

Economic Background and Borrowing Update

Economic Background

The economy has weathered the drag from higher inflation better than was widely expected. The 0.2% month on month rise in real GDP in April will further raise hopes that the economy will escape a recession this year. Some of the strength in April was due to fewer strikes by train workers and teachers in that month. Moreover, some of the falls in activity in other areas in April were probably temporary too.

The recent resilience of the economy has been due to a confluence of factors including the continued rebound in activity after the pandemic, households spending some of their pandemic savings, and the tight labour market and government handouts both supporting household incomes. That said, as government support fades, real household incomes are unlikely to grow rapidly. Furthermore, higher interest rates will mean GDP is likely to contract later this year. Our central assumption is that inflation will drop to the 2.0% target only if the Bank triggers a recession by raising rates from 5.00% now to at least 5.5% and keeps rates there until at least mid-2024.

The labour market became tighter over the quarter and wage growth reaccelerated. Labour demand was stronger than the consensus had expected. The three-month change in employment rose from +182,000 in March to +250,000 in April. Meanwhile, labour supply continued to recover as the size of the labour force grew by 303,000 in the three months to April. That was supported by a further 140,000 decline in inactivity as people returned to work from retirement and caring responsibilities (while inactivity due to long-term sick continued to rise). But it was not enough to offset the big rise in employment, which meant the unemployment rate fell from 3.9% to 3.8%

The tighter labour market supported wage growth in April, although the 9.7% rise in the National Living Wage on 1st April (compared to the 6.6% increase in April last year) probably had a lot to do with it too. UK wage growth remains much faster than in the US and the Euro-zone. In addition, regular private sector wage growth increased to 7.6%, which left it well above the Bank's forecast for it to fall below 7.0%. Overall, the loosening in the labour market appears to have stalled in April and regular private sector wage growth was well above the Bank's forecast.

CPI inflation stayed at 8.7% in May and, perhaps more worryingly, core CPI inflation rose again, from 6.8% to a new 31-year high of 7.1%. The rise in core inflation means it is accelerating in the UK while it is slowing in the US and the Euro-zone (both fell to 5.3%). A further decline in fuel inflation, from -8.9% to -13.1%, and the second fall in food inflation in as many months, from 19.3% to 18.7%, explained why overall CPI inflation didn't rise. And the scheduled fall in the average annual utility price on 1st July means overall CPI inflation will probably ease in the coming months. But the problem is that the recent surge in core inflation and the

reacceleration in wage growth shows that domestic inflationary pressures are still strengthening.

This suggests the Bank may have more work to do than the Fed or ECB. Indeed, the Bank of England sounded somewhat hawkish in the June meeting. This came through most in the Monetary Policy Committee's decision to step up the pace of hiking from the 25bps at the previous two meetings.

That said, the Bank has not committed to raising rates again or suggested that 50bps rises are now the norm. What it did say was that "the scale of the recent upside surprises in official estimates of wage growth and services CPI inflation suggested a 0.5 percentage point increase in interest rates was required at this particular meeting". Moreover, the Committee did not strengthen its forward guidance that any further rate hikes would be conditional on the data. However, it looks highly probable, given the on-going strength of inflation and employment data, that the Bank will need to raise rates to at least 5.5% and to keep rates at their peak until the mid-point of 2024. We still think it is only a matter of time before the rise in rates weakens the economy sufficiently to push it into recession. That is why instead of rising to between 6.00%-6.25%, as is currently priced in by markets, we think rates are more likely to peak between 5.50-6.00%. Our forecast is also for rates to be cut in the second half of 2024, and we expect rates to then fall further than markets are pricing in.

In early April, investors turned more optimistic about global GDP growth, pushing up UK equity prices. But this period of optimism appears to have been short-lived. The FTSE 100 has fallen by 4.8% since 21st April, from around 7,914 to 7,553, reversing part of the 7.9% rise since 17th March. Despite the recent resilience of economic activity, expectations for equity earnings have become a bit more downbeat. Nonetheless, further down the track, more rate cuts than markets anticipate should help the FTSE 100 rally.

A summary overview of the future path of Bank Rate

Our central forecast for interest rates was previously updated on 25th May and reflected a view that the Monetary Policy Committee (MPC) would be keen to further demonstrate its anti-inflation credentials by delivering a succession of rate increases. This has happened to a degree, especially as it moved to a more aggressive 0.5% hike in June but, with inflation remaining elevated, we anticipate that Bank Rate will need to increase to at least 5.5%, if not higher, to sufficiently slow the UK economy and loosen the labour market.

Moreover, we also still anticipate the Bank of England will be keen to loosen monetary policy when the worst of the inflationary pressures are behind us – but timing on this will remain one of fine judgment: cut too soon, and inflationary pressures may well build up further; cut too late and any downturn or recession may be prolonged. Our current judgment is that rates will have to increase and stay at their peak until the second quarter of 2024 as a minimum.

On the positive side, consumers are still estimated to be sitting on excess savings left over from the pandemic, which could cushion some of the impact of the above challenges and may be the reason why the economy is performing somewhat better at this stage of the economic cycle than may have been expected. However, most of those excess savings are held by more affluent people whereas lower income families already spend nearly all their income on essentials such as food, energy and rent/mortgage payments.

Borrowing

It is a statutory duty for the Council to determine and keep under review the “Affordable Borrowing Limits”. The Council’s approved Treasury and Prudential Indicators (affordability limits) are included in the approved Treasury Management Strategy. A list of the approved limits is shown in Appendix B. The Prudential Indicators were not breached during the first quarter of 2023/24 and have not been previously breached. The schedule at Appendix C details the Prudential Borrowing approved and utilised to date.

No new external borrowing was undertaken in the first quarter of 2023/24.

The Council has not undertaken any new borrowing for a number of years, and has been utilising cash balances to internally “borrow” for prudential borrowing schemes. This has enabled the Council to benefit from increased interest costs compared to the returns that could be generated on the cash balances. This approach has been effective during a period where the Council has held significant cash balances.

PWLB rates increased over the first quarter, which is to be expected as the Base Rate has also increased over this period. The table below shows the high/low/average PWLB rates for the first quarter.

	1 Year	5 Year	10 Year	25 Year	50 Year
Low	4.65%	4.14%	4.20%	4.58%	4.27%
Date	06/04/2023	06/04/2023	06/04/2023	06/04/2023	05/04/2023
High	6.24%	5.71%	5.28%	5.44%	5.23%
Date	28/06/2023	28/06/2023	20/06/2023	30/05/2023	30/05/2023
Average	5.32%	4.87%	4.78%	5.09%	4.82%
Spread	1.59%	1.57%	1.08%	0.86%	0.96%
