

Monthly Investment Analysis Review

March 2024

Monthly Economic Summary

General Economy

The UK Manufacturing PMI rose to 49.9 in March from 47.5 in February, some way above market expectations of 47.8. UK factory activity nearly "stabilised" (ie a reading of 50 divides expansion from contraction), but still recorded a twentieth consecutive monthly contraction. Within the headline reading, subcomponents showed that manufacturers experienced the fastest expansion in new orders since May 2022, causing factories to increase production levels for the first time in a year and sparking renewed optimism, despite higher borrowing costs. However, on the pricing front, manufacturers observed accelerating input costs yet again with continued supply chain disruption as shippers avoid the Red Sea. Meanwhile, the UK Services PMI edged lower to 53.4 from 53.8 in February and below market expectations of an unchanged reading. This represented the slowest growth in business activity for three months, with firms linking it to constraints on households' disposable income. Consequently, the UK composite PMI fell to 52.9 in March from 53 in February and slightly below market expectations of 53.1. Nonetheless, it was the fifth consecutive month of expansion for the UK private sector driven by a strong rate of output growth. This added to expectations that the UK would avoid a third consecutive negative quarterly growth reading in Q1, meaning that the mildest of recessions seen in the second half of 2023 was now concluded. Meanwhile, the UK construction PMI increased to 49.7 in February from 48.8 in January (it is released on a one-month lag to other sector reports), the highest since August 2023.

The UK economy expanded 0.2% m/m in January, following a 0.1% contraction in December and matching market expectations. Services output rose by 0.2% with strong retail trade and construction output rebounded by 1.1% after a poor December. However, industrial output fell by 0.2% in January after a 0.6% rise in December. Elsewhere, the UK's trade deficit widened to £3.129 billion in January, after a three-month low in December, driven by a 1.4% rise in imports, compared to a 0.7% rise in exports.

The Chancellor of the Exchequer, Jeremy Hunt, presented his 2024 Spring Budget. It aimed to boost the economy following the weaker performance in the second half of 2023 and ahead of the expected general election later this year. One key point was the 2p cut in National Insurance Contributions following on from the cut in the previous Autumn Statement to reduce tax burdens and support household finances.

The UK recorded a fall in 21,000 jobs in the three months prior to January, below market expectations of a 10,000 increase and following a 72,000 growth in the prior period. This was the first fall in job creation since September 2023. Meanwhile, average weekly earnings (including bonuses) in the UK increased 5.6% y/y in the three months to January, the least since July 2022, and slightly below market expectations of 5.7%. The unemployment rate edged up to 3.9% between November 2023 and January, just above the previous quarter increase of 3.8% and slightly above market expectations of no change.

Regarding inflation, the monthly Consumer Price Index (CPI) rose by 0.6%, reversing the 0.6% fall in January. However, base effects meant the headline annual rate dropped to 3.4% in February, reaching its lowest level since September 2021. The rate of price pressures declined significantly for food and non-alcoholic beverages, and restaurants and hotels, while there was also a slowdown in miscellaneous goods and services. Costs also fell at a slower pace for both housing and utilities and transport. The annual core inflation rate, excluding food and energy, fell to 4.5 % from 5.1% the prior month.

The Bank of England decided to keep Bank Rate at 5.25% in its March meeting as it waits to be certain that the country's inflationary pressures have subsided back towards its target rate. The Monetary Policy Committee voted 8-1 in favour of keeping rates unchanged, with one member voting for a 25-basis point decrease. In the retail sector, sales remain unchanged in February after an upwardly revised 3.6% increase in January and beating market expectations of a 0.3% decline.

While clothing and department store saw boosts, this was cancelled out by declines in trade at food stores and fuel retailers. Meanwhile, the GfK Consumer Confidence Indicator held at -21 in March and missed market expectations of a slight improvement to -19 as the cost-of-living crisis and broader economic uncertainty continued to dampen sentiment. However, there were increases in indices for consumer confidence over personal finances over past 12 months and next 12 months, alongside increased confidence in the general economic situation over the next 12 months. Elsewhere, public sector net borrowing, excluding public sector banks, rose to £8.4 billion in February which surpassed market expectations of £5.95 billion.

US Economy

The US economy added 275,000 jobs in February, in comparison to the downwardly revised 229,000 added in January, and above market expectations of a 200,000 increase. The main areas of gain were healthcare, government and food services and drinking places. The US economy expanded an annualised 3.4% in Q4 2023, slightly higher than the 3.2% previously reported as consumer spending and services were revised higher. The US inflation rate unexpectedly rose to 3.2% in February from 3.1% in January and above market expectations of holding steady. The Federal Reserve made no change to its policy rates at its March meeting. As in the UK and Europe, the central bank reiterated that members required further evidence that inflation is headed to target levels.

EU Economy

In the Euro area, the inflation rate dropped to 2.6% y/y in February, the lowest rate in three months but still above the ECB's 2% target. Meanwhile, the core rate, excluding food and energy prices, was confirmed at 3.1%, which is its lowest point since March 2022. GDP in Euro area stalled in the last quarter of 2023, after a 0.1% contraction in the previous period as high inflation, record borrowing costs, and poor external demand continued to apply downward pressure on growth. The European Central bank also held policy levels unchanged at its March meeting, stating that while most measures of underlying inflation have eased further, domestic price pressures remain high, in part owing to strong growth in wages.

Housing

The Halifax House Price Index rose 1.7% y/y in February, after a downwardly revised 2.3% gain in the prior month suggesting a relatively stable beginning of 2024 and adding to signs of increased housing activity. There was a fifth consecutive increase monthly for house prices as lower mortgage rates, lower Bank rate expectations and falling inflation all contributing. Meanwhile, the Nationwide House Price Index fell by 0.2% in March, falling for the first time in seven months and against market expectations of a 0.3% rise. However, the index was still 1.6% higher on the year, gaining from 1.2% in February, but short of market expectations of an increase to 2.4%.

Currency

Sterling depreciated against both the Euro and Dollar over the month.

March	Start	End	High	Low		
GBP/USD	\$1.2654	\$1.2633	\$1.2882	\$1.2603		
GBP/EUR	€1.1678	€1.1697	€1.1754	€1.1652		

Interest Rate Forecasts

Link Group and Capital Economics still hold that Bank Rate will peak at 5.25% in this cycle.

Note: An historic risk of default is only provided if a counterparty has a counterparty credit rating and is not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default therefore measures the historic risk of default attached only to those investments for which a counterparty has a counterparty credit rating and also does not include investments which are not rated.

The Historic Risk of Default column is based on the lowest long term rating. If clients are using this % for their Expected Credit Loss calculation under IFRS 9, please be aware that the Code does not recognise a loss allowance where the counterparty is central government or a local authority since relevant statutory provisions prevent default. For these instruments, the Expected Credit Loss will be nil. Please note that we are currently using Historic Default Rates from 1990-2023 for Fitch, 1983-2023 for Moody's, S&P data was not available at the time of completion of this report.

Where Link Group have provided a return for a property fund. that return covers the 12 months to December 2023. which are the latest returns currently available.

Rating Exposure

Historic Risk of Default

This is a proxy for the average % risk for each investment based on over 30 years of data provided by Fitch, Moody's and S&P. It simply provides a calculation of the possibility of average default against the historical default rates, adjusted for the time period within each year according to the maturity of the investment.

Chart Relative Risk

This is the authority's risk weightings compared to the average % risk of default for "AA", "A" and "BBB" rated investments.

Rating Exposures

This pie chart provides a clear view of your investment exposures to particular ratings.

Note: An historic risk of default is only provided if a counterparty has a counterparty credit rating and is not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default therefore measures the historic risk of default attached only to those investments for which a counterparty has a counterparty credit rating and also does not include investments which are not rated.
