The allocation of points does not reflect the lack of size and capacity issues in our village so that the points awarded do not satisfactorily reflect the value of the facility being scored. We have repeatedly explained this to SC Planners and also drawn this to the attention of SC Cabinet, with little effect, as no changes to our points score have been made. Longden itself has little employment available and this factor seems to be totally ignored in promoting the village to HUB status. Access to areas of employment such as Shrewsbury or Telford etc is again often via single track lanes connecting to some main or trunk roads. With climate change and carbon emissions high on the agenda for everyone, it seems foolhardy to promote development in areas where there is poor public transport and no cycle lanes due to the narrowness of the roads. Surely it would make more sense to expect development nearer the towns, so saving the need for car journeys and avoiding the increase in carbon emissions. The infrastructure requirement for the proposed new housing has not been projected or anticipated and this will lead to further loading of existing facilities or of the poor road links to those further afield. The number of new houses proposed for Longden, equates to over a 35% increase in the number of dwellings in the village. This goes against the SC core strategy objective 3 that seeks to support rural communities by the delivery of local housing...appropriate to the role, size and function of each settlement. The section on Longden (para 19.75) refers to a 'modest amount of additional housing'. Little weight has been given to the character and quality of the local environment and the impact further development would have on the village character as required by objective 11 of the SC. core strategy. Aligning Longden Village with much larger settlements each having extensive facilities and. With good road links does not seem credible. Village residents do not want Longden to be a HUB. They feel that this will inevitably lead to pressure from developers to build significant numbers of new homes which goes against the recent Parish Plan and Longden Development statement to which they contributed. They feel that remaining a cluster should preserve the character of the Parish and safeguard our open countryside and traditional customs and landscape. The proposed development boundary for Longden provokes discussion regarding where and how the expected new housing is going to take place. The planners state that the expected new housing will come from exception sites around the development boundary. The recent Right Home Right Place survey highlighted particular housing needs and how this is expected to be met by exception sites, is anyone's guess. What we do not want is an unplanned and ad hoc approach leading to the highly valued agricultural fields around the village becoming housing estates in the coming years. The points the Parish Council put forward for review and action are: 1. The Hierarchy of settlements methodology formulae is too blunt and is flawed. Longden should not have reached HUB status because there is no employment in the village which could be counted in the hierarchy of settlement assessment and should therefore have a negative score for this section. The points given for a 10-minute visit of a library bus, once a fortnight in the middle of the day when few are able to use it, is fundamentally wrong. Receiving three points for this fleeting visit, the same number of points as Pontesbury which has a large fully equipped and staffed library, seems particularly ridiculous! Longden shop is also the post office, but it is so small that only two people can use it at any one time, particularly under COVID regulations. Allocating so many points for a tiny shop and post office is completely unfair compared again with Pontesbury that has several shops, a mini-supermarket, post office, butchers, hardware store and yet gets the same points allocation as Longden! The Public transport link is regular, but, is so infrequent that it has little effect on sustainability. The timetable does not allow office/shop workers to arrive in time for opening/starting and outgoing or returning connections timings prohibit Public Transport links as a feasible method of gaining onward transportation to other towns. To gain 10 points for this awful service seems particularly wrong. Reducing points in the Settlement Hierarchy Assessment to a more realistic and rational number in these areas would lower the village points to below the HUB status threshold. 2. Changing Longden Village from Hub as proposed and confirming its status as a cluster. In summation, Longden Parish Council have consulted the residents on several occasions recently and the overwhelming consensus is that Longden Village should be designated a cluster and the other settlements within the Parish be designated open countryside.
A1263B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Concerned about level of development in Cross Houses and strongly suggest that should remain as Open Countryside and not a Community Hub. Housing needs assessment should be undertaken. Recent Parish Council Community Led Plan questionnaire was not sufficient in asking whether further development was required and the difference between Open Countryside and Community Hub. Believe Inspector should request PC to explain why this was not made clear and why they assumed Community Hub was a given. The proposed Hub status is based on a points system with several areas of contention in the scoring of services, facilities and employment for Cross Houses. Such as lack of library (mobile library does not constitute a library, single provision children's playground and amenity green space and outdoor sports facility, assumed to a playing field owned by PC which is just a field.

A1646B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	SHR109 should be a housing with the adjoining land (SHR174 and SHR023). This land is capable of sustainable development along with contributions towards critical infrastructure identified in the Settlement Strategy. There is little logical reason to exclude the area contained between the NWRR and the town from being used for appropriate additional residential and commercial development. Site SHR109 as part of a comprehensive development of this area can and should therefore make a positive residential development contribution to the future growth of Shrewsbury particularly in light of the changing character and levels of accessibility to the area provided by the implementation of the NWRR. The failure to identify and allocate this land represents a significant omission from the Plan given the level and nature of new housing required in Shrewsbury and in Shropshire overall. Set against this substantial change in underlying characteristics, it is not clear why this land has been omitted from allocation in the Pre-Submission Draft Plan when the neighbouring site SHR173, equally dependent upon the NWRR, has now been proposed for allocation. It should be noted that the landowners of these parcels of land (SHR023, SHR109 and SHR174) have now agreed to jointly promote their land in order to achieve a deliverable and comprehensive sustainable development of this area.
A1700B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Cross Houses should remain a Hub. Cross Houses has had enough house building in recent years. Cross Houses' residents should have had the option to remain as Open Countryside. The points scoring is flawed – only have mobile library, only 1 children's playground, 1 amenity green space, the outdoor play facility is just a field. The Inspector should inspect all the facilities to determine whether SC is correct.
A1814B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The Village Plan should be given consideration. The site is not supported by Core Strategy, SAMDev or the revised NPPF. It is Countryside. Visibility is poor on Lyth Hill Road with on-street parking. The road is already busy due to it being a popular commuter route. The road near the site [south] is single track. Traffic would back up. The overall forecast demand should be compared to the ability of the existing network to accommodate traffic over a period up to ten years. I raise concerns over the validity of the findings of the previous applicants Transport Assessment undertaken – there is an underestimation of the vehicles numbers here. Drainage is over-capacity. Village has been over-developed. Popular footpaths will be lost. Construction traffic will last 3 years. More affordable houses needed. Dangerous walking route for any children in these houses to the schools. Doctors/dentist are over-capacity. Shops/amenities far from site. Residents do not want this site developed. There is ecological and biodiversity interest in the site.
A1834B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Consider that proposed site allocation SHR057 & SHR177; SHR145; SHR173; SHR166; SHR197VAR; and SHR060, SHR158 & SHR161 would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: SHR057 & SHR177: traffic and boundary; A5 Churncote and Woodcote roundabouts. SHR145: traffic; A5/ A49 Dobbies/ Bayston Hill roundabout. SHR173: traffic; A5 Churncote and A5/ A49 Dobbies/ Bayston Hill roundabouts. SHR166: traffic; A5 Preston Island roundabout. SHR197VAR: traffic; A5 Preston Island roundabout. SHR060, SHR158 & SHR161: traffic, boundary; A5 Edgebold, A5/ A49 Dobbies/ Bayston Hill and A5 Churncote roundabouts. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development. The Circular sets out, "Capacity enhancements and infrastructure required to deliver strategic growth should be identified at the Local Plan stage...[and] should not normally be considered as fresh proposals at the planning application stage". This requires an assessment of the transport impacts of the above proposed allocations to be made that is appropriate in detail to the scale of the proposals such that the board requirements for any enhancements to the SRN can be identified and included in the Infrastructure Delivery Plan (IDP). A significant number of the proposed allocations (not just those in Shrewsbury itself) have a cumulative impact to the SRN around Shrewsbury (A5 and A458 routes) and would welcome separate discussions about requirements of this assessment. This will need to be extended, in a proportional way, to consider whether any of the other above allocations will also give rise to such needs. Note delivery of the proposed North West Relief Road (NWRR) is supported in principle within the draft Local Plan. The Council is currently seeking to finalise the traffic modelling and scheme design details in relation to the NWRR (including proposals at A5 Churncote roundabout), informed by discussions with Highways England. Recommend consider further the opportunity to use these strategic models to assess the likely cumulative traffic impacts from the draft Local Plan proposed site allocations on the A5 roundabouts at Shrewsbury. The final form of this scheme would also benefit from a cumulative assessment of the draft Local Plan, to confirm whether additional needs arise and whether these could be accommodated for by changes to the planned scheme.
A1834B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Consider that proposed site allocation BAY039 would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: BAY039: traffic; A5/ A49 Dobbies/ Bayston Hill roundabout. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.
A1834B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		Consider that proposed site allocation FRD011 would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: FRD011: traffic, boundary; A5 Churncote roundabout. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.
A1852B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	strong objections to the proposed change of Longden village from cluster to hub status This would completely change the character of the village and the surrounding countryside as well as having a detrimental effect on the quality of life for those currently living there. The school is, I understand, full to capacity - can the Education Dept afford to provide additional accommodation, and even if it could, is there sufficient land without destroying the children's play areas? There is considerable parking congestion outside the school already. The narrow roads and lanes in the area will not cope with a lot of additional traffic, there is no pavement in many places and this will be even more dangerous for both drivers and pedestrians. The bus service is already very limited and the times are not convenient for commuters, they are also often unreliable meaning that those who have to be at work on time could be disadvantaged. Also more children would need to be bussed or driven to secondary schools in Shrewsbury. Hope will the infrastructure - electricity, gas, water and sewerage cope with a lot of additional housing? Finally, one of the reasons for the change is cited is that there is a shop. There is however it is very small, privately owned (ie not part of a chain) and is not intended for large numbers of people to do a big shop. We own and rent out the building in which it is housed - there is nowhere to extend it and we would have no intention of doing so anyway. I do hope that you will listen to the concerns of the people of Longden, who are being very reasonable in accepting that some new build is inevitable, and may even be beneficial, but this should be within the guidelines of CLUSTER and not hub status
A1892B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Object to Longden being a Community Hub. The settlement is half the size of the next smallest proposed Community Hub with only 135 dwellings. The Longden Village Development Statement, endorsed by the Parish Council, reflects the view that half the residents want to stay as a Community Cluster. The Hierarchy of Settlements is flawed as there is no weighting to reflect the size of services and its capacity to cater for additional residents. Feel less points should have been given to Longden by the Hierarchy of Settlements because they only have a mobile library, very small village shop which doubles as Post Office (but both get points), the pub is very small and only opens part time, the primary school and nursery are very small, superfast broadband is only available by satellite link, outdoor sports facility should be grouped with childrens playground, the 546 bus service does not allow for connections to other public transport in Shrewsbury and Longden does not have sustainable transport links to other nearby settlements. A lack of employment opportunities means residents have to drive to work so, development in Longden would generate significant carbon emissions - this is against government and Shropshire Council policy. Having Longden as a Hub will have a negative impact on the climate whilst staying as a Community Cluster means growth would be by infill and minimise carbon emissions. New development would result in loss of mature hedgerows and replacement ones will take time to mature, thus reducing carbon capture and storage. The Right Home Right Place survey indicated 18 houses were needed so residents feel the guideline of 50 (27 after consideration of completions since 2016 and existing commitments) is a betrayal of trust in the Council. Future Local Plan reviews are likely to add more houses: this engenders mistrust from those residents who have engaged with the Council so far. Residents fear that exception sites will be identified on an ad hoc basis and valuable agricultural land will be lost. If agricultural land around the village were developed, flooding from tributaries of the Reabrook will occur. Wish to remain a Community Cluster and not be a Community Hub.
A1898B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Amenity green space at Quail Ridge - if the gas tank area and the play area (already allocated points) are discounted then the resulting amenity area drops below the size threshold of 0.2ha to 0.19ha. The allocation of 3 points should be removed. Bus service – there is not a return service arriving in the village between 3pm and 6pm - it gets in at 6.08pm. There is one bus that arrives in Ford parish at 4.52pm but it only stops opposite The Cross Gates Hotel (now called 'The Smoke Stop'). This is not within the parameters of the village or the development boundary and it is not within reasonable walking distance of the village. The allocation of 5 points should be removed. Outdoor sports facility – the redundant and overgrown bowling green is not accessible to the public and is now in private ownership with planning application for storage units pending consideration. The allocation of 1 point should be removed. Library - the provision of a mobile library service that visits for 20 minutes once a fortnight should not be allocated 1 point less than a permanent library open 6 days a week, as it is a far more limited and restricted service. The village lies within a Conservation Area (limiting potential for infill and potential harm to the character of the Conservation Area). Soil types within the village and surrounding area are classed as good or very good (Grade 2 or 3) for agricultural use. Ford is in a designated Mineral Safeguarding Area and any proposed development conflicts with Shropshire Council's Strategic Policy SP13, Strategic Planning for Minerals. Field FRD011 is an ancient Ridge and Furrow field that should be protected. Its proposed development conflicts with Shropshire Council's Development Management Policy DP24, Conserving and Enhancing the Historic Environment. The required Environmental Impact Assessment will highlight the biodiversity present in, and adjacent to, the proposed development site that should be protected. A Local Housing Survey carried out in 2019/20 showed that the scale of demand for new housing development in Ford is low. This is highlighted by the fact that it has been particularly difficult to find tenants for a recently completed affordable housing project of 32 homes at Cross Gates Meadow. Mathew Mead, Shropshire Council officer, commented: "This survey shows the scale of demand (for housing) is low and this should be met by the planned new development (Cross Gates Meadow). There doesn't seem to be much evidence for a big increase in development."Ford is a rural village that lacks the infrastructure to support the level of extensive development resulting from being a Community Hub.
A1899B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Amenity green space at Quail Ridge - if the gas tank area and the play area (already allocated points) are discounted then the resulting amenity area drops below the size threshold of 0.2ha to 0.19ha. A1928B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Agree with objections made by Longden Village Action Group
A2104B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	objection to the proposed plan to change Longden Village from a cluster into a hub. I would like to state that I am in complete agreement with the letter written by the Longden Village Action Group regarding the Shropshire Local Plan review. Each and every point is valid, and the points system used to decide the future of the village is flawed and grossly unfair. A very large concern I have is the road running through Longden and the onward route to Shrewsbury through the neighbouring villages, already struggles with the amount of traffic using it. The volume of cars, large lorries and farm vehicles using a road which substantial bends and the fact that the road is also a well-used cycle route has safety implications.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2108B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Consideration should be given to moving the Harlescott P&R to this site which is much better than its current location, where we have the absurd situation of a P&R located well within the town boundary rather than on its edge. This leads to traffic and congestion along Battlefield Road in order to reach the P&R. Relocating the P&R to SHR16 would remove much traffic from Battlefield Road, which is currently heavily congested. The current P&R site could then be developed for employment or housing use. All P&R sites should be on the edge of town as a matter of principle. Consideration should also be given to opening a station on the rail line at this location. This would remove even more traffic from the town centre. Combined with a relocated P&R and new and improved segregated cycle paths and a cycle park, this site would make a very substantial contribution to reducing traffic and hence carbon emissions. The car park associated with the P&R could also be covered by solar panels, thus allowing buses and cars to be recharged whilst parked without taking electricity from the National Grid. There may even be times when excess electricity could be contributed to the grid. It would also provide shade and some weather protection for parked cars.
A2108B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	SHR197VAR should be deleted from the Plan as it lies outside the natural boundary of the town formed by the A49 link road. Development outside this boundary sets a dangerous precedent as further urban sprawl would be difficult to stop. Battlefield is at the very limit of walkability within Shrewsbury. It takes approx. 1 hour to walk from Battlefield to the town centre. The northward sprawl of the town needs to be halted at this natural boundary because development beyond it would be effectively unwalkable as well as unstopable. It should also be noted that SHR197VAR lies within 500m of an ancient woodland (Lion Coppice) which has not been noted in the scoring. This site is known to be a hunting ground for the Tawny Owls that nest in Lion Coppice and would further isolate the coppice from what used to be surrounding open fields. It would further degrade the coppice which is a priority habitat under Section 41 of the NERC Act 2016. I believe this would change its score from -6 to -8 meaning that it would be rated as Fair rather than Good.
A2108B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	SHR197VAR has been incorrectly scored as it lies within 500m of an ancient woodland (Lion Coppice). I believe this would change its score from -6 to -8 meaning that it would be rated as Fair rather than Good.
A2108B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	"The provision of a Shrewsbury Parkway Station will promote rail travel and reduce traffic on the strategic highway network". The proposed location of this station is not mentioned. I am hopeful that this is SHR166, but I think it is important for the location to be given in this document. "Shropshire will welcome investment to improve highway safety especially on the A49, or by duelling or partially duelling the A5/A483 north of Shrewsbury and with junction capacity improvements to the A5 Shrewsbury and Oswestry bypasses." There is no evidence that duelling or partially duelling a road will lead to improved safety. Usually it results in faster speeds which result in more casualties (and more severe injuries). Furthermore, duelling increases road capacity which encourages car use at a time when we urgently need to be reducing it and moving "positively towards a zero-carbon economy" as stated in para 2.28. Duelling is also very expensive and the money would be better spent on improving active travel infrastructure. Duelling of roads and other capacity "improvements" fails para 1c of The Shropshire Test. In general we should be decreasing the capacity for motor vehicles whilst increasing the capacity for walking and cycling. Indeed, this is stated explicitly in para. 4.254: "Key objectives are to reduce our dependency on private motor vehicles and fossil fuels by using "active" travel opportunities...".
A2126B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Strongly object to designation of Ford as a community hub and subsequent development of field FRD011 for residential purposes. I object because - the additional housing will put a strain on the facilities already available in the village, which is already affected by holiday traffic during busy times of the year; impact on residents of Ford through building work noise and general disruption; the school during drop off and collection times is extremely dangerous with people parking on yellow lines and residents have a great deal of trouble leaving the village at this time and new housing will compound this. FRD011 is an ancient ridge and furrow field that should be protected. Its proposed development conflicts with policy DP24 conserving and enhancing the historic environment. Ford lacks the infrastructure to support the level of development resulting from being a community hub. The school is at full capacity and no longer has room to expand. The traffic emerging onto the A458 is already at a concerning rate and additional vehicles would take this to an alarming rate.
A2131B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	A further 300 houses have been added to the original total of 1200, so now totaling 1500 for this area. A concern here is all the traffic inc public transport both moving around the development and in and out onto a very narrow Hanwood Road. There is also a concern about carbon emissions during the building of all these houses and after.
A2132B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	As wildlife has now returned to the area (since the last development) it is extremely important to maintain enough sufficient green space between existing ponds and new green corridors so that the swans, geese, ducks, moorhen etc are able to graze and rest.
A2135B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	As long term Longden residents we are writing to oppose the proposition to develop the village as a hub. Without wishing to repeat the many reasons that this would be inappropriate we would like to state that we fully support the objections raised by the Longden Village Action Group all of which we see as valid and pragmatic.
A2144B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I have seen and read the letter of objection that has been sent to you from the Longden Village Action Group about the Shropshire Local Plan Review. I fully support their arguments.
A2161B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with designation of Ford as a community hub. Feels that points have been incorrectly awarded in the areas of Amenity Green space; bus services; outdoor sports facility and mobile library service. In addition the scale of development proposed would place a strain on infrastructure and the natural environment. Level of demand in Ford for housing doesn't require the scale of development listed in the plan.
A2162B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with designation of Ford as a community hub. Feels that points have been incorrectly awarded in the areas of Amenity Green space; bus services; outdoor sports facility and mobile library service. In addition the scale of development proposed would place a strain on infrastructure and the natural environment. Level of demand in Ford for housing doesn't require the scale of development listed in the plan.
A2163B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Support proposed allocation SHR173. The site has been promoted throughout the Local Plan Review as a suitable, available and achievable site suitable for delivering a sustainable residential development. A vision document for the site has been appended as an annex to this representation. The Vision Document has been underpinned by technical analysis and assessments including minerals assessment, highways, landscape, heritage and ecology. It demonstrates that the site is suitable, available and achievable for sustainable residential development. SHR173 is proposed for 450 dwellings. However, consider has the capacity to accommodate up to 500 dwellings over the developable area of 14.35ha. This could be delivered at: Phase 1: 5.72ha (200 dwellings at 35dph) and Phase 2: 8.63ha (300 dwellings at 35dph) (illustrated on an Illustrative Framework Plan which represents an Appendix to this representation). Notwithstanding the new requirement to allow for a local centre, SHR173 can accommodate up to 500 dwellings without needing to alter the wider development parameters. these dwellings can be provided whilst also providing the requisite infrastructure such as play areas, greenery and wildlife ponds. The draft policy should be amended accordingly and these extra dwellings can contribute towards housing need. The broad principles of the Development Guidelines for SHR173 are supported, including the provision of a local centre. Would welcome the flexibility within the policy wording to provide single retail outlet in place of local centre, if retail demand favours this. It is noted that draft site guidelines state development of SHR173 will not commence until such time as the North West Relief Road (NWRR) is operational. This is also included in the explanatory text of the policy at para 5.224. It is understood that construction of the NWRR is still intended to commence in Spring 2022, with the road opening in Autumn 2023. A Highway Assessment demonstrates that up to 200 dwellings (phase 1) could come forward prior to the NWRR being operational, without having a significant adverse impact on the current highway network. If planning permission for SHR173 was granted in 2021 and reserved matters approval secured later in 2021, construction could start on site in 2022 with the expected delivery of 50 dwellings per year. Phase 1 could then be completed by 2025. Therefore, the draft policy and draft policy explanation should be amended to allow for up to 200 dwellings with the remainder dependent on approval/construction/completion of the NWRR. Draft Development Guidelines also request preparation of a Masterplan in consultation with the public and adopted by Shropshire Council, with a decision not to be made on a planning application until such a time a Masterplan for the Site has been approved by the Council. Consider adoption and approval of a masterplan prior to a Planning Application being submitted is not necessary for the effective delivery of a sustainable residential development. Instead, the draft policy should be amended to read that a comprehensive masterplan should be submitted as part of a planning application that has been demonstrably informed by public consultation and engagement. This way, delays in bringing an application forward would be avoided and it would not materially change or influence the Council's decision-making process. SHR173 is viable, available and achievable, and is expected to deliver housing in accordance with the policy requirements identified within the 'Regulation 18: Pre-Submission Draft Shropshire Local Plan'. Consider the timescales identified for SHR173 in Appendix 7 of the draft Local Plan are too protracted. The delivery of the SHR173 is anticipated to be between the Short-Term and Medium-Term in the Local Plan, even with the residential guideline increasing to 500 dwellings. In the short-term 200 dwellings are deliverable, with 300 dwellings in the medium-term.
A2175B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with SC Highways assessment that the highway is suitable for development on land off Lyth Hill Road BAY039. The proposed development would lead to an extra 250 cars using the road, and so the full impact will be significant, not only on the road itself but the impact on neighbouring roads of Cross Roads, Lyth Wood Road and the Lyth Hill Countryside Site itself, as well as issues with parking on these narrow roads. The impact of additional traffic onto the A49 also doesn't seem to have been sufficiently considered.
A2180B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Agree with urban focus and High Growth. Concerned that expansion of Shrewsbury into other parishes will lead to CIL and council tax given to other parishes, where really the houses are situated in Shrewsbury (a boundary review has been pressed for, although it is acknowledged that this is not a LPR concern). Disappointed Shrewsbury Test and Big Town Plan not fully grasped in this Plan. However agree with Shrewsbury's position within the Plan. A reinforcement of the highways network is needed (due to the increasing houses to the S and W), a rail halt should be at Preston Boats as well as a Park & Ride and Green Open.
A2180B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	We are generally supportive of this development site but would request that great stock is placed on the layout along the Shrewsbury Canal and the Shropshire Way Routes. We would also expect improvements to the Highway Network and particularly the Roundabout from which we presume this development will access the network.
A2180B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	We are generally accepting that the direction of development will head west towards the A5, but we believe that this parcel of land needs to have an appropriate Masterplan to ensure the correct design, quality and linkages not only to the proposed development site across the road but also to the Mytton Oak Road/Hanwood Road development site. Improvements to the highway network particularly in terms of footpath improvements is critical.
A2180B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Reference needs to be taken from the experience of the Barratt/Bovis development in terms of how the site develops, engagement with the community and the layout of the network to avoid these residential areas becoming rat-runs should a congested A5 occur. It is essential that there is a Masterplan developed and also extensive provision for recreation. The Barratt/Bovis site had significant land allocated for education/recreation but this has been allocated by the Education Authority for Education. The imbalance needs to be addressed on this site. Careful consideration needs to be made so that open space across this development site and the one above links up to existing open space to create that western green lung that the Big Town Plan aspires to achieve.
A2180B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	We are generally supportive of this site but have some concern about the strain on the network and we made our comments known during the consideration of this site as the development was presented for planning permission. Hereford Road already suffers from overtrading of the retail park and both carriageways can be gridlocked by vehicles at this point. Consideration also needs to be given to that fact that Pulley Lane opposite this junction is a major route for Bayston Hill residents accessing the town.
A2180B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Whilst we understand that this site will only ever be presented in the event the North West Relief Road is constructed, we are still aware of the traffic congestion along Ellesmere Road which has been cumulatively impacted by additional developments. Members question the sustainability of this site and would request clarification on the level of projected traffic reductions that a NWRR would create to justify inclusion. Adding also to our point above about Walking & Cycling, we would wish to understand how this is likely to be generated to link up to existing active travel networks particularly in view of the fact that the development sits on the opposite side of such networks.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2180B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	The Town Council does acknowledge that any plan needs to continue to allocate land for employment, but careful consideration needs to be given to design and layout so that buildings sit within what is a green corridor along the A49. Understandably this employment site sits alongside the main network, but we need to appreciate that this site will be an employment site for residents of Shrewsbury and its surrounding areas. Therefore active travel routes need to be created to ensure that this doesn't become a car-led development
A2180B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	The Town Council is generally supportive of this scheme.
A2258B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Insufficient infrastructure to support an additional 200 houses. Roads, medical facilities, schools, water,sewage as evidence by the overflow of untreated sewage down Farlwy Brook into the River Severn. Housing sites elsewhere will increase traffic through this small historic town. Roads all around are becoming increasingly busy.
A2276B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Errors in your document. Green space at Quail Ridge is below 0.2 Ha. No bus stop within ford village. Bowling Green no longer exists, land now for sale as a development site. Site FRD011 is an ancient ridge and furrow field and is protected under DP24. The service station serves A458 not Ford Village. There is no public house, just a restaurant. No high speed broadband.
A2297B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by Longden Parish Council and the Longden Village Action Group.
A2298B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by the Longden Village Action Group.
A2299B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by the Longden Village Action Group.
A2300B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by Longden Parish Council and the Longden Village Action Group.

A2302B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by Longden Parish Council and the Longden Village Action Group.
A2303B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagree with the proposal and agree with the objections raised by Longden Parish Council and the Longden Village Action Group.
A2308B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	FRD011 is approximately 2km south east of Nesscliffe Training area. Flying activity within this location, undertaken in support of training for the front-line, produces a significant amount of low frequency noise which can be disturbing. Therefore, the proposed allocation would represent a cumulative increase in sensitive receptors to noise within this location and as a result has the potential to lead to an increase in noise complaints. For FRD011 to be in accordance with Para 95 of the NPPF (ensuring operational sites are not affected adversely by the impact of other development proposed in the area) and para 182 of the NPPF (existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established, with a requirement for the applicant to provide suitable mitigation before the development has been completed), it should make reference to a requirement for planning applications to be submitted with an appropriate noise assessment which takes into account noise arising from defence activities and provides appropriate mitigation solutions such as soundproofing. Applicants should engage with MOD in the production of such assessments. Furthermore, the site promoters of FRD011 should provide measures to enable future occupants to be made aware that military aircraft may be seen and heard operating in the area and that aircraft may overfly the site. The mitigation of noise in external areas may not be possible. Future occupants should also be made aware that aircraft types, flight paths and ground based activity can vary over time and this may cause disturbance. Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: FRD011: RAF Shawbury Plan AT 91.4m - East part of site.
A2308B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: SHR054a: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B. SHR057 and SHR177: Safeguard Zone - RAF Shawbury Plan AT 91.4m. SHR060, SHR158 and SHR161: Safeguard Zone - RAF Shawbury Plan AT 91.4m. SHR145: Safeguard Zone - RAF Shawbury Plan AT 91.4m. A2308B21	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: BNP024: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B. BNP035: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B.
A2308B22	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: BAY039: Safeguard Zone - RAF Shawbury Plan AT 91.4m. BAY050: Safeguard Zone - RAF Shawbury Plan AT 91.4m.
A2308B23	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: BIT022: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B.
A2308B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: BOM019: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B. BOM020: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B.
A2311B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Paragraph 5.228 in Regulation 18: Pre-Submission Draft of the Shropshire Local Plan identifies Policy SP7, and states as a key priority the importance of retaining the Green Gap with Shrewsbury to the north of Bayston Hill. This is very welcome and I fully support this objective. This area, north of Bayston Hill and south of Meole Village incorporates the Rea brook, farm land and flood plain for the Rea, it leads into the Rea valley conservation areas and is important for wildlife and its habitat, and for exercise and recreational for local people. The Rea has flooded extensively over the area in recent times, and such flooding is likely to increase with climate change. The action of the flood plain in storing water is important in reducing the flow to the Severn at Coleham and the English Bridge. The Green Gap is a crucial buffer zone between the communities in Bayston Hill and Meole Village, and because of its environmental importance it would be highly desirable to afford permanent protection to all of the land south of Meole Village and extending to Hook-a-gate. I strongly request Shropshire Council to provide this protection in its strategic policy documents.
A2316B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Whilst a point system (for HoS) seems logical, it does mean that it can skew results and does not take into account the views from residents and does not allow a common sense appraisal of an area, which has all incorrectly lead to Longden being classified as a Hub. The roads in and around Longden are poor and extra housing would exacerbate this issue. It is unjustified to give 3 points as the library is only a mobile library. If a hub, it would open the floodgates to planning proposals from aggressive developers and inevitably more than the need/guideline would be built. The planned growth is around 20%, which is too high. Longden should remain a Cluster to resist aggressive developers. Small pockets of housing is acceptable, which a Cluster classification would allow for. A large number of housing would threaten the integrity of the village/community.
A2322B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Shropshire Wildlife Trust - Shrewsbury Branch - The plan falls short in the following ways: There is a lack of reference to the 25 Year Plan for the Environment, the Environment Bill, and Nature Recovery Networks Supportive of the North West Relief Road an environmentally damaging scheme that does not have planning permission. Any development areas associated with the road should be excluded from the plan. Unambitious with its target of increasing land for biodiversity by 10% - the Wildlife Trusts' believe that 30% of the land should be under recovery for biodiversity by 2030 and this should be reflected as reasonably as possible at the local, regional and national level. It is biased towards the social and economic benefits of development and downplays the environmental disbenefits against the backdrop of climate and ecological crises It is inconsiderate of accessible local natural green space for people Overall it demonstrates an set of underwhelming solutions to the climate and ecological crises We note the plan does not reference the proposed planning process changes or changes to the standard method of calculating house number:

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2330B1	Viability and Deliverability of Proposed Site	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	We envisage SHR060 commencing delivery in the short term and potentially being fully delivered in the medium term. Strong support for this site. Masterplan attached to rep
A2340B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I would like it noted that I am fully supportive of the Longden Parish Council and the Longden Village Action Group's position of OBJECTION to the proposed changes in status for Longden Parish. I hope you will give due weight to both their submissions regarding this appeal.
A2353B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		SHR057 etc. It is important that employment areas are balanced across the town to reduce traffic movements and provide an even distribution of social and economic uses. We are supportive of this allocation as part of the much larger development; there may be scope for this to be a medical/educational employment cluster. SH145. Remain concerned that this enclave of housing in a broadly commercial area will cause a conflict of uses both with the retail area and the allocated employment land to the east of the railway line, and that the access onto the Hereford Road leading to the A5/A 49 is inadequate. SH166. Support this allocation as a longer term follow on site to the established Shrewsbury Business Park to the south and the Otley Road land which is expected to be released (at last) for development in 2021. Bearing in mind the proximity of SH166 to the main Shrewsbury - Birmingham railway we suggest that there is reservation for a rail halt in this area. SHR197VAR. Support this zoning as a long-term expansion of Battlefield Enterprise Park Shrewsbury Town Centre. Support the realism that demand for town centre retail space has diminished and as such redevelopment of the Riverside Centre should consider other uses. Linking with the Shopping Centres and the surrounding historic streets it should be developed as a key 'anchor' for town centre investment.
A2370B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Settlement Policy S16.1 'Development Strategy: Shrewsbury Strategic Centre': This policy is supported as it recognises the strategic role of Shrewsbury in the County and directs a significant proportion of the County's housing and employment land growth to Shrewsbury during the Plan period. In addition, the identification of land to the west of the town (north and south of Mytton Oak Road) as a focus for growth during the plan period is also supported as this land is unconstrained and lies in a highly sustainable location. The land will therefore make a significant and unique contribution towards meeting the growth needs of both the Town and the County.
A2370B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Strategic Policy S16.1(i) 'Residential and Mixed-Use Allocations: Shrewsbury Strategic Centre', Policy Map Inset S16 'Shrewsbury Town' and Mixed Allocation 'Land between Mytton Oak Road and Hanwood Road, Shrewsbury SHR060, SHR158 & SHR161' are supported. This site is a strategic allocation and would make a significant contribution towards the overall housing and employment requirements for Shrewsbury up to 2038 and beyond, into the next Plan period. The majority of the site allocation (SHR158) is promoted for development by CEG who are a strategic development and investment company operating across the UK. They have extensive experience of delivering a huge range of development projects, from office and residential, to retail, industrial and mixed-use. In delivering on projects CEG works closely, and builds lasting relationships, with local authorities, landowners, stakeholders and communities. CEG therefore has a proven track record in delivering development projects and this is exemplified in Shrewsbury with CEG's involvement in the development at Bowbrook to the north-east of, and adjoining, proposed mixed use allocation SHR158/SHR060/SHR161. Examples of recent projects are included at Appendix 1. Development Guidelines: In respect of the development guidelines we have the following comments: Housing Numbers – The overall housing number in the plan is supported. Employment Land – The quantum of employment land is supported. Local Centre – The provision of a local centre is supported. Education Facilities – The Council acting as Education Authority have confirmed that the required area of land is significantly less than the 4ha identified and is closer to the town. We would support this approach and the area of land identified on the parameters plan has been reduced to 2.10 hectares accordingly. Site Design & Layout – We recognise that a masterplan will need to be approved for the site and the quality, design, mix and layout of the development will be informed by site constraints and opportunities. Highways and Access – We support the approach taken to vehicular access points, pedestrian, and cycle links within and through the site. Further detail will emerge through the Development Brief process. We would express some concern that "all necessary improvements to the Local and Strategic Road Networks will be funded through the development". This is imprecise an open ended and would request the Council consider an alternative form of words which ensures that the improvements needed are directly attributable to the development site rather than other improvements to the Strategic Road Network. Green and Blue Infrastructure – We support the approach taken to green and blue infrastructure. A sustainable drainage strategy and Green Infrastructure network will be key components of the Development Brief. In summary, the allocation of this site is supported as it represents a significant, and unique, opportunity to meet the social, environmental, and economic needs of Shrewsbury during the current Plan period and beyond. It is considered essential that the Plan enables flexibility on the precise amount and mix of uses to be provided on the site to ensure that the site best meets the development growth requirements of the town. Development Brief: CEG have been leading discussions between the two other landowners forming the draft allocation; Mr Roger Parry (on behalf of Davies Parry (Oakfields) Limited, Site SHR060) and Shropshire Council (via their Estates Team, Site SHR061). Through this dialogue, a draft Development Brief has emerged that aims to provide a strategic approach to the creation of a cohesive and coordinated high quality development, spanning land ownership boundaries and buildings on existing and forthcoming planning policy. The Brief provides for a three-tiered approach, including: 1. Design Principles – which all design decisions must be judged against; 2. Spatial Parameters – the strict parameters that the development must comply with; and 3. A Placemaking Code – a future document to be produced before the submission of a reserved matters planning application. CEG have worked collaboratively on the Parameter Plan and the latest version of this is attached in Appendix II. The plan conforms with all the requirements in the development guidelines except for the school expansion land. This has been reduced to 1.8 hectares following confirmation of the land requirements from Shropshire Council acting as education authority. CEG would take this opportunity to confirm their commitment to working proactively with the Council, landowners, the local community and other stakeholders to develop the Development Brief and subsequently deliver a mixed use scheme that meets the needs of the settlement. Viability and Deliverability: The Council's latest viability study and appraisal of the site currently demonstrates, with the consultants' own assumptions, that the development is currently 'Marginal' in terms of viability, and therefore should not be considered as viable. We would disagree with this assumption however understand that many of the assumptions, particularly with regards to abnormal infrastructure costs and S106/CIL, are not yet 'set in stone' and are therefore open to interpretation and further analysis. At this stage, we would consider that this appraisal is inconclusive given that we need to look into several areas of this in much more detail and to understand how Shropshire are planning to address site wide or off site infrastructure provided by developers of the scheme where this would normally have been paid for via CIL which may help to mitigate the position. In addition, we would expect that developers would be able to build for a lower price per sqft and indeed sell for a higher price per sqft than currently indicated in the appraisal, depending upon the mix and quality of product ultimately delivered. Furthermore, the mix of development of the subject Site within the Study is set at 1,400 dwellings; and does not take account of any land value derived from the areas of employment land or the proposed Local Centre/Community Hub uses. In respect of deliverability CEG are committed to bringing forward an outline application as soon as possible and in advance of the Examination in Public. Some early discussions with housebuilders have taken place and it is expected that a proportion of the site will be available early in the plan period. Naturally, a site of this scale will be phased, and a phasing plan will form part of the outline application. CEG are committed to further engagement with the Council to gain a more in depth understanding of the assumptions put forward in the calculation of the £17,380,000 abnormal development costs for the scheme. This can then be reviewed by our appointed cost consultant in due course to ensure that any costs that the Council assume going forward are robust and support our view that the scheme is viable and deliverable. Conclusion: To conclude we welcome the Council's allocation of this strategic site and ask that these representations are considered in preparing the Final Plan.
A2373B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Disagrees which method for identifying Community Hubs.
A2398B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	Bayston Hill is the tenth largest settlement in Shropshire, with a population of 5,156, with only three of the proposed Key Centres being larger. Bayston Hill is nearly three times the size of Bishops Castle, which is the smallest of the proposed Key Centres. The settlement provides a wide range of services which meet not only the day to day needs of its residents but also those of the surrounding rural and urban catchment. Bayston Hill performs very well in the Council's Hierarchy of Settlements. It has multiple convenience stores, a post office, several pubs, a place of worship, library, areas of public open space with play equipment, a two-form primary school (with a larger than average number of pupils, including from Shrewsbury and the wider rural area), a medical centre (6,228 patients, an asthma clinic, physiotherapy service and undertakes minor surgery), Bayston Hill quarry is a large local employer. Bayston Hill is clearly a well contained settlement, with the majority of services located within a defined centre. Given level of services, surrounding countryside and proximity of additional working opportunities in Shrewsbury, it is clearly an attractive place to live. There is unmet housing need within Bayston Hill which could be fulfilled either through its designation as a Key Centre or the identification of an appropriate development guideline. The SAMDev Guideline identified the importance of the gap between Shrewsbury and Bayston Hill - as such it is apparent that the Council consider development around Bayston Hill is particularly constrained to the north and to the east. This has also been considered through Planning Appeals, within which the strategic importance of this gap was given significant weight. The explanation to this draft Policy also specifically references the importance of this gap, cross referencing draft Policy DP7. Until Part 2 of the SHMA is published, latest information dates back to March 2014 (previous SHMA). For Bayston Hill this identifies that affordable stock comprises 78 dwellings; 30 lettings occurred and an average of 68 bids per affordable property were made between June 2009 and Jan 2014. The 2014 SHMA also indicates that there was an affordable housing need of between 469 and 997 dwellings per annum. An addotable housing statement submitted in support of a Planning Application in Bayston Hill indicated that between 2008/09 and 2014/15, 1,728 affordable dwellings had been delivered in Shropshire, equating to 247 dwellings per annum. Significantly short of the need identified in the 2014 SHMA. In Bayston Hill average affordable housing delivery is 1 per annum over the last 11 years excluding delivery in Meole Brace (which is part of the Parish). There is an obvious need for additional affordable housing within Bayston Hill, which the SAMDev Plan Guideline would not meet. This justifies a guideline of at least 200 dwellings as proposed within this draft Local Plan. Support the identification of a development guideline for Bayston Hill, but maintain that 200 dwellings should be the minimum figure for consideration. This scale of development will enable provision of much needed affordable and market housing in an area which is attractive to developers. It is important to remember these development guidelines are not ceilings or maximums, they are intended to provide guidance. As such the policy should state at least 200 dwellings rather than around 200 dwellings. Any provision over and above these guidelines should be considered on its own merits and whether it comprises sustainable development. It is specifically the use of "around" in regard to the development guidelines for all Community Hubs with which our client disagrees. There are also less sustainable Community Hubs with larger development guidelines than Bayston Hill (see other comments).

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2398B9	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	<p>Agree with the approach to the allocation of sites for Bayston Hill, which confirms that BAY039 is the most suitable for allocation.</p> <p>Support the draft allocation and can demonstrate the site is capable of delivering a minimum of 100 dwellings which will meet the needs and aspirations of the area and the benefits which new development might be able to provide. It will make an important contribution to meeting the needs of Bayston Hill. It can also offer benefits to the area, including affordable homes, opportunities for leisure and recreation, and/or new highways infrastructure. Keen to work collaboratively with Shropshire Council, the local community and other stakeholders to explore, expand and refine the potential development opportunity.</p> <p>BAY039 is approximately 6.1ha, relatively flat and unremarkable agricultural land, immediately to the south of Bayston Hill.</p> <p>The site is to be accessed from Lyth Hill Road from the eastern boundary. The north western and western boundaries of the site are tree lined with countryside extending beyond that. Land to the north of the site comprises residential areas of Bayston Hill. The site consists of two distinct sections to the site that are clearly separated by a hedgerow.</p> <p>Lyth Hill Road is a residential street with pavements on both sides which stop approximately 60m north of the proposed access point, near to the junction with Grove Lane. As part of development proposals, the pavement will be extended on the western side of Lyth Hill Road into the site and this is to be achieved within highway land.</p> <p>At the site's eastern extent is a public footpath and a connection will be made to this path where it emerges between the houses on Yew Tree Drive and Grove Lane. Footpaths will therefore provide access between the site and the services/facilities in the village centre, as well as to local bus stops. Buses provide links to Shrewsbury and Little Lyth. Nearest train station is in Shrewsbury.</p> <p>Highlighted site guidelines for BAY039 are broadly supported. With regard to the draft guidelines proposed for the site:</p> <ol style="list-style-type: none"> 1. Access to the site is proposed off Lyth Hill Road and will be provided in the form of a priority T-junction with 5.5m carriageway width and 6.0m junction radii. 2. An Automatic Traffic Count (ATC) carried out on Lyth Hill Road in the vicinity of the proposed access indicates 85th percentile wet weather speeds of 35.5mph northbound and 36.3mph southbound. In accordance with guidance within Manual for Streets, the required stopping site distances based on these speeds would be 54.3m to the north of the access and 56.0 to the south. The required visibility splays can comfortably be accommodated to/from the proposed access junction. 3. Currently, there are no footways present along the site frontage with Lyth Hill Road. As part of the development proposals, a footway will be provided on the western side of Lyth Hill Road, from the proposed site access junction, connecting to the existing footway further to the north at Grove Lane. 4. A landscape and visual impact assessment has been undertaken for the site. This confirms the site is reasonably visually contained with the existing settlement containing most views from the north, northeast and east. Local undulations limit inter-visibility with the wider landscape to the west and existing boundary hedgerows and trees assist in filtering remaining views of the site. It is recommended that development retains the southern hedgerow boundary and introduces additional native hedgerow and linear groups of broadleaved trees to the south. It is concluded that a sensitive design response, including retention and strengthening of existing vegetation will mitigate against the minimal impact on landscape and visual setting. 5. The emerging Masterplan for the site shows buffering along the site's northern boundary and the introduction of additional planting. The plan also shows that the boundary separating the two fields would be enhanced to create a focussed north-south green link. These features will preserve existing habitats and provide opportunities for ecological gain. 6. The Arboricultural Survey and Report for the site identifies that the majority of the tree population occurs in the field boundaries between hedgerows and that trees are often in associated groups. These trees and hedgerows are to be retained and strengthened where possible. Opportunities to de-culvert the watercourse are being explored. 7. The emerging Masterplan for the site provides for a policy compliant level of greenspace which is to be located optimally within the site. This area will be well overlooked in order to provide natural surveillance and minimise opportunities for crime, increasing the safety of residents. The layout has been designed to allow for circular walks around the northern and western edges of the development, which will also link with existing pedestrian connections. 8. An attenuation pond will be positioned at the northern corner/lowest point of the site. Provided attenuation will be appropriately sized to include the appropriate allowance for climate change (currently 40%). Above ground attenuation will be utilised where possible to enhance aesthetic amenity and provide valuable habitats for the local wildlife, supplemented where necessary by below ground storage. <p>The Environment Agency Flood Map confirms the site is located entirely within Flood Zone 1 (Low Probability of Flooding). There is a smaller ditch ('Ordinary Watercourse' system) along the boundary of the site in the Northwest most site extent. The ditch is culverted from the northern site boundary and this culvert runs diagonally across the neighbouring parcel of land and continues on to Yewtree Drive. A review of historic mapping shows that the majority of the site forms part of the natural catchment to this ordinary watercourse system. The Site Framework sets out development parcels that are outside the 1,000 year surface flood risk zone.</p> <p>BAY039 is viable for development, suitable, sustainably located and development here would be achievable with the scheme being completed in full within five years.</p> <p>There are no known viability issues and any scheme would provide a policy compliant suite of planning obligations in respect of affordable housing as well as providing on site open space for the benefit of new and existing residents. Such benefits would have a significant material positive effect on the local community. The land is capable of being delivered in accordance with density and Site Guidelines highlighted in the draft Local Plan.</p>
A2403B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	<p>We support the continued role for Shrewsbury as the strategic centre for Shropshire and the primary focus for growth and new development in the county, and the identification of the need for additional land to be allocated to support this development strategy. The development boundary should include proposed allocated sites, including SHR166 and thereby provide greater support for connectivity between the site and the rest of Shrewsbury. The Sundorne Castle Estate continues to support the development of site SHR166 'Land to the west of the A49' and its identification as the key gateway employment site for Shrewsbury. It is recognised that its location allows it to contribute to the council's strategic aspirations for the A5/M54 'Eastern Belt' Shrewsbury-Telford-Wolverhampton growth corridor. With the potential for sustainable transport options to the site to be improved as acknowledged within the policy, it is considered that the site could also be suitable for a wider mix of uses on the site as part of an holistic master planning exercise which delivered sustainable transport improvements at its heart. This would allow the council flexibility during the plan period, as encouraged by Paragraph 81 d) of the Framework, including in responding to what could be a shift in the structure of the economy and lifestyles generally as a result of the Coronavirus Pandemic. In response to comments made to the 2019 Local Plan consultation by Historic England regarding the allocation of this site for development, a Heritage Assessment has been undertaken to support the proposed allocation. This report is submitted within this representation. This report concludes that the site could be brought forward for development, in some cases with appropriate mitigation, without substantial harm to the heritage significance of the site itself or nearby heritage assets. The development would represent the continuing expansion of Shrewsbury. Furthermore, it notes the heritage benefits that would arise from the development in providing investment opportunities to the estate for the management of other heritage assets, and the sustainable and economic health of its communities. It is therefore considered there are no barriers to the site being allocated for development, and the Estate will continue to work positively with the council to ensure the site can contribute to the strategic ambitions of the council.</p>
A2403B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	<p>Heritage Report for SHR166. Concludes that: The integrity of the Roman marching camp has been compromised by the construction of the A49 that cuts across a part of the site. At that time (1990s) it appears that the value in advancing our understanding of such camps, by excavation, would mitigate the harm caused by the engineering works. Given that there are other better preserved marching camps surviving elsewhere it would be reasonable to conclude that further archaeological investigation, prior to development would mitigate the archaeological impacts. The proposed development of the Manor field would not directly affect the scheduled monuments or affect the extent of the view from the hillside. It would to some degree alter the viewing experience but the development of the site would not undermine our understanding of the significance of the hillfort and castle folly as a defensive location or as a visible object in the landscape. What's in the view and our sensory response to it would depend on a range of variables, not least the size and scale of any new buildings required to meet the employment needs, as well as their materiality and layout on site. Subject to Shropshire Council's end user requirements the site could be laid out to take advantage of existing landscaping and as may be proposed to soften the edges of buildings and to filter views. This would reflect the way that the existing suburban forms of Shrewsbury are experienced. Why the scale and materiality of any proposed buildings is important can be explained by reference to the visual effects of the light coloured roofs of the buildings on the business park to the north of Shrewsbury. The prominence of these buildings could have been eliminated or minimised by careful design of roof forms and by careful choice of roofing materials, supported by an effective landscaping strategy. The development of this site should not be seen in isolation, the existing backcloth against which this site will be experienced in views will change with other sites on the edges of the town being brought forward for housing and employment purposes. The Sundorne estate is responsible for a variety of heritage assets in the area. It takes its responsibilities seriously. Development of this proposed allocated site, which now has had its physical link and continuity with the wider estate severed by the A49, would facilitate the long term investment the estate is making or planning for the preservation and enhancement and ongoing management of its heritage assets. This would represent a heritage benefit.</p>
A2404B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>I have grave concerns about the quality and type of development planned. It appears to me to overwhelm an already densely populated area, and has little additional amenity for the new community to be created. Even with the new school planned, I cannot see how the existing infrastructure can support the proposed level of development. The creation of this level of development will seriously impinge on the existing wildlife, green space and flora. This change is irreversible and damaging to the local environment and the future of our planet. I question if a more suitable site has been sought for this quantity of development? Access to the existing area is already a concern; already I live on Darwins walk, and the existing road layout already creates problems. Roads are too narrow, and there are many parking issues and near misses in traffic. I question the safety for children with additional traffic and likely lack of buses, especially post COVID. Park and Ride towards Mytton Oak Road would be good but access from it and then through to Hanwood Road is also a concern. Where will the link road be, to access the site? Roads are already busy when A5 has congestion, often already I do not use the A5 to go to work, as at 7.30 it has long queues and it is quicker for me to travel to Telford via town! Surely this will get worse, with more traffic on existing roads especially with the proposed schools' site it is great to see more green space and corridors, but surely we need to retain this, not just squeeze it in? Please maintain the link between existing ponds and buffer development as much as possible from away from these. Lots of wildlife has now returned and we have resident ducks of various varieties, swans and migrating geese annually use fields for grazing. I have seen a person doing a survey of these - they would not tell me where they were from/representing whom - but I am aware that a small mammal survey would be likely to reveal a large number of small mammals and these are pivotal in the food chain. Waters edge / marginal plants are an essential part of our eco system and would be lost. Meanwhile we need to support a sustainable drainage plan as water levels are already an issue with them rising annually. Flood concerns for some existing properties, will only get worse when there is less natural surface run off and pools with more built up areas cannot state more firmly my multiple concerns that this development will impede the environment that has so far enticed us to live in this area. Infrastructure will fail and the proposed development will take away a natural amenity for all of our futures, which would be a tragic loss for future generations.</p>
A2417B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Site SHR173 is currently a high quality area of countryside adjoining the busy Ellesmere Road, directly opposite Winney Hill and Hencote and a section of the Old River Bed, immediately adjacent and of a similar character to the SSSI on the east side of Ellesmere Road. It is a site of high amenity and agricultural value and only scores -4 or 'Fair' in the Council's own sustainability criteria.</p> <p>I oppose allocating this site for housing development for the following reasons:</p> <ol style="list-style-type: none"> 1. There is extensive evidence that building new road links such as the NWRR increases journey demands. Any reduction on Ellesmere Road would only be temporary, indeed Shropshire Council's own traffic forecasts show that traffic would increase on the northern part of the road up to the roundabout and on Berwick Road. 2. The bus service along Ellesmere Road is not regular enough to be relied on (every hour or two hours). 3. There are no continuous cycle routes from the site to the town centre. The cycle route from Herongate via Greenfields Recreation Ground has been blocked by the car park works at the Flaxmill - the path left is only 1.5 meters wide, which is not enough for cycles and pedestrians. 4. The site is of enormous amenity value, opposite the rare wetland habitat in the old river bed and the protected heritage landscape of Winney Hill, where the council has made at least some efforts to control unsuitable development by Hencote Winery with glamping and holiday lodges etc. 5. The site is close to the Old River Bed SSSI and would affect this site adversely. 6. 450 houses is far too high a density for this site given the constraints of the road and cycle network. <p>Additionally I would like to endorse the position taken by Shropshire CPRE. All the housing targets in the plan, especially for Shrewsbury, are too high (higher than the government requires). The target for affordable houses within this figure is far too low. The NWRR is being simultaneously proclaimed as a means to reduce traffic while opening up land for development. It cannot be both. The sustainability strategy is vague and the effects of the proposals on carbon reduction to meet statutory requirements to combat climate change are inadequate.</p>
A2425B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>The site BNP034A has been promoted throughout the consultation process and has generated assessment forms as a result, but at no point has it been acknowledged that this site will be surrounded on all four sides by the built environment, once relevant planning permissions are built out. As such, this should have been an allocated site.</p>
A2441B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Building the NWRR might be seen by some to be solving one of Shrewsbury's problems but in all likelihood the proposed road will actually increase local traffic overall. There is evidence supporting this view - many bypasses, for example Newbury, significantly increased traffic in the area. By encouraging people into their cars onto the new road does this really tie in with SC's goal of reducing reliance on private vehicles? Please reconsider the NWRR. If a project has been in the books for 50 years and still hasn't been built it is either not required or the chosen place isn't the right place.</p>
A2441B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	<p>Far too many houses for the area to cope with. These two sites together will add some 1500 dwellings. This could mean around 4,500 extra vehicles using Mytton Oak Road. What provision is being made so that access to the hospital ie ambulances, will not be impacted. Additional infrastructure will be needed to cope with the influx of people - where will these people shop / go to school / see a doctor or dentist / etc. The area is already under pressure. Are the people expected to get in their cars for these services and drive across the town - that will not help with climate change, it will add to the CO2 emissions. All development plans should consider and address upfront the infrastructure needs of the area</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2441B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Very supportive of the choice of BIT022 by Shropshire Council to be included in the development boundary for Bicton and to make the main part of Bicton Parish, the community hub element of Bicton, to be the development boundary for this area and that it has been recognised by Shropshire Council that no additional small boundary necessary. I am also very pleased that Shelton Rough has been removed from any development. Well done to Shropshire Council on the above points
A2441B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	There has been very little to no green belt left when planning for the 750+ houses. Given Shropshire Council's commitment to the environment and the government's pledge to protect the English countryside to support the recovery of nature, could more consideration to including wildlife corridors and green space be incorporated in to the SUE. What we are actually seeing from the developers of this area is squash as many houses in as possible without any thought to the occupants well-being or supporting the recovery of nature. The original application for land off Welshpool Road was 297 which was dropped to 296 - and that was considered overcrowded - and now that application has been withdrawn with a request to build 345. There is insufficient infrastructure to cope with the original proposed number of houses. Furthermore, the land off Churncote Roundabout - in 2014 the developers withdrew the application for a petrol station because of public opposition and the Environment Agency but in 2020 the application is back in with the petrol station being the prominent feature. The petrol station should be withdrawn especially as there is a similar set up of petrol station and cafe/hotel only 4 miles away.
A2441B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Agree	Very, very pleased that the main part of Bicton Parish, the community hub element of Bicton, is the development boundary and the site BIT022 has been chosen for this area and that it has been recognised by Shropshire Council that no additional small boundary is necessary. I am also very pleased that Shelton Rough has been removed from any development. Well done to Shropshire Council on the above points.
A2452B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	As a resident of Longden I would like to raise my objections to above proposal. Longden is a country village & to maintain it's character I believe that any future development needs to be on a small scale as any large development would ruin the present balance. The point system appears to be an inflexible blanket assessment whatever the size or merit of the business. How was such a steadfast inflexible means of attributing the points formulated and how was the qualifying criteria determined? The Longden shop & post office are very valuable but very small & to attribute the same number of qualifying points to this business as to Pontesbury shop is illogical. The mobile library is little used & in my opinion does not qualify for 4 points. The pub trading is also very limited. I consider that any development of Longden should be gradual and confined to small clusters of 2 or 3 houses sensitively placed rather than extensive housing developments. The school, shop, play area and the roads are not suitable to cope with or serve many more people. I believe that planning permission has been given to too many very large houses. Longden is historically a country village & any development needs to have that concept in mind i.e. smaller houses that local people can afford to buy rather than mansions or 'local needs houses' taken over by housing associations not respecting that concept. I strongly believe that it is not in the best interests of Longden to be developed as a Hub but instead have the status of a Cluster & developed aesthetically without taking out the small lanes characteristic of this area.
A2458B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The NWRR should not be supported in principal. It will not ease congestion as suggested instead will only make the problems worse. It is now known through various published studies that it is not possible to build your way out of congestion. It is the roads themselves that cause traffic. The concept of 'induced demand' - when you increase the supply of something - including roads - it makes people want it more. The NWRR will not only increase congestion further but also cuts through a swathe of important countryside and will have severe detrimental impact on designated sites such as the Hencote SSSI. The combination impacts of the new road have not been properly considered and the ecological impacts will not be outweighed by the benefits of the road. Furthermore, in the current climate the Council should be aiding economic recovery post Covid 19 not spending money on a new road. The existing roads in the county are in a terrible state of repair and these should be repaired before a new road is built.
A2458B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The policy should not rely on the NWRR taking place. The NWRR should not be constructed as this significant harm it will cause to the countryside and ecological sites does not outweigh the potential benefits. The pollution impacts have not been fully considered. Sites should not be allocated assuming the road will be constructed.
A2458B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	The Council should not be allocating sites that is directly dependant on a new road being built - which may not ever happen. The site is unsuitable for development particularly as the Ellesmere Road is already very congested and unsafe. Local residents are becoming increasingly concerned about the safety of the Ellesmere Road and any new development will only make it worse - with or without the NWRR. The development will have negative impact on the Hencote Pools SSSI. The combination impact of the NWRR and any new development needs to be assessed.
A2476B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Don't know / no opinion	Parts of the Estate are assessed in the Council's housing evidence base under SHELAA references SHR096, SHR162, SHR169 and GVH001X however these representations refer to a wider area of land. A Site Location Plan is attached to Appendix 1. Site Description 2.1 The Berwick Estate consists of approximately 2000 acres (c. 810 Ha) of land that is predominantly held within two ownerships. The Estate mainly comprises agricultural land along with 38 houses and cottages and several areas of woodland. 2.2 Notable assets and opportunities within the Estate include the following: Agriculture - around 1500 acres (c. 607 Ha) of tenanted farmland, some of which has inherent development potential given its location between the proposed NWRR and the edge of Shrewsbury. ● Berwick House - the Estate is centred on this large grade II* Listed mansion house that dates back to 1731. The house is no longer a main residence and requires a new viable use to ensure its ongoing conservation and retention. ● Berwick Stable Block - an attractive and historic grade II Listed stable block that adjoins Berwick House. Now largely redundant, these buildings require a new viable use. ● The Walled Garden - located to the south of the main house are a number of cottages and greenhouses within a spacious walled garden. There are ambitions to use this area as a wedding and event space. ● Berwick Chapel - a grade II* listed dedicated estate chapel which could also tie in with the proposed wedding and events uses. ● Gravel Hill farm buildings - an attractive courtyard of dis-used farm buildings centred on a grade II listed C17th farm house. The buildings require a new viable use to ensure their ongoing conservation. ● The West Midlands Showground - the 58 acre site is let to the Shropshire & West Midlands Agricultural Society and hosts the annual agricultural show along with other entertainment, cultural and fundraising events. 2.3 The Estate abuts the north western edge of Shrewsbury at its southernmost point, separated by the River Severn, and it stretches towards Bomere Heath at its northernmost point. The majority of the land lies between the River Severn and the Shrewsbury to Chester Railway line, although there are additional holdings west of the river and east of the railway. 2.4 The Berwick Road (B5067) is the primary vehicular route and crosses the Estate from the north to the south east where it connects to the A258, which itself leads to the centre of Shrewsbury. Shrewsbury railway station is around 0.7km away from the nearest point of the Estate and provides regular services to key destinations including Manchester, Birmingham and Cardiff. With the NWRR in place, access to the National Cycleway and strategic road network will be greatly enhanced. 2.5 In terms of designations, the Estate includes Berwick Park which is a grade II listed Registered Park & Garden. This area of land surrounds Berwick House and is a representative example of a C18 park, improved in the late C19. An area of the Estate to the north of the river is vulnerable to fluvial flooding lying within Flood Zones 2 and 3.4.1 These representations have demonstrated the substantial opportunities that can be brought about by the allocation of a first combined phase of 350 dwellings at the Berwick Estate. This will assist in and safeguard the delivery of the NWRR, which is a fundamental policy objective, and in doing so, will facilitate the draft local plan in meeting the tests of soundness. 4.2 The 350 dwellings being promoted is the first phase of a Berwick Whole Estate Plan that can provide substantial development opportunities in years to come. The vision is in accordance with Garden Village principles and driven by the opportunity for stewardship to ensure the living with Beauty initiative is carried through. That will ensure the Estate takes a long-term custodianship approach to delivery, lasting beyond the current plan period. 4.3 In doing so there will be a clear enhancement in connectivity and accessibility between Shrewsbury Town centre, the new garden neighbourhood and the extended historic Parkland, which will be opened up for the benefit of all existing and future residents of the area. 4.4 The Vision for the Estate is a new healthy, thriving and balanced community that adopts 21st Century Garden Village principles that respects the uniqueness of the landscape and wellbeing heritage of the Berwick Estate and the historic character and nature of Shrewsbury. The first phase of this vision can come forward within the Shropshire Local Plan and will provide an exemplar development in terms of its sustainability and placemaking principles. 4.5 The opportunity to take this forward only exists with the unique location of the Berwick Estate. The first phase development should therefore become an allocation and serve to support the advancement of the local plan. Representation includes appendices (not summarised here) as follows: Appendix 1 Site layout Appendix 2.2 Context analysis Appendix 2.3 Flood risk Appendix 2.4 Heritage and Ecology Appendix 2.5 Strategy and Design Appendix 2.6 Access map Appendix 2.7 Initial phases of the master plan Appendix 3 Environmental Constraints and Opportunities Appendix 4 Transport Report
A2476B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area		3.17 This policy sets the key aims and principles for development within Shrewsbury, which is incorrectly acknowledged as the primary focus for development within the County with around 8,625 dwellings and 100Ha employment land to be delivered within the Plan period. These representations are broadly supportive of the approach to the Shrewsbury Strategic Centre, however a number of improvements to soundness are identified and could be assisted by the inclusion of land at the Berwick Estate. S.16.1(2) 3.18 Policy S.16.1(2) sets out that a comprehensive and co-ordinated approach to the development of Shrewsbury will be taken in a manner that is consistent with the 'Big Town Plan' for Shrewsbury along with Policy SP1 - The Shropshire Test. 3.19 The Vision Document submitted alongside these representations makes clear the rationale for a phased mixed-used sustainable neighbourhood at the Berwick Estate. This Vision is supported by the Berwick Estate Whole Estate Plan, which in turn was created in accordance with the Shrewsbury Big Town Plan. The Vision for the Berwick Estate is integral to the success of this policy and should be acknowledged accordingly. 3.20 Phase One is promoted to be delivered during this plan period, opening up the opportunity for a framework to support the success of the Shrewsbury Town Plan, to help exceed its well-being targets, facilitate the North West Relief Road and deliver high quality investment and public access to the outstanding Parkland and natural environment Shrewsbury has to offer. 3.21 The Vision for the Estate also explains how the Whole Estate Plan looks beyond the plan period and sets out a comprehensive and co-ordinated long-term strategy for development at the Estate that can assist meeting housing and other development needs for decades to come, in a manner entirely consistent with the aims of this policy and to support local aspirations in addition to the aims set out in the Building Better Building Beautiful Commissions report Living with Beauty (2020). Policy S.16.1(7) 3.22 Policy S.16.1(7) supports the delivery of the NWRR in principle. It states that land between the proposed NWRR and the development Boundary will remain as Countryside guided by policy SP9, but that potential windfall proposals for commercial purposes may be supported wherever suitable access can be provided. In accordance with policy SP9, open market residential development will continue to be strictly controlled in this area. 3.23 The North West Relief Road has been committed by Shropshire Council. The location of the NWRR is yet to be fixed via a planning application and consequently its location and the associated land required for delivery is not yet fully understood. Berwick Estate is supportive of the principle of a NWRR and recognises the strategic importance of this to Shrewsbury Town. 3.24 These representations and the submitted material alongside them put forward a clear case for the additional benefits that can be delivered by allocating land for development at the Berwick Estate. There are clear synergies that could arise whereby additional development at the Estate is made even more accessible by the NWRR, which in turn could safeguard and assist the delivery of key sections of the road itself, including the proposed Berwick Road and Shelton roundabouts. 3.25 In this respect, the NPPF at paragraph 72 and 72(a) make clear that authorities should consider the opportunities presented by existing or planned investment in infrastructure when looking to identify suitable locations to meet needs for development in a sustainable way. It goes on to set out that it is important to set clear expectations for the quality of development, such as through the use of garden city principles, when planning for larger scale development. 3.26 It is therefore suggested that policy S.16.1(7) is amended to acknowledge that land at the Berwick Estate can facilitate and contribute towards the delivery of the NWRR and that additional land on the Estate is identified for residential-led development based on a garden village principle. In doing so, this will ensure the policy is justified and consistent with national policy. S.16.1(i) Residential and Mixed Use Allocations: Shrewsbury Strategic Centre 3.27 This draft policy proposes to allocate the site ref. SHR173 for around 350 dwellings. In doing so it recognises that the site is directly dependant on the construction of the NWRR and that development cannot commence until the road is fully operational. 3.28 The lead-in times for development that relies on substantial infrastructure improvements are well documented and it is unclear at this stage whether the full 350 dwellings identified could be realistically delivered within the plan period, given that it is reliant on the entirety of the NWRR being delivered. 3.29 There is no in principle objection to the allocation of the land west of Ellesmere Road for future development, however it cannot be considered that it will be capable of being achieved when the location of the NWRR has not been fully committed. The plan should recognise that development of at least 350 units at the Berwick Estate can come forward independent of the NWRR delivery, and also an earlier stage in the plan period if required. 3.30 When referring to the 'Phasing' section of the submitted Vision Document it can be seen that Parcel A/Phase 1 (200 homes) and Parcel B/Phase 2 (150 homes) can come forward within 5-10 and 10-15 years respectively, and can therefore comfortably be delivered entirely within the plan period, when due regard is had to local build out rates of housing delivery. 3.31 Given these points, the allocation of land parcels A and B as outlined in the Berwick Estate Vision Document will ensure the effectiveness of the local plan by commencing earlier and by delivering in full within the plan period. As such, Policy S.16.1(i) should be modified to allocate land at the Berwick Estate for at least 350 residential dwellings. 3.32 In addition, the local plan should recognise the significant long-term development potential for in excess of 1,000 new homes along with improved connectivity, a country park, employment and community facilities at the Berwick Estate. Parcels C, D and E within the Vision Document should be safeguarded for future development within and beyond the current plan period. An alternative alignment of the NWRR is also put forward and could enhance further the placemaking and development opportunities arising in this location. 3.33 The alternative alignment of the NWRR has its genesis in the work undertaken between the Estate and Severn Trent Water. There is no objection from Severn Trent Water to the location of the Bridge across the River Severn being north of the abstraction point and it appears that the Environment Agency objection to that point has been the driving force behind the location of the Bridge. There is limited information within the public domain that suggests this alternative location for the Bridge has been explored and the Estate would like to raise an objection that the full optioneering exercise has been undertaken to suitably justify the current location of the NWRR within the proposed local plan. 3.34 It is clear that the Estate supports the delivery of the NWRR and the rationale for the benefits it will bring to the whole of Shrewsbury, however it is also clear that it objects to the current location until it is satisfied that other locations have been more fully explored. 3.35 If the Berwick Estate land is not allocated our view is the plan will not be capable of demonstrating that the allocations can be delivered. The Estate wants to ensure the Local Plan is found to be effective and therefore it is required to identify the Phase 1 area as a broad location for future growth. 3.36 The delivery of land associated with the NWRR will be safeguarded by the Estate and alongside further detailed master planning and technical work to be brought forward through the Whole Estate Plan the delivery or contribution to the Berwick Road and Shelton roundabouts will be set out. 3.37 Proposals should come forward through the endorsement of a Whole Estate Plan and/or under Policy SP6. In doing so, this would provide greater flexibility for the plan and any subsequent local plan review(s).
A2481B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	This will confirm that we do not agree with Shropshire Council proposal to amend Longden village to "Hub" status following review of the local plan. Longden is small village in rural setting, we do not object to "in-fill" development for (appropriate) housing, but the village should retain its "Cluster" status.
A2488B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	I would like to comment on paragraph 4.261, page 139. My comment also relates to the application of policy SP3 To deter heavy traffic flow and to encourage pedestrians and cyclists into the centre of Shrewsbury, the temporary calming measures introduced during the pandemic to make provision for social distancing should be made permanent. There has been obvious economic benefit to hard-pressed shop and café owners as a result of the colonisation of pavements by diners and coffee drinkers throughout July, August and most of this month. However, this is a minor aspect in relation to the issue of greatest significance ever faced by humankind which is the almost unprecedented changes to the bio-sphere on which we depend that are now occurring as a result of the radical and uncontrolled experiment we are conducting with our planet's atmosphere. If the Thwaites glacier in Antarctica were to collapse, sea level rise would be so great as to inundate all our port cities, including London. The New Scientist and The Washington Post have reported very recently that this massive volume of ice is now unstable because of infiltration by sea-water from beneath. We need urgently to implement massive reductions in greenhouse gas emissions now, not in the next two decades. Steel manufacture emits 1.85 tonnes CO2 per tonne of steel made. Cement production causes 0.82 t CO2 per tonne to be released to air. Projects dependent on huge consumption of these materials must be halted until their carbon impact can be reliably off-set. Regrettably, the draft plan not only fails to reflect this urgent need, it runs counter to it by having the proposed North Relief Road as a centre piece. In addition to the great CO2 emission impact caused by its construction, the extra traffic such a project would inevitably generate would contribute its part, as a consequence of the CO2 emissions from the increased traffic volume, in the destruction of our native islands by encroachment of the rapidly rising seas surrounding them.

A2493B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S16 Shrewsbury Place Plan Area	Disagree	To the North East of saved site BAS 035 Lies the old station yard site. The site has full planning permission which can be seen on the Shropshire Council Portal ref 17/02174/REM. However, whilst the village boundary line was shown correctly surrounding the site when the plan went to cabinet, on this consultation it is shown, incorrectly, not including the site. When I queried this with the planning department, they informed me that this was a mistake and would be rectified, at the regulation 19 stage of the plan However, this means that locals, parish councils and indeed bodies such as the CPRE are not commenting on a true picture in the village as this site covers over six acres and has planning permission for 48 houses. I have included in the email, both the correct map as presented to councillors at cabinet and the incorrect map as presented to the public at the consultation
A0005B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		Reject CLV012 & CLV018 as an unbalanced aesthetic. Support CLV010 which offers proximity to train station and offers the chance for Clive to grow and support to local school
A0021B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	I am writing in support of CLV012/018. I have attended many Parish Council Meetings and listened to the arguments from both sides and I believe that this proposal offers the best approach for Clive village for the following reasons: 1. It helps to address the parking issues which are a major safety concern for those of us who live here. 2. It provides easy access to the A49 which I believe will lessen the impact of the new traffic on the village as a whole. 3. It provides land for other community activities which can be discussed and decided by the population as a whole. CLV010 does not address any of these issues. I am concerned that supporters of CLV010 have been spreading inaccurate reports.
A0033B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Respondent indicates support for CLV12/18 but raises concerns that the School of Governors at Clive school are inappropriately trying to influence parents to support a specific site by mis-representing the facts.
A0035B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Advocate CLV10 as the better site. There are benefits for the school, through opportunity to create new hall and reduce education time lost moving pupils to other sites and rearranging furniture to allow lunches to be eaten in classrooms.
A0036B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Advocate CLV10 as the better site. There are benefits for the school, through opportunity to create new hall and reduce education time lost moving pupils to other sites and rearranging furniture to allow lunches to be eaten in classrooms.
A0038B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	The whole of our site, CLV018 was put forward and in by letter to you on 25/02/20 we suggested that part of this land could find a solution to the car parking problem for the school, and also include a bowling green. The current proposals does not include the whole field, but leave around an acre which is land-locked. Why not include all of that field for development and move the proposed boundary to the end of our field to link up with our boundary.
A0040B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		Shawbury site promotion
A0043B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The two sites allocated for 20 dwellings in Clive (CLV012 and CLV018) are not supported by the Governors of Clive CofE Primary School. For the reasons outlined in the representations made by the school that CLV010 is a site with greater advantages, I am in support of this position.
A0048B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The two sites allocated for 20 dwellings in Clive (CLV012 and CLV018) are not supported by the Governors of Clive CofE Primary School. For the reasons outlined in the representations made by the school that CLV010 is a site with greater advantages, I am in support of this position.
A0077B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Survey carried out by the PC showed 56% were in favour of the preferred sites (at 27 Aug 2020). Any U-turn from this position would need explaining
A0078B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Survey carried out by the PC showed 56% were in favour of the preferred sites (at 27 Aug 2020). The inclusion of more parking and safe access to the School by CLV012+CLV018 proposals helps to address the long-standing issue of traffic /parking. CLV010 would be more hazardous as vehicles drive at speed with reduced visibility
A0093B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Site will not provide suitable additional parking nor enhance pedestrian linkages between the site and existing facilities. The Choice of CLV012/018 is likely to increase the flow of traffic through the village (enclosures detail & compare shortest distance & quickest /preferred routes between popular destinations from Clive village from CLV010 and proposed site CLV012). Anecdotal evidence suggests that more people from the village will travel in the Shrewsbury direction than towards Shawbury/Whitchurch CLV010 is a more suitable site because: 1) It is closer to the centre of the village and amenities and virtually the same distance from the school as CLV012/018 (details of distances/walk times provided) 2) Any Car park envisaged on CLV012/018 is likely to be of little use because of the distances & walking times to/from the School & such a car park(details of walk times from different locations provided) 3) There is a public footpath on CLV010 which provides safe and direct access to the centre of the village and the school.(map provided showing new footpath link from CLV010) 4) CLV010 is likely to enhance the use of Train services from Yorton as there is a direct and safe footpath from CLV010 to the Station. Shropshire Council should seriously consider offer of land next to the Clive Primary school linked with the choice of site CLV010 as the School Governors have already made clear the benefits to the school and the education that it would be able to provide(as previously set out in letters to the council from the School Governors). Additionally the 'well being' and standards of Clive Primary school are also an important consideration in the present and future character of the village
A0094B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Site will not provide suitable additional parking nor enhance pedestrian linkages between the site and existing facilities. A0097B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Accept that the site falls within Wem Town its position but comments unchanged from those submitted in January 2019 .Wem Town Council continuing opinion that there should be no more development in the town until necessary previously identified infrastructure improvements are addressed.
A0097B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Accept that the site falls within Wem Town its position but comments unchanged from those submitted in January 2019 .Wem Town Council continuing opinion that there should be no more development in the town until necessary previously identified infrastructure improvements are addressed.
A0097B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Accept that the site falls within Wem Town its position but comments unchanged from those submitted in January 2019 .Wem Town Council continuing opinion that there should be no more development in the town until necessary previously identified infrastructure improvements are addressed.
A0097B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Amend Development boundary .To reflect planning & appeal history including dismissal of development on land opposite the Mill on Mill Street, the development boundary should be amended to run parallel north with the road from Roden Weir alongside the western edge of the pavement on Mill Street to the watercourse known as Back Brook behind Mill House and then west along the southern boundary of Roden Lodge.
A0180B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		LETTER Support for CLV012 & CLV018 but oppose CLV010. Clive PC survey 56% support CLV012 & 018. only 24% support for CLV010, 19% no preference. Support for Lydia Bardsley letter 27 March benefits of sites 012 & 018 PC support development on east side, bridge the gap between main village and Quarry View, close to amenities so let driving, provision for dedicated parking for school & overflow for medical centre, pedestrian access to school avoiding public roads, improved pedestrian safety, provision for additional recreation space for school & community. Clive CofE Primary School governors have been lobbied by Sansaw Estates promoting CLV010 and have gifted the school a derelict building adj to the school. Parents have been asked to write to you with a template letter. As Clive residents we object to parents who do not live in Clive determining outcomes in Clive. 45% of pupils do not live in Clive 9/2019 Exec Director Children's Services SC. It has been promulgated that all CL monies from CLV010 should be used for the school, against the wishes of residents who want wider community to benefit. 40% of pupils from Clive travel to primary schools away from Clive. PETITION states unsafe nature of gifted building, land not gifted, cost of demolition who will pay, support for CLV012 & CLV018, notes single track roads into Clive but agrees with growth & Clive taking it's share. signed by 61 people
A0208B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Concerned that there is insufficient land allocated for housing. There is a considerable number of dwellings to be met by windfall sites (at least 109 units). Where there are suitable sites for allocation it is therefore more appropriate to allocate sites rather than to seek to meet a shortfall through reliance on windfalls. Site WEM038 is suitable to assist in meeting this requirement and would provide around 50 dwellings. It was only ruled out by its "remote location...[and] highway and traffic issues associated with the rail crossing." Application 14/03428/OUT was granted in 2014 with the appeal docs confirming it was suitable and would not constrain any highway/traffic issues. The only reason for non-inclusion has already been addressed by the Planning Inspector
A0239B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Object to inclusion of WEM010 as a preferred option. WEM045 should be allocated in preference to WEM010 which is undeliverable. WEM045 is readily available, clearly in a sustainable location and is contiguous to both existing and proposed employment sites with safe access onto the main road and is confirmed deliverable. The site sustainability and accessibility is supported by the Inspectors comments on an appeal relating to planning application 14/00797/OUT for site development which was primarily dismissed due to the site being undeveloped agricultural land outside the development boundary. Whilst comments are made by the Inspector regarding impact on character and appearance of the area WEM045 is little different to that identified on Pym's Road, in that both would involve development on open land outside the recognised built form of Wem. WEM045 has also been acknowledged by the Council as being in a sustainable location adjacent to the identified proposed employment site for Wem and close to Robinson and Young garage and shop, during consideration of recent nearby planning application 19/00006/FUL. Additionally the site should be included for allocation to address the shortfall in delivery since the SAMDev was adopted; to meet the growing need for different types of housing and to address likely significant shortfall (as identified by Lichfields) due to revised housing methodology

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0239B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Object to continued inclusion of WEM003 as an Allocated site. Support site WEM045 in preference to allocated site WEM003. WEM003 allocated over 5 years ago but little interest in the site and it still has no planning permission so it would not appear to be deliverable. An outline application (20/01054) for up to 100 dwellings was refused in June 2020. The application included additional land to the west of the identified site required to compensate for land within the site that cannot be developed due to the presence of a high-pressure gas main. Presence of this constraint & likely need for additional land throws considerable doubt on the deliverability for the preferred option site WEM010 for a further 120 dwellings, as a linked second phase to the adopted allocation. Whilst site guidelines include an option for second access in case WEM003 not developed it will result in 2 accesses in close proximity if both sites are brought forward. There are significant traffic issues within Wem and no shops local to the site or direct routes to Ellesmere and Whitchurch, whilst the Eastern side of Wem provides direct access to the A49. Additionally, there are known flooding problems which require investigation. WEM045 is a more sustainable location with sustainability having been established in an appeal decision. Whilst this site is on open agricultural land this is no different to the allocated and preferred sites objected to.
A0247B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Site HDL009 should be allocated within the Local Plan. The site is adjacent to several recent developments and access can be gained through Hall Drive (off the A49), which has served other recent development - the road does narrow but this can be addressed. The site adjoins the proposed development boundary and represents a natural continuation of development. Hadnall offers the infrastructure necessary to support development of the site. The site would provide a range and choice of housing in the village and has the potential to represent an attractive development. This site would contribute to addressing the shortfall of deliver since the adoption of SAMDev and meeting the need for different types of housing identified in the NPPF and draft policies DP1-DP7. Housing delivery will become increasingly important if the revised housing methodology for Shropshire becomes national policy (increasing need from 1,400 to 2,129)
A0251B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	These sites would minimise the impact on pedestrian safety - The High Street through Clive has no footpath for much of its length. CLV0012 & CLV0018 benefits over alternatives considered is children living in the proposed developments would be able to access the village school without walking or travelling along the High Street. Adults who drive would be able to begin and end many journeys away from the village using the road at the eastern end of the village as access to one of the nearby A roads, thereby not increasing traffic towards the centre of the village (Drawwell, High Street, Jubilee etc).
A0271B1	Viability and Deliverability of Proposed Site Allocations	Draft Policy Area S17 Wem Place Plan Area		The landowner is working in partnership with the landowner of CLV018, where the involvement of a developer has been discussed. It remains the landowners preference to have a single site allocation, across the two land parcels – instead of the current CLV012 and CLV018. The proposed sites are allocated as a single site, with a single guideline and will be delivered together – i.e. any application will be submitted across both sites and to provide both the proposed housing provision and policy requirements across the both sites. One site is not responsible for certain requirements, and the other site others. It therefore makes sense to have a single allocation, with a single housing provision and a single delivery timescale.
A0278B1	Viability and Deliverability of Proposed Site	Draft Policy Area S17 Wem Place Plan Area		Confirmed subject to the matters raised in our main representation. The assumption made is too late (c.) as we now have a contract with a housebuilder who is keen to move forward to submit a planning application. We anticipate delivery commencing in the short term.
A0306B062	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	We are concerned about firstly, the proximity of this site to a SSSI and secondly, the lack of mitigation measures mentioned in the plan:
A0370B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Agree
A0371B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Accept the need for development, including in Clive - although 3 of the 4 roads into the village are narrow Support identification of CLV012 and CLV018 as site allocation. Strongly oppose site CLV010. Recent surveys by the Parish Council indicate local support for development of CLV012 and CLV018 (56% of respondents, with 24% supporting CLV010 and 19% expressing no preference). Benefits of CLV012 and CLV018 include: -Reflects community and Parish Council preference for development to the east of the village. -Bridges the gap between the main village and Quarry View. -Closer to amenities, reducing the need to drive. -Provision of dedicated car parking for the school and overflow parking for the GP. -Provision of a dedicated pedestrian access to the school, avoiding public roads. -Contribution to improved pedestrian safety. -Provision of additional recreational space. It is understood the school and parents of children at the school may prefer CLV010 as a result of potential provision of a derelict building for school purposes. This is contrary to the views of residents of the Parish. It is also understood that some have suggested CIL funding from development should be ring fenced for the school, this is also contrary to views of residents. There is also concern about the potential for further expansion of CLV010
A0372B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Any development should not change the 'feel' of the village. CLV012 and CLV018 will enhance the 'feel' of the village by linking parts of the village, provide car parking facilities near the doctors surgery and school and though this provision increase road safety by reducing on street parking close to a difficult bend. The alternative site to the west would represent urban sprawl.
A0420B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The site allocations do not include sufficient land to meet the housing need. HDL013 should also be included.
A0440B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Support identification of Clive as a Community Hub and the proposed residential guideline. Support the joint allocation of CLV012 and CLV018. The site is largely flat site, which is open and with minimal field boundaries - there is slight tree cover along the boundary between the two components of the site. The site has good access to the A49 which will reduce construction vehicles travelling through the village. It represents a natural expansion of the settlement. Development of CLV012 and CLV018 will be undertaken comprehensively, provide attractive low-density residential development and much needed infrastructure. Specifically it will deliver appropriate low-density housing, bridge the gap and increase community cohesion between the main form of the village and Quarry View, incorporate open space and much needed additional car parking facilities (to the west of Flemley Park Farm in the centre of the village) to reduce the level of on-street parking with enhanced pedestrian linkages between the site and the existing facilities on the High Street and Clive Primary School (via Holly Close Public Footpath). It can also deliver a policy compliant scheme. Parish Council have indicated support for improved car parking and accessibility to the school. A recent community survey resulted in support for CLV012 and CLV018 rather than CLV010 (an alternative site promotion), which would not deliver off-street parking for the school, but is understood to be offering land/building to the school. Another recent community survey related to loss of services and Community Hub status, with suggestions the shop may now close. There is a need for a rounded and holistic assessment when considering the future status of Clive. As a result of the Covid 19 pandemic; 2020 is an unprecedented year with most businesses, facilities, venues across the county negatively impacted. Therefore it is felt unfair to make a valid 'points' assessment at this moment in time, plus on a more specific level if the shop closes it affords an opportunity for another business to be set up to fulfil that need. It is noted that Community Cluster status would mean loss of development boundary and guideline, with all development delivered as windfall. The required housing growth is unlikely to alter, so new development is likely to be delivered through sporadic, small scale sites, which will not be able to deliver the wide-reaching community infrastructure improvements that the Proposed Site Allocation can bring. Hence it would be detrimental for the community if Clive were to lose its Community Hub status. The 'open countryside' status of Clive in the current Local Plan is a glaring omission by the Council and ignored the facilities afforded this settlement and the need for sustained growth to allow the existing facilities to flourish. Oppose downgrading of Clive to a Community Cluster and failure to plan positively would impact on the soundness of the plan and represent a missed opportunity for the village to deliver much needed community infrastructure.
A0533B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	If the adjoining site of 1 The Hill was available to the School, the Governors intend to build a school hall, Early Years classroom, kitchen and ancillary facilities on the site, and use the rest of the site for recreation and outdoor education purposes. This would enable the School to enhance permanently the quality of education for all children at the School for many years to come, and allow additional children to be admitted.
A0599B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Feels that the site is unsuitable because: The land is very wet and has 3 natural springs on it, and stream running to the side. If developed these issues and water run off roads could increase local flooding; the site will add to existing issues with waste water and sewerage in the Shawbury area, as the system needs increased capacity already; there are not sufficient places at Shawbury Primary school and 80 new homes will see a need for significant expansion of the school. Issues of bus collection and drop off of pupils also needs to be addressed; supply of fresh water to properties by Severn Trent is already barely sufficient. Insufficient supply could also impact on RAF Shawbury and any major fire at the base; Shawbury Medical Practice on Poynton Road is at full capacity and will need to be expanded considerably with this new development; the impact on traffic in Shawbury. The A53 is already busy and 80 extra homes will cause congestion and risk to pedestrians walking along Poynton Road to the School
A0635B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Site plan included but no other information submitted.
A0671B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Shawbury is still evaluating the impact of the ongoing development of Lioncourt homes plus that of Chantry Close development. For example St Marys primary school has a 42 student reception entry and is dividing classes with 15 students having to join classes with other year groups. Traffic in and through Shawbury has increased despite traffic calming solutions. A thorough and proper evaluation of the drainage and sewage works requires conducting and its outcomes made transparent to the Parish community in association with STW. The sewage and drainage system cannot cope with the existing demands on it. There is regular flooding from manholes into and surrounding properties and waterways. The current new build Lioncourt homes resulted in sewage floods due to blockages as it connected into the Paddocks and destruction of wildlife into the beck. Reference to S010. An infrastructure survey and overhaul should be conducted and upgrades made to bring the system into the 21st century able to cope with new developments as a starting point. Residents from Whitelodge through to the Hazeldines have already been impacted by the Lioncourt development in terms of noise and visual impacts for the last 2 years. Further developments from the Lioncourt site as proposed in Appendix R Wem Place Plan Area Site Assessments will continue this for a further 2 to 3 years on this proposed site SHA019, despite a local parish meeting some 9 months ago agreeing to lobby that this chosen site was not to be given any more credence than any other of the viable sites proposed. It appears that the decision has been made to develop SHA019 despite this site being one of 8 with an overall sustainability conclusion of good. Far from creating a community, the development is isolated from the main community, and fails to address the public transport depression and the councils commitment to a zero carbon future. Environmentally the key points relating to habitat loss, noise and air pollution, and drainage even given small enclaves between the sites involve too much disturbance too quickly in relation to the sustainability appraisal of the Regulation 18. Please reconsider decisions around this site SHA019 and the need to carry out a full sewerage and drainage survey in Shawbury with Severn Trent Water who have not responded to information on the extent of the issues in Shawbury when contacted several weeks ago. Existing residents also have rights to a peaceful life and not 5 years plus of continual developments in a village with a heavy traffic thoroughfare on the A53
A0708B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Object to allocation of HDL006 for development. HDL006 lies outside the development boundary in open countryside contrary to Policy CS5 Countryside. Planning permission has already been refused for the development of this land under appeal decision APP/L3245/W/15/3003781. A letter was provided to the Council in 2019 setting out the following issues: development of HDL006 will affect our quality of life and our neighbours. Permission for development of the land has already been refused on appeal but the Council seem unwilling to accept the decision of the Inspector. Hadnall residents voted at a Parish Meeting in 2019 to remain as a Countryside village.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0855B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	We fully support the identification of Hadnall as a 'Community Hub' settlement. Hadnall is a medium-large settlement, serving wide hinterlands, with multiple services and facilities. We are also in full support of the development boundary as found at Inset S17.2 Hadnall. The residential guideline of "around 125" dwellings throughout the plan period - 2016 - 2038 - is supported and considered achievable within the period. The inclusion of a site allocation, to provide 40 new dwellings at Proposed Site Allocation HDL006, allows for an appropriate level of windfall development within the development boundary. Hadnall previously had no identification of a Hub or Cluster settlement, yet still received a large amount of housing - disproportionate to its status as open-countryside. The identification as a Hub and the introduction of a development boundary can only be seen as a positive and will allow for a managed and directed housing growth that is in-line with the Parish Council's and communities aspirations.
A0872B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	WEM037 Promoted as a more sustainable alternative to WEM033. WEM037 is identified as a site with long term potential which has no significant constraints identified by the SLAA. The site is within an area of moderate rural character with medium visual and landscape sensitivity. Site is accessible and well located relative to development boundary with a favourable Fair sustainability rating which is therefore better than identified site. It is immediately available, fully deliverable with interest from developers.would help to deliver stated dwelling requirement Additional information can be provided as required to support bringing the site forward. Site location plan provided .
A0876B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Pleasued land is identified as a site with long term potential which has no significant constraints by the SLAA. However considered site is has short term potential because site ; immediately available, fully deliverable ; adjoining land has been developed for residential use and there has been interest from developers in the site; direct access to A53 ; would help to deliver stated dwelling requirement. Additional information can be provided as required to support bringing the site forward. Site location plan provided .
A0880B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Site HDL015 proposed as alternative site. Site has short term potential for development because site; within village proposed as community cluster; has no significant constraints; is immediately available, fully deliverable with significant developer interest ; has main services; close to primary school with no requirement to cross A49; well positioned located with western boundary adjoining the village with agricultural building and yard forming natural infill and screening bund to the south. Site development well placed to provide benefits of additional school carparking providing safe access to school plus land suitable for a multipurpose sports centre through the landowner of land donation. Additionally, site would include area of public open space. Land to north(in same ownership) recently developed incorporating infrastructure to accommodate high volume of surface water . Site however outside area of flood risk. . Site has a Good sustainability rating compared to other sites in Hadnall. Site self-contained & Plan provided illustrates how site can fulfil 52 house requirement for Hadnall. Village has good facilities and further development will allow additional investment to local facilities & improve sustainability. Site has direct access within existing 30mph zone and required improvements can be implemented. Proposed scheme provides needed affordable family houses within safe walking distance of the school. Proposal for a attractive development to complement the village and balance housing type. Adjoining farm building will not be used for housing livestock. Scheme reflects community led plan and no objection raised by Parish Councillors. The proposed scheme to be allocated suggests that cars will drive through the Westfield's Housing development as the proposed car park for the school is a long walk away, where our proposal has direct access off Astley Lane. Residents of Westfield's states their houses shudder as HGV's travel on the A49 Proposed site lost an appeal. The area has high water table and existing gardens at Westfields unusable in winter. Site guidelines for proposed allocation suggests that cars will drive through the Westfield's Housing development as the proposed car park for the school is a long walk ,whereas our proposal has direct access off Astley Lane. Residents of Westfield's highlight traffic impact (houses shudder as HGV's travel on the A49).Additional information can be provided as required to support site allocation.
A0884B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Promoting land at Wem Industrial Estate, Souldon Road, Wem, Shrewsbury on behalf of clients. This site is currently an agricultural field located to the south east of the industrial estate adjoining the B5065. The site has no significant constraints. I am writing as we believe this land can be considered for short term potential due to the following: Available and owner has full title to the land; the site is fully deliverable and suitably placed to provide development in Wem; the site is well positioned to highways access off the B5056 and onto the A49. Our client is very keen to provide this site for commercial/business park development, therefore is happy to provide any information the Council deems as necessary as further evidence of the site being available and sustainable
A0900B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Sansaw Estate supports the designation of Hadnall as a Community Hub settlement in Policy S17.2 as vital to ensure the village's long-term future. Paragraph 5.247 of the explanatory text is supported in noting that, "due to its relatively close proximity, the village (also) has a strong relationship with Shrewsbury." This relationship makes Hadnall one of relatively few villages in Shropshire that has significant potential for rural growth both socially and economically. Amend policy S17.2 to reflect the more visionary approach provided by the Estate and help deliver policy SP2 Strategic Approach. We would strongly support a residential guideline for Hadnall of at least 250 dwellings to 2038 with additional allocations of land for up to 200 dwellings and 2 hectares of employment land together with new community facilities in the centre of the village, to be delivered during the plan period to 2038. Despite being located on a strategic corridor, Policy S17.2 gives Hadnall a residential development guideline of 125 dwellings, of which 73 dwellings (58%) are already committed. The Plan allocates one site for 40 dwellings at land south of Wedgefields Close (HDL006) and assumes windfall development of 12 dwellings over the remainder of the plan period to 2038. This equates to around 3 dwellings per annum over the 17 years 2021-2038, which we consider to be unjustifiably small for such a well located, sustainable village. The Sansaw Estate is disappointed that Shropshire Council has not allocated any of the land promoted in the Strategic Vision Document presented to both Shropshire Council and Hadnall Parish Council in 2018/2019. The Vision balanced residential development with economic development arranged in an arc around the village core. It provides a 30 year vision encompassing both this plan period and the next, to 2050. The Plan in its current format ignores the potential for a more vibrant village core centred on the community facilities of the village hall, car park, church, village shop and central area of public open space around Hadnall moat. There is a missed opportunity to focus development in a ring around the village core to facilitate a renewal of the heart of the village. The Council's Landscape and Visual Sensitivity Assessment for Hadnall notes that in the northern side of the village, "Views are generally contained due to low lying topography and vegetation." The Assessment notes, "The gentle topography is less susceptible to change a result of development, with opportunities to enhance the settlement edge and restore hedgerows and rural pattern as part of new development." This supports the potential of the northern part of the village to accommodate residential and employment-led development. The following sites are promoted by the Sansaw Estate for allocation, having already been assessed by the Council as having no technical difficulties: HDL011 Land south of Ladymas Road (1.656ha); HDL012 Land west of A49 and north of Chapel Rd (5.174ha) and HDL014 Land north of Station Road (1.337ha). Address its pressing need to identify more land for housing and employment development in light of Government pressure; reinforce its strategy of focussing growth in strategic corridors including the A49 north of Shrewsbury; utilise a worked out Whole Estate Plan on which Hadnall Parish Council has already been consulted to help deliver sustainable housing.
A0900B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Sansaw Estate object to the removal of their site CLV010 from the regulation 18 Pre-Submission Local Plan Plan in favour of sites CLV012 and CLV018 which are further from the railway station and the village shop. CLV010 was the preferred allocation in the last consultation in November 2018. Sansaw Estate support Policy S17.2 identifies Clive as a Community Hub settlement that will have growth of around 30 dwellings. The Sansaw Estate supports the designation of Clive as a Community Hud as essential to the long term vitality of the village. In light of policy DP1, we can guarantee that site CLV010 will deliver a suitable mix to reflect local housing need as well as help enhance local infrastructure, with the Sansaw Estate prepared to work closely with the school and the Parish Council. We respectfully request that site CLV010 is restored as an allocation in the Plan. To guarantee delivery of community infrastructure, we suggest the following development guidelines: "Development will contribute to the extension of the school through the provision of the 'Hilltop Cottages' site adjoining the school. An appropriate highway access will be provided onto Station Road with accompanying pedestrian footway. Development will provide a low density scheme and the development mix will reflect identified local housing needs. Development will enhance pedestrian linkages between the site and the existing facilities on the High Street and Clive Primary School. Existing trees, hedgerows and priority habitats will be retained and enhanced". This new allocation will address the issues raised in page 220 of the Wem site assessments report as, "Whilst this site was identified as a Preferred option in 2018, concerns have been raised about the sites proximity to services within the villages, taking into account the slightly uphill gradient from west to east, as well as concern that traffic will need to go through the village to access the A49. To this end, it is considered there are alternative sites on the east of the village that are more appropriate for allocation to meet the village's modest housing requirement." These concerns are misplaced and can be adequately addressed as follows: the gradient of Station Road at this point is very slight indeed and development can create a pedestrian footway along this length of Station Road, to the benefit of existing homes on the opposite side of the road as well as to the new dwellings. Sansaw Estate owns the intervening land between site CLV010 and the existing public right of way connecting the south of the village to the railway station and the school. A new footpath link can be created as part of CLV010 to provide residents with a largely off-road route to the station to the west and the school and village facilities to the east as shown in figure 4. the Sansaw Estate can provide a hard surface to improve the route between site CLV010 and the school. For traffic management along the route from the A49 to the A528, concerns about construction traffic are misplaced and can be addressed as a planning condition to require deliveries to travel to and from the site from the A528 direction entirely avoiding the village. Sansaw Estate has an excellent reputation for delivering housing and public open space, it manages 150 hectares of woodland and extensive areas of grassland, including the Grinshill Local Nature Reserve with unfettered public access. Clive CoE Primary School is physically constrained but the Estate own land and a derelict building adjoining the school and as identified in our letter dated 16th December 2019, the Estate is willing to make this land available to Clive primary school for educational purposes as CLV010's contribution to village infrastructure. Clive school governors support this proposed transfer of the land and building, which represents a significant opportunity for the school. There is an outline agreement between the Estate and the school that this will accompany the development of site CLV010 as part of its contribution to community infrastructure. A mix of smaller houses with at least 25% two-bedroomed and 25% three-bedroomed houses will be required by Policy DP1 in addition to 10% affordable homes. CLV010 will therefore include housing for young families with children who rely on the school. This addresses Parish Council's concerns regarding the mix of housing in December 2018 with the PC minutes showing they favour sites that deliver smaller, lower-cost homes.
A0900B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Sansaw Estate support Policy S17.3 which identifies Grinshill as a Community Cluster that will deliver "appropriate small-scale windfall residential development, where it is consistent with Community Cluster Policy SP8 and other relevant policies of this Local Plan". The Plan thereby provides for a small-scale, limited growth consistent with maintaining the social, economic and environmental vitality of Grinshill. Sansaw Estate has an ongoing dialogue with Grinshill Parish Council and the neighbouring estate regarding a comprehensive plan for Grinshill and would welcome an opportunity to discuss this with Shropshire Council in more detail in a face-to-face meeting.
A0913B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	This policy's aspiration to accommodate, "investment and new development that contributes to meeting needs and making its settlements more sustainable" is supported.The identification of Wem as a Key Centre accords with the Local Plan's vision in this regard, given Wem's strategic location on the A49 corridor with excellent connections to Shrewsbury and other English regions to the north.
A0913B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The designation of Wem as a Key Centre settlement in Policy S17.1 is strongly supported as this is seen as vital to ensuring the town's long-term future.We agree with the explanatory text to policy S17.1 that due to Wem's strategic transport links (including main Crewe-Shrewsbury rail line) the settlement "contributes towards the strategic growth objectives in the north-east of the County". However, Policy S17.1 places a significant reliance on windfall development to meet the needs of the townover the Plan period, with an additional 89 dwellings as windfall (unplanned development). Given the strategic importance of growth being directed to Wem such a reliance on windfall development is considered inappropriate.It would be a much more sensible option to allocate up to 40 of these windfall dwellings onto our client's land, along the lines of the indicative plan attached to this letter. the current consultation provides anopportunity for Shropshire Council to amend policy S17.1 and Inset Map S17 to allocate ourclient's land. The allocation of this land would result in a greater level of certainty that theaims and objectives of the Plan, including the strategic growth objectives in the north-east ofthe County, will be realised over the Plan period. In addition, the allocation of this land,rather than the reliance on windfall development, will also deliver the important communitybenefits set out in this letter.
A0913B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The designation of Wem as a Key Centre settlement in Policy S17.1 is strongly supported as this is seen as vital to ensuring the town's long-term future.We agree with the explanatory text to policy S17.1 that due to Wem's strategic transport links (including main Crewe-Shrewsbury rail line) the settlement "contributes towards the strategic growth objectives in the north-east of the County". However, Policy S17.1 places a significant reliance on windfall development to meet the needs of the townover the Plan period, with an additional 89 dwellings as windfall (unplanned development). Given the strategic importance of growth being directed to Wem such a reliance on windfall development is considered inappropriate.It would be a much more sensible option to allocate up to 40 of these windfall dwellings onto our client's land, along the lines of the indicative plan attached to this letter. the current consultation provides anopportunity for Shropshire Council to amend policy S17.1 and Inset Map S17 to allocate ourclient's land. The allocation of this land would result in a greater level of certainty that theaims and objectives of the Plan, including the strategic growth objectives in the north-east ofthe County, will be realised over the Plan period. In addition, the allocation of this land,rather than the reliance on windfall development, will also deliver the important communitybenefits set out in this letter.
A0924B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	The designation of Edstaston as a Community Cluster settlement in Policy S17.3 andits identification on Inset S17, is strongly supported as this is seen as vital toensuring the settlement's long-term future.The settlement of Edstaston lies in close proximity to, and has a strong relationshipwith, the key service centre of Wem. It is also benefits from a limited range ofservices and facilities. Edstaston therefore provides a sustainable location for theprovision of additional residential development in the rural area.
A0924B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Site location plan for EDS005

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0951B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Don't know / no opinion	<p>Proposed Allocation</p> <p>Policy S17 Wem Place Plan Area, highlights the importance of Wem as a Key Centre that contributes to strategic growth in the north-east of the County. As such a development guideline for 600 new dwellings in Wem is identified in Policy S17.</p> <p>The policy identifies new allocations for residential development in the edges of Wem and saves allocation WEM003, which was identified in the adopted SAMDev. An additional residential allocation on the western side of Wem is proposed, as shown in figure 1 (shaded yellow but not included in this summary).</p> <p>The 1.5 hectare site is put forward to deliver approximately 25 dwellings in conjunction with the delivery of the saved WEM003 allocation.</p> <p>The proposed allocation is currently outside of the development boundary and therefore is within the open countryside. However, it is well related to Wem and its development would come forward with WEM003. Both sites would then also have the potential to link to the proposed allocation WEM010, creating a comprehensive development area on the western side of Lowe Hill Road.</p> <p>Landscape Evidence Base</p> <p>As the proposed allocation is currently open countryside, the local plan evidence base has been reviewed in relation to the sensitivity of the landscape surrounding Wem and the potential impacts the proposed allocation would have on the surrounding countryside.</p> <p>The adopted SAMDev evidence base considered the appropriateness of new residential development extending Wem's settlement boundary. The North Shropshire Landscape Sensitivity and Capacity Study (March 2008) considered the landscape constraints around Wem and the sensitivity and capacity of a number of sites (as selected by officers and marked by a red dashed line). The plan extract is included below as figure 2. The study did not identify any specific constraints relating to the proposed allocation site or surrounding land. Moreover, site NSWe9-24, north of the site was considered to have a medium landscape sensitivity and a medium landscape capacity for housing (Figure 2 - North Shropshire Landscape Sensitivity and Capacity Study (March 2008) – Plan Extract and Assessment Text for NSE29-24 (not included in this summary)).</p> <p>The assessment for the NSWe9-24 site also noted that the area has medium visual sensitivity as the area is gently undulating, which limits very wide views.</p> <p>The Site Assessment for allocation WEM003 identified the site as having medium landscape sensitivity, based on the assessment for site NSWe9-24. The site was recommended as a preferred option, as it is a 'good strategic location relative to alternatives, limited environmental constraints, opportunities to masterplan and phase if required'.</p> <p>(Figure 3 - Extract from Adopted Policies Map (S17 Wem) is not included in this summary).</p> <p>The Shropshire Landscape & Visual Sensitivity Assessment (2018) considers land surrounding Wem and forms part of the evidence base for the current Local Plan review. For the western / northern section of Wem, within which the proposed allocation site falls, the assessment concludes that:</p> <p>Landscape Sensitivity – This is a generally intact landscape of pastoral fields with recreational features including The Shropshire Way, Wem Market Town and Cycle Rides and the River Roden, which are locally enjoyed. Overall, the sensitivity of the landscape to change arising from new housing is medium and to employment is medium-high.</p> <p>Visual Sensitivity – This is a landscape with very gently rolling landform with intervisibility to the settlement edge. The medium scenic quality combined with intervisibility with the settlement edge means views experienced are of medium sensitivity to change arising from new housing and medium-high to employment.</p> <p>The overall sensitivity for the proposed allocation site and surrounding area for housing development is assessed as 'medium'. The level of sensitivity was recorded on a six-point scale (low, medium-low, medium, medium-high, high and very high).</p> <p>The three residential allocations proposed in Wem (WEM010, WEM025 and WEM033) are located within this area of 'medium' sensitivity, as is the additional site proposed to the west of WEM003.</p> <p>Based on this assessment, the Design Guidance for Wem, as set out in the report (figure 4 below):</p> <ul style="list-style-type: none"> - Does not identify the proposed allocation site and its surrounding land as having 'higher landscape sensitivity to development' or 'higher visual sensitivity to development' (while several areas to the east of Wem are considered to have higher sensitivity); - Does not identify any designated features or visitor destinations in or near to the proposed allocation site; - Does not include any important landscape features which should be retained are located in or near to the site. - Does not identify any long distance views passing through or close to the site. (Figure 4 - Shropshire Landscape & Visual Sensitivity Assessment (2018) – Extract is not included in this summary). <p>The SAMDev Review Site Assessment (2018) for WEM010, which lies to the north east of the proposed allocation site, noted that 'the site lies outside, but adjacent to the development boundary and adjoins the existing housing SAMDev allocation which is expected to deliver in 2019, and is therefore considered a natural extension to the settlement.' The assessment confirms there are limited environmental constraints relating to the site.</p> <p>In light of this it is not considered that any specific landscape features have been identified to restrict the allocation of land to the west of saved allocation WEM003. The western edge of the proposed allocation is delineated by an established hedgerow and tree lined boundary which would form a clear edge to the open countryside.</p> <p>Site Proposals</p> <p>A masterplan and site specific Landscape and Visual Impact Assessment have been produced for the proposed allocation site and the adjacent WEM003 saved allocation site, copies of which are included as Appendices A and B. The masterplan illustrates an outline layout for a modest density housing scheme, set within a strong axis of landscape buffers which include the retention of valuable fir</p>
A0966B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>Promoters and Landowners support the allocation of site SHA017 as a site in a highly sustainable location close to Shawbury Community Hub centre and its services and facilities. The site lies within 1 ownership which simplifies availability and delivery & is available for immediate development. There is evidenced developer interest. The site is viable and capable of coming forward as part of the Local Plan Review process as evidenced by phase 1 development (SHA004) experience by Lioncourt Homes. Anticipated delivery timescales: Phase 1 site 'Short Term' (2020 to 2025) Phase 2 site will come forward in the 'Medium Term' (2025 to 2030).</p> <p>site will be developed in 2 Phases-approx 40 in each Phase; Access to site would be via the new A53 roundabout via 'Oaklands Park as this has sufficient capacity with pedestrian footway along the site's eastern boundary, connecting to the existing footway on Poynton Road. No vehicular access will be provided from Poynton Road, the Paddocks or Hazeldine Crescent. The development will support delivery of a footpath link, along side appropriate infrastructure including lighting and secure fencing, to enhance connectivity to the School and to ease congestion. Existing trees, hedgerows and priority habitats will be retained and enhanced; enhanced connectivity to St Marys Primary School and to ease congestion on Poynton Road. Existing trees, hedgerows and priority habitats will be retained and enhanced. Development will reflect and respect heritage interest & contributions be provided towards the consolidation, conservation and interpretation of the Grade II listed brick kiln and associated structures west of the site. Appropriate noise management/mitigation measures will be employed. Appropriate sustainable drainage and water management will be put into place & details are attached of drainage improvements which have been discussed with Shropshire Council.</p> <p>Inaccuracies published on social media community site regarding the proposal and feedback prompted some adverse comment, but positive comment also made which is unlikely to be submitted. Positive comments related to benefits of provision of new houses, economic & social benefits and support for local shops & businesses also highlighting timescale and safeguards built into planning processes. It was also noted that Shawbury not unique in receiving development. It is clear that there is support within the community of Shawbury for new houses. Extract from social media postings included in rep.</p> <ul style="list-style-type: none"> •at Preferred Sites Consultation agreed that proposed development boundary provides for the a logical extent of the existing settlement along with a suitable residential allocation in SHA019; •Shawbury Parish Council comments of 22nd January 2019 are reported (agenda and minutes included as an appendix) including acceptance of 80 dwellings to 2036 and identification of the site as the most appropriate. Although the PC request that application for development not considered within the next 5 years this cannot be justified and alternative suitable phasing for the site is suggested. •Public concerns (set out in standard letter provided) were raised to the Parish Council meeting regarding the development of the site & village capacity for development. In respect of these it can be demonstrated that: there is likely to be sufficient gp & school place capacity; access and road infrastructure is suitable; recently upgraded sewer is capable of accommodating the outfall from the proposed site SHA019; no likely flood risk and the development of the site will not result in the loss of flood storage capacity & drainage scheme & culvert upgrade will address localised issues; employment available locally; alternative footpath route to that via The Paddocks & bus turning area can be provided if required.
A0966B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>Support identification of Shawbury as a (higher level) Community Hub - known services & facilities listed which support that role. Follows that within the hierarchy of settlements that Shawbury should be a focus for new development in line with Policy CS1.</p> <ul style="list-style-type: none"> •In view of the sustainability residential requirements, including settlement housing guideline (150) identified at Preferred Sites Consultation should be a minimum level of development
A0969B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>Agree with site allocation and guideline for SHA019</p>
A0995B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	<p>Site promoted - on the West side on Hadnall, immediately adjacent to several recent residential developments. Access has previously been deemed appropriate for the recent small/medium developments that have been approved and built. We have had discussions with Eddie West in August 2019 regarding the alterations to Church Lane and developing the land in general, and he was sympathetic with our scheme and generally positive with the approach we were taking. The proposed land is immediately adjacent to the current proposed development boundary for Hadnall, making our site a natural continuation of the desire for development. It is our view that this site should be included for allocation to address the shortfall in delivery since the SAMDev was adopted and meet the growing need for different types of housing identified in the NPPF and the draft Local Plan (Policies DP1 – DP7).</p>
A1120B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>Fully support the identification of Aston as a Community Cluster' settlement within the Wem Place Plan Area and in connection with: Edstaston, Quina Brook, Northwood, Newtown and Tilley</p> <p>Aston is in close proximity to Wem, a Key Centre, providing easy access to the services and facilities within the town to meet the day-to-day needs of current and future residents. Aston was formerly an open-countryside development and has been largely void of development through the current plan period. However, its size, accessibility and proximity to Wem clearly evidences Aston as a sustainable settlement and able to accommodate new housing growth through the extended plan period.</p> <p>However, with Aston identified as a Cluster settlement, any new housing growth must be in accordance with draft Policy SP8, specifically Point 2.</p> <p>Whilst the introduction of a definition for 'infill' is welcomed, it is felt that there is too much rigidity in directing new housing development, that does not take into account local context and character and will hamper new development on a otherwise sustainable development.</p> <p>Aston is a very much linear and tight-knit settlement, with a clear nucleated cluster of housing in a regimented form, as a result the availability for new development (aside from conversions) is few and far between.</p> <p>It is therefore requested that a degree of flexibility be introduced to the definition of infill, in recognition that no two sites or settlements are the same. For draft Policy SP8 to be applied so rigidly, with no allowance for slight interpretive anomalies would limit new development in Aston so heavily, that it is likely the settlement will not deliver on any windfall new-build. Instead new housing will be delivered through conversions, of which are disproportionately high-value and will exclude Aston from delivering its longer-term sustainability</p>
A1121B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>Support the identification of Clive as a 'Community Hub' settlement within the Wem Place Plan Area as a medium-large settlement serving a surrounding rural hinterland. Clive offers multiple services and facilities to meet the day-to-day needs of the community and future residents including: School, Church, Medical Practice, Shop & Post Office, Village Hall, amongst others. Support the development boundary as found at Inset S17.2 Clive which will facilitate the delivery of the residential guideline of "around 30 dwellings" from 2016 – 2038, whilst retaining a sympathetic built pattern and avoiding unnecessary encroachment into the open countryside. The inclusion of Proposed Site Allocation CLV012 and CLV018 to provide 20 new dwellings is supported as they help meet the needs of Clive and allow an appropriate level of windfall development within the settlement. The Proposed Site Allocations CLV012 and CLV018 should be amalgamated into a single site allocation and together they are available, deliverable and viable. The development of this allocation will provide local infrastructure improvements to satisfy the settlement policy, whilst providing a sympathetic form of low-density housing to be developed in complete accordance with all draft Policy requirements and developer contributions. The Proposed Site Allocation represents the most sustainable site for new development within the settlement, protecting residential amenities and providing improvements to highway safety, local biodiversity and landscaping. It is considered there are no other promoted land parcels which the Council have not previously considered and already rejected. The Site Allocation CLV012 and CLV018 should remain in the Plan to provide the new housing required in Clive. A supporting Further Representations document accompanied this submission.</p>

A1123B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Fully support the identification of Tilley as a Community Cluster' settlement within the Wem Place Plan Area and in connection with: Edstaston, Quina Brook, Northwood, Newtown and Aston. Tilley is in close proximity to Wem, a Key Centre, providing easy access to the services and facilities within Wem to meet the day-to-day needs of current and future residents. Tilley was formerly an open-countryside development and has been largely void of development through the current plan period. However, its size, accessibility and proximity to Wem clearly evidences Tilley as a sustainable settlement and able to accommodate new housing growth through the extended plan period. However, with Tilley identified as a Cluster settlement, any new housing growth must be in accordance with draft Policy SP8, specifically Point 2. Whilst the introduction of a definition for 'infill' is welcomed, it is felt that there is too much rigidity in directing new housing development, that does not take into account local context and character and will hamper new development on a otherwise sustainable development. Tilley is a very much a tight-knit linear settlement and a largely historic settlement, hence the recent designation of a Conservation Area. As a result, the availability for new development (aside from conversions) is few and far between. It is therefore requested that a degree of flexibility be introduced to the definition of infill, in recognition that no two sites or settlements are the same. For example, land adjoining the north-western edge of the settlement, on a parcel of land that is physically and functionally well connected to the existing settlement, yet would fail to comply with draft Policy SP8 owing to a lack of development on two sides. For draft Policy SP8 to be applied so rigidly, with no allowance for slight interpretive anomalies would limit new development in Tilley so heavily, that it is likely the settlement will not deliver on any windfall new-build. Instead new housing will be delivered through historic conversions, of which are disproportionately high-value and will exclude Tilley from delivering its longer-term sustainability. Additionally, Tilley is characterised by large detached farmhouses and former barn conversions. The designation of a Conservation Area will add further pressures on any new housing scheme providing a sympathetic form and layout, whereby the requirement that no infill site be bigger than 0.1 hectare and provide no more than 3 units, will result in any new housing development unable to meet the requirements of draft Policy SP8 and draft Policy DP24 concurrently.
A1142B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Don't know / no opinion	From previous Council meetings and discussions, Clive Parish Council's standpoint was as follows: given that the points score for the parish (51 points) put Clive just over the threshold for Community Hub status (48 points), the only course of action was therefore to accept Community Hub status and to try our best to mitigate the negative impacts of large scale development in the community so that it did not put too much pressure on existing infrastructure, or feel too out of character with existing development. The Parish Council had previously asked for the housing guideline figure for Clive to be reduced from 40 to 25 maximum, with the dwellings being split between a single development of 10-15 dwellings and the remaining as in-fill within the development boundary. In this latest draft of the Local Plan, the current housing guideline figure being proposed for Clive parish is "around 30 dwellings", however it is noted that policy SP6 does allow for these housing guideline figures to be exceeded in certain circumstances. In anticipation of this current stage of consultation on the Local Plan, Clive Parish Council delivered a survey to all local electors asking for their preferences on preferred development sites, on the assumption that Clive would be a Community Hub. The return rate was over 80% and results showed that: • 56% of respondents were in favour of development on sites CLV012 and CLV018 • 24% of respondents were in favour of development on site CLV010 • 3% of respondents were in favour of development on both sites CLV010 AND CLV012 & CLV018 • 16% of respondents had no preference on development sites • 5% of surveys had no options ticked As a result of this, the Parish Council had agreed at the Parish Council meeting held on 17.09.2020, that it would respond in support of the current proposals for Clive, in terms of development boundary, site allocation and housing figure, although we do note that a large number of comments in the surveys asked that there be sufficient affordable housing provision. This is so that those who have grown up in Clive are given an opportunity to rent/buy in their home village. A number of survey comments also repeated concerns about the pressure that an additional 30 houses will have on current infrastructure e.g. sewage, and services such as the medical centre. There were also concerns about the impact of increased traffic (potentially 60 extra cars) on the narrow access roads in and out of Clive, and how this will impact road safety. These comments echo concerns that have been raised by the Parish Council in previous consultations. Following the Parish Council's survey of the community, a separate, unofficial survey was conducted by a group of independent residents. This survey asked the community whether they would support losing an amenity or service in order to drop below the 48-point threshold, and take Clive out of Community Hub status. At an Extra Ordinary Parish Council meeting held on 24.09.2020, the independent group presented their findings. Whilst the results of this survey still need to be independently verified, it was stated that: • 23% of respondents wished to retain current services/amenities and become a Community Hub • 43% of respondents were willing to lose an amenity/service to become a Community Cluster • 25% of respondents were willing to lose an amenity/service to remain as Open Countryside • 7% of respondents had no preference • 1% of surveys were spoilt At the same meeting, it was also revealed that the tenants and landlord of the Clive Village Stores had decided to close the shop, and it has since been confirmed that th shop will close on 16th October 2020. The landlord has given assurances that the timing of this decision is coincidental, that this will be a permanent closure, and that the building (7a High Street) will not re-open as a shop in the future. On this basis, when the shop closes Clive would then lose 4 points for the shop, and drop to 47 points, which is below the 48-point threshold for Community Hub status. Clive would therefore default to Open Countryside. As this news about the forthcoming closure of the shop has come just before the end of the consultation period, the Parish Council does not have time to re-consult the community again at this point, however we plan to look further into what is entailed in the different options of Open Countryside and Community Cluster (potentially with Grinshill parish), and engage the local community fully to establish whether the preference would be to remain as Open Countryside or to become a Community Cluster.
A1168B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	From previous Council meetings and discussions, Clive Parish Council's standpoint was as follows: given that the points score for the parish (51 points) put Clive just over the threshold for Community Hub status (48 points), the only course of action was therefore to accept Community Hub status and to try our best to mitigate the negative impacts of large scale development in the community so that it did not put too much pressure on existing infrastructure, or feel too out of character with existing development. The Parish Council had previously asked for the housing guideline figure for Clive to be reduced from 40 to 25 maximum, with the dwellings being split between a single development of 10-15 dwellings and the remaining as in-fill within the development boundary. In this latest draft of the Local Plan, the current housing guideline figure being proposed for Clive parish is "around 30 dwellings", however it is noted that policy SP6 does allow for these housing guideline figures to be exceeded in certain circumstances. In anticipation of this current stage of consultation on the Local Plan, Clive Parish Council delivered a survey to all local electors asking for their preferences on preferred development sites, on the assumption that Clive would be a Community Hub. The return rate was over 80% and results showed that: • 56% of respondents were in favour of development on sites CLV012 and CLV018 • 24% of respondents were in favour of development on site CLV010 • 3% of respondents were in favour of development on both sites CLV010 AND CLV012 & CLV018 • 16% of respondents had no preference on development sites • 5% of surveys had no options ticked As a result of this, the Parish Council had agreed at the Parish Council meeting held on 17.09.2020, that it would respond in support of the current proposals for Clive, in terms of development boundary, site allocation and housing figure, although we do note that a large number of comments in the surveys asked that there be sufficient affordable housing provision. This is so that those who have grown up in Clive are given an opportunity to rent/buy in their home village. A number of survey comments also repeated concerns about the pressure that an additional 30 houses will have on current infrastructure e.g. sewage, and services such as the medical centre. A1197B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Response to sites CLV010 and CLV012/18 Governors Clive Church of England Primary School the Governors continue to support the development of site CLV010 on the ground that it provides the following benefit: <ul style="list-style-type: none"> • A substantial planning gain by the provision of the only possible adjacent site for the construction of much needed facilities at the School which will secure the provision of first- rate education for the children of Clive and the surrounding area for many years to come. • Alleviates the concentration of traffic on High Street, thus promoting road safety particularly by creating on site car parking for School staff. • Provides easy pedestrian access to the greatest number of village facilities and the railway station. • Has the least detrimental effect on the built form of the village. Range of supporting documents submitted with the response
A1198B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Suupport for allocation of site CLV010 within the plan over sites CLV012/018. Benefits of CLV010 include - Close to the railway station which will help encourage use of the train for journeys; major advantage of this site is that the owners have offered as part of their site development to provide an off road path from the site to the public footpath from Back Lane to Yorton Station and, most significantly, to give the Clive Primary School a 99 year lease of the site of 1, The Hill (known locally as Rowland's Cottage). This site is immediately adjacent to the school and provides the only site opportunity for the School to build a school hall and a new EYFS classroom. both of these developments are essential for the future existence of the school. It also provides the opportunity to provide 9-10 on site parking spaces for staff which will remove the need for staff to park on the highway between the Wem Road junction and the doctors surgery removing the only serious conflict of parking in the village related to the school. Site CLV012/018 is less attractive as it has acces issues onto the A49, planning gains from these sites of a car park is too far from the school to be attractive to use
A1266B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	This site is not suitable due to drainage and flood risk issues. Recent development off Poyton Road has seen significant flooding in recent years, with one property flooded upto the front door. Developing next to this already flood prone area would be a disaster. The site SHA019 has streams running through it and part of the site has been impossible to cultivate as a result. Even if this area is left for green infrastructure its not a suitable for housing. Developers assurances the sites flooding can be mitigated are not reassuring - and may displace flooding to other neighbouring sites. Sewerage is also an issue, a small development of 4 houses was built nearby 20 years ago and the sewerage system has been over capacity ever since, and this summer sewerage spilled into the river. Please on't build on this site its not suitable
A1635B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Wem's target is too low. Site at Mill Street should be included. Windfall numbers are no realistic. It is a logical extension and a good location. The chosen draft allocations are very rigid and provide no real flexibility if any land becomes undeliverable. The allocations rely on factors outside the Council's control in terms of their deliverability and there is no thought given to providing a suitable buffer. The site at Mill Street is fully deliverable as a residential or mixed-us allocation and the land can be available immediately.
A1638B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	There is a need to address the issue of traffic crossing the railway rather than to extend the development of the town further into open countryside on its northern and western extremes. A new road which would link Aston Road with the Shawbury Road would seem to be a good way to reduce the traffic impact of the level crossing and eliminate the need for cross-town traffic movements by commercial vehicles. Promoted Sites WEM018 and WEM034 coupled with the proposed Employment site ELR031 could enable the new road.
A1827B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	CLV010 is better than the preferred allocations. There is an opportunity to extend the school and this should be taken.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1886B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		<p>I am a parent and resident of Clive. I understand that the Parish Council have lobbied to change the draft proposal from CLV010 to CLV012/018, Shropshire Council are about to launch an 8-week consultation and the Parish Council will leaflet villagers to explain the reasoning behind the change. I have reviewed the documentation uploaded on 2 July by Lydia Bardsley and the minutes from the past year and I am seriously concerned that the Parish Council have used both inaccurate and misleading information, overlooked key information and relied upon unsupported assumptions, which I strongly feel have invalidated any conclusions drawn. I ask that the Parish Council corrects these errors and omissions and also fully acknowledges them in the actual consultation document issued to villagers. This is because many will have attended the public meeting last year and many will have also read copies of the documentation in the past week, since the school governors wrote to parents and the links were then subsequently posted on the village Facebook page. Full analysis attached, but in summary the Parish Council documentation includes:</p> <ol style="list-style-type: none"> 1) Inaccurate measurement to the school from CLV012/18/2) Misleading measurements to the school from CVL12/18 (measured from near corner of a plot which is over 300m long) 3) Misleading timed walk by councillor from far corner of CLV010 to school, because walked the longest route possible via surgery 4) Inaccurate conclusion that CLV012/18 is "considerably closer to the school and other village facilities". I have included full walking times and distances to all amenities, recorded with Strava. 5) Inaccurate statement from CLV018 landowner that the land offered to the school is 'adjacent' (not queried by PC). The nearest point of land owned by CLV018/CLV012 owners is over 200m or a 3-minute walk from the school. 6) Omission regarding the footpath link Sansaw would cut between CLV010 and the existing footpath to Back Lane, (providing off-road access to the centre of the village, and the school via the Glat.) 7) Omission of possible locations, footpath routes and walking distances from proposed car parks at CLV012/18. Having looked at the distances from these plots, they are too distant compared to the existing access points to be used by many parents and will be of no use in solving traffic or parking issues for any of the other amenities. E.g. school drop off time of approx. 17 minutes vs approx. 8 minutes from Drawwell/Glat. 8) PC has not asked about or quantified the size of the reduction in CIL available to the community, from offsetting the large number of farm buildings currently on CLV012. 9) Illogical thinking regarding assertion that CLV010 would increase potential traffic in the village more than CLV012/18. There is no evidence to back up the assertion that villagers leave the village via Preston Brockhurst/A49 more than via Yorton/B5476/A528. Since the Battlefield link road gives access to Battlefield Roundabout, it is logical to leave away from the village from either plot for most destinations. I have included quickest routes using Google maps from each plot to various destinations, which shows the quickest routes are typically to leave West via Yorton/A528 from CLV010 and East via Preston Brockhurst/A49 from CLV012. I appreciate the Parish Council's enthusiasm for wanting to alleviate parking and traffic issues, but in this matter, they have seized upon an ill-thought-out suggestion from landowners and immediately "RESOLVED" to support it in the March meeting, without consulting governors or parents or scrutinising the proposal properly. Dismissing a concrete and extremely valuable opportunity for the school on this basis is outrageous. Unfortunately, throughout the Local Plan Review process I feel the Parish Council have failed to act objectively. I understand the majority of feedback from the village so far has been against development at CLV010. I would expect this to be the case, as it was the plot actually consulted on last year. Since then, there has been no visibility to parents or villagers of the Sansaw offer to the school beyond the Parish Council meeting minutes, until last week when the school governors wrote to parents themselves to tell them of the opportunity to comment in the upcoming consultation. Representation then includes a data summary (46 pages) showing: 1. Maps: Showing: i) On-road and off-road walking routes for residents from both plots to amenities ii) Proposed footpath link from CLV010 to existing footpath running from Yorton Station to Back Lane. iii) Potential footpaths from car parks somewhere at CLV012 or CLV018 to brideway along top of hill. iv) Walking routes from proposed car parks vs existing walking routes from on-street parking. 2. Walking Times (Strava) Proposed car parks vs existing access for parents driving. 3. Car Traffic quickest routes – From Google Maps and an analysis of documents as follows: Parish Council Response to Berry's proposals for site CLV010 30th January 2020 "Letter From Halls to SC re site CLV012 March 2020" and "Letter from Landowner to SC re. site CLV018 (Feb 2020)" and "Clive Parish Council response to proposals re. CLV012 and CLV018 27.03.2020" Letter from landowner CLV018: Letter from Landowner CLV018 and the response from the Parish Council. Strava Traces within Clive and screen shots of Google Map driving routes from Clive are then included. The "Site Assessment stage 3" allocates CLV012/018 over CLV010 for housing based on the ability to access the A49 without driving through the village and proximity to the village services. 1) CLV012/018 does have the ability to access the A49 at Preston Brockhurst without driving through the village, but it does not follow that this is a benefit for reducing traffic through the village, in fact there is a benefit for reducing traffic by allocating CLV010 for housing as follows: CLV010 has the ability to access the B5476/A528 at Alderton Crossroad without driving through the village. As the Battlefield link road connects the A528 at the Ellesmere roundabout and the A49 at the Battlefield roundabout, it is logical to leave away from the village from either plot for most destinations. From CLV010, destinations cross-country East to Shawbury or North/ North West over A49 to Whitchurch/Market Drayton and beyond cross through the village. From CLV012 destinations cross-country West to villages or to the A5, North West to Ellesmere, South to Shrewsbury centre or South West to the Royal Shrewsbury Hospital, cross through the village. As more destinations, in particular central Shrewsbury are best accessed by driving to the West of the village, there is a benefit to situate new housing at CLV010. See next section for full evidence. Looking to the longer term, once the North West Relief Road is built, destinations South West beyond Shrewsbury (and likely South as well given the traffic pinch point between Battlefield and Sundorne Roundabouts) would also cross through the village, further increasing the number of journeys that will leave the village to the West. 2) While CLV010 does have a slightly uphill gradient West to East towards the village, its overall proximity to services is arguably closer than CLV012/CLV018 as it's closer to the village hall/Renshaw's field area and with the proposed footpath link up to the existing footpath (Back Lane – Yorton Station) improves the off-road connectivity of Station Road with the centre of the village. There are contradictory statements in the sustainability assessment commentary, which make no sense: CLV018 (page 236) is noted as 'close walking distance to the village facilities' However, CLV017 (page 235), which is closer to the village is noted as 'being more remote from the focus of the village'. CLV013 (page 226), which is diagonally opposite CLV018 (no more than 50m further along High Street) is noted as "Site is far from the village centre and its service". CLV012 and CLV018 combined stretch 330m along High Street, that's over a quarter of the distance from walking from CLV018 through the village to CLV010. The originally proposed development boundary (terminating near CLV012) reflected correctly that the housing is most situated to the South West and that there are relatively few houses East of the Wem Road. As a narrow and very long plot, quite a lot of the new houses would be 'remote from the focus of the village' as noted in the commentary for CLV017 opposite. CLV010 in contrast is a more compact plot, with the housing stretching back further South and South East from the road frontage, with those houses being actually closer to the centre of the village via the proposed new footpath. 3) There are a number of typographical errors in the document, which would appear to potentially show a lack of attention when considering CLV012/018. CLV012 includes 'carparking' and the CLV018 commentary appears to have been copied and pasted from CLV012 narrative, without being properly adjusted, so doesn't read correctly. 4) Community Hub: Clive Scoring page 17 and 18 The mobile library stops have not been included and should score a + for both CLV010 and CLV012 (and many other plots, although not CLV018). This doesn't affect the decision making though, as the plots would still be carried through to stage 2b assessment. Details and Evidence: Representation includes a detailed description of the benefit in reducing traffic by allocating CLV010 and not CLV012/018 (61 pages including methodology and screenshots of Google Mapping for different travel routes). 1) "additional car parking" will not "reduce the level of on-street parking" because the car park location is too distant to be of use for the amenities and potentially dangerous. 2) The "enhancement of pedestrian links to Clive Primary" will more than double the distance currently walked from the on-street parking, to approximately 700m (from the additional carparking or directly from the housing), including approx. 240m of the existing muddy brideway. No maps or distances have been provided by the Parish Council for the public to understand the walking route and they have deliberately chosen not to inform or consult parents (over 2/3 of whom live outside of the village). 3) There are no proposed "pedestrian linkages between the site and the existing facilities on High Street", which will remain as being a walk along High Street without pavements. (The proposal adds only the limited benefit of a pedestrian route along the site's frontage, behind the maintained hedgerows and having to detour around 'Flemley Park'). 4) S106 agreements have been proposed by the landowners for CLV010 and CLV012/18: The offer of car parking and amenity land, attached to CLV012/18 has no detail and confers little benefit, as the car park is too distant to be useful for the amenities. No consultation has taken place with parents at the school, or users of the doctor's surgery who are the intended users of the car park. With no size of land, or number of spaces stipulated at this stage, it is impossible to evaluate objectively. In contrast the offer of the site adjacent to the school, attached to CLV010, is clearly defined, meets the school's pressing need for additional space and is a major benefit to improve the sustainability of such a vital service for the long term. 5) The 'majority of existing housing is located to the south-west of the village', noted in Paragraph 5.246 reflects the volume of feedback against CLV010 from villagers, as it is situated where the current housing is densest. However, a wish to retain a view or situate new housing as far away as possible from your house, is not a valid planning concern. I feel Clive Parish Council have acted improperly in choosing to conduct a vote on preferred plot, rather than working to provide factual information to residents and reflect valid planning points, backed up by evidence. I wrote a letter to Clive Parish Council and Eddie West on 3 August about factual inaccuracies and omissions in the information that Clive Parish Council were using. I subsequently spoke to Eddie West and agreed that my letter could be considered official 'consultation response' and have therefore also attached it alongside the part A and part B consultation responses. I have had no response from Clive Parish Council, who are clearly unconcerned by any of the issues raised. 6) Clive has 'hub' status under the hierarchy of settlements methodology, but this has encouraged some members of the village to try to game the system by asking that a service be pressurised to close. While I feel this is selfish and utterly ridiculous behaviour, it has unfortunately garnered a lot of support. The Parish Council has legitimised this plan by holding an extraordinary council meeting to discuss it and stated that their job is to represent the majority view of the village. This further means that any future service developments would be opposed, such as a plan to put a children's playground in the village, or replace the footballing green. Details & Evidence: Representation includes evidence to support the view that "Additional car parking" will not "reduce the level of on-street parking" due to the location of the car park being too distant. Suggested uses for the car park are for the school and the doctor's surgery and even for other amenities in the village. <p>The village of Clive has been categorised as a Community Hub. The Parish Council has not made this request voluntarily and a recent poll found that 68% of respondents (79% turnout) did not favour Community Hub and would rather be categorised as Open Countryside or Community Cluster. This compared against 23% who did prefer Hub status. Also, Appendix 3, schedule A3 lists the evidence used in shaping SP2 and contains the results of the Shropshire Hierarchy of Settlements Assessment (2020). Since this assessment, there has been a permanent and material change to the points that should be awarded to Clive. The local convenience store will not be renewing its lease and represents the second time this shop has been forced to close in less than 2 years. This has 2 implications:</p> <ol style="list-style-type: none"> 1. Clive now lies below the threshold for automatic Hub status and should be re-examined (including seeking the opinion of the Parish Council to determine the village's preferred status), and, 2. The fact that the shop is about to close its doors for the second time demonstrates it is not commercially viable. This should be taken to mean the closure is permanent and not a transient effect of the current pandemic.
A2105B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	<p>Within Appendix 3, the Shropshire Hierarchy of Settlements Assessment (2020) is used to inform SP2 and SP7. However, the methodology of any assessment that is incapable of differentiating between the public transport provision of Shrewsbury centre and Clive village must be called into question. Specifically:</p> <ol style="list-style-type: none"> 1. It is incapable of drawing a distinction between bus service provision and simply sees any route with a peak time service as being the same as Shrewsbury centre. 2. It makes no allowance for transitory amenities, such as libraries. This leads to a mobile service in an outlying village (currently twice a month for 2 hours) accruing the same points as a permanent facility in a town centre. 3. It allocates maximum points for 'high-speed broadband' without defining what that is. It makes no distinction between 'fibre to the cabinet' connections typical of Openreach and 'fibre to the home' systems which are available within the county and represent true high-speed internet. 4. It makes no allowance for part-time services, such as shops or post offices with limited opening hours. For example, Clive scores 4 for a convenience store, the same as a large store servicing a town, yet the store is only open during the morning (typically 0900 to 1200). The points allocation should be capable of being awarded on a pro-rata basis depending on the proportion of time open. <p>In all, lack of flexibility within the methodology means lack of distinction between rural settings and larger towns; this leads to some rural areas being awarded more points than the true value of the contribution from an amenity and compromises the objectiveness of the assessment.</p>
A2125B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>We fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area. We are also in full support of the development boundary as found at Inset S17.2 Hadnall. The boundary has been drawn appropriately to meet the residential guideline, whilst retaining a sympathetic build pattern and avoiding unnecessary encroachment into the open countryside. The residential guideline of "around 125" dwellings throughout the plan period - 2016 - 2038 - is supported and considered achievable within the period. The inclusion of a site allocation, to provide 40 new dwellings at Proposed Site Allocation HDL006, allows for an appropriate level of windfall development within the development boundary and in recognition of those committed new dwellings. Hadnall previously had no identification of a Hub or Cluster settlement, yet still received a large amount of housing - disproportionate to its status as open-countryside. The identification as a Hub and the introduction of a development boundary can only be seen as a positive and will allow for a managed and directed housing growth that is in line with the Parish Council's and communities aspirations, whilst providing considerable local infrastructure improvements through developer contributions and improving the rural housing stock through compliance with the draft policy requirements.</p>
A2170B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	<p>I fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area. I am in full support of the development boundary as found at Inset S17.2 Hadnall. I am in support of the inclusion of site HDL006 and the number of houses proposed throughout the plan period.</p>
A2245B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		<p>Fully supportive of the designation of Clive as a Community Hub in the draft Local Plan to encourage development which will sustain the level of village's facilities into the future. Within the Hierarchy of Settlements it is noted that Clive scored '0' under 'public house' category. The Clive Hub on Back Lane in Clive village is a free of charge members' club with a bar and full alcohol licence, and it has a full-size snooker/billiards table, pool table, darts and dominoes. It is also available for bookings for events. Like many local businesses, its opening hours have recently been affected by Covid-19, however, it is usually open until 11pm from Wednesdays to Saturdays and during the day on Sundays. Therefore, the score for Clive should be increased from 54 to 57. Site promotion in Clive - land south of High Street and adjacent to Clive Hall. The site is located within the proposed development boundary for Clive and in a sustainable location as such it should be identified for residential development within the draft Local Plan. Within the draft Local Plan, 40 new houses are proposed to be delivered in Clive over the period to 2038. Half of these new dwellings will be facilitated on two site allocations to the far east of the village development boundary. Site allocation CLV012 (Land at Flemley Park Farm, High Street) is proposed to deliver 5 dwellings. Site allocation CLV018 (Land adjacent to The Bungalow) is proposed to deliver 15 dwellings. Taking into consideration existing commitments in Clive, a further 18 dwellings (45%) that need to be delivered through "infill sites" to ensure that Clive can deliver its housing requirements. Land to the east of Clive Hall (the promoted site) is within the defined settlement boundary of Clive and is more centrally located within the village and in closer proximity to existing services and facilities than the two site allocations which are on the same side of the village. The land to the east of Clive Hall is more suitably located for new residential development than the proposed allocations and can contribute to the housing requirements of Clive. The site's allocation will reduce the need for infill sites coming forward and provide more certainty for development.</p>
A2308B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	<p>Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPP</p> <p>WEM010: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B. WEM025: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B. WEM033: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B and Ternhill Airfield Plan B</p>
A2308B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	<p>Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF:</p> <p>CLV012 and CLV018: Safeguard Zone - RAF Shawbury Plan AT ANY DEVELOPMENT, Plan B.</p>
A2308B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	<p>Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF:</p> <p>HDL 006: Safeguard Zone - RAF Shawbury Plan AT 15.2m, Plan B and West WAM Plan T ANY DEVELOPMENT.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2308B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	SHA019 lies approximately 0.5km to the south / south-west of RAF Shawbury. Development would be at risk from increased noise and disturbance from defence flying activities. Therefore, the proposed allocation would represent a cumulative increase in sensitive receptors to noise within this location and as a result has the potential to lead to an increase in noise complaints. For SHA019 to be in accordance with Para 95 of the NPPF (ensuring operational sites are not affected adversely by the impact of other development proposed in the area) and para 182 of the NPPF (existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established, with a requirement for the applicant to provide suitable mitigation before the development has been completed), it should make reference to a requirement for planning applications to be submitted with an appropriate noise assessment which takes into account noise arising from defence activities and provides appropriate mitigation solutions such as soundproofing. Applicants should engage with MOD in the production of such assessments. Furthermore, the site promoters of SHA019 should provide measures to enable future occupants to be made aware that military aircraft may be seen and heard operating in the area and that aircraft may overfly the site. The mitigation of noise in external areas may not be possible. Future occupants should also be made aware that aircraft types, flight paths and ground based activity can vary over time and this may cause disturbance. Para 5.248 of the explanation to the draft Policy makes no reference to RAF Shawbury, which is surprising given that it is a significant, large development immediately adjacent to the village. Concerned that the draft policy/draft Local Plan does not adequately consider the needs of national defence as RAF Shawbury, nor is it included within the settlement boundary for Shawbury village, despite the fact that the edge of the village and the edge of RAF Shawbury are contiguous. As a result RAF Shawbury sits within the countryside in planning terms and is subject to the restrictive policies that apply in such locations. This has the potential to constrain development required at the Station, increase planning risk and could impact adversely on the delivery of national defence requirements. It is considered that by not giving due consideration to RAF Shawbury within the Wem Place Plan, the draft Local Plan is not in accordance with Para 95 of the NPPF, which requires planning policies to recognise and support development required for operational defence and security purposes. Would like to see a defence-specific policy within the draft Local Plan, (as specified in a response to a previous consultation), these concerns could be addressed by making the changes to draft Policy SP9 Managing Development in the Countryside (see comments on this draft Policy). Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: SHA019: Safeguard Zone - RAF Shawbury Plan AT 15.4m, Plan B and West WAM Plan T 45.7m
A2324B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	We fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area We are also in full support of the development boundary as found at Inset S17.2 Hadnall
A2332B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	Support Hadnall's classification as a Hub, it has the services to support the proposed housing. Support the Development Boundary proposal
A2346B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	We have previously promoted CLV017 and maintain our support for it. It is close to the village facilities which are within walking distance. The site is available, deliverable and achievable as an allocated site or windfall site. It is within the 30mph zone of the village. A safe access with good visibility and a pavement can be created. There is existing development to the west and east so the proposal would fit logically between existing housing. The design and layout will reflect the edge of village location. It remains our view this is the most suitable site in the village for development. We welcome the fact that the council support development at the east end of the village as opposed to the west.
A2350B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Further new residential development in Grinshill would not be suitable because the village is not served by any safe and accessible public transport. There is no village shop or public house to sustain. More development in Grinshill would conflict directly with the stated Climate Change aims of SP3 as - no public transport serves Grinshill or links to other networks. The Neighbourhood Plan process should be used to determine if the residents of Grinshill want this community cluster status. In 2015 when residents were asked their views on future proposals on 3 out of 60 returned their questionnaire wanting to extend the village development boundary
A2351B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Appendix 3, Schedule A3 references policy SP2 as being informed by the Shropshire Hierarchy of Settlements Assessment (2020). In the Hierarchy of Settlements Assessments 2020 Clive village has been classified as a Community Hub. The points allocation that informed this decision is incorrect. Clive has been scored as amassing 54 points. There is however no "Outdoor Sports Facility" and these 3 points were supposed to have been removed from the assessment. Inaccuracies in the points allocation calls into question the validity of the inferences and subsequent decisions made from the Hierarchy of Settlements 2020. There has also now been a material change to the amenities of Clive village in that the local convenience store is due to close this year. This was confirmed at Clive Parish Council extraordinary meeting of the 24th of September 2020. This is now the third time in recent years that this convenience store has closed. It has now closed twice in the last year and is now not seen as a commercially viable business. The proprietor has stated that it will not be reopening. This will bring Clive village to 47 points, below the threshold for Community Hub status. This should be reflected in the Hierarchy of Settlements prior to finalisation of the local plan. This is in alignment with the results of a recent village survey (79% response rate) demonstrated the lack of support for community hub status. 68% of respondents believed that Community Cluster or Open Countryside better represented the nature of Clive village.
A2358B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Shropshire council's original preferred site CLV010 not identified or included within boundary on map. The sites within Clive have not been assessed or treated honestly and fairly by the parish council. I know residents who feel there is blatant bias and vested interests playing a part in the development decision making process. I agree with them.
A2358B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Hub status should no longer apply with Clive as the village shop is closing, bringing the points total to below hub level. Points system does not seem fair at present with part time rural amenities scoring the same as full time urban ones.
A2364B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	SITE ATTACHED The proposal to classify Loppington as open countryside is questioned and it is felt that due to the level of services afforded this settlement it should be identified as a community cluster or even a hub as part of Wem Place Plan. It is acknowledged that there is a Hierarchy of settlements across the county, but the exclusion of the village of Loppington as a (SP2.2) Community Hubs or (SP2.3) Community Clusters seems illogical, particularly in light of the inclusion of other rural villages of similar status and size in the County. The village has an active and prospering community, with well known landmarks such as the church, village hall and the Dickin Arms public house. While it remains rural in nature and the locals undoubtedly wish to retain the integrity, it is a popular village and for it to continue to thrive it will need to move with the times and appeal to a younger audience who work from home or can commute for work. Mr Lay owns several sites in the vicinity of the village which could deliver small scale residential development to address the communities needs. Details of the possible sites are included within the attached document; 'Lay Rep LPR 2020'. It is considered that in order that the plan is considered sound that Loppington needs to be considered more positively and be classified either as a Community Hub or part of a Cluster in the Local Plan, subsequently allow suitable new development to allow modest growth
A2367B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Within Appendix 3, the Shropshire Hierarchy of Settlements Assessment (2020). The scoring methodology does not differentiate between levels of service provided by an amenity. In Clive, the small rural primary school scores double that of the large secondary in Wem, because it contains an (even smaller) pre-school. The village post office, which is run via a temporary contract from the village hall and is open for a few hours a week, scores the same as the permanent and dedicated PO facility in Wem. The shop (which is permanently closing by the end of the year), opens for a few hours on sporadic days, yet scores the same as a major store. The village bus service scores the same as Shrewsbury town centre. A mobile library stops in the village for 2 hours each month; this scores that same as a permanent facility. The scoring assessment should be adjusted so that points are scaled down to reflect the true nature and availability of the amenity.
A2367B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	A survey undertaken in Clive demonstrates that that 68% of residents (turnout of 79%) do not support Hub status, and instead want to be categorised as Open Countryside or Community Cluster. Furthermore, since the HS assessment, the village shop has closed, meaning that the village no longer scores the required points to be considered a hub. There is no prospect of the shop reopening. The village should not be classed as a Hub in the final Local Plan.
A2397B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	I fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area. Hadnall is a medium-large settlement with multiple services and facilities to meet the day-to-day needs of the community and future residents: I am in full support of the development boundary as found at Inset S17.2 Hadnall and the identification of HDL006 for the building of 40-houses. I trust this will avoid development outside of the proposed boundary for the foreseeable future.
A2401B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	Within Appendix 3, the Shropshire Hierarchy of Settlements Assessment (2020) is used to inform SP2 and SP7. However, the methodology of any assessment that is incapable of differentiating between the public transport provision of Shrewsbury centre and Clive village must be called into question. Specifically: 1. It is incapable of drawing a distinction between bus service provision and simply sees any route with a peak time service as being the same as Shrewsbury centre. 2. It makes no allowance for transitory amenities, such as libraries. This leads to a mobile service in an outlying village (currently twice a month for 2 hours) accruing the same points as a permanent facility in a town centre. 3. It allocates maximum points for 'high-speed broadband' without defining what that is. It makes no distinction between 'fibre to the cabinet' connections typical of Openreach and 'fibre to the home' systems which are available within the county and represent true high-speed internet. 4. It makes no allowance for part-time services, such as shops or post offices with limited opening hours. For example, Clive scores 4 for a convenience store, the same as a large store servicing a town, yet the store is only open during the morning (typically 0900 to 1200). The points allocation should be capable of being awarded on a pro-rata basis depending on the proportion of time open. In all, lack of flexibility within the methodology means lack of distinction between rural settings and larger towns; this leads to some rural areas being awarded more points than the true value of the contribution from an amenity and compromises the objectiveness of the assessment.
A2401B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Disagree	The village of Clive has been categorised as a Community Hub. The Parish Council has not made this request voluntarily and a recent poll found that 68% of respondents (79% turnout) did not favour Community Hub and would rather be categorised as Open Countryside or Community Cluster. This compared against 23% who did prefer Hub status. Also, Appendix 3, schedule A3 lists the evidence used in shaping SP2 and contains the results of the Shropshire Hierarchy of Settlements Assessment (2020). Since this assessment, there has been a permanent and material change to the points that should be awarded to Clive. The local convenience store will not be renewing its lease and represents the second time this shop has been forced to close in less than 2 years. This has 2 implications: 1. Clive now lies below the threshold for automatic Hub status and should be re-examined (including seeking the opinion of the Parish Council to determine the village's preferred status), and, 2. The fact that the shop is about to close its doors for the second time demonstrates it is not commercially viable. This should be taken to mean the closure is permanent and not a transient effect of the current pandemic
A2436B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area		Response form b has no information
A2464B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	We fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area. We are also in full support of the development boundary as found at Inset S17.2 Hadnall and the identification of HDL006 for the building of 40-houses. We believe the development boundary will avoid the over development (outside of the boundary) that has been seen for the last few years in Hadnall whilst it has been classified as open countryside.
A2465B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S17 Wem Place Plan Area	Agree	I fully support the identification of Hadnall as a 'Community Hub' settlement within the Wem Place Plan Area. Hadnall is a medium-large settlement with multiple services and facilities to meet the day-to-day needs of the community and future residents. I am in full support of the development boundary as found at Inset S17.2 Hadnall and the identification of HDL006 for the building of 40-houses.
A0107B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The town has poor roads, lack of dental & medical facilities, poor broadband. The proposed sites' location is poor as they would create a sprawling mass of houses in an area where the drainage is poor, creating one large estate of housing which would not be in the character of this small market town.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0140B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Sites WHT037 and WHT044, areas of high flood risk, should not be included in the Plan as contrary to paragraph 4.189 of Policy DP20. Known natural springs and the newly developed site at Oakfield Way already suffers from drainage issues. Photographic evidence included of flooding in 2020 Having considered the published criteria, requirements and outcomes of Stage 1 – SLAA for the sites WHT037 and WHT044 should not have progressed to stage 2 of the Assessment. Key concern is risk of surface water flooding not taken into account as a significant environmental/physical constraint at stage 1, an omission which results in the Local Plan Partial Review being potentially unsound. Report submitted provides map of areas of high flood risk within the sites & references known flood issues which have been highlighted in relation to various planning applications, most recently 18/02583/FUL (retrospective application for the construction of storm drainage system). Chester Road has experienced flooding as a direct result of development on sites adjacent to WHT037 and WHT044. Additionally, there are ongoing disputes regarding illegal culverting on the site and the green field run off rates. Additionally, stage 2 & 3 assessments are unsatisfactory. At stage 2 the strategic suitability of the site is justified by the existence of each other and surface water flooding not identified. As Stage 3 assessment identifies need for flood modelling it is premature to designate sites WHT037 and WHT044 as 'preferred sites' before modelling undertaken. Flood risk primary issue but there are also concerns relating to highways, landscape impact, ecology and impact on the amenity of local residents. Accuracy of analysis of responses to previous Preferred Sites Consultation questioned and detail of infrastructure concerns and Welsh Water response requested;
A0162B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The site is low lying, wet and contains a large pond/lake, as such where will the water go - this will mean significant engineering works will be required and lead to increased flood risk on and off-site. Surrounding properties and roads experience run-off during heavy rainfa Past development has caused flooding in the area. The site is of ecological value, ducks and other birds use the pond/lake and yellow bellied newts (protected?) and foxes have been observed, development will destroy this habitat. Chester Road had the reputation as the best part of Whitchurch, over development will stop this. The development will spoil views, reduce property values, the area is too densely developed and there has already been significant development in this part of the town, as such other areas should be the focus. Surrounding roads are very busy and poorly maintained. This site will increase pressure and could create a 'rabbit run'. There is insufficient infrastructure to support the development, particularly sewage infrastructure in this part of the town (some properties have to store sewage on site and then pump it to the nearest main drain at Chester Road). Further development will not provide sufficient support to retain/reopen existing shops and businesses and many will simply shop/commute elsewhere
A0191B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area		The public sewerage network can accept the potential foul flows from the proposed development site WHT014.The sewerage system in this area drains to Whitchurch WwTW which can accommodate the foul flows from the proposed growth figure.
A0191B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area		For WHT042- hydraulic modelling assessment (HMA) of the sewerage network will be required to assess its capacity to accommodate additional foul flows. Potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage upgrades which can be requisitioned through the provisions of the Water Industry Act 1991 (as amended).The sewerage system in this area drains to Whitchurch WwTW which can accommodate the foul flows from the proposed growth figure.
A0191B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area		The public sewerage network can accept the potential foul flows from the proposed allocation WHT037 & WHT044. Welsh Water will seek to control the points of communication to the sewerage network via appropriate planning conditions as such there would be a requirement for off-site sewers to be provided to the boundary of the development site. The sewers can be requisitioned through the provisions of the Water Industry Act 1991 (as amended).The sewerage system in this area drains to Whitchurch WwTW which can accommodate the foul flows from the proposed growth figure.
A0199B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	No objection to the creation of new housing ,especially affordable homes for young first-time buyers. Objection to encouraging an over-developed urban sprawl that erodes communities and qualities that make Whitchurch an attractive place to live. As stated by Whitchurch councillor, Thomas Biggins, the land to the north of Chester Road would become "saturated" and needs to be "given a break". Cumulative impact of the proposed 200 home development that joins up The Beeches with Oak Tree Way and Haroldgate, to create an un-necessarily dense, concentrated and unpleasant mass development. An undeveloped northern strip of land, parallel to the by-pass, between Tarporley Road and Chester Road roundabouts, would still leave a needed central public amenity triangle of green fields which have nature conversation value including presence of protected species. As the site is a low central triangle of damp land, with a high water table, this would threaten the foundations of any future housing – despite any ambitious drainage proposal. Photo provided of heavy flooding subsequent to heavy rain, earlier this year,which persisted for some considerable time. Proposal irretrievably threatens the rural market town character and community quality of Whitchurch.
A0203B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT014 should be removed as it will badly affected green spaces (and thus mental and physical health), habitats will be affected, increased traffic will affect asthmatics, noise pollution and congestion
A0216B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This site should not be included as: Alkington and Liverpool Roads are densely populated and this greenfield site should be retained to provide valuable open space. Most traffic from the site will exit to the by-pass via Wrexham Road, which due to on-street parking is limited to single land traffic for much of its length, causing delays, increased air and noise pollution (many houses are located close to with living room level with the highway). There are high numbers of asthma sufferers in Whitchurch. Priority should be reducing traffic on Wrexham Road.
A0220B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT037 and WHT044 should be removed from the plas because They are in an area which has already been heavily developed. They are important open space, well used for recreation, providing health benefits and contributing to the character of the area. They have a diverse ecology including foxes and birds. They are prone to flooding. They would place additional pressure on existing infrastructure - particularly roads (and the additional pollution resulting from the cars)
A0222B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The site is prone to flooding. The land is used for wildlife and is popular with the public for walking. The extra traffic will add to pollution and congestion. The area should remain unchanged.
A0227B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This is the only green space left and is not appropriate for building. WHT037 floods and there are ongoing drainage and sewer issues. A road connecting Tarporley Road and Chester Road would be a dangerous rat run.The current continual work on Chester Road is disruptive and further development will make this worse. The area is at development capacity now. It would be nice to retain some green land for wildlife.
A0243B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to allocations WHT037 and WHT044. There is known flooding in the area. Past development in the area has caused significant problems/flooding, installing inadequate drainage, it is wrong to consider a site for development which has similar problems. There has been significant recent development in the area. The B5395 is extremely busy and residents on Chester Road have problems getting off their driveway. A link fro Chester Road to Tarporley Road would degenerate the situation
A0291B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Current development around Chester Road/Tarporley Road should be sufficient, other areas around the town should be considered WHT037 and WHT044 has significant drainage issues and a road through the sites would create a 'rat-run'. Existing properties have been sold on the premis of open space to their rear, which is now proposed for development. Development boundary in this area should remain unchanged.
A0302B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Concern over timing of development as infrastructure supporting the Chester Road area is already severley overloaded. Upgrading required before further development. Proposed timing is inconsistent with the proposed policy on wastewater treatment works.
A0306B063	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	With regard to PH004, we are concerned about firstly, the proximity of this site to a SSSI and secondly, the lack of mitigation measures mentioned in the plan.
A0309B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Site promotion Land north of Pear Tree Lane. Site considered to be a in a sustainable location, within walking distance of services and facilities. Whitchurch is a Principal Centre and should have more than the current 3 sites allocated. This site should be given serious consideration
A0325B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT 037 & WHT044 I disagree with plans for further housing development. I live on the Mount Farm development and am aware of people having problems with flooding gardens and drainage. I also have concerns for existing wildlife, having recently witnessed Red Kites flying over the fields in question , fox family 'playing', bats fying and many other wildlife making use of this land, it would be a real shame to further disturb this.It is really important to maintain some green spaces , nature and people in harmony.
A0336B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT037/WHT037VAR and WHT044 should be removed from the Local Plan Developers of WHT046 provided inadequate drainage causing flooding to properties. WHT037/WHT036VAR is also likely to cause flooding around Tarporley/Chester Road. There is insufficient infrastructure (highways, phones, medical, education, retail drainage and water water etc), these shortfalls must be addressed before development. A link road between Chester Road and Tarporley Road will create a 'rat-run' with safety implications. WHT046 was supposed to have pedestrian/cycle access to Tarporley Road, however whilst provided these are on narrow roads with on street parking causing safety implications. Proper segregated pedestrian and cycle paths should be the aim of all future development. Development of WHT037/WHT037VAR and WHT044 would result in loss of green space
A0381B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Disappointed to see that site TLK009 not screened as having potential for future housing as Tilstock is a cluster and is a sustainable area near to Whitchurch.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0408B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to allocation of WHT037 and WHT044 as Development of the sites could result in the loss of approximately 622m of hedgerows, this is contrary to Policy DP13 (para 8E). It is important to keep a green wedge of land between Chester Road and Tarporley Road. Development of the sites would impact on the views of residents on the Mounts Farm Estate. Development of the sites would result in 87,000m2 of green infrastructure to be lost, affecting wildlife and habitats on the site, contrary to Policy DP15. If the sites are developed, then Para 1b of draft Policy DP15, draft Policy DP16 and draft Policy DP17 relating to enhancement of existing green infrastructure assets/networks, open space provision and landscaping of new development must apply. To maintain green space and the present views from the properties in the Mount Farm development and ensure open space provision on the sites adjoin existing open space on the Mount Farm development in order to create a high-quality open space which meets the needs of all residents. The sites are currently agricultural land and as such contrary to draft Policy DP19. The sites are subject to flooding (as are existing properties in the area). Development of the site will reduce the amount of permeable land and increase flood risk elsewhere, contrary to draft Policy DP22. There is insufficient infrastructure (none was provided as part of the Mount Farm Development), this will need to be provided if the sites are developed, consistent with draft Policy DP28. Mobile signals are a particular issue. Development of the site would cause increased traffic on Haroldgate. As such if the site remains in the Plan, no vehicular access should be possible from the existing estates. Furthermore, the draft guidelines for WHT037 and WHT044 include provision of a cycle and pedestrian route to link the Tarporley Road and Chester Road. However, the proposed allocations do not reach Tarporley road, as such it is unclear where this route would go
A0419B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Enough development on this side of the town now. Storm water issues for most recent development need resolving before more development.
A0441B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	Support identification of Whitchurch as a Principal Centre with a residential guideline of 1,600 dwellings and employment guideline of 20ha Support proposed allocation of WHT042, a deliverable site which can contribute to the future sustainable growth of Whitchurch. WHT042 represents a natural extension to existing SAMDev allocations WHIT051 and ELR033. WHT042 is well located to facilitate pedestrian access to the town's facilities and subject to ecological surveys, the could facilitate opportunities to make improvements to pedestrian access to the east railway platform, which is currently not accessible to wheelchair users. WHT042 affords the opportunity to incorporate green infrastructure corridors with effective native planting forming a buffer to the allocated employment land to the east of the site. Acknowledge that development of WHT042 will provide further cross-subsidy support, where required, for the delivery of the allocated employment land to the east (saved SAMDev policy ELR033). Development of WHT042 is viable and deliverable, having regard to the policy requirements identified within the Pre-Submission Draft of the Shropshire Local Plan. Acknowledge that WHT042 is targeted to deliver 180 new dwellings during the plan period. Assumptions made within Appendix 7 in respect of timescales for the delivery (Medium Term (2025 – 2030) to Long Term (2030 – 2035)) is considered appropriate
A0442B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Support identification of Whitchurch as a Principal Centre with a residential guideline of 1,600 dwellings and employment guideline of 20ha However the proposed development boundary for the town is drawn too tightly and is overly restrictive, limiting the amount of windfall opportunities. WHT040 is not a preferred allocation, however it would complement the spatial pattern of development proposed for the town, as it is surrounded by existing built development on three sides. The site is unquestionably sustainable with a raft of amenities / facilities within walking distance (shop around 300m, doctors around 0.5miles, bus stop around 550m, school around 0.9miles(7-13)/0.6miles(4-6), sports facilities around 0.4miles). Off-street parking could be offered on-site, to residents on Wrexham Road to reduce on-street parking. Discussed with the Town Council and was received positively. Expansion of the development boundary to include WHT040 would afford efficient use of this parcel of land and represent a logical windfall opportunity. It would afford the opportunity for a modest scale residential development to come forward which would not put undue impact of existing infrastructure and potentially reduce parking on Wrexham Road.
A0444B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Support identification of Whitchurch as a Principal Centre with a residential guideline of 1,600 dwellings and employment guideline of 20ha. However the proposed development boundary for the town is drawn too tightly and is overly restrictive, limiting the amount of windfall opportunities. This boundary could be loosened to increase logical small-scale windfall developments, which would complement the existing spatial pattern and boost housing delivery. According to Appendix 5, Whitchurch has a windfall allowance of 82 dwellings. Due to the tightly drawn development boundary, it is questioned whether this allowance is appropriate. WHT032 has not been identified as a preferred allocation, however it would complement the spatial pattern of development as it is surrounded by existing built development on three sides and would represent a logical windfall opportunity. The site is in low intensity agricultural use and could deliver housing growth consistent with the targets for Whitchurch; form a logical rounding of the settlement, whilst maintaining public access through, thus improving greater spatial cohesion; provide new housing that is physically close to the towns services/facilities which are accessible on foot, reducing the need for private vehicle travel; provide enhanced and improved pedestrian provision through the site; and is able to comply with all draft policy requirements (Open Space, Affordable Housing, biodiversity). Unencumbered access can be achieved onto Chester Avenue. Modest-scale development could comfortably be accommodated on this road without undue impact on existing infrastructure or neighbouring properties. The footpath that crosses WHT032 is well used by the local community. Development could be sympathetically done so as not to hamper this, in fact it could enhance it and afford good connectivity to the surrounding footpath network.
A0446B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Support identification of Prees as a Community Hub and its proposed residential guideline. However it is considered that the proposed development boundary is drawn too tightly. With the 'tight' development boundary, achieving the windfall allowance is uncertain. Consider that land off Brades Road, Prees (PPW018), north of Prees Industrial Estate, should be included within the development boundary as it could provide a logical windfall development whilst providing tangible benefits to the villages sports facilities. It would benefit the vitality of the community. Prees Cricket and Recreation Club (host numerous local sports teams including 18 football teams, both male and female teams of all ages) is in need of additional pitches to sustain the various teams. PPPW018 could be developed for a mixed residential/recreation use, providing land for additional pitches, a modest amount of housing which complements the existing built form, a landscape buffer to the adjacent employment site and allow expansion of the number of sports pitches available to local sports teams. PPW018 has an access off Brades Road. Development could incorporate improvements to Brades Road, which is a narrow country lane with no pedestrian footway. PPW018 lies adjacent to the development boundary and the Prees Cricket and Recreation Club, the social and recreational hub of the community. It scored 'fair' within the SA. Part of PPW018 is in Flood Zone 2/3, however recreational use is considered an appropriate use as it is less vulnerable.
A0476B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to WHT037 / WHT044 land north of Chester Road because the development will have the following effects. Ill considered layout increasing building density - existing developments and recent construction on Chester / Tarporley Roads has significantly increased the density of development. Loss of light and overshadowing - WHT037/WHT044 will cause loss of green space and encroachment onto existing properties and loss of privacy for existing residents. Visual obstacle and loss of wildlife /trees - green spaces in this area must be preserved as local amenity land for exercise and walking pets and to enable urban residents to encounter and enjoy wildlife by protecting habitats and food sources in urban areas. Pollution and odours - the loss of green spaces raises concerns about the effects of increasing pollution and other environmental damage. Generation of traffic - a new access road for the development between two major local roads (Chester Road and Tarporley Road?) may attract further through traffic. Noise and disturbance - the impacts of further urban development may be harmful to both the sense of community and to wildlife (and trees) especially as climate change impacts increase. The recognised character of Whitchurch is that of a quiet country town. New building detracts from the restoration and improvement of the existing housing stock and may simply encourage the sub-division of larger garden plots to provide more new housing
A0478B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Chester and Tarporley Roads have already undergone considerable residential development in recent years. Green spaces between the two roads must be maintained and protected not simply infilled by further development. WHT037/WHT044 both flood and major groundwater and sewage capacity infrastructure investments will be required particularly in the Chester Road area.
A0479B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Chester and Tarporley Roads have already undergone considerable residential development in recent years. Green spaces between the two roads must be maintained and protected not simply infilled by further development. WHT037/WHT044 both flood and major groundwater and sewage capacity infrastructure investments will be required particularly in the Chester Road area.
A0508B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	MPG do have concerns about two key sites that are included that have the benefit of planning permission and which were allocations in the SAMDEV Plan. These are sites WHIT009 Land at Tilstock Road and WHIT021 Alport Road. The two sites in question account for 600 units of the supply in Whitchurch and whilst they have been granted planning permission they have yet to commence. If there is a question mark over whether they will come forward, we contend that the Council should look at other sites within Whitchurch that are not constrained and which could deliver either instead of these or, or in addition to them. MPG's site at Tarporley Road, Whitchurch is one such site that in our view is suitable for residential development and should be considered for development. A Site Location plan is attached. In order to address our concern, we contend that the land at Tarporley Road should be considered for an allocation either instead of current allocations or sites that have been carried forward from the SAMDEV Plan, in order to meet housing needs in town in the early part of the Plan Period
A0567B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Range of evidence submitted outlining disagreement with site PPW025 being included in the plan, along with supporting evidence for PPW021a to be included in the plan. Submission raises concerns about the flood risk on site PPW021a and amount of affordable properties the site will deliver. Alternatively site PPW025 can address flood issues on the site through development; is closer to recreational facilities and is a more sustainable site. Clarification is also sought on what contamination Shropshire Council considers exists on PPW021a
A0603B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Oppose the planned development of 200 homes on WHT037 and WHT044. Development of WHT037 and WHT044 would further impact on the environment, existing roads and waste water infrastructure. There are existing infrastructure problems in this area resulting from recent developments at Croft Gardens, The Beeches, Oaktree Way, The Orchards and additional homes on Pear Tree Lane, which have not been mitigated or resolved in a systematic manner. Development of WHT037 and WHT044 for 200 dwellings will exacerbate this. Development has continued in the Chester Road area without resolving foul/waste water infrastructure capacity problems and periodic odor issues emanating from waste water covers remain. These long-standing issues need to be resolved before they become health and safety issues. Despite previous commitments, issues with road conditions and cycle/pedestrian facilities remain. Where cycle lanes exist, they are poorly surfaced, contain multiple pot-holes and infrastructure covers. Speed limit signs are also in disrepair or non-existent. Previous development in the Chester Road area has occurred without attention to the repair/maintenance of roads and cycle lanes nor has there been any attempt to enforce speed limits in a now predominantly residential area. Additional vehicular traffic on what is already an unsafe avenue will adversely impact existing homes, drivers and the safety of cyclists and pedestrians.
A0611B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT037 and WHT044 are liable to flooding and should therefore not be built on Whitchurch has had numerous new developments in this area in recent years with little or no increase in infrastructure. Unclear how infrastructure (Schools, Medical Services, Roads, Sewage, Drainage and Recreational Facilities) have been considered in relation to WHT037 and WHT044. Development of WHT037 and WHT044 will increase the population by 400-800 and cars by 200-400 (together with associated pollution). The Local Plan should not be amended to include development of the scale of WHT037 and WHT044 until these matters are addressed to the satisfaction of the local community
A0621B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Against development of these sites as it is good farmland which produces haylage and provides grazing for cattle and sheep. The land should be kept for farming, food production and a home to endangered wildlife
A0622B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	More houses are not needed in this area. They should not be built on areas WHT037 and WHT044. These areas are good greenbelt farmland which at present are being farmed well, producing haylage and food.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0638B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The essence of the market town will be lost. Empty buildings in the town could be used instead. The Prime Minister has pledged to protect 30% of our land. This site could add to the damage already caused by development. We are already affected by the increased level of the water table, the garden areas do not drain after periods of heavy rainfall. Increased light pollution from housing and street lighting will have an impact on the bats and birds. An increase in traffic will have a negative impact on health because of the emissions and the road noise. Mr Tom Biggins, councillor for Whitchurch North has identified that there are also sewer capacity and infrastructure issues that will have a negative impact on the surrounding developments already in situ and that the "Green Wedge of Land" between the Chester and Tarporley Roads should be kept in place.
A0658B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	another 100 unplanned for dwellings on Chester Road add these to the 100 houses on the Mounts estate built off Tarporley road If these are connected to the two proposed sites it forms a 400 house development. - This includes no green space, no play areas, no football and cricket pitches, no provision for a new school as has been stipulated for the 500 house development site off Tilstock Road. This is not sustainable. - There are insufficient GP surgeries for the current population, where is the infrastructure to support the increasing population, given that the Paul's Moss Medical Centre is quite likely not to be built with the current JD in process. - The main sewer on Chester road ends at Pear Tree Lane and its capacity to take effluent from 200 more dwellings is questionable. - There is work taking place now to find the sewer on Chester Rd presumably to connect the Orchards estate of 52 houses, where sewage is being tankered away daily at the moment even though the houses are occupied. There is frequent overflow of sewage into the nearby brook from the Bronington treatment works Until it is upgraded it is unsustainable.
A0658B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT042 should be increased by 200 houses and WHT037 and WHT044 be removed. This site is closer to the schools, train station and the town's services, and would therefore result in less car reliance.
A0659B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The site WHT014 should not be considered Wrexham road has increased traffic since the housing developments at the top of Wrexham road, along with Mcdonalds, Starbucks and now Aldi the amount of traffic has increased considerably over the past few years. The junction to Liverpool road from Wrexham road at the weekends is very busy. At times the cars are backed up to the highgate bend waiting to turn down Liverpool road. So the increased traffic the 67 houses will bring will make this already busy junction extremely busy and very dangerous. Children who walk to school again this part of the road is very difficult for them to cross safely, increased traffic will only cause more of a problem. Schools and doctors in the Whitchurch area are already at capacity and over subscribed, with the increase in housing in the Whitchurch there is a desperate need for more schools and doctors. Houses at the bottom of Liverpool road will be very overlooked causing loss of privacy if this build goes ahead. Drainage is another issue, as one of the first residents to move into the estate on Liverpool road, We experienced for ourselves the drains could not cope with the houses being built. Which caused raw sewerage to come up through the plug hole in our new home. When we currently have heavy rain fall the gullies on Liverpool road can not cope with the water which in turn floods the road. So if the field is no longer there this flooding will only increase. Habitats for a variety of local wildlife including bats, birds, great crested newt, toads, hedgehogs, rabbits and foxes would be destroyed.
A0665B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I support the sites allocated for development on the draft Policies Map for Whitchurch, including those saved from the SAMDev - WHT014; WHT037; WHT042; WHT044; WHIT009; WHIT021; WHIT051; ELR035; and ELR033.
A0665B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	These comments relate to the housing number for Whitchurch and the positive use of windfalls. In my comments to SP2, I set out why the housing requirement is too high for Shropshire, including there no longer being a need to take 1,500 dwellings from the Black Country. This reduction in overall numbers would result in a commensurate reduction in the housing requirement for Whitchurch (and other settlements as well). I support the reference to windfall development within the development boundary of Whitchurch. The plan proposes 82 dwellings, which is 5% of the town's total housing requirement. This seems an appropriate figure. Even with a reduction in dwellings based on my point above, the percentage against the Whitchurch total would be only very slightly higher.
A0665B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This site continues the new housing that has been built in this part of town. Like WHT037 and WHT044 it is very well situated for the town centre. It makes perfect sense to continue to build houses on Liverpool Road. WHT014 is far more sustainable, both in terms of access to services and shops, and has less impact on things like roads and landscape than alternative options. The Council is correct to allocate WHT014 and I support it.
A0665B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	These sites will continue the successful housing development that has already taken place around them. They are very well located and genuinely within walking distance of the town centre, including Sainsbury's which is only a few minutes away. I therefore support their allocation.
A0665B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	This site is very well located by the railway station and to the jobs around Waymills. This combination delivers sustainable development. Both the station and industrial estate are walkable, as is the town centre along Station Road into Green End. Again this site is far superior to other options that the Council has quite correctly rejected for failing to deliver sustainable development. I therefore support its allocation.
A0705B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to WHT037/WHT044 north of Chester Road due to risk of flooding from the sites. WHT044 contains a natural spring and WHT037 is a known flood risk on the Environment Agency (EA) Flood map. The sites drain into channels across neighbouring properties including Dr Muir's home. The riparian responsibilities for the channels require work and significant costs to keep clear. The owners of the channels must accept natural increases in discharge but not from land improvements such as developing greenfield into brownfield land with reference to EA report SC030219 'Rainfall runoff management for developments'. Development at Oak Tree Way on the Gratton Oaks estate caused significant flooding into Dr Muir's property recorded by Shropshire Council Building Control. The matter has been referred to the Local Government Ombudsman.
A0705B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Attached is a photograph of a garden in Chester Road that has been flooded - measuring the inflow at 12 litres per minute : that's 3800 gallons a day...over 17 tonnes of water every day. This volume of water has only started to appear since the developments down Chester Road and I am sure you can understand my extreme consternation at the prospect of further development occurring in this floodplain area with our garden being now repeatedly flooded already. I am only too aware of the environment agency report SC030219 which states that "the total volume of run-off after extreme rainfall events from a developed site is typically between two and 10 times the run-off volume from the same site in a Greenfield state, and this is released much more quickly than the greenfield run-off discharging into receiving waters at orders of magnitude faster than an undeveloped site"By law we are aware that as a riparian owner of a culvert I have to accept natural land drainage water from adjacent land at a higher level. HOWEVER BY LAW THIS DOES NOT APPLY WHEN THE OWNER OF THE LAND UPSTREAM has carried out "improvements", so the run-off from the land isn't "natural" - for example if green field sites have been built on or has been paved over. I am paying Richard Chadwick drainage consultant to do all he can to drain my garden for me for the fourth time since we moved here in 2006, but I cannot keep pace with the massive increase in water reaching the Victorian land dries that are passing under our garden, and deluging our property as a result of the extensive building work that has been carried out on Chester Road over the last 2-3 years. I hope you can understand why we are so very distressed to hear that a further 21 acres of greenfield land above our property could be built on unless common sense prevails, and why we are requesting that this project to build houses on a known flood risk area be abandoned before irreparable damage is done to housing in the area and the local residents affected be forced to take legal action.
A0706B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to WHT037/WHT044 north of Chester Road because development of 200 new houses will accommodate 400 people and generate 200 vehicles. This will deleteriously affect the quality of life of existing residents. The views of the Local Councillor are endorsed that: Chester Road and Tarporley Road have taken their full share of housing in recent years and need a rest from further development. WHT037 and WHT044 flood and it is important to keep a 'green wedge' of land between Chester Road and Tarporley Road. There are major drainage, sewer capacity and infrastructure issues. The development boundary in this area should remain unchanged.
A0718B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	200 houses in this one area would create one mass housing area and would impact on the wildlife. The area floods
A0719B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This area of the town has had enough housing in recent years. Traffic and noise created, the area is becoming too densely development
A0832B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Concerned about over development of the area and believe development boundary should remain unchanged. Both WHT037 & WHT044 currently flood and have major drainage and sewer capacity. Strongly object to Harroldgate being used as part of the proposed link road between Tarporley Rd and Chester Rd as will create a rat-run and is unsuitable.e
A0851B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area		Opposes allocation of the site as the area of Whitchurch has already had significant development. Loss of wildlife around the Chester Avenue and Pear Tree area of Whitchurch has occurred and allocation this site would be in detriment to the town and neighbourhood.
A0869B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The proposed development at WHT037 and WHT044 are completely undisable. The Chester Road and Tarporley Road area has already taken its full share of new housing in recent years. The road infrastructure joining the A41 by-pas wukk be problematic and over burdened. Both sites flood and it is important to keep a green space land between the Chester and Tarporlwy Roads to prevent this problem being exacerbated. Given the flood rish the suitability of the land for building 200 houses is questionable. There are major drainage and sewerage capacity issues for these sites as identified by Welsh Water. Having considered all of this I believe the development boundaries the area should remain unchanged.
A0919B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The designation of Whitchurch as a Principal Centre settlement in Policy S18.1 is strongly supported as this is seen as vital to ensuring the town's long-term future. However, Policy S18.1 places a significant reliance on windfall development to meet the needs of the town over the Plan period, with an additional 82 dwellings as windfa (unplanned development). Given the strategic importance of growth being directed to Whitchurch such a reliance on windfall development is considered inappropriate. It would be a much more sensible option to allocate up to 50 of these windfall dwellings onto our client's land, which was submitted under the Council's Call for Sites and identified as WHT002: 'Land north of Edgeley Road, Whitchurch'. A planning application for the site (application ref. 19/05311/OUT) addresses the issues about the sites viability during the stage 2a Sustainability Appraisal. This application has addressed the concerns raised over the amount of land that would be required for retention and buffering of the ecological features, as demonstrated by the response of the Shropshire Wildlife Trust to the application who conclude that, subject to the recommendations of the Ecological Assessment submitted with the application being implemented, they have no objections to the proposed development of the site. In summary, the current consultation provides an opportunity for Shropshire Council to amend policy S18.1 and Inset Map S18 to allocate our client's land. The allocation of this land would result in a greater level of certainty that the aims and objectives of the Plan, including the strategic growth objectives in this area of the County, will be realised over the Plan period.
A0919B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area		Location plan accompanying A0919

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0964B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	SUPPORT the allocation of site WHT037, WHT044 as promoter and landowner. Confirmed available and deliverable (2020 – 2035) (see comment in notes) Development manner will ensure sustainable development. Quality, design, mix and layout of housing will be informed by site constraints and opportunities, identified local needs, need for local employer and key worker housing & relevant Plan policies. site's vehicular access will be from Chester Road. Pedestrian and cycle links will be provided through the site, connecting from Chester Road to Tarporley Road via the existing development to the north & seeking to encourage own centre access. necessary improvements to the highway network will be undertaken. Appropriately planted Green infrastructure corridors will form an intrinsic component. Road noise mitigation & SUDs informed by a sustainable drainage strategy will be included. Any residual surface water flood risk will be managed by excluding development from the affected areas of the site. Considered site is sustainable location close to town centre/ services and facilities. Site is capable of being safely accessed off the B5395 ideally from a joint site roundabout. position of the site access should not prejudice the longer-term development of site WHT043 on the opposite side of the B5395. Sites are available. Land will come forward over short to long term (2020 – 2035) Suggested that long term strategic vision be taken, and a roundabout be provided to access WHT037 and WHT044 and the land opposite site WHT043 to provide for a safe and convenient access and traffic calming when entering the town.
A0968B1	Viability and Deliverability of Proposed Site	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	Site likely to be in the short and medium term, rather than just medium term
A0989B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT035 should be a preferred allocation. It is not divorce from the town and recent developments have occurred near the preferred sites. It is a sustainable location and has a better SA score than the preferred sites. As our site is better, the latest consultation document cannot be considered sound. Our comments will also be submitted at examination. There are issues with the preferred options, mainly concerns over infrastructure and these have not been properly considered.
A0990B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT017VAR should be a preferred allocation. There are incorrect assessments in its SA. Being surrounded by green space should be a positive. The agricultural land grading is incorrect. Its SA score would be better than the preferred sites in the town. It is in proximity to goods and services, markedly better than the preferred options. Limited detail for Landscape and Visual Assessment for this site - its situation is no different to the preferred options. It has a better highways aspect. Site's ecology can be expanded. Highway's assessment of the preferred sites, particularly links between Chester Road and Tarporley Road, are flawed. The various conclusions reached within the Stage 3 assessment are poor and vague, sufficiently so to suit the Council's favoured direction of continuing to support the site allocations favoured identified under earlier consultation, despite representations and evidential factors which clearly demonstrate that other sites, namely the promoted land at Terrick Road, are more favourable.
A1001B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Feels site should not be included in the Local Plan for a variety of reasons, these include: over capacity of development in the immediate area around the site, which caused major drainage and sewerage capacity issues. The site itself floods on a regular basis. Overall the development boundary in this area should remain unchanged
A1002B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I agree with Tom Biggins suggested amendment and that WHT037 and WHT044 are removed from the plan and the existing development boundary is retained
A1098B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Oppose the allocation of these sites for the following reasons: Whitchurch is a small market town and is becoming over developed; area around Chester Road has already seen vast development and the local infrastructure can't cope with more development; the proposed site has been subject to major flooding; would destroy the northern approach into Whitchurch which is currently open fields; The housing would be high yield for developers and not smaller starter homes for local residents; existing proposals have already increased from 10 to 190 what is to stop it going to 4000
A1163B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	WHT035 site promotion .Additional material on WHT035. Objection to proposed allocation:WHT035 remains a viable and available option to help deliver the future housing needs of Whitchurch and evidenced site suitability has been unduly overlooked ; evidence of better sustainability credentials than allocated sites. Do not agree with Stage 3 assessment stage 3 flawed conclusions . Disagree that the site is divorced from the town as adjacent housing in a sustainable location and suitable for housing. Highlight that a local Councillor has written to local residents raising significant infrastructure concerns in relation to the proposed allocations of WHT037 and WHT044. Given that concerns based on previous issues experienced resulting from the implementation of other large housing sites in the immediate location, it is evident that there are underlying concerns which have not been properly considered in relation to these preferred sites and they should not be supported.
A1168B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	Whitchurch WHT037 and WHT044 additional promotional information. Act for principal landowners of WHT037 but all of the owners of the combined site, WHT037 and WHT044, are working in collaboration to provide a comprehensive and sustainable development in accordance with the "Development Guidelines" in Schedule S18.1 Collective owners are working in partnership with developer David Wilson Homes (DWH) to ensure the site is available, deliverable at the first opportunity. DWH is actively building in Shropshire and has a positive demonstrable delivery track record including completed the SAMDev residential allocation, WHIT046 which secured improvements to the existing foul drainage systems. To enable second phase development & planning application , WHT03744 DWH have undertaken undertake the requisite preliminary studies -topographic surveys, ground investigation, arboriculture, ecology and drainage assessments. The site is sustainably located , walking distance of the town centre and station and Sainsbury's food store. provides an opportunity to integrate new housing with established residential areas in the north west area of the town improving connectivity for existing residential neighbourhoods between Tarporley Road and Chester Road. Such development has the potential to promote more sustainable modes of transport and benefits of additional public open space to the wider community. A concept scheme has been designed by DWH to demonstrate how WHT037 and WHT044 could be developed to meet the site guidelines & Council's requirements regarding access, on site open space provision and affordable housing to potentially provide 215 dwellings. Site within Flood Zone 1 – i.e. within the lowest flood risk category & flood risk/drainage considerations taken into account through sustainable drainage solution (detail provided) with attenuation ponds to be provided; foul drainage disposal available The Land is available for development & can come forward for development in a timely fashion.Draft layout provided. Sites will provide a planned and coherent form of development and enhance accessibility by providing a new highway connection between Chester Road and Tarporley Road. It will satisfy the Council's standards regarding on site affordable housing, sustainable drainage, ecological enhancement and on-site open space provision
A1269B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I would like to please request the 1) the removal of WHT037 and WHT044 (Housing allocation for 200 dwellings) from the proposed new local plan and 2) the development boundary in this area of the town maintained as it exists currently. (Documents attached showing redrawn development boundary) There are a number of reasons for requesting these two sites are removed from the plan and the existing development boundary maintained. a) The Chester Road has been saturated with new housing during the period Shropshire didn't have a 5 year land supply. This part of town needs a rest from more housing b)We want to keep a green wedge between Tarporley Road and Chester Road, to be part of the green lungs of the town c) We do not want Tarporley Road and Chester Road joined together as one urban mass d) WHT037 and WHT044 flood regularly and are shown by Environment Agency records to be medium/high risk to flooding e)There have been serious flood incidents in Chester Road and Chester Avenue since new development took place in the area f) The sewer infrastructure in this area is at capacity
A1377B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	No comment
A1378B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Against allocation of these sites. Area does not have the infrastructure to support more homes. They need to be in keeping with other properties around Chester Road not rabbit warren created by David Wilson. More parkland is desperately needed to accommodate the residents in Whitchurch area. Drainage is also an issue on the site as floods have occurred and flooded gardens. More green land around properties is needed
A1388B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Site should not be developed. Area has already accommodated a lot of housing and services can't cope with anymore, and new housing will impact on the character of the area
A1603B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This area of the town has taken its fair share of development in recent years. Will cause traffic problems, and the sites flood. Wildlife should be considered. Drainage issues.
A1637B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Development on the other side of town at Tilstock Road makes more sense - it is closer to services. WHT046 will degrade the area.
A1650B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	No comments made
A1835B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I do not support this on the basis of the excessive development that has already taken place on and along the Chester Road. There are clearly problems with drains as evidenced by the repeated work being undertaken there and that's without all of the new build taken place being fully occupied. Once fully occupied this can only serve to exacerbate the problem. Furthermore, the proposed location is quite some distance from any amenities and has problems with flooding. It therefore would make sense for this proposal to be rejected and an alternative site be found that would address my above concerns.
A1841B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	NO COMMENT MADE
A1876B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	The preparation work that needs to take place would undermine the integrity of the existing buildings on Alkington Road. This site would or could be a beneficial wildlife area, woodland, allotment or a combination. We need to consider the fact that green spaces are as important as the housing needed. With the current on going Covid-19 issues green spaces and places to exercise outside are vitally important.
A1889B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Very concerned about any development on site WHT014, the effects building would have on drainage to the environment and to nearby houses are a worry. Any access from Alkington Road would result in much more traffic on an already busy minor road. The infrastructure in the area is already stretched to the limit with additional housing developments around the outskirts of the town.
A2106B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Object to inclusion of sites WHT037 & WHT044 in the plan because: The area has been over developed in recent years and local infrastructure can't cope; the greenfield sites are valuable for wildlife and needs to be maintained; Whitchurch will become a commuter town and community spirit will be lost; additional services such as schools, medical facilities and leisure are needed; green space between the town and bypass needs to be maintained; derelict brownfield sites should be prioritised ahead of green fields

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2176B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	A decision to build 200 houses on land between Tarporley Road and Chester Road is not realistic because of the congestion that is likely to be caused. The access road onto Tarporley Road would be Haroldgate which is not suited for a heavy volume of traffic as it is a residential area. In addition any access road onto Chester Road (presumably opposite Pear Tree Lane or close by) would create a bottleneck onto Chester Road and substantially increase the traffic volume on Chester road into the town centre. I am not against a proposal for any development on the land but believe it should be restricted to a much smaller development and with more suitable access away from Chester and Tarporley Roads to enable any out of town traffic to avoid Chester or Tarporley Roads My view therefore is that the local plan should not be amended from its current position namely allowing for development of WHT046 only
A2266B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I oppose the proposed extension to the Chester/Tarporley road sites. The Beeches Chester Rd site floods my property during heavy rain. The roads, sewerage and drainage systems are at capacity already.
A2269B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	With the proposed extension to the site, the traffic will become unmanageable and will become unsafe for children.
A2271B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	My main concern is the continual impact on the environment, loss of hedgerows, green spaces. Residents are fed up of the road been continually dug up and not repaired properly. Traffic is already very busy, this will make it much worse. Why build more houses when there are still some unsold from the last site? The sewage systems are at capacity and have already overflowed.
A2282B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Against allocation of sites WHT037/044 but also concerned about over development in Whitchurch generally. Feels site 044 won't meet open space policies as playground and green space are too far away; site is liable to flood; sewerage system in the area already has problems and won't sustain more development. Site is also a mineral safeguarding areas and a heritage assessment hasn't been undertaken. Wider concern about services in Whitchurch such as schools and doctors being able to accommodate new development. This should be resolved before new housing is allowed. Feels that information in the documents has been manipulated to show the area can be developed, and only people who will benefit from the development are buy to let landlords
A2288B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	A lot of wildlife would lose its habitat, so I think WHT037/044 should be removed from the plan and the existing development boundary should be retained. The sites are vulnerable to flooding. The road junctions off Tarporley Rd/Haroldgate is dangerous as it is.
A2308B26	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF: PPW025: Safeguard Zone - RAF Shawbury Plan AT 91.4m, Plan B and Ternhill Airfield Plan B.
A2315B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	It is my understanding that previous developments have been denied due to problematic drainage issues. The village is already struggling with an overwhelmed drainage system and a further 100 dwellings would cause significant problems for basic sanitation. This would need to be addressed and rectified. Further traffic would be of great concern to current bottlenecking along Station Road. Widening of High street seems unachievable given all the residential properties present. The increased traffic that 60 further dwelling would bring would cause safety issues.
A2331B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	No comment
A2339B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This area of Whitchurch has had too much development in recent years. Concern over drainage and infrastructure not being able to cope with the housing increases proposed. The needs of the residents should be taken into account first.
A2341B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Don't know / no opinion	General description refers to two refused planning applications for the site. Without details of failed applications and proposed changes to the site it is not possible to agree or disagree with the achievability/viability, although the site assessment indicates that the development is generally considered achievable and viable unless there are any site specific issues evident.
A2341B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	In relation to Highway Comments, Existing Highway Suitable for Traffic Associated with the Development at the Access Point - Yes. The Site Assessment Stage 3 document indicates that the existing highway is not suitable for the traffic associated with the development as design requirements state that the junction between Wrexham Road and Liverpool Road will require improvement. Subsequently, there is no response to the question "If Existing Highway at Access Point is Not Suitable, Can It Reasonably be Made So?"
A2341B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Under the Strategic Considerations there is no reference to vehicle access. I would suggest that vehicular access would be subject to either a development being limited to low traffic generation or to a wider area transport assessment given other potential sites off Alkington Road (WHT051, WHT041, WHT046) and their combined impact (potentially 378 homes) on the narrow sections of Alkington Road, Kingsway and Wrexham Road. WHT046 refers to access to Liverpool Road via WHT014 and poses a risk of significant increase in traffic locally and on the approach roads.
A2341B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Public Protection Comments - Other Constraints makes no reference to noise or emissions. These would be considerations given the potential for increased traffic due to c.140 additional cars at WHT014 (possibly c.700 + with other future developments) although I note that a Habitats Regulation Assessment would be required under the Ecology Comments.
A2341B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Achievability/Viability Information indicates that the development is generally considered achievable and viable, however I am aware that there is a high potential for natural ground instability in the area which could become an issue for existing properties on Liverpool Road and Alkington Road if piling is to take place. I note that a viability assessment will be undertaken.
A2368B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	Proposed Housing Development on areas WHT037 and WHT044 Evidence in support of the amendment submitted by Councillor Biggins Context- It is unlikely this proposal will be stopped, though the proposal submitted by Councillor Biggins is sound and well argued. However, the housing expansion south of Pear Tree Lane, and alongside the Chester road opposite, were delivered despite strong opposition based on strong planning, infrastructure, educational, environmental arguments. This is because the local authority is keen to increase rate income and meet house building targets imposed by national government. The government is keen to stimulate building expansion, particularly post-depression and following the impact of COVID-19. This is why it proposes a presumption in favour of house building proposals. Therefore, the notion of maintaining a Green Belt or protected environment has disappeared from planning, at least in terms of decisions and outcomes. As the two areas (WHT037 and WHT044) are already in the current local, the likelihood of altering this intention is slim. Despite this pessimism there are good reasons for opposing further developments in these areas. Overall development of the area is patchy, appears unplanned and beyond the town's capacity to support the increased numbers. Whitchurch is relatively underdeveloped and poorly resourced. The town urgently needs further planned development to build a population that is capable of sustaining a town in the modern world and an infrastructure to support and provide for both the current population and the inevitable growth that will come. Planned development can enhance and improve our town by providing the services and business opportunities it needs. Currently we have relatively unplanned housing growth with no planned improvement in services, infrastructure or local business. We should ensure further development is conditional upon commitment to resource the town. Investment and improvement required to support further house building -1. Medical Centre A modern fully resourced medical centre for our GP services is urgently needed. We are the only local town in North Shropshire or South Cheshire without this provision. Crisis situation, oversubscribed understaffed and under resourced. 2. Education- The infant school is full and future intake is rising. This will spread into the Junior school. An additional primary school is needed and the existing provision requires substantial investment. A significant proportion of secondary age pupil travel to schools in Cheshire. As building is taking place in Cheshire West too, this will create additional demand on the nearest Cheshire local secondary school (BHHS). This will increase demand for secondary places in Whitchurch. No significant FE provision in Whitchurch, students travel out of area, little planned provision. 3. Developing the town centre - developing ring of supermarkets and convenience stores around the town are servicing the expanding population who access free parking and easy road access. The town centre is handicapped by relatively few parking areas, much of this is not free, not aware of EV charging points. Funds needed to attract people to the old town. The future of local shops and businesses will depend upon footfall and access which at present is hindering development not supporting it. Transport - Road and Rail links Increased traffic on the ring road has led to dangerous situations at junctions. This is particularly so at the ring road junctions with Chester Road and the Wem Road where traffic enters the junction travelling at 60mph but with no visibility for, or of, traffic from the two feeder roads. Whitchurch is now a dormitory town serving surrounding conurbations and larger towns. The majority of this commuter transport is by car. In large part this is because local train and bus services are wholly inadequate. There are no regular fast services to Manchester, Chester, Liverpool, Stoke on Trent, Wolverhampton, Wrexham or Birmingham. Though it is possible we may be moving into a deeply changed work era, there is no evidence, other than the reaction to the current crisis, to support this. If this shift does take place, then the area requires substantial improvements to its tele-communications and broadband provision. Infrastructure - Water and Sewage, Electricity & Telecommunications There are existing problems with flooding and sewage back-up around the Pear Tree Lane developments and the two estates. Though some work is underway, more will be needed if further developments are planned. The existing electricity supply will not be able to sustain a world in which all domestic transport requires charging points and daily usage increases. Summary - In total this evidence reflects a small town that requires further investment and development in order to service its current population. More development is probably inevitable, but this will lead to a further deterioration in local services in all key areas. Therefore, further local provision must be linked to local investment and improvement. In addition the issue of local environment and character is of increasing significance. Green areas close to and within the town are important because they retain the historical and visual nature of this small market town. Building tightly packed estates around the existing centre will destroy this past and in so doing damage the future. It will also lead to a deterioration in the physical and social environment. This is not planning; it is just building without regard to the immediate impact and the long term future.
A2391B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	believe and observe as a resident that Chester Road and Tarporley Road area has indeed taken its fullshare of new housing in the very recent years and has now reached a sustainable state for the next years. There should not be any further and such large scale developments which have been flourishing in the last four years to retain one of the very last green wedges of land between Chester Road and Tarporley Road. I strongly disagree with the viability of this assertion: "Development to be delivered in a comprehensive manner in order to ensure sustainable development" and would also like to highlight that "Green infrastructure corridors with effective native planting will form an intrinsic component of this development" as if operated as for the existing site WHT046 are a phantasmagoria and will not be achieved. If by implementing "green infrastructure corridors", we designate the very few edges of grass that, are instead of sidewalks or car parks which would guarantee the safety of the residents then I suggest its definition and this statement are reviewed. I also notice that the maintenance of these "green infrastructure corridors" are usually incumbent to the Local Authority as it is in the framework of site WHT046 and have not been maintained once by the Local Authority. This lack of furtherance surely isn't reassuring for the residents of the area. This local plan also equates to the loss of one of the very last unbuilt land in North Whitchurch will be imposed upon its residents. As of today, there is no guarantee and actually, past sites in this area have proven that there will be a major infrastructure issue and that "All necessary improvements to the highway network" would need to far exceed the vicinity of the sites WHT037 and WHT044 as they would impact the area extensively. It is to be highlighted that an important number of Whitchurch residents benefit from the open space on The Mounts and enjoy not only the far-reaching views but also the natural state of this space. Ashighlighted, are remaining only a couple of walks and open space between Chester and Tarporley. With the proposed local plan, this green wedge is set to disappear leaving the increasing number of residents who enjoy daily walks to this area with no option for natural and open spaces. Also, parking spaces are seriously lacking with recent sites having four bedrooms houses benefit from only one single outside parking space in this area. This results in residents parking off-road or on pathways. Drastic improvements would also be required in terms of phone reception as residents of the area are foremost of them encountering serious difficulties. I believe that at the moment the current and overall local plan especially regarding sites WHT037 and WHT044 will be detrimental to the stability of the town and its ecosystem and suggest these are halted or strongly altered.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2392B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	believe and observe as a resident that Chester Road and Tarporley Road area has indeed taken its fullshare of new housing in the very recent years and has now reached a sustainable state for the next years. There should not be any further and such large scale developments which have been flourishing in the last four years to retain one of the very last green wedges of land between Chester Road and Tarporley Road. I believe that at the moment the current and overall local plan especially regarding sites WHT037 and WHT044 will be detrimental to the stability of the town and its ecosystem and suggest these are halted or strongly altered.
A2451B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	1 I strongly object to the following planning application for 200 dwellings as 1 wht037 and wht044 both flood and have major drainage issue 2 This area of Whitchurch is overdeveloped and a area of undeveloped land should remain to maintain Whitchurches character 3 Access through Haroldgate is to the proposed development is not safe over the last 2 years since the development 100 dwellings there has been - 3 car accidents, 2 pet deaths and numerous jams on the road . during peaktime 8.20 to 9am the traffic flow is over 50 cars data taken on Monday 28th September , plus Regular speeding 4 Further development of an additional 200 dwellings would be unsafe on the current access
A2463B1	Viability and Deliverability of Proposed Site	Draft Policy Area S18 Whitchurch Place Plan Area	Agree	Support site – achievable, viable and deliverable. Past refused applications on the land can be amended to ensure consent.
A2463B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	This land immediately west of the preferred allocation (WHT014) can and should come forward as a preferred site as part of the LPR. This would support the 'urban focus' and, given the changing national government policy, the housing requirement put forward in the draft plan is some 40% lower than Shropshire's LHN figure calculated using the emerging standard methodology.
A2466B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	There have been 4 new developments, close to each other, completed or nearing completion in the last year or two. These are at The Beeches, Oak Tree Way, The Orchards and Croft Gardens. 3 of these are within 200m of the 30mph outer limit. As a result I think Chester Road has already carried a fair share of local development. There are now 4 roads feeding on to Chester Road at Peartree Lane, Croft gardens, Oak Tree Way and The Orchards within about 150m of each other (3 within 100m) and shortly after the brow of the hill, just within the 30mph speed limit. A further access for 200 properties will significantly add to that. In addition we have seen a significant increase in traffic on Chester Road in the short time we have lived there. Adding the traffic from another 200 homes, new homes often have more than one car, will significantly add to the traffic on Chester Road. I note the proposal will encourage cycling and pedestrians but the reality is that people commute and shop by car. The proposal acknowledges that some of the land is subject to flooding. In addition the drains on Chester Road do not currently handle surface water. During heavy or longer rain showers water runs down the road surface, often heavily like a river.
A2472B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy Area S18 Whitchurch Place Plan Area	Disagree	I wish to place on record my objection to consider WHT014 as suitable land on which to build 70 new homes. Reasons detailed below SAMDEV Plan The land in question was not included within the plan which was adopted by the council on 17/12/2015 and it was removed from the 2013 plan for the following reasons: 1. "The outstanding on-site concerns over landscape and visual impact, and traffic congestion on Liverpool Road"; 2. "The mixed community reaction to the site, including Town Council's objection"; 3. "The presence of more suitable sites elsewhere in the town to meet the overall housing need" It is clear that the issues which resulted in the location being removed from the SAMDev plan are still valid: 1. The impact on the landscape and the negative impact the development would have from a visual perspective cannot be underestimated. The site is one of the few "green" areas remaining in the town because of the drive to erect more housing in recent years. Liverpool Road and the surrounding area in particular has seen huge construction and the over-development of the area must be considered. Furthermore if traffic congestion was viewed as a valid issue of concern in 2013 and 2015 respectively I fail to see how this is no longer the case. Traffic is notably worse than in 2013 and to build yet more homes in the area would only exacerbate the issue, creating a bottleneck of traffic that is unmanageable and simply increases the risk of an accident. In addition it is vital that emergency services have easy access Greenfields care home located down Liverpool Road and adjacent to Mare Close. The additional traffic caused by 70 new homes would negatively impact on this capability. 2. Having spoken with neighbours it is clear that the community is united in its objection to the proposed development. I would also assume that the Town Council still objects to the development as the 2013 Preferred Options Draft states that objection was based around "traffic generation and how it would contribute to the over-development of the area". These are still pertinent issues. 3. There are still a number of sites within the existing SAMDEV plan and within this Pre-Submission Draft document that are more suitable building locations than the Liverpool Road location in question. 2015 Rejection Planning permission to build on the site was last rejected in 2016. The decision notice issued by the Council identifies 4 main reasons for refusal, all of which are still relevant today. Services and Amenities Additional pressure on schools, doctors and other services within the town would increase substantially should approval be granted. Schools are already struggling with class sizes and an increase in population would impact negatively on the standard of education received by children, something which is ethically and morally wrong. Doctors, likewise, are struggling with the number of patients demanding services. One surgery in town serves 1,400 patients. If we assume an average of 3 people per home then an additional 210 people would require access to the town's surgery. If all were to use Dodington Surgery (the closest surgery location wise) then the number of patients the surgery would need to care for would increase by 15%. Wildlife The 2015 application was rejected because: "Insufficient survey information has been provided in relation to Great Crested Newts to conclude that the proposal will not cause an offence under the Conservation of Habitats and Species Regulations (2010) and as such the development would also be contrary to policy CS17 of the Shropshire Core Strategy." I can see nothing within the documents which details whether or not this still remains an issue. This would need to be clarified before the site is even considered. Habitats for many other species would also be destroyed such as foxes and hedgehogs. The need for green space within the town can also not be underestimated. The field in question is used by many children to enjoy outdoor activities with their friends and building on the site would obviously take this away. The town of Whitchurch is quickly losing many of its rural features, becoming urbanised beyond recognition over the last few years. Studies show that open, green spaces reduce stress and boost mental and physical health as well as improve air quality and greater diversity. Sadly Whitchurch has also been shown to have the joint highest rate of asthma incidences in England, with 9.3 per cent of the population being registered with the condition – compared to a national average of 5.9 per cent. Therefore, it is essential efforts should be made to reduce traffic pollution in areas around Whitchurch, such as Wrexham Road and Alkington Road, rather than increase it.
A0956B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement	Disagree	Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire. Comment on S19 Clive Barracks The indicative masterplan illustrates the mixed-use redevelopment of the (72ha) site to provide local services and facilities; around 5.75ha of employment land; around 750 homes; and green infrastructure. The constraints of the site are as follows: The site is expected to deliver 300-50 homes within the plan period, but this means that much of the site will not meet the County's current need; the site is reliant on the private car, with the nearest railway station 11km away; Ecological/ environmental constraints including ancient woodland, local wildlife sites and Flood Zones 2 and 3; and due to the scale of the site (750 dwellings) it is legitimate to question whether the critical mass could be generated to support local services, facilities and infrastructure, which are central to sustainable development. The proposed development at Beslow Farm is free from such constraints and therefore better placed to meet the immediate needs of Shropshire.
A0971B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement	Disagree	Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire. Comment on S19 Clive Barracks The indicative masterplan illustrates the mixed-use redevelopment of the (72ha) site to provide local services and facilities; around 5.75ha of employment land; around 750 homes; and green infrastructure. The constraints of the site are as follows: The site is expected to deliver 300-50 homes within the plan period, but this means that much of the site will not meet the County's current need; the site is reliant on the private car, with the nearest railway station 11km away; Ecological/ environmental constraints including ancient woodland, local wildlife sites and Flood Zones 2 and 3; and due to the scale of the site (750 dwellings) it is legitimate to question whether the critical mass could be generated to support local services, facilities and infrastructure, which are central to sustainable development. The proposed development at Beslow Farm is free from such constraints and therefore better placed to meet the immediate needs of Shropshire.
A1152B47	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement	Disagree	Disagree with the housing and employment allocations to the extent that Tern Hill is sufficiently close to Market Drayton (particularly the Tern Valley Business Park) that houses and employment land at the Tern Hill site should be taken as satisfying the need in Market Drayton.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1192B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement	Agree	<p>Support proposed allocation of Clive Barracks, Tern Hill as a Strategic Site</p> <p>Clive Barracks has been identified for release by the MOD as part of the Better Defence Estate Strategy. As confirmed in 2019, the site will be available from 2025.</p> <p>Fully committed to delivery of housing at Clive Barracks and recognise the role of the site in the delivery of housing during the Local Plan Review period and beyond.</p> <p>The proposed redevelopment of the site provides an opportunity to deliver a new sustainable settlement on a predominantly brownfield site. Delivering new housing, employment and local services and facilities to benefit both new residents and the existing residents nearby. The site is also able to deliver much needed housing in the latter years of the Plan period and beyond, helping the Council demonstrate that its supply of new homes can be maintained throughout the plan period.</p> <p>As recognised within the explanation of draft Policy S19, the proposed redevelopment of the Clive Barracks is in accordance with the Economic Growth Strategy for Shropshire which seeks to prioritise investment in strategic locations along strategic corridors. Clive Barracks lies on the A41, a strategic corridor within the Economic Growth Strategy. Therefore, it is entirely logical that it be identified for re-development for new homes and employment generating uses, which will contribute towards Shropshire's housing need through the effective re-use of a predominantly brownfield site.</p> <p>A suite of technical evidence to confirm the suitability and deliverability of the site for a residential led mixed-use development has been prepared. These documents and workshops with the Clive Barracks Task Force Group have informed an indicative masterplan for the site which illustrates how approximately 750 dwellings and 5.75 hectares of employment land can be accommodated, having regard to the various site-specific constraints and opportunities.</p> <p>Note that the Council have also prepared evidence for the site.</p> <p>Part 3 of draft Policy S19, advises a comprehensive masterplan will be prepared and adopted by the Council. Recognise and support this requirement and remain committed to ongoing engagement with the Council and the Clive Barracks Task Force Group in working up this masterplan. Part 3 also identifies site guidelines for the masterplan and resultant development. Comments on each proposed site guideline are as follows:</p> <p>Criterion A: Constraints and opportunities arising from site specific technical evidence has informed the quantity of development which can be accommodated on the site. The site can deliver approximately 750 dwellings, accommodating a mix of housing types.</p> <p>Criterion B: The Illustrative Masterplan for the site demonstrates how the site can accommodate approx. 5.75 ha of employment generating uses alongside new housing. Committed to working with the Council to ensure the employment generating opportunities at Clive Barracks reflect local need, market demands and the aspirations of the Economic Growth Strategy for Shropshire. Site Guidelines which seek employment generating uses on the site and provide flexibility rather than a prescriptive approach to deliver the best possible employment offer for the site are supported.</p> <p>Criterion C: The proposed local centre will benefit residents of the site and those living nearby. Note that at previous public consultation events residents commented on the benefit to them of the delivery of a local centre in this location. The exact nature of the local centre, and the phasing of it, will be confirmed through a future planning application for the development of the site.</p> <p>Criterion D: To provide certainty consider the "appropriate quantity" of Green Infrastructure needs to be defined. The illustrative masterplan provides for a range of green infrastructure, including new formal and semi-natural open space which delivers approximately 4.4 ha of open green space and seeks to ensure that both the existing Ancient Woodland and other high quality trees within the site are retained with appropriate buffers provided. Areas of woodland within the site (including buffers) extend to approximately 17.8 ha in total.</p> <p>Criterion E: The Illustrative Masterplan confirms how 1ha of land can be provided in a central location on the site, to facilitate the merging of Buntingsdale School and Stoke on Tern Primary School.</p> <p>Criterion F: A Highways Report has been prepared for the site. A Junction Capacity Assessment of the A41/A53 Tern Hill Roundabout confirms the roundabout currently operates over capacity. The Highways Report identifies measures to reduce the impact of the proposed development, comprising junction widening on three of the approach arms to the roundabout to increase the storage capacity/width available in the vicinity of the roundabout which can be undertaken within Highways land. The Highways Report also confirms the existing junction arrangement with the A41 is capable of serving the proposed development.</p> <p>An Air Quality Assessment which assesses the impact of increased vehicular movements from the proposed development on Tern Hill roundabout will be provided at outline planning application stage.</p> <p>Criterion G: Pedestrian and cycle links throughout the site. Welcome the amended wording which makes clear enhancement of the A41 underpass is for pedestrian/cycle connectivity between the north-eastern and south-western portions of the site.</p> <p>Criterion H: A Preliminary Noise Assessment identifies the A41 and Tern Hill Airfield as the main noise sources. It also identifies a number of measures to mitigate noise impact from both sources on both external and internal noise levels. Further extensive noise monitoring of the Airfield has since been undertaken to inform the ongoing development of the site layout and confirmed mitigation methods proposed are appropriate.</p> <p>Criterion I: A Phase 1 Ground Investigation study has been undertaken and identified how on-site sources of contamination will be managed. Additional Ground Investigation will be undertaken to inform the final layout of the site.</p> <p>Criterion J: A Preliminary Ecological Appraisal identifies habitats on-site. Recommendations within this appraisal have informed the Illustrative Masterplan, which ensures appropriate buffers between proposed built development and Ancient Woodland (30m)/Local Wildlife Sites (at least 15m). Further species-specific surveys (identified within the Preliminary Ecological Appraisal) will be undertaken at the Planning Application stage, although potential species groups identified are unlikely to pose an overriding constraint to development.</p> <p>An Arboricultural Survey identifies Root Protection Areas of trees within the site and has informed the Illustrative Masterplan. A Preliminary Arboricultural Impact Assessment has since been prepared which concludes subject to ongoing arboricultural input during the detailed design stage, a sensitive scheme which retains the site's highest quality trees and important arboricultural features is achievable.</p> <p>Criterion K: A Heritage Statement has been prepared to assess potential impacts on designated/non-designated heritage assets and has informed the emerging masterplan. At detailed design stage, an opportunity exists to retain elements of the former Barracks buildings, and verges/roads within the proposed residential areas. Such measures would reduce the degree of harm caused by the proposed development, notably if the final site layout retains an overall sense of the planned 'campus style' layout of the Barracks, as suggested by the indicative masterplan.</p> <p>Criterion L: Indicative Surface Water Drainage Strategy and Flood Risk and Drainage Scoping Study have been undertaken. The proposed development will incorporate SUDs to manage surface water run-off from the proposed development, ensuring the proposed development will not be subject to surface water flood risk. A sustainable drainage strategy which incorporates SuDS will be prepared as the scheme evolves and will be supported by infiltration testing and detailed ground investigation.</p> <p>The Illustrative Masterplan demonstrates how the proposed development can be delivered outside of the area designated as Flood Zone 2 and 3.</p> <p>Clive Barracks lies adjacent to the operational RAF Tern Hill Airfield. To ensure the proposed site and adjacent Airfield can co-exist, the proposed Masterplan has had due consideration to the MOD's statutory safeguarding requirements associated with the Airfield and its transmitter and receiver facilities (as well as the noise impacts, as dealt with under site guideline h). All these factors have been considered and the land uses proposed by the Masterplan are deliverable.</p> <p>However to protect MOD interests and ensure that the future land uses within the development are compatible with the operation of the neighbouring airfield and associated transmitter / receiver facilities would recommend an additional Site Guideline as follows:</p> <p>applicant/developer may need to identify suitable mitigation measures.</p> <p>The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows:</p> <p>Clive Barracks, Tern Hill: traffic; A5 Preston Island roundabout, M54 -J5, J6 and J7.</p> <p>Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.</p>
A1834B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement		<p>Consider that proposed site allocation Clive Barracks, Tern Hill would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the</p>
A2308B27	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S19 Clive Barracks Strategic Settlement	Disagree	<p>The indicative masterplan Clive Barracks considers safeguarding issues. However, looking ahead to future Planning Applications for the site, in order to protect MOD interests and ensure that future development and land use is compatible with the operation of the neighbouring airfield and associated technical sites (transmitter/receiver facilities), MOD would like to see an additional criterion added to the list of criteria as follows:</p> <p>"m. The layout and dimensions of new structures as well as use of materials will need to be appropriately designed to ensure new development does not impede the operation of the airfield and associated transmitter/receiver facilities at the adjoining MOD site."</p> <p>Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF:</p> <p>Clive Barracks: Safeguard Zone - Ternhill Airfield Plan AT ANY DEVELOPMENT, 15.2m, 45.7m, Plan B; RAF Shawbury Plan AT ANY DEVELOPMENT 91.4m, Plan B and West WAM Plan T ANY DEVELOPMENT, 10.7m, 15.2m, 45.7m, also Consultation required for power lines above 2k</p>
A0270B1	Viability and Deliverability of Proposed Site	Draft Policy S20 Former Ironbridge Power Station		<p>Site is deliverable in accordance with NPPF. Outline planning application submitted with detailed phasing plan. First housing plots will be delivered in 2022/3 (within 0-5 years). However, significant viability constraints due to legacy of former use. A series of viability scenarios have been assessed and confirm that a fully policy compliant scheme is not viable, and would generate a significant financial loss. Several other scenarios have been explored and are all presented within the Development Viability Review. Site is not viable with policy compliant affordable housing.</p>
A0114B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Don't know / no opinion	<p>Development site affects National Grid assets or are in close proximity including 400Kv Overhead Transmission lines & Electrical Substations. A plan showing details of the site locations and details of National Grid's assets provided</p>
A0193B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Agree	<p>Ironbridge The landowner and developer of this site support the emerging Policy S20 which seeks to allocate the former Ironbridge Power Station as a new strategic settlement. Harworth Group is committed to bringing forward a highly sustainable mixed-use development, on this largely brownfield site.</p> <p>Site purchased in June 2018 and extensive public consultation has been undertaken to inform the emerging proposals for the redevelopment of the site. The demolition of the power generation infrastructure started in April 2019 and is expected to be complete by December 2021. An outline planning application, 19/05560/OUT including an Environmental Statement, was submitted to Shropshire Council (& also to Telford and Wrekin Council) in December 2019.</p> <p>The planning application (uses described in rep) was formulated in to reflect the mix of uses within the emerging policy for the site & carefully considered to ensure that a comprehensive, appropriate, and sustainable development is delivered. The detailed design and layout of the development will follow at a later date through future reserved matters applications; however, the Illustrative Masterplan that accompanies the planning application demonstrates how the layout could be configured to deliver a high quality and attractive mixed-use development, in accordance with the emerging Policy S20.</p> <p>An Environmental Statement Addendum and revised planning application was submitted in August 2020. There has also been additional technical work and some amendments to the Illustrative Masterplan which is subject to re-consultation by Council. The updated Planning Statement (dated August 2020) sets out how the proposed development accords with each of the site guidelines (A – Q) for S20.</p> <p>The planning application and Illustrative Masterplan support & incorporate the Council's Sustainability Appraisal mitigation measures (set out at Table 10.4) and site guidelines at Policy S20 and therefore they are supported. Measures include:</p> <ul style="list-style-type: none"> - appropriate buffers to the SSSI's, Wildlife Sites and Woodland Sites; - the provision of facilities and services within a village centre, including a nursery and primary school and GP surgery (subject to CCG advise); - exclusion of built development from Flood Zones 2 and 3; - submission of a comprehensive Heritage Assessment to address the site's relationship with Ironbridge Gorge World Heritage Site, Buildwas Abbey Scheduled Monument, the Severn Gorge Conservation Area and the two Grade II Listed Buildings to guide the conservation and enhancement of these features; - identification of requirements to safeguard trees; - provision of green infrastructure and sports facilities, pedestrian and cycle links to service facilities onsite and in the wider area. <p>A Viability Appraisal has been undertaken. The package of contributions proposed by the applicant, in accordance with the overall viability of the site, totals £16.5m towards primary and secondary education, health, sport, community and footpath/cycle links, public transport, tourism and heritage improvements, ecological enhancements, and highway improvements, including traffic calming in Ironbridge. 50 affordable dwellings will be provided. A funding review will also be undertaken midway through the development to review the extent and applicability of these contributions.</p> <p>The developers have worked positively with stakeholders, the local community and the local planning authority in bringing forward these development proposals, and this has continued post- planning application submission with the application programmed for consideration by planning committee in November/December 2020. Delivery of development on the site is expected to take place from 2022 – 2032. The redevelopment of this site represents an opportunity for Shropshire Council to meet their housing and employment needs in a sustainable way, supported by necessary infrastructure and supporting services and facilities.</p>
A0355B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	<p>Impact of the Buildwas development on the highways infrastructure on roads in Much Wenlock, pressure on GP surgery and school</p>
A0486B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	<p>We are disappointed that none of our suggestions for renewable power generation and storage have been incorporated into the Local Plan. While there are generic Policies in the Plan that may apply, this large site with good connections to the power grid, provides an opportunity to generate solar power which could be stored in batteries and/or exported from the site. It appears symptomatic of the lack of any real intention to ensure that the Local Plan sets out to achieve net zero emissions.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0956B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	Need to ensure that the Shropshire Local Plan is 'effective' by fully considering the risks to the delivery trajectories of the strategic settlements and the consequent need for further flexibility in the housing land supply, which could be accommodated via the urban focused strategy within the Strategic, Principal and Key Centres. The Strategic Settlements of Clive Barracks (draft Policy S19) for 750 dwellings and Former Ironbridge Power Station (draft Policy S20) for 1,000 dwellings are identified as a part of the housing delivery strategy. Appendix 7 highlights the anticipated delivery trajectory for these sites, with Clive Barracks potentially extending beyond the plan period and the Former Ironbridge Power Station being at least long term too (up to end of the plan period). There does not appear to be any information within the draft SLP or supporting evidence base on how the trajectory has been derived and no updates provided from the previous Shropshire Council 'Strategic Sites Consultation' (2019) on how the necessary assessment work for these strategic settlements has progressed. As per our comments under draft Policy S16, the Council should clearly set out the anticipated delivery trajectories for these sites and be transparent on the assumptions applied in order to ensure any risks to delivery of housing at these site within (and beyond) the plan period are fully accounted. These assumptions should reflect the site-specific existing characteristics affecting the development of these strategic settlement sites and future requirements (such as infrastructure) to enable their effective delivery. If the risk assessment demonstrates that such sites are likely to be longer term and further beyond the plan period than anticipated, the Council should consider the need to identify further flexibility within the housing land supply by directing additional allocations to the urban locations as per the urban focused spatial strategy for development (draft Policy SP2). Clive Barracks may be better suited to a strategic employment allocation given its location adjacent to the A41, which the plan recognises is an important strategic corridor thereby providing greater alignment with Policy SP10. Our Client's Site, Land at Nobold, can provide a sustainable urban extension to Shrewsbury town, in line with the urban focused strategy of the draft SLP. The accompanying Concept Plan demonstrates the opportunity for a comprehensive development that would serve to make use of and further enhance the sustainability of the south-west area of Shrewsbury, delivering on the objectives of the Shrewsbury Big Town Plan and meeting local needs for housing, employment and infrastructure.
A0971B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	Promotion of land owned by Raby Estate between Shrewsbury and Telford, promoting the "Beslow Estate" based on a Garden Village principles and providing 3,500 homes and 17ha employment land, community uses and infrastructure. This site is put forward as an alternative to three Strategic sites in Shropshire Comment on S20 Former Ironbridge Power Station Questions can be raised about the deliverability of 1,000 dwellings on the site within the plan period and whether it is possible to minimise the landscape and visual impact. Constraints of the site are considered to be: The demolition and decontamination of the site; and the impact on heritage and environmental designations. The impact the site is expected to have on these make it the worst scoring site in the Sustainability Appraisal. The proposed development at Beslow Farm is free from such constraints and therefore better place to meet the immediate needs of Shropshire.
A1152B48	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	The Former Ironbridge Power Station site is sufficiently close to Telford that its proposed houses and employment could be taken as satisfying need in Telford. It is apparent that the local road network could not currently adequately cope with the volume of traffic likely to be generated. The site scored as 'Poor' within the Sustainability Appraisal, yet has still been allowed to come forward as an allocated site. The pressure for development has over-ruled the objective assessment.
A1834B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement		Consider that proposed site allocation Former Ironbridge Power Station would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows: Former Ironbridge Power Station: traffic; M54 J6. Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.
A2187B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	I am concerned at the apparent lack of consideration of the effects on Much Wenlock of the large development at the former Ironbridge Power Station. Traffic problems, in particular at the Gaskell Arms junction, are already well-documented, and this substantial increase in housing, and therefore traffic movements, both at Ironbridge and at Bridgnorth will put intense pressure on traffic passing through Much Wenlock, including its historic centre
A2475B24	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S20 Former Ironbridge Power Station Strategic Settlement	Disagree	This site is already the subject of a planning application to which we have made a detailed response, objecting principally on the basis of the scale and proximity of this major development in the immediate setting of the AONB. We are not opposed to the principle of development on the former power station site, but the importance of the AONB was downplayed and the setting of the AONB not adequately taken into account in the masterplan and application. We welcome para 3h referencing the greenfield elements of the site and their sensitivity in relation to the AONB, but reiterate that we expect the proper consideration of the AONB to result in actual change to the proposed development to reduce its impact on the setting of the AONB, mainly by reduction in scale at the western edge. The policy should refer to the scale of development reflecting proximity to the AONB, as well as design and layout.
A0056B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0065B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0069B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0083B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0084B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0095B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?

A0212B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	Consider that ALB013 (Albrighton Garden Centre) should be included within Cosford Strategic Site. The site is around 2.5ha, consisting of a garden centre, car park and overspill parking, it is a long establish retail location, adjoins the Strategic site, is well defined - bounded by RAF Cosford, roads and rail lines and in the Green Belt. Para 133 of the NPPF sets out the purposes of Green Belt. ALB013 was assessed (alongside RAF Cosford) within the Shropshire Green Belt Assessment and Review and considered to make no contribution to Purposes 1 and 4, made only a weak contribution to Purposes 2 and 3, and made an equally significant contribution to Purpose 5 as the rest of the land assessed. Overall it was concluded that there would be a low level of harm to the Green Belt if the site was released (the lowest in the assessment). Opportunity Area assessments also concluded that release of this land would not affect the strategic function of the Green Belt. Policy S21 proposes removal of land at RAF Cosford from the Green Belt to enable the growth of the site and local economy and to contribute to the employment needs of Albrighton. We can see no reason why ALB013 is omitted from the Strategic Site and no reason for its continued inclusion within the Green Belt. Inclusion of ALB013 in the RAF Cosford Strategic Site would unlock the economic value of the site enabling it to provide either complementary retail services (either in its present form, or a revised form of retail/commercial) or as additional housing land. Supporting the economic growth of this part of Shropshire without compromising the Green Belt. ALB013 is highly accessible and would reduce pressure for development on Greenfield sites. Its removal from the Green Belt would not lace harm on surrounding Green Belt or affect its strategic function.

A0310B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	TC objects to removing the site from greenbelt – no exceptional circumstances to justify. Permissions have already been granted here without the need to remove from greenbelt. Cosford developments are already covered by CS5 and MD6. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities, there is no reason based on recent history, to assume that any current Defence Review will be fully implemented. It would appear that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development well before the Strategic Sites Consultation in July 2019. Proposed policies in the Plan permitting future employment development on such Sites would allow for unrestricted additional employment development here if the site was removed from the Green Belt. It is clear that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here. It is premature to remove such large areas of land from the Green Belt due to covid. There are plenty of areas for employment land within the Strategic Corridor in neighbouring authorities. The TC are concerned that different parcel reference numbers appear to be given to the Proposed Midlands Air Ambulance Charity Site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. Concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. There was no mention in the Strategic Sites consultation response summary that any comment had been received from MAAC regarding a new site. Evidence from the MAAC should be required to be made public. At the SALC meeting, when it was pointed out that the proposed site was much larger than required by the Charity, Shropshire Council's planning policy officer apparently agreed that the land proposed for release was far more than MAAC required. Site would narrow gap between Albrighton and Shifnal. SC have no control to ensure that the site is only developed for MAAC. The fact that SC are proposing nearly double the site area that MAAC actually require calls into question the reasoning behind the size of site proposed and putting the site into the wider RAF Cosford Strategic Site. The site should have a separate allocation. If it was exceptional, it could gain consent through the application process without the need for removal from greenbelt.
A0319B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Don't know / no opinion	Donington with Boscobel Parish Council welcomes the Midlands Air Ambulance plans, but questions the plans to remove 36 rather than 20 acres of green belt
A0353B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?

A0457B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	The 36 acre provision for the Midlands Air Ambulance at Tong appears excessive. No current plans are available to justify the size of the development and both the existing site in Cosford and other air ambulance sites are 2-3 acres.
A0469B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	The 36 acre provision for the Midlands Air Ambulance at Tong appears excessive. No current plans are available to justify the size of the development and both the existing site in Cosford and other air ambulance sites are 2-3 acres.
A0507B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	The removal of land from the Green Belt in Policy DP25 is welcomed but it fails to meet the Councils own requirements and those of the NPPF which require the Green Belt review to consider both Shropshire's current Plan development requirements as well as the need to safeguard land to accommodate future development needs beyond 2038. To meet this shortfall the Council should re-examine the site to the west of the A41 bounded to the north by Sydnal Lane and to the west by Shackerley Lane. This would provide an additional 16 hectares of land for future development without significant impact on the aims of the Green Belt and by retaining an element of open Green Belt between Cosford and Albrighton to maintain a strategic gap.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0697B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	<p>Albrighton is highly sustainable and enjoys excellent accessibility to the strategic road (A41/M54) and rail network (which provide excellent access to Telford and Wolverhampton). Albrighton is also in proximity of RAF Cosford, which is likely to be subject to MOD investment and housing need during the plan period (RAF Cosford is identified as a strategic opportunity to complement existing/future uses of the base and support investment in the wider West Midlands Engine). Given Albrighton's role as a Key Centre and its high sustainability, it is crucial to consider the role it can play in accommodating additional growth emanating from RAF Cosford. Any such growth would need to be directed away from the north-west given the need to maintain a strategic gap between Albrighton and RAD Cosford (referenced in S21 and based on evidence from the Green Belt Assessment).</p> <p>The proposed development strategy continues to identify Albrighton as a Key Centre and includes a guideline of around 500 dwellings, which remains unchanged from two previous stages of consultation. It is significant that despite an increase in the overall housing requirement for Shropshire, the outstanding guideline for Albrighton has reduced (from 195 dwellings to 180 dwellings) due to completions over the last two years. This further limits potential growth in Albrighton which would support the draft Local Plan growth agenda, tackle local infrastructure priorities and address under-delivery in Albrighton (since 2006, Albrighton has the lowest level of completions of any Principal or Key Centre, with an average of just 5 dwelling per annum and has delivered only 24 dwellings (average of 8 per annum) in the first three years of the draft Local Plan period, perhaps reflecting the Green Belt constraint). In order to deliver a 'step change' in the scale of development, not only should Green Belt land be released (supported in relation to ALB014) but specifically allocated as part of the Local Plan review, over and above the 180 dwellings currently allocated to Albrighton.</p> <p>The draft housing requirement for Shropshire and draft housing guideline for Albrighton should be increased to not only meet local need but also recognise opportunities to support the wider housing and economic agenda of the draft local plan, better reflect latest evidence on household growth trends (2018-based), chronic under-delivery of housing at Albrighton and to recognise Albrighton's strategic location in proximity to the West Midlands conurbation. Increasing the residential guideline for Albrighton is wholly in line with Albrighton's role in the urban focused strategy, consistent with the wider housing and economic agenda in Shropshire (focusing growth on major 'strategic corridors'), provides further flexibility/boosts housing supply and is in line with national policy.</p> <p>Concerned about the approach/reliance on windfall in the draft Local Plan, including Albrighton. Para 70 of the NPPF sets out tests when considering windfall allowances, with a need for compelling evidence that they will provide a source of supply and they should be realistic having regard to the strategic housing land availability assessment (SLAA), historic windfall delivery and expected future trends. The Shropshire SLAA considers windfall across Shropshire but not for specific settlements, despite allowances being made for many. Do not agree with this approach or that there is compelling evidence for windfall allowances, to be credible a windfall allowance for a settlement must be based on an assessment of future supply at a settlement level. Consider windfall allowances have been applied to limit the allocation of additional sites needed to meet the proposed housing requirement/settlement guidelines, do not agree with this approach. In Albrighton the windfall allowance is 48 (21% of the total identified supply) but the housing supply in the built area has been limited (just 66 dwellings since 2006, or 5 dwellings per annum), compared to other non-Green Belt settlements where the development boundary is less tight. Consequently, additional allocations should be made where opportunities exist in sustainable locations that do not undermine Green Belt purposes (notably ALB014) before any allowance is made for windfalls. In this way, windfall allowances would represent a 'buffer' to help ensure required growth at Albrighton is achieved. This would be more consistent with a plan-led approach to meeting housing needs, rather than relying on supply from unknown sources that may or may not come to fruition i.e windfall sites, without sufficient justification.</p> <p>Object to the proposed development boundary, as the boundary around this highly sustainable settlement is too tight, to limit Green Belt alterations, meaning it is less able to flex and respond to rapid change (such as non-delivery of allocations) as required in para 11a of the NPPF. Allocating more sites (ALB014 could deliver now) and providing greater flexibility from the outset would be sensible, rather than restricting the ability to respond to change.</p> <p>Allocation of ALB014 would also support the contribution that Shropshire, and Albrighton specifically, can make to addressing unmet cross-boundary needs, in a location that lies within close proximity to good transport connections (road and rail) to the conurbation. Such provision should be considered in addition to the proposed housing requirement set out in the consultation document.</p> <p>ALB014 is identified as safeguarded land for development beyond the draft Local Plan period. Support recognition that ALB014 is distinct from other areas of Green Belt around Albrighton and be removed from the Green Belt. Also support recognition that development of ALB014 is potentially acceptable in principle without undermining the purpose of the Green Belt (informed by the Council's Green Belt Review).</p> <p>Therefore, do not support the mere designation of ALB014 as safeguarded land and consider an allocation more appropriate.</p> <p>The explanation to this policy does not explain why sites ALB017 and ALB021 are proposed for allocation ahead of other sites (including ALB014). Identification of these sites is therefore influenced greatly by their previous identification in earlier plans (i.e SAMDev) rather than based on a fair and transparent selection of the 'most appropriate' sites informed by the evidence. This is a significant failing.</p> <p>ALB014 is highly sustainable, being accessible to a range of services and community facilities within the village and enjoying excellent accessibility to the strategic road (A41/M54) and rail network.</p> <p>ALB014 is contained by Cross Road to the north, Newhouse Lane to the east and Patshull Road to the west.</p> <p>An initial vision document/conceptual layout for the site has been submitted as an Appendix to this representation. This illustrates that the site could accommodate around 160 dwellings; 1.7ha of open space, including retained trees/hedgerows; and would fully integrate and complement the existing village. Note a community aspiration to deliver enhanced healthcare provision in the village, ALB014 has the potential to accommodate such a community use.</p> <p>ALB014 would therefore deliver significant social, economic and environmental benefits and will be truly "deliverable" as defined in the NPPF: being "suitable", "available" and "achievable".</p> <p>Therefore the draft Local Plan should identify the site as a proposed allocation rather than simply safeguarding it for future development.</p> <p>Site assessment comments addressed under comments on the Sustainability Appraisal.</p> <p>Exceptional Circumstances for the site addressed under comments on draft Policy DP25.</p>
A0697B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site		Note reference to maintaining a strategic gap between Albrighton and Cosford, which appears to reflect evidence from the Green Belt Assessment. This limits growth of Albrighton in the north-west direction.

A0834B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	Supportive of conclusion to keep site within Green Belt due to flooding, access to waterway, quality agricultural land, proximity to nature reserve, railway makes a boundary, conservation area around Donington Church and provides a green break between Cosford and Albrighton/Donington
A0845B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0846B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported.</p> <p>There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p> <p>Object to the proposed removal of RAF Cosford from the Green Belt. There has been no change in circumstances, and certainly no exceptional circumstances to justify Green Belt release, since the current plan was adopted.</p> <p>Note that there has been significant development at RAF Cosford and Cosford Museum despite it being in the Green Belt - therefore there have been no difficulties getting Planning Permission for necessary activities on the site and therefore no need to change the Green Belt.</p> <p>Current policy (CS5 and MD6) specifically permits development of the site - including economic uses. This would, apply to all the development referred to as being proposed for RAF Cosford (military, museum and aviation academy) in the draft Local Plan.</p> <p>Reference is made to the Defence Review, however there is no certainty that this will be completed (given past reviews and changing national priorities). Furthermore this also applied during preparation of the previous Local Plan and the site remained in the Green Belt as a major developed site with specific policies (CS5 and MD6) allowing developments that would not compromise future uses, this approach would equally apply in the future - retaining Green Belt status provides greater control, particularly if the defence review does stall. There are therefore no exceptional circumstances to justify release of this site from the Green Belt.</p> <p>Despite statements suggesting only the specific development referenced can occur on the site, it is noted that there are several draft policies and comments in the draft Local Plan that support unrelated economic development schemes, through its identification as a proposed Strategic Site. It would appear, therefore that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>For example since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational site for mixed use and as a potential new employment site that is subject to the Local Plan review, but that the Council will consider making the site available for development in response to market demand. It would appear the Council has already pre-determined the site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites. By defining RAF Cosford as a Strategic Site without any restriction tying future development proposals to those specified in the draft Local Plan, proposed policies in the Draft Local Plan permitting future employment development on Strategic Sites would allow for unrestricted additional employment development here if the site was removed from the Green Belt. RAF Cosford is also located on a Strategic Corridor which is again a focus for employment development in draft Local Plan policies and the Economic Growth Strategy.</p> <p>The draft Local Plan policies also specifically state that the employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site.</p> <p>The draft Local Plan states RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from wider Local Plan policies and the Invest in Shropshire brochure and investment opportunities webpage that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>Given the current economic climate, Covid-19 and the fact that the Economic Growth Strategy which underpins many of the draft policies of this Local Plan runs to 2021 (and does not consider the current economic climate or Covid-19) it is premature to release such a large area of land for employment development and no exceptional circumstances exist.</p> <p>Attention is also drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor.</p> <p>In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal of the site from the Green Belt.</p> <p>The proposed Midlands Air Ambulance Charity (MAAC) site appears to have difference references in different documents and no clarification is given as to which references/assessments apply to it.</p> <p>There is also concern that the draft Local Plan does not specify the size of land being proposed for the MAAC or how this relates to the specific needs put forward by MAAC (assume it is 18ha based on the change to the size of the site between this and previous consultations, however the Flood Risk Assessment for RAF Cosford (which includes the MAAC site) refers to a total site of 218ha, meaning the MAAC site is 15ha). It is essential that there is no discrepancy in the precise amount of land proposed to be removed from the Green Belt and the minimum amount of Green Belt is used to meet the stated need.</p> <p>Note that in the summary of the Strategic Sites consultation, no reference is made to a representation from the MAAC and it is unclear when the site promotion occurred.</p> <p>MAAC evidence has not been made available for consideration by the public to assess the detailed case being put forward to justify the sites removal from the Green Belt. Because this is not brownfield (like the rest of RAF Cosford) but greenfield, it is considered essential that the specific needs of the MAAC can be assessed, to justify the allocation of this site. Particularly, important is evidence about the minimum site area required. Without such justification exceptional circumstances for the release of this amount of land cannot be proven.</p> <p>MAAC information provided to the local community suggests they do not need the size of site proposed nor intend all the development stated to occur. This supports concerns that written evidence from the MAAC should be published so there is no ambiguity regarding specific needs for exceptional circumstances to be established.</p> <p>It is also a concern that the site forms part of the RAF Cosford Strategic Site and not a stand alone site, meaning the Council cannot ensure the site is only developed by the MAAC. Once removed from the Green Belt, it can be developed for any purpose, including residential (see earlier comments regarding the wider RAF Cosford Site). This could prejudice the position of the MAAC, as the landowner may consider it more advantageous under proposed policies in the Plan, to develop it for alternative more profitable uses than MAAC.</p> <p>If established that there is an overriding need for MAAC to relocate here, no opportunity for accommodation on the existing RAF Cosford site and there are no alternatives outside the Green Belt, then the site proposed should be the minimum necessary to meet their needs and it should be allocated separately from the wider RAF Cosford site.</p> <p>This would protect the site from alternative development should MAAC not develop, or in the future to retain planning control over the site should MAAC cease to use it.</p> <p>This would be an identical situation to the M54 Service Area just a few miles away at Junction 4 of the M54. The service area was a specific allocation in the Green Belt because of the essential need for it at this particular site. For this reason, to ensure that planning control was retained for any other use of the site should the service area not proceed or cease in the future, it was accepted that it was appropriate to allocate the site for the precise use but keep the site within the Green Belt. Again this would also be identical to the current position with RAF Cosford where policies allow for any developments related to the current uses without having to establish exceptional circumstances, whilst retaining the site in the Green Belt to protect the Green Belt and site from uncontrolled development unrelated to the exceptional reason for allowing the site for its specific use.</p> <p>Alternatively, if this proposal is considered as an exceptional circumstance such that the land would only be approved for MAAC development, then there is no reason why the development could not be approved through the planning application process, rather than being proposed as an extension to a strategic site. This would also enable stronger planning controls to be applied to ensure that the site was solely approved for and developed for the intended purpose, which would not be possible as currently proposed in the Draft Local Plan.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0848B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0888B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	Site promotion (part of site P30) made on land north of the element of the RAF Cosford Strategic site located to the east of the A41. Land promotion document submitted in support of this representation The site is located directly adjacent to RAF Cosford which is identified as a proposed Strategic Site (adjacent to its proposed development boundary) in a small gap between the Base and the M54. As such the Site offers the potential to deliver housing for existing service personnel seeking private or affordable housing, retiring service personnel wishing to remain in the area and civilian staff who will be required to support the Strategic Objectives of the Base and the wider long term centre of excellence. It should be recognised by Shropshire Council that the living accommodation to be provided as part of the RAF Cosford site will only be made available to those in active service or on contract to the MOD. As such, there will be unmet housing demand in this locality that will not be provided by the RAF Cosford site alone. Disappointed that this site has not been assessed in its own right in the Stage 2 and 3 Assessments, despite submissions during the Strategic Sites consultation defining the site and presenting the technical case for its release. Failure to assess this site in the context of the evidence base is, inconsistent with consideration of other promoted sites which have been provided with their own site assessment numbers in the Council's Evidence Base which supports this Regulation 18 Consultation. It is impossible to make any meaningful comments on the Council's consideration of the site in terms of the Stage 2 and 3 Assessments because the site is only considered as part of a much larger parcel (Site ref. P30), within the 'Albrighton Place Plan Area.' The site should be removed from the Green Belt and allocated for housing or 'safeguarding' as it is available, in a suitable location for development, and achievable (i.e. with a realistic prospect that housing will be delivered within the plan period) and in particular that development is viable. Analysis of planning and environmental issues confirm there are no major constraints to the development of this Site and where there are potential constraints, solutions can mitigate them. If the Site is considered by Shropshire Council as a potential development opportunity, further and more detailed work would be undertaken to fully detail the Site's technical deliverability. The site is appropriate for release for residential development to meet future housing requirements in this area particularly given that the site's contribution to the aims of Green Belt mean that its release would have little impact on the operation of Green Belt in this location, especially given the clearly defined Green Belt boundaries that could be established through its release. Key considerations in terms of the positive contribution which this site can make to current and future housing needs include: <ul style="list-style-type: none"> • Accessible land to meet identified and future housing and other requirements, without the need for significant new infrastructure improvement; • Provision of non-military, market housing that will allow civilian staff, services staff, retired and other people working in supporting services to purchase property within walking distance of where they work (RAF Cosford); • Delivery of affordable housing which could be prioritised for serving and ex-services personnel; • Release of Green Belt land which has a more limited contribution to the NPPF's Green Belt purposes than other areas around RAF Cosford, particularly given the defensible boundary provided by the M54, Newport Road and established woodland planting; • Ability to deliver sustainable housing development in co-location with a strategic level employment allocation within the M54 corridor; • Opportunity to identify this Site as safeguarded land, to ensure sufficient land is taken out of the Green Belt and avoid the risk of successive reviews in any subsequent Local Plans, which would run contrary to the NPPF; • Delivery of a site which is located sustainably and can be readily linked into the wider, existing transport network; • Unlocking the opportunity to enhance the Site and its wider setting through improved/diversified landscaping of retained open areas; • Opportunity to improve/enhance the level of accessible publicly available open space, enhancing its quality, general condition and providing opportunities for better, natural surveillance; • Opportunity to enhance biodiversity and implement an ecological mitigation/improvement scheme to develop ecological connectivity within the Site, and beyond the Site's boundary; • Opportunity to create a landscape framework to be implemented which incorporates green infrastructure corridors; • Delivery of development within the M54 corridor to assist in meeting identified cross-boundary housing need; and • Reducing pressure on a constrained Albrighton for further housing to support the growth of Cosford Air Base, thus helping to protect the gap between these two areas. RAF Cosford is a major part of the Defence College of Technical Training (DCTT). It is at the centre of the RAF's mission to deliver flexible, affordable, modern and effective technical training that meets the needs of the UK's Armed Forces now and into the future. In addition, as part of its future strategy, it is understood that the DCTT is reviewing capacity at RAF Cosford, and it is estimated that over the next 10+ years RAF Cosford could see in the region of an additional 1,500 people (staff and student population), which could potentially increase further, dependant on the outcome of the ongoing work. In order to make the site more sustainable the delivery of range of housing options should be considered in the context of the current local plan review as this level of growth will bring with it demand for housing within walking distance of the Base. The Midlands Air Ambulance Charity (MAAC) also require a new headquarters, which will facilitate co-location of MAAC operations in the Midlands. The location within the RAF Strategic Site will therefore help to provide further opportunities to improve the charity's operation; essential public emergency services; key fundraising facilities which will help to transform their potential to host events; and high quality modern training facilities and office accommodation. Proposals for RAF Cosford provide for new, mixed-use facilities, including training facilities; technical accommodation and domestic accommodation. Draft Policy S21 also notes that proposals for new development and the intensification of the use of RAF Cosford are expected to be for military use and non-profit making uses rather than acting as a contribution to meeting Shropshire's future housing growth needs. The Proposals therefore focus on providing education opportunities, access to a skilled workforce, opportunities for the co-location of supply chain and opportunities for complementary employment offer, facilitating economic growth aspirations in the east of the County and therefore helping to complement and facilitate delivery of the Economic Growth Strategy. To deliver on these objectives, particularly in terms of the benefits accrued from retaining local talent within the M54 Growth Corridor, there will be a need to provide non-military, open market housing that will allow civilian staff, military staff, retired and people working in supporting services to purchase property close to where they work. The current development boundary proposed does not include sufficient land to deliver such open market housing in either the short or long term. This site offers the opportunity to deliver this critical component to support wider strategic objectives for the base and enable people working at the site to walk to work and with the chance to put down real roots by investing in local housing. As such, Shropshire should look to safeguard this site to allow consideration for potential allocation within the next Local Plan iteration. Draft Policy S21(c) also states 'any development required to support the expansion of The RAF Museum Cosford will be of a high-quality design and layout which will complement existing iconic museum buildings and the relationship with an operational airfield.' We believe that an adjacent housing offer would help to support the expansion of the Museum, which will adopt a high quality and sustainable design, in line with the Policies' development objectives and site guidelines as defined within a future high-level overarching masterplan. One of the key objectives from reviewing Shropshire Council's Economic Growth Strategy is to retain more highly trained people in the County. To underpin this, appropriately located housing is essential. By providing improved access to housing for both private sale and prioritised affordable provision, staying in the County becomes more like

A1105B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A1152B49	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	Do not agree that there is any need to remove the RAF Cosford site from the Green Belt. The existing policy for RAF Cosford has enabled development to take place there over the years without too much difficulty. Why is it therefore necessary to remove the base from the Green Belt? This proposed removal carries the risk that if the military use ceases, the whole area could be redeveloped, without the protection of Green Belt status. While this is currently deemed unlikely by the Council, were the site to be removed from the Green Belt it is hard to see how protection against non-military development would be enforced. In addition, we also do not agree that there is any proven need to remove the whole of the additional MAAC Element of the Strategic Site from the Green Belt. The area proposed appears to be considerably greater than is required by the actual needs of the MAAC. There should also be protection in place to prevent the use of the area for anything other than MAAC purposes.
A1189B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A1200B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A1200B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	A strong-objection is made to the proposal to remove the site from the Green Belt. It is considered that there has been no change in circumstances (and certain) not the exceptional circumstances required to justify removal from the Green Belt) The current local plan policies specifically permit the specific developments proposed for the site. Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt, Military and museum proposals have not materially changed from the previous local plan. The Plan primarily refers to specific military, museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. Concern that the site is mentioned in the Shropshire Council Invest in Shropshire brochure, which it would appear, therefore, that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development. Current Covid 19 concerns make it premature to remove the land from the Green belt on the basis of increased economic activity, especially as there is plentiful supply of employment land in Telford and the M54 corridor
A1200B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No specific site detail is provided or assessments of the land made which make comment on the site difficult. Also concern the Plan doesn't specify the specific sites or needs of the MAAC on the site. It is noted that there was no mention in the Strategic Sites consultation response summary that any comment had been received from MAAC regarding a new site. No indication or evidence has been published as to when MAAC submitted details that led to Shropshire Council allocating this site subsequent to the Strategic Sites consultation, nor has that MAAC evidence been made available for the public to be able to assess the detailed case being put forward by MAAC to justify the sites removal from the Green Belt. Information received direct from MAAC representatives from the local community states that they do not require the size of land proposed to be removed from the Green Belt, nor intend all the development stated to be required for the site. A further concern is that the site is being promoted as part of the RAF Cosford Strategic Site and not as a one-off allocation for the MAAC. Shropshire Council have no controls to ensure that the site is only developed for MAAC. If it can be established that there is an overriding need for MAAC to relocate here, that the site proposed is the minimum necessary to meet that need, and that no alternative site is available outside the Green Belt or within the existing RAF Cosford, then the site should not be included as part of the RAF Cosford Strategic Site, but given a separate and specific location. This would be an identical situation to the M54 Service Area just a few miles away at Junction 4 of the M54. The service area was a specific allocation in the Green Belt because of the essential need for it at this particular site. For this reason, to ensure that planning control was retained for any other use of the site should the service area not proceed or cease in the future. Alternatively, if this proposal is considered as an exceptional circumstance such that the land would only be approved for MAAC development, then there is no reason why the development could not be approved through the planning application process, rather than being proposed as an extension to a strategic site. This would also enable stronger planning controls to be applied to ensure that the site was solely approved for, and developed for the intended purpose, which would not be possible as currently proposed in the Draft Pre Submission Plan.

A1235B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported.
A1235B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	Object to the removal of RAF Cosford from the Green Belt for the following reasons: since the Bridgnorth Local Plan (BLP) reviewed the Green Belt there has been no change in circumstances to justify releasing the RAF base from the Green Belt; BLP applied special policies for development on RAF Cosford and so the Green Belt designation did not prevent development on the base, current policies CS5 and MD6 could be used in a similar way to permit development for the RAF and its Aviation Academy, Museum and other the MoD development as a major contributor to the Shropshire economy; whilst a Defence Review is underway this is not a change in circumstance since the BLP was also prepared during a Defence Review and the Defence proposals are rarely fully implemented but if they were a CS5/MD6 policy approach would enable the necessary development to be delivered. This leads to the conclusion that there are no exceptional circumstances for releasing RAF Cosford from the Green Belt because the development required by the MoD could be permitted under local policies. Statements in the Local Plan indicate the intended purpose for releasing RAF Cosford from the Green Belt. This is to establish RAF Cosford as a Strategic Site inset into the Green Belt to permit future, large scale, windfall employment development in the M54 Corridor without requiring very special circumstances under national Green Belt policy. This purpose is evidenced by: RAF Cosford is identified on the Invest in Shropshire web-site as an opportunity site for future investment; removing the Green Belt designation is a predetermined decision to permit unrestricted employment development on the base under Policies SP2, SP12, SP13, SP14 and S1.1 (which requires employment land to be provided on the base) and this is endorsed by RAF Cosford being named in two of the Strategic Corridors. The Local Plan should identify whether RAF Cosford is being released to facilitate MoD developments to enhance the role of the base or to promote the site for future employment development through Invest in Shropshire. Removing the Green Belt designation will release 203ha of land but this should not happen until the SEGS 2017-2021 is reviewed and until the effects of Covid-19 on our employment land supply are better understood. There is a plentiful supply of employment land in Telford, Wolverhampton and South Staffs without releasing RAF Cosford and attracting an unrealistic range and scale of employment uses to the RAF base.

A1235B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Object to release of Green Belt land for the MAAC without evidence of their exceptional needs and justification for the amount of Green Belt land released for this purpose at Tong.</p> <p>There is no simple summary of the amount of land being released. This has to be calculated by comparing the Local Plan summary of all Green Belt land releases and the Green Belt land releases in the proposals for the RAF Cosford Strategic Site. These do not give a consistent figure because comparing the Preferred Option (203ha of Green Belt land) with the Reg 18 Plan (221ha of Green Belt land) suggests 18ha and comparing with the RAF Cosford Strategic Flood Risk Assessment (218ha of Green Belt land) suggests 15ha. The minimum amount of Green Belt land required by the MAAC must be identified.</p> <p>There is no authoritative summary of the stated purpose and the original date of the MAAC request to release Green Belt land for their use. MAAC must be required to explain: the detailed case for their new operating base and why they require Green Belt land instead of using land within RAF Cosford; the precise, minimum quantity of land required for their new operating base with a justification setting out the different uses and their individual land requirements within the new base. These are essential requirements to evidence any exceptional circumstances for the amount of Green Belt suggested for the new MAAC operating base.</p> <p>It appears the new operational base for the MAAC is being promoted in the RAF Cosford Strategic Site to provide additional land for any employment uses or possibly residential uses should the MAAC proposal not be implemented. The potential for unrestricted development following the removal of the Green Belt designation could possibly persuade the landowner not to sell the land to the MAAC. To prevent this happening, the MAAC must establish: a compelling case to locate their new operating base in the Green Belt; the minimum quantity of land needed for the new base; that there are no suitable, alternative sites within RAF Cosford or in locations outside the Green Belt.</p> <p>If Green Belt land is released for the MAAC it should be a separate allocation to the RAF Cosford Strategic Site. The MAAC allocation should retain the Green Belt designation and local policies should be used to permit development on the allocation. The Green Belt designation can then be used to control the use of the land if the MAAC does not relocate to the allocation or if the MAAC uses ceases in future.</p> <p>This approach to the MAAC development was used in the Bridgnorth Local Plan for the M54 Knowle Bank Services and to control development at RAF Cosford. This retains control over the use of the land where proposed uses are not implemented or existing uses cease to operate. However, if the MAAC proposal can establish exceptional circumstances for development in the Green Belt, why does it not form part of the RAF Cosford Strategic Site rather than being an extension to the proposals for the RAF base. If the MAAC came forward as a planning application within the Strategic Site, there is a strong case to ensure the land is only used for the MAAC base, which is more than the Draft Plan will achieve.</p> <p>Please note: Parcel References for this land are different in various documents which makes it difficult to identify the correct site assessments for the land.</p> <p>Explanations given in the Local Plan and at a public meeting identify some inconsistencies in the proposed land release for MAAC. It has been accepted by officers of the Council that the proposed land release is too large for the new MAAC base. It was then suggested that the additional land might provide further development land for MoD uses. However, the Green Belt Exceptional Circumstances Statement advocates the land only for use by the MAAC. The Draft Plan states that military uses will only be located within the RAF Cosford land being released from the Green Belt.</p> <p>The Council have also failed to identify: the employment land needs in the wider area; how additional employment development on unused land within the MAAC proposal might satisfy national and local policies on sustainability and how residential uses in this locality would be prevented especially given the degree of flexibility apparent in some of the Draft Plan policies.</p>

A1403B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported.</p> <p>There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A1406B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported. The decision to reject the proposals by Bradford Estate to release 500 acres of prime Green Belt land at Junc. 3 of the M54 is sound. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford? Proposal to release 36 acres of prime Green Belt land for development at the bottom of Neachley Lane is not supported as this land area exceeds the needs of MAAC even though their service is much needed. This release of Green Belt land will cause moderate to high harm to the Green Belt.</p>
A1407B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported.</p>
A1407B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Object to the removal of RAF Cosford from the Green Belt for the following reasons: since the Bridgnorth Local Plan (BLP) reviewed the Green Belt there has been no change in circumstances to justify releasing the RAF base from the Green Belt; BLP applied special policies for development on RAF Cosford and so the Green Belt designation did not prevent development on the base, current policies CS5 and MD6 could be used in a similar way to permit development for the RAF and its Aviation Academy, Museum and other the MoD development as a major contributor to the Shropshire economy; whilst a Defence Review is underway this is not a change in circumstance since the BLP was also prepared during a Defence Review and the Defence proposals are rarely fully implemented but if they were a CS5/MD6 policy approach would enable the necessary development to be delivered. This leads to the conclusion that there are no exceptional circumstances for releasing RAF Cosford from the Green Belt because the development required by the MoD could be permitted under local policies.</p> <p>Statements in the Local Plan indicate the intended purpose for releasing RAF Cosford from the Green Belt. This is to establish RAF Cosford as a Strategic Site inset into the Green Belt to permit future, large scale, windfall employment development in the M54 Corridor without requiring very special circumstances under national Green Belt policy.</p> <p>This purpose is evidence by: RAF Cosford is identified on the Invest in Shropshire web-site as an opportunity site for future investment; removing the Green Belt designation is a predetermined decision to permit unrestricted employment development on the base under Policies SP2, SP12, SP13, SP14 and S1.1 (which requires employment land to be provided on the base) and this is endorsed by RAF Cosford being named in two of the Strategic Corridors.</p> <p>The Local Plan should identify whether RAF Cosford is being released to facilitate MoD developments to enhance the role of the base or to promote the site for future employment development through Invest in Shropshire. Removing the Green Belt designation will release 203ha of land but this should not happen until the SEGS 2017-2021 is reviewed and until the effects of Covid-19 on our employment land supply are better understood. There is a plentiful supply of employment land in Telford, Wolverhampton and South Staffs without releasing RAF Cosford and attracting an unrealistic range and scale of employment uses to the RAF base.</p>

A1407B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Object to release of Green Belt land for the MAAC without evidence of their exceptional needs and justification for the amount of Green Belt land released for this purpose at Tong.</p> <p>There is no simple summary of the amount of land being released. This has to be calculated by comparing the Local Plan summary of all Green Belt land releases and the Green Belt land releases in the proposals for the RAF Cosford Strategic Site. These do not give a consistent figure because comparing the Preferred Option (203ha of Green Belt land) with the Reg 18 Plan (221ha of Green Belt land) suggests 18ha and comparing with the RAF Cosford Strategic Flood Risk Assessment (218ha of Green Belt land) suggests 15ha. The minimum amount of Green Belt land required by the MAAC must be identified.</p> <p>There is no authoritative summary of the stated purpose and the original date of the MAAC request to release Green Belt land for their use. MAAC must be required to explain: the detailed case for their new operating base and why they require Green Belt land instead of using land within RAF Cosford; the precise, minimum quantity of land required for their new operating base with a justification setting out the different uses and their individual land requirements within the new base. These are essential requirements to evidence any exceptional circumstances for the amount of Green Belt suggested for the new MAAC operating base.</p> <p>It appears the new operational base for the MAAC is being promoted in the RAF Cosford Strategic Site to provide additional land for any employment uses or possibly residential uses should the MAAC proposal not be implemented. The potential for unrestricted development following the removal of the Green Belt designation could possibly persuade the landowner not to sell the land to the MAAC. To prevent this happening, the MAAC must establish: a compelling case to locate their new operating base in the Green Belt; the minimum quantity of land needed for the new base; that there are no suitable, alternative sites within RAF Cosford or in locations outside the Green Belt.</p> <p>If Green Belt land is released for the MAAC it should be a separate allocation to the RAF Cosford Strategic Site. The MAAC allocation should retain the Green Belt designation and local policies should be used to permit development on the allocation. The Green Belt designation can then be used to control the use of the land if the MAAC does not relocate to the allocation or if the MAAC uses ceases in future.</p> <p>This approach to the MAAC development was used in the Bridgnorth Local Plan for the M54 Knowle Bank Services and to control development at RAF Cosford. This retains control over the use of the land where proposed uses are not implemented or existing uses cease to operate. However, if the MAAC proposal can establish exceptional circumstances for development in the Green Belt, why does it not form part of the RAF Cosford Strategic Site rather than being an extension to the proposals for the RAF base. If the MAAC came forward as a planning application within the Strategic Site, there is a strong case to ensure the land is only used for the MAAC base, which is more than the Draft Plan will achieve.</p> <p>Please note: Parcel References for this land are different in various documents which makes it difficult to identify the correct site assessments for the land.</p> <p>Explanations given in the Local Plan and at a public meeting identify some inconsistencies in the proposed land release for MAAC. It has been accepted by officers of the Council that the proposed land release is too large for the new MAAC base. It was then suggested that the additional land might provide further development land for MoD uses. However, the Green Belt Exceptional Circumstances Statement advocates the land only for use by the MAAC. The Draft Plan states that military uses will only be located within the RAF Cosford land being released from the Green Belt.</p> <p>The Council have also failed to identify: the employment land needs in the wider area; how additional employment development on unused land within the MAAC proposal might satisfy national and local policies on sustainability and how residential uses in this locality would be prevented especially given the degree of flexibility apparent in some of the Draft Plan policies.</p>
A1408B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported.
A1408B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Object to the removal of RAF Cosford from the Green Belt for the following reasons: since the Bridgnorth Local Plan (BLP) reviewed the Green Belt there has been no change in circumstances to justify releasing the RAF base from the Green Belt; BLP applied special policies for development on RAF Cosford and so the Green Belt designation did not prevent development on the base, current policies CS5 and MD6 could be used in a similar way to permit development for the RAF and its Aviation Academy, Museum and other the MoD development as a major contributor to the Shropshire economy; whilst a Defence Review is underway this is not a change in circumstance since the BLP was also prepared during a Defence Review and the Defence proposals are rarely fully implemented but if they were a CS5/MD6 policy approach would enable the necessary development to be delivered. This leads to the conclusion that there are no exceptional circumstances for releasing RAF Cosford from the Green Belt because the development required by the MoD could be permitted under local policies.</p> <p>Statements in the Local Plan indicate the intended purpose for releasing RAF Cosford from the Green Belt. This is to establish RAF Cosford as a Strategic Site inset into the Green Belt to permit future, large scale, windfall employment development in the M54 Corridor without requiring very special circumstances under national Green Belt policy. This purpose is evidenced by: RAF Cosford is identified on the Invest in Shropshire web-site as an opportunity site for future investment; removing the Green Belt designation is a predetermined decision to permit unrestricted employment development on the base under Policies SP2, SP12, SP13, SP14 and S1.1 (which requires employment land to be provided on the base) and this is endorsed by RAF Cosford being named in two of the Strategic Corridors.</p> <p>The Local Plan should identify whether RAF Cosford is being released to facilitate MoD developments to enhance the role of the base or to promote the site for future employment development through Invest in Shropshire. A1448B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	Strong objection to remove the site from the Green Belt. RAF and museum have been able to develop already under the current designation so there is no need to make a major change here. The current local plan policies specifically permit specific developments proposed for the site through policy CS5 and MD6; The document mentions the Defence Review, but this occurred during the last Local Plan and didn't require a change to the green belt policy so there is no clear conclusion this review will require a change in policy; So no exceptional circumstances have been demonstrated to require a change to Green Belt policy; While the plan refers to development of military, museum and a complementary Aviation Academy being developed these will not be compromised by the site being in the Green Belt; it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specified developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained. It would appear, therefore, that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development through its Invest in Shropshire brochure. In view of the current economic climate and effects of COVID-19 on the , economy. it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non-site related developments as proposed in the Plan. Additionally does not believe there is sufficient evidence for the Proposed Midlands Air Ambulance Charity site to be relocated, and if a move is required this could be accommodated through existing policies for the green belt as was the case with the M54 Service station at Shifnal. In conclusion the development proposals for the Costford site can be accommodated through existing policy and there is no need to remove the site through a change to Green Belt policy

A1506B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that there are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A1507B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that there are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>

The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A1518B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that 'it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>

In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A1609B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>The MAAC have put forward compelling justifications for their proposal but what is not as clear is the amount of land they require. While Shropshire Council has neglected to specify how large the portion of land allocated for the MAAC development is, it has been estimated at 36 acres. Most air ambulance bases in other parts of the country a between 3 and 5 acres apart from Wiltshire AA which is between 11 and 12 acres. It was not mentioned by SC during the previous consultation and the area in question is located outside the perimeter of RAF Cosford. Contrary to what is stated by Shropshire, in the RAF Cosford Strategic Site Plan, there are not any immediate plans to merge with Tatenhill AA base in Staffordshire. They cannot afford to wait for the outcome of the Shropshire Local Plan Consultation otherwise additional funding will be lost. In order to benefit from a government grant, development of the new base needs to commence by February/March 2021 at the latest. This development does need not to be part of the RAF Cosford Strategic Site Plan, as planning permission could be sought through the normal planning application process as they are now doing, and treated as permitted development within the greenbelt. Moreover, it raises questions regarding Shropshire Council's reasons for its inclusion, particularly as there will be at least 16 acres of the allocation not accounted for and available for other development if it is removed from greenbelt protection.</p>
A1656B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A1669B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that 'it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A1671B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that 'it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that 'it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A1779B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. A1792B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported.</p> <p>There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A1834B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site		<p>Consider that proposed site allocation RAF Cosford would result in a likely impact on the SRN, as such it should be subject to consultation with Highways England, and appropriately assessed in line with the Circular, to determine the extent of its potential impacts on the SRN. Depending on the scale of likely impact on the SRN, th applicant/developer may need to identify suitable mitigation measures.</p> <p>The type of potential impact on the SRN and immediate SRN junctions likely to be impacted by each site is summarised as follows:</p> <p>RAF Cosford: traffic; M54 J3.</p> <p>Whilst we have identified the immediate SRN junctions in close proximity to the site allocations identified in the pre-submission version of the Local Plan, where a likely impact is anticipated, it should be noted that the assessments should not be limited to these junctions only and a wider extent needs to be considered based on the scale of the proposed development.</p>

A1969B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	The level of growth is too high for Shifnal – services would not be able to cope. Proposals do not account for existing and proposed employment areas within 10miles of the settlement. Shifnal housing growth is concealed by using low housing density and is in addition to existing consents not yet built out. Proposed safeguarded land exceeds Shifnal's future housing needs and will destroy the village atmosphere. Employment proposals will exacerbate traffic problems/ gridlocks in the town centre. Additional commuters will inevitably use travel by car and use this route. Green Belt must be retained, particularly to the west. Site assessments have been inadequate, there are contradictions and missing evidence. The plan is contradictory and difficult to navigate. Support the decision not to proceed with development at Tong. 36 acre site for Air Ambulance appears excessive in comparison with other site:

The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A2039B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A2043B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A2047B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt ib respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A2051B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy C85 states that limited ' defence related development will be permitted, SAMDev policy MDS not only permits additional development for military uses but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MOD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities. there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current . policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the Future</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MDG in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt.</p> <p>1.5 The Plan primarily refers to specific military museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational Site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites.</p> <p>1.8 By defining the site as a Strategic Site without any restriction tying future - development proposals to those specifically stated in the Plan. proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that economic growth and investment will be . supported in...strategic sites; windfall class B employment development... will be supported... if located on a Strategic Site"; the Council's objective is to prioritise significant new development intoidentified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a significant location in the Shropshire Green Belt in respect of two of these corridors.</p> <p>1.9 The Plan also states that Shropshire Economic Growth Strategy seeks to promote a step change in the capacity and productivity of the local economy. The strategic corridors the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified Strategic Sites at RAF Cosford .</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at..RAF . Cosford...and future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt 'new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site".</p> <p>1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here.</p> <p>1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non site-related developments as proposed in the Plan</p> <p>1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21 ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site,- refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p>
A2055B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green, Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. This will give Shifnal growth of 54% compared with 23% for the Shropshire area.</p> <p>4.The proposed safeguarded land area (equivalent to 130 football pitches) far exceeds Shifnals future local housing needs and will destroy Shifnal village atmosphere for ever.</p> <p>5.The suggested scale of the industrial development will exacerbate'the trafj40g1rcidlock already experienced in the town centre at peak periods as the resulting additional commuters will inevitably travel by car using this route</p> <p>6.The green belt must be retained, especially to the west side, and protected to prevent Shifnal becoming another suburb of Telford.</p> <p>7.Most of the Shifnal land earmarked for housing and industrial is being removed from the green belt with inadequate assessment of j402oodinCg.02 generation, climate change, air quality, loss of prime farmland and other environmental considerations.</p> <p>8. The presentation of this plan is riddled with contradictions, missing evidence and an effective denial of public access.</p> <p>9. We support the decision not to proceed with the Bradford Estates proposals at Tong.</p> <p>10. The 36 acre provision for the Midlands Air Ambulance at Tong appears excessive. No current plans are available to justify the size of the development and both the existing site in Cosford and other air amulance sites are 2-3 acre</p>

A2308B28	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Support inclusion of RAF Cosford as a strategic site.</p> <p>Removal of the majority of RAF Cosford from the Green Belt and the support for defence related development provided via this draft policy will assist in reducing planning risk for MOD and will ultimately support delivery of national defence requirements at the station.</p> <p>Additional information should be added to settlement policies where a proposed allocation falls within a designated safeguarding zone. This will provide clarity for applicants and ensure potential impacts on defence interests are considered, in line with para 95 of the NPPF:</p> <p>RAF Cosford: Safeguard Zone - RAF Cosford Plan AT ANY DEVELOPMENT, 15.2m.</p> <p>Part 4 of the draft Policy: Proposes a requirement for a high-level overarching masterplan which will "be prepared and then adopted by Shropshire Council". This should be clarified to make it clear such a masterplan will be developed with involvement from landowners of the site. Suggest the sentence is amended to include "... working closely with landowners / site operators".</p> <p>Draft Criterion B: Support recognition that any development on the area of the site identified for the Midlands Air Ambulance Charity (MAAC) must not adversely impact on Ministry of Defence (MOD) operations at RAF Cosford.</p> <p>Criterion F: Recognise the need for appropriate pedestrian and cycle links within the site and support recognition that part of the site is restricted in terms of public access, given that it is "within the wire". There is also the issue of considering sustainable travel options into Albrighton, ensuring site users can safely access schools, shops, work and facilities in the village. Suggest the following is included at the end of this criterion: "Consideration should also be given to opportunities for improvements to pedestrian and cycle links into Albrighton."</p> <p>Draft Criterion G: There are a number of undeveloped areas within the boundary of the proposed RAF Cosford Strategic Site, concerned that this criterion could reduce opportunities for expansion if all "open space" (which is not defined) needs to be maintained or compensatory provision made. Furthermore, it is not clear whether sports pitches are included within the definition of open space for the purposes of this criterion. Should there be a change in operational requirement which led to a reduction in the requirement for sports provision at the Station, it would be inappropriate for the draft Local Plan to require any loss of such provision to be re-provided if there was no longer a defence related requirement for it. Consider this criterion lacks clarity and has the potential to be overly restrictive and should be removed.</p> <p>Criterion H: Recognise need for appropriate green infrastructure provision and support recognition that part of the site is restricted in terms of public access given that it is "within the wire".</p> <p>Criterion L: Concerned this is the same criterion as that for the two strategic settlements, therefore it does not acknowledge the key difference: this is an existing development which will remain in use by three separate key users (MOD, RAF Museum and the MAAC), not a site for wholesale redevelopment like Clive Barracks and the former Ironbridge Power Station. Reference to "the site" incorporating sustainable drainage could be read as requiring retrospective application of sustainable drainage features to the existing built form, which would be unreasonable and onerous. Suggest the first part of the criterion is amended to read: "Development proposals will look to incorporate appropriate sustainable drainage..."</p> <p>Criterion M: Para 138 of the NPPF sets out a requirement for compensatory improvements to environmental quality and accessibility of remaining Green Belt land to offset the impact of removing land from the Green Belt. Understand the purpose of this criterion is to address this requirement. However there is a need for clarity because it has the potential to be overly onerous, confusing and creates uncertainty given it refers to the requirements of Policy DP25: Green Belt and Safeguarded Land, however RAF Cosford Strategic Site is proposed for removal from the Green Belt. Furthermore, this criterion applies to "any development proposals", which fails to take into account that RAF Cosford is an existing, developed and operational site rather than a site which will be subject to wholesale redevelopment. Whilst major development could come forward on the site in the future as set out within the draft policy, there will also be more minor development associated with maintaining or extending the existing buildings on the site, or for meeting new requirements. The criterion as currently written could require minor applications for small-scale development to provide improvements to Green Belt boundaries, which appears overly onerous.</p> <p>The RAF Cosford Strategic Site differs from other sites allocated within the draft Local Plan as apart from the area to be utilised by the MAAC, the site is already significantly developed and will continue in its current use, rather than being a site for wholesale redevelopment. RAF Cosford is an existing, operational defence site and therefore it is already a viable site.</p> <p>Turning to future development, RAF Cosford is key operational site for the MOD and has an enduring role to play in national defence. Future proposals will be assessed as they come forward to ensure that they are affordable and represent value for money. Highlighted some concerns with the detail of draft Policy S21, should those issues be addressed there appears to be no significant issue with the viability or deliverability of the site from the MOD perspective, taking into account the policy requirements of the plan.</p> <p>Appendix 7 of the Draft Local Plan indicates that the RAF Cosford Strategic Site will be delivered over all time periods within the plan period and also post 2038. This assumption is considered to be correct. RAF Cosford is an existing, operational defence site and as such is likely to see development brought forward across the plan period and beyond, whether this is required to expand / intensify the defence use of the site or help to maintain / support existing site uses and activities.</p>

A2321B15	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>Policy S21: Strategic Site: RAF Cosford</p> <p>6.1 Vistry welcome the identification of RAF Cosford as a strategic site which as set out throughout these representation and within the report enclosed at Appendix 2, its allocation aligns with significant national and local support with a realistic opportunity that the site could build upon the wider success along the M54 growth Corridor such as that at i54.</p> <p>6.2 As identified in Policy S21 the strategic allocation of RAF Cosford: "will facilitate the sustainable growth of the local economy and contribute to meeting the employment needs of nearby Albrighton"</p> <p>6.3 A key element of the strategic allocation of RAF Cosford is the incorporation of the MOD plans to relocate the No.4 School of Technical Training from MOD St Athan to RAF Cosford as set out within the 'Better Defence Estate Strategy'. This is a considerable move which the Draft Plan identifies could see in the region of an additional 1,500 people (staff and student population) on site (subject to ongoing work).</p> <p>6.4 This increase in working population within RAF Cosford on top of the existing population and wider growth of the site through other new business activities resulting from the strategic allocation could be significant. This is particularly critical given a 'St Athan Development Brief' document prepared by the Welsh Government and MOD to inform the Vale of Glamorgan Local Plan process (July 2006), identified a site population of just over 10,000 personnel made up of trainers and trainees. While we appreciate that this data reflects operations at a given time, Vistry consider, that the identification of RAF Cosford as an 'internationally renowned facility' incorporating the relocation of the No.4 School of Technical Training, amongst a wide range of related industries, in a key location on the M54 growth corridor could lead to additional population on site far in excess of the rudimentary indicated 1,500 people.</p> <p>6.5 Vistry therefore consider that the full potential of the Strategic Allocation of RAF Cosford has not been realised making it impossible to fully appreciate the associated requirements for supporting infrastructure provision and specifically, the impact upon local housing need. There is clearly a correlation here between an increase in the working population at RAF Cosford, and: "Recognising the relationship between Albrighton and the nearby Strategic Site at RAF Cosford, with many employees and personnel based at RAF Cosford choosing to live in Albrighton" (Paragraph 5.15, Draft Local Plan)</p> <p>6.6 Alongside wider comments set out within these representations, Vistry consider that the draft plan should identify more sites for development in sustainable locations which will be able to assist in sustainably meeting the housing needs associated with the strategic allocation of RAF Cosford, such as land to the east of Newport Road, Albrighton.</p> <p>6.7 Even in the event that the Council do not agree with the wider comments around the suppression of housing delivery within Albrighton, Vistry consider that in the context of a relatively unquantified level of growth at RAF Cosford, the draft plan should as a very minimum identify additional sites for safeguarding in sustainable locations around Albrighton, which should RAF Cosford grow exponentially, sustainable and accessible sites are able to come forward and meet the associated identified housing need.</p>
A2328B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A2382B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	<p>No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A2383B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	<p>No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?</p>
A2405B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site		<p>Agree with draft Policy S21, subject to suggested amendments.</p> <p>Strongly support proposed inclusion of Midlands Air Ambulance Charity (MAAC) site as part of the RAF Cosford Strategic Site addressed within draft Policy S21.</p> <p>Proposed release of RAF Cosford (including the MAAC site) from the Green Belt as a Strategic Site is supported. The evident and robust nature of the exceptional circumstances cited by the Council in its evidence base is supported.</p> <p>Suggest the following amendments to draft Policy S21 to ensure it is positively prepared, fully justified and facilitates/ensures the viability and deliverability of planned investment at the site:</p> <ul style="list-style-type: none"> -Remove the requirement for a high level overarching masterplan to coordinate delivery of the RAF Cosford Strategic Site. Rather each component of the strategic site should simply develop a masterplan. Consider this requirement conflicts with para 16 of the NPPF which requires plan making to be deliverable and positively prepared, as it negatively impact on deliverability of the proposed allocation (particularly given the varying timescales for progressing developments and the need to engage multiple landowners in this process). Requiring masterplans for each component of the site and in compliance with overarching site guidelines would ensure deliverability and allow each component to come forward in accordance with individual operational timescales. Through compliance with overarching site guidelines and engagement between key stakeholders it can be ensured no conflict will arise and sustainable development is achieved. -Support wording of para 4b of the draft policy, which is clear and unambiguous. It also allows design flexibility for proposals. It is also consistent with para 16 of the NPPF. -Make it clear that any improvements to the railway station should be commensurate and viable (rather than appropriate). Remove reference to station car parking and instead reference facilities such as cycle parking. Consider that the day to day operations of the MAAC development will not have a material impact on Cosford Railway Station. Suggested amendments will ensure future development proposals are viable and the draft policy is deliverable (in accordance with para 16 of the NPPF); that any improvements are commensurate to arising impacts of each specific development; and include the potential for facility improvements including cycle parking. -Amend references to pedestrian and cycle links through the strategic site to through each component and individual masterplan across the strategic site. -Improvements to pedestrian and cycle links should be determined by available evidence at the Planning Application stage, rather than required within the draft Policy. -With regard to consideration/mitigation of noise, odour and contaminated land, this should be where required on the basis of survey evidence and reflect the nature of the development proposal. To ensure this draft policy requirement is clear, additional clarification is necessary (in accordance with para 16 of the NPPF). The MAAC element of the proposed Strategic Site is greenfield land where there is no known contamination. Need to ensure there is no onerous requirement for technical evidence where this is not necessary to ensure the achievement of sustainable development. -The explanation to the draft policy should be updated to more accurately reflect the purpose of the new MAAC headquarters. -Consider the extent of the proposed allocation (specifically the area proposed for the MAAC) should be amended to reflect the extent of the site required to provide the proposed headquarters/airbase. The size, amount and nature of development required to meet MAAC essential operational requirements have been very carefully considered and this process has identified a requirement for an area of approximately 8.3ha (smaller than the area identified within the proposed allocation). The extent of this area is identified within an Appendix to this representation. No further land is required to meet the essential operational requirements of the Charity. <p>The Local Plan Review must be positively prepared, justified, effective and consistent with national policy.</p>
A2413B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	<p>1. RAF Cosford excluding Air Ambulance Proposed Site</p> <p>1.1 A strong objection is made to the proposal to remove the site from the Green Belt. It is considered that there has been no change in circumstances (and certainly not the exceptional circumstances required to justify removal from the Green Belt), since the previous local plan to justify removing the site from the Green Belt. It is noted that despite being in the Green Belt, there has been significant developments permitted and developed at both RAF Cosford and Cosford Museum. There have been no difficulties in either the RAF or the Museum in getting permissions for developments associated with their activities within the current policies, so there is no need to make a major change to the Green Belt here.</p> <p>1.2 The current local plan policies specifically permit the specific developments proposed for the site. Indeed, whereas Core Strategy policy CS5 states that limited defence related development will be permitted, SAMDev policy MD6 not only permits additional development for military uses, but goes further than the Core Strategy and also permits redevelopment for economic uses appropriate as a major contributor to Shropshire's economy. This would, therefore, apply to all the development referred to as being proposed for RAF Cosford in the consultation document. The SAMDev policy in particular would not only allow for all the military development required by the MoD and RAF, but also that required for the Museum and the proposed Aviation Academy.</p> <p>1.3 Reference was made in the previous consultation, to the Defence Review. This was exactly the same situation that applied when the previous local plan was being prepared and adopted with the site remaining in the Green Belt as a major developed site with specific policies allowing developments that would not compromise the future uses of the site. There was a defence review being implemented at that time, but national policies changed. With changes in Government and national priorities, there is no reason based on recent history, to assume that any current Review will be fully implemented. Even if it is, then current policies which have already been seen to facilitate any development required at the site, will meet future needs without the need to compromise the Green Belt status of the site. If the review changes as it has on previous occasions, then by retaining the Green Belt, gives planning control over how the site should be developed in the future.</p> <p>1.4 There are, therefore, no exceptional circumstances, as required by national planning policy, to permit the removal of the site from the Green Belt. Military and museum proposals have not materially changed from the previous local plan, existing planning policies have not prevented or delayed appropriate development at the site, and those self same policies, especially policy MD6 in SAMDev, will continue to permit all the developments outlined in the current consultation without requiring removal from the Green Belt. 1.5 The Plan primarily refers to specific military, museum and a complementary Aviation Academy and in an e-mail of February 2019, a representative for the site stated that are no plans for the allocation of any MOD land at RAF Cosford for alternative uses. As stated above, the Base's development for these purposes has in no way been compromised by its Green Belt status and current planning policies fully support and allow for these future development proposals, so that there has been no change in circumstances and hence no new exceptional circumstances to support removal from the Green Belt.</p> <p>1.6 However, despite the statements suggesting specific developments only for the site, it is noted that there are several policies and comments in the Plan that support unrelated economic development schemes to be allowed on the Base, through its definition as a new Strategic Site. It would appear, therefore, that the prime reason for the release of Green Belt is not for the specific developments outlined in the Plan, but to allow for future unplanned development to be allowed without having to first justify exceptional circumstances for such development if the Green Belt status was maintained.</p> <p>1.7 It is noted, for example that since early 2019, RAF Cosford has been advertised in Shropshire Council's Invest in Shropshire brochure and on their website as a future investment opportunity site. It is described as a long term aspirational site for mixed use and as a potential new employment site that is subject to local plan review, but that the Council will consider making the site available for development in response to market demand. It would appear, therefore, that Shropshire Council had already pre-determined the site for removal from the Green Belt, as advertising its potential for development (with no restriction to military, museum use and complementary use only) well before the Strategic Sites Consultation in July 2019. Shropshire Council have submitted no evidence of this market demand that responded them to make the site available for development, in accordance with the statement on their investment opportunity sites. 1.8 By defining the site as a Strategic Site without any restriction tying future development proposals to those specifically stated in the Plan, proposed policies in the Plan permitting future employment development on such Sites, would allow for unrestricted additional employment development here if the site was removed from the Green Belt. Thus the Plan states that "economic growth and investment will be supported in...strategic sites"; "windfall Class B employment development... will be supported... if located on a Strategic Site"; "the Council's objective is to prioritise significant new development into ...identified Strategic Sites to create growth zones along the strategic corridors. RAF Cosford is stated to be a "significant location in the Shropshire Green Belt" in respect of two of these corridors. 1.9 The Plan also states that "Shropshire Economic Growth Strategy seeks to promote a 'step change' in the capacity and productivity of the local economy. The 'strategic corridors' have the potential to support this economic objectivethey may function as the location for the release of significant sites that are suitable and accessible for inward investment on identified 'Strategic Sites' at RAF Cosford ...".</p> <p>1.10 The Plan states that "it will be essential when promoting development in the Strategic Corridors to essentially promote the Strategic Sites identified at...RAF Cosford...". And "future additional development at this strategic site would be expected to take place within the area of land inset within the Green Belt"; "new employment development to serve the Albrighton community will primarily be delivered at the RAF Cosford Strategic Site". 1.11 Shropshire Council state that RAF Cosford has been identified as a strategic site to facilitate its role as a centre of excellence for Defence training, to form a specialist aviation academy, for co-locating other MoD services and expansion of the Museum. However, it is clear from the statements quoted from the Plan above and the Council's Invest in Shropshire brochure and investment opportunities webpage, that Shropshire Council want the site removed from the Green Belt so that there is no Green Belt issue to control whatever future employment development the Council want to allow here. 1.12 In view of the current economic climate and effects of Covid-19 on the economy, it is premature to remove such large areas of land from the Green Belt on the sole basis of an economic objective that is based on a policy that expires in 2021 and takes no regard of the likely long term impacts of Covid-19 on the scale of likely future new employment developments. Exceptional circumstances do not exist, therefore, to justify the release of 203ha of land from the Green Belt, especially for non-site related developments as proposed in the Plan. 1.13 Attention is drawn to the plentiful supply of employment land already committed in neighbouring authorities within the Strategic Corridor. These include 21ha at Hortonwood, Telford, 24ha at Featherstone, 24ha on the second phase of i54 adjacent to Junction 2 of the M54, 10ha at Newport Shropshire and the West Midlands Interchange which is said would create 8500 jobs. In view of this existing supply of employment land, it is unrealistic to expect RAF Cosford to attract strategic employment outside its specific local needs, and so would not constitute exceptional circumstances for the removal of the site from the Green Belt.</p> <p>2. Proposed Midlands Air Ambulance Charity Site</p> <p>2.1 Different parcel reference numbers appear to be given to this site in separate documents but no clarification is given to confirm which numbers apply to this site and no plan is submitted to clearly show what assessments and comments apply to this site. The public should not be expected to search through various documents to try and establish what assessments and comments apply specifically to the site.</p> <p>2.2 There is also concern that the Plan does not specify the size of land being proposed or how this relates to the specific needs put forward by MAAC. It is assumed from the difference in size of land to be removed from the Green Belt between the Preferred Sites and current consultation that the site is 18ha (203ha to 221ha). However, the Flood Risk Assessment for RAF Cosford which includes the MAAC site, refers to a total site of 218ha, which would give the MAAC site an area of 15ha. It is essential if Green Belt land is to be removed that there is no discrepancy in the precise amount of land proposed to be removed and that the minimum amount of Green Belt is used to meet the stated need.</p> <p>2.3 It is noted that there was no mention in the Strategic Sites consultation response summary that any comment had been received from MAAC regarding a new site. No indication or evidence has been published as to when MAAC submitted details that led to Shropshire Council allocating this site subsequent to the Strategic Sites consultation, nor has that MAAC evidence been made available for the public to be able to assess the detailed case being put forward by MAAC to justify the site's removal from the Green Belt. Because this is not brownfield RAF Cosford land but greenfield Green Belt, it is considered essential that the specific needs of the MAAC can be assessed, to justify the allocation of this site. Particularly, there is no evidence given from the MAAC saying the minimum area of land they require and how this is justified amongst the different elements of their requirements for the site. Without such justification, exceptional circumstances for the release of this amount of land cannot be proven. 2.4 Information received direct from MAAC to representatives from the local community states that they do not require the size of land proposed to be removed from the Green Belt, nor intend all the development stated to be required for the site. This supports the concerns that written evidence from the MAAC should be required to be made public so that there is no ambiguity in their specific needs for exceptional circumstances to be established. 2.5 A further concern is that the site is being promoted as part of the RAF Cosford Strategic Site and not as a one-off allocation for the MAAC. Shropshire</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2478B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site		No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A2487B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Agree	I support the decision not to proceed with the Bradford Estates proposals at Tong. The 36 acre provision for the Midlands Air Ambulance at Tong appears excessive. No current plans are available to justify the size of the development and both the existing site in Cosford and other air ambulance sites are 2-3 acres.
A2506B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Draft Policy S21 RAF Cosford Strategic Site	Disagree	No development at Tong is supported. There is no justification for the scale of the MAAC site at Tong? or RAF Cosford?
A0004B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Concerned about availability of evidence base and impact this has on 'proper' consultation.
A0008B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Supports growth. This form of positive planning has supported our own long term investment in North Shropshire where we are investing in a new 132kV circuit from Oswestry substation to an upgraded Wem substation. The injection of additional capacity into North Shropshire will support the levels of growth proposed. Furthermore, the improvements will facilitate other changes needed in the network to meet new demands on the network in transitioning to net zero and therefore contribute to meeting those objectives in the Local Plan for creating a more sustainable environment.
A0015B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	I would like Shropshire Council to commit in the Local Plan that all cycling infrastructure in Shropshire (whether funded by the council, a private organisation or others) will be built to the standards presented in LTN 1/20 (this document has only just been released by the Department for Transport).
A0031B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Asks whether Boraton Bank is in the Plan.
A0037B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Shropshire Council have not published any Statements of Common Ground (SOCG) on the progress of their Duty to Cooperate on the single cross-border issue of supporting unmet housing in the emerging Black Country Plan. Paragraph 2.24 of the Draft Shropshire Local Plan (DSLPL) states that "Positive conversations with relevant bodies have been ongoing over the course of the preparation of the Plan, and ahead of the submission of the Plan for Examination a full set of Statements of Common Ground will be made available". This position is contrary to para 27 of the NPPF and current NPPG which require SOCGs to be made public throughout the plan-making process and before publication of the draft plan. Only 5 letters covering correspondence between Shropshire Council and the Association of Black Country Authorities (ABCA) have been specifically made available to the public in the index of the main evidence base documents. However, a more significant letter dated 27 February 2020 has been included under Appendix 1 of the Green Belt Release: Exceptional Circumstances Statement. This detailed and more up to date letter should have been included with the other correspondence in the the index of the main evidence base documents as it is unlikely that the public will have had the time to read through and consider all of the supporting Local Plan documents. This letter calls for responses by 20 March 2020 and copies of these should also have been published. It appears a very generous offer by Shropshire Council to include a provision of 1,500 dwellings to support the housing needs of the emerging Black Country Plan. The information included in the consultation document is not sufficient to form an opinion without the publication of the Statements of Common Ground and these should have been placed in the public domain over the course of the preparation of the Local Plan. The published consultation documents are silent regarding any reciprocal arrangements which have been proposed/agreed with adjacent Local Authorities and which will benefit Shropshire Council. It appears to be a very generous offer by Shropshire Council to include a provision of 1,500 dwellings to support the housing needs of the emerging Black Country Plan. The information included in the consultation document is not sufficient to form an opinion without the publication of the Statements of Common Ground and these should have been placed in the public domain over the course of the preparation of the Local Plan. The published consultation documents are silent regarding any reciprocal arrangements which have been proposed/agreed with adjacent Local Authorities and which will benefit Shropshire Council. In order for the public to understand the positive conversations and negotiations that have taken place over the past 3/4 years it is essential that all SOCGs are published before the end of this consultation period.
A0045B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Pre-submission Plan does not meet the Shropshire Test SP1. We need affordable housing that is zero carbon emission and enhances local areas. The Council should not be promoting housing schemes that just lead to more road pollution and the detriment of the environment.
A0045B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Consultation process is not accessible to everyday residents. Instructions are unfriendly and unhelpful. Process seems to be designed to put people off. Process is flawed and planned developments should not go ahead.
A0068B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Not clear how feedback is to be submitted. Wealth of technical and opaque documents not accessible to non-experts.
A0068B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Questions how environmental issues are considered in allocation of land for housing; traffic, services and facilities, public transport. Development leads to more traffic which causes pollution. Council's zero carbon aspirations are just words. The needs of young adults and poorer people are not considered - we desperately need more affordable homes. The Plan does not include the North West Relief Road which would only generate more traffic and is unnecessary because decent retail provision should have been made on the west side of town. The same applies to commercial traffic.
A0101B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Support the Strategic Policies, particularly SP2 and SP5. 30,800 dwellings is appropriate and that the strategic proposals for the distribution of development is sound.
A0101B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	From our knowledge of many of the sites concerned we believe that the allocations proposed are generally sound and well-reasoned.
A0114B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	National Grid should be consulted on any Development Plan Document (DPD) or site-specific proposals that could affect National Grid's assets (gas or electricity transmission). National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets and guidance is available during your policy development.
A0120B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	The Council should ensure that its policies are appropriately updated before enabling any future development in order to provide more exacting road specification requirements and deal with residential light pollution issues caused by streetlighting policy

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0123B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	I write to express grave concern about a lack of clarity in the process of consultation on the Draft Local Plan for Shropshire and to express equal concern about the inaccessibility of the evidence and the format for responding. I express this concern after having been personally involved in organising procedures for consultation over many decades. I also do so on the basis of comments from numerous members of the public some of whom, including graduates, have sought my help to navigate this confusing consultation process. I recognise the unhelpful staff to which your department has been subjected and the pressure that colleagues must experience. However, I would suggest that this simply makes it even more important to give careful attention to the clarity of the questions asked and the nature of the responses required in the consultation. For ease of comprehension I will briefly outline my main concerns. 1. The consultation took place amid the Covid-19 emergency which limited contacts 2. The time schedule was limited and fell across a holiday season 3. The online nature of consultation made it inaccessible to many 4. Those able to access the system had to trawl through a large complex document 5. Many wishing to respond on local issues found its broad nature intimidating 6. The language used in the documents made it inaccessible to many 7. The pages on the document did not match those in the index 8. Comment realistically demanded the ability to print relevant sections for reference 9. The response forms were themselves complex and off-putting 10. Reference to a guidance document added further complexity 11. The tick boxes on Form B Q1 were liable to misinterpretation 12. On Form B Q2 it was not clear how many boxes should be filled 13. On Form B Q3 the questions are potentially ambiguous 14. The request for evidence and information was off-putting to many 15. The 034Wvoerdrio0n3d5id not always provide for paragraphs to aid clarity 16. There were some problems in successfully submitting the forms 17. There was no fail-safe formal acknowledgement of submissions Sadly, the potential problems with this Consultation process do not end there. The lack of clarity in the questions means that the public is denied any opportunity to assess the way in which the responses are tabulated and judgments made on their validity. This is a particular concern where purely local issues are concerned where respondents have been denied the opportunity to provide simple feedback. It is perhaps not surprising, therefore, that some have begun to believe that the consultation process was deliberately made obscure, and non-specific in terms of local issues, in order to ensure that the plans in relation to particular localities are not subject to any major change. I trust that you will receive feedback on the nature of these criticisms and will ensure that your processes are designed to be more inclusive and comprehensible in future. It is also vital in the interests of local democracy and accountability that respondents to any consultation can have their voice heard.
A0140B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Key concern is risk of surface water flooding not taken into account as a significant environmental/physical constraint at stage 1 of SLAA, an omission which results in the Local Plan Partial Review being potentially unsound
A0159B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	All DPs should contain an explicit link to the ways they will assist in achieving net zero carbon. This is unacceptable and DPs 1-11 inclusive should be re-written to align them with the urgent need to get to net zero carbon
A0167B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Paragraphs 2.18 and 2.20 Support the Council's aspirations to create a supportive environment for economic growth and the need to carefully balance protection of the local environment and historic assets. Disagree that identification of sites have had regard to a full balance of considerations, with the aim of achieving sustainable development. The extent and nature of development/site allocations in and around Oxon Hall Caravan Park are not deemed to represent sustainable development, and will in fact have detrimental impacts on existing businesses and the wider local environment. Need to carefully consider protection of the local environment as the Local Plan progresses and ensure policies are prepared to ensure development proposals do not have detrimental impacts on adjacent land uses and the long term viability of Oxon Hall Caravan Park.
A0167B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Support the principle of the vision which alongside Plan aspirations should form a material planning consideration. Specifically the aspirations of the vision to resist development which negatively impacts on public safety, health and economic productivity. The extent and form of development proposed at SUE West and within the NWRR will result in detrimental noise and light pollution to Oxon Hall Caravan Park - destroying the tranquil and relaxing visitor experience. Concerned these proposals will undermine the future of this existing business in the longer term.
A0175B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		The line is not 'former' but in use and under re-construction. The Ordinance Survey are already in the process of correcting their maps as they regard the line as 'preserved'. Retrieving data. Wait for a few seconds, then try cutting or copying again. Since 2016 and the transfer of the Transport Works Act Order to the Cambrian Heritage Railway, the entire line should be considered operational. Any matter involving planning adjacent to the railway must take that fact into consideration and the references changed to 'Railway' so that nobody is under the illusion that trains no longer run, because they do, and this may impact on consideration of use, access and therefore viability of adjacent development
A0176B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		The map wisely shows the line of the Shrewsbury and Newport Canal. I believe that the Montgomery Canal and the Llangollen Canal should be shown similarly. The later canal should include the Whitchurch Branch of the Canal which is subject to detailed restoration proposals. In all cases the canal network is an essential & vital part of the canal network providing employment & environmental benefits to the area.
A0187B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Plan is not fit for purpose. It does not provide a positive framework necessary to guide the county towards a net zero carbon economy. There is a lack of detail, there are no targets for how much and by when and no baseline data on the county's current carbon footprint. It does not contain strategies in the 4 key areas of reducing energy demand, developing and supporting more renewable energy, promoting more plant based diets and increasing forested land, using land for carbon capture, increasing biodiversity and reducing livestock use. The need to retrofit buildings should be included. A strategy for moving people's diets to more plant based and low carbon foods should be included as part of DP30.
A0187B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate change.
A0187B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake.
A0187B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The requirement to minimise carbon emissions should be included in SP5, SP6 and SP9 in the same way as it is in SP7 and SP8
A0187B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The local plan must include details, targets and timescales for reducing car use in the county – and it doesn't. Much more support must be given to promoting and signing cycling and walking to reduce carbon emissions. A major shift is needed in transport planning to achieve active travel.
A0187B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Converting to an electric public bus service should be included in this plan.
A0187B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed.
A0188B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Plan is not fit for purpose. It does not provide a positive framework necessary to guide the county towards a net zero carbon economy. There is a lack of detail, there are no targets for how much and by when and no baseline data on the county's current carbon footprint. It does not contain strategies in the 4 key areas of reducing energy demand, developing and supporting more renewable energy, promoting more plant based diets and increasing forested land, using land for carbon capture, increasing biodiversity and reducing livestock use (respondent ref form 2). The need to retrofit buildings should be included (respondent ref form 6). A strategy for moving people's diets to more plant based and low carbon foods should be included as part of DP30.
A0188B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	All the local plan housing development strategies (not just SP5) require details of the standards of design that the council requires of developers in response to climate change (respondent ref form 3).
A0188B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake (respondent ref form 4)
A0188B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. Re-use of existing resources reduces carbon emissions (respondent ref form 5)
A0188B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The requirement to minimise carbon emissions should be included in SP5, SP6 and SP9 in the same way as it is in SP7 and SP8 (respondent ref form 7)

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0188B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref form 8)
A0189B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	CO2 emissions from transport are rising. The local plan does not set out a clear framework on how this will be tackled. Consequently the local plan must include details, targets and timescales for reducing car use in the county – and it doesn't (respondent ref form 9). A major shift in transport planning to achieve active travel is required to give equal and higher priority to walking and cycling compared to car use. The plan includes an excellent graphic depicting this, but nothing concrete or tangible in the plan to make it happen (respondent ref form 10). As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county (respondent ref form 11). Converting to an electric public bus service should be included in this plan (respondent ref form 12).
A0189B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed (respondent ref form 13).
A0231B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Since the Plan very clearly recognises the canal network crosses many threads & is extremely important and worth protecting and enhancing with reference under many different sections/ policies, this importance would be better reflected by a canal specific section The plan could very usefully define these canal corridors (Llangollen Canal, Montgomery Canal, Shrewsbury & Newport Canal and Whitchurch Branch Canal) so that the relevant lines can be easily identified. The plan should include a policy which would explicitly oppose any developments which would detract from the restoration proposals and any proposals which would harm the natural or historic environment of the corridors. This would provide clarity & avoid the danger that protection of the canals undermined by conflicting interpretations of the different policy areas.
A0238B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Document Reference BTC7: Para 2.25 states "The availability of sufficient infrastructure underpins good plan making". However, not aware of any 'Infrastructure Plan' to support the draft Local Plan or that the infrastructure required to implement the plan has been identified and costed
A0238B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Document Reference BTC10: Ref Para 5.63 implementation Plan to support the regulation 18 draft pre-submission needed. The Place Plan is inadequate for strategic policy making. Allocates funding after development has occurred, rather than planning infrastructure in advance and ensuring required funding is/will be available.
A0238B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Document Reference BTC18: Reasoning behind the growth proposed for each market town in Shropshire is not explained in the Plan or supporting documents
A0238B33	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	Document Reference BTC7: Para 2.25 states "The availability of sufficient infrastructure underpins good plan making". However, not aware of any 'Infrastructure Plan' to support the draft Local Plan or that the infrastructure required to implement the plan has been identified and costed
A0238B49	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Cover letter: Democratic & response process for the Town Council challenged by Covid 19 circumstances in particular need to consider significant late change to proposals for Bridgnorth & lengthy document via Zoom & preference would have been for in person meeting. Additionally consultation/engagement opportunity with and by the developer limited by late submission & circumstances.
A0254B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Rep refers to Housing Strategy. Have forwarded the response to the correct inbox.
A0269B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Page 6 Shropshire's Character Support objective of meeting housing needs having regard to strong sub regional ties to Herefordshire
A0269B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Page 7 Shropshire's Character Support policy approach based on Place Plan Areas
A0306B060	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	We would like to see more regard for the Shropshire Environment Network (SEN), both in terms of limiting impacts on priority habitat areas (core areas of SEN), in addition to identifying areas for biodiversity enhancement and net gain (restoration areas of SEN). As well as mitigation for impacts on SACs, we would like to see impacts on local wildlife sites, SWT reserves, and national and local nature reserves be accounted for. Strengthen wording wherever 'where possible' is used. Settlement policies only make up a small proportion of housing allocations; we are concerned by the areas of windfall sites and the impact these may have.
A0306B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The draft plan lacks ambition and policy wording is weak, a combination that is unlikely to deliver the biodiversity gains and carbon reductions that are needed. There is not a balanced approach to sustainability as economic growth is given priority. This is reflected in the pursuit of higher levels of growth than are actually needed. In turn this places significant pressures on towns and villages in the county that cannot sustainably accommodate the housing and employment allocations forced upon them. Main concerns: There is a lack of reference to the 25 Year Plan for the Environment, the Environment Bill, and Nature Recovery Networks; Support in the plan for the North West Relief Road and HS2 - both environmentally damaging schemes that we have major concerns with; The plan is unambitious with its target of increasing land for biodiversity by 10% - we believe that 30% of the land should be under recovery for biodiversity by 2030: Inconsiderate of accessible local natural green space for people: Underwhelming solutions to the Ecological and Climate Change Crisis: Development where a release of greenbelt would cause moderate or above risk of harm is unacceptable: Reliance on significant levels of housing being accommodated on windfall sites.
A0306B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.19 There is reference to strategies, some still in draft format, but no reference to Local Nature Recovery Strategy. Given the contribution of transport to Climate Change we have particular concerns relating to the absence of an up to date and adopted Local Transport Plan.
A0306B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	Para 2.20 We welcome the recognition of the need to respond to the Climate Emergency, and the aim to achieve sustainable development. There is an Ecological and Climate Emergency; this weighting should be duly considered in the 'full balance of considerations'.
A0306B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.28 There is an Ecological and Climate Emergency; moving towards a zero carbon economy should be occurring now to be ideally be achieved by 2038. We would suggest rewording along the following lines: 'as Shropshire moves towards completing it's progress to a zero carbon economy'.
A0310B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP10, SP11 and DP9: These policies would allow for unplanned development outside settlements. These policies specifically allow for new economic development and windfall development in the countryside and particularly adjacent to settlements in a strategic corridor and in a strategic site, undermining the stated purpose for removing the Green Belt protection. The TC supports the decision not to allocate land at J3 of the M54 as a garden village in this Plan, but notes that the wording of this policy would still allow such a development to be approved subsequently in the future. DP9 also states that Cosford (not RAF Cosford) is a key centre in the East/M54 Strategic Corridor. There is no need to in effect allow for any employment development outside settlements. These policies undermine the status of Green Belt and Safeguarded Land protection
A0310B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The Town Council question the adequacy of consultation and whether it has been supported by proportionate and appropriate evidence as required by several legal and procedural requirements. Allocation of sites have not been properly assessed. There has been pre-determination with some proposals in the Plan. Only 8 weeks has been allowed and this over the main summer holiday. It is considered that this inconsistency in consultation period is legally unsustainable. Several pieces of evidence quoted in the Plan were not put on the evidence base website at the start of the consultation period and nearly half has not been put on the evidence base. It is not considered that evidence has been submitted to show that consultation responses have been taken into account and why decisions have been taken contrary to those responses. Since February the LDS available for the public to view on their website is June 2019. Inadequate time for the TC to respond to Green Infrastructure Strategy. Statement of Community Involvement (SCI) has not been updated since 2011
A0311B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system
A0311B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated
A0311B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan
A0311B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete
A0311B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0311B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:“ The design and layout of development positively responds to our changing climateand maximises any opportunities to minimise carbon emissions and make efficientuse of water, in accordance with relevant policies of this Local Plan. “Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A0311B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an ‘extensive’ bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A0318B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Agree with the Plan in general, however the LPA should assess the impact of the White Paper consultation on the Local Plan. We agree with the government that Local Plans should be focussed on where real value can be added. Plans should set clear expectations on what is required on land that is identified for development, providing confidence in future growth. The simplification of the planning process could impact the delivery of the Shropshire Local Plan and therefore delaying the submission of the Plan would provide time to consider the implications of any significant changes to the national planning system. The proposed submission of the Shropshire Local Plan is timetabled to take place in early 2021; therefore, prematurity of the potential revisions should be considered. The amendments to the Infrastructure Levy are unclear in the emerging policy document how this will be accommodated in Shropshire.
A0323B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete (respondent ref; Form 4)
A0323B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding.It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county’s carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether (respondent ref; Form 5)
A0323B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:“ The design and layout of development positively responds to our changing climateand maximises any opportunities to minimise carbon emissions and make efficientuse of water, in accordance with relevant policies of this Local Plan. “Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A0323B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an ‘extensive’ bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A0323B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system (respondent ref; Form 11)
A0323B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The need for electric vehicle charging points is acknowledged in a number of places .Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn’t this aim – and more - included in the local plan The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them.A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated ((respondent ref; Form 12)
A0323B13	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It is of great concern that the strategies supporting Shropshire’s economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A0323B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The way we use land is one of the four key net carbon zero strategies. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. We have enough land in the UK not only for producing food but to offer new potential income streams such as biomass. Forest area could be doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas (respondent ref; Form 16)
A0341B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county’s carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether (respondent ref; Form 5)
A0341B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The greatest energy demand of buildings is in the heating of homes – so reducing energy demands of existing homes should be the highest priority for carbon emissions reduction within the housing sector.The need to retrofit existing buildings is mentioned just once in the plan within SP3:“ Promoting fabric energy efficiency, including as part of the retrofitting of existing buildings.”This significant step to reduce carbon emissions needs to have clear targets & timescales for all properties within council’s responsibility and to commit to active advise, encourage and support home owners. Leadership and creative thinking needs to be applied; a reduction in council tax to help offset costs to home owners may be cheaper in the long term than doing nothing.To achieve net zero carbon we will need to reduce the energy demand from our buildings and industry, and put in place systems that allow us to meet this reduced energy demand with renewable energy and carbon neutral fuels.To reduce the energy demand for heating we must improve our building stock. By reducing the heat our buildings lose we will reduce the energy needed to keep them warm. Heat loss from buildings can be reduced by:• Improving insulation. • Reducing draughtiness. • Recovering heat from air leaving the building through ventilation (respondent ref; Form 6)
A0341B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:“ The design and layout of development positively responds to our changing climateand maximises any opportunities to minimise carbon emissions and make efficientuse of water, in accordance with relevant policies of this Local Plan. “Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A0341B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an ‘extensive’ bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A0341B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system (respondent ref; Form 11)
A0341B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The need for electric vehicle charging points is acknowledged in a number of places .Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn’t this aim – and more - included in the local plan The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them.A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated ((respondent ref; Form 12)
A0341B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It is of great concern that the strategies supporting Shropshire’s economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A0355B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Respondant feels that this consultation has been designed in such a way that deters Shropshire residents from responding. And that planning agents will be benefiting from siter promoters by submitting support preferred sites. Local residents will countenance the likely cost of professional help in negotiating the consultation
A0356B04	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete (respondent ref; Form 4)
A0356B05	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding.It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated ((respondent ref; Form 12)
A0356B13	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A0356B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The way we use land is one of the four key net carbon zero strategies. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. We have enough land in the UK not only for producing food but to offer new potential income streams such as biomass. Forest area could be doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas (respondent ref; Form 16)
A0413B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	This draft plan is not ambitious enough and is not giving due consideration to climate change. The council has agreed to declaring a climate emergency and needs to respond with policies that deal with the requirements for adaptation and mitigation over the time period of the plan. The UK climate change act has been amended to include reaching Net Zero Carbon emissions by 2050 or earlier if possible. The council Climate Change strategy is being developed with a target for Net Zero by 2030 for the council estate. While the Shropshire climate action partnership is setting the target for Net Zero Carbon by 2030 for the wider Shropshire emissions. The local plan should therefore have full consideration of Climate change, Protection of the natural environment and also the needs for a Sustainable Low carbon economy. These priorities must be reflected in all the Strategic and Development policies, as outlined in the NPPF.The sustainability appraisal did not show any significant negative effects and we question if some issues were not given complete consideration, such as rising carbon emissions. It is important that reviews of the plan consider the levels of demand for developments and how fast the communities need to grow. The changes to government planning policies and the requirements to deal with climate change will need to be addressed. This draft plan is only good in certain sections and is weakened by the lack of connection with other Policies, many of which are waiting to be completed, including the Climate Change Strategy,the Rural Strategy, the Housing Strategy and the Local Transport plan. Hopefully these policies will soon be available to link with the Local Plan and subsequent reviews.
A0433B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Concerned about the complexity of the consultation response process.
A0457B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Support the decision not to proceed with the Bradford Estates proposals at Tong.
A0469B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Support decision not to proceed with Bradford Estates proposal
A0486B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Gases that contribute to climate change are more than just carbon. The LPR does not reflect the Council's declaration of a Climate Emergency. There is no encouragement for the generation of renewable energy. The Plan does not give climate change the over-riding significance it deserves. There is no convincing evidence that suggested policies will deliver carbon reduction.
A0486B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The TRICS database should have been used in the decision over the location of new homes.
A0486B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It was our understanding from discussion with officers that landscape and wind power studies would take place to define an area where windfarms could be suitable for development. Shropshire Council subsequently commissioned no studies of the wind energy potential to fulfil this statement and have not provided any explanation for this U turn and abandonment of the potential development of wind power other than that it is for Neighbourhood and Community Led Plans to determine. This clearly is practically unworkable and is clearly a negation of the Council's responsibility to ensure that net zero emissions are achieved in Shropshire. The wind energy resource in Shropshire is of regional importance. The Council's Climate Change Strategy Framework envisaged the development of wind energy for both business and community needs 12 months ago. This Plan prevents this from happening. The Plan is not compliant with Section 19 (1A) of the Planning and Compulsory Purchase Act 2004 which requires the development and use of land in the LPA's area to contribute to the mitigation of, and adaptation to, climate change. We consider the Plan to be unsound in its omission of areas suitable for wind energy.
A0491B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Consultation timing over the summer holiday was very bad and community have had no time to respond.
A0501B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climateand maximises any opportunities to minimise carbon emissions and make efficientuse of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A0501B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.12 " There are 15 other railway stations across Shropshire and an extensive bus network which together aim to provide accessible public transport to residents and visitors. "I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The place plans from seven towns specifically mention the need for more or improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one place plan calls for a train halt to be re-instated (Baschurch). I live in a town that last year had its bus service cut from 2 routes to just one. It is a town with significant hills in all directions and narrow minor roads in and out of town. These factors make it difficult for so many citizens of the town to walk or cycle – so car use has become more vital to them, not less. The elderly, young and disabled are all at a significant disadvantage in travel because of the geography and narrow roads. Calling the bus network 'extensive' is – frankly – a lie. My town does not even have a direct bus link to Shrewsbury. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Shropshire council has made considerable cuts to the county's bus service in recent years is NOT in line with aims to provide a transport service that reduces the need to use private cars. In addition, the information coming out from the council about closure / demolition (carbon footprint implications) of the existing bus station is contrary to the principle of a sustainable transport system for the county. It also invalidates claims to link up public transport systems (it's a short walk from the bus station to the train station) which is key to making it possible for people to stop using cars.The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions.
A0501B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.2 I was pleased to discover that Shropshire has signed up to the 'UK 100 Network' which pledges the county to secure the future for the community by shifting to 100% clean energy by 2050. Although I personally believe that 2050 is far too late, this is a positive step. So where are the plans, framework and SMART targets to make this happen? Why is this pledge not included in the local plan, together with, at least the start of, a road map to achieve this? Paragraph 2.2 states the role of the Local Plan is to translate high level objectives into meaningful and positive frameworks at the local level to inform decision-making for the benefit of the County. Including how the County moves towards a net zero carbon economy. However the plan has nothing tangible, measurable or SMART. I disagree with this paragraph because the positive statements towards climate it contains are not put into actions within the plan. They are therefore meaningless words included to make the plan appear to be addressing the most critical issue the people of Shropshire and beyond face. The plan is not fit for the purpose of moving the county towards a net zero carbon economy
A0502B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Feels that the plan is vague and doesn't reflect the climate emergency; The Plan is low in ambition compared to other authorities i.e. Warrington Community Investment Scheme; Plan ignores the opportunities offered by the Shrewsbury Big Town Plan; The plan makes no mention of local low carbon networks; The Plan proposes the encouragement to sustainability., There is no reason the Authority cannot demands higher standards than the currently down graded Building Regulations (Part L) or incorporate an enhanced "Merton Rule" as part of any planning requirement
A0504B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.24 DUTY TO COOPERATE (See Section 5.1, "Regulation 18 Consultation Update Report", Based upon the work carried out by Bridgnorth Plan steering group, I consider that the case for allocating an additional 1,500 homes to meet the Black Country's projected shortfall is not sound. In particular, the referenced report notes that: 4. Shropshire is not adjacent to any of the Black Country authorities. 5.Progress on the Black Country plan has stalled due to Covid-19. 6. The Black Country authorities ... Urban Capacity study ... indicates a shortfall of just under 27,000 homes, but the worst shortage is in Sandwell borough making up over half the total. The Bridgnorth area wouldn't be an obvious place to make up for that shortfall ... 8. Telford & Wrekin rejected ABCA's request in 2019 - they said there wasn't any evidence to support them contributing to the unmet Black Country Housing Need.
A0514B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Plan is too long. Policies are overly complex and prescriptive with often competing objectives. Plan should be shortened with a keener focus on meeting objectives. The reference to supplementary documents which adds a further layer of complexity. Reference to these non-development plan documents should be removed, or they should be incorporated into the policies themselves. Changes to policies needed to take account of recent national level changes to the use class order.
A0600B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Disagrees that increased housing development can be sustainable - Since the year 2,000, the world population has increased by a further 1.65 billion people. Regrettably the planet is being overrun by the human race, much as a plague of locusts decimates everything within its path. In the above circumstances, any pretence, either on the part of National Governments or Shropshire Council, that rapid housing development is substantiable is laughable, or more truly, deceitful.
A0642B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2 The role of the Local Plan is stated to be focused around sustainable development (as required by NPPF). We do not believe (as explained in our responses below) that the plan as currently developed will lead to sustainable development or address the pressing needs of the climate and biodiversity emergencies. Instead the plan will result in 'business as usual' i.e. more, edge of town, car dependent housing estates with little or no provision of public transport or facilities for active travel.
A0642B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.2 These general statements are not translated into specific, tangible, enforceable and measurable outcomes that are in line with national policy and the Council's declaration of a climate emergency in 2019. We need measurable outcomes, in particular, robust targets for reducing transport carbon. The NWWR and 30,000 new homes will generate large amounts of additional carbon. Policies that lead to an increase in carbon must be discarded. Changes must be made before the end of the Plan period (2038). The Local Plan does not give climate change the over-riding significance it so obviously deserves, it contains policies that will add to carbon emissions which is unacceptable and it does not contain convincing evidence that the suggested policies will deliver carbon reduction.
A0642B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.19 There is reference to strategies, some still in draft format, but no reference to Local Nature Recovery Strategy. Given the contribution of transport to Climate Change (37% of Shropshire's emissions) we have particular concerns relating to the absence of an up to date and adopted Local Transport Plan to inform the Local Plan. The plan cannot reference the draft Climate Change framework or emerging Local Transport Plan as these do not exist in any meaningful sense at the moment and are certainly not available as part of the evidence base for the consultation on the local plan. We are not aware of the council having a Green Infrastructure Strategy or a Cycling and Walking Infrastructure Strategy. Both of these need to be rapidly developed to inform the revised plan and referenced here.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0642B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.20 There is reference to strategies, some still in draft format, but no reference to Local Nature Recovery Strategy. Given the contribution of transport to Climate Change (37% of Shropshire's emissions) we have particular concerns relating to the absence of an up to date and adopted Local Transport Plan to inform the Local Plan. The plan cannot reference the draft Climate Change framework or emerging Local Transport Plan as these do not exist in any meaningful sense at the moment and are certainly not available as part of the evidence base for the consultation on the local plan. We are not aware of the council having a Green Infrastructure Strategy or a Cycling and Walking Infrastructure Strategy. Both of these need to be rapidly developed to inform the revised plan and referenced here.
A0642B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.26 This doesn't seem to be consistent with experience to date that Shropshire Council has generally has not supported attempts to develop such plans which explains why so few have been completed to date
A0642B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.28 The growth target is too high and not supported by the people of Shropshire. New housing will increase traffic and thus increase carbon emissions. Location for new housing should make reference to trip estimation data by different modes available on the TRICS database. The Plan must define 'right location' and not ignore the impact of car trip generation and consequent increase in transport's carbon emissions. There is an Ecological and Climate Emergency; moving towards a zero carbon economy should be occurring now in order to be achieved by 2038. We would suggest rewording along the following lines: 'as Shropshire moves towards completing its progress a zero carbon economy.' We consider that whilst some aspirations for improved building standards have been included, these are inadequate in the face of a climate emergency and largely unenforceable: there clear definition of how viability would be assessed. we contend that the provisions contained within the plan of the natural and historic environment are a completely inadequate response to the current biodiversity and climate change emergencies
A0642B25	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	All DPs should contain an explicit link to the ways they will assist in achieving net zero carbon. They do not. It is astonishing and unacceptable that DP 11 (Tourism and Leisure) fails to recognise the importance of shifting tourism car trips as much as possible to public transport and bikes. This is unacceptable and DPs1-11 inclusive should be re-written to align them with the urgent need to get to net zero carbon
A0642B48	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The Plan uses words like 'encourage' and does not appear to consider the overall effect of all development. In addition, to continue to allow developers to put in plans for paths and cycle paths on their development only without firm plans and funding to link them to wider routes and without firm plans for public transport seems to us will cement the need for car use and is a recipe for future disaster. Shropshire Council has an agreed climate emergency policy. Traffic produces the largest amount of the carbon emissions in the UK. Traffic is also responsible for most of the air pollution. A shift to electric cars will help with NO2, but they still produce PM's and, even if there is rapid uptake, most of the fleet will be non electric for many years. Half of a vehicle's PM2.5 comes from brake pad, road and tyre wear. 75% of PM10 is from wear. This is why we ask for a commitment by Shropshire Council to make it a priority to reduce traffic and to improve air quality in the County. The plea of no money to do anything does not apply if decisions are taken now for future planning. Inaction now will cost lives, produce a less healthy population, impact on the climate emergency and will cost far more to correct in the future.
A0647B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Do not agree with the assertion in para 2.12 that Shropshire has an 'extensive' bus network. 7 Place Plans specifically mention the need for more or improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one Place Plan calls for a train halt to be re-instated (Baschurch). The County has a high level of car ownership but reducing public transport increases the need for cars, especially in the rural areas. Draft policy DP29 lists proactive measures to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Considerable cuts have been made to the County's bus service in recent years which is not in line with aims to provide a transport service that reduces the need to use private cars. Council information about closure / demolition (carbon footprint implications) of the existing bus station is contrary to the principle of a sustainable transport system for the County. It also invalidates claims to link up public transport systems (it's a short walk from the bus station to the train station) which is key to making it possible for people to stop using cars. The draft Local Plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions
A0647B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete. There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether. An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures (a recent decision not to reduce speeds in Shrewsbury is unhelpful). As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system. The need for electric vehicle charging points is acknowledged in a number of places. Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan? The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated. It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan. The way we use land is one of the four key net carbon zero strategies. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. We have enough land in the UK not only for producing food but to offer new potential income streams such as biomass. Forest area could be doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas.
A0648B05	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Do not agree with the assertion in para 2.12 that Shropshire has an 'extensive' bus network. 7 Place Plans specifically mention the need for more or improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one Place Plan calls for a train halt to be re-instated (Baschurch). The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions
A0672B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Consider information in the Draft Local Plan is reasonably well presented albeit with inaccuracies. Disagrees with the way guidance and format for response has been produced. The cumbersome format required to respond to this consultation has actively reduced the numbers who will reply. This was acknowledged when email were accepted from the general public. In these difficult times it is even more necessary that opportunities to participate are readily comprehensible to encourage and permit as many as possible to get involved. Do not believe this consultation has achieved its objective.
A0685B3	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Draft policies SP4 and SP5 are supported.
A0690B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 1.2 No specific comments

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0691B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 1.2 No specific comments
A0698B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 Object to WHT037/WHT044 north of Chester Road because the development of 200 new houses will accommodate 400 people and generate 200 vehicles. This will have a deleterious effect on the quality of life of existing residents. The respondent advocates the views expressed by the Local Councillor that:
A0698B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas.
A0897B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is a legal duty to cooperate with neighbouring authorities, outlined in paras 24-27 of the NPPF Question why Shropshire Council has not yet published any Statement of Common Ground. It is contrary to para 27 of the NPPF to wait until submission before publishing any Statements of Common Ground. To avoid challenges at later stages, it is important that Shropshire Council publishes Statements of Common Ground before the Final Plan publication stage. The Association of Black Country Authorities (ABCA) point in their various letters to the close functional relationship between the Black Country and east Shropshire. ABCA note the railway linking Shropshire to the Black Country, which has stops at Cosford and Albrighton. To demonstrate it is responding to ABCA, Shropshire Council may find it helpful to increase the Albrighton settlement housing guideline, this would be supported
A0955B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.2 2.2 states the plan needs to deliver on affordable housing. Nowhere in the evidence have documents including the draft housing strategy explained how current local need for affordable housing will actually be monitored or really delivered. Shropshire Councils comments outside of the local plan process indicate that possibly around one third of new housing is taken up by incomers to the County and to the relatively cheap house market in Shropshire. It is apparent from national figures that the first time buyers market is flat and likely to stay so for a number of years as many new properties are being bought as investment properties and they are priced out of the market. All estate agents have investors looking for relatively lower priced property in which to invest. This is in spite of the tax environment for private landlords being less favourable than that of a few years ago. Primarily tax relieve on interest payments being at 20% rather than the previous 40% and very low buy to let mortgage rates. Shropshire's low house price environment is an attractive attraction for buy to let investors. Building more houses will not in my view help local young lower paid families achieve their ambition of home ownership. I urge Shropshire Council to do a more in-depth study of who is buying new houses and from where they are coming and to consider what policies could be put in place to ensure affordable property is not gobbled up by buy to let investors or incomers downsizing. A suggestion may be as that use in Cornwall where many affordable houses on many sites have to be sold to local people who are first time buyers and these properties can only in future be occupied by owner occupiers
A0957B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Timing of the Local Plan Review is unfortunate as Government's new White Paper "Planning for the Future" has many aspirations to simplify Local Plans and to make them more specific. If translated into law, these ideas will quickly render the Plan out-of-date. The main changes would be: a drastic shortening of the Local Plan; identification of all land as "Protected", "Re-development" or as "Growth land" (where planning permission is not needed); more early stage public consultation; less high level aims; and more specific locally agreed 'design codes'. Some changes may already be aligned with this Local Plan. Meantime, the NPPF still applies and the draft Local Plan has been extended to cover up to 2038 (2 more years than the last draft). The draft Local Plan also includes the Shrewsbury Place Plan and it economic growth appears to be the main policy driver. The number of new homes planned for Shrewsbury has also been raised to 8,625 (some 28% of population). According to CPRE, this is some 11% greater than the Government requires. However, there are likely to be new ways of identifying local housing need and may re-configure governmental requirements upwards, if the White Paper takes effect. The draft Local Plan shows few of the implications of other changes proposed, such as: those to Permitted Development Rights; Public Consultation (e.g. the belated SCI); and the trends indicated in both the Government's National Design Guide and BBBBC's Living with Beauty.
A0970B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Draft policies SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: " The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. " Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?
A0970B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 of the introduction references bus and train links. Do not agree with the assertion that Shropshire has an 'extensive' bus network. Seven Place Plans specifically mention the need for more or improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one Place Plan calls for a train halt to be re-instated (Baschurch). The issue becomes chicken and egg: yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. Draft Policy DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Shropshire Council has made considerable cuts to the county's bus service in recent years is NOT in line with aims to provide a transport service that reduces the need to use private cars. In addition, the information coming out from the council about closure / demolition (carbon footprint implications) of the existing bus station is contrary to the principle of a sustainable transport system for the county. It also invalidates claims to link up public transport systems (it's a short walk from the bus station to the train station) which is key to making it possible for people to stop using cars. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions.
A0981B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Para 2.28 Spatial Vision Sport England supports the reference in the Spatial Vision to the promotion of healthy communities. It is recommended that this is expanded to reference physical activity i.e.. being healthy by being physically active. This would help to underpin several of the proposed policies elsewhere in the plan including in particular, policy DP30 relating to Health and Well-Being.
A0997B11	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	We would refer you to our previous comments in respect of the 2019 Strategic Sites consultation and historic environment elements and would welcome opportunity to discuss matters further ahead of the Regulation 19 consultation. Previous comments include. 1. Objection to allocation of sites P56 in Bridgnorth, SHF0032 in Shifnal and SHR166 in Shrewsbury. 2. Concern was also raised about the proximity of the following sites to Conservation Areas: Ludlow LUD052, Hodnet HHH001 and HHH014, Knockin KCK009, Llanymynech LYH007, Whittington WHN024 and Prees PPW025.
A1101B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The way in which documents are presented on the website makes it very difficult for interested parties and members of the public to navigate, to understand which documents are important and what status they have as part of the Regulation 18 process It is not made clear that all of the documents have equal "status" as part of the Regulation 18 consultation, and furthermore it does not make it clear that the Local Plan consultation welcomes comments on these documents and the promotion of alternative sites in the same way as comments are invited on the Strategic and Settlement Policies. These deficiencies mean that there is not a level playing field in terms of the options which are being consulted on for the proposed allocation in Bridgnorth. This is a fundamental flaw in the process. The decision to consult on the proposed allocation of the Tasley Site, without making it clear that the public have the opportunity to comment on the site assessment procedure and suggested alternative sites is flawed
A1139B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	A 'cut & paste' exercise undertaken by personnel who have limited experience of the infrastructure of Shropshire. The desk – based exercise appears to have been written in isolation, not taking account of The Climate Emergency, flood issues, loss of EU Funding and the decline of retail. Do not agree with High Growth. Shropshire was an ideal area for tourism, but with this level of growth its market towns are being stripped of their identity with 'growths' adhering to their periphery. There will be no gain for the people of Shropshire, no improvements to medical provision, poorer quality of life, and decreased areas for walking and increased mental health issues. The document is biased towards landowners and developers. It is not an objective document, but a frustrating gateway to allow developers and infra – structure providers to continue delivering the lowest level of provision to the council tax payers. Other local planning authorities insist on inclusion of renewables – Why not Shropshire? The Shropshire Test has no teeth – criteria against which a proposal can be measured is required, is meaningless and there is little evidence of any planner caring about design in Shropshire. The insistence of delivering high density development results in unrealistic parking allocations, therefore, leading to parked vehicles blocking pavements and roads. There is a lack of sensitivity on the part of the planning officer is apparent in villages, such as Kinlet where Little Stocks Close boasts of hideous constructions which stand out with no attempt at screening.
A1152B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Two aims of this response are (1) to indicate areas which might be found unsound at Examination in Public, and (2) to further develop arguments touched on at earlier stages of consultation. Endorse many of the policies within the Plan but are not commenting primarily on these. We naturally concentrate on the elements of the plan with which we have reservations, although this response is necessarily selective in what we comment upon. COVID-19 has caused widespread disruption to the economy and has caused society generally to re-appraise some of its priorities. Those changes may be so great as to alter the ethos behind parts of the Local Plan, particularly the drive for economic growth. There may instead be a realisation that economic stability and a smarter approach is more sustainable than a drive for growth. COVID-19 has cause more people to work from home than was previously the case, this may have highlighted places in Shropshire that have such poor broadband connections that they inhibit the ability of people in those locations to be able to work from home. Shropshire Council should carry on trying to remedy such black-spots. COVID-19 is only referenced once in the draft Local Plan, consider it should be given greater reference. The consultation was influenced by COVID-19. No public consultation events could be held, as they had been for the previous four rounds of consultation in this LPR process. The ability of people to see physical copies of the documentation was severely restricted, because appointments had to be made at the locations where a copy of the main consultation document had been deposited; the other supporting documentation was available only on-line, subject to a fee for non-library members. Consider that proper notice has not been taken of public opinion and that the Council is pursuing its own agenda regardless of the fact that public opinion is against the high targets in the plan. Key evidence documents referenced in Appendix 3 of the draft Local Plan were not published. The Council has indicated these will be available for the formal Regulation 19 Consultation, however consider this is an inadequate response and that the non-publication of such key evidence is symptomatic of the Council's resources being stretched, and that this consultation has been launched prematurely, before all supporting evidence is fully available to the public to ensure sufficient reason is provided for proposals and adequate consideration when responding to consultation. It is noted that the Authority Monitoring Report is referenced numerous times, but the latest version is over 3 years old. It would be very helpful if the final Regulation 19 version of the Draft Plan could be issued in a format which also makes plain exactly what changes have been made to this current Regulation 18 Draft Plan.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1173B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		Response from Shrewsbury Friends of the Earth - General concern that the consultation has not been laid out in a fashion which is not easy for members of the public to followClimate Change Crisis - The plan does not give climate change the over-riding position that it must have; The development plan doesn't give fact transport is the largest source of emissions in Shropshire sufficient weight. The plan assumes that locating new development in urbanised areas is enough to claim sustainability, but evidence from recent developments shows this not to be the case. Development of safe walking and cycling routes are essential if emissions are to be reduced. We see some positive aspirations in terms of domestic emissions, but with the climate emergency we feel that all new houses should be net emitters. Maximum on site generation must be sought not an arbitrary figure. The Big Town Plan proposed a Shrewsbury Test to ensure future development is to a high standard but this idea has not been carried forward. The proposed similar idea now covering the whole county would be a way forward if it sets adequate standards and is robustly applied. If this is the case then it would be important in the move towards making developments really sustainable. Renewable energy production is critical and there is a need to identify sites for this purpose. The plan fails to address this important issueNorth West Relief Road -Significant conflict with the aspirations of the plan with the development of this road. Road will add to emissions from its development and use, and with its threat to the water supply and natural environment this scheme should be cancelled. The Natural Environment - Special consideration should be given to robustly protecting Shrewsbury's green spaces as identified by the Big Town Plan, especially if the North West Relief Road does take place. the requirement for a minimum 10% biodiversity gain is a step forward. However, for a rural county like ours a higher figure would be more appropriate. Proposals for ensuring the enhancements are carried out, assessed and maintained are inadequateNew Green Infrastructure - This is a desirable objective but giving qualitative guidance on what should be delivered is needed. Remedies for non compliance need to be considered. A General Comment on Development - The collection of DP's that cover aspects of development are full of desirable intentions which we support. However, it is evident from recent developments and current proposals that implementation is the problem. In many cases developers have managed to get permission for schemes that could have been much better and applications continue to be the same. Comments on air quality aspects of Sustainability appraisal - Believes that transport is the main contributor to air quality issues in Shropshire and so much stricter assessments of the impact of transport should be included in the plan, and air quality should be considered for every application. Summary - Shropshire Council has an agreed climate emergency policy. Traffic produces the largest amount of the carbon emissions in the UK. Traffic is also responsible for most of the air pollution and the plan must do more to reduce emissions with clear enforceable policies. climate change and biodiversity must be at the heart of the plan.
A1180B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A1180B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A1182B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A1182B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A1183B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	General comments Thank you for the opportunity to comment on the pre-submission draft of the Shropshire local plan 2016 to 2038. We wish to make some general comments and then some more specific observations. We note that there are 14 strategic policies and 35 development management policies in the document. It's unclear from the information presented how compliance within specific policy areas or effectiveness of delivery is to be evaluated and what metrics are to be collected to evidence performance in general or performance specifically in policy areas that require specific information to be collected. We note that there is understandably a focus throughout the document on sustainability but very little reference to making particularly rural communities resilient but this is also an important Planning function. Comments on this in the submission would be useful. Significant development is often preceded by a Preapplication process and our experience is that in Shropshire local input from Parish Councils is obtained late in an application process of this sort though other unitary authorities involve the "Lowest tier" of Local Government to participate early in this process. No Policy as such for how to deal with Preapplication submissions is included. We would suggest this is considered and the process around this important area of activity clearly set out. Shropshire's Character is outlined in 2.4. The introduction notes that 35% of the population live outside the Strategic, Principal or Key areas with a low population density. To deal with this geography the county is split into place plan areas which have been established historically and aim to capture infrastructure needs to some extent though have no planning status as such. We are not particularly convinced that these localised strategies actually deliver very much and suggest their performance is also monitored. The draft local plan emphasises sustainability but doesn't really have a plan for areas that are not sustainable by the criteria used. This is a significant proportion of the population of Shropshire and a section on how the Planning Process can facilitate and deliver in a "rural hinterland" is not included. This topic should be mentioned.
A1609B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Would like to understand how Shropshire Council intend to respond to all of the comments received from the Regulation 18 consultation, in such a short period of time before the Regulation 19 (publication version) is published. As Policy Officers will be aware, there is usually an 8 to 12 month period between each review phase, to allow for comments to be reviewed and factored into the next subsequent publication document. The revised LDS is therefore unrealistic and should be revised so that comments received under Regulation 18 are considered and where applicable policies are amended when the Regulation 19 (publication version) document is published.
A1609B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Shifnal Matters support Shropshire Councils decision not to allocate land at J3 for the proposals put forward by Bradford Estates to provide a so-called garden village and vast area of employment land. There are no exceptional circumstances for such a huge development in the greenbelt of some 1750 acres.
A1624B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	don't know / no opinion	Generally in support of the Local Plan and make the comment that the development in Tern Valley should be strictly adhered to
A1630B14	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Food production The paper focuses in great detail on the natural environment and includes policy on landscape, green infrastructure and water. However it lacks a focus on food production which is disappointing given the importance of farming to Shropshire's economy. Any policy that relates to land use and the natural environment should be practical and support farming, within the context of environmental and landscape benefit, including climate change adaptation. Local farm businesses should be supported as producers of sustainable local food and key delivery mechanism for landscape and biodiversity assets. The policy should include support for farm infrastructure improvements, some which will be regulatory requirements to protect the environment and is necessary for food production. These could include but is not limited to; new muck/slurry storage infrastructure to protect the water environment and reduce ammonia emissions, new grain storage facilities to meet food hygiene standards, new livestock and dairy housing to meet the latest standards on animal welfare. With agriculture occupying over 70% of the UK landmass, farm businesses play an irreplaceable role in looking after our cherished natural environment. Livestock units and residential development Where sites are allocated for development, the proximity of the land to existing livestock units must be examined. Sites should not be allocated for residential development if they are found to be in near proximity to an existing livestock unit. Farms can be sources of noise and odour and therefore neighbouring land could be unsuited to residential development. We are keen to ensure that development in the countryside does not result in conflict between new residents and existing farm businesses.
A1634B10	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The way we use land is one of the four key net carbon zero strategies. The UK could become more self-reliant in food, reducing imports from 42% to 17%, and so reducing the impacts of food production for our consumption elsewhere in the world. We have enough land in the UK not only for producing food but to offer new potential income streams such as biomass. Forest area could be doubled to 24% of the land area of the UK – roughly one third is unharvested and two-thirds harvested for timber. These forests, the wood products they produce and the restoration of 50% of UK peatlands, results in the capture of around 47 MtCO2e on average every year. This is required to balance the residual emissions in the scenario and so make the UK net zero carbon. The changes would also provide more room for biodiversity in wild, restored, conserved or protected areas (respondent ref; Form 16)
A1634B13	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no mention within the local plan of the need to build new homes to PassivHaus standards. This is an area that the county should be encouraging, requiring and supporting developers, housing associations and others to undertake. The excellent Callaughtons Ash development in Much Wenlock needs to be the start of this initiative, not the end of it. I disagree with this policy because it is incomplete (respondent ref; Form 4)
A1634B14	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	There is no commitment within the local plan for supporting redevelopment of existing building rather than demolishing and rebuilding. It was previously argued that demolishing an old energy-consuming building and constructing a well-insulated replacement was better for the climate. This is now accepted as wrong due to the amount of carbon emitted during the construction of the new building. The Royal Institute of Chartered Surveyors has estimated that 35 per cent of the lifecycle carbon from a typical office development is emitted before the building is even opened. It says the figure for residential premises is even higher at 51 per cent. The Oswestry Place Plan comments that the town has started a survey of empty houses. Has Shropshire council gathered similar data across the county? Understanding what is available for refurbishment and renovation is integral to measuring and then reducing the county's carbon footprint. We cannot meet the 2050 carbon emission targets unless we tackle carbon emissions in our existing building stock. Retrofit reduces operational emissions but also avoids the embodied carbon of demolition. By considering our existing built environment as stock and making use of the already existing resources, we avoid the use of new materials and their impacts altogether.
A1634B16	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A1634B17	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A1634B3	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system.
A1634B4	regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The need for electric vehicle charging points is acknowledged in a number of places. Converting to an electric public bus service should be included in this plan. Recent examples in the UK include Surrey and Maidenhead councils and so given the bid that Shropshire made earlier in 2020, why isn't this aim – and more - included in the local plan The government is also making it easier and more convenient to take the bus through a new £20 million fund to encourage the development and trial of on-demand ride sharing services in rural and suburban areas, helping people to plan their journeys down to the minute. The fund will boost traditional services by helping people use bus travel to get closer to where they live, at a time that is convenient for them. A further £30 million of funding in 2020 to 2021 has also been confirmed for local authorities to help them improve current bus services or restore those that have been lost. Every local authority in England, outside of London, is eligible for this funding to ensure that crucial bus routes can be revived or reinvigorated.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1634B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	It is of great concern that the strategies supporting Shropshire's economy make no mention at all of supporting renewable industries. There is nothing in the economy sections to give any encouragement, support or commitment to the development of solar arrays, wind turbines, hydro-electric power, battery or heat storage solutions and heat networks to help meet business and community energy needs. This industry has the potential to provide significant future employment, it is a fast growing industry and brings the carbon reduction energy that is needed. This strategy requires commitment to invest in, support and encourage renewables and this is missing from the local plan (respondent ref; Form 13).
A1644B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	The Plan refers to the ageing population issue but does not then set out a specific and effective policy approach to deal with the matter going forward. For the Plan to simply say that elderly accommodation will form part of general housing allocations is unrealistic and experience shows that it simply will not happen. The Plan should identify sites for the delivery of specialised care and retirement accommodation including purpose built care communities. The delivery of purpose built accommodation for the elderly has the double benefit of not only providing more suitable accommodation for them, but also freeing up under-occupied family housing to serve the needs of the younger active sectors of the population. We recommend and request a more specific policy approach to deliver appropriate accommodation in the right locations, including specific retirement living and care communities, and the allocation of suitable sites for this.
A1647B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	The proposals constitute an appropriate strategic approach to deliver housing and employment needs within Shropshire. The strategic approach represents a positive response to the challenge identified in the Shropshire Economic Growth Strategy of promoting a 'step change' in economic activity and seeking to balance increased levels of housing growth and economic development. Should Junction 3 be identified for allocation in the future, we would expect to see robust evidence produced to support this decision.
A1649B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	The proposed allocation of 250 within Highley in particular could adversely affect congestion in Bewdley town centre. By allocating the majority of development within the strategic and principal centres, the preferred sites document appears to be consistent with sustainable development as outlined in the revised NPPF. Wyre Forest District Council has serious concerns that the future development will result in adverse pressure on existing infrastructure that is important to Wyre Forest District, such as traffic levels on the A442 from Bridgnorth to Kidderminster and additional pressure on the Dowles Road/Welch Gate Air Quality Management Area junction in Bewdley and Stourport-on-Severn. Wyre Forest would furthermore oppose any development within parcels BA5 and BA6 which are adjacent to the district.
A1834B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments		The Strategic Road Network (SRN) in Shropshire comprises the M54 motorway, the A5, A49, A458 and A483 trunk roads. The sections of the SRN most relevant to this consultation include the M54, A5, A49 and A483. The Department for Transport (DfT) Circular 02/2013 (Strategic road network and the delivery of sustainable development) (Circular) sets out how interactions with the SRN should be considered in Local Plans. Para 16 of the Circular states: "Through the production of Local Plans, development should be promoted at locations that are or can be made sustainable, that allow for uptake of sustainable transport modes and support wider social and health objectives, and which support existing business sectors as well as enabling new growth." There is also a need to consider the NPPF and other relevant policies. Any potential development site which is anticipated to have an impact on the SRN should be subject to consultation with Highways England, and appropriately assessed in line with the Circular to determine the extent of potential impacts on the SRN. Depending on the scale of likely impact on the SRN, the applicant/developer may need to identify suitable mitigation measures. Note that existing SAMDev Plan allocations yet to be delivered are to be saved, as the SAMDev Plan was adopted in 2015 do not expect any further consideration of these sites. Would expect proposed new site allocations, where impacts on the operation of the SRN in the area are anticipated, to be subject to consultation with Highways England, and appropriately assessed to determine the extent of their potential impacts on the smooth functioning of the SRN in the area (the cumulative impact of the proposed site allocations also needs to be considered as per the Circular, to understand the likely traffic impacts on the SRN in the area in terms of capacity and safety, and, identifying any possible mitigation measures).
A1844B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Canals are important part of Shropshire's industrial heritage and we consider that they should be referenced in this description of the character of Shropshire.
A1844B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The policy map should be corrected to show canal network and restoration lines in Shropshire to ensure consistency with policy DP11
A1857B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	No specific comments on the whole draft Local Plan
A1896B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A1896B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions
A2150B7	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of this Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?"
A2150B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A2158B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. A2173B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020 Paras 1.3, 2.6, 5.32; Tables 1, 4, 5, Para 5.13; Para 5.41 1) Hierarchy of Settlements 2020 - Para 1.3, Para 2.6, Para 5.32 "The lower threshold for Community Hub status has remained unchanged" By reference to the first HofS 2017 Para 5.40 this threshold was set by a "3point gap" in the original Table 10 settlement scoring. As previously raised, this gap never existed; and just removing written reference to that factor determining the threshold does not correct the mistake. The Threshold must be determined by the full Hub criteria, and not by the wording introduced to support the inaccurate scoring results i.e. outcomes must be set by the policy and not the policy re-written to fit the results. We consider that is "unsound". 2) Hierarchy of Settlements 2020 - Table 1, Table 4, Table 5, and para 5.13 Library - a mobile library visiting fortnightly does not give the same community benefit to a settlement as a full or part time library premises, and therefore should not carry full 3points value Chemist/Pharmacy - a Dispensary is a legally different service, which is only provided to registered patients of a Surgery and cannot be a 'walk-in' service to the general public. Therefore it does not give the same community benefit as a chemist or pharmacy, and therefore should not carry full 3points value Post Office - a part time or mobile service does not give the same community benefit to a settlement as a permanent full hours service, and therefore should not carry full 4points value. Also, this service is noted as having a higher 'day-to-day' ranking in a rural settlement due to its "special importance" from providing "banking, convenience and comparison shopping; and often acts as a community hub". When the Post Office service is purely a counter within the only village shop, it does not give additional "convenience and comparison shopping", nor provide a "community hub" over and above that provided by the shop. Therefore it does not give that higher "special importance" community benefit to a settlement that a separate and independent provision would, and therefore should not carry full 4points value These affect the true comparison of settlements by objective assessment. 3) Hierarchy of Settlements 2020 - Para 5.34 "Shropshire Council officers then used this information to identify similarities and groupings of settlements, which in turn informed decisions on specific categories of settlement" By reference to the first HofS 2017 the threshold was set by a "3point gap" in the original Table 10 settlement scoring. That threshold remains unchanged. As previously raised, this gap never existed; and just removing written reference to that factor determining the threshold does not correct the mistake. There are clear differences between settlements proposed by the officers as Community Hubs in the HofS 2020, as opposed to similarities, which calls into question their "informed decisions". The fundamental issue is that of officer's subjective assessment and decision making in determining settlement status, rather than it being based on the objective Methodology outcomes.
A2173B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020 Paras 1.3, 2.6, 5.32; Tables 1, 4, 5, Para 5.13; Para 5.42 3) Hierarchy of Settlements 2020 - Para 5.34 continued One of the main factors in undertaking this Local Plan Review was the SAMDev Examination Inspector's concerns on the subjective 'opt-in' decision process by Parish Councils; and the need for it to be an objective decision based on set criteria. Report to Shropshire Council by Claire Sherratt DipURP MRTPI 30 October 2015:- Identification of Community Hubs and Clusters Paras 28-43 culminating in Para43 A main modification is required to Policy MD1 to clarify the process for designation of Community Hubs and Clusters in the future which would be through a review of the SAMDev Plan or through a formal Community-led Plan or Neighbourhood Plan (MM3). This is necessary to ensure the plan is positively prepared and effective. The purpose of the Hierarchy of Settlements Methodology was to be an "appropriate and robust assessment" of settlements against the full Community Hub key criteria:- Community hub settlements - Whilst the exact combination varies, the settlements within this category are considered to provide a combination of services and facilities; public transport links (often operating regularly through peak travel times); significant employment opportunities; and high speed broadband generally considered sufficient to meet the day-to-day needs of their resident communities. Those criteria requirements have been relaxed by the insertion of additional wording into Para 5.41 by officers following the inaccurate original Table 10 scoring. That is "unsound". 4)a) Hierarchy of Settlements 2020 - Para 5.41 The relaxation of the Community Hub key criteria for multiple significant employment and peak time public transport is still included - that is "unsound" and should be removed. Lack of these will fundamental requirements will result in additional private vehicle use travel use which is contrary to the Council's Climate Emergency Policy, to NPPF, and to Government's Zero Carbon aims. It is contrary to the "Spatial Vision" and SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 which seeks to minimise car travel and maximise trips by sustainable travel, and to reduce carbon emissions. The officer's proposal of a "larger range" of services and facilities to compensate for the lack of these fundamental criteria is not defined, and is purely subjective. It is patently obvious that facilities such as fortnightly mobile library visits, children's playgrounds, outdoor sport facilities & green space cannot possibly compensate in any way for lack of employment and/or public transport. This relaxation makes the Hub assessment "unsound" and should be removed. This is particularly relevant when considered with:- 4)b) Hierarchy of Settlements 2020 - Para 5.41 Community Hubs to offer "a good range (at least 5) of services and facilities" in conjunction with employment and peak time public transport . This threshold is clearly too low.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2173B09	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020 Paras 1.3, 2.6, 5.32; Tables 1,4, 5, Para 5.13; Para 5.43 4)b) Hierarchy of Settlements 2020 - Para 5.41Community Hubs to offer “a good range (at least 5) of services and facilities” in conjunction with employment and peak time public transport . This threshold is clearly too low. Table 1 lists 20 services and facilities 7 Primary “essential to everyday life”, and 13 Secondary expected in larger settlements but “not needed on a day to day basis”. Requiring only “at least 5” from the 20 for designation as a “Community Hub” is clearly too low Also it is not defined whether they must be Primary or Secondary services & facilities By reference to the 2020 Table 10 the top twenty “Other Rural” Settlements (down to 34 score) have “at least 5” services and facilities, so using that figure as the Hub threshold is clearly wrong. Similarly, the requirement in Para 5.40 for Principal / Key Centres to have “a large range (at least 12)” is equally clearly set low as well. All the proposed Principal / Key Centres have at least 15 services & facilities including all 7 Primary, and all have significant employment and peak time public transport. The full Hub criteria requires services sufficient to meet the “day-to-day needs” of residents so a high proportion of the Primary services & facilities must be required to fulfil that The Hub threshold requirement for services & facilities should include a minimum of 5 Primary plus a good range (more than 6/13) of Secondary services & facilities - more than 11 total. However, it is fundamental that to be designated as Community Hubs that settlement should have both multiple significant employment and peak time public transport as required by the full Hub criteria. As an absolute minimum there must be multiple significant employment opportunities in the settlement or peak time public transport for residents to access employment elsewhere without the use of private transport. When the very low threshold of “at least 5” for Hubs is used in combination with the proposed undefined “larger range” of services & facilities to compensate for a lack of employment and peak time public transport it is clearly “unsound”. Trefonen has no “significant employment opportunities” or “peak time public transport” It is the only proposed Hub settlement with neither of these key requirements. It is contrary to SP3 Climate Change and Sustainability Objectives SO5, SO6, & SO12 which seeks to minimise car travel and maximise trips by sustainable travel, and to reduce carbon emissions. Therefore Trefonen should be designated “Other Rural” settlement, for which it meets the full criteria.
A2173B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020 Paras 1.3, 2.6, 5.32; Tables 1, 4, 5, Para 5.13; Para 5.44 5) Hierarchy of Settlements 2020 - Para 2.4 and Para 4.1 Para 2.4 “The assessment methodology, assessment results and its application have been informed by public consultation and have been approved by the Shropshire Council Cabinet.” Para 4.1 “The updated methodology was approved by Shropshire Council Cabinet on 18th October 2017” We would contest the “approval” by Cabinet as the original 2017 document was voted ‘on the nod’ by Cabinet simultaneously with the Preferred Options “for consultation” document without due presentation, consideration & debate of its content or status at meeting on 18th October 2017. When this fact is considered along with the inaccuracies and flaws identified in that document which have been repeated into the 2018 and current 2020 versions, we believe that make this document “unsound” for its purpose as a “robust methodology”. 6) Hierarchy of Settlements 2020 - Table 10 scores - inaccuracies We believe that there are still numerous incorrect scoring for employment, services and facilities for several settlements (additions and omissions), including some identified by ourselves in our Preferred Options response Dec 2017 and in January 2019. This makes the assessment “unsound”. We believe that if the scoring is to be used as the initial stage in making an objective criterion based determination of settlement status then the information must be 100% correct. The HofS Para 2.8 disclaimer “Note” that “it is not intended to represent a comprehensive assessment of all every services or facilities” just compounds the inaccuracy. This assessment underpins the decisions on the development status of settlements and their development guidelines; and therefore it is critical that it is 100% accurate. As it is not, the whole outcome is flawed and “unsound”.
A2173B19	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020 Table 10: Highlights a series of settlements in Shropshire whose scoring on the hierarchy of settlements is thought to be incorrect.
A2177B20	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The NPPF (paras 24-27) place a duty to cooperate on Local Authorities. This should be demonstrated through preparation of statements of common ground (SoCG), which should be made public during the plan-making process for transparency. The National Planning Practice Guidance (NPPG) confirms a key element of Local Plan Examination is ensuring that there is certainty through formal agreements that an effective strategy is in place to deal with strategic matters when Local Plans are adopted. The NPPG explains that a SoCG sets out where effective co-operation is and is not happening throughout the plan-making process. The NPPG also sets out that by the time of publication of a Draft Plan, a SoCG should be available on the Council’s website. Once published, the Council should ensure that the SoCG continues to reflect the most up-to-date position of joint working. No SoCGs accompany this Draft Local Plan consultation. The Council has stated that a full SoCG will be made available ahead of submission of the Local Plan for examination, however this is inconsistent with the NPPG. Shropshire adjoins twelve other LPAs. The HBF would expect the Council to prepare and maintain one or more SoCG with these LPAs. There is also a functional relationship with the Black Country authorities of Dudley, Sandwell, Walsall and Wolverhampton, where there is an identified unmet housing need of up to 29,000 dwellings. It is proposed that 1,500 dwellings incorporated in Shropshire’s housing requirement will support housing needs from the Black Country. There is correspondence dated 30th September 2019 from the Black Country authorities supporting the proposed strategic allocation at J3 M54 in the Shropshire Local Plan. These strategic matters should be set out in a SoCG. Before the pre-submission LPR consultation, respective SoCG should be prepared and published, at which time may comment further.
A2180B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Welcome the Plan as a whole. There are some inadequacies, where it should shift away from being car-led, stronger focus on carbon reduction (particularly due to the Climate Emergency announced by the council), design issues – more focus on quality of design is desired, the development of affordable housing and Open Space being at plan-level. Overall view is that the Plan is good with some queries outlined below.
A2194B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	‘At the core of this process is continuous and meaningful community engagement, in line with the Council’s Statement of Community Involvement (SCI).’ SWT’s Clun & BC branch committee consider that continuous and meaningful community engagement has been neither attempted nor achieved in relation to the Local Plan consultation. These long, complex documents, with unfamiliar terminology, many layered structure, and numerous appendices and cross-referenced policies require presentation to the community in many more ways, if meaningful community engagement is to be achieved. We are aware of no presentations by councillors or council staff during the consultation period, to help and guide community members, simplify and explain the structure and the means of commenting. Even highly educated, academic members of our committee have found this process and the documents overwhelming and we have serious doubts about the validity of the consultation process. Whilst we appreciate that the Covid19 Pandemic has caused interruptions in the way normal council business can be conducted, there has been significant development in citizens’ use of new technology, such as Zoom for example, which could have been capitalised on to engage the public. Also community halls have been reopening widely which would permit safe face-to-face engagement with those whose use of the internet is limited or difficult. It is difficult to believe in the reality of a desire for consultation when none of this has been offered.
A2351B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Hierarchy of Settlements 2020; Appendix 3: Key evidence SP2/SP7 Clive I am concerned about the validity and the accuracy of the Shropshire Hierarchy of Settlements 2020, a piece of key evidence informing the local plan review. The methodology of the points allocation lacks much in the way of granularity and is not in alignment with many other national councils. Many other councils do not class libraries as an “essential service” and so do not consider them in the sustainability of settlements. They also consider mobile provisions to be “transitory” and therefore do not include them. This approach would address the apparent lack of face validity in Shropshire’s points allocations. Specifically I would consider the scoring of a mobile/hosted Post Office of two hours a week to not be comparable in sustainability terms to a permanent six days a week Post Office. I am also concerned about any methodology that fails to take into account the accessibility of the settlement. Clive village is the only proposed Community Hub that is not on a main road. All access roads to Clive village are single track roads. I do not think that the local infrastructure has been meaningfully taken into account when considering Clive to be suitable for ongoing development as a Community Hub. The population of each settlement varies significantly even amongst those on the same points allocations. Some extremely small settlements score higher than considerably larger settlements which also calls into question the face validity of the methodology. Knockin scores 50 points with a population of 181 whilst Cosford/Donington with a population of over 1750 scores 48 points. The sustainability of these settlements is not comparable. A cursory look at many of the settlements show accuracy errors and inconsistent applications. For example Grinshill is scoring 3 points for a Public House that closed many years ago and that is now operating as a bed and breakfast, not open to passing trade. Clive primary school is in the Parish of Grinshill and is within a 10 minute walk of Grinshill, yet Grinshill scores no points for this amenity. The inaccurate and inconsistent approach is in my opinion, open to challenge. With the inevitable challenge to local government finances that will result from the Covid-19 pandemic I am concerned that transient subsidised services such as mobile libraries and bus services will no longer be supported. I would want reassurance that decisions on the sustainability of settlements were not being made on the basis of subsidies that were under review.
A2353B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Comments from Shrewsbury Business Chamber. Broadly in agreement with the plan, but encourages the Council to consider implications of Covid outbreak and potential changes to national planning law. Feel that it is vital that there is a continuing and expanding supply of housing within the price range of local wage levels both to purchase and rent whether that is supplied on the open market or via Affordable Housing allocations. Providing quality standards in new development is also important. Supportive of the ‘corridor’ approach to Economic development, with Shrewsbury being central to the A49, and also via the M54/A5 to West Midlands /Telford leading to Oswestry/Wrexham. Important for the plan to be flexible in the allocation of employment land to reflect changing uses. Specific comments on some Shrewsbury sites included. Encourage SC to develop gypsy site in the plan. Support for NWRR but would like to see this linked with improvements to public transport in Shrewsbury given more weight in the plan. Continued work with partners is needed to address River Severn issues of flooding and pollution.
A2365B06	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:” The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. “Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A2365B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 2.12 “ There are 15 other railway stations across Shropshire and an extensive bus network which together aim to provide accessible public transport to residents and visitors.” I do not agree with the assertion that Shropshire has an ‘extensive’ bus network. The place plans from seven towns specifically mention the need for more improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one place plan calls for a train halt to be re-instated (Baschurch). The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Shropshire council’s decision to make considerable cuts to the county’s bus service in recent years is not in line with aims to provide a transport service that reduces the need to use private cars. In addition, the information coming out from the council about closure / demolition (carbon footprint implications) of the existing bus station is contrary to the principle of a sustainable transport system for the county. It also invalidates claims to link up public transport systems (it’s a short walk from the bus station to the train station) which is key to making it possible for people to stop using cars. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions. A reliable and affordable public transport is vital for keeping the community connected, giving freedom to those who are too young and importantly, those too old to be driving. If we are to live within planetary boundaries, we must take steps to make the need for private cars obsolete and invest in green public transport. (response ref form 8)
A2372B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:” The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. “Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A2372B6	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	para 2.12 I do NOT agree with the assertion that Shropshire has an ‘extensive’ bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A2372B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	An item included in every single one of the eighteen place plans, is the need for speed limits and/or traffic calming measures. As well as the safety issues, reducing the speed of traffic reduces the carbon emissions as well as increasing the amount of walking and cycling. This local plan makes NO REFERENCE to strategies to reduce speed limits or provide more traffic calming measure, despite the obvious requirement throughout the county. This indicates a real lack of joined up thinking over what it really means to have an active and sustainable transport system (respondent ref; Form 11).

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2375B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The pursuit of sustainable development is at the heart of the planning process. The National Planning Policy Framework (NPPF) quotes the United Nations General Assembly in defining what this means at a strategic level: "meeting the needs of the present without compromising the ability of future generations to meet their own needs" The United Nations has set out a clear and compelling need for Shropshire, alongside the rest of the world, to achieve net zero carbon as a matter of the highest urgency, and we request that you recognise this over-riding priority in all your future plans for Shropshire unitary authority area, and the consequent need to recognise priorities for a shift in strategy from your current priority for 'economic growth' to a new priority for 'sustainable economic growth'. This means that the 'Shropshire Local Plan' must consider the carbon footprint of current and future activities and available carbon budget and priorities for addressing the climate and ecological emergency, and offer support for the new technologies and enterprises that Shropshire needs for the future. This new strategy must explicitly recognise that your draft plan targets for 2050, a generation away, do not meet the NPPF definition of sustainable development because as set out in the Paris Agreement, to allow emissions to continue would compromise the ability of the next generation to meet their needs. In particular, your draft plan reference to the planning system needing to play a full role in the achievement of 80% reduction by 2050 is out of date now that SC has recognised the climate emergency, and your own corporate proposals for net zero 2030 will be at odds with this goal. I request that you also recognise the ambition of Shropshire residents and enterprises to ensure net zero carbon by 2030 at the latest and ensure that your plans will be re-aligned to support this target. Furthermore, I request that you recognise the implications of the United Nations Paris Agreement for Shropshire as set out in the recent Tyndall report as follows: 'the recommended energy only CO2 carbon budget for the Shropshire area for the period of 2020 to 2100 is 11.5 MtCO2', and a consistent emissions reduction rate of -13.5% out to the end of the century is appropriate.' This provides an 'energy only' carbon emissions budget for Shropshire of 10.7MtCO2 from now until the end of your Local Plan period in 2038, and a further 0.8 MtCO2 during 2039 to 2100. The UK Climate Change Committee reported last year that 'Current policies and plans are insufficient to meet the fourth or fifth carbon budgets (covering 2023-2027 and 2028-2032).' There is therefore a clear and pressing need to fundamentally reconsider the policy framework in relation to any plans that Shropshire Council wishes to adopt, in the light of the need for Shropshire to achieve net zero carbon in line with the reductions required by the Paris Agreement and UK obligations under international law. The Centre for Alternative Technology, and others, have demonstrated that we have the solutions we need for net zero carbon Shropshire to be achieved by 2030: 'Our work clearly demonstrates that we already have the tools and technology needed to efficiently power the UK with 100% renewable energy, to feed ourselves sustainably and so to play our part in leaving a safe and habitable climate for our children and future generations.' We need to consider the total carbon footprint rather than purely energy emissions, enabling the broadest possible scope for planning the change programme required for this fundamental but vital shift towards sustainable development, the investment in future enterprises and households fit for the future, and the discontinuation of unsustainable practices. I request that you ensure that your plan makes reference to the need to reach zero carbon Shropshire by 2030, and that you give formal requirement for all proposals and developments and priorities in your Local Plan that achieve at least that level of carbon footprint reduction in all that you plan to do from now on. I am sure you will agree the intention in all future plans must be that activities and developments are aligned to the achievement of net zero carbon Shropshire by 2030 at the latest. The changes required will be hugely challenging, but we must seize this opportunity for Shropshire to become a truly sustainable economic success, and I welcome the support of SC for this transformation. There is an exciting opportunity for Shropshire to succeed in this new world - local solutions from local enterprises for growth & success of a Shropshire economy based on products & services that a net zero world will need, promoting sustainable economic growth of our lovely county, and wealth creation from our world class environmental technology sector, which can export sustainable solutions around the UK and around the globe. Time is pressing, the pace of change will challenge all of us, and as we know we are in last chance saloon. Whilst we make plans, Shropshire's carbon emissions continue to race out of control (as typical UK citizens our carbon footprints are more than twice the global average, with 46% of it outsourced overseas). We will burn through this century's carbon budget by 2027 if we continue on current trends. The consequences of failure to implement a ZCSP and achieve net zero carbon Shropshire by 2030 would be catastrophic. https://unfccc.int/climate-action/introduction-climate-action https://carbonbudget.manchester.ac.uk/reports/E06000051/ https://www.theccc.org.uk/wp-content/uploads/2019/07/2019-Progress-Report-Summary.pdf https://www.cat.org.uk/info-resources/zero-carbon-britain/research-reports/zero-carbon-britain-rising-to-the-climate-emergency/ https://www.wwf.org.uk/sites/default/files/2020-04/FINAL-WWF-UK_Carbon_Footprint_Analysis_Report_March_2020%20%28003%29.pdf
A2394B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	The draft LDP recognises in various places the value of the canal network in the county and that the canals are worth protecting and enhancing. Their values fall into many sections of the Policy statements but there is no overriding drawing together of the various threads/benefit. For example, the value of the canals fall into health & well being; historic environment; water; natural environment; landscape & visual amenity; strategic corridors; economic growth; tourism & culture. We suggest there is a separate policy section for the canals – perhaps like the one for the Clun Valley? – which covers all the benefits and shows how the canals' policy links in with the other policies. Reason: To avoid the possibility that the essential protection of the canals could be mired by conflicting interpretations of the different policy areas
A2398B5	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Broadly support the vision. The economic aims and ambitions that are set out in the plan should be endorsed by all and it is imperative that the housing and infrastructure which support growth are delivered.
A2406B2	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	Natural England considers that the Plan's vision and emerging development strategy addresses impacts on and opportunities for the natural environment and sets out the environmental ambition for the plan area. The plan takes a strategic approach to the protection and enhancement of the natural environment, including providing a net gain for biodiversity, considering opportunities to enhance and improve connectivity.
A2407B04	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	During the site appraisal stage and before selecting which sites to take forward as allocations in the plan, the following may be useful to ensure opportunities for biodiversity net gain are secured: • Does the site present significant risks to biodiversity? If so, have alternative sites with lesser impacts been explored? • What site specific recommendations can help delivery biodiversity net gain, for example what further survey work may be required at the planning application stage? • Whether the site can accommodate on-site biodiversity net gain provision or whether there is a need for off-site contributions? What types of habitat creation or enhancement are most appropriate? • Does there need to be any restrictions on the type of development that will be acceptable or particular parts of the site that should be not be developed? During the site selection process, potential sites should be judged in accordance with all policies in the NPPF, including selecting land with the least environmental value, where consistent with other policies.
A2407B12	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	The Local Plan should identify relevant areas of tranquillity and provide appropriate policy protection to such areas as identified in paragraph 100 and 180 of the NPPF. Tranquillity is an important landscape attribute in certain areas e.g. within National Parks/AONBs, particularly where this is identified as a special quality. The CPRE have mapped areas of tranquillity which are available here and are a helpful source of evidence for the Local Plan. We note that tranquillity within the Shropshire Hills AONB is covered within the plan but you may wish to consider if there are other areas.
A2422B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	In many planning situations, compromise has to be sought. However, here I believe a more drastic approach will be needed. We are sleepwalking towards chaos. My perspective is unashamedly environmental. I cannot pass by the stirring words of policies, from the NPPF onwards, without reflecting on what kind of a mess we're in; and on how great are the changes that we must make, in order to stand any hope of surviving the coming, and predicted, difficulties. I shan't waste much time repeating the texts and data. You've seen them already. My job is to not let you forget, to continue with the old ways.
A2427B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: "The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan." This requirement is not included in the standards that are applied to SP5, SP6 and SP9.
A2427B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions
A2440B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	spelling mistake of Llanymynech. Sympathetic development of the Canal Yard Is essential for village canal heritage area and visitors. Montgomery Waterway Restoration Trust has been represented on Llanymynech Heritage Partnership for many years and would wish to take part in community discussions about future of the canal yard and the wider development of Llanymynech as a canal destination
A2441B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	agree with spatial vision but have concerns over the vagueness of the statement. Will there be a clear definition of what constitutes well-designed, decent and affordable homes in the right location? The approved housing application for the SUE shows cramped conditions with little parking and dangerously positioned outdoor spaces and play areas. Currently the area has 3 naturalised pools dating back to the glacial period and according to the spatial vision these would be protected and enhanced but in reality they are to be filled in and houses built on them. One only has to look at the Radbrook estate to see how well a housing estate can be designed unfortunately that blueprint appears to have been discarded in favour of money in the pocket for the developer.
A2441B8	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	In principal I agree with the policy but have the following concern which I would like addressed - how will Shropshire Council move the County to a net zero carbon economy when it has an aggressive housing supply target and the proposed housing developments largely depend on the use of private cars.
A2453B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Paragraph 1.11 The SLAA appraisal was a flawed process. The cut-off benchmark for what constituted a community hub was quite arbitrary. Communities on either side of this mark could easily have disagreed with the outcome. In North Shropshire the decision to distribute more housing into smaller communities where infrastructure was more limited was mistaken. Other constituency areas had a better balance going to the larger settlements where existing infrastructure will be able to cope with new development. CIL /s106 money would have not been sufficient to cover the gaps in infrastructure. So in the north more development should have been allocated to the larger settlements. This has distorted allocations with less sustainable sites being allocated where other more sustainable sites were available within the settlement itself or in another settlement
A2454B1	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 This introductory paragraph detailed car ownership as being at a high level and then goes on to say that there is an extensive bus network in the County. The limited bus network in our parish, results in an absolute need to have access to a car or van.
A2462B03	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	In terms of Water Quality (WQ) the supporting documents are clear that: Significant infrastructure upgrades would be required to serve growth in Shrewsbury, (Strategic Centre), and Bridgnorth and Ludlow (Principal Centres) as well as a number of Key Centre and Rural Areas settlements • Some treatment works could require upgrades to ensure growth can occur without causing the flow permits to be exceeded • At many of the WwTWs in the study area planned growth would cause either a 10% deterioration in water quality or a deterioration in water framework directive class. In some cases, this could be prevented by a tightening of environmental permit and/or upgrades to treatment processes. In other cases, this would not be possible under current technically achievable limit • At other WwTW, although deterioration was not significant, there is a risk that the additional flow from growth could prevent good ecological status being achieved in the future. In WQ terms we note the intention for early engagement with Severn Trent Water and Dwr Cymru/Welsh Water to ensure capacity / upgrades in time with development / further mitigation. Therefore, putting the onus on assessing capacity at planning stage of each development.
A2462B10	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	We advise that the DLP needs to consider that SSSIs as well as N2K sites in Wales might be impacted by air pollution originating from developments in Shropshire. We are concerned about impacts on cross border sites and sites near the border with lichen/bryophyte features, particularly: Llanymynech and Llyncllys Hills SSSI • Breidden Hill SSSI • Roundton Hill SSSI • Corndon Hill SSSI • Moel y Goffa SSSI • Fenn's, Whixall, Bettisfield, Wem And Cadney Mosses SSSI (see comments on the SAC which are applicable to the SSSI). All of these sites are SSSIs only, so it is unclear how impacts on these sites from development in Shropshire will be assessed (we are conscious they are not considered by the HRA). We note the Regulation 18 Pre-Submission Draft Shropshire Local Plan 2016 to 2038 - Sustainability Appraisal and Site Assessment - Environmental Report considers the effect of site allocations upon certain SSSIs. However, any potential effect on the sites listed above does not appear to be given consideration. The background levels of ammonia and nitrogen (according to APIS) at these sites already significantly exceed the critical level and critical load for the features present. Therefore, any additional impacts from proposed development e.g. the development proposed in Llanymynech and Pant (approx. 75 dwellings), will be adding to traffic movements and residential combustion, and associated air pollution that will be further impacting on the protected sites – particularly Llanymynech and Llyncllys Hills SSSI which is within 200m of the A483 at Llanymynech/Pant. We would like to make you aware of our general concern for the River Teme SSSI and any proposals likely to pollute or abstract water from it, and the need to consult with NRW about any such proposals. Corndon Hill SSSI and Moel y Goffa SSSI support nitrogen sensitive lichen and bryophyterich habitat, although they are not known for any particular rare species so increase in nitrogen deposition would lead to increase in growth of plants that will dominate the sward reducing diversity, structure and condition of the habitats present rather than bryophyte/lichen features. This has the potential if left unmitigated by inappropriate planning to cause these sites to fall into irreversible states.
A2469B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs: " The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan." Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9?

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2469B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 "There are 15 other railway stations across Shropshire and an extensive bus network which together aim to provide accessible public transport to residents and visitors." I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The place plans from seven towns specifically mention the need for more c improved public transport by bus for their area. The need to link up neighbouring communities by bus was frequently mentioned and one place plan calls for a train halt to be re-instated (Baschurch). The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Shropshire council has made considerable cuts to the county's bus service in recent years which is NOT in line with aims to provide a transport service that reduces the need to use private cars. In addition, the information coming out from the council about closure / demolition of the existing bus station, which in itself has carbon footprint implications, is contrary to the principle of a sustainable transport system for the county. It also invalidates claims to link up public transport systems (it's a short walk from the bus station to the train station) which is key to making it possible for people to reduce their use of cars. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions.
A2470B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Don't know / no opinion	To be considered sound at Examination the emerging Local Plan will need to meet all four of the soundness tests set out in paragraph 35 of the revised Framework (2019).
A2471B07	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	SP7 and SP8 both include specific item about the need to design these building with reference to climate change needs:" The design and layout of development positively responds to our changing climate and maximises any opportunities to minimise carbon emissions and make efficient use of water, in accordance with relevant policies of the Local Plan. "Why has this requirement been omitted from the standards that are applied to SP5, SP6 and SP9? (respondent ref; Form 7)
A2471B08	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. DP29 lists proactive measures the council can take to reduce car use, but the provision of a truly extensive and comprehensive public transport system is crucial, without it the county will continue on its current trajectory of increasing carbon emissions from transport. Recent cuts to bus services and the proposed closure of the bus station are contrary to the principle of a sustainable transport system for the county. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions (respondent ref; Form 8)
A2477B02	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Agree	The pursuit of sustainable development is at the heart of the planning process. The National Planning Policy Framework (NPPF) quotes the United Nation General Assembly in defining what this means at a strategic level: "meeting the needs of the present without compromising the ability of future generations to meet their own needs". The role of the Shropshire Local Plan is to translate this high level objective into a meaningful and positive framework at the local level to inform decision making for the benefit of the County. This relates to both strategic issues, such as the amount of growth proposed and how it is distributed, and how the County moves towards a net zero carbon economy; through to more detailed issues, such as the design and layout of new development and how environmental assets are to be protected." The respondent supports and agrees with this statement fully and without reserve.
A2489B01	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	General Comments	Disagree	Para 2.12 I do NOT agree with the assertion that Shropshire has an 'extensive' bus network. The issue becomes chicken and egg; yes the county has a high level of car ownership but by reducing public transport, the need for a car increases, especially in the rural areas. The local plan must set out the framework for a public transport service that will facilitate the reduction in car use that is vital for reducing CO2 emissions
A2177B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Appendix 5	Disagree	Appendix 5 outlines the Councils housing land supply as some 29,384 dwellings. This appears to exclude sites in draft Policies S19-S21. Before the pre-submission Local Plan consultation, the overall HLS should be clarified by the Council. Strategic policies should ensure availability of a sufficient supply of deliverable and developable land to deliver the housing requirement. Supply should meet the housing requirement, ensuring maintenance of a 5 Years Housing Land Supply (YHLS) and achieve HDT performance measurements. The Council's overall HLS should provide some flexibility to respond to changing circumstances, to treat the housing requirement as a minimum rather than a maximum and to provide choice and competition in the land market. There is no numerical formula to determine the appropriate quantum for a contingency but greater numerical flexibility is necessary where HLS is dependent on a few large strategic sites or locations than in cases where HLS is more diversified. The HBF always suggests as large a contingency as possible (at least 20%). If during the Local Plan Examination, any of the Council's assumptions on lapse rates, windfall allowances and delivery rates are amended or any proposed housing site allocations are removed then any built in flexibility is also reduced. National policy only permits an allowance for windfall sites if there is compelling evidence that such sites have consistently become available and will continue to be a reliable source of supply. The Council's 5 YHLS Statement dated 3rd March 2019 estimates the 5 YHLS between 2019/20 – 2023/24 against the adopted Local Plan housing requirement is 6.42 years or against the minimum LHN is 8 years (based on a stepped trajectory, Sedgefield approach to shortfalls and 5% buffer). Before the pre-submission LPR consultation, the Council should prepare and publish an updated 5 YHLS Statement for 2020/21 – 2024/25 against the proposed housing requirement and trajectory.
A0853B4	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Appendix 7	Disagree	It is noted that the Draft Plan introduced additional strategic allocations in the Regulation 18 Pre-Submission Draft which were not included within the previous 'Preferred Site' consultation, notably Clive Barracks at Tern Hill and the Former Ironbridge Power Station. Whilst we do not object to the allocation of these sites, the Council needs to realistic in its expectations for delivery. In our view the delivery forecasts for these sites suggested at Appendix 7 are very ambitious having regard to the scale of proposed developments and the significant infrastructure requirements related to new settlements. It is therefore critically important that the plan still provides a sufficient supply of deliverable sites free of constraint, which are capable of coming forward in the early and middle parts of the plan period, to ensure the Council is able to demonstrate a five-year supply on adoption and throughout the Plan period, and to meet immediate needs within the key settlements (Shrewsbury and the Principal Centres).
A2177B18	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Appendix 7	Disagree	Appendix 7 : Forecast of Delivery Timescales for Local Plan Allocations is not a housing trajectory. The NPPF sets out that strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period and if appropriate to set out the anticipated rate of development for specific sites (para 73). The omission of a detailed housing trajectory is inconsistent with the NPPF. Before the pre-submission LPR consultation, a housing trajectory should be incorporated into the Local Plan.
A0306B067	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	We would question the assessment of Hencott Pool and the decision that the increased buffer (now 200m) between the proposed North West Relief Road and the site is sufficient to determine that there will be no significant impacts. The construction of a major road within 200m of a site of international importance surely raises some uncertainty as to the significance of impacts. The precautionary principle is a key element of the HRA process and so at the very least the site should have progressed to stage 2. Within this assessment the possibility of windfall development (the potential for this is identified in para 5.224 of the local plan consultation document) should also be considered.
A2389B2	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Don't know / no opinion	There are also further discussions probably to be had around the Clun catchment which we have spoken about previously i.e. around possible measures/solutions and potential concerns including Natural England.
A2407B06	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Agree	We note paragraph 3.30 of the HRA "states Shropshire Council is continuing to liaise with Natural England, the Environment Agency and Severn Trent Water as well as other stakeholders to find solutions and to update the Nutrient Management plan together with the underlying evidence base. A revised nutrient management plan or action plan, providing the required certainty that mitigation measures will be implemented, would help to unlock future development. The building industry is also being encouraged to seek innovative solutions for larger developments." Natural England agrees that additional work on the Nutrient Management Plan and actions arising from it are necessary, in order to provide appropriate certainty to enable development and restore the site
A2462B04	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	We note that the HRA includes an assessment of the effects upon the Fenns & Whixall Mosses SAC and Midland Meres & Mosses Phase 2 Ramsar (paragraphs 3.71 – 3.79). The assessment appears to focus on recreational pressures on the designations. However, the designations are highly vulnerable to nitrogen deposition and are already widely in exceedance for its bryophyte-rich bog habitat and the SSSI feature Waved fork-moss Dicranum bergeri. We would advise that the HRA give further consideration to the potential for airborne emissions from new, including agricultural renovations and yard upgrade, developments.
A2462B05	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	We have concerns about the Berwyn SAC/SPA/SSSI/ NNR, where background levels of Nitrogen already exceed the critical load for the habitat features present. We note section 2.34 of the HRA and in relation to SAC/SPA we do not agree with the approach taken. The HRA indicates that the contribution of traffic movements emanating from Shropshire will be small and that other local authorities should consider the impact in combination. However, it is uncertain that other local authorities will undertake the assessment. We would question what feedback mechanism exists to review the Shropshire Plan in the light of any findings. The HRA states "The HRAs of both Cheshire West and Chester's LP and the Wrexham LDP both conclude no likely significant effect, alone or in combination from airborne pollution on this international site." However, the HRA does not appear to consider the in-combination effects of those plans with the Shropshire and Powys plans. We note cross reference to an extract from the Powys Preferred Strategy HRA (2016), (Table 2, page 18) in relation to the Berwyn SPA and SAC (representation then quotes text from the Powys HRA which screens out the Berwyn SPA and Berwyn and South Clywd Mountains SAC from further assessment). Representation then sets out details of a previous consultation with NRW from Shropshire Council in February 2018 on a SC technical note covering the proposed methodology for assessing Annual Average Daily Traffic values. At this point, NRW had indicated they were satisfied that the Shropshire LPR was not likely to have an adverse effect on the integrity of the Berwyn SPA and Berwyn and South Clywd Mountain SAC at this stage. NRW then say: However, we do not agree that development and associated increased combined contributions e.g. combustion, traffic movements, intensive livestock units etc. will not have any impact on N2K sites when background levels already exceed critical levels and, in some cases, critical loads. We would also add that whilst the issue of traffic emissions was not raised in the Powys Preferred Strategy 2016 HRA, that does not mean that traffic movement is not an issue. Our understanding of air pollution has developed since 2016 hence the need to identify air pollution and its impact on protected sites. In addition, we advise that the concept of screening out development that contributes under 1% of the process contribution, and previously deemed "de-minimus" is no longer thought to be an approach that is compliant with the legislation or case law, regardless of the type of impact being assessed. This being the case, NRW is currently reviewing its own guidance note "GN020 Assessing the impact of ammonia and nitrogen on designated sites from new and expanding intensive livestock units" to address this, however this might also apply to the assessment of traffic movements and combustion processes from residential development etc. Therefore, we do not agree with the use of de-minims referred to in Table 2 in relation to Berwyn SAC. Particularly because the site is already subject to background levels of nitrogen deposition that exceeds the critical load for the habitats present. We advise that if it is known that the SAC is already 'under stress' from airborne pollution (from any source), it is particularly important to consider very carefully the additional impact of any new sources. Regarding recreation and other disturbance for the Berwyn SAC/SPA please note that parts of these designations are also included in the Berwyn NNR and are therefore accessible to the public. There is potential for increased visitor numbers to the uplands, as has already been seen in the post Covid-19 lockdown period, with sites such as Piston Rhaeadr being inundated with visitors, therefore the impact of an increased Shropshire population may be significant in particular in some honeypot attraction areas. NRW are aware of some small areas that appear to have been damaged by visitors and that there is the potential for this to increase without mitigation. The HRA should give appropriate consideration to this issue.
A2462B06	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	We note that the HRA has considered impacts on sections in England (we note reference to EA data from 2009 in paragraph 3.37) but makes no reference to NRW (or Natural England) assessments of the site. We could not find reference to any in-combination assessment. We note Appendix 6: Other Plans and Projects Considered for In-Combination Effects. The appendix includes reference to the conclusions of neighbouring Local Authority Local Development Plan HRAs (Wrexham and Cheshire West and Chester). However, it is unclear how the in-combination effects have been assessed. There is reference to the Shropshire Water Cycle Study. However, the HRA does not provide clarity on whether that study considered in-combination effects, including upon Welsh feature interest associated with the SAC. Confirmation that in combination effects have been considered would clarify this matter.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A2462B07	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	In terms of Severn Estuary SAC, SPA, RAMSAR we note the conclusion that 'application of policies DP20. to 23. in the DLP will protect water courses and water bodies, and in so doing are likely to prevent adverse effects on site integrity, alone and in combination, on international sites (paragraph 3.20). We would anticipate that the local protection within Shropshire is likely to be around phosphate. Under the Water Framework Directive (WFD) phosphate is the physical chemistry element that is assessed in rivers as assumed to be the limiting nutrient, the exception will be the Clun SAC where we note in addition to avoiding an increase in P levels the intention is to avoid an increase in N or sediment inputs) whereas the Severn Estuary SAC is more likely to be nitrate limited being a marine environment. The HRA should clarify the current state of the Severn Estuary SAC in terms of nutrients / risk from nutrients. Furthermore, as Shropshire is just one of a number of areas that drain to the Severn estuary, we would question how an in-combination assessment of this issue has been considered.
A2462B08	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Don't know / no opinion	There is recent evidence to suggest that there is cross-border movement of Lesser Horseshoe bats between Shropshire and Powys, although not specifically from the sites that make up this SAC. This evidence has been gathered as a result of a ringing and radio-tracking project undertaken by the Shropshire Bat Group at Snailbeach Mine in the Stiperstones. Two Lesser Horseshoe bats ringed by this project have been found hibernating within Montgomeryshire. One of the individuals was found at Roundton Hill SSSI, and the other at an undesignated private residence within the locality of Welshpool. This may have implications where development could impact on potential commuting routes/ corridors of vegetation between the counties and should be taken into account at the planning application stage.
A2462B09	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Don't know / no opinion	We note references to the restoration and re-navigation of the Montgomery Canal in Shropshire. NRW are part of the ecology sub-group of the Montgomery Canal Partnership that meets regularly to discuss ongoing monitoring, restoration proposals, etc, but we advise that NRW should be formally consulted when any plans to re-open the canal to boat movements close to the Welsh border at Llanymynech come to fruition, and that project level HRA will be required.
A2462B11	Habitats Regulations Assessment	Comments on the Habitats Regulations Assessment	Disagree	We are of the view that the submission is not likely to be detrimental to the maintenance of the Favourable Conservation Status of any of the Welsh populations of EPS. We advise that our response identifies the requirement to consider mobile Habitats Directive Annex II species such as otter and lesser horseshoe bats among others. Considering the proposed allocations and locations of N2K sites, this will effectively be the otter in respect of the Dee catchment. We advise that our responses identify the requirement to ensure continued breeding, foraging and dispersal within the catchment.
A0268B6	Sustainability Appraisal	Comments on the Sustainability Appraisal		The Site Assessment and Sustainability Appraisal to inform the Preferred Sites Consultation concluded SHR197 lies within 250m of a designated Local Wildlife Site of linear form comprising Sunderton Pool and a thick belt of woodland stretching north to south from the A49 to the B5062. However, this assessment was based on the delivery of wider site. The updated Site Assessment papers correctly recognise that the developable area of the site will now lie a minimum of 500m from this designation. However it suggests that there are TPOs on the site, this is incorrect. Development of SHR197VAR would have a very limited impact on the trees and hedgerow which largely fringe the site and would not impact on any protected or veteran trees in any way whatsoever.
A0306B066	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	Shropshire Wildlife Trust has no confidence in the Sustainability Appraisal (SA) which fails to, in it's own words: consider how a plan contributes to improvements in environmental, social and economic conditions; identify any significant adverse effects that a plan might have; amend proposals in a plan to avoid any significant adverse effects; propose mitigation measures to counter any remaining significant adverse effects. Little has been done to address concerns flagged in previous consultations. To produce a SA that appears to state that the delivery of 30,800 new dwellings and around 300 hectares of employment land with all the associated infrastructure will have no significant negative effects is incredible. Amendments to the SA methodology are insufficient to address climate change. There are fundamental scoring errors in the assessments. Sites score well for climate change even though they will generate traffic. We suggest that the Sustainability Appraisal is subject to a thorough review and rewrite.
A0336B1	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	Agree with the suitability conclusion within Stage 2b of the Site Assessment process (taken from the SLAA) for WHT037 and WHT044, that the site is not currently suitable but future potential, the site is not suitable for development. WHT037 and WHT037VAR achieve a fair score in Stage 2a Sustainability Appraisal, this is due to proximity to a gold course. Remove this and it would be poor as there is little open space in the area (WHT046 provided very little). There is no evidence of a viability assessment being undertaken.
A0398B2	Sustainability Appraisal	Comments on the Sustainability Appraisal	Agree	Page 6: To meet the needs of future generations, please include food production. Place a higher value on agricultural land and soil quality. We import over 40% of our food so need to protect land capable to feed future generations. Homes are of course needed and I support more housing. Long term we need to look at other models of delivery. We need to build up rather than out so save land, e.g. the highly desirable condos as in Canada. Soundproof high quality builds with balconies and maintained gardens, ground floor laundry to prevent fires and floods.
A0407B3	Sustainability Appraisal	Comments on the Sustainability Appraisal		The Sustainability Appraisal is poor quality and cannot be taken to support the Strategy it purports to appraise. There is no evidence demonstrating that development in Hubs and Clusters is sustainable, in fact available evidence shows development in these rural settlements is unsustainable. Principal failings of the Sustainability Appraisal are: It fails to compare carbon emissions between available sites; It takes an absolute approach, asking "does development of this site meet the threshold for sustainability as defined by chosen measures", rather than "would development of this site be more sustainable than others", such that the cumulative result of all development would provide the most sustainable overall development pattern. In important respects, notably the efficiency of public transport as a competitive alternative to the private car; and the societal conditions offered to households and members of households without access to a private car, the appraisal fails to make a realistic assessment. No consideration of SA objective SO12 Reduce carbon dioxide emissions within the assessment of sites. With regard to SO5 and SO6, the criteria used to assess sites is not an indication of whether a site will encourage use of sustainable transport. A more appropriate question is the likelihood that a site location would lead to private car being the choice of mode. Paras 102-105 of the NPPF require that patterns of growth should be actively managed to achieve results which are encapsulated in Oswestry 2050, but the SA fails to address the requirements of these policies. Opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised – for example in relation to the scale, location or density of development that can be accommodated; and opportunities to promote walking, cycling and public transport use are identified and pursued. There is no "active management" of the pattern of development. The SA fails to address accessibility to the main trip generators – employment opportunities, weekly shopping locations, and secondary schools. Leaving out these locations skews the results in favour of rural development, and the SA is therefore defective. There can be little argument that sustainable development patterns are those which minimise the distance travelled; minimise the number of private car trips, and enable the provision of attractive public transport. SA1 and 2 proceed on the basis that a development is sustainable if it achieves the bare minimum of public transport access, and pays no regard to the accessibility of those services which are most used. Nowhere in government policy is support found for such an approach.
A0430B30	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	The Sustainability Appraisal process and a separate site assessment process have been conflated into a single document, the Sustainability Appraisal and Site Assessments Environmental Report (July 2020). No issue is taken with this per se, but the approach makes it somewhat difficult to navigate the document and the site selection process hard to follow. It is set out in the document that the Sustainability Appraisal represents Stage 2a of the site assessment process. A summary of the overall scores for each site is provided in the main part of the document with the full appraisals for Shifnal provided as Appendix P. SHF034 scores 'good' in the Sustainability Appraisal and is the best score of all the safeguarded land in Shifnal. Indeed, it scores better than two of the three allocations. Wallace concur with this score, as the Site is highly sustainable. It is set out in the document that the Screening of Sites represents Stage 2b of the site assessment process. This is presented as a series of proforma for each site. The proforma for the sites in Shifnal is also provided at Appendix P, and they include a summary of the findings of the SLAA and an overview of the availability and achievability of the site with a recommendation on whether it should be considered in the next stage of the process. Ultimately SHF034 was found to be available and achievable at this stage and recommended to be considered in the next stage. The Detailed Assessment of Sites represent Stage 3 of the site assessment process. This is again presented as a series of proforma for those sites which were taken forward from Stage 2b. The proforma include a summary of the strategic considerations for each site and officer commentary on highways, ecology, trees and public protection. Ultimately, it is recommended in the proforma that SHF034 be removed from the Green Belt and safeguarded other than land north of the western railway line, which was recommended to be retained in the Green Belt. Wallace have no issue with these findings as the Site can be delivered in a suitable and sustainable manner. However, they would like to stress that the land north of the western railway line has the potential to extend the proposed link road up to the A464 (west), and by choosing not to release this land from the Green Belt now the Council are preventing this benefit from coming forward until the next review of the Green Belt boundary. On a final point, and with regards to methodology, it is respectfully requested that the SAMDev Plan housing allocations that are proposed to be retained as allocations in the Regulation 18 Local Plan be given consideration in the Sustainability Appraisal and the site assessment process. This is considered to be a necessary step before a conclusion can be drawn on whether these allocations are still suitable for housing and so they can be compared to the reasonable alternative of other sites which are not currently allocated coming forward instead, such as this Site. It is understood that the SAMDev Plan housing allocations underwent a Sustainability Appraisal at the time of that plan, but different assessment criteria was used and it is safe to say that the spatial context within which the sites were considered will have changed since then. A failure to consider the SAMDev Plan allocations may be seen as a significant oversight on the basis that the PPG requires Sustainability Appraisals to develop Local Plan options including reasonable alternatives and evaluate the likely effects of the Local Plan and alternatives.
A0642B47	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	We have no confidence in the Sustainability Appraisal (SA) which fails to, in it's own words: consider how a plan contributes to improvements in environmental, social and economic conditions; identify any significant adverse effects that a plan might have; amend proposals in a plan to avoid any significant adverse effects; propose mitigation measures to counter any remaining significant adverse effects. Little has been done to address concerns flagged in previous consultations. To produce a SA that appears to state that the delivery of 30,800 new dwellings and around 300 hectares of employment land with all the associated infrastructure will have no significant negative effects is incredible. Amendments to the SA methodology are insufficient to address climate change. There are fundamental scoring errors in the assessments. Sites score well for climate change even though they will generate traffic. We suggest that the Sustainability Appraisal is subject to a thorough review and rewrite. Air Quality: Land transport is responsible for the greatest percentage of CO2 emissions in the UK, at around 28% (and 37% within Shropshire). Since transport is also responsible for most of the air pollution, both gas and particles, it is crucial that transport is made a main target of reduction and the absence of a Local transport Plan to support the Local Plan is a major omission. If, as now, the Local Plan does not seriously consider and mitigate this, then it will be storing up very costly future corrective action. Apart from the climate emergency, more and more research is confirming that all levels of air pollution are harmful and no amount is 'safe'. Restricting consideration to AQMA leaves most potential sites out of air quality consideration in the SA. It is not the presence of the development in the AQMA that is the issue but rather where the traffic generated by the development will occur. Sites within the county are being looked at on a piecemeal basis, each on their own merits, with no overall consideration of the cumulative effect on the Local Plan. Leaving a developer to produce a report on air quality which is only for the site in question leaves the way open to development and air quality worsening which will need correction at a later date at Council expense. Shropshire Council's Annual Air Quality Reports (ASRs) concur with current knowledge of the Public Health harm of any pollutants at any level, not just 'illegal' levels and yet it appears that action is not being taken within the Local Plan to ameliorate this. Sadly, we now see that the consideration given to a site in the latest Sustainability Assessment (Jul 19) (and therefore the Local Plan) consists of noting if a site is wholly or partly in an AQMA. This ignores the fact that a site outside an AQMA might result in a significant deterioration of air quality that might even mean a new AQMA is needed. To be in an AQMA, a site must have consistent yearly averages for NO2 of over 40ug/m3, but this is not able to be correctly measured. We also note that in the spreadsheet, ref table 2.4, air quality becomes criterion 9 instead of 10 and the scoring has changed so that the possible 'scores' are either one minus or a zero with no plus available. This also highlights that even if the site is totally within an AQMA, it can never 'score' more than one minus point whereas some other criteria can score two minus points. As a result of these policies, we therefore have Tern Hill, site ref BNT002, being put forward with no negative score at all for air quality, even though Tern Hill crossroads is 300m from the site and has had consistently high 'illegal' NO2 results. We are not saying that housing instead of barracks would necessarily adversely affect the crossroads, but that it merely illustrates the problem of the criteria system as this possibility is not even considered for a site proposing 750 new houses plus other services and facilities. Thus air quality considerations are ignored or, at best, left to a developer when detailed planning permission is applied for. At that stage, it is too late to do anything strategic and later problems will have to be corrected at Council expense. Also, considering each site on its own merits without regard to the impact on the whole area is not a sustainability approach. This piecemeal approach was criticised in the Stansted expansion inquiry.
A0642B52	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	Although the presence of an adjacent Local Wildlife Site and nearby SSSI are mentioned in various sections of Sustainability Appraisal text they are not counted in the assessment matrix. Also rather strangely the site scores well in terms of the climate change assessment (bus stop within 480m) despite the issue of the number of car journeys being generated being of such a scale that the development would be dependent on the proposed NWRR to accommodate the additional traffic.

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A0697B04	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>The NPPF states that the preparation of Local Plans should be informed by Sustainability Appraisal (SA) and that significant adverse impacts on should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts pursued. PPG states SA should outline reasons alternatives were selected, rejected options were not taken forward and why the preferred approach was selected given the alternatives. It should provide conclusions on the overall sustainability of different alternatives, including those selected as the preferred approach. Development and appraisal of proposals should be iterative, with proposals revised to reflect findings.</p> <p>Given this, do not agree with the approach taken in the selection of the preferred allocations at Albrighton.</p> <p>The SA states that it can help make sure the plan proposals are the most appropriate, given the alternative. Do not consider that this has occurred.</p> <p>The SA for the Preferred Sites Consultation stated it directly informed selection of the 'most' appropriate sites for allocation.</p> <p>Note the main bulk of the site assessments (Stages 2a, 2b and 3) have been undertaken within the SA (Stage 1 SLAA assessment being the exception). However, the Council has not selected the appropriate sites consistent with the findings of the assessment and the overall sustainability conclusions presented in the SA. ALB014 scored overall 'Good' in terms of sustainability (with good accessibility - criteria 5) compared to other sites in Albrighton including the proposed allocation ALB017&ALB021) which overall scored fair (-6) and poor (-10). Noted mitigation is proposed in relation to ALB021.</p> <p>ALB014 is not covered by statutory designations for landscape character or quality. It lies wholly within the Green Belt. The Albrighton Conservation Area lies to north-east of the Site, approximately 260m away at its closest point, continuing east to include Albrighton Hall. The Boningale Conservation Area is south of the Site, approximately 820m from the Site at its closest point. A number of Listed Buildings lie within the wider vicinity of the Site.</p> <p>Consider that the Council has not given sufficient regard to the findings of the SA in considering the appropriateness of the preferred approach, in light of reasonable alternatives, contrary to NPPF and PPG advice. As a consequence, the site selection process has not been sufficiently 'iterative' as required by the PPG, given that no changes or amendments have been made to the preferred approach to reflect the findings of the assessment process. This is evident based on consideration of the specific scoring for the proposed allocations and the Site (ALB014) undertaken at Stage 2a of the process.</p> <p>Broadly agree within the Stage 2a Assessment underpinning the good score for ALB014. However the site is incorrect when stating it is not within 480m of a primary school, it is adjacent to one (the site layout proposes a footpath to improve access to this and the sites surroundings). This score should be amended from a minus to strong positive (given proximity, it is the closest of any site to a primary school) which would change the score from -2 to +1 the highest of any site in Albrighton.</p> <p>ALB014 is therefore one of the most sustainable of all the sites assessed, providing clear justification to support the allocation of ALB014, given there is no logical reason that prevents its inclusion on sustainability grounds.</p> <p>It should be noted only three sites assessed in Albrighton scored worse than ALB021 and even when ALB017 and ALB021 were jointly assessed, they only scored fair (-6). Difficult to understand why ALB017 and ALB021 (either separately or in combination) are considered more appropriate than ALB014, based on the evidence set out in the SA.</p> <p>The Council has gone against its own assessment, without setting out justification in the draft Local Plan (this has previously been raised). This represents a clearly failing and raises serious soundness concerns regarding the site assessment/selection process undertaken.</p> <p>Notes and broadly accepts the assessment and conclusions in Stage 2b regarding ALB014. However the residential suitability conclusion from the SLAA for ALB014 is 'not suitable' - only factors referenced are Green Belt, TPO's and proximity to heritage assets which the SLAA concluded could be made 'suitable'. Consider there are no constraints once Green Belt boundaries are addressed, therefore disagree the site is 'not suitable'. In stage 2a there are gaps in the conclusions for sites ALB017 and ALB021. Both these sites were 'not currently suitable', but both are proposed for allocation. The word 'currently' has therefore been used interchangeably, given the SLAA concludes that ALB014 could be made suitable. This raises further concerns as to the consistency and transparency applied in the site assessment process for Albrighton.</p> <p>Stage 3 is claimed to be a proportional and comprehensive assessment and iterative. ALB014 is proposed for safeguarding rather than allocation at this stage, the main reason being its location in the Green Belt, release of which would have moderate harm to the Green Belt. Agree that the site should be removed from the Green Belt, but disagree that it would cause limited harm to the wider Green Belt as it no longer meets the purposes of the Green Belt. It is noted that within stage 3 (and agreed with) that no site-specific/other policy reasons to reject ALB014 as being unsuitable, all relevant development-related matters can be resolved at the planning application stage.</p> <p>Justification for proposed allocation of ALB017&ALB021 provided in the stage 3 assessment include relationship to the settlement, consider ALB014 is equally 'well related' and represents a 'natural direction for growth' - no justification or analysis denies this.</p> <p>Reasoning has bias in that the Council has chosen a site that, without mitigation, would continue to perform poorly in SA terms with regards to accessibility, were it to be developed compared to other more appropriate site options. In this context, it is clear that site ALB014 is more accessible than site ALB021 and could deliver as much, if not greater, improved provision of green infrastructure than ALB021.</p> <p>Considers proposed allocation of ALB017 and ALB021 has not been adequately justified based on the SA (Stage 2a), site screening (stage 2b) and subsequent detailed review (Stage 3).</p>
A0888B9	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	See wider response.
A0897B10	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	The SA does not recognise that ALB017 is in proximity of a children's play area and amenity open space. These are being constructed on the adjacent development site (within 100m of ALB017). This converts two negative scores (-2) into two positive scores (+2) and thereby changes the Sustainability Appraisal scores for site ALB017 from -6 to -2, changing its rating from 'Fair' to 'Good'. The Final Plan Sustainability Appraisal documents should be changed accordingly.
A0898B3	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	Object to the Sustainability Appraisal for Highley site HNN016 land south of Oak Street which has an error for this site. The sustainability score is +4 and the conclusion should therefore be 'Good' rather than 'Fair' as 'fair' is for the range -1 to -6. The error is repeated on page 55 as the conclusion from the stage 2a sustainability appraisal. This error needs to be corrected before the Plan's examination stage.
A0956B05	Sustainability Appraisal	Comments on the Sustainability Appraisal		The Sustainability Appraisal (SA) for the draft SLP outlines the range of positive benefits for an urban focused strategy, particularly in comparison to other strategy options which would involve greater growth in the rural areas. This tested the scenario of around 75% of housing growth being directed towards the urban locations, which appears to be carried forward within the draft SLP (with around 70% directed to urban locations, as detailed above). Whilst it is recognised that there are some potential adverse effects arising from a more urban focused strategy, in light of its overwhelming positive effects the Council should consider directing a higher proportion of growth to these urban locations (namely the Strategic, Principal and Key Centres) whilst providing specific policy support for smaller scale affordable housing provision within the rural areas. The scenario of a higher level of growth within the urban areas (more than 75%) does not appear to have been tested within the SA to date.
A0966B2	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	key issues which are incorrectly factored in to the Feb 2019 Preferred Sites Consultation sustainability appraisal identified as:- mobile library stops; Multi-Use Games Area; amenity green space & footpaths; Accessible natural green space all less than 480m from the site should result in an adjusted score of +6 rather than (-2) therefore site more sustainable for development
A0984B30	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>The assessment excludes the existing SAMDev Plan allocations, the Council may be criticised for not comparing these allocations with the sites in the SA.</p> <p>Whilst it is recognised that SAMDev Plan allocations underwent SA at the time of that plan, different assessment criteria was used and the spatial context within which sites were considered will have changed. A failure to consider SAMDev Plan allocations may be a significant oversight on the basis that the PPG, which requires SA to develop Local Plan options including reasonable alternatives and evaluate the likely effects of the Local Plan and alternatives.</p> <p>The SA uses 480m as the average distance walked in 10 minutes, to ascertain the accessibility of a site. This distance is derived from the Council's Open Space, Sports & Recreation Interim Planning Guidance (September 2010). The main issue is that PPG17, on which this guidance is based does not reference this distance and in event has long since been revoked. A distance of 800m is the normal proxy for a 10 minute walk as established by reputable and much utilised sources. As such, the use of the 480m distance is not justified and the use of an 800m distance in the SA instead could prevent unnecessary scrutiny at submission and examination.</p> <p>It is also unclear how these measurements have been taken and whether this is a walking distance measurement or a simple point to point 'as the crow flies' measurement. From a review of the scoring of some of the sites it appears that the measurement is a point to point measure. It is recommended that this is confirmed within the methodology.</p>
A0984B31	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>Criterion 3 relates TPO's. The SA of BRD030 suggests a TPO is present within the site. We are not aware of any such TPO and this is not raised within the Stage 3 Site Assessment under the 'Tree comments' heading. As such, this may be an error</p> <p>Criterion 5 relates to proximity to a range of different services and facilities. As already highlighted, it is not clear how this measurement is taken (by routes or as crow flies, although appears as the crow flies). As the crow flies, the site is within 480m (448m) of a primary school and a children's playground (385m), yet these are both identified as beyond 480m. This should be corrected and would mean the sites performs fairly for residential and employment.</p> <p>It is also worth noting that although BRD030 scores 'Poor' in comparison to some other sites in the SA around Bridgnorth, the majority of these are small sites which are located within or on the edge of Bridgnorth. Some of these do not make it to Stage 3, as they are considered to be too small (less than 0.5 hectares). Tasley Garden Village measures approximately 119 hectares and therefore it is likely that it may score lower than other smaller sites which are not capable of accommodating the settlements future housing and employment needs</p>
A0984B32	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>Support conclusions reached with regard to BRD030 within this assessment, part of which is identified as an allocation for a mixed use SUE and part identified as a future direction for growth. The site can deliver a sustainable urban extension to address the housing and employment needs of Bridgnorth.</p> <p>Also agree with the overall comments provided, however we have some minor additional comments to make on some of the individual considerations.</p> <p>Highways: It is not clear within the main report or appendices why some sites have been scored a highways accessibility rating and others have not. BRD030 has not been provided with a rating and the report does not suggest how this would be scored and what would be considered a good score where the site has good accessibility and what would be considered a poor score with poor highways accessibility.</p> <p>Heritage: Comments note that given the size of the site, it may have archaeological potential. A Heritage Desk Based Assessment has been prepared in support of BRD030 which concludes that the potential for archaeological remains it considered to be low. The assessment also considers the potential harm to two listed buildings (in/in proximity of the site) resulting from its development, the level of harm to both heritage assets has been categorised as less than substantial harm, at the lower end of the spectrum, and such harm should be weighed alongside the public benefits of the development proposals.</p> <p>Public Protection: A Phase 1 Geo-Environmental Assessment has been prepared for BRD030 which has identified that the site was historically and currently remains agricultural fields with 9no infilled former ponds and 2no farms. Potential contamination sources are anticipated to be extremely limited or absent for the majority of the site.</p> <p>Should there be a contamination issues, there are likely to be very localised sections of the site, namely the infilled ponds, farms and land adjacent to the old clay pit in the north west of the site. Further work would be carried out as part of a future planning application.</p>
A1101B17	Regulation 18: Pre-Submission Draft of the Shropshire Local Plan	Comments on the Sustainability Appraisal	Agree	<p>The SA forms the evidence base for the Plan and is flawed due to the incomplete evidence base including the justification for site selection and its failure to consider fully reasonable alternative sites including Stanmore Garden Village.</p> <p>At Bridgnorth, the SA demonstrates the preferred site, BRD030 does not score as well and is not rated as highly as an alternative, Stanmore Garden Village.</p> <p>The evidence base therefore does not support allocation of BRD030 and the approach does not accord with the policy of the NPPF that requires an alternative with a lesser impact to be considered. Stanmore Garden Village should be allocated.</p>
A1101B18	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>There are two limitations where the methodology falls short. The first is what is included in the baseline information and the second is the way the SA objective (SO15) assess heritage</p> <p>On the first limitation, baseline information should draw on the key sustainability issues facing Shropshire. A key issue is climate change, SA objective SO6 'Reducing the need of people to travel by car' has not been adequately considered in the assessment process.</p> <p>There is a need to consider self-containment to reduce in and out commuting, which generally takes place by car. Reducing the need to travel by car between home and employment will reduce commuting, miles travelled and can contribute positively to the climate change emergency (this is a particular issue in Bridgnorth but also a sound land use planning principle even where self-containment is not an issue).</p> <p>To address this, consider an additional Criteria 6 should also be added for 'An employment area within 480m of the site boundary' where Yes = plus score (+) and No = minus score (-). A previous change translated into criteria 6 (made following the Preferred Sites Consultation), added consideration of a 'Regular peak time public transport service within 480m of the site boundary'. For consistency the same distance is suggested for an additional criteria.</p> <p>On the second limitation, the SA scores sites on the basis of their proximity to designated heritage assets, using firstly criteria 13 whether a site has a designated asset within the site boundary; and secondly, criteria 14 whether a site falls within a standard specified distance. In the case of SA for another authority in the West Midlands, Historic England have expressed concerns about the limitations of this approach. It is effect on significance rather than proximity, of each allocated site and reasonable alternative that should be assessed. An assessment of significance of heritage assets is required so a sensitivity rating can be used and a highly sensitive site would have a significant negative effect. Therefore, an assessment of sensitivity should be used to assess potential impacts, rather than proximity.</p>

Column 1: Respondent Reference	Column 2: Summary of Response to Q1. Relevant Document	Column 3: Summary of Response to Q2. Part of the Document (Grouped)	Column 4: Summary of Response to Q3. Agree or Disagree with Part of Document	Column 5: Summary of Response to Q4. Comments
A1101B19	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>P56 (part of Stanmore Garden Village) clearly scores more favourably than the assessment shows: P56 does not have any Tree Preservation Orders on site (Criteria 3) (Arboricultural Appraisal provided as Appendix to Rep). P56 does not include any Ancient Woodland (Criteria 1), this falls within adjoining P55. P56 is also scored as 'high' landscape sensitivity (Criteria 15) when in fact it is medium. Furthermore, P56 scores is assessed as having a Scheduled Monument within the site. Currently, the scheduled boundary covers a minute area on the north-west edge, the site boundary could be redrawn to remove it. The subtly of a site boundary can make a difference to a score. P54 (part of Stanmore Garden Village) clearly scores more favourably than the assessment shows: P54 does not contain an existing waste management operation (Criteria 12), Swancote (the only such operation) is outside the boundary of the site and would not be impacted by the Stanmore Garden Village proposal (Swancote is close to the eastern element of the site but only the western element forms part of the proposed Stanmore Garden Village). In fact this would be an environmental benefit, offering access to electricity made from waste. All sites which form part of Stanmore Garden Village should be attributed a positive for being within 480m of accessible natural green space (Criteria 5), as Stanmore Country Park is on their boundaries. One of the deficiencies of SA is a 'criteria description' may only apply to a small part of a parcel, yet the whole parcel is blighted, giving the impression of significant effect when the reality is the criteria description is not representative of the whole parcel. All sites score a negative for being wholly or partly grade 1 or 2 or 3 agricultural land (best and most versatile). As there is no accurate survey it is not known what percentage of the parcels are classified as best and most versatile yet the possibility of a small part and may be not even in the development area scores a negative. Even with inaccuracies and deficiencies, Stanmore is still rated as 'Fair' for the elements proposed, save for the western extremity of P54 which is rated 'Poor' for employment. As that relates to such a small part of a very large parcel the effect cannot be considered representative of the reality.</p>
A1101B20	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>Sites rated as 'Poor' are considered to have likely significant adverse effects for which mitigation measures should be proposed BRD030 is proposed for allocation but rated 'poor'. As there are alternative sites in Bridgnorth that are not 'poor' rated, before looking to mitigate the alternative site should be favoured. The mitigation proposed to address the three reasons that lead to the 'Poor' for BRD030 are in doubt: The site is not in walking distance of many services and facilities, proposed mitigation includes as a minimum pedestrian and cyclist footbridge crossing of the A458 at an appropriate location near Ludlow Road roundabout, subject to ground investigations and available land. It must be demonstrated how necessary links can be achieved as this is not considered achievable in a satisfactory way. Part of the Site is within Flood Zones 2/3, mitigation proposed includes requirement for a suitable drainage strategy and that no development should take place in the areas at high risk of flooding. It should be demonstrated now that all development including access roads can be achieved on areas at low risk of flooding, taking account of other constraints that affect layout such as buffers for the livestock market and listed buildings. Locating open space in the areas at high risk of flooding compromises the recreational use and additional land might be needed. The site contains a Listed Building, mitigation proposed is through design and layout and that Green Infrastructure can create appropriate settings, although this is yet to be demonstrated</p>
A1139B1	Sustainability Appraisal	Comments on the Sustainability Appraisal	Agree	<p>The objectives are laudable, however, the document is not convincing that these objectives are any more than aspirations From current observations of new comers to Shropshire in new developments such as Leighton Park, Shrewsbury, they relocate to reliable 'Hot Spots' during working hours. This is an example of the regulatory body i.e. Shropshire Council Planning not insisting on providing basic standards to enable remote working from home, through a set of criteria against which planning proposals are measured, prior to being granted. It is likely to be difficult to focus growth in accessible locations so it may not be possible to reduce the need to travel by car. There is little mention of the plans for road improvement or the source of funding. Even during a time of unprecedented building in Shropshire bringing with it funding, this has not been spent in areas outside of Shrewsbury. The changes to the roads on the periphery of the town of Shrewsbury were inadequate by the time they were constructed. To be able to comment on this plan adequately, proposals to improve existing routes need to be included or the means of reducing car use</p>
A1152B03	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>Disagreement is in part. The report requires proofreading as Five 'Error! Bookmark not defined' errors found. Two particular deficiencies with the Sustainability Appraisal (SA) methodology exist, namely -objectives SO2, SO3 and SO12 had not been translated into any of the criteria (which extraordinarily, includes the objective SO12 to 'reduce carbon dioxide emissions'), and -criteria 6, about the proximity of regular peak time public transport had then not been translated into the criteria used for scoring sites within the stage 2a detailed site assessments. The documents explains why SO3 (reducing carbon dioxide emissions) has not been translated but incorrectly references it as SO1 - other SO's have elements of reducing carbon dioxide emissions and are included. Criteria 6 is now included, but table 2.8 incorrectly states that it is not. A huge amount of work must have been done to rescue each site by incorporating this missing Criteria 6, which in Table 2.7 is stated as 'regular peak time public transport service within 480m of site boundary', although, on the detailed stage 2a sheets, the criteria is stated slightly differently as 'site boundary within 480m of a public transport node with a regular service offered during peak travel times'. There do also appear to be further weaknesses in the SA methodology: -There is a mismatch between the services listed in criteria 4 and 5, and the primary and secondary services listed in Table 1 on page 3 of the Hierarchy of Settlements of Settlements (HoS) document. A similar list of services could have been used in both assessments. Furthermore the HoS applies weighting to these services with the SA does not. -The SA has no mechanism to rule sites out altogether because of a particular protected feature such as a SSSI. -Criteria in tables 2.7 and 2.8 have all been applied to residential assessments but 2 have not in the employment assessments (proximity to library and children's playground). No rationale is provided for this and it is considered illogical given proximity to a primary school is still used. -It is a weakness that there are no absolute scores for a site, only relative ones. Scoring for proposed allocations range from good (+2 to -6), fair (+4 to -13) to poor (-2 to -17). It is apparent there is a wide overlap in the good, fair and poor ranges which make it difficult to identify absolute scores. -Sites with poor ratings have progressed to stage 2b and 3 of the site assessment process. For example the Former Ironbridge Power Station with a score of -17. -18 proposed allocations were identified as poor in the stage 2a / SA. Mitigation measures are proposed for these sites in the SA report. In actuality 26 of the separate sites were assessed as poor in stage 2a / SA, so 8 do not have proposed mitigation measures. Some are proposed as safeguarded land to be removed from the Green Belt for future development. -Shropshire Council has declared a Climate Emergency, engaged with the Shropshire Climate Action Partnership, and is committed to achieving net-zero carbon by 2030, eight years before the end of this 22-year plan. It is recognised that the Climate Emergency is probably the greatest challenge facing mankind, much more so than the current, but temporary, Covid-19 emergency. Climate change considerations, and CO2e emissions considerations, should therefore be given the highest priority throughout the Local Plan process. The Welsh National Plan (Future Wales – the national plan 2040) summarises this issue cogently. At the very least the carbon emissions of each proposal should be assessed, to provide an idea of whether proposals contribute to the zero carbon goal or make the problem worse. It is noted that "climate action appraisals are now compulsory in all key council decisions, forcing climate impact to be considered and criteria to be met". In summary: -Reference to SO1 in Para 2.19 of the SA report needs to be changed to SO3. -In Table 2.8, Criteria 6 is assessed and needs to be added in. -Development will occur not just at the boundary of a site; for Criteria 6, the measurement of 480m should have been taken from the centre of the site, not from its boundary. The same applies to Criteria 5. -The detailed criteria listed against Criteria 4/5 and 6 should have a better match with those listed in Table 1 of the HoS document. -The scoring system used in stage 2a should use absolute scores, not scores that are relative only to other sites in that particular settlement. -In order to assess the CO2 emissions saving potential of a site, it seems insufficient only to consider the items within Criteria 4/5 and 6. Other factors could have included the propensity of the site for solar gain (e.g. north facing or south facing), or the distance from a supermarket. -The whole methodology as summarised in the diagram at paragraph 2.2 above is undermined when it is possible to override a highly negative sustainability score, as is the case with the Ironbridge site, by proposing mitigation measures. The implication is that the site has been allocated for other reasons than sustainability, and in spite of the sustainability appraisal process. The draft Local Plan should pursue the overarching environmental objective to contribute to protecting and enhancing our natural, built and historic environment; including "mitigating and adapting to climate change, including moving to a low carbon economy".</p>
A1191B7	Sustainability Appraisal	Comments on the Sustainability Appraisal		<p>BUR004's overall score is 'Good' within the SA. This is the highest score achievable within the SA and the highest score attributed to the three proposed site allocations in Burford Generally agree with the findings of the SA and consider the site to be worthy of its 'Good' score. Note that the scoring criteria 5 attributes positive '+' scores when a site is within 480m of one or more of the facilities listed. Consider this criteria doesn't reflect that proposed developments have the ability to provide facilities such as children's playgrounds, amenity green space and accessible natural green space, which would further enhance the site's sustainability. It is therefore requested that consideration is given to allotting further 'positive' scores when a site proposal will provide such benefits Concerned about the SA undertaken for Clive Barracks, Tern Hill with regard to Ancient Woodland and the nearby Local Wildlife Sites The SA provides a double minus score (denoting "Strongly Negative" effect) for featuring Ancient Woodland and being close to Wildlife Sites. The effect is described to be: "Likely to have a significant adverse impact on the whole, or on a large part of, Shropshire, on internationally or nationally protected assets or on areas outside the county. The effect is predicted to be direct, permanent, irreversible and of major magnitude". This is not considered a fair assessment as whilst Ancient Woodland falls within the site, it will be retained. Supporting work has informed proposed buffers to Ancient Woodland to ensure it is not impacted by the development (a buffer of a minimum of 30 metres). Local Wildlife sites fall outside of the site, but again have been considered in full in developing the proposals for the site. Buffers of a minimum of 15 metres have been taken forward in developing the masterplan. Redevelopment of Clive Barracks will provide additional woodland planting which will connect Ancient Woodland with other woodland onsite, providing an enhancement to both habitats. An appropriate woodland management regime could also be introduced to enhance the structural diversity of the woodlands. As such it is considered that the SA scoring relating to Ancient Woodland and Wildlife Sites should be amended from '-' to '0' score denoting a neutral impact. Also concerned over the scoring of the site in respect of accessibility to open space facilities. The site has been marked down within the SA because the site's boundary is not within 480 m of the following: • Children's Playground • Outdoor Sports Facility • Amenity Green Space • Accessible Natural Green Space (natural/semi-natural green space) The assessment does not however consider that all these facilities already exist on-site and proposed development (demonstrated by the Illustrative Masterplan) will reinstate these amenities, and more. The site should not therefore be marked down in respect of accessibility to open space facilities. Consider the scoring for these elements should be amended to '0'. Suggested amendments to the SA scoring would bring Clive Barracks total SA score from -14 (Fair) to -6 (Good)</p>
A1192B10	Sustainability Appraisal	Comments on the Sustainability Appraisal		<p>Shifnal Matters are concerned at the way the local plan review has been handled. The allocation of sites have not been properly assessed during the preparation of the plan under sustainability appraisal requirements and Shropshire Council have failed to demonstrate the reasons for rejecting reasonable alternatives. Shropshire Council have not ensured that potential environmental effects have been given full consideration nor have they carried out a sustainability appraisal of each of the proposals in the plan during its preparation and S.39 of the Act requires the authority preparing the plan must do so "with the objective of contributing to the achievement of sustainable development". Shifnal suffers serious issues of congestion and stationary traffic in the centre. The proposed Employment land (SHF018b/SHF018d) will generate thousands of traffic movements both for employees and the transport supporting those businesses, which will move through the centre of Shifnal. In addition, the sites in LPR and those already approved will bring residents to 945 more homes in the LPR period. These homes are likely to represent another 1900 cars and residents moving to schools, shops, rail station or work are also likely to cross this central junction. These movements will all conflict with objective SO6. Shropshire Council have failed in all aspects in delivering a sustainable local plan.</p>
A1609B13	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>The assessment gives no mention of the environmental impact (across carbon, resources, waste, nature and biodiversity) of building development, nor the social impact of noise and nuisance. It indicates upsides throughout which are not realistic – for example improvements in local transport resulting from Bridgnorth development, so reduced reliance on car transport? This is highly unlikely with no rail connection. The proposed developments will not have impact on flood risk. This is an interesting assumption considering the flash floods of water coming down from the Stourbridge road in 2019-2020 and effecting the A442 which was closed for a number of days..</p>
A1652B3	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>S11.1 Market Drayton & MDR046 SA Summary Table page 174 Disagree SA doesn't recognise the potential for significant community benefits through the delivery of a marina and associated commercial uses & relocation of existing sports pitches and facilities, all of which could be accommodated on sustainable urban extension on site MDR046. MDR046 classed as a 'Good' location for strategic housing (Table 8.1) and a 'Fair' location for strategic employment (Table 8.2), but appears to be incorrectly summarised as a 'Poor' location – an error that should be acknowledged and rectified</p>
A2166B7	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	<p>S11.1 Market Drayton & MDR046 SA Summary Table page 174 Disagree SA doesn't recognise the potential for significant community benefits through the delivery of a marina and associated commercial uses & relocation of existing sports pitches and facilities, all of which could be accommodated on sustainable urban extension on site MDR046. MDR046 classed as a 'Good' location for strategic housing (Table 8.1) and a 'Fair' location for strategic employment (Table 8.2), but appears to be incorrectly summarised as a 'Poor' location – an error that should be acknowledged and rectified</p>

A2308B29	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	Concerned that some of the conclusions within Part 2a Strategic Site Assessment for RAF Cosford (understood to be Part 28 and parts of CFD001, P30 and P40) are incorrect and should be updated: -It scores '-' for being "within 100m of a Local Nature Reserve". Donington and Albrighton Local Nature Reserve (DALNR) is not within 100m of the Strategic Site. Estimate that at its closest point the Strategic Site is just over 500m from the DALNR. Therefore, the site score for this criterion should be amended to '0'. -It scores '-' for a "Tree Preservation Order (single or group) within or on site boundary". Would welcome clarity on where the TPO(s) affecting the site is/are, as not aware of any TPOs at RAF Cosford. -It scores '-' for lack of a GP surgery within 480m. However, this is not unfair, there is a medical centre at RAF Cosford which is primarily for regular uniformed personnel and their families / dependants. Therefore, the score should be adjusted to a '+' or, at the minimum a '0'. -It scores '-' due to presence of a listed building on site. Fulton Block is Grade II listed, however, the double negative score does not appear to be a fair assessment as the building is being maintained and is in use and there is a significant amount of existing development in close proximity to the building. Therefore, it is not clear how the Strategic Site allocation would have such a negative impact on the listed building and the score should be adjusted accordingly to a '-' at most. -It scores '-' for being "within 300m of a Conservation Area". Whilst there are three conservation areas within Albrighton, and one at Tong, none are within 300m of the Strategic Site allocation. The closest point, which relates to the Donington and Albrighton Conservation Area appears to be in the region of 600m from the Strategic Site. Therefore, the site score for this criterion should be amended to '0'.
A2398B8	Sustainability Appraisal	Comments on the Sustainability Appraisal		Within Stage 2 of the site assessment process BAY039 is considered achievable and viable. The assessment concludes that the site is well related to the built form of development and benefits from well-defined hedgerow boundaries. Furthermore, the site presents an opportunity to provide a high quality area of open space in an area of the village with limited provision. The site does not suffer from any overriding constraints and is therefore proposed for allocation. Within the Sustainability Appraisal the site scores 'fair', however this assessment is binary in nature and fails to acknowledge that the location of Oak Meadow Primary School, Lythwood Sports Complex and two areas of accessible natural green space are located are located within walking distance of the site, but outside the stipulated 480m distance. Were these to be positively assessed in the Sustainability Appraisal, the site would be likely to score -1 and therefore be considered 'good' in sustainability terms. Commentary provided on each of the non-preferred sites. BAY005: The site's position within the undeveloped gap renders it not suitable for allocation in the emerging Local Plan Review. The physical and planning constraints affecting the site further enforce this position. BAY008 and BAY009: Availability unknown. The site has a number of physical and planning constraints which, even if the site was available, may cause it to be unsuitable for development. BAY011: The site scores well in the Sustainability Appraisal, mainly due to its proximity to key services and lack of physical constraints, however its location in the green gap overrides these positive conclusions. BAY022: Availability unknown. The site is not suitable for residential development due to likely access constraints and the requirement for the use of third party land. This however, is secondary to the lack of availability of the site. BAT026: Concerned about the ability to access the site, which would involve unidentified 3rd party land. As such conclusions on the sites suitability should be reconsidered. It is assumed reference to BAY019 is as an access option, however, this is not made clear and, in any case, this site is referenced as having unknown availability and is within public use. It cannot therefore be considered as a suitable location for access to BAY026. Furthermore, as identified within the SLAA but not the Sites Assessment, the site lies within a Mineral Safeguarding Area and is subject to medium – high visual impact. It also has no defined physical boundary to the south ensuring development would not be contained. The site scores 'good' in the Sustainability Appraisal and is located in close proximity to existing services. However, this is secondary to the points set out above and should not influence the decision as to whether this site is suitable for residential development. As stated within the Site Assessment, there are preferable sites within the settlement with better relationships to the settlement, more well-defined site boundaries, and which can satisfactorily access the highway network. BAY036: Availability is unknown. Whilst the site scores relatively well within the Sustainability Appraisal this does not override location within the Green Gap and proximity to scheduled monument and listed buildings. BAY037: Availability unknown. Located within the Green Gap; proximity to a Special Area of Conservation, Scheduled Ancient Monument and Listed Building; and located within an Air Quality Management Area. These issues combined with the distance from local services ensure that the site scores poorly in the Sustainability Appraisal. Putting aside the site's unknown availability, the physical and technical constraints identified ensure that it is unsuitable for residential development. BAY040: The site is significantly larger than other SLAA sites with an indicative capacity of over 500 dwellings. The site is therefore too large for consideration as an allocation. If split in two, the central and southern areas would have a lesser relationship with the existing built form of the settlement. Connectivity is also highlighted as an issue. Considered to have high visual sensitivity due to its position on the side of a valley slope. Off-site highways works are required and the assessment considers that these are unlikely to be achievable. There are also concerns raised within the Site Assessment with regard to ecology and heritage. The SA scores the site accordingly, although it does benefit from the northern section of the site being close to some existing services. BAY043: Located in the Green Gap. The site is located in a rural location with a poor relationship to the existing settlement. The Site Assessment concludes that there are preferable sites within the settlement, with better relationships to the existing built form. The site is scored extremely poorly by the SA for reasons including distance to existing services, the location of the site within Flood Zones 2/3, the presence of TPOs on site and the potential displacement of a Waste Management option. Not considered suitable for development. BAY048: Adjacent to BAY039 but landform makes the sites very different. Site Assessment concludes the site is not suitable for residential development due to overriding constraints such as its high visual sensitivity and the potential requirement for buffers to a watercourse which would reduce developable area. The site is also in close proximity to a non-designated heritage asset. The SLAA references the need to manage both heritage and access constraints, whilst the site is not considered within the Sustainability Appraisal and therefore cannot be thoroughly assessed in this regard. The site's visual, ecological and heritage constraints ensure the site is not considered suitable for residential development by the Site Assessment. Based on published evidence base supporting the Local Plan Review we have undertaken an analysis of all of the Long Term Potential SLAA Residential Sites within Bayston Hill. In light of the importance of the strategic gap to the north; the environmental constraints prevalent elsewhere in the settlement; highways and access issues; BAY039 represents the most sustainable and suitable site for allocation within Bayston Hill.
A2468B3	Sustainability Appraisal	Comments on the Sustainability Appraisal	Disagree	The Environmental Assessment of Plans & Programmes Regulations 2004 require such plans and programmes to be compared with reasonable alternatives at 12 (2)(b). Paragraph: 018 Reference ID: 11-018-20140306 of the NPPG requires the SA "to consider and compare all reasonable alternatives as the plan evolves, including the preferred approach, and assess these against the baseline environmental, economic and social characteristics of the area and the likely situation if the plan were not to be adopted." The paragraph goes to state that in undertaking this, it is important to: "provide conclusions on the reasons the rejected options are not being taken forward and the reasons for selecting the preferred approach in light of the alternatives." The SA process with this Plan fails to adequately compare the selected options with the reasonable alternatives, nor provide any reasons the rejected options have not been taken forward. No reasonable alternatives have been considered for the levels of growth identified for each settlement; the SA has only considered the number for each settlement as set out in the Plan. This is a failing of the SA process and also demonstrates a lack of evidence to justify the levels of growth proposed for each settlement. As noted in submission to Policy 5.11, the site selection process is insufficiently clear. Chapter 9 of the SA accompanying this Reg 18 Plan provides the SA for the policies in the Plan. Amendment to the SA site methodology are set out on page 162, with paragraph 9.8 identifying some changes that have been made in response to previous submissions. It was surprising to read that the previous criteria failed to assess a site's ability to reduce the need to travel by car. The SA notes that this has now been translated into criterion 6 in the Scoping Report as 'regular peak time public transport service within 480m of site boundary'. No indication is given to what is meant by the word 'regular', which of course impacts considerably on the ability of residents to use public transport. This therefore seems a rather narrow approach to the consideration of this highly important sustainability objective. It is noted that the SLAA form asks if the site is within 1,000m of a range of local facilities; this is considered a far more holistic and improved measure of a site's ability to reduce the need to travel by car than the one used in the SA. How a site scored as part of the SA process appears to have had little influence on the sites that have been selected, with a number of 'poor' sites being put forward. How the sites have been scored also appears questionable, an example being site MDR048, recorded in the SA that this is not within 480m of a regular peak time PT service, when this is factually incorrect. No reasons are given to why rejected sites have not been taken forward, contrary to the NPPG. Mitigation measure for 'poor' sites are set out in Table 10.4 of the SA; the measures proposed appear cursory and lacking in detail on whether what is suggested is actually deliverable. For example, the mitigation for sites MDR39 & MDR43 is for the proposal to enable sufficient improvements to the pedestrian, cycle and vehicle accessibility. Given the site is some 2 kms distant from the town centre, meaningful pedestrian and cycle access will be difficult to achieve. In summary, it is contended that the SA is inadequate and fails to accord with the Regulations in appropriately and fairly considering the reasonable alternatives.
A2470B01	Sustainability Appraisal	Comments on the Sustainability Appraisal	Don't know / no opinion	The Shropshire Council Local Plan should ensure that the results of the SA process clearly justify its policy choices. In meeting the development needs of the area, it should be clear from the results of the assessment why some policy options have been progressed, and others have been rejected. Undertaking a comparative and equal assessment of each reasonable alternative, the Shropshire Local Plan Review's decision-making and scoring should be robust, justified and transparent.
