

## HEALTH DEPRIVATION IN SHROPSHIRE

### Shropshire Rank

### National Rank

### Health Deprivation

This domain measures premature death and the impairment of quality of life by poor health. It considers both physical and mental health. The domain measures morbidity, disability and premature mortality but not aspects of behaviour or environment that may be predictive of future health deprivation. Four indicators are used to calculate this domain:

- Years of Potential Life Lost – an age & sex standardised measure of premature death
- Comparative Illness & Disability Ratio – an age and sex standardised measure of morbidity and disability
- Measures of acute morbidity – an age and sex standardised rate of emergency admissions to hospital.
- Proportion of adults under 60 suffering from mood or anxiety disorders – a modelled indicator for the proportion of adults suffering from mood and anxiety disorders.

# HEALTH DEPRIVATION NATIONAL RANK

*The top 3 most deprived wards are labelled in yellow*

## **Health Deprivation**

This domain identifies areas with relatively high rates of people who die prematurely, whose quality of life is impaired by poor health or who are disabled. The scores are derived from four measures:

- Years of potential life lost (2001-2005)
- Comparative Illness and Disability Ratio (2005)
- Measures of hospital admissions (2003-2005)
- The proportion of adults under 60 suffering from mood or anxiety disorders based on prescribing, suicide mortality rate, hospital admissions and health benefits data (2001-2005)

HEALTH NATIONAL QUINTILES  
■ 0-20%  
□ 21-100%

Health deprivation is calculated using a number of indicators:

- Years of Potential Life Lost (1997-2001)
- Comparative Illness and Disability Ratio (2001)
- Measures of emergency admission to hospital (1999-2002)
- Adults under 60 suffering from mood or anxiety disorders (1997-2002)

The IMD score for health deprivation contributes 13.5% of the overall IMD score for each SOA.
